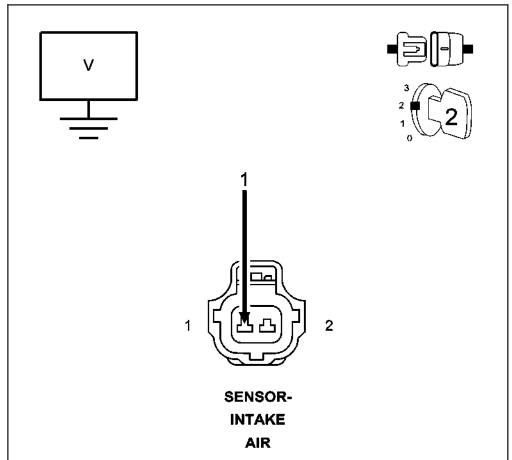
Measure the voltage on the (K21) IAT Signal circuit in the IAT Sensor harness connector.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K21) IAT Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4



8132bcd0

## 4. (K21) IAT SIGNAL CIRCUIT OPEN

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

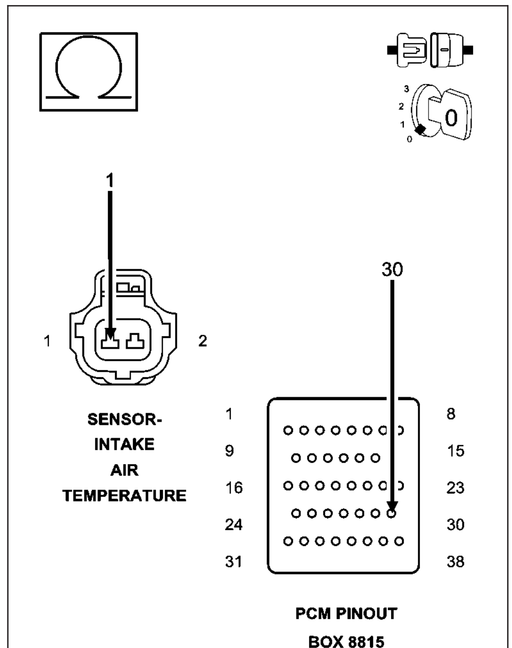
Measure the resistance of the (K21) IAT Signal circuit from the IAT Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K21) IAT Signal circuit.

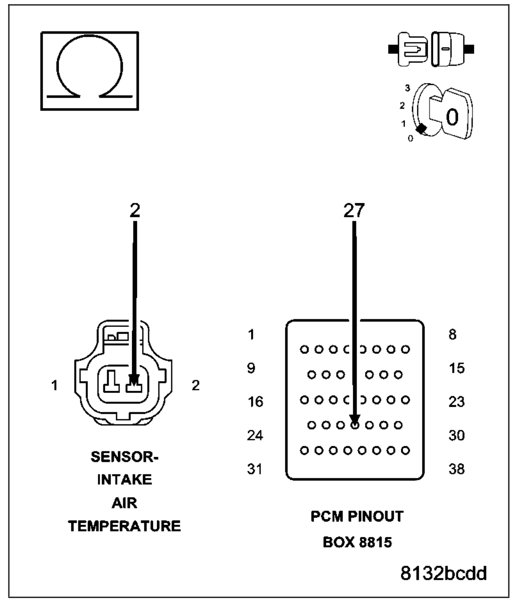
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)



8132bcd9

## 5. (K900) SENSOR GROUND CIRCUIT OPEN

Measure the resistance of the (K900) Sensor ground circuit from the IAT Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K900) Sensor ground circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

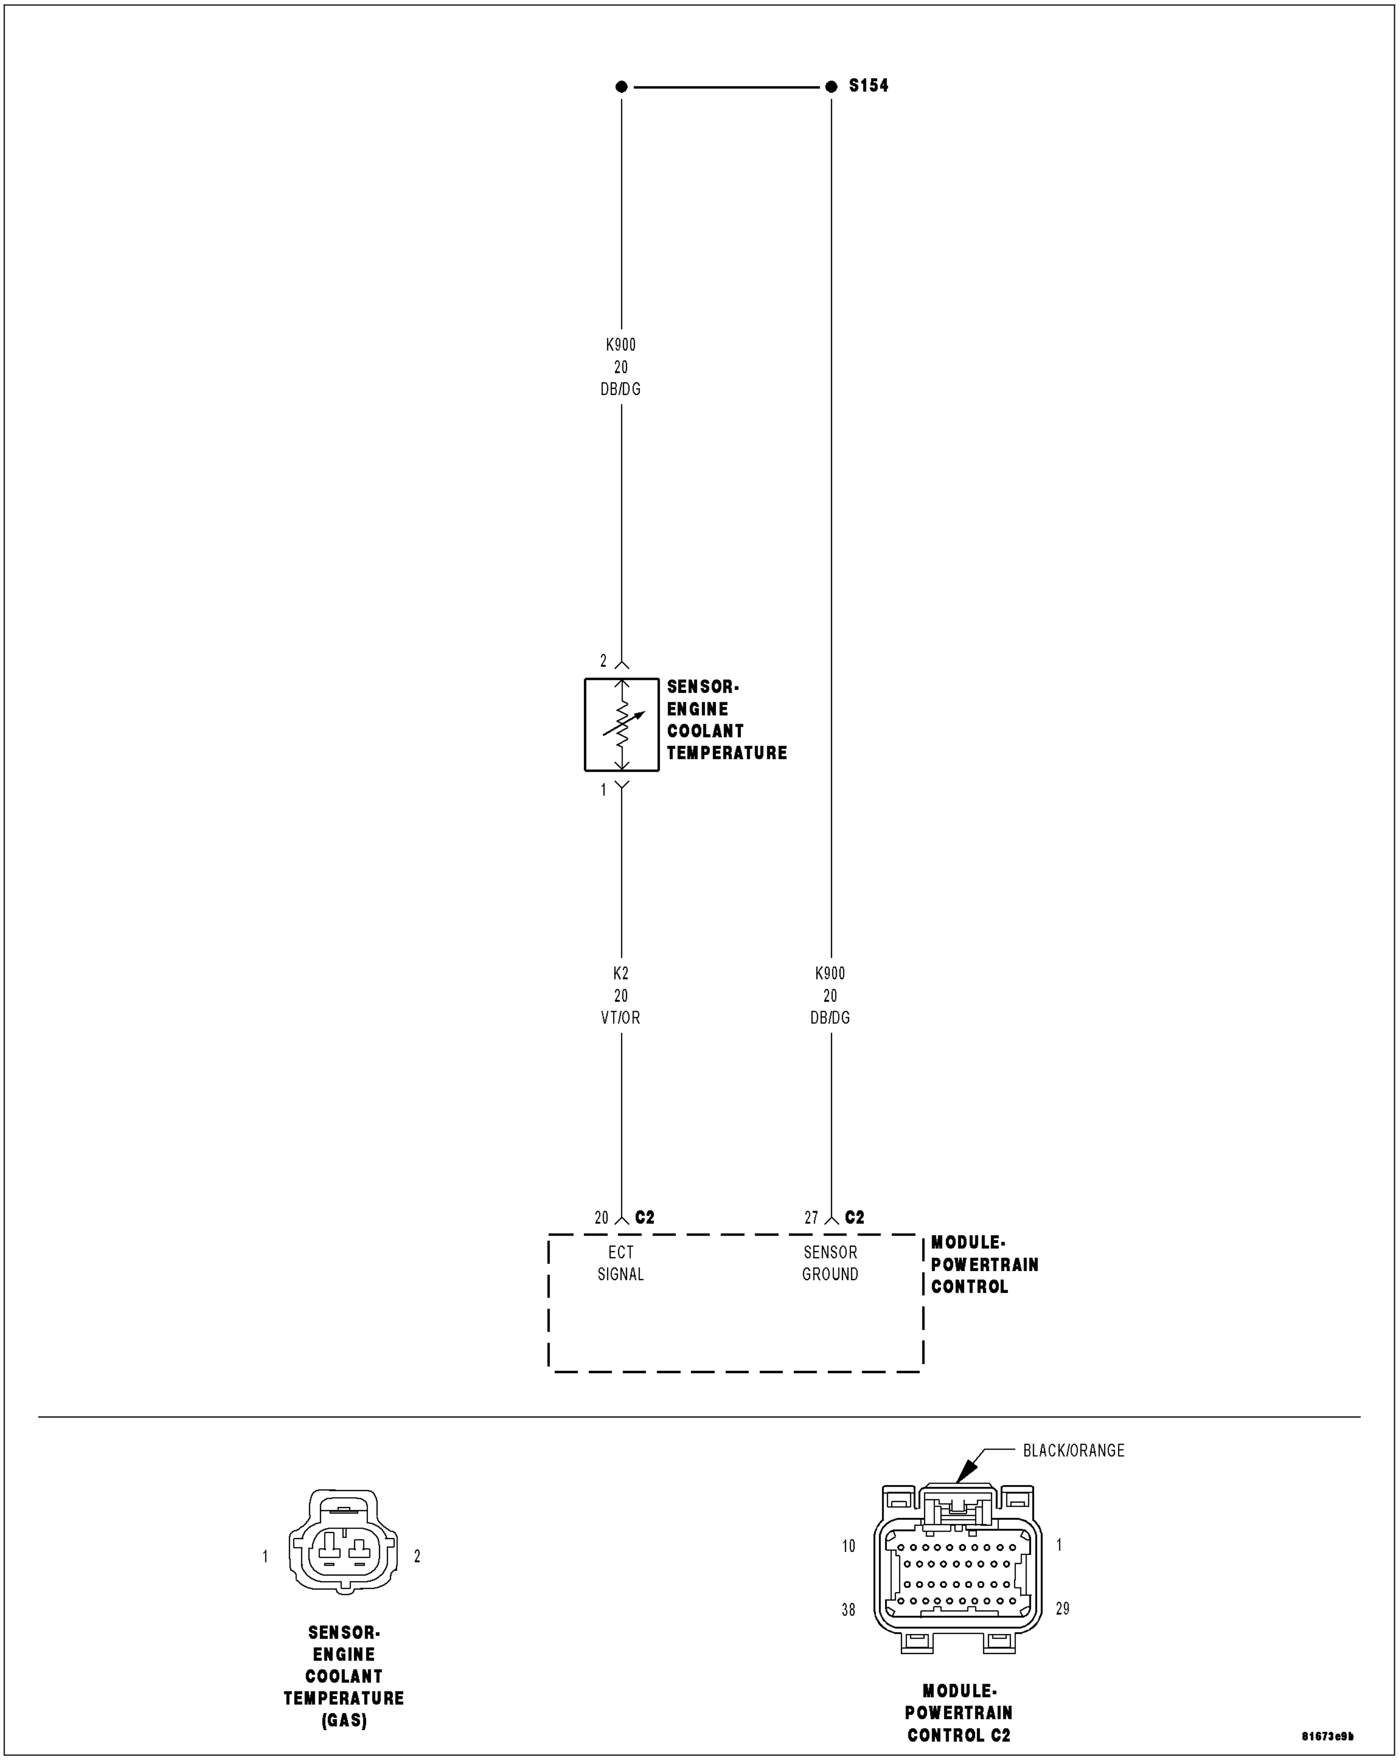
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0116–ENGINE COOLANT TEMPERATURE SENSOR CIRCUIT PERFORMANCE



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

Engine Coolant Temperature Sensor performance looks at the outputs of three temperature sensors and compare them under cold start conditions. Following a start to run delay time, the outputs of the ambient, engine coolant, and intake air temperature sensors will be compared. If the intake air and ambient air temperature sensors agree and the intake air temperature does not agree, the intake air temperature sensor is declared as irrational.

- **When Monitored:**
  Engine off time is greater than 480 minutes. Ambient temperature is greater than 4 deg C (38 deg F).
- **Set Condition:**
  After a calibrated amount of cool down time the PCM compares the ECT Sensor, IAT Sensor, and the Ambient Air Temp Sensor values. If the IAT Sensor value is not within 10 deg C (18 deg F) of the other two temperature sensors. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (K2) ECT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K2) ECT SIGNAL CIRCUIT OPEN |
| (K900) SENSOR GROUND CIRCUIT OPEN |
| (K2) ECT SIGNAL CIRCUIT SHORTED TO GROUND |
| (K2) ECT SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT |
| ECT SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (K2) ECT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

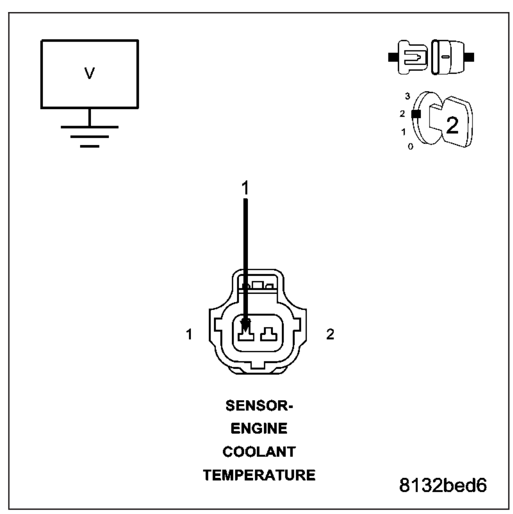
Turn the ignition off.

Disconnect the C2 PCM harness connector.

Disconnect the ECT Sensor harness connector.

**NOTE: Visually inspect both the component and the PCM connectors. Look for damaged, partially broken wires, and backed out or corroded terminals.**

Ignition on, engine not running.



Measure the voltage on the (K2) ECT Signal circuit in the ECT Sensor harness connector.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K2) ECT Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. ECT SENSOR VOLTAGE ABOVE 4.6 VOLTS

Turn the ignition off.

Connect the C2 PCM harness connector.

Ignition on, engine not running.

With a scan tool, read the ECT voltage.

**Is the voltage above 4.6 volts?**

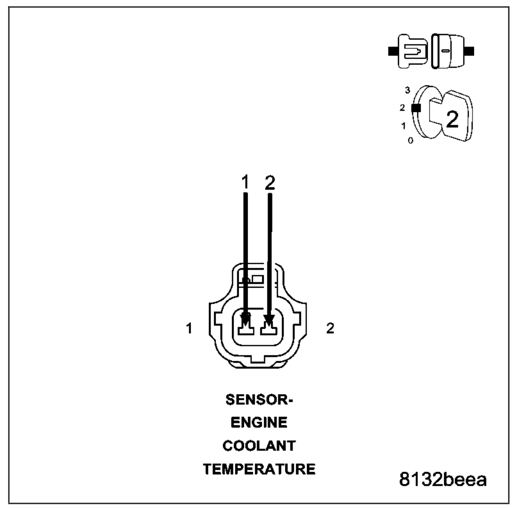
**Yes** >> Go To 4

**No** >> Go To 7

## 4. ECT SENSOR

Connect a jumper wire between the (K2) ECT Signal circuit and the (K900) Sensor ground circuit in the ECT Sensor harness connector.

With a scan tool, read the ECT voltage.



**Is the voltage below 1.0 volt with the jumper wire installed?**

**Yes** >> Replace the ECT Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

**NOTE: Remove the jumper wire before continuing.**

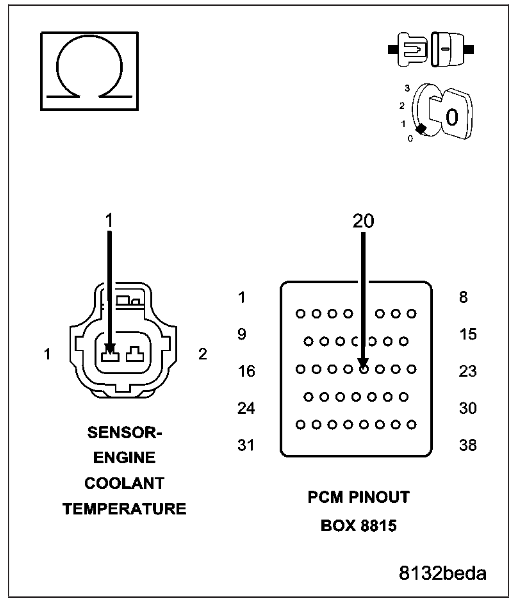
## 5. (K2) ECT SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K2) ECT Signal circuit from the ECT Sensor harness connector to the appropriate terminal of special tool #8815.



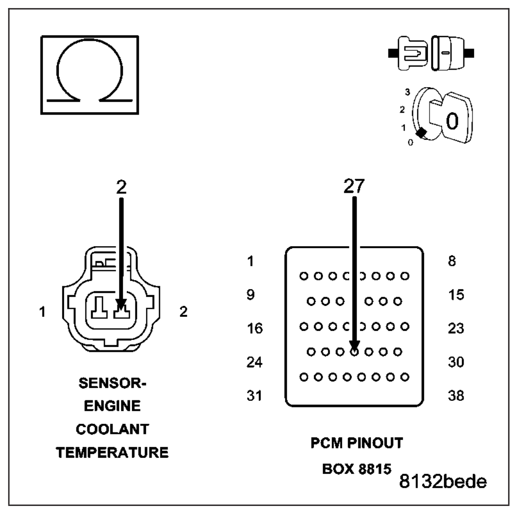
**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K2) ECT Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. (K900) SENSOR GROUND CIRCUIT OPEN

Measure the resistance of the (K900) Sensor ground circuit from the ECT Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

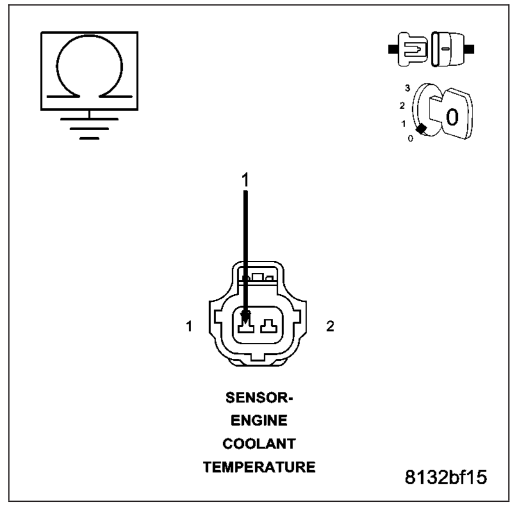
**No** >> Repair the open in the (K900) Sensor ground circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. (K2) ECT SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K2) ECT Signal circuit in the ECT Sensor harness connector.



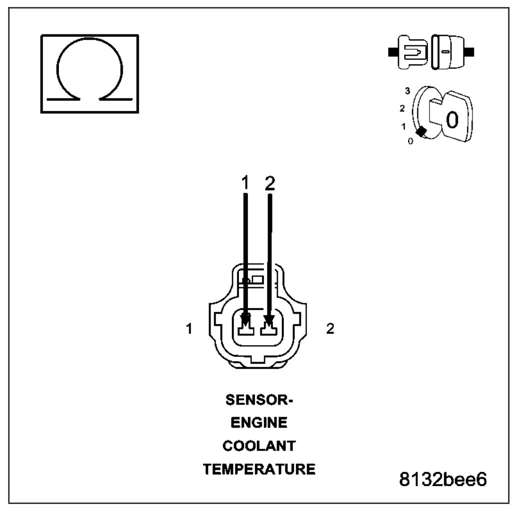
**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K2) ECT Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

## 8. (K2) ECT SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT

Measure the resistance between the (K2) ECT Signal circuit and the (K900) Sensor ground circuit in the ECT Sensor harness connector.



**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K900) Sensor ground circuit and the (K2) ECT Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 9

## 9. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

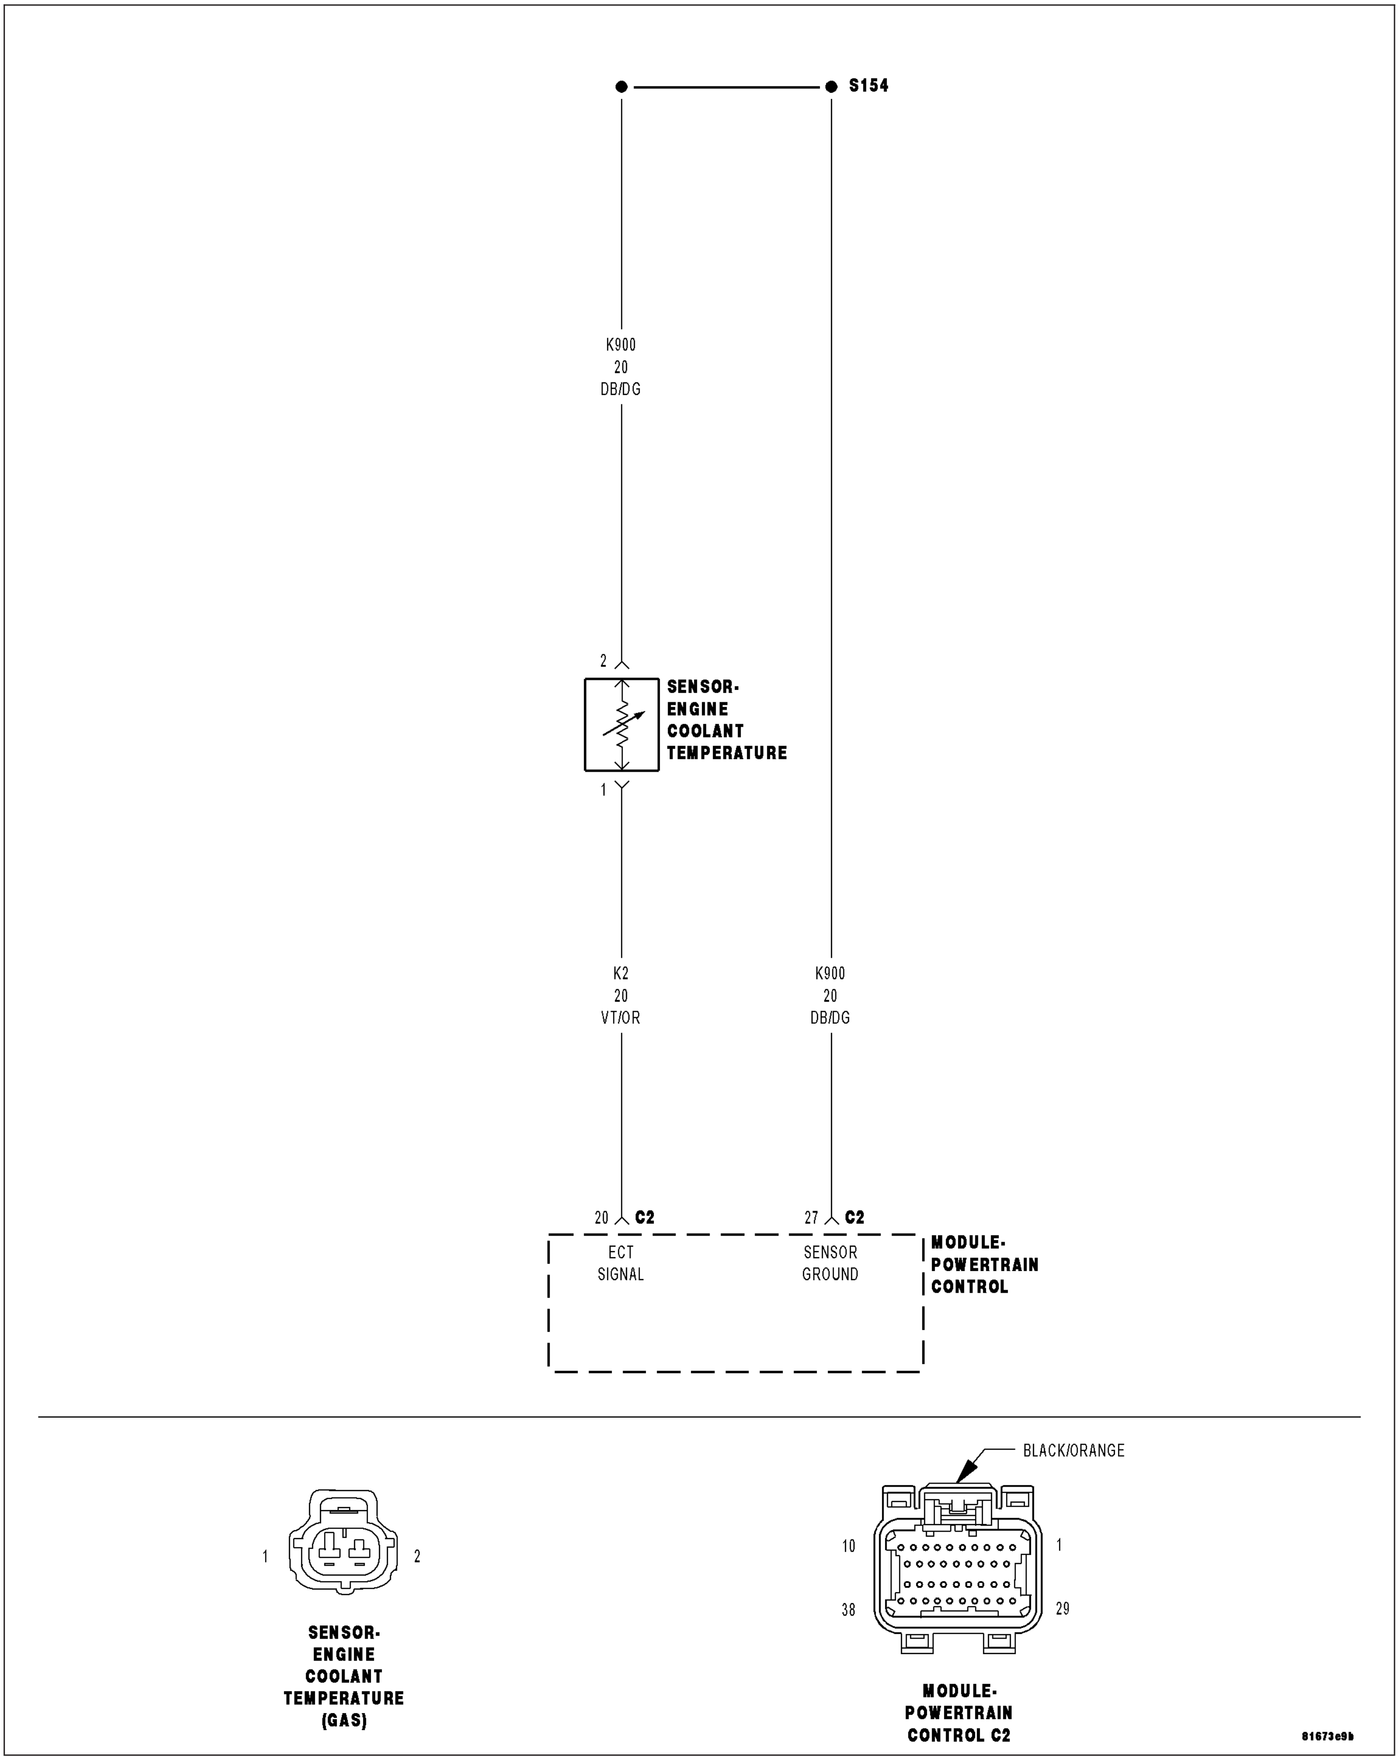
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0117-ENGINE COOLANT TEMPERATURE SENSOR CIRCUIT LOW



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The engine coolant temperature sensor is a negative temperature coefficient thermistor-type sensor whose resistance varies inversely with temperature. At cold temperatures the sensor resistance is high so the voltage is high. As the coolant temperature increases the resistance decreases and the voltage becomes low.

- **When Monitored:**
  With the ignition on. Battery voltage greater than 10.4 volts.
- **Set Condition:**
  The Engine Coolant Temperature (ECT) sensor circuit voltage at the PCM is less than 0.078 of a volt for more than 2.8 seconds. One Trip Fault. Three good trips to clear the MIL.

| Possible Causes |
|---|
| (K2) ECT SIGNAL CIRCUIT SHORTED TO GROUND |
| (K2) ECT SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT |
| ECT SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ECT SENSOR VOLTAGE BELOW 0.078 OF A VOLT

Ignition on, engine not running.

With a scan tool, read the ECT voltage.

**Is the voltage below 0.078 of a volt?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. ECT SENSOR

Turn the ignition off.

Disconnect the ECT harness connector.

Ignition on, engine not running.

With a scan tool, read ECT voltage.

**Is the voltage above 1.0 volt?**

**Yes** >> Replace the ECT Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

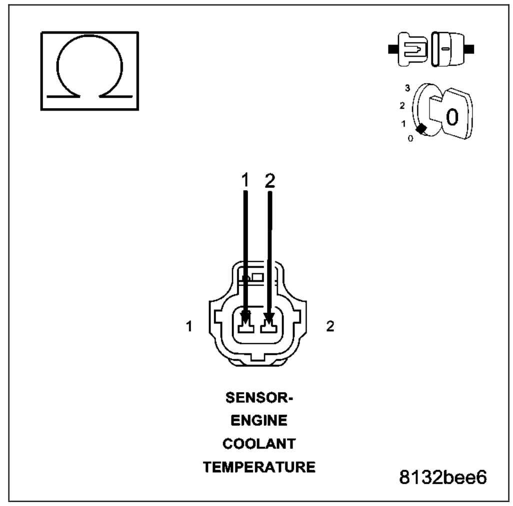
**No** >> Go To 3

## 3. (K2) ECT SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between the (K900) Sensor ground circuit and the (K2) ECT Signal circuit in the ECT Sensor harness connector.



**Is the resistance below 5.0 ohms?**

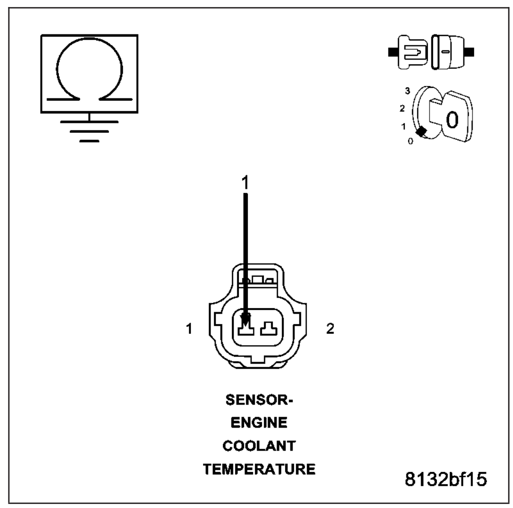
**Yes** >> Repair the short to between the (K900) Sensor ground circuit and the (K2) ECT Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. (K2) ECT SIGNAL CIRCUIT SHORTED GROUND

Measure the resistance between ground and the (K2) ECT Signal circuit in the ECT Sensor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K2) ECT Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

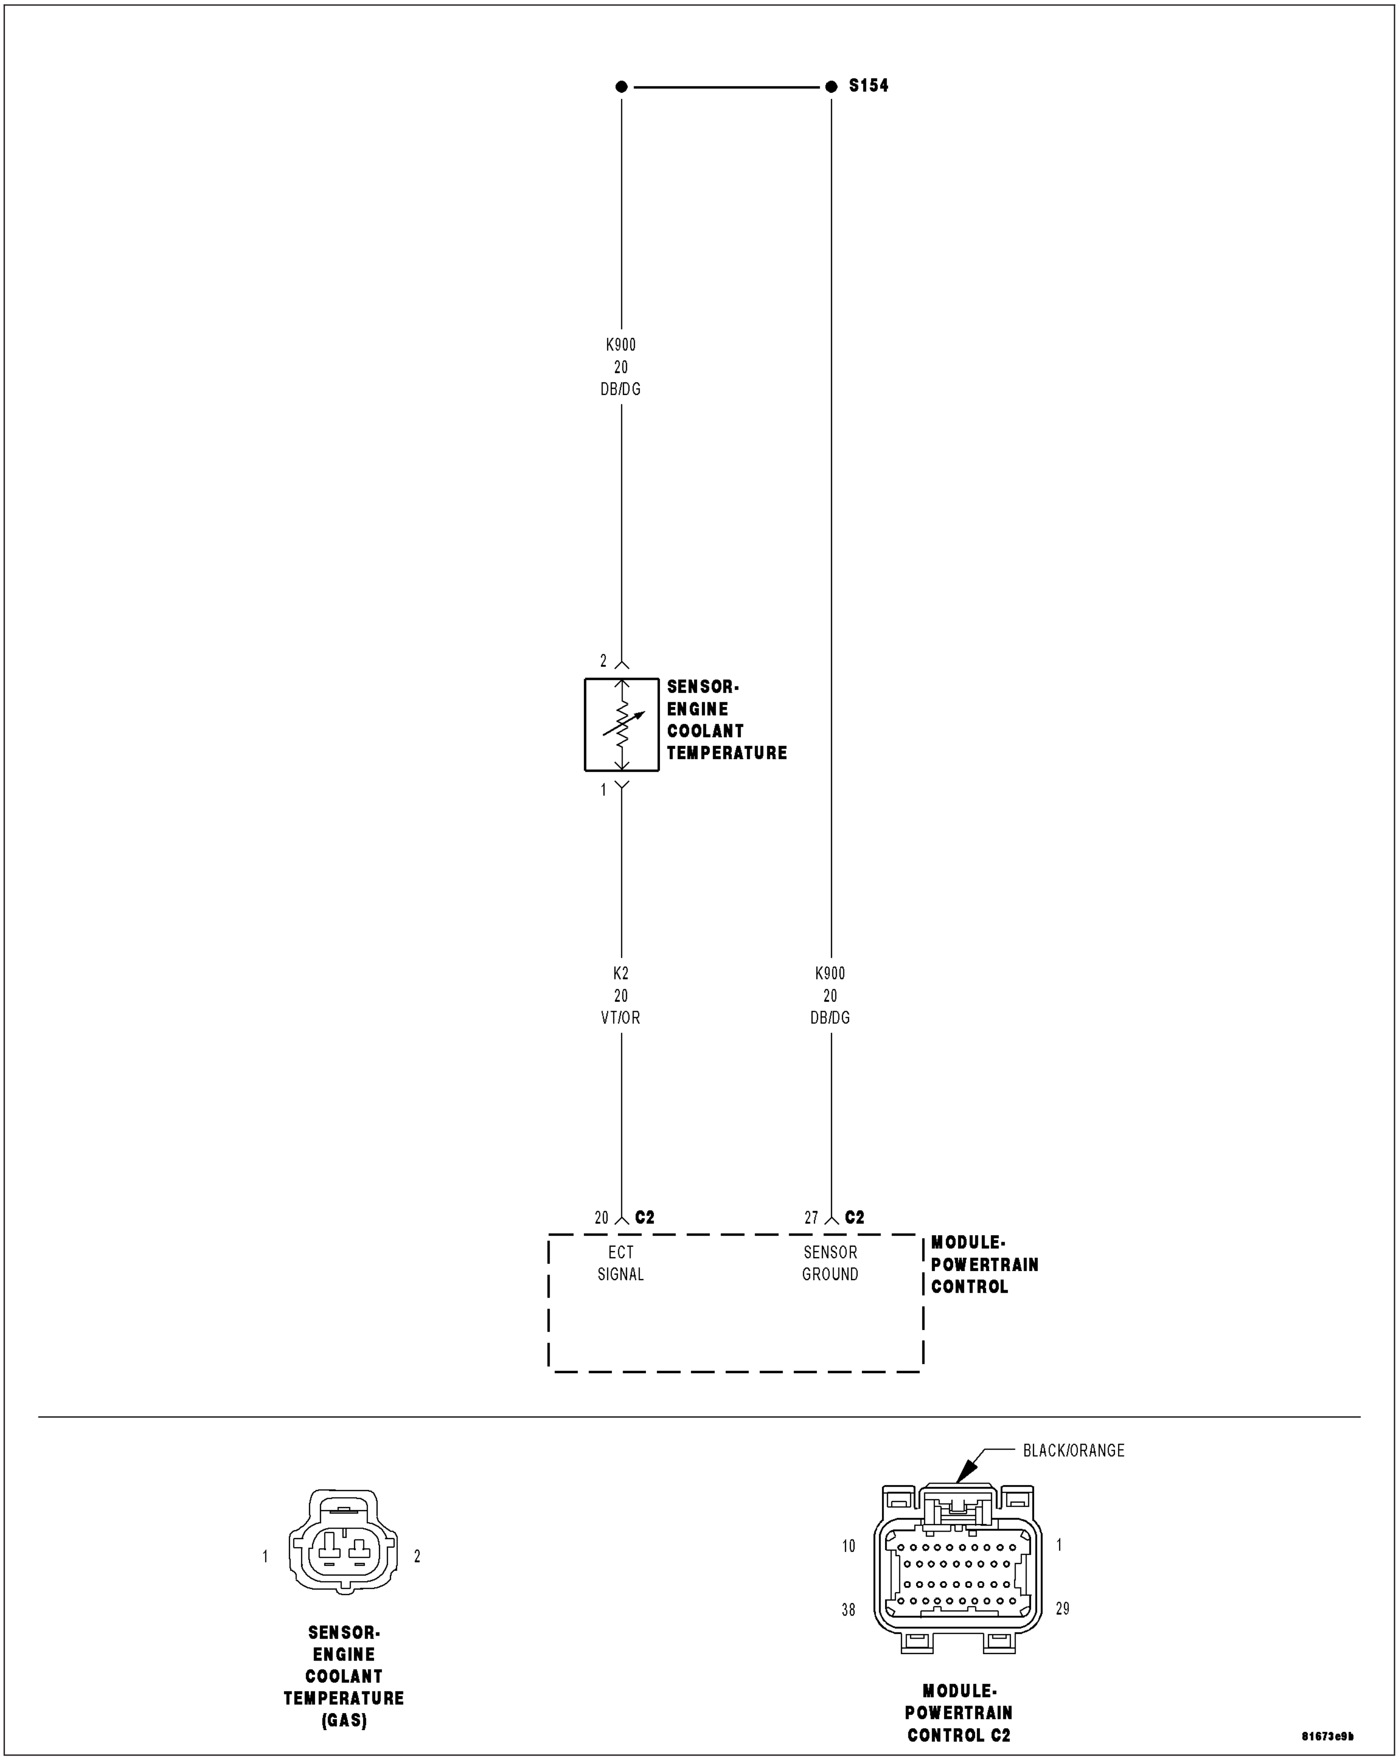
**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0118-ENGINE COOLANT TEMPERATURE SENSOR CIRCUIT HIGH



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The engine coolant temperature sensor is a negative temperature coefficient thermistor-type sensor whose resistance varies inversely with temperature. At cold temperatures the sensor resistance is high so the voltage is high. As the coolant temperature increases the resistance decreases and the voltage becomes low.

- **When Monitored:**
  With the ignition on. Battery voltage greater than 10.4 volts.
- **Set Condition:**
  The Engine Coolant Temperature (ECT) sensor circuit voltage at the PCM is greater than 4.98 volts for more than 2.8 seconds. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (K2) ECT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K2) ECT SIGNAL CIRCUIT OPEN |
| (K900) SENSOR GROUND CIRCUIT OPEN |
| ECT SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ECT SENSOR VOLTAGE ABOVE 4.98 VOLTS

Ignition on, engine not running.

With a scan tool, read the ECT voltage.

**Is the voltage above 4.98 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. ECT SENSOR

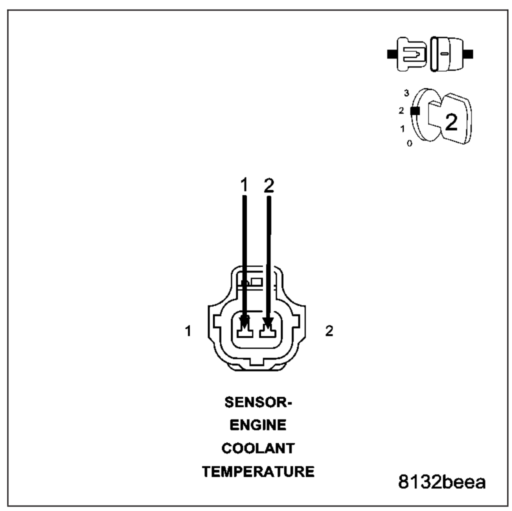
Turn the ignition off.

Disconnect the ECT harness connector.

Connect a jumper wire between the (K2) ECT Signal circuit and the (K900) Sensor ground circuit in the ECT harness connector.

Ignition on, engine not running.

With a scan tool, read ECT voltage.



**Is the voltage below 1.0 volt with the jumper wire installed?**

**Yes** >> Replace the ECT Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

**NOTE: Remove the jumper wire before continuing.**

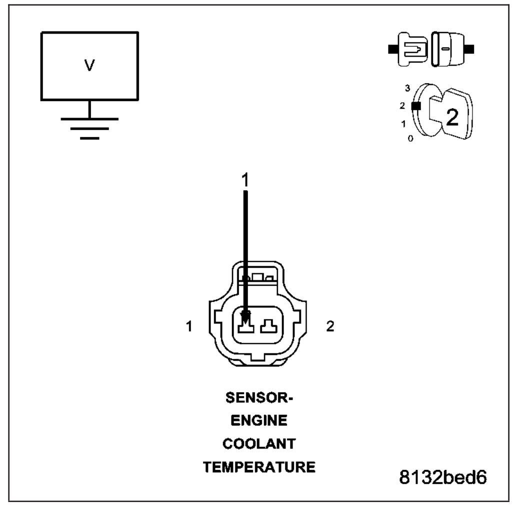
## 3. (K2) ECT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (K2) ECT Signal circuit in the ECT Sensor harness connector.



**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K2) ECT Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

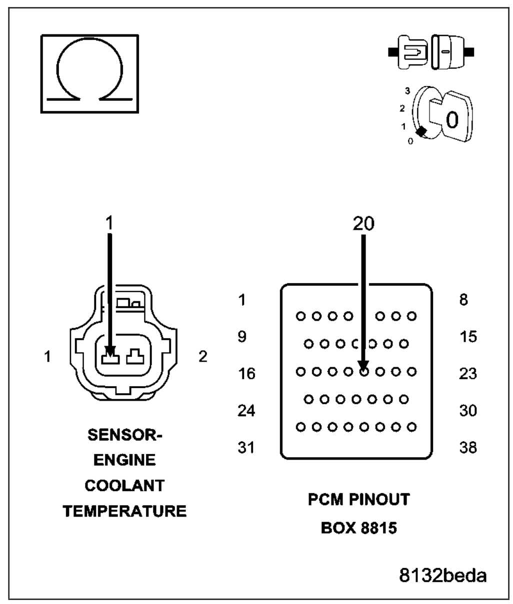
**No** >> Go To 4

## 4. (K2) ECT SIGNAL CIRCUIT OPEN

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K2) ECT Signal circuit from the ECT Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

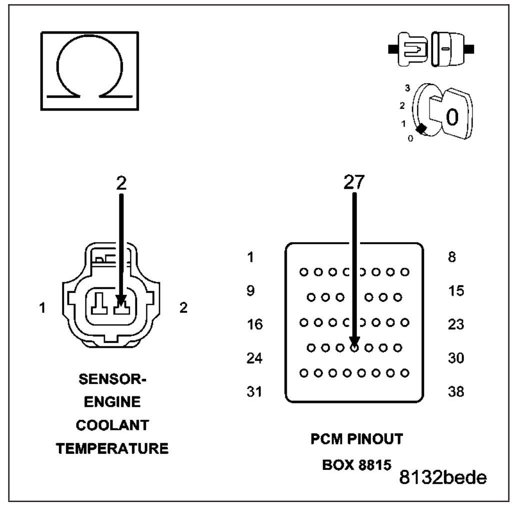
**Yes** >> Go To 5

**No** >> Repair the open in the (K2) ECT Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. (K900) SENSOR GROUND CIRCUIT OPEN

Measure the resistance of the (K900) Sensor ground circuit from the ECT Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K900) Sensor ground circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

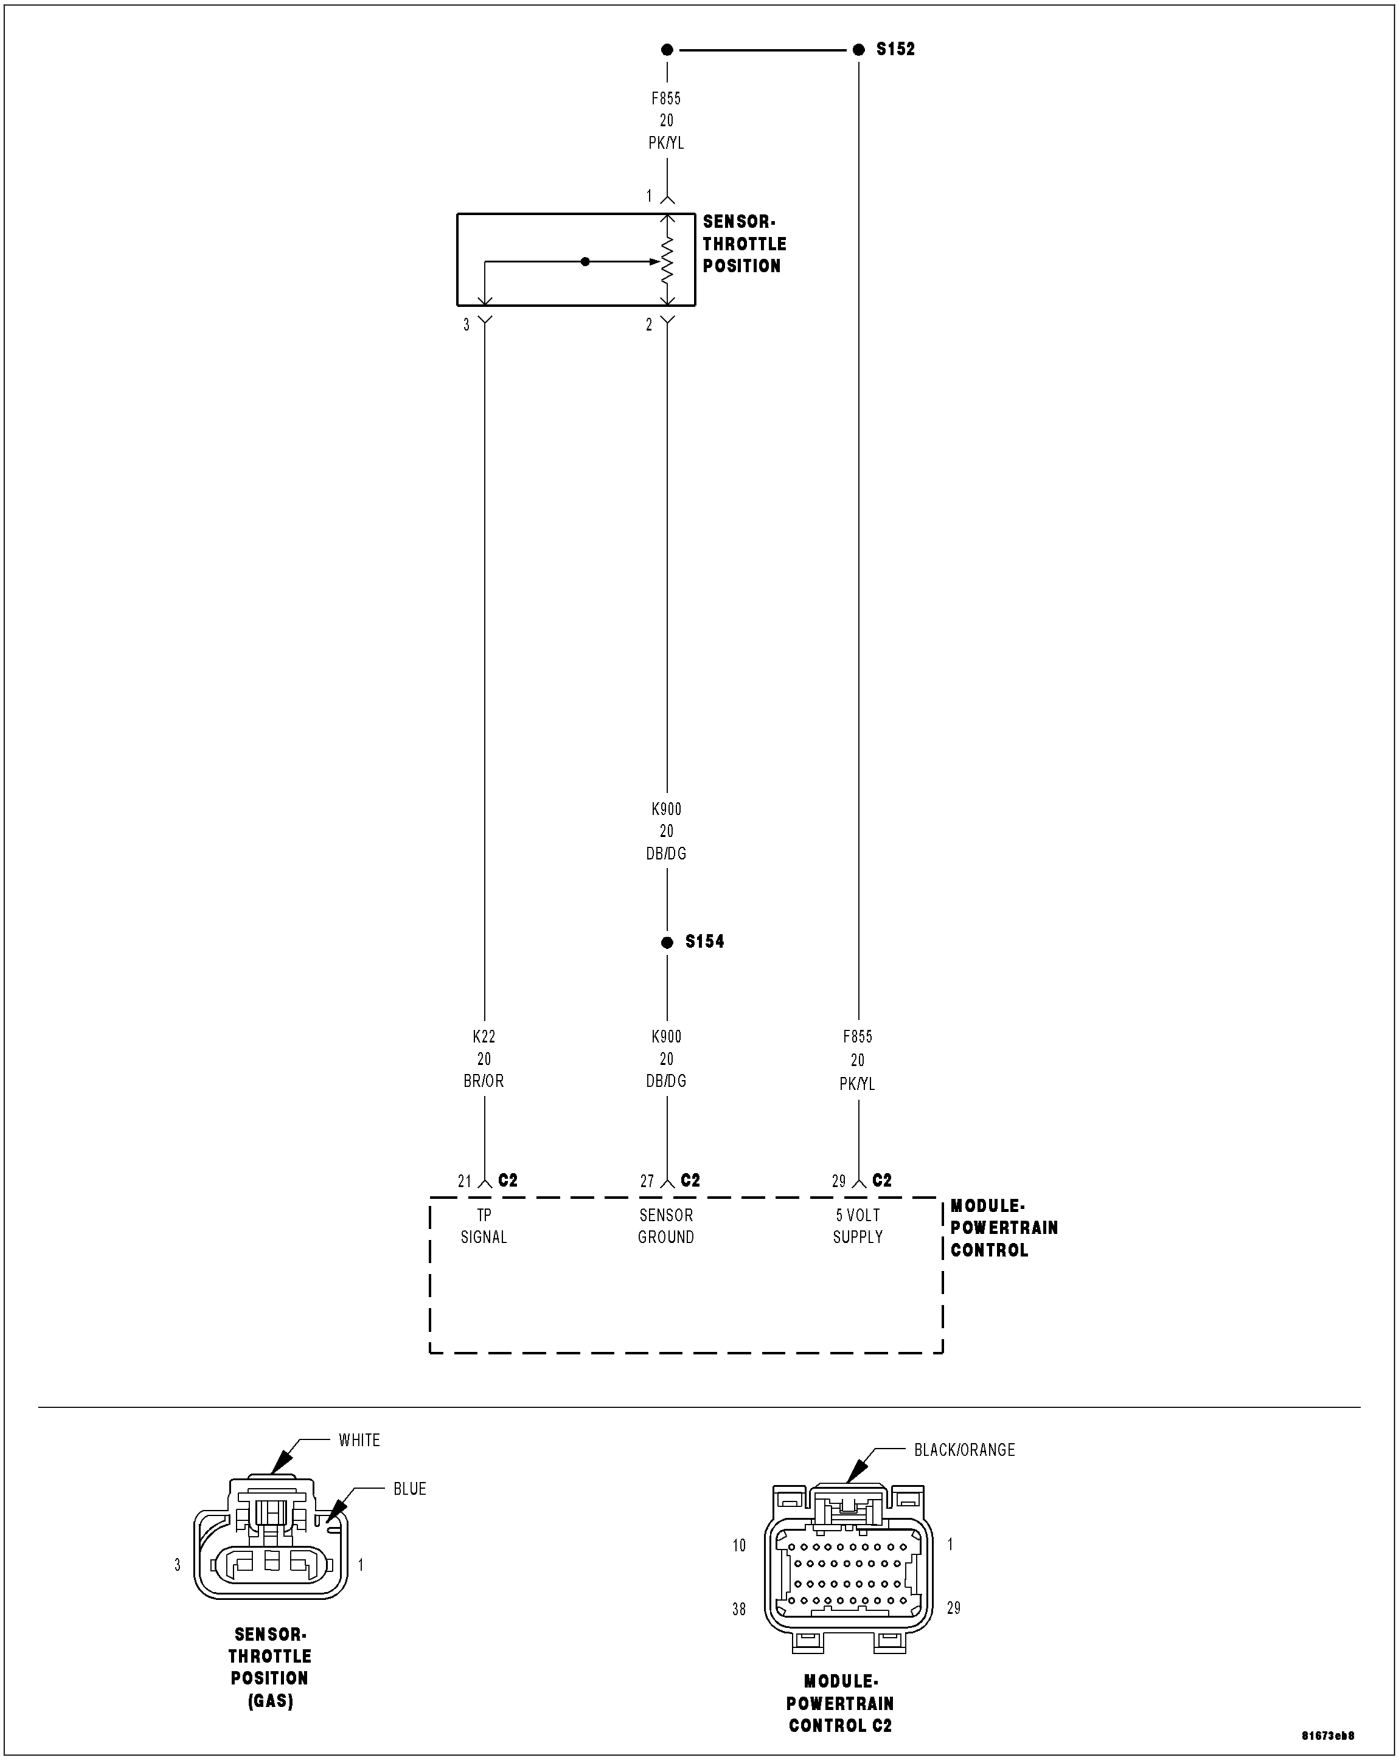
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0122-THROTTLE POSITION SENSOR 1 CIRCUIT LOW



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the ignition on. Battery voltage greater than 10.4 volts.
- **Set Condition:**
  Throttle Position Sensor voltage at the PCM is less than 0.0978 of a volt for 1.3 seconds. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
| --- |
| (F855) 5-VOLT SUPPLY CIRCUIT OPEN |
| (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO GROUND |
| (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT |
| THROTTLE POSITION SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. THROTTLE POSITION SENSOR VOLTAGE BELOW 0.098 OF A VOLT

Ignition on, engine not running.

With a scan tool, read the TP Sensor voltage.

**Is the voltage below 0.098 of a volt?**

**Yes** >> Go To 2

**No** >> Go To 9

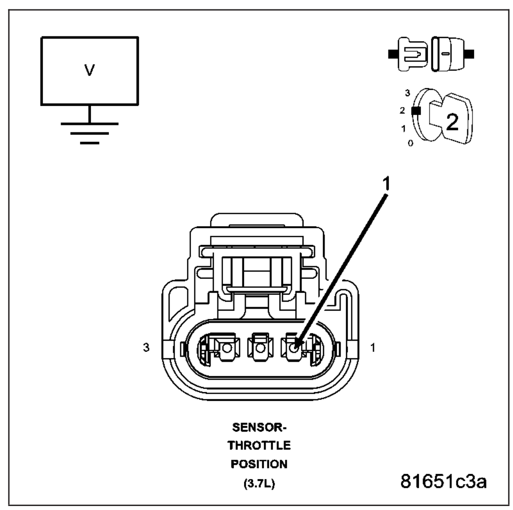
### 2. (F855) 5-VOLT SUPPLY CIRCUIT

Turn the ignition off.

Disconnect the TP Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F855) 5-volt Supply circuit in the TP Sensor harness connector.



**Is the voltage between 4.5 to 5.2 volts?**

**Yes** >> Go To 3

**No** >> Go To 6

### 3. THROTTLE POSITION SENSOR

With the a scan tool, monitor the TP Sensor voltage with the Sensor harness connector disconnected.

**Is the voltage above 4.5 volts?**

**Yes** >> Replace the Throttle Position Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

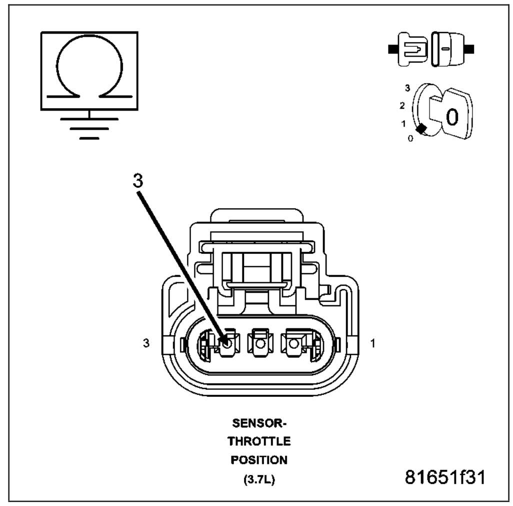
**No** >> Go To 4

## 4. (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K22) TP Sensor No.1 Signal circuit in the TP Sensor harness connector.



**Is the resistance below 100 ohms?**

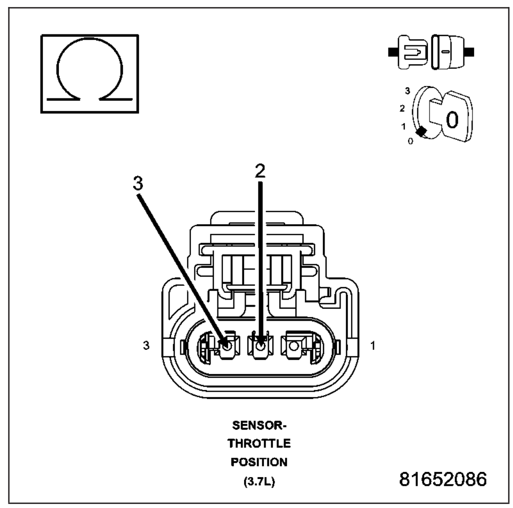
**Yes** >> Repair the short to ground in the (K22) TP Sensor No.1 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT

Measure the resistance between the (K22) TP Sensor No.1 Signal circuit and the (K900) Sensor ground circuit in the TP Sensor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K900) Sensor ground and the (K22) TP Sensor No.1 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

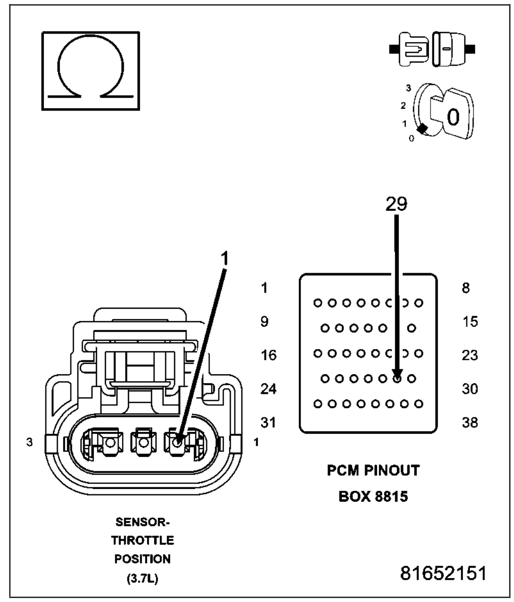
## 6. (F855) 5-VOLT SUPPLY CIRCUIT OPEN

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F855) 5-volt Supply circuit from the TP Sensor harness connector to the appropriate terminal of special tool #8815.



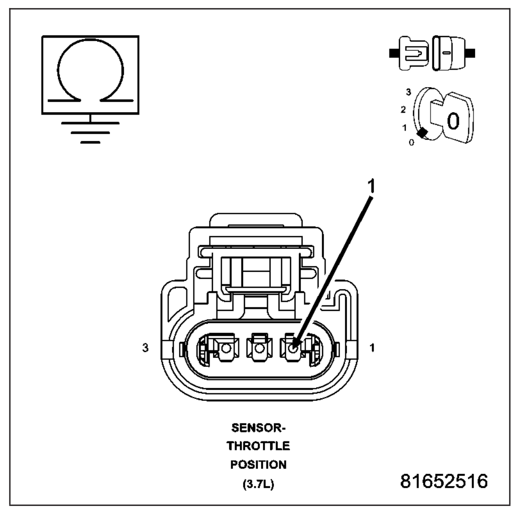
**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (F855) 5-volt Supply circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (F855) 5-volt Supply circuit in the TP Sensor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F855) 5-volt Supply circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

## 8. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 9. THROTTLE POSITION SENSOR SWEEP

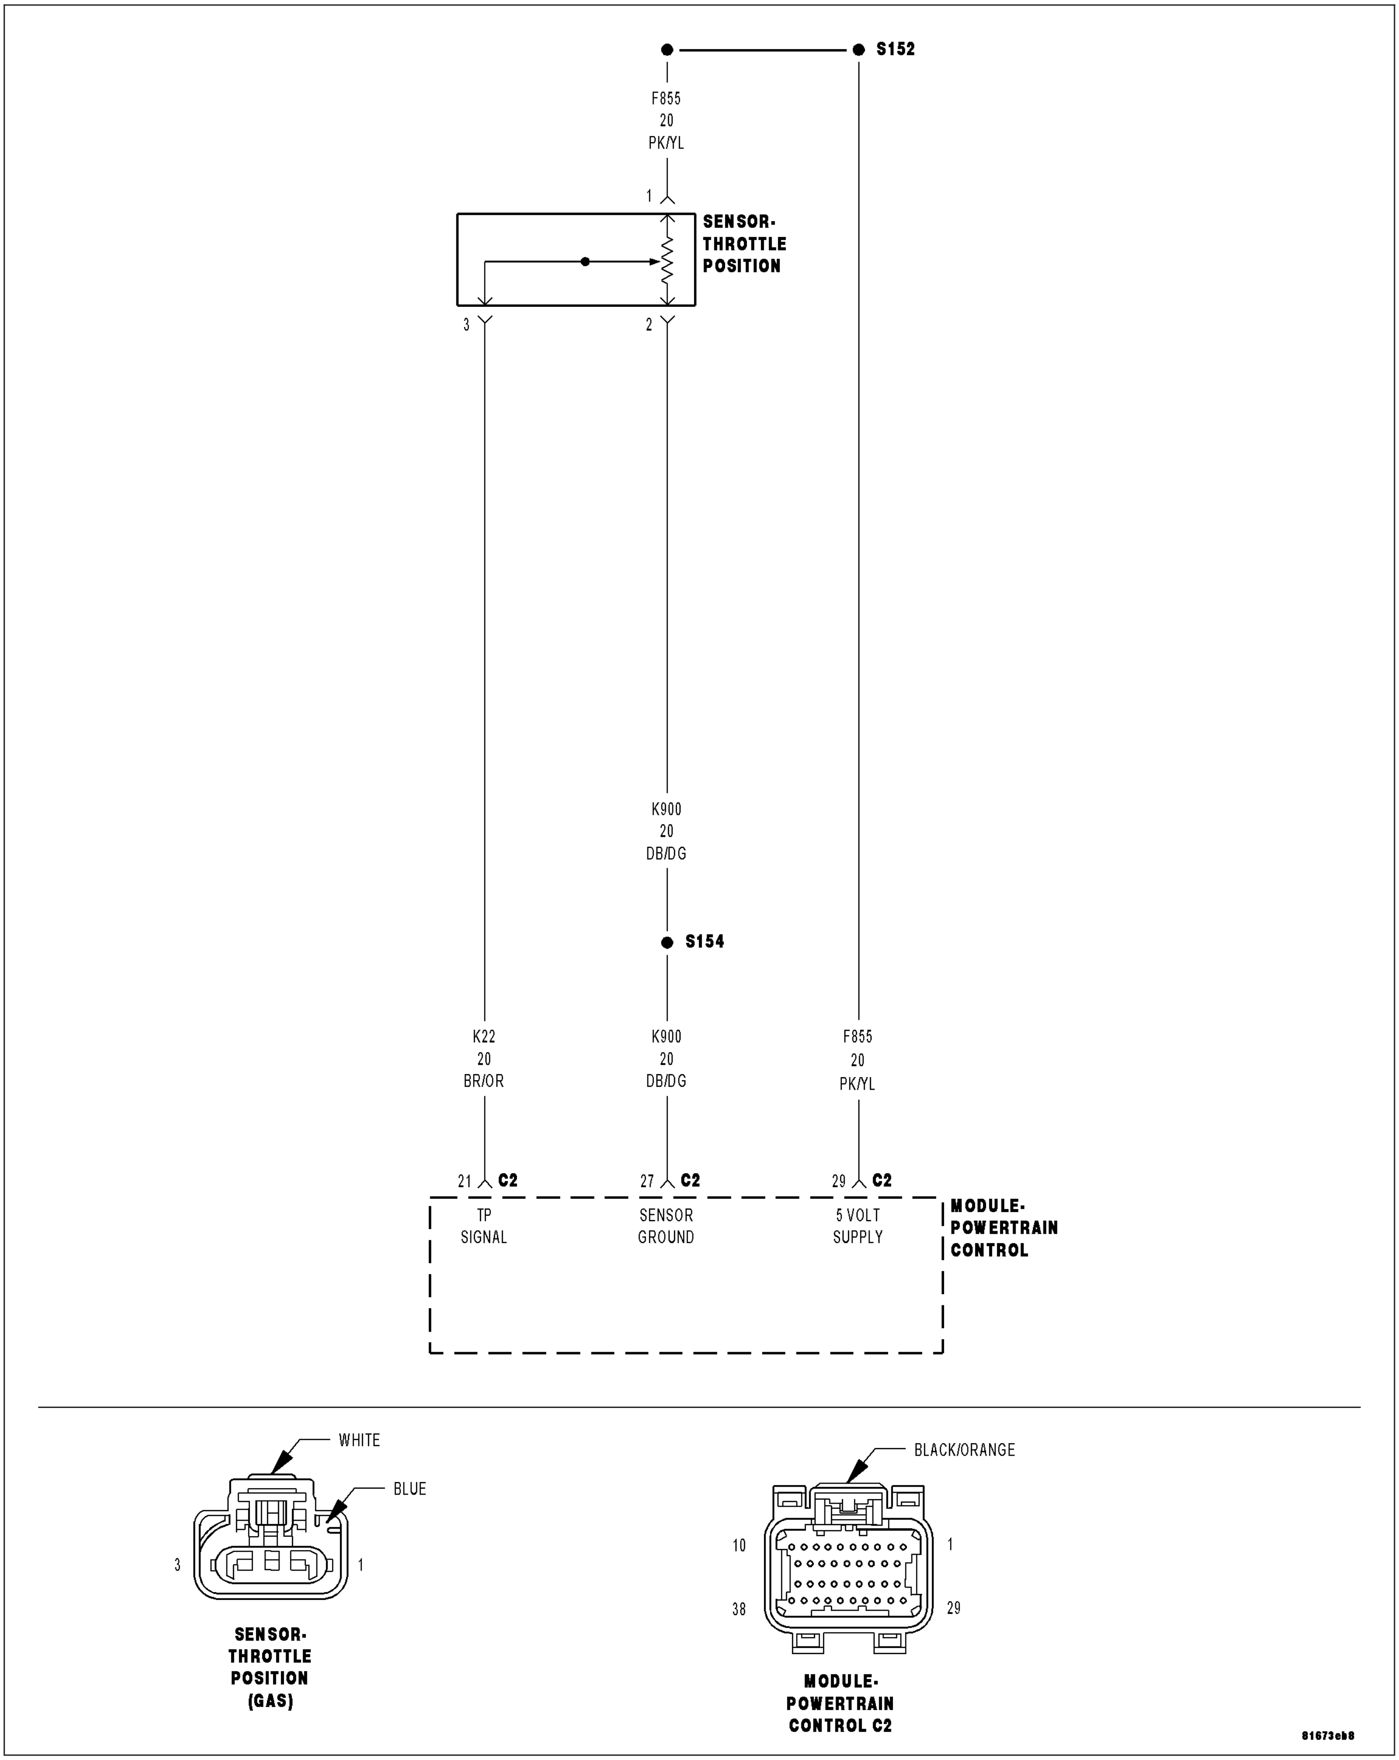
With a scan tool, monitor the Throttle Position Sensor voltage.
Slowly open the throttle from the idle position to the wide open throttle position.

**Does voltage start at approximately 0.8 of a volt and go above 3.5 volts with a smooth transition?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace the Throttle Position Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0123-THROTTLE POSITION SENSOR 1 CIRCUIT HIGH



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the ignition on. Battery voltage greater than 10.4 volts.
- **Set Condition:**
  Throttle Position Sensor voltage at the PCM is greater than 4.47 volts for 1.3 seconds. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K22) TP SENSOR NO.1 SIGNAL CIRCUIT OPEN |
| (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO THE (F855) 5-VOLT SUPPLY CIRCUIT |
| (K900) SENSOR GROUND CIRCUIT OPEN |
| THROTTLE POSITION SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. TP SENSOR VOLTAGE ABOVE 4.5 VOLTS

**NOTE: Make sure the throttle is fully closed and free from binding and carbon build up.**

Start the engine.

With a scan tool, read the TP Sensor voltage.

**Is the voltage above 4.5 volts?**

**Yes** >> Go To 2

**No** >> Go To 8

### 2. THROTTLE POSITION SENSOR

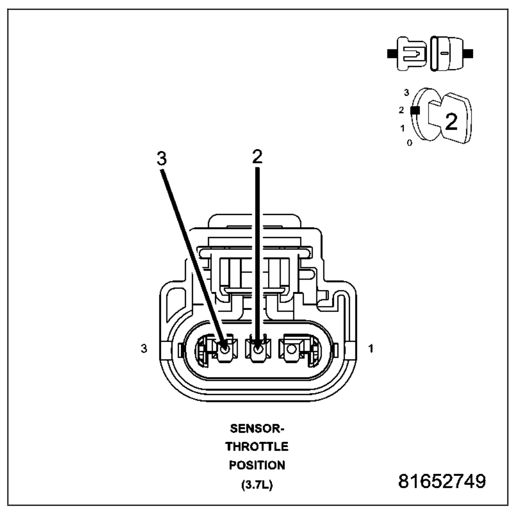
Turn the ignition off.

Disconnect the TP Sensor harness connector.

Connect a jumper wire between the (K22) TP Sensor No.1 Signal circuit and the (K900) Sensor ground circuit in the Sensor harness connector.

With a scan tool, monitor the TP Sensor voltage.

Ignition on, engine not running.



**Is the voltage below 0.5 of a volt with the jumper wire installed?**

**Yes** >> Replace the Throttle Position Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

**NOTE: Remove the jumper wire before continuing.**

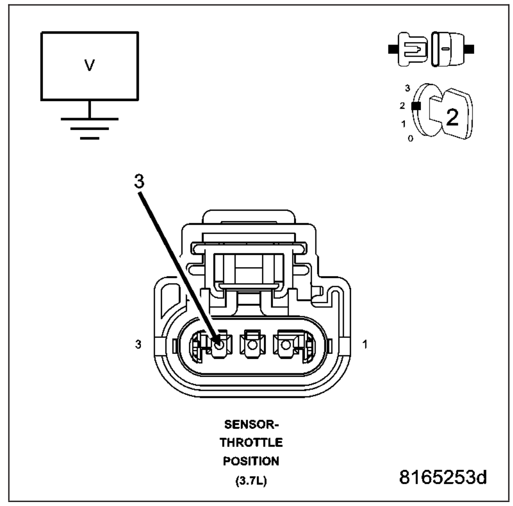
## 3. (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (K22) TP Sensor No.1 Signal circuit in the TP Sensor harness connector.



**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K22) TP Sensor No.1 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

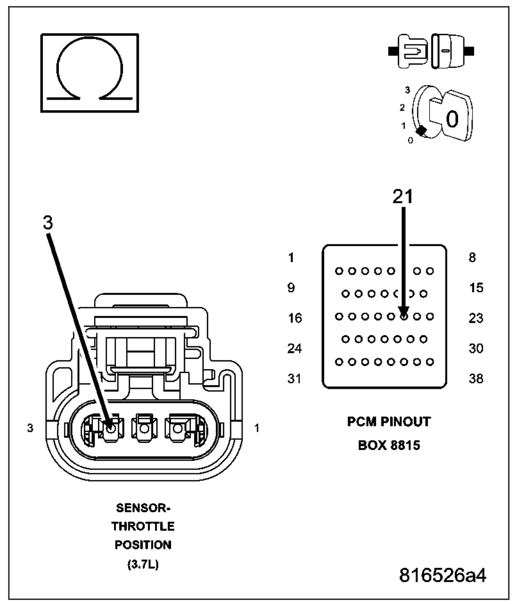
**No** >> Go To 4

## 4. (K22) TP SENSOR NO.1 SIGNAL CIRCUIT OPEN

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K22) TP Sensor No.1 Signal circuit from the TP Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

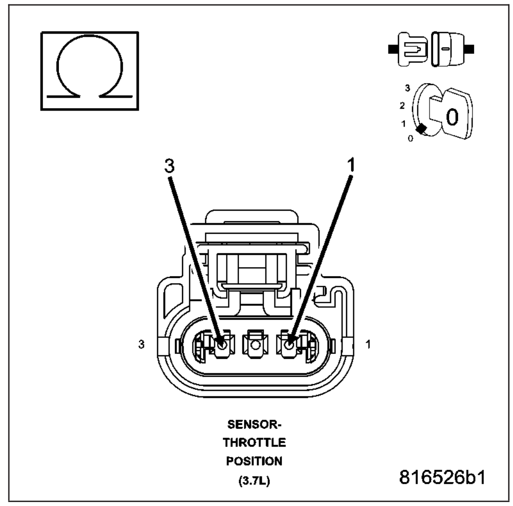
**Yes** >> Go To 5

**No** >> Repair the open in the (K22) TP Sensor No.1 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO THE (F855) 5-VOLT SUPPLY CIRCUIT

Measure the resistance between the (K22) TP Sensor No.1 Signal circuit and the (F855) 5-volt Supply circuit in the TP Sensor harness connector.



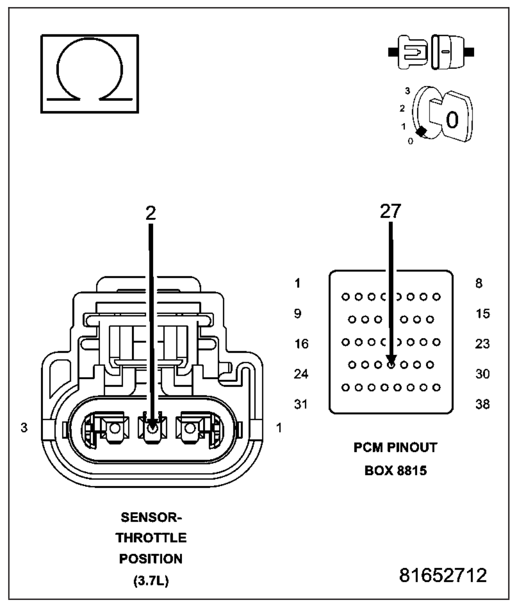
**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (F855) 5-volt Supply circuit and the (K22) TP Sensor No.1 Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. (K900) SENSOR GROUND CIRCUIT OPEN

Measure the resistance of the (K900) Sensor ground circuit from the TP Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K900) Sensor ground circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 8. THROTTLE POSITION SENSOR SWEEP

With a scan tool, monitor the Throttle Position Sensor voltage.

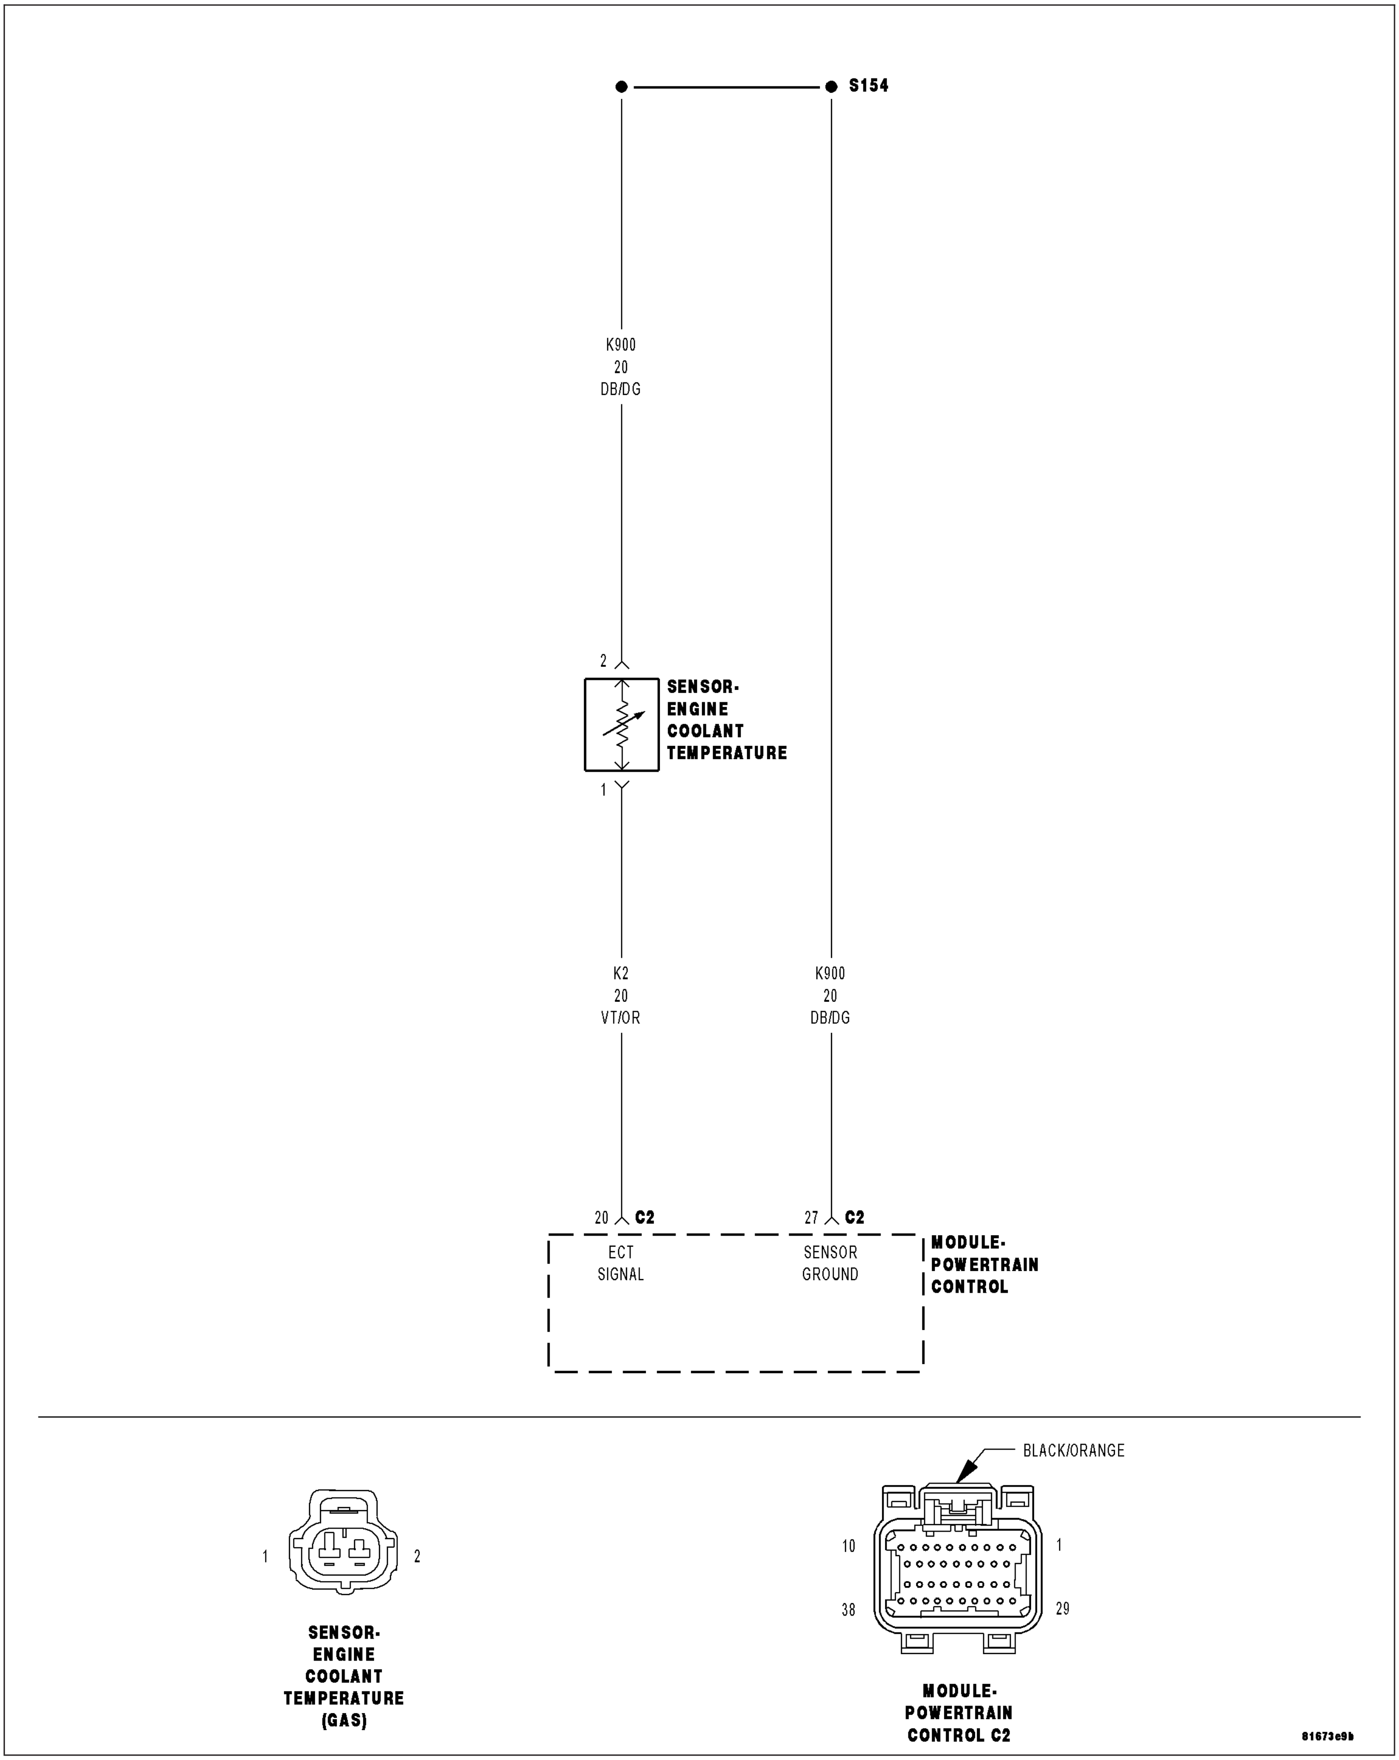
Slowly open the throttle from the idle position to the wide open throttle position.

**Does voltage start at approximately 0.8 of a volt and go above 3.5 volts with a smooth transition?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace the Throttle Position Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

# P0125-INSUFFICIENT COOLANT TEMP FOR CLOSED-LOOP FUEL CONTROL



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The engine coolant temperature sensor is a negative temperature coefficient thermistor-type sensor whose resistance varies inversely with temperature. At cold temperatures the sensor resistance is high so the voltage is high. As the coolant temperature increases the resistance decreases and the voltage becomes low. The INSUFFICIENT COOLANT TEMP FOR CLOSED-LOOP FUEL CONTROL determines if the engine coolant temperature will reach the closed loop fueling control temperature limit in a regulated time after start.

- **When Monitored:**
  With battery voltage greater than 10.4 volts and after engine is started.
- **Set Condition:**
  The engine temperature does not go above -10°C (15°F). Failure time depends on start-up coolant temperature and ambient temperature. (i.e. 2 minutes for a start temp of -10°C (15°F) or up to 10 minutes for a vehicle with a start-up temp of -28°C (5°F). Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
| --- |
| LOW COOLANT LEVEL |
| THERMOSTAT |
| ECT SENSOR |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. CHECKING COOLANT LEVEL AND CONDITION

Ignition on, engine not running.

With a scan tool, read DTCs.

**NOTE: If a Engine Coolant Temperature (ECT) DTC is set along with this code, diagnose the ECT DTC first.**

**NOTE: Inspect the ECT terminals and related PCM terminals. Make sure the terminals are free from corrosion and damage.**

**NOTE: The best way to diagnose this DTC is to allow the vehicle to sit overnight outside in order to have a totally cold soaked engine.**

**NOTE: Extremely cold outside ambient temperatures may have caused this DTC to set.**

**WARNING: Never open the cooling system when the engine is hot. The system is under pressure. Extreme burns or scalding may result. Failure to follow these instructions can result in personal injury or death. Allow the engine to cool before opening the cooling system.**

Inspect the coolant system for proper level and condition.

**Is the coolant level and condition OK?**

**Yes** >> Go To 2

**No** >> Inspect the vehicle for a coolant leak, make the appropriate repairs, and add the correct amount of coolant.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 2. THERMOSTAT OPERATION

**NOTE: This test works best if performed on a cold engine (cold soak)**

Ignition on, engine not running.

With a scan tool, read the Eng Coolant Tmp Deg value. If the engine was allowed to sit overnight (cold soak), the temperature value should be a sensible value that is somewhere close to the ambient temperature.

**NOTE: If engine coolant temperature is above 82°C (180°F), allow the engine to cool until 65°C (150°F) is reached.**

Start the Engine.

During engine warm-up monitor the Eng Coolant Tmp Deg value. The temp deg value change should be a smooth transition from start up to normal operating temp 82°C (180°F). Also monitor the actual coolant temperature with a thermometer.

**NOTE: As the engine warms up to operating temperature, the actual coolant temperature (thermometer reading) and the scan tool Eng Coolant Tmp Deg values should stay relatively close to each other.**

Using the appropriate service information, determine the proper opening temperature of the thermostat.

**Did the thermostat open at the proper temperature?**

**Yes** >> Go To 3

**No** >> Replace the thermostat.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. ECT SENSOR OPERATION

Ignition on, engine not running.

With a scan tool, read the Eng Coolant Tmp Deg value. If the engine was allowed to sit overnight (cold soak), the temperature value should be a sensible value that is somewhere close to the ambient temperature.

**NOTE: If engine coolant temperature is above 82°C (180°F), allow the engine to cool until 65°C (150°F) is reached.**

Start the Engine.

During engine warm-up monitor the Eng Coolant Tmp Deg value. The temp deg value change should be a smooth transition from start up to normal operating temp 82°C (180°F). Also monitor the actual coolant temperature with a thermometer.

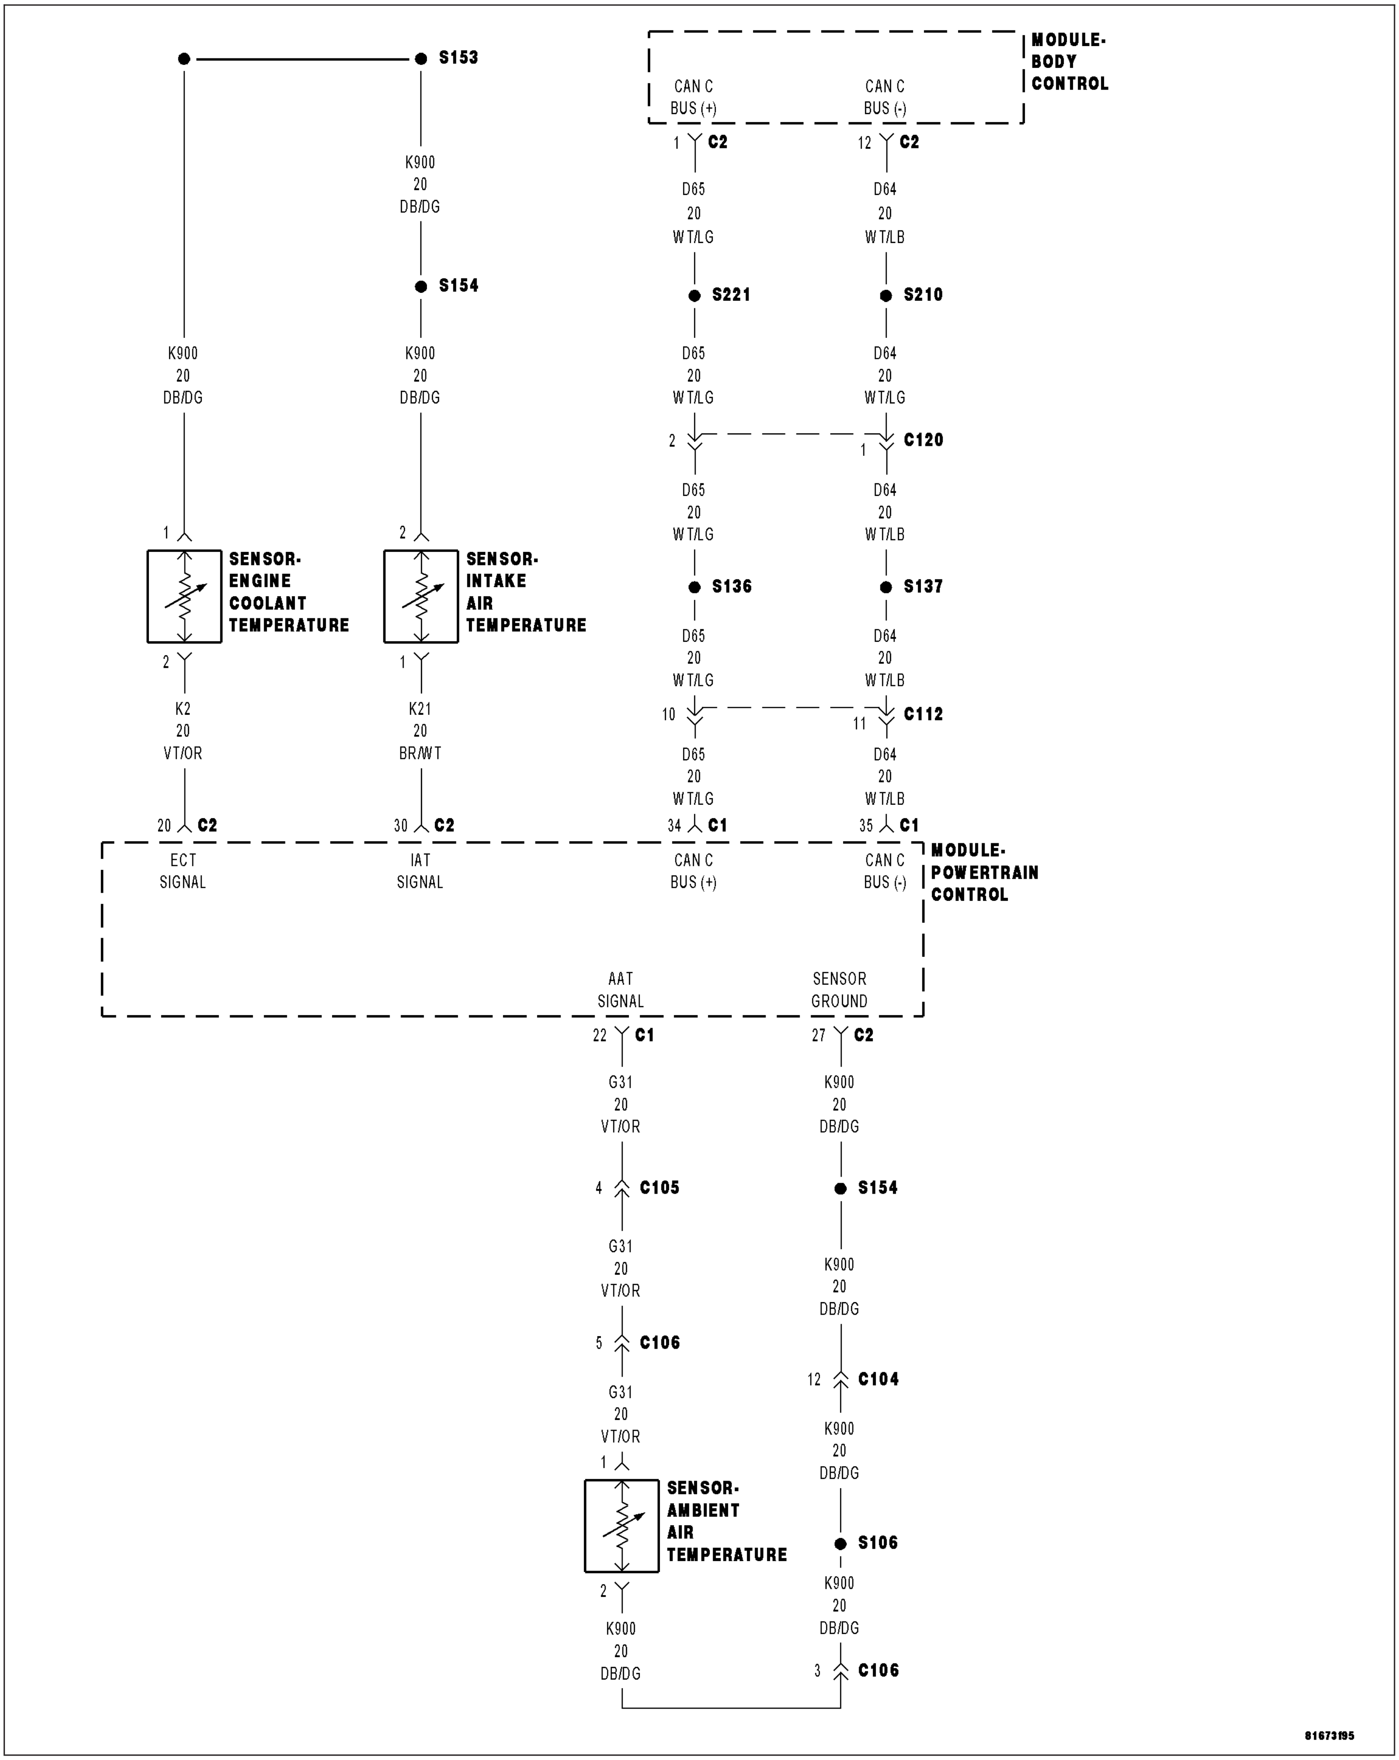
**NOTE: As the engine warms up to operating temperature, the actual coolant temperature (thermometer reading) and the scan tools Eng Coolant Tmp Deg value should stay relatively close to each other.**

**Is the thermometer reading relatively close to the scan tool ECT reading?**

**Yes** >> Test Complete.

**No** >> Replace the Engine Coolant Temperature Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0128-THERMOSTAT RATIONALITY



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The PCM predicts what the engine coolant temperature should be, based on the engine coolant temperature at start-up, ambient temperature and how the vehicle is subsequently driven. The predicted engine coolant temperature is compared to the Engine Coolant Temperature Sensor reading. The error between the two is calculated and integrated with respect to time. When the Thermostat diagnostic runs, the integrated error is compared to a calibrated threshold and pass/fail is determined. Separate pass and fail thresholds are used in order to improve accuracy of the diagnostic.

- **When Monitored:**
  Engine running.
- **Set Condition:**
  The PCM predicts a coolant temperature value that it will compare to the actual coolant temperature. A significant difference results in an error. Two Trip Fault. Three good trips to turn off the MILD.

| Possible Causes |
|---|
| LOW COOLANT LEVEL |
| THERMOSTAT OPERATION |
| SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| TEMPERATURE SENSOR |
| SIGNAL CIRCUIT OPEN |
| SENSOR GROUND CIRCUIT OPEN |
| SIGNAL CIRCUIT SHORTED TO GROUND |
| SIGNAL CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT |
| OTHER POSSIBLE CAUSES |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: If any ECT, AAT, CRANK, or CAM sensor DTC's have set along with P0128, diagnose them before continuing.**

**NOTE: Make sure that the Pinion Factor has been programmed correctly into the PCM.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 2. LOW COOLANT LEVEL

**NOTE: If a Engine Coolant Temperature (ECT) DTC is set along with this code, diagnose the ECT DTC first.**

**NOTE: Inspect the ECT terminals and related PCM terminals. Make sure the terminals are free from corrosion and damage.**

**NOTE: The best way to diagnose this DTC is to allow the vehicle to sit overnight outside in order to have a totally cold soaked engine.**

**NOTE: Extremely cold outside ambient temperatures may have caused this DTC to set.**

**WARNING: Never open the cooling system when the engine is hot. The system is under pressure. Failure to follow these instructions can result in personal injury including extreme burns, scalding, or death. Allow the engine to cool before opening the cooling system.**

Check the coolant system to make sure that the coolant is in good condition and at the proper level.

**Is the coolant level and condition OK?**

**Yes** >> Go To 3

**No** >> Inspect the vehicle for a coolant leak and add the necessary amount of coolant.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. THERMOSTAT OPERATION

**NOTE: This test works best if performed on a cold engine (cold soak).**

Ignition on, engine not running.

With a scan tool, read the ECT Deg value. If the engine was allowed to sit overnight (cold soak), the temperature value should be a sensible value that is somewhere close to the ambient temperature.

**NOTE: If engine coolant temperature is above 82°C (180°F), allow the engine to cool until 65°C (150°F) is reached.**

Start the Engine.

During engine warm-up, monitor the ECT Deg value. The temp deg value change should be a smooth transition from start up to normal operating temp 82°C (180°F). Also monitor the actual coolant temperature with a thermometer.

**NOTE: As the engine warms up to operating temperature, the actual coolant temperature (thermometer reading) and the scan tool, ECT Temperature value should stay relatively close to each other.**

Using the appropriate service information, determine the proper opening temperature of the thermostat.

**Did the thermostat open at the proper temperature?**

**Yes** >> Go To 4

**No** >> Replace the thermostat.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. AMBIENT AIR TEMP SENSOR OPERATION

Ignition on, engine not running.

With a scan tool, read and record the AAT Sensor Temperature value.

Using the DRB Temperature Probe #CH7050, or an equivalent temperature measuring tool, measure the ambient air temperature near the AAT Sensor.

**Is the AAT Sensor value with -15°C (5°F) of the temperature probe reading?**

**Yes** >> Go To 5

**No** >> Go To 7

## 5. ECT SENSOR OPERATION

**WARNING: Make sure the engine cooling system is cool before removing the pressure cap or any hose. The cooling system is pressurized when hot. Failure to follow these instructions can result in personal injury including extreme burns, scalding, or death.**

With a scan tool, read and record the ECT Sensor Temperature value.

Use the DRB Temperature Probe #CH7050, or an equivalent temperature measuring tool, measure the engine coolant temperature.

**Is the ECT Sensor value with -15°C (5°F) of the temperature probe reading?**

**Yes** >> Go To 6

**No** >> Go To 7

## 6. OTHER POSSIBLE CAUSES

Inspect the Temperature Sensors for any physical damage.

Inspect the engine coolant. Make sure the coolant is at the proper level. Refer to the Service Information COOLING.

Make sure the Temperature Sensors are properly installed.

Make sure the CMP and CKP sensors are installed properly. Check the connectors for any signs of damage.

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

Refer to any Technical Service Bulletins (TSBs) that may apply.

With the engine running at normal operating temperature, monitor the Temperature sensor parameters while wiggling the wire harness. Look for parameter values to change.

Visually inspect the related wire harness. Look for any chafed, pierced, pinched, partially broken wires and broken, bent, pushed out, or corroded terminals.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Inspect and clean all PCM, engine, and chassis grounds.

**Were any problems found during the above inspections?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Test Complete.

## 7. SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

**NOTE: Visually inspect both the component and the PCM connectors. Look for damage, partially broken wires and backed out or corroded terminals**

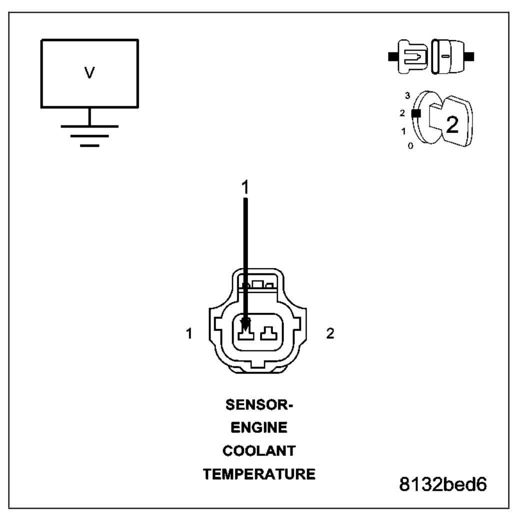
Turn the ignition off.

Disconnect the applicable Temperature Sensor harness connector.

Disconnect the C2 PCM harness connector.

Disconnect the C2 BCM harness connector if the vehicle is equipped with the Electronic Stability Program (ESP).

Ignition on, engine not running.

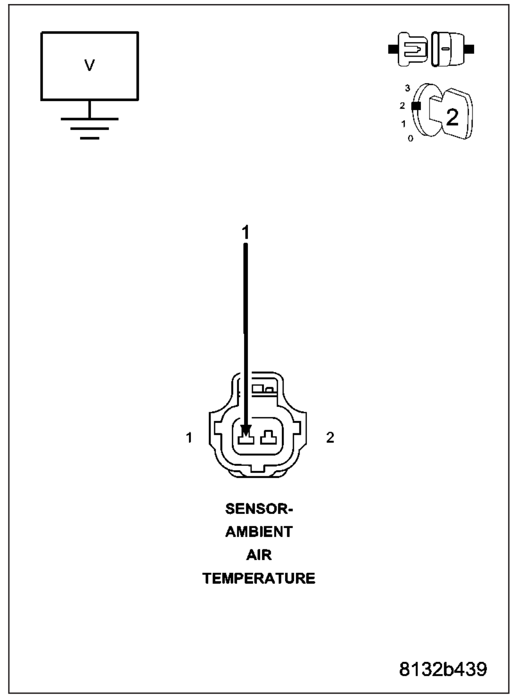


Measure the voltage on the (K2) ECT Signal circuit and the (G31) AAT Signal circuit at the appropriate Temperature Sensor harness connector.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8



## 8. TEMPERATURE SENSOR

Turn the ignition off.

Connect the C2 PCM harness connector.

Connect the C2 BCM harness connector if the vehicle is equipped with ESP.

Connect a jumper wire across the ECT and AAT Sensor harness connectors.

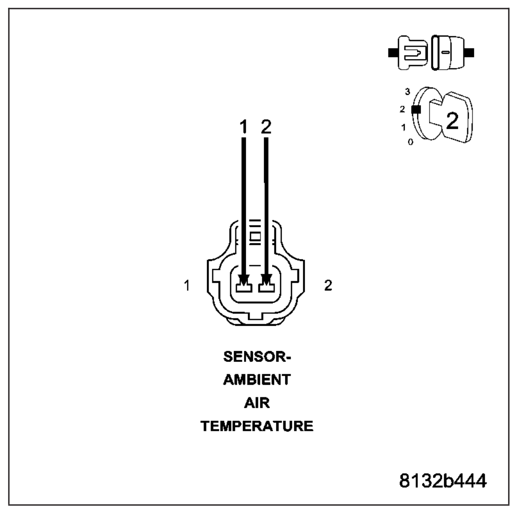
Ignition on, engine not running.

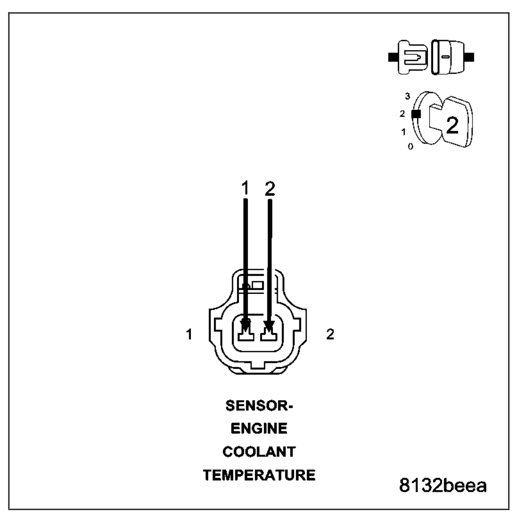
With a scan tool, read the Temperature Sensor voltage.

**Does the voltage start at 5.0 volts and drop below 1.0 volt when the jumper wire is installed?**

**Yes** >> Replace the appropriate Temperature Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 9





**NOTE: Disconnect the jumper wire before continuing.**

## 9. SIGNAL CIRCUIT OPEN

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K2) ECT Sensor Signal circuit from the ECT Sensor harness connector to the appropriate terminal of special tool #8815.

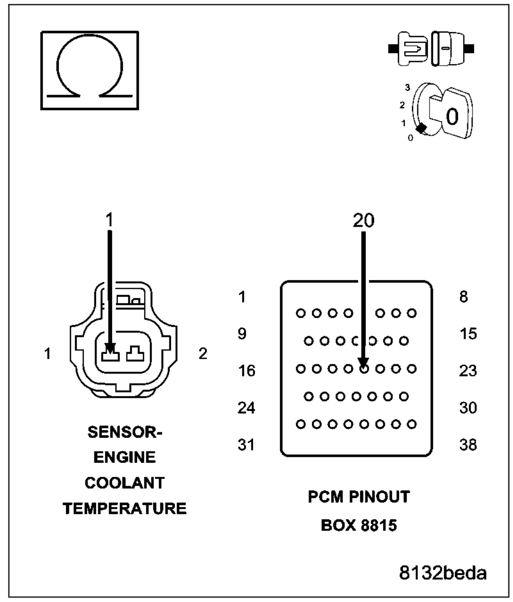
Measure the resistance of the (G31) AAT Sensor Signal circuit from the AAT Sensor harness connector to the appropriate terminal of special tool #8815.

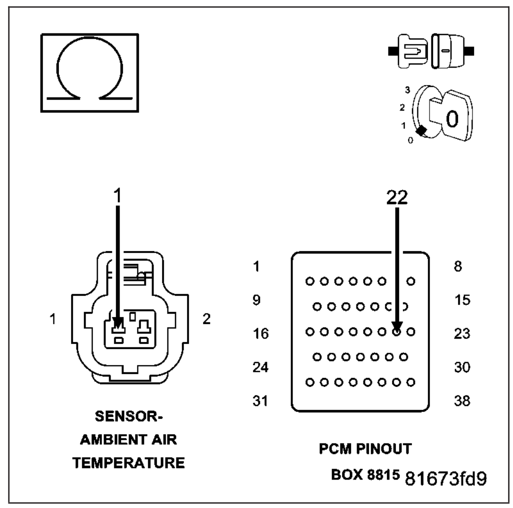
**Is the resistance below 5.0 ohms?**

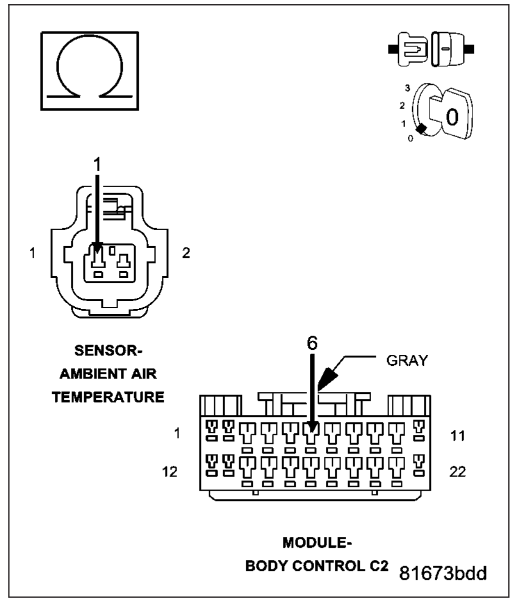
**Yes** >> Go To 10

**No** >> Repair the open in the Sensor Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)







## 10. SENSOR GROUND CIRCUIT OPEN

Measure the resistance of the (K900) Sensor ground circuit from the appropriate Temperature Sensor harness connector to the appropriate terminal of special tool #8815.

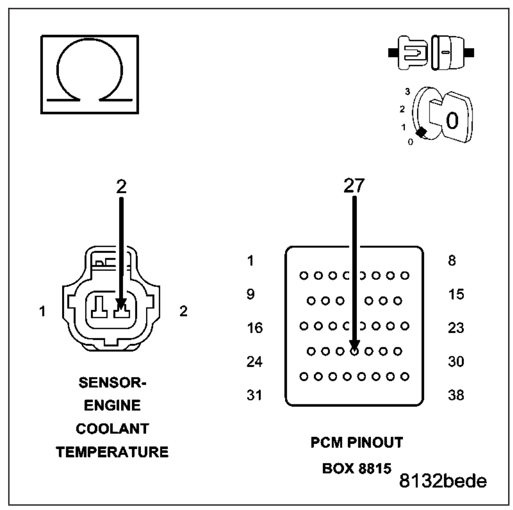
Measure the resistance of the (K300) Sensor ground circuit from AAT Sensor harness connector to the C2 BCM harness connector for ESP equipped vehicles.

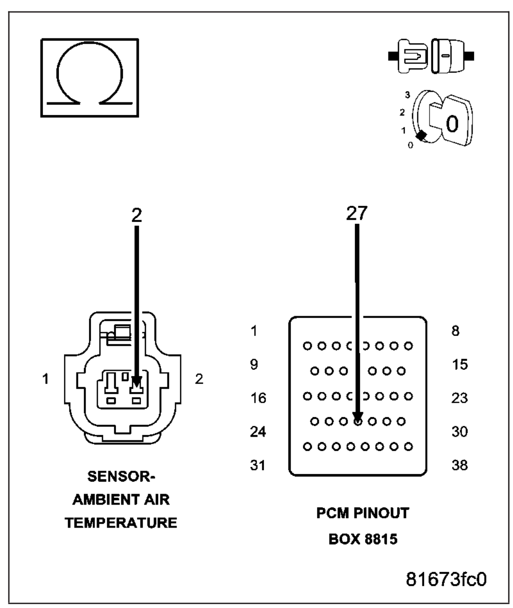
**Is the resistance below 5.0 ohms?**

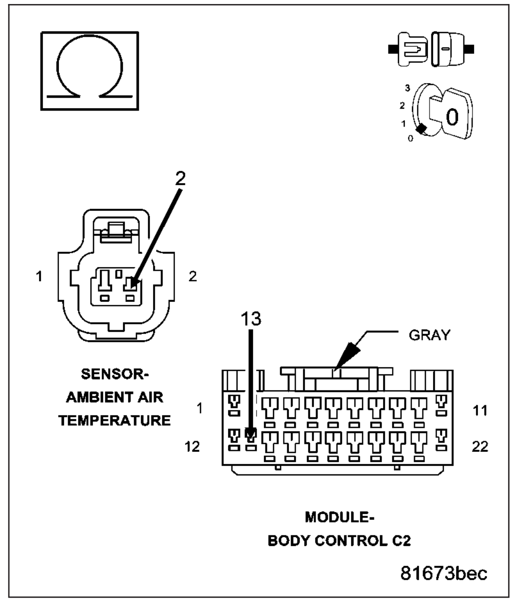
**Yes** >> Go To 11

**No** >> Repair the open in the Sensor ground circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)







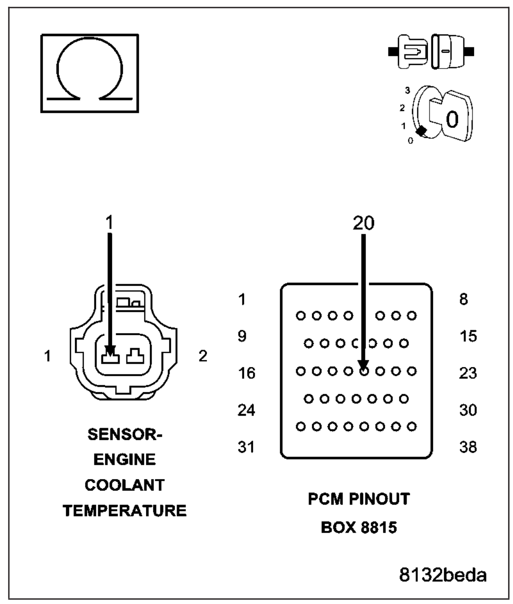
## 11. SIGNAL CIRCUIT SHORTED TO GROUND

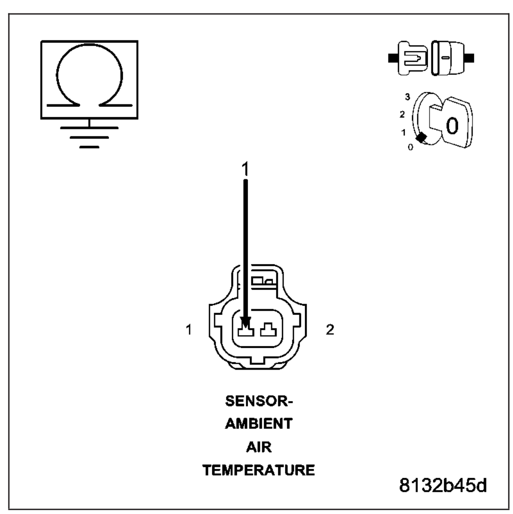
Measure the resistance between ground and the Sensor Signal circuit in the Temperature Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 12





## 12. SIGNAL CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT

Measure the resistance between the Signal circuit and the (K900) Sensor ground circuit in the (K2) ECT Sensor harness connector.

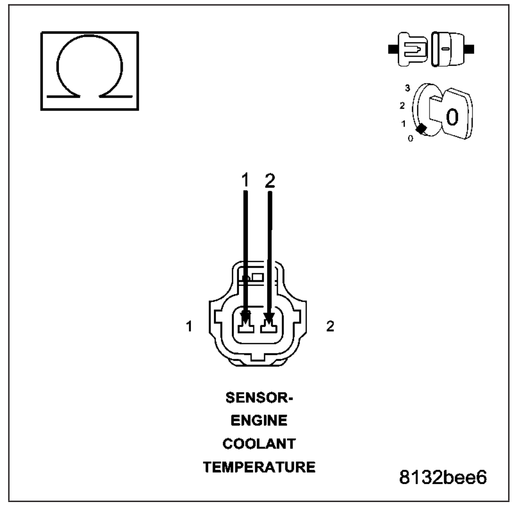
Measure the resistance between the Signal circuit and the Sensor ground circuit in the (G31) AAT Sensor harness connector.

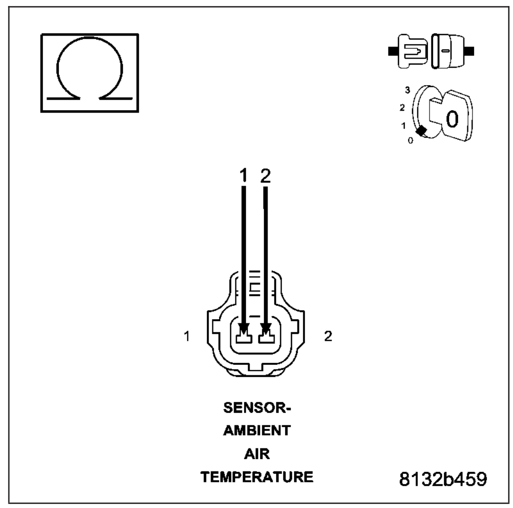
**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the Sensor ground circuit and the Sensor Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 13





## 13. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

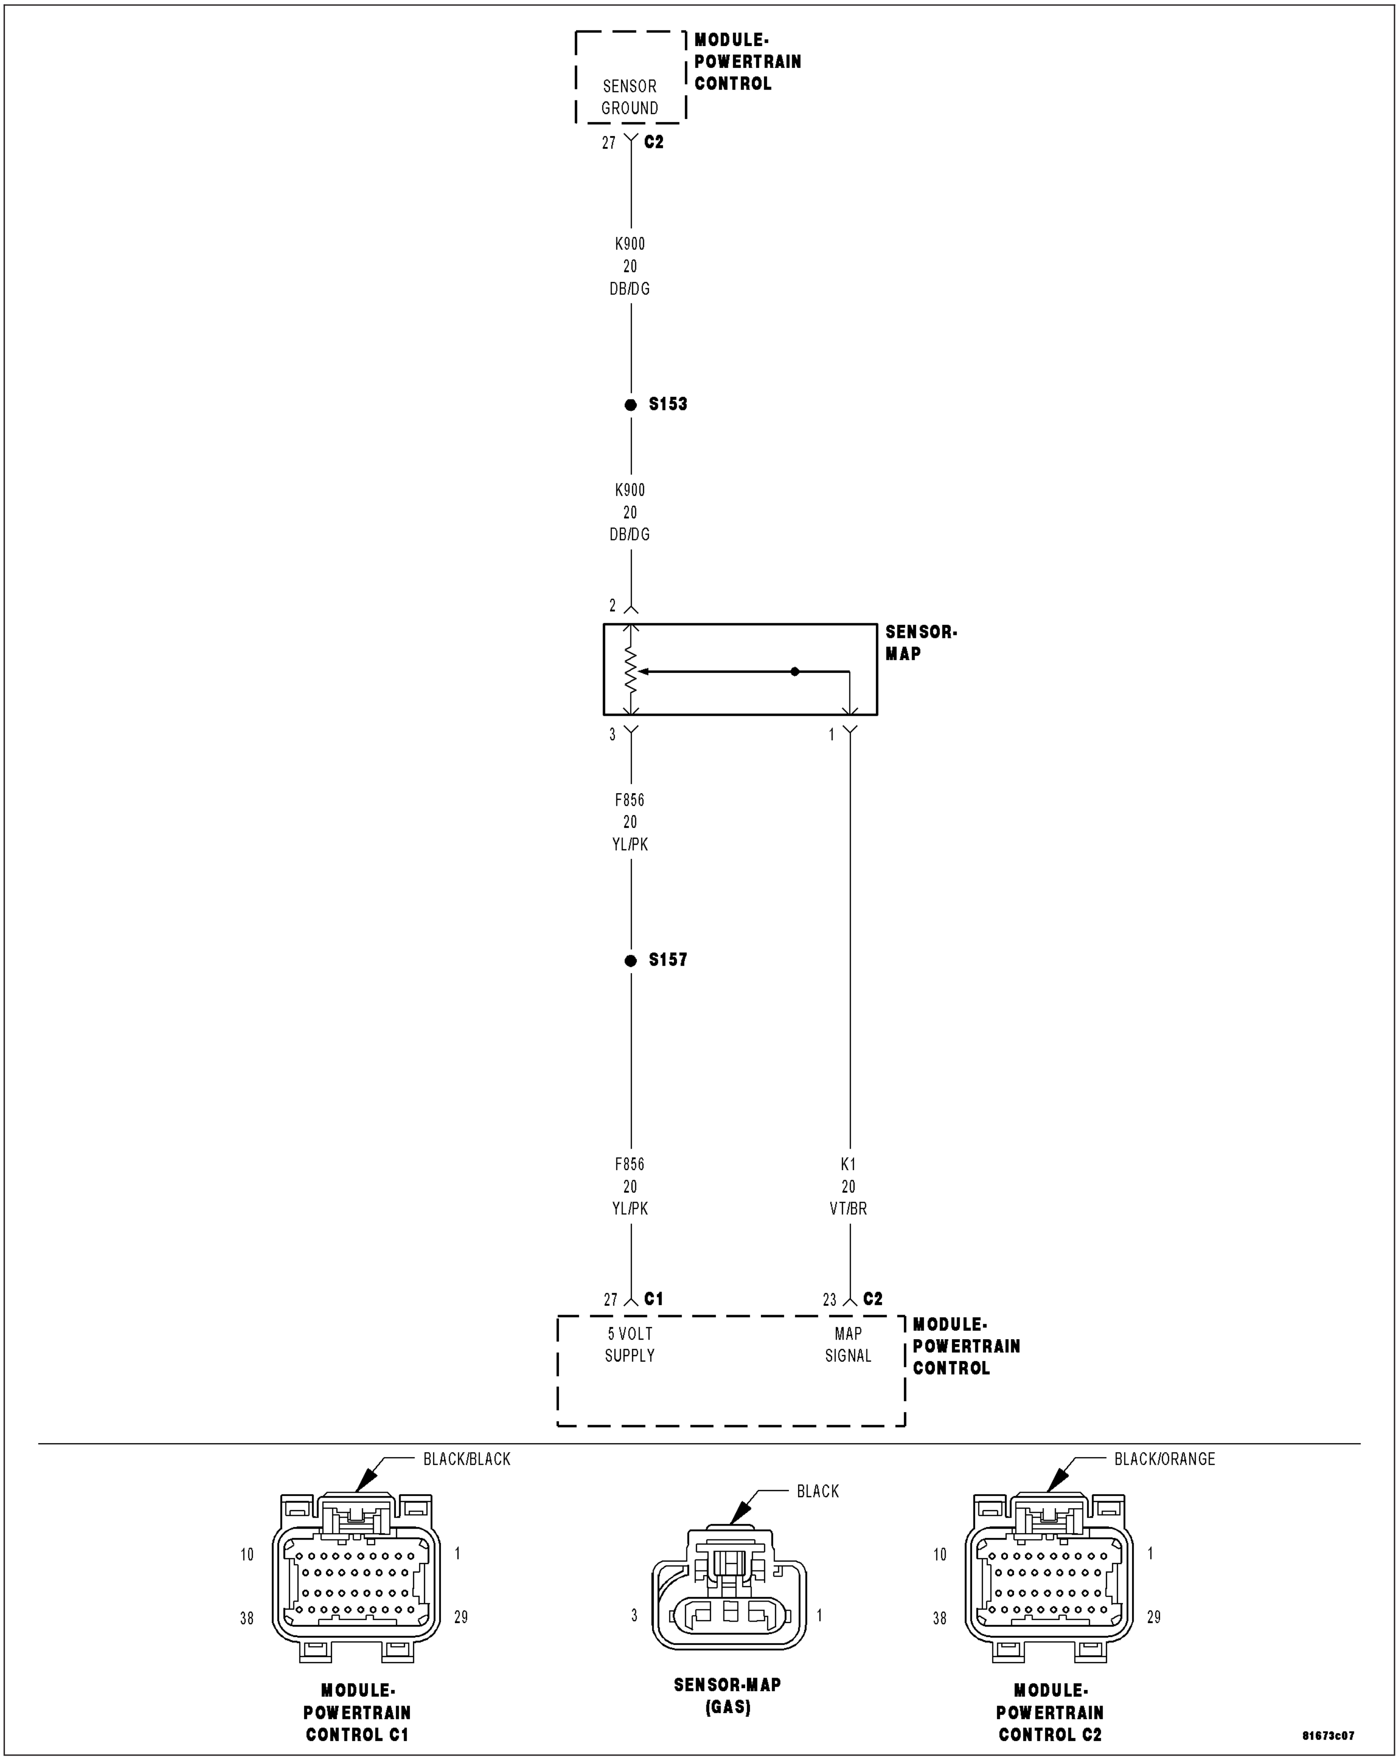
**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0129-BAROMETRIC PRESSURE OUT-OF-RANGE LOW



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the ignition key on. No Cam or Crank signal within 75 ms. Engine speed less than 250 RPM.
- **Set Condition:**
  The PCM senses the voltage from the MAP sensor to be less than 2.2 volts but above 0.04 of a volt for 300 milliseconds. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (F856) 5-VOLT SUPPLY CIRCUIT OPEN |
| (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| (K1) MAP SIGNAL CIRCUIT OPEN |
| (K1) MAP SIGNAL CIRCUIT SHORTED TO GROUND |
| (K1) MAP SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT |
| MAP SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time.**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

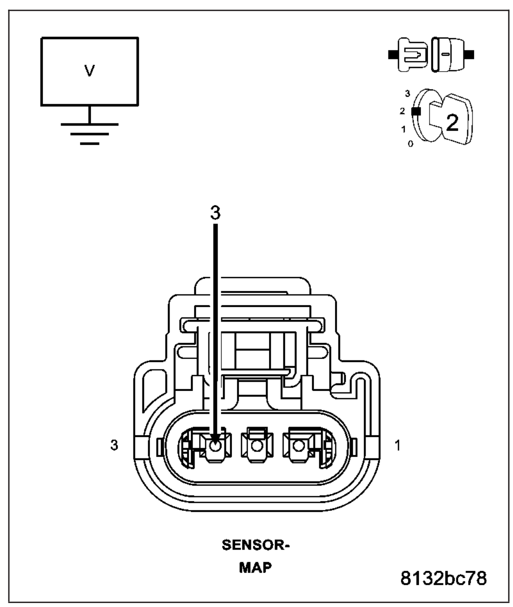
### 2. (F856) 5-VOLT SUPPLY CIRCUIT

Turn the ignition off.

Disconnect the MAP Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F856) 5-volt Supply circuit in the MAP Sensor harness connector.



**Is the voltage between 4.5 to 5.2 volts?**

**Yes** >> Go To 3

**No** >> Go To 7

## 3. MAP SENSOR

With a scan tool, monitor the MAP Sensor voltage with the Sensor harness connector disconnected.

**Is the voltage above 2.2 volts?**

**Yes** >> Replace the MAP Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

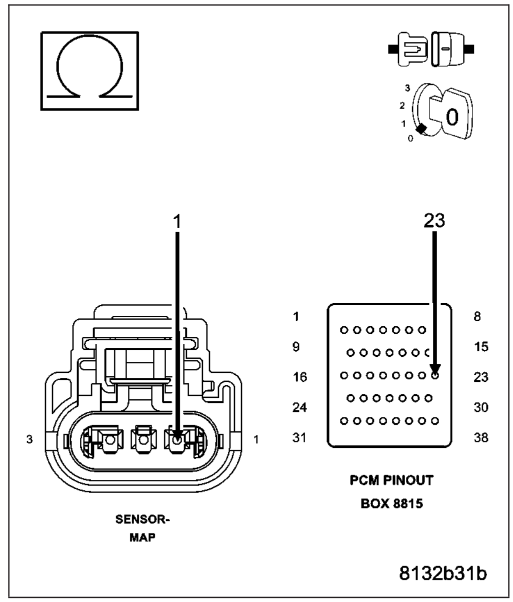
## 4. (K1) MAP SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K1) MAP Signal circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.



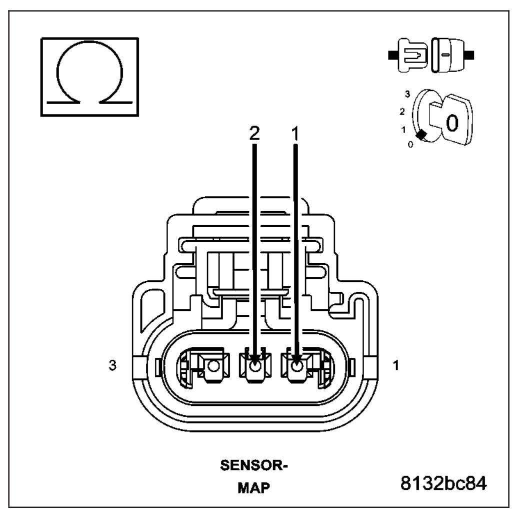
**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K1) MAP Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. (K1) MAP SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT

Measure the resistance between the (K900) Sensor ground circuit and the (K1) MAP Signal circuit in the MAP Sensor harness connector.



**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K900) Sensor ground circuit and the (K1) MAP Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

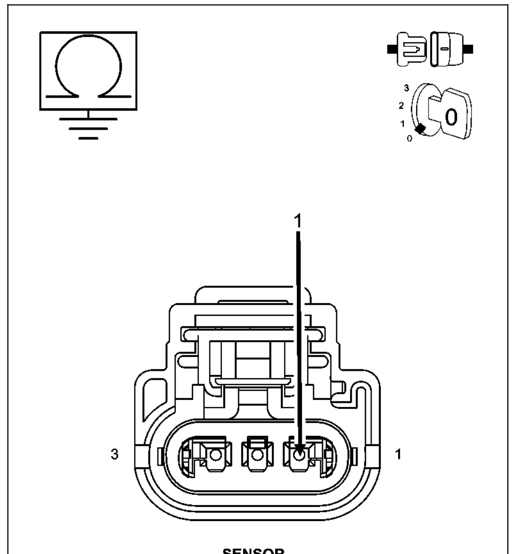
## 6. (K1) MAP SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K1) MAP Signal circuit in the MAP Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K1) MAP Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 10



8132b323

## 7. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the C1 PCM harness connector.

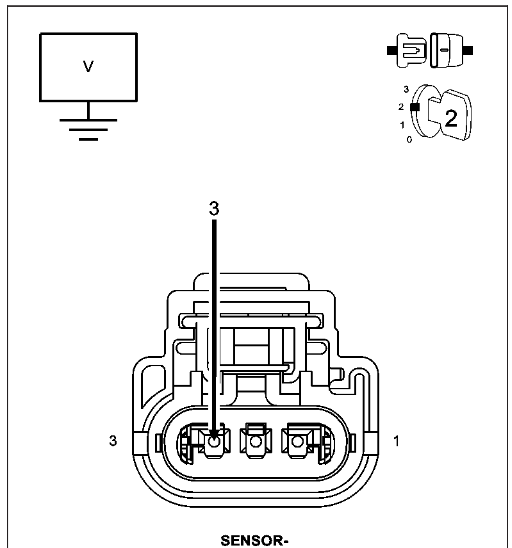
Ignition on, engine not running.

Measure the voltage on the (F856) 5-volt Supply circuit in the MAP Sensor harness connector.

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (F856) 5-volt Supply circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8



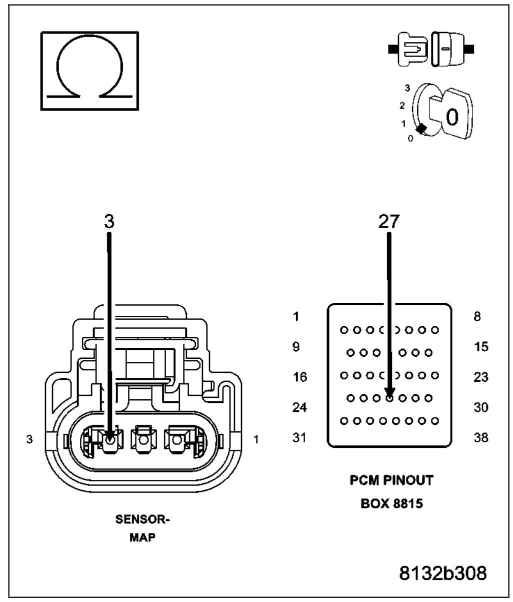
8132bc78

## 8. (F856) 5-VOLT SUPPLY CIRCUIT OPEN

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F856) 5-volt Supply circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

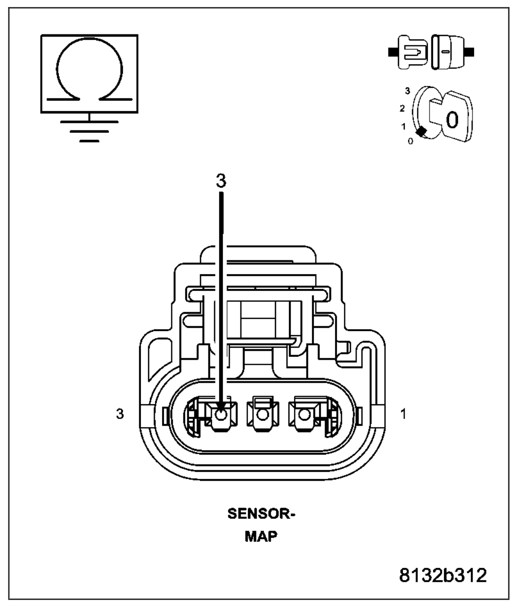
**Yes** >> Go To 9

**No** >> Repair the open in the (F856) 5-volt Supply circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 9. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (F856) 5-volt Supply circuit in the MAP Sensor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F856) 5-volt Supply circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 10

## 10. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

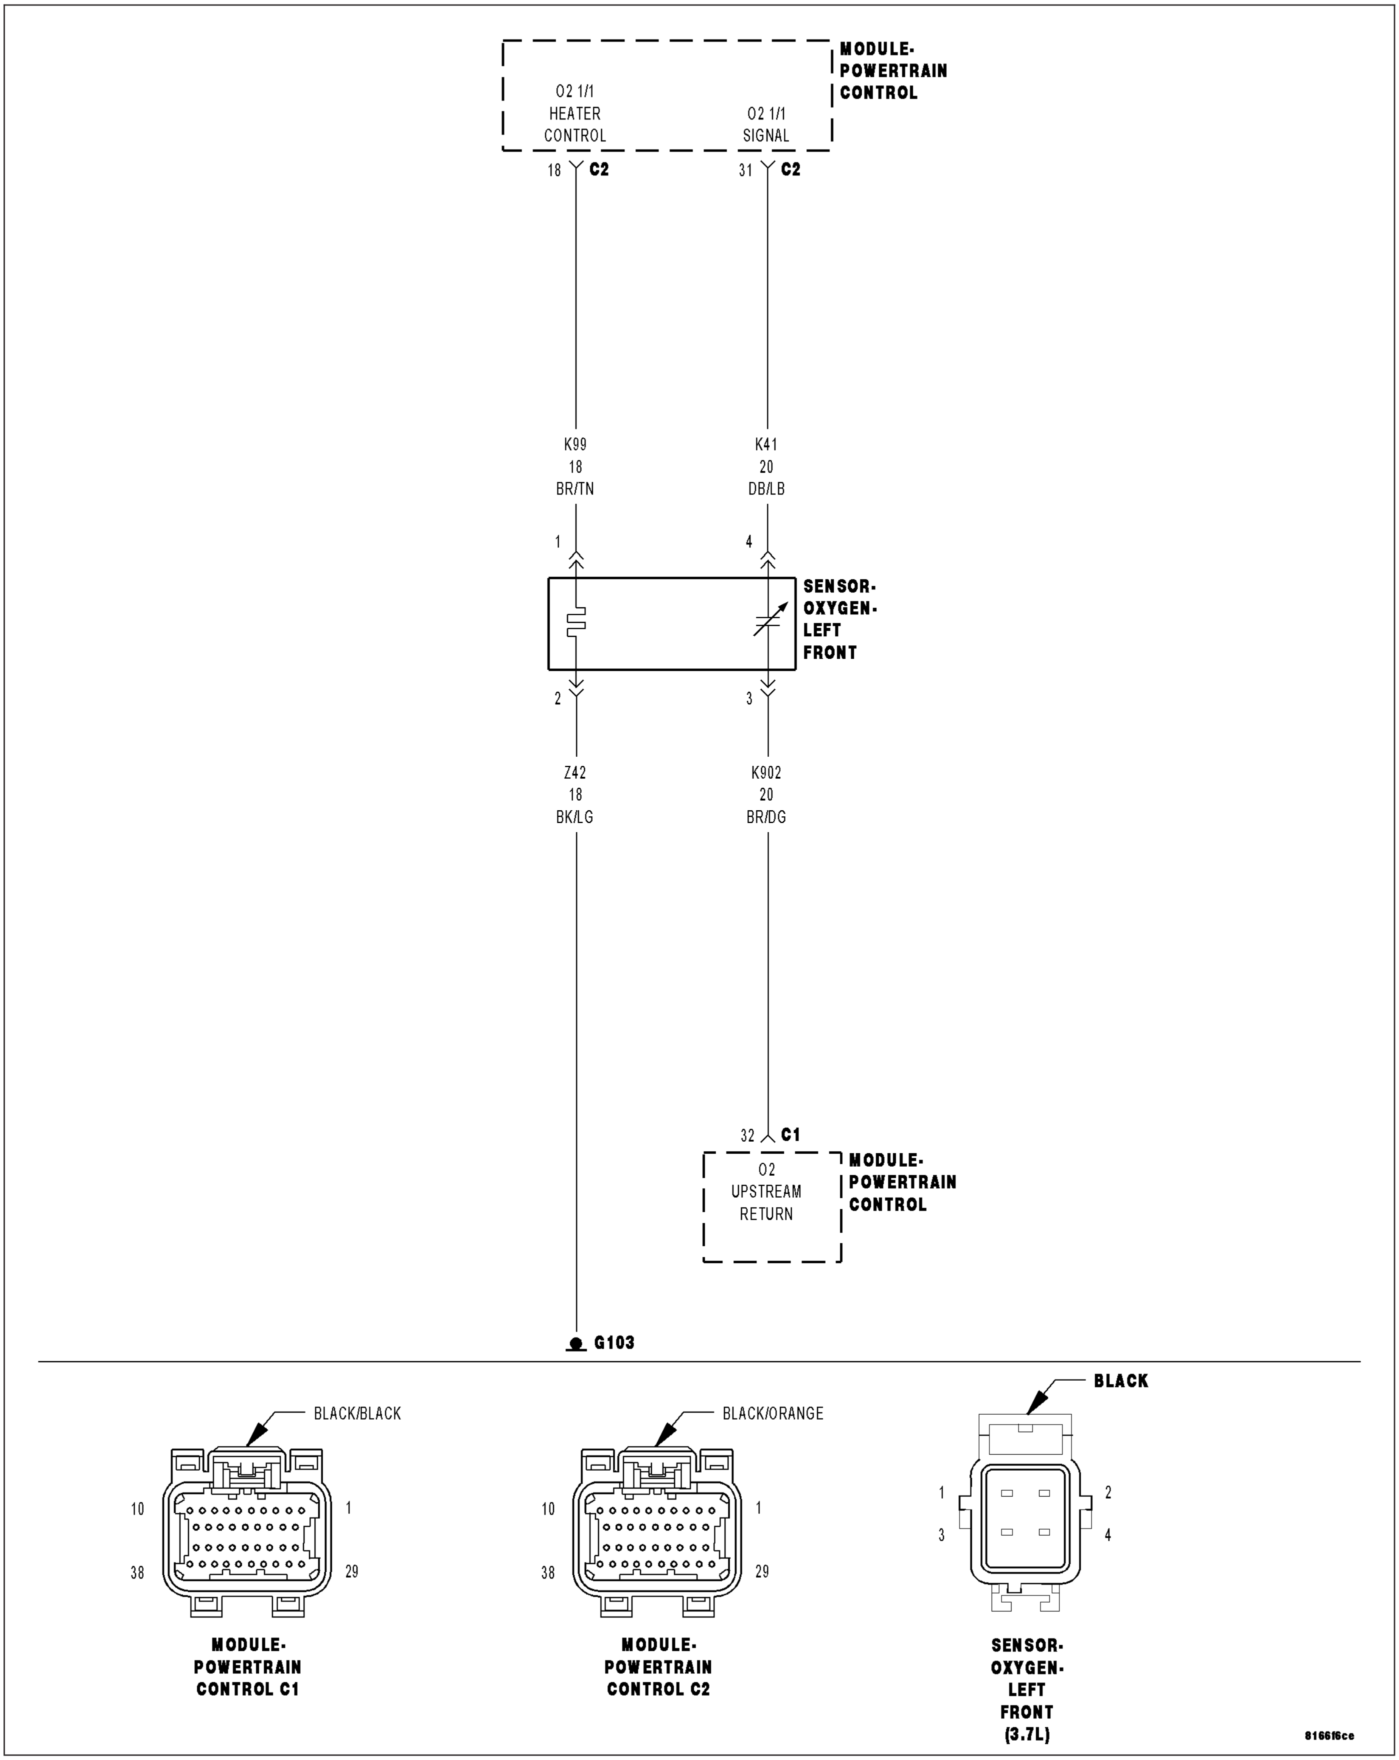
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0131-O2 SENSOR 1/1 CIRCUIT LOW



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine running for less than 30 seconds and the O2 Sensor Heater Temperature is less than 251°C (484°F) with battery voltage greater 10.4 volts.
- **Set Condition:**
  The oxygen sensor signal voltage is below 2.5196 volts for 6 seconds after starting engine. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (K902) O2 RETURN UPSTREAM CIRCUIT SHORTED TO GROUND |
| (K41) O2 1/1 SIGNAL CIRCUIT SHORTED TO GROUND |
| (K41) O2 1/1 SIGNAL CIRCUIT SHORTED TO THE (K902) O2 RETURN UPSTREAM CIRCUIT |
| (K41) O2 1/1 SIGNAL CIRCUIT SHORTED TO THE (Z42) O2 1/1 HEATER GROUND CIRCUIT |
| O2 SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. O2 SENSOR BELOW 2.52 VOLTS

Start the engine.

Allow the engine to reach normal operating temperature.

With a scan tool, read the 1/1 O2 Sensor voltage.

**Is the voltage below 2.52 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (K41) O2 SENSOR 1/1 SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the 1/1 O2 Sensor harness connector.

Ignition on, engine not running.

With a scan tool, monitor the O2 Sensor voltage.

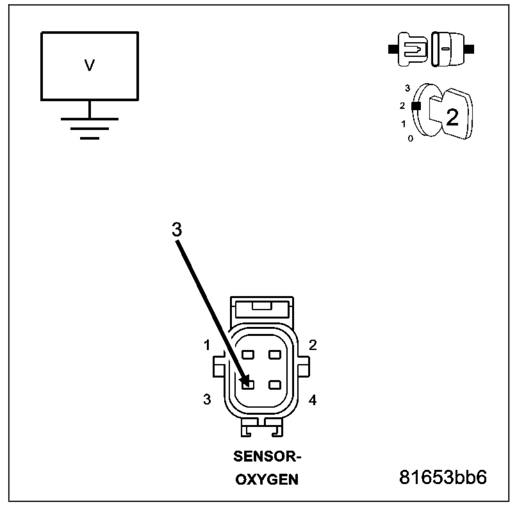
**Is the 1/1 O2 Sensor voltage above 4.8 volts?**

**Yes** >> Go To 3

**No** >> Go To 5

## 3. O2 SENSOR

Measure the voltage on the (K902) O2 Return Upstream circuit in the O2 Sensor harness connector.



**Is the voltage at 2.5 volts?**

**Yes** >> Replace the O2 Sensor.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

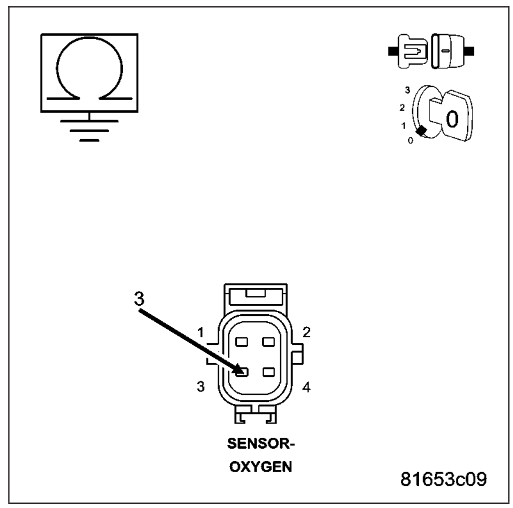
**No** >> Go To 4

## 4. (K902) O2 RETURN UPSTREAM CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C1 PCM harness connector.

Measure the resistance between ground and the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K902) O2 Return Upstream circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

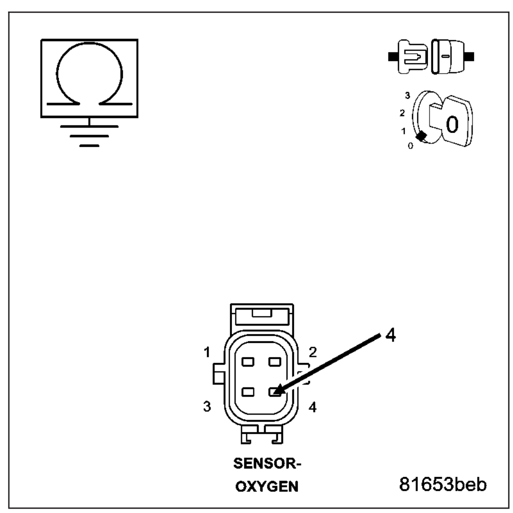
**No** >> Go To 8

## 5. (K41) O2 SENSOR 1/1 SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C1 and C2 PCM harness connectors.

Measure the resistance between ground and the (K41) O2 Sensor 1/1 Signal circuit in the O2 Sensor harness connector.



**Is the resistance below 100 ohms?**

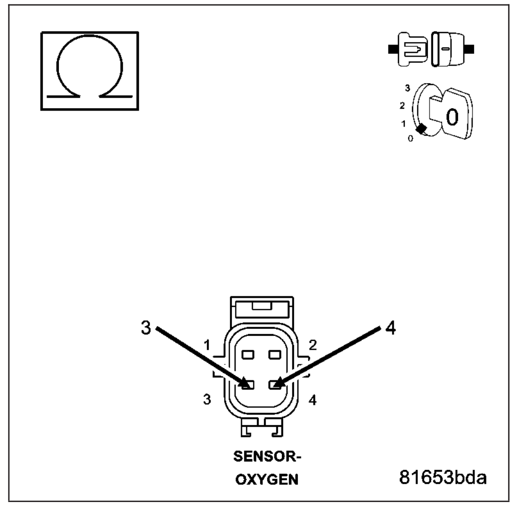
**Yes** >> Repair the short to ground in the (K41) O2 Sensor 1/1 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. (K41) O2 SENSOR 1/1 SIGNAL CIRCUIT SHORTED TO THE (K902) O2 RETURN UPSTREAM CIRCUIT

Measure the resistance between the (K41) O2 Sensor 1/1 Signal circuit and the (K902) O2 Return Upstream circuit in the O2 Sensor harness connector.



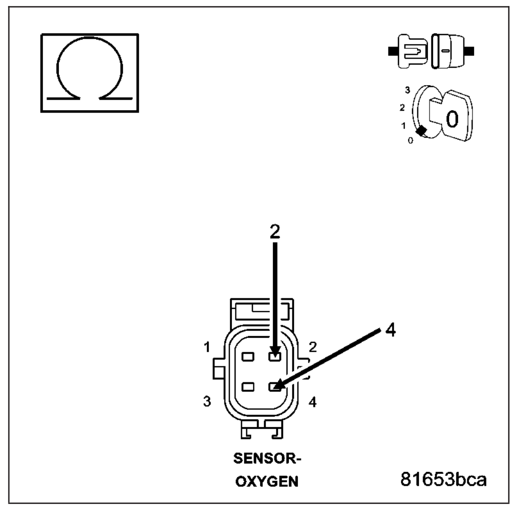
**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K902) O2 Return Upstream circuit and the (K41) O2 Sensor 1/1 Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 7. (K41) O2 SENSOR 1/1 SIGNAL CIRCUIT SHORTED TO THE (Z42) O2 1/1 HEATER GROUND CIRCUIT

Measure the resistance between the (K41) O2 Sensor 1/1 Signal circuit and the (Z42) O2 1/1 Heater ground circuit in the O2 Sensor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (Z42) O2 1/1 Heater ground circuit and the (K41) O2 Sensor 1/1 Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

## 8. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

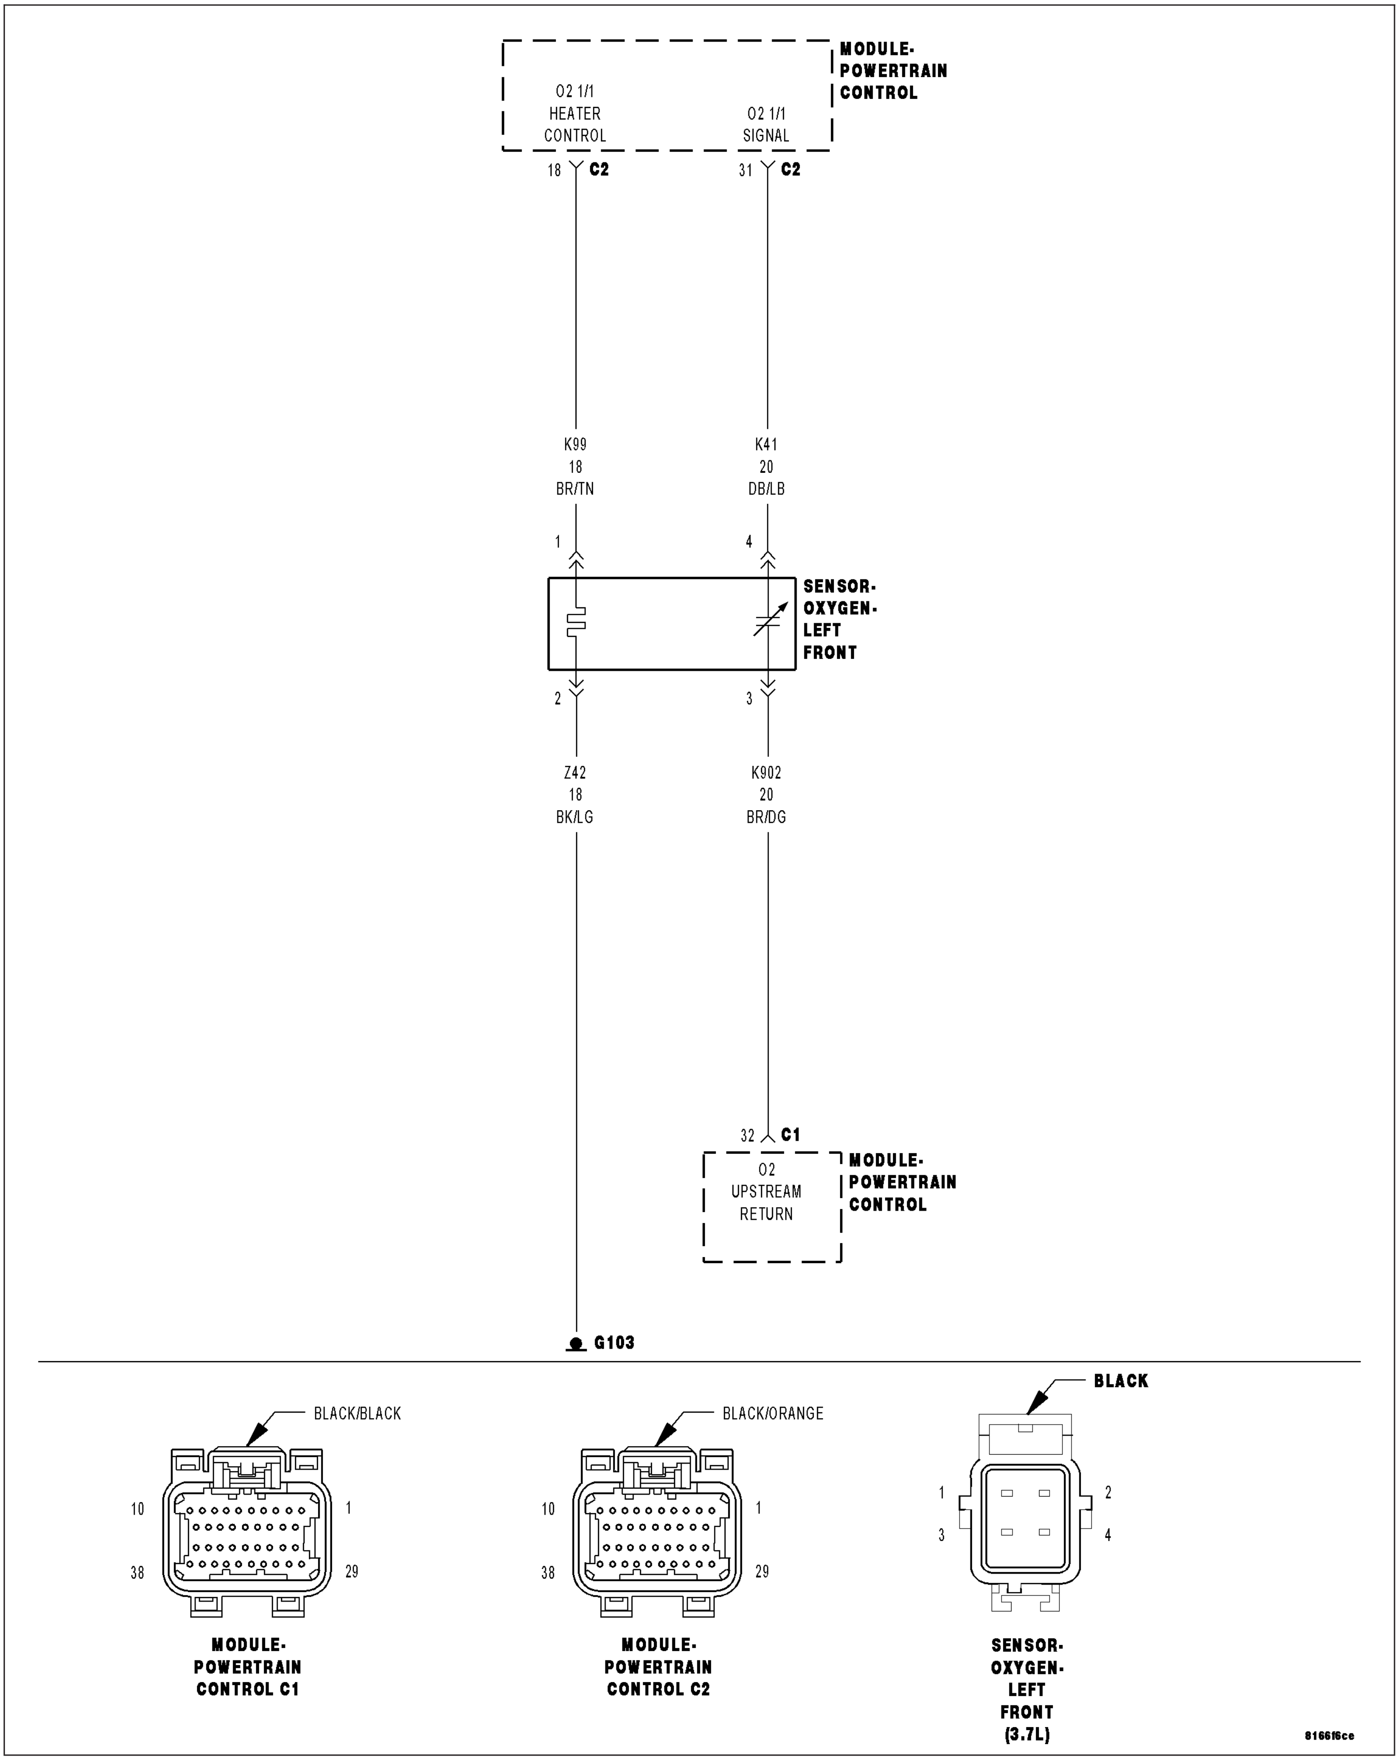
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0132-O2 SENSOR 1/1 CIRCUIT HIGH



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  O2 Sensor Heater Temperature is greater than 496°C (925°F) and battery voltage greater than 10.4 volts.
- **Set Condition:**
  The Oxygen Sensor voltage is above 3.99 volts for 40 seconds. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (K41) O2 1/1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K902) O2 UPSTREAM RETURN CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K41) O2 1/1 SIGNAL CIRCUIT OPEN |
| (K902) O2 UPSTREAM RETURN CIRCUIT OPEN |
| O2 SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. O2 SENSOR ABOVE 3.99 VOLTS

**NOTE: When only one O2 Sensor is shorted to voltage, the scan tool will display all O2 Sensor voltage readings at approximately 5.0 volts. When diagnosing this DTC, only diagnose the O2 Sensor that set the DTC.**

Start the engine.

Allow the engine to reach normal operating temperature.

With a scan tool, read the 1/1 O2 Sensor voltage.

**Is the voltage above 3.9 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (K41) O2 1/1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Start the engine and allow the engine to idle.

Disconnect the 1/1 O2 Sensor harness connector.

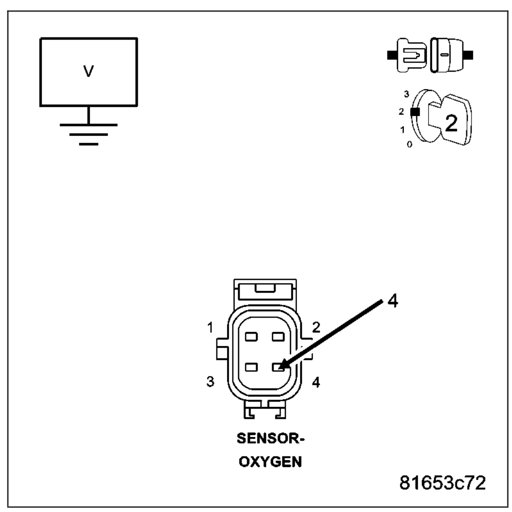
Measure the voltage on the (K41) O2 Sensor 1/1 Signal circuit in the 1/1 O2 Sensor harness connector.

**NOTE: Measure the voltage in reference to ground, not the (K902) O2 Upstream Return circuit.**

**Is the voltage above 5.2 volts?**

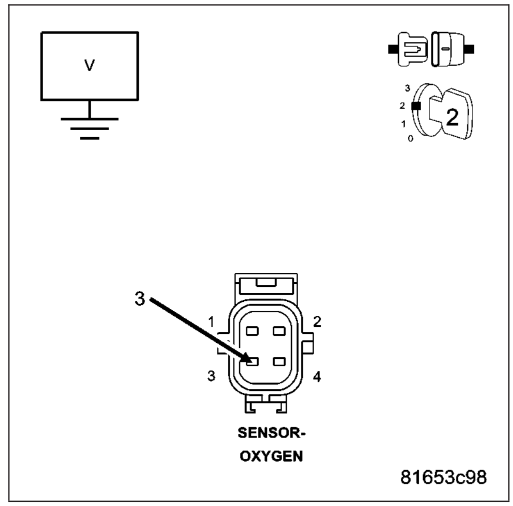
**Yes** >> Repair the short to battery voltage in the (K41) O2 Sensor 1/1 Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3



81653c72

## 3. (K902) O2 UPSTREAM RETURN CIRCUIT SHORTED TO BATTERY VOLTAGE



Turn the ignition off.

Disconnect the C1 PCM harness connector.

Ignition on, engine not running.

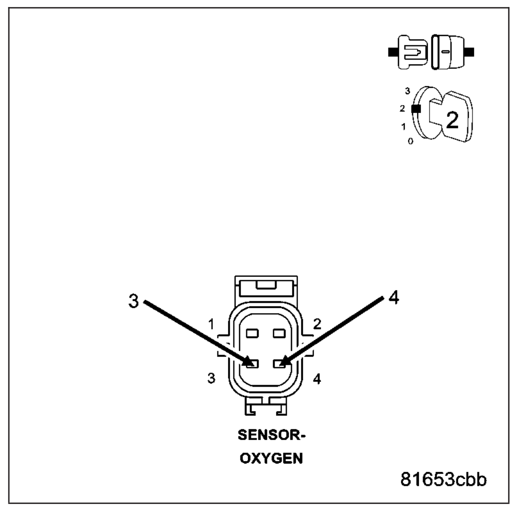
Measure the voltage on the (K902) O2 Upstream Return circuit in the 1/1 O2 Sensor harness connector.

**Is there any voltage present?**

**Yes** >> Repair the short to battery voltage in the (K902) O2 Upstream Return circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. 1/1 O2 SENSOR



Turn the ignition off.

Connect the C1 PCM harness connector.

Connect a jumper wire between the (K41) O2 1/1 Signal circuit and the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.

Ignition on, engine not running.

With a scan tool, monitor the 1/1 O2 Sensor voltage.

**Is the voltage between 2.3 and 2.7 volts with the jumper wire installed?**

**Yes** >> Replace the O2 Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

**NOTE: Remove the jumper wire before continuing.**

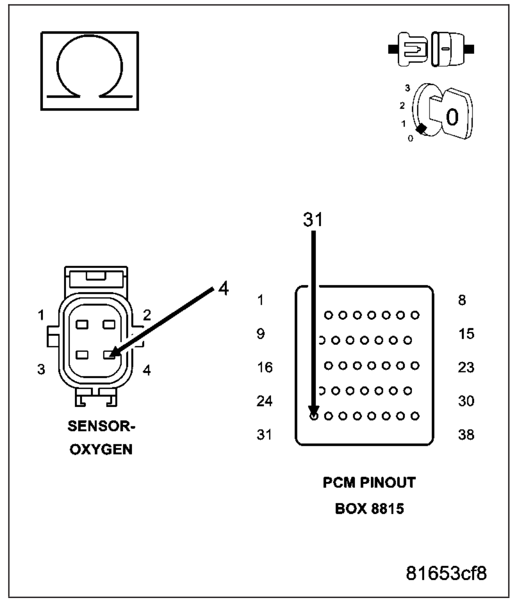
## 5. (K41) O2 1/1 SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the C1 and C2 PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K41) O2 1/1 Signal circuit from the 1/1 O2 Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

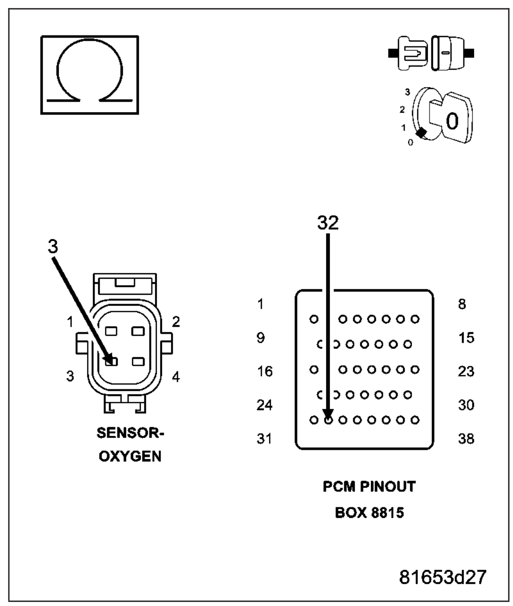
**Yes** >> Go To 6

**No** >> Repair the open in the (K41) O2 1/1 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. (K902) O2 UPSTREAM RETURN CIRCUIT OPEN

Measure the resistance of the (K902) O2 Upstream Return circuit from the O2 Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K902) O2 Upstream Return circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

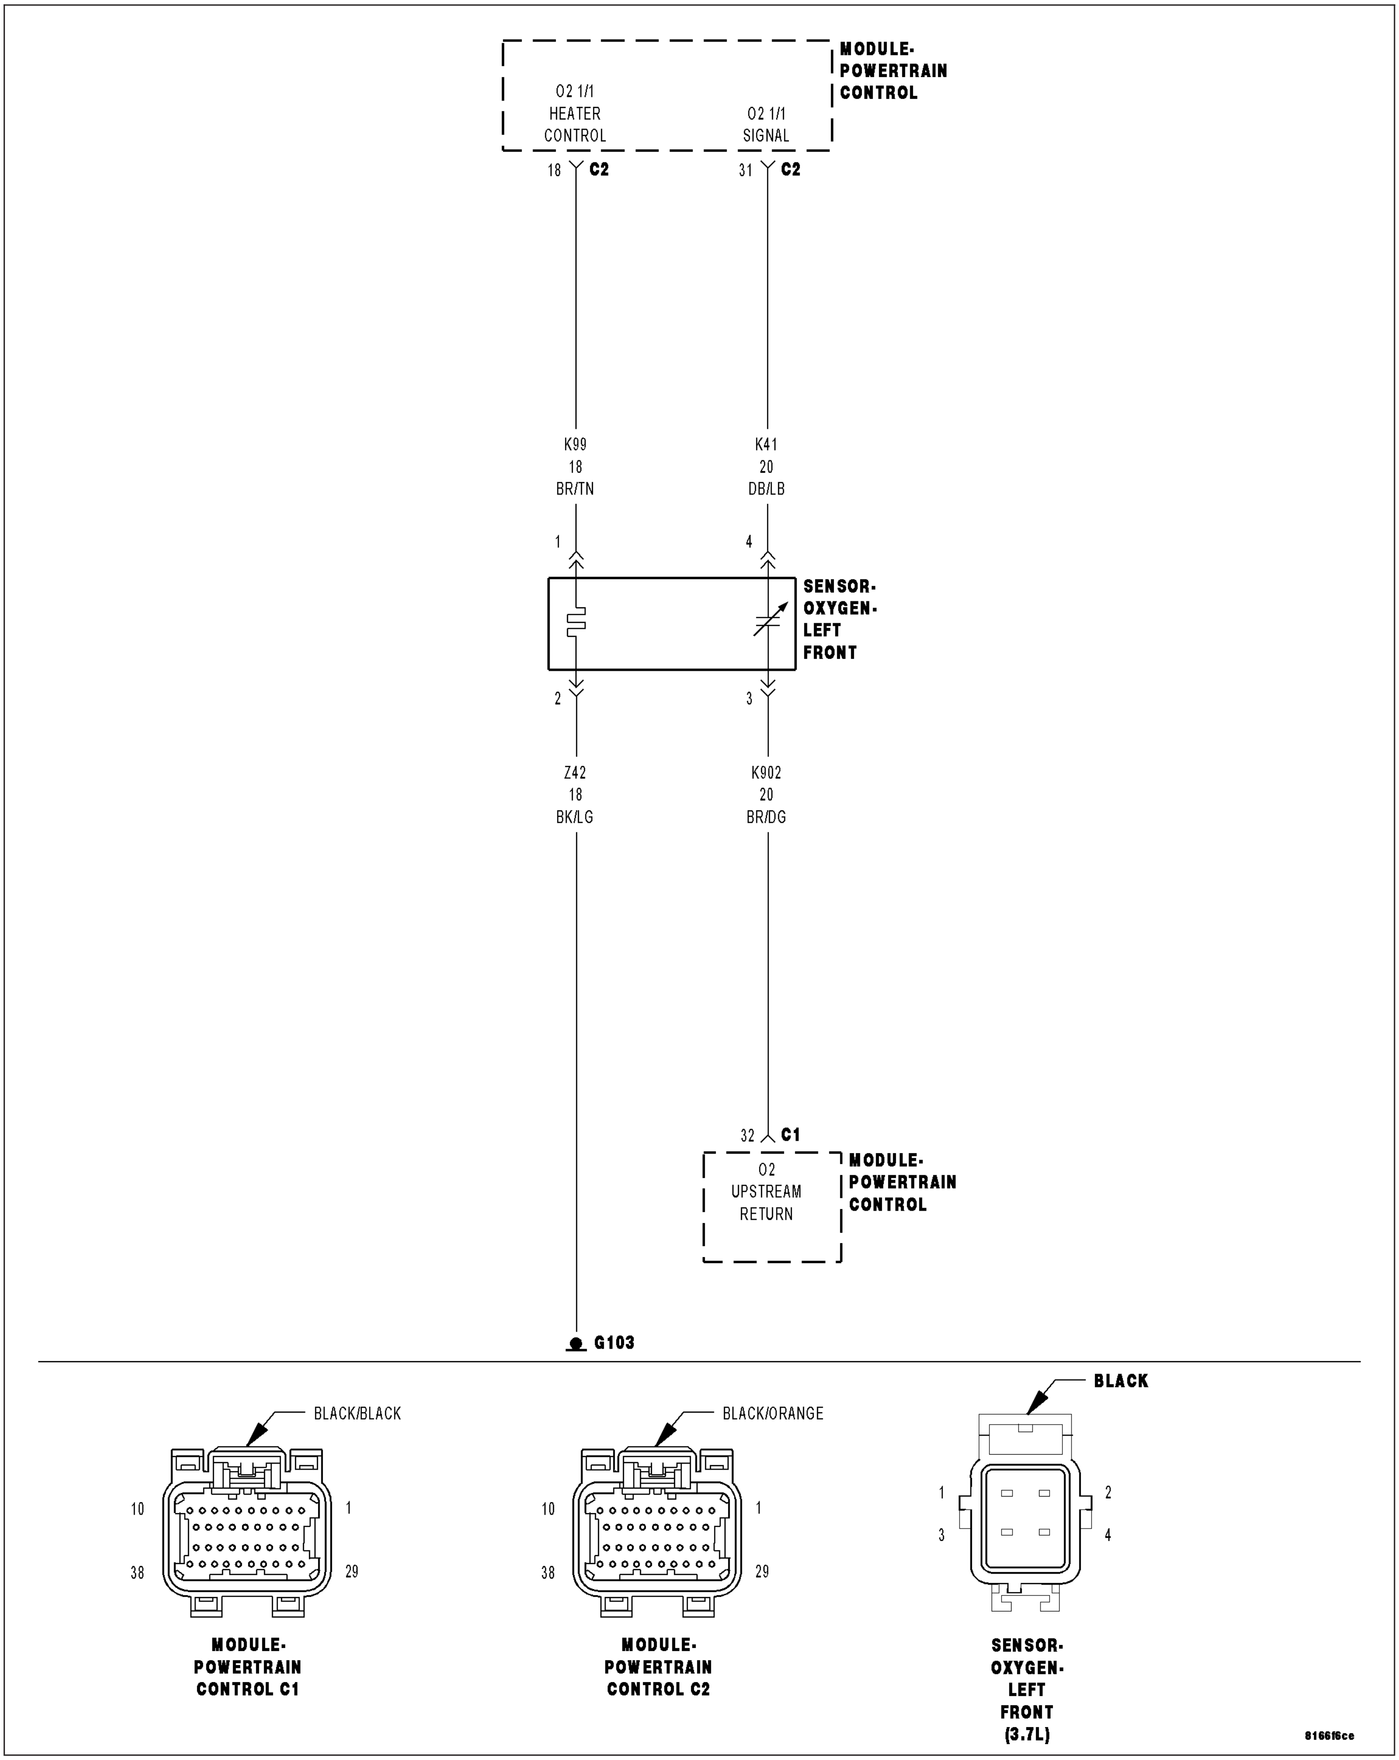
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0133-O2 SENSOR 1/1 SLOW RESPONSE



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

For an aged O2 sensor , the response rate to the air/fuel change is slower than when it was new. The O2 sensor tends to move less with the same air/fuel changes in a given time frame. Therefore by observing the activity of voltage readings from the upstream O2 sensor, the quality of the O2 sensor can be detected.

- **When Monitored:**
  Vehicle is started and driven between 20 and 55 MPH with the Throttle open for a minimum of 120 seconds. Coolant greater than 70°C (158°F). Catalytic Converter Temp greater than 600°C (1112°F) and EVAP Purge is active.
- **Set Condition:**
  O2 Sensor response is too slow for a calibrated amount of time. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| EXHAUST LEAK |
| (K41) O2 1/1 SIGNAL CIRCUIT |
| (K902) O2 RETURN UPSTREAM CIRCUIT |
| O2 SENSOR |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: Check for contaminants that may have damaged the O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant.**
Ignition on, engine not running.

**NOTE: After the repairs have been made, verify proper O2 Sensor operation. If all the O2 Sensor voltage readings have not returned to normal, follow the diagnostic procedure for the remaining O2 Sensors.**
With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 2. EXHAUST LEAK

Start the engine.

Inspect the exhaust system for leaks between the engine and the O2 Sensors.

Turn the ignition off.

If a leak is heard but unable to be located, it may be necessary to use special tool Miller Tool #8404A Evaporative Emissions Leak Detector (EELD) on the exhaust system to find leaks.

Connect the SMOKE supply tip (black hose) to the exhaust cone adapter (if equipped) and place it into the tail pipe.

Set the smoke/air control switch to SMOKE.

Press the remote smoke/air start button.

While still holding the remote smoke/air start button, use the white light (#8404-CLL) to follow the EVAP system path, and look for the source of the leak indicated by exiting smoke.

If a leak is concealed from view, release the remote smoke/air start button, and use the ultraviolet (UV) black light #8404-UVL and the yellow goggles 8404-20 to look for residual traces of dye that is left behind by the smoke.

The exiting smoke deposits a residual fluid that is either bright green or bright yellow in color when viewed with a UV light.

Be sure to check the exhaust manifold to cylinder head connection for leaks.

**Are there any exhaust leaks?**

**Yes** >> Repair or replace the leaking exhaust parts as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

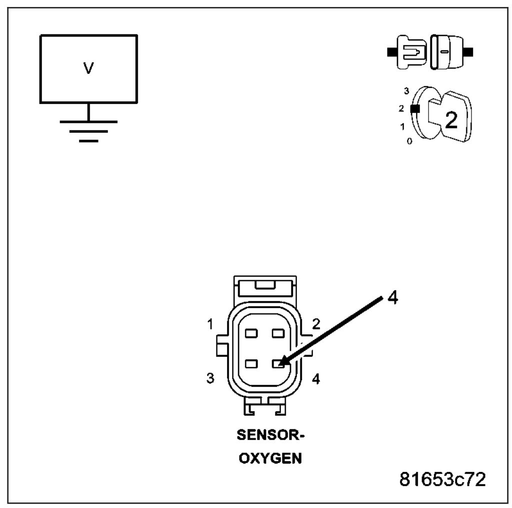
## 3. (K41) O2 1/1 SIGNAL CIRCUIT

Turn the ignition off

Disconnect the 1/1 O2 Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (K41) O2 1/1 Signal circuit in the O2 Sensor harness connector.



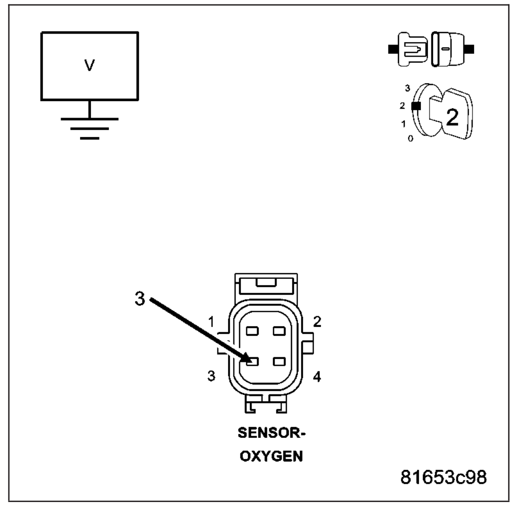
**Is the voltage approximately 5.0 volts?**

**Yes** >> Go To 4

**No** >> Check the (K41) O2 1/1 Signal circuit for a short to ground, open, or short to voltage. If OK, replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. (K902) O2 RETURN UPSTREAM CIRCUIT

Measure the voltage on the (K902) O2 Return Upstream circuit in the O2 Sensor harness connector.



**Is the voltage at 2.5 volts?**

**Yes** >> Check the (K902) O2 Return Upstream circuit for a short to ground, open, or short to voltage. If OK, replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. O2 SENSOR

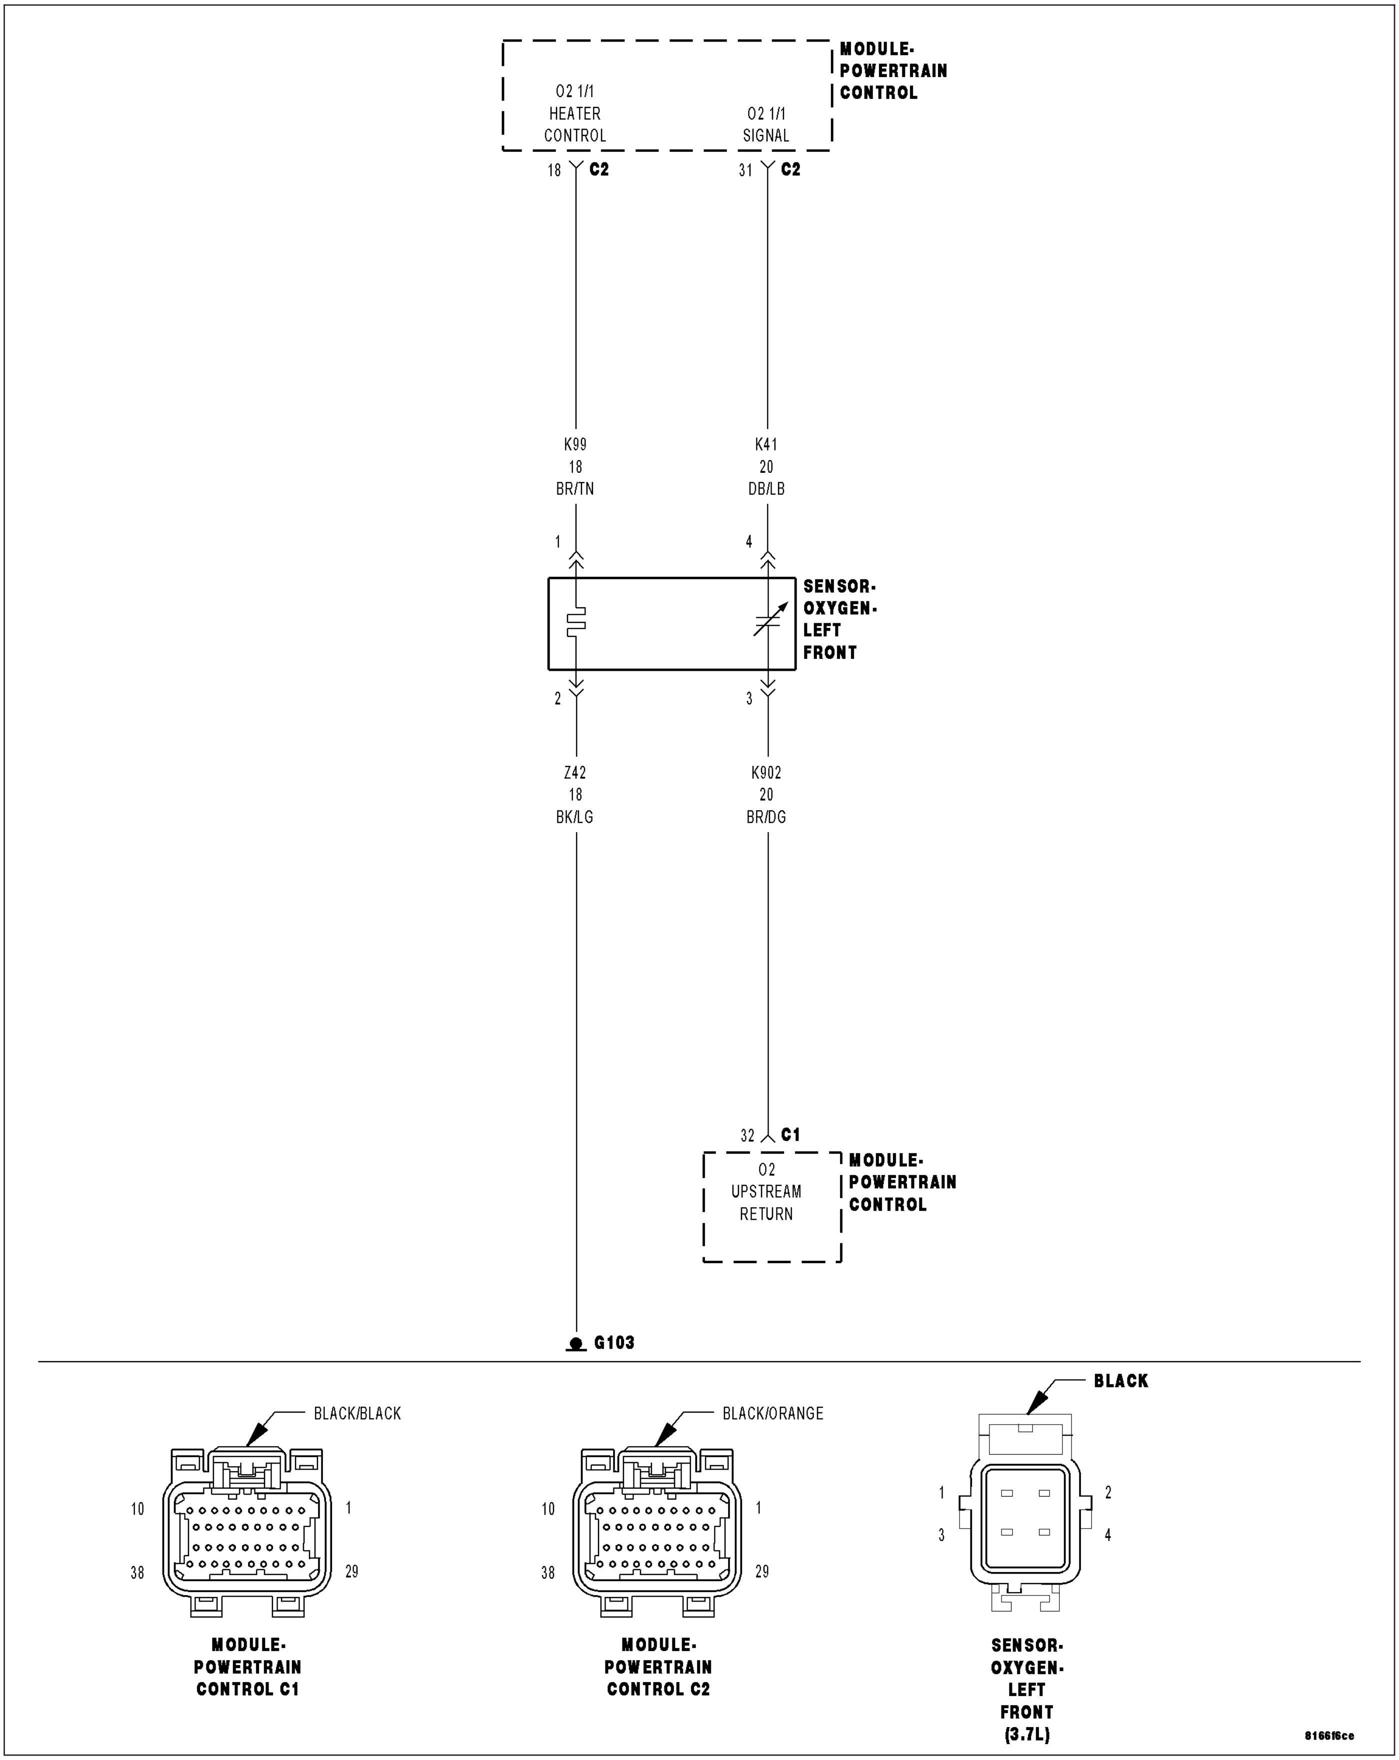
**If there are no possible causes remaining, view repair.**

**Repair**

Replace the O2 Sensor

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0135-O2 SENSOR 1/1 HEATER PERFORMANCE



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

This diagnostic provides a continuous check of the O2 heater circuit during operation. The heater circuit is momentarily disabled to allow a resistance measurement to be taken to infer heater temperature. The current delivery to the heater is duty cycled to maintain a specific target temperature. The error from the target temperature is continuously monitored to assess heater performance.

- **When Monitored:**
  Engine running and heater duty cycle greater than 0%. Battery voltage greater than 11.0 volts.
- **Set Condition:**
  No sensor output is received when the PCM powers up the sensor heater. Two trip fault. Three good trips to turn off the MIL.

| Possible Causes |
| --- |
| (K99) O2 1/1 HEATER CONTROL CIRCUIT OPEN |
| (Z42) O2 1/1 HEATER GROUND CIRCUIT OPEN |
| O2 SENSOR HEATER ELEMENT |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. O2 SENSOR HEATER OPERATION

Turn the ignition off.

**NOTE: Wait a minimum of 8 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize between 4.6 and 5.0 volts.**

Ignition on, engine not running.

With a scan tool, actuate the O2 Heater Test.

With the scan tool, monitor 1/1 O2 Sensor voltage for at least 2 minutes.

**Does the voltage stay above 4.5 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. O2 SENSOR HEATER ELEMENT

Turn the ignition off.

**NOTE: Allow the O2 sensor to cool down to room temperature.**

Disconnect the O2 Sensor harness connector.

Measure the resistance of the O2 Heater Element across the 1/1 O2 Sensor connector between the O2 Heater Control terminal and the Heater ground terminal.

**NOTE: O2 Heater Element resistance values should be measured at 70°F (21.1°C). The resistance value will vary with different temperature values.**

**Is the resistance of the O2 Sensor Heater Element between 2.0 and 30.0 ohms?**

**Yes** >> Go To 3

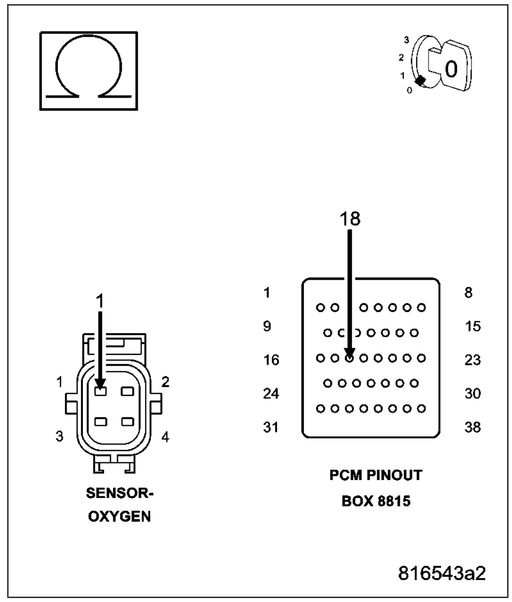
**No** >> Replace the O2 Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. (K99) O2 1/1 HEATER CONTROL CIRCUIT OPEN

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K99) O2 1/1 Heater Control circuit from the O2 harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 0.5 of an ohm?**

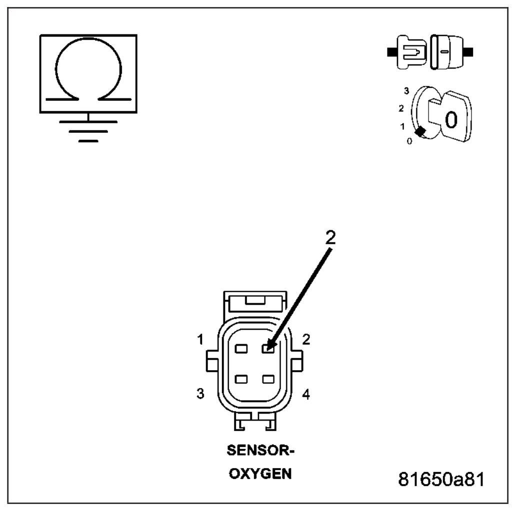
**Yes** >> Go To 4

**No** >> Repair the excessive resistance in the (K99) O2 1/1 Heater Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## 4. (Z42) O2 1/1 HEATER GROUND CIRCUIT OPEN

Measure the resistance between ground and the (Z42) O2 1/1 Heater ground circuit in the O2 Sensor harness connector.



**Is the resistance below 0.5 of an ohm?**

**Yes** >> Go To 5

**No** >> Repair the excessive resistance in the (Z42) O2 1/1 Heater ground circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

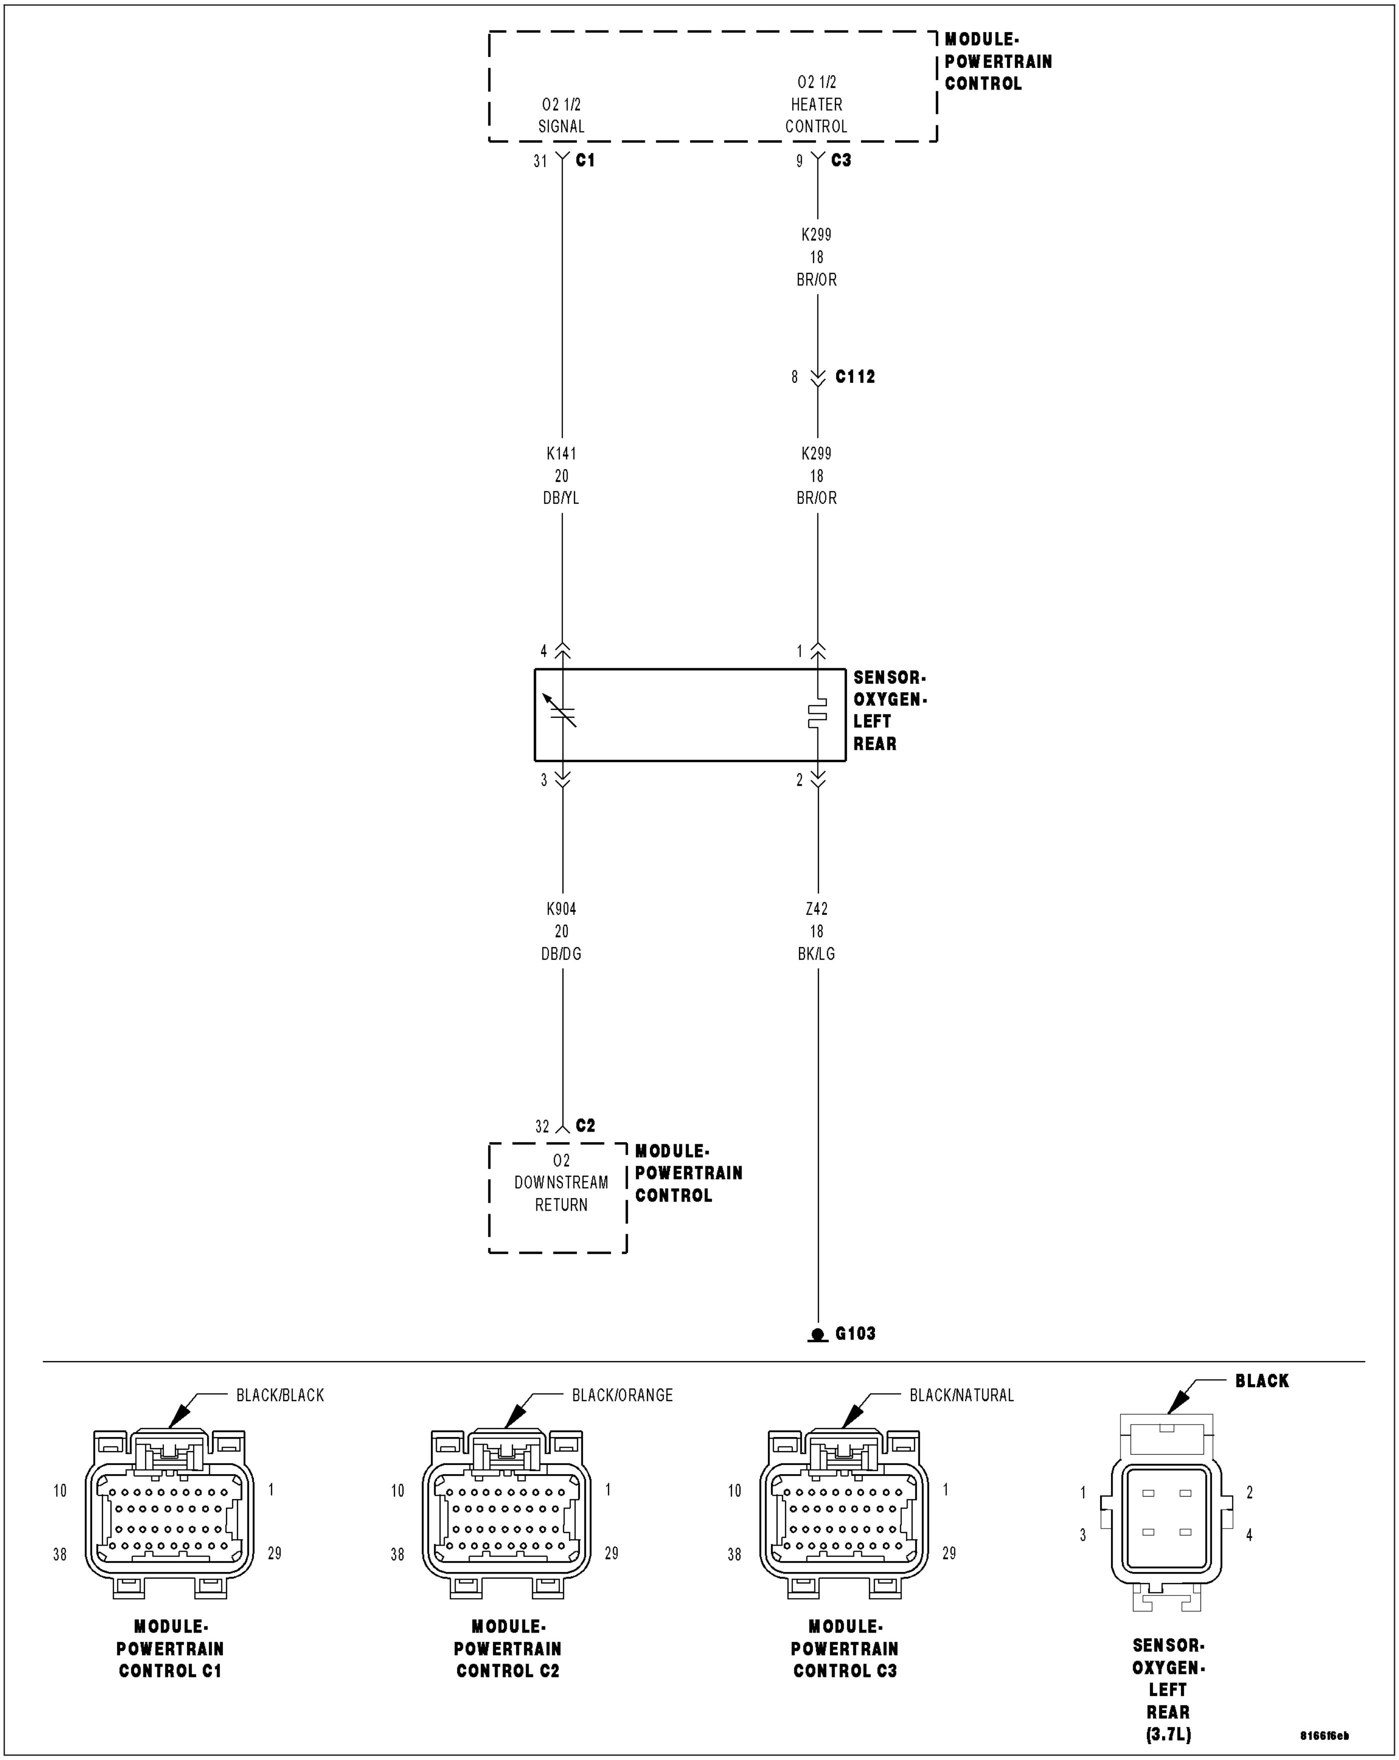
**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0137-O2 SENSOR 1/2 CIRCUIT LOW



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine running for less than 30 seconds and the O2 Sensor Heater Temperature is less than 251°C (484°F) with battery voltage greater 10.99 volts.
- **Set Condition:**
  The oxygen sensor signal voltage is below 2.5196 volts for 6 seconds after starting engine. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (K904) O2 DOWNSTREAM RETURN CIRCUIT SHORTED TO GROUND |
| (K141) O2 1/2 SIGNAL CIRCUIT SHORTED TO GROUND |
| (K141) O2 1/2 SIGNAL CIRCUIT SHORTED TO THE (K904) O2 DOWNSTREAM RETURN CIRCUIT |
| (K141) O2 1/2 SIGNAL CIRCUIT SHORTED TO THE (Z42) O2 1/2 HEATER GROUND CIRCUIT |
| O2 SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. O2 SENSOR BELOW 2.52 VOLTS

Start the engine.

Allow the engine to reach normal operating temperature.

With a scan tool, read the 1/2 O2 Sensor voltage.

**Is the voltage below 2.52 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (K141) O2 1/2 SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the 1/2 O2 Sensor harness connector.

Ignition on, engine not running.

With a scan tool, monitor the 1/2 O2 Sensor voltage.

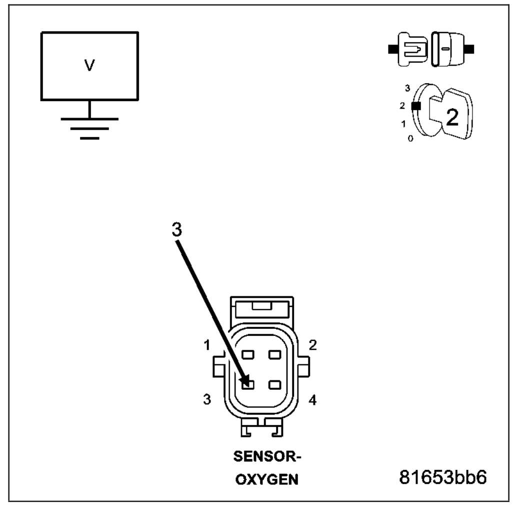
**Is the O2 Sensor voltage above 4.8 volts?**

**Yes** >> Go To 3

**No** >> Go To 5

## 3. O2 SENSOR

Measure the voltage on the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.



**Is the voltage at 2.5 volts?**

**Yes** >> Replace the O2 Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

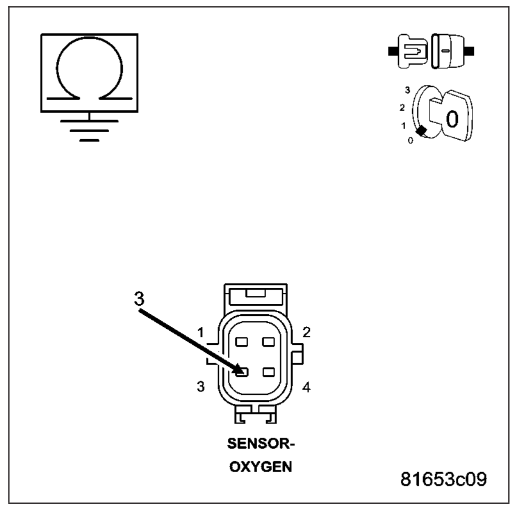
**No** >> Go To 4

## 4. (K904) O2 DOWNSTREAM RETURN CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K904) O2 Downstream Return circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

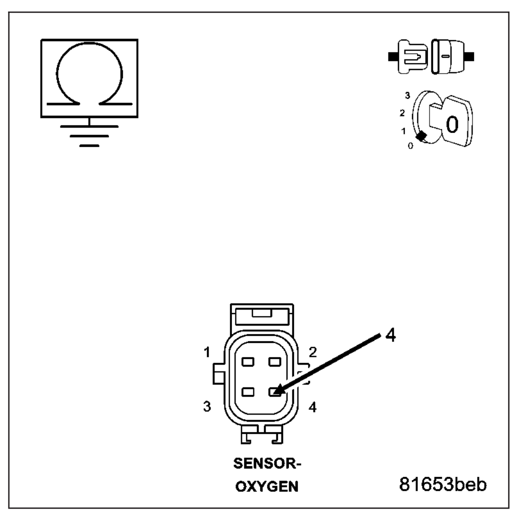
**No** >> Go To 8

## 5. (K141) O2 1/2 SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C1 and C2 PCM harness connectors.

Measure the resistance between ground and the (K141) O2 1/2 Signal circuit in the O2 Sensor harness connector.



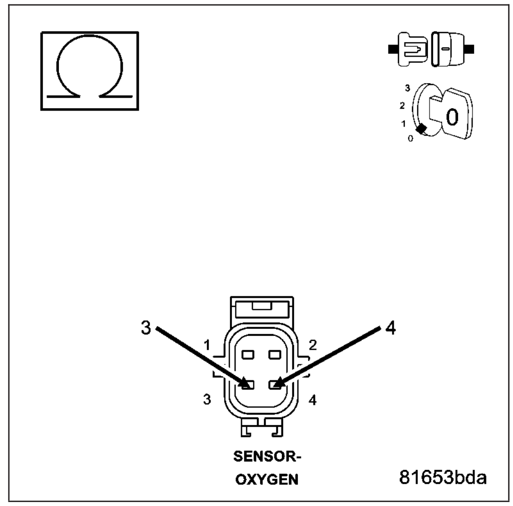
**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K141) O2 1/2 Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. (K141) O2 1/2 SIGNAL CIRCUIT SHORTED TO THE (K904) O2 DOWNSTREAM RETURN CIRCUIT

Measure the resistance between the (K141) O2 1/2 Signal circuit and the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.



**Is the resistance below 100 ohms?**

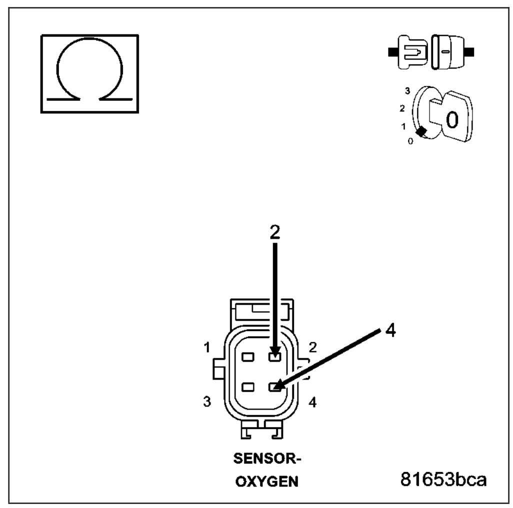
**Yes** >> Repair the short between the (K904) O2 Downstream Return circuit and the (K141) O2 1/2 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 7. (K141) O2 1/2 SIGNAL CIRCUIT SHORTED TO THE (Z42) O2 1/2 HEATER GROUND CIRCUIT

Measure the resistance between the (K141) O2 1/2 Signal circuit and the (Z42) O2 1/2 Heater ground circuit in the O2 Sensor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (Z42) O2 1/2 Heater ground circuit and the (K141) O2 1/2 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

## 8. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

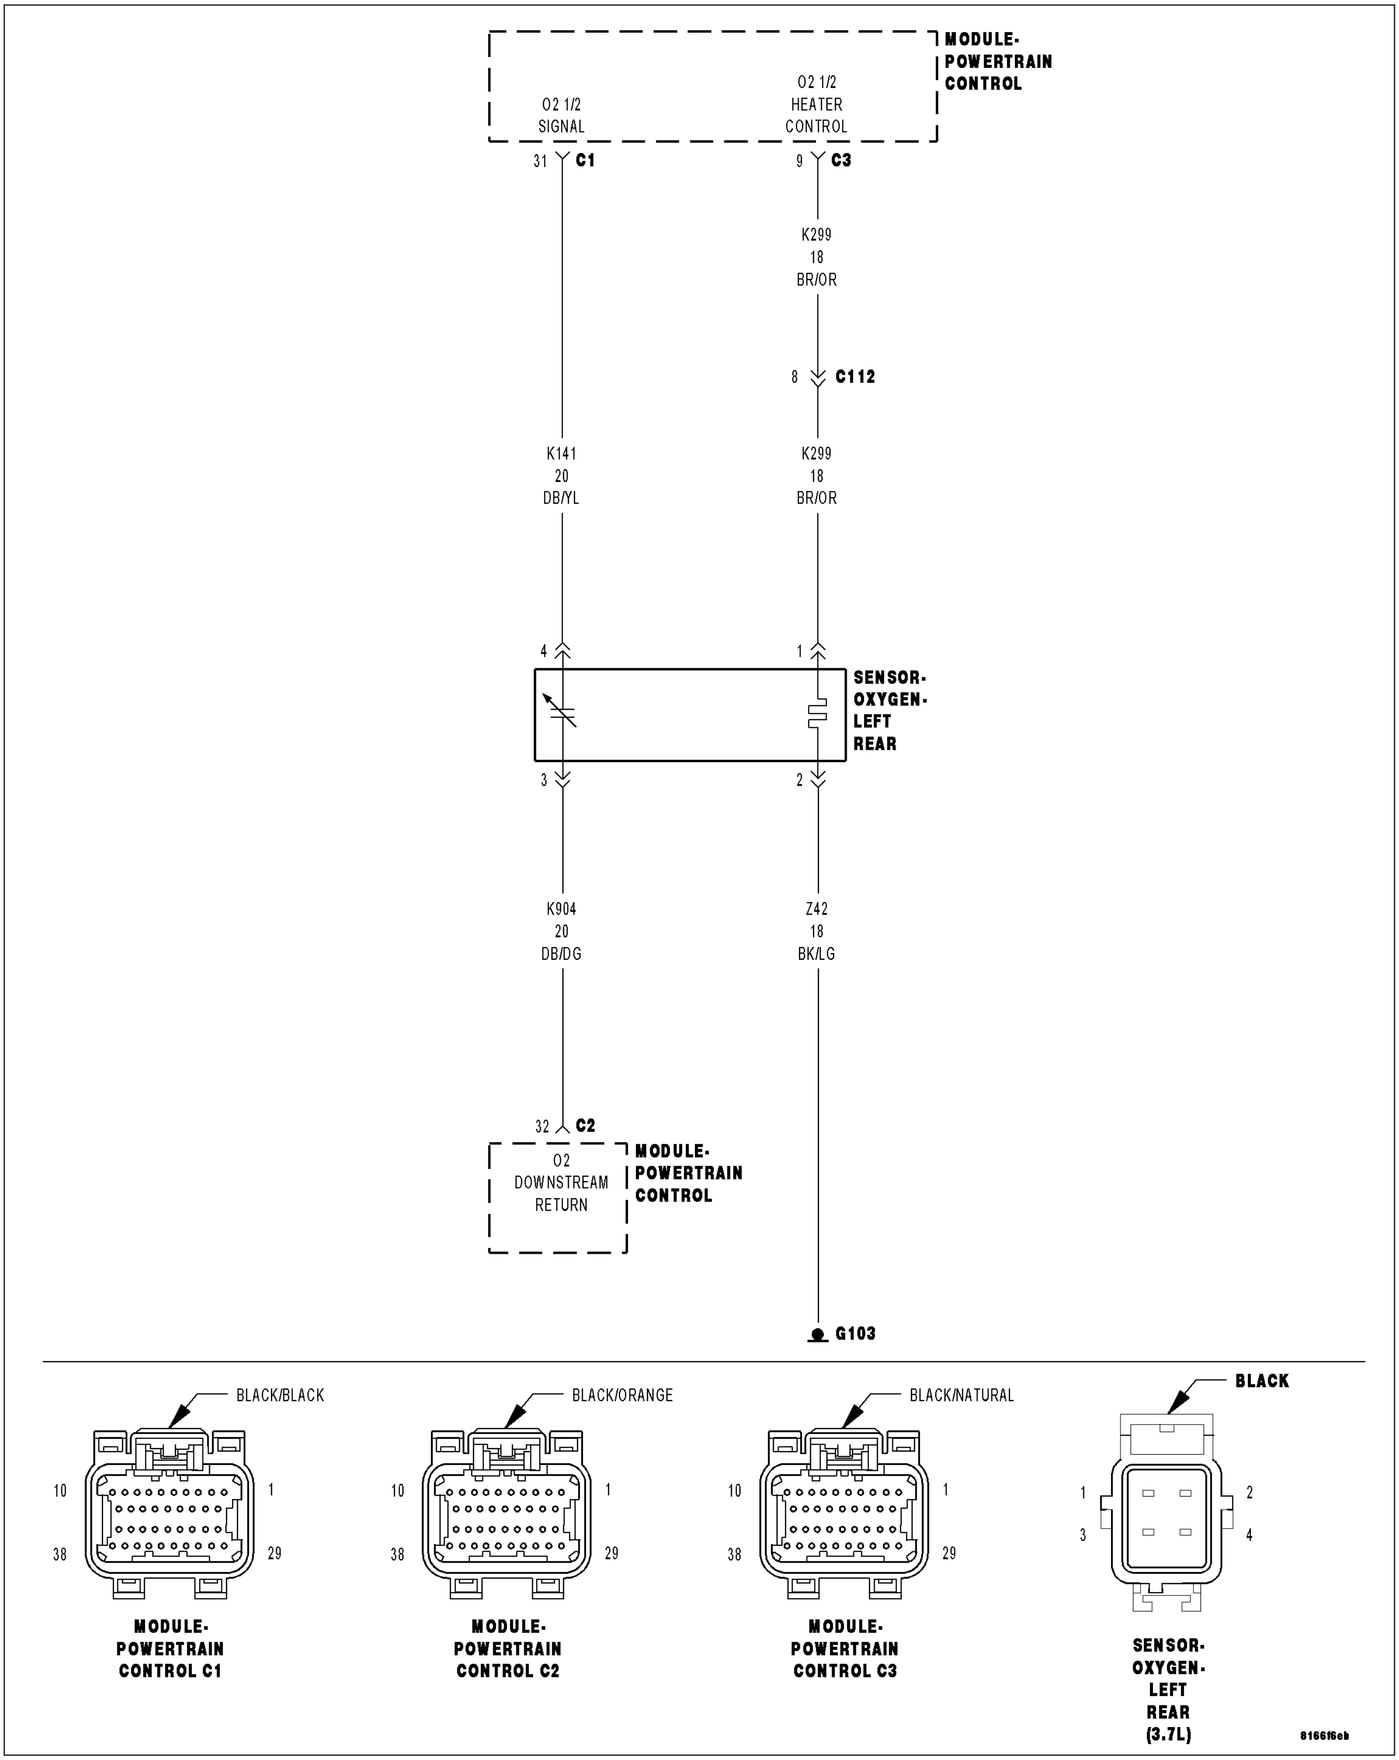
**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0138-O2 SENSOR 1/2 CIRCUIT HIGH



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  O2 Sensor Heater Temperature is greater than 496°C (925°F) and battery voltage greater than 10.99 volts.
- **Set Condition:**
  The Oxygen Sensor voltage is above 3.99 volts for 40 seconds. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
| --- |
| (K141) O2 1/2 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K904) O2 DOWNSTREAM RETURN CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K141) O2 1/2 SENSOR SIGNAL CIRCUIT OPEN |
| (K904) O2 DOWNSTREAM RETURN CIRCUIT OPEN |
| O2 SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. O2 SENSOR ABOVE 3.7 VOLTS

**NOTE: When only one O2 Sensor is shorted to voltage, the scan tool will display all O2 Sensor voltage readings at approximately 5.0 volts. When diagnosing this DTC, only diagnose the O2 Sensor that set the DTC.**

Start the engine.

Allow the engine to reach normal operating temperature.

With a scan tool, read the 1/2 O2 Sensor voltage.

**Is the voltage above 3.7 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (K141) O2 1/2 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Start the engine and allow the engine to idle.

Disconnect the 1/2 O2 Sensor harness connector.

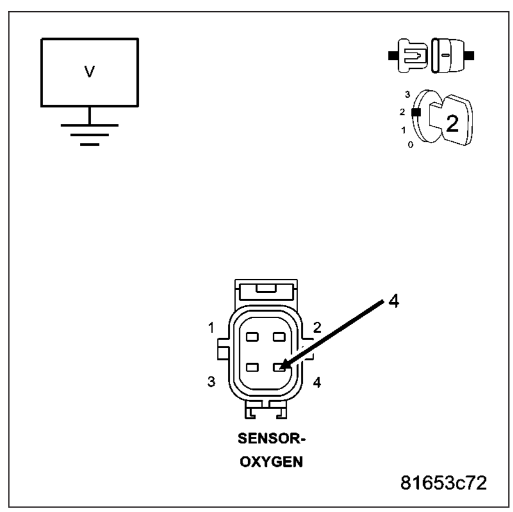
Measure the voltage on the (K141) O2 Sensor 1/2 Signal circuit in the O2 Sensor harness connector.

**NOTE: Measure the voltage in reference to ground, not the (K904) O2 Downstream Return circuit.**

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K141) O2 Sensor 1/2 Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3



## 3. (K904) O2 DOWNSTREAM RETURN CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the C2 PCM harness connector.

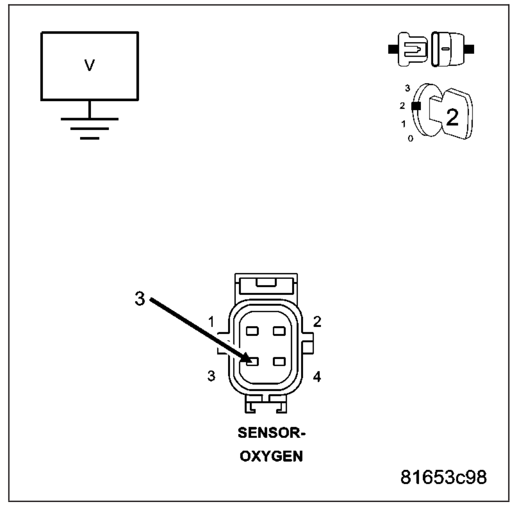
Ignition on, engine not running.

Measure the voltage on the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**Is there any voltage present?**

**Yes** >> Repair the short to battery voltage in the (K904) O2 Downstream Return circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4



## 4. O2 SENSOR

Turn the ignition off.

Connect the C2 PCM harness connector.

Connect a jumper wire between the (K141) O2 1/2 Signal circuit and the (K904) O2 Downstream Return circuit in the 1/2 O2 Sensor harness connector.

Ignition on, engine not running.

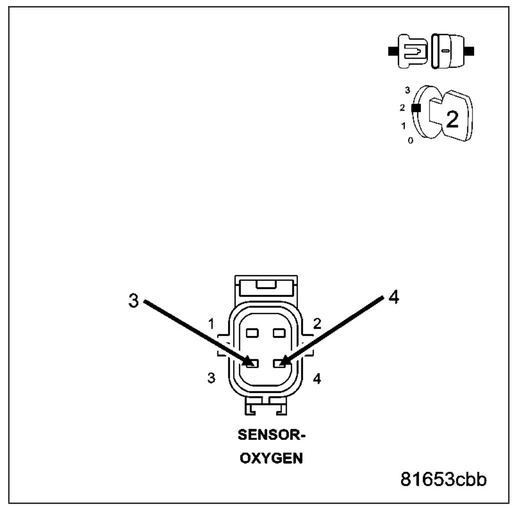
With a scan tool, monitor the 1/2 O2 Sensor voltage.

**Is the voltage between 2.3 and 2.7 volts with the jumper wire installed?**

**Yes** >> Replace the O2 Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

**NOTE: Remove the jumper wire before continuing.**



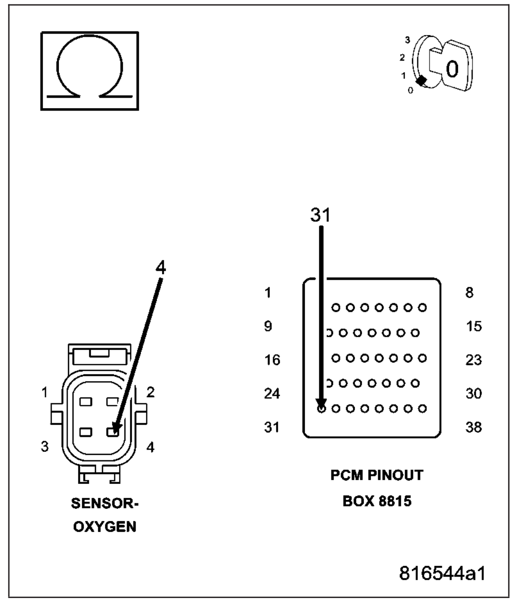
## 5. (K141) O2 1/2 SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the C1 and C2 PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K141) O2 1/2 Signal circuit from the O2 Sensor harness connector to the appropriate terminal of special tool #8815.



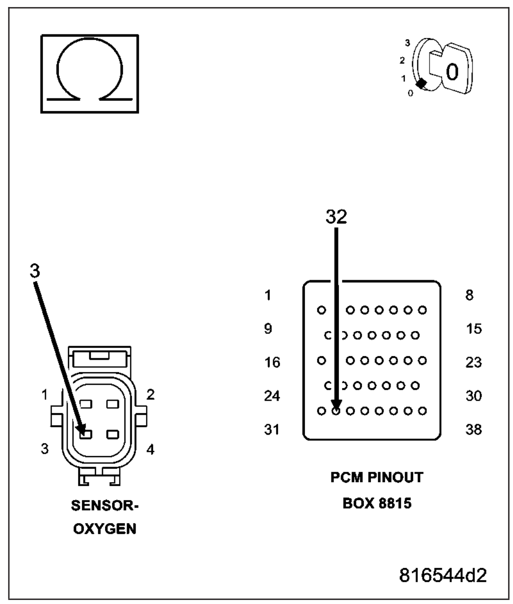
**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K141) O2 1/2 Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. (K904) O2 DOWNSTREAM RETURN CIRCUIT OPEN

Measure the resistance of the (K904) O2 Downstream Return circuit from the O2 Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K904) O2 Downstream Return circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

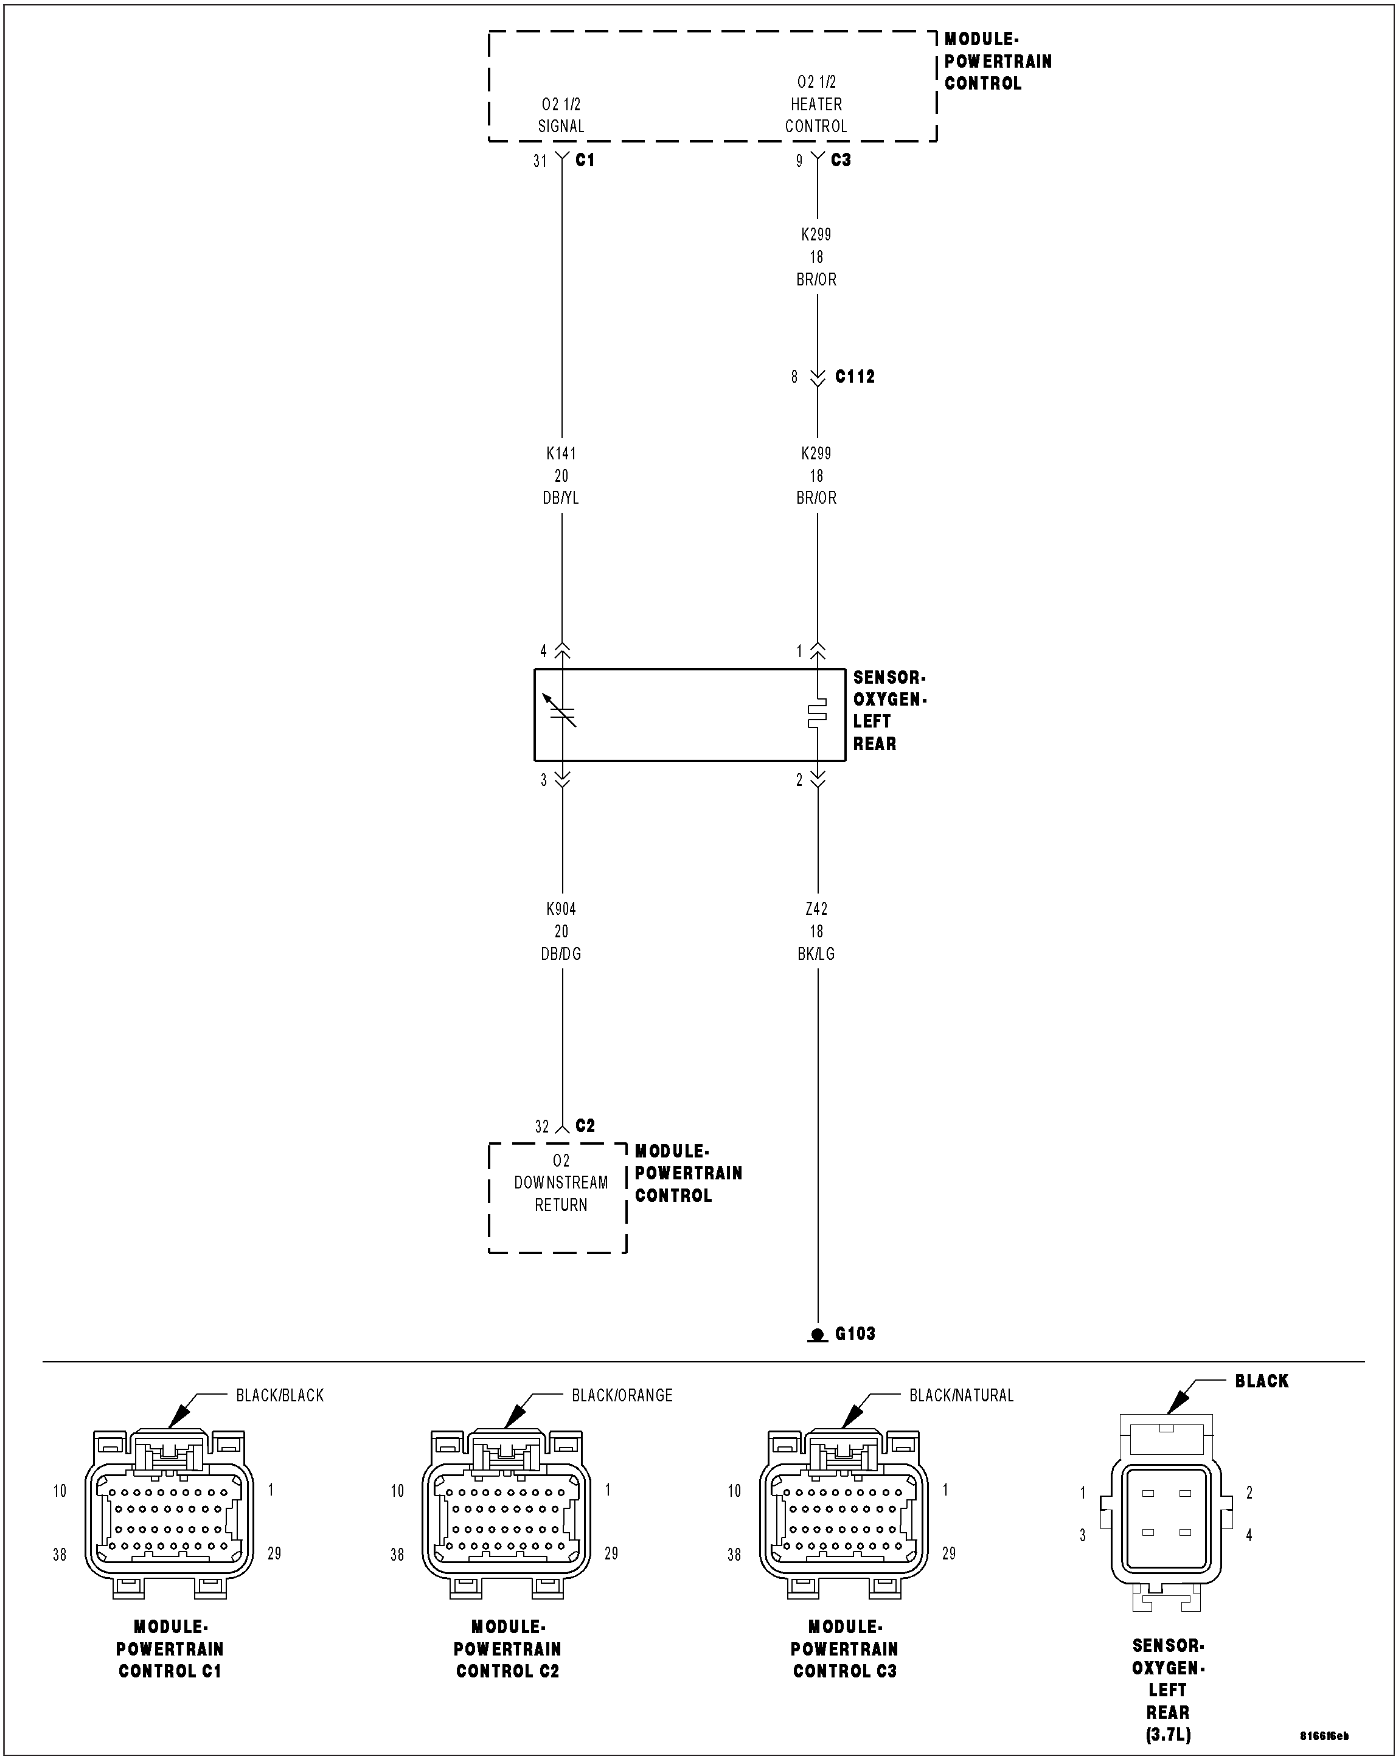
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0139-O2 SENSOR 1/2 SLOW RESPONSE



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The downstream O2 Sensor is located in the exhaust path behind the catalytic converter, is monitored for proper response to assure optimum catalytic converter efficiency. The downstream O2 response monitor is intended to diagnose a downstream O2 sensor that is not moving or stuck in a voltage window and to insure accurate information for catalyst monitor diagnosis.

- **When Monitored:**
  Vehicle is started and driven between 20 and 55 MPH with the Throttle open for a minimum of 120 seconds. Coolant greater than 70°C (158°F). Catalytic Converter Temp greater than 600°C (1112°F) and EVAP Purge is active.
- **Set Condition:**
  The oxygen sensor signal voltage switches less than 16 times from lean to rich within 20 seconds during monitoring. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| EXHAUST LEAK |
| (K141) O2 1/2 SIGNAL CIRCUIT |
| (K904) O2 DOWNSTREAM RETURN CIRCUIT |
| O2 SENSOR |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: Check for contaminants that may have damaged the O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant.**
Ignition on, engine not running.

**NOTE: After the repairs have been made, verify proper O2 Sensor operation. If all the O2 Sensor voltage readings have not returned to normal, follow the diagnostic procedure for the remaining O2 Sensors.**
With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. EXHAUST LEAK

Start the engine.
Inspect the exhaust system for leaks between the engine and the O2 Sensors.

**Are there any exhaust leaks?**

**Yes** >> Repair or replace the leaking exhaust parts as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

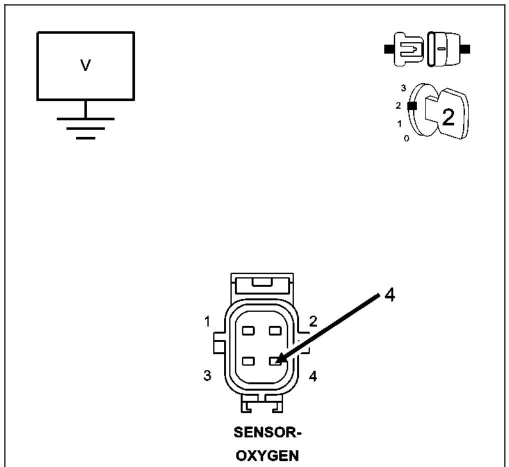
## 3. (K141) O2 1/2 SIGNAL CIRCUIT

Turn the ignition off

Disconnect the 1/2 O2 Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (K141) O2 1/2 Signal circuit in the O2 Sensor harness connector.



81653c72

**Is the voltage approximately 5.0 volts?**

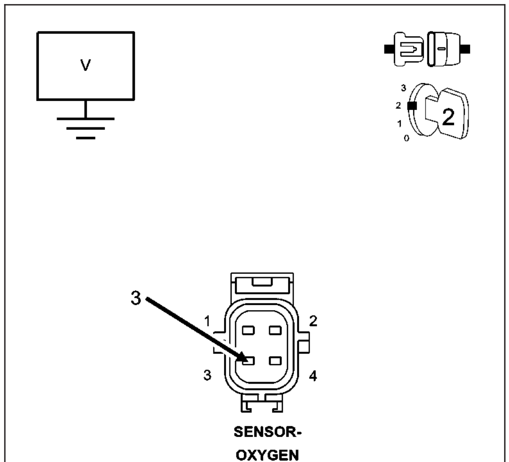
**Yes** >> Go To 4

**No** >> Check the (K141) O2 1/2 Signal circuit for a short to ground, open, or short to voltage. If OK, replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. (K904) O2 DOWNSTREAM RETURN CIRCUIT

Measure the voltage on the (K904) O2 Downstream Return circuit in the 1/2 O2 Sensor harness connector.



81653c98

**Is the voltage at 2.5 volts?**

**Yes** >> Check the (K904) O2 Downstream Return circuit for a short to ground, open, or short to voltage. If OK, replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. O2 SENSOR

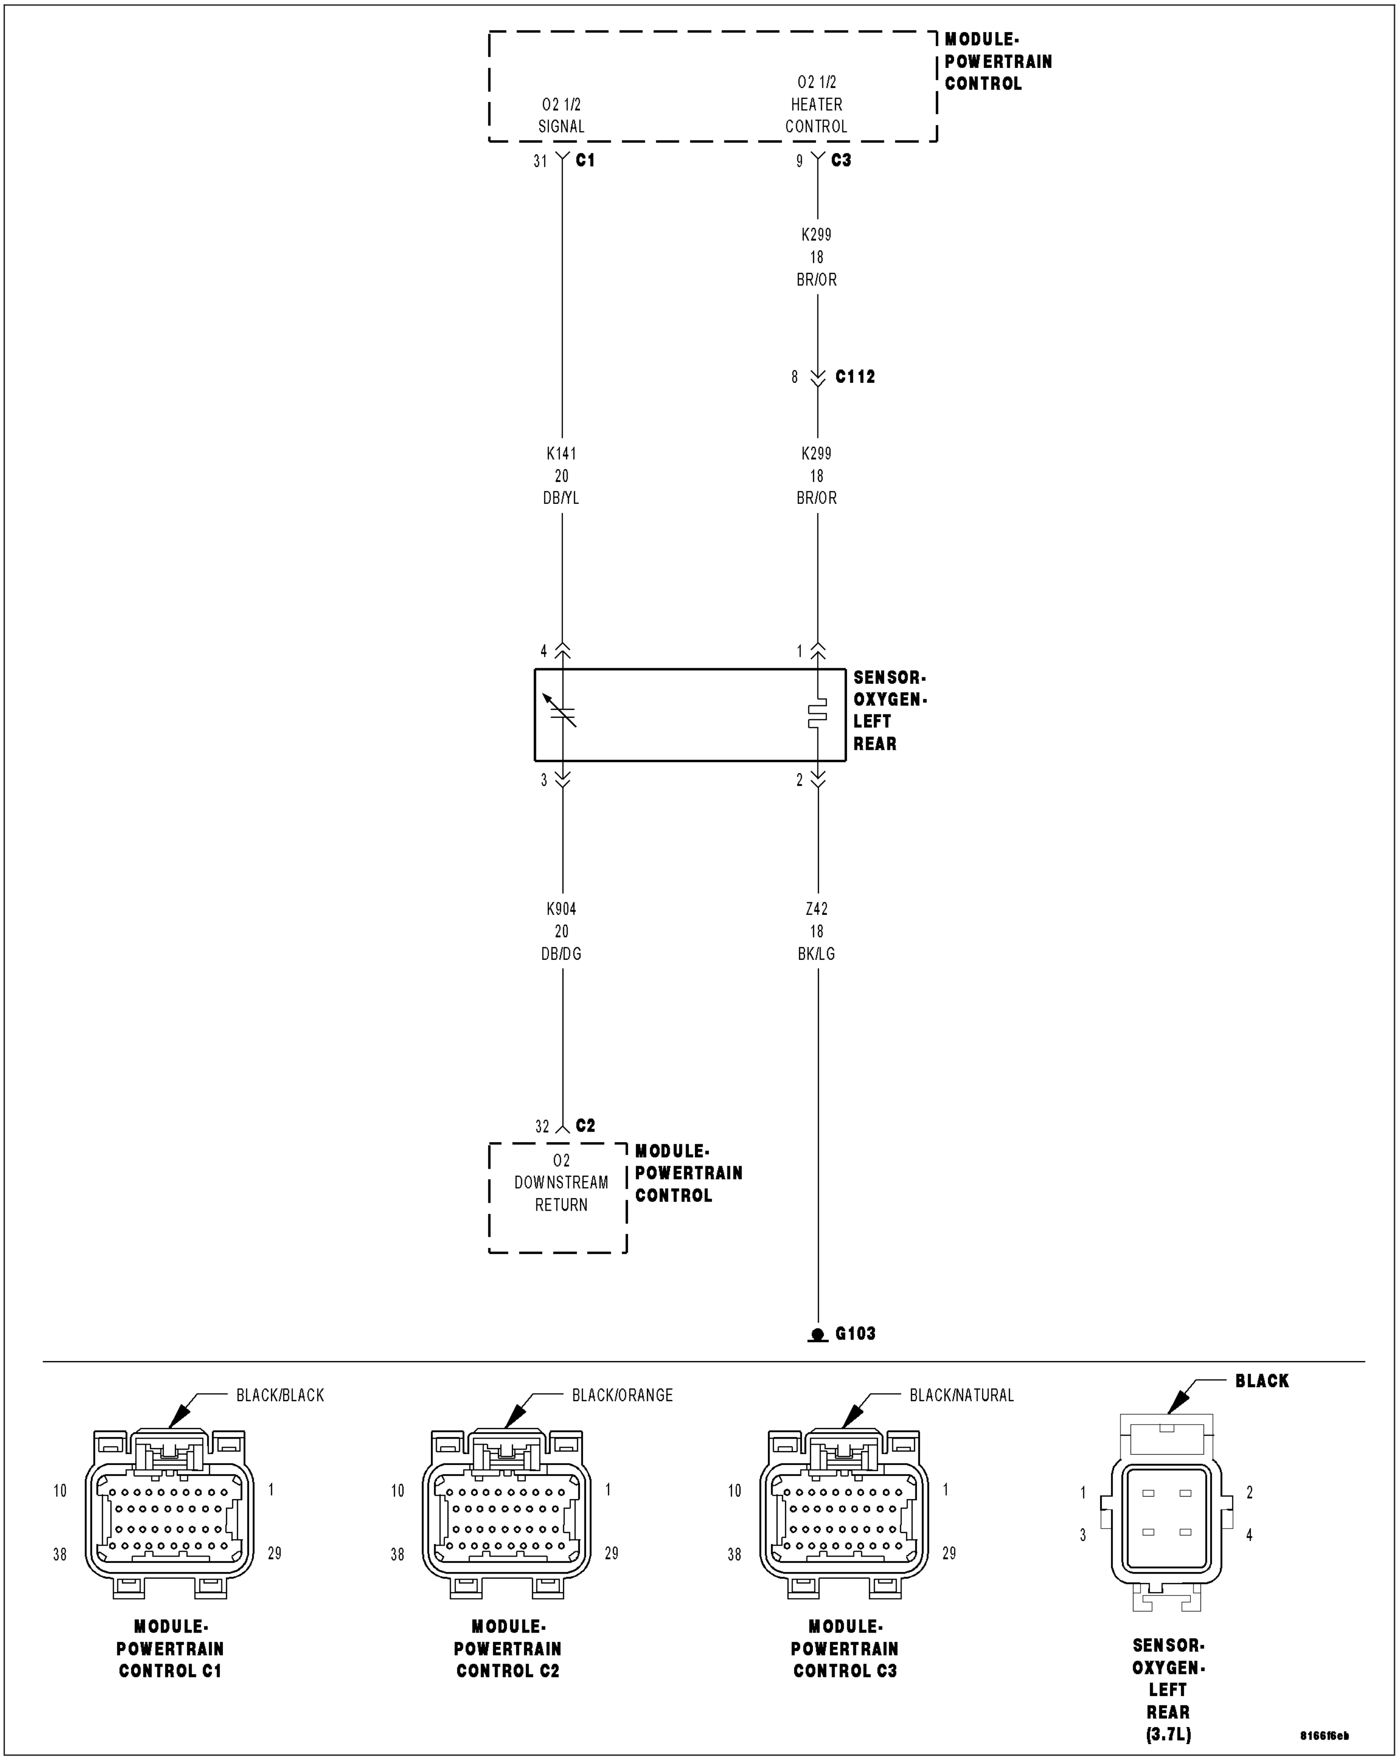
**If there are no possible causes remaining, view repair.**

**Repair**

Replace the O2 Sensor

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0141-O2 SENSOR 1/2 HEATER PERFORMANCE



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

This diagnostic provides a continuous check of the O2 heater circuit during operation. The heater circuit is momentarily disabled to allow a resistance measurement to be taken to infer heater temperature. The current delivery to the heater is duty cycled to maintain a specific target temperature. The error from the target temperature is continuously monitored to assess heater performance.

- **When Monitored:**
  Engine running and heater duty cycle greater than 0%. Battery voltage greater than 11.0 volts.
- **Set Condition:**
  No sensor output is received when the PCM powers up the sensor heater. Two trip fault. Three good trips to turn off the MIL.

| Possible Causes |
| --- |
| (K299) O2 1/2 HEATER CONTROL CIRCUIT OPEN |
| (Z42) O2 HEATER GROUND CIRCUIT OPEN |
| O2 SENSOR HEATER ELEMENT |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. O2 SENSOR HEATER OPERATION

Turn the ignition off.

**NOTE: Wait a minimum of 8 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize between 4.6 and 5.0 volts.**

Ignition on, engine not running.

With a scan tool, actuate the O2 Heater Test.

With the scan tool, monitor 1/2 O2 Sensor voltage for at least 2 minutes.

**Does the voltage stay above 4.5 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. O2 SENSOR HEATER ELEMENT

Turn the ignition off.

**NOTE: Allow the O2 sensor to cool down to room temperature.**

Disconnect the O2 Sensor harness connector.

Measure the resistance of the O2 Heater Element across the O2 Sensor connector between the O2 Heater Control terminal and the Heater ground terminal.

**NOTE: O2 Heater Element resistance values should be measured at 70°F (21.1°C). The resistance value will vary with different temperature values.**

**Is the resistance of the O2 Sensor Heater Element between 2.0 and 30.0 ohms?**

**Yes** >> Go To 3

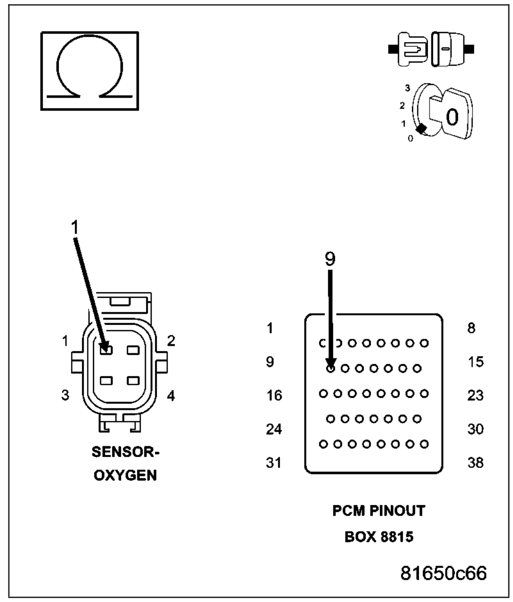
**No** >> Replace the O2 Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. (K299) O2 1/2 HEATER CONTROL CIRCUIT OPEN

Disconnect the C3 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K299) O2 1/2 Heater Control circuit from the O2 harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 0.5 of an ohm?**

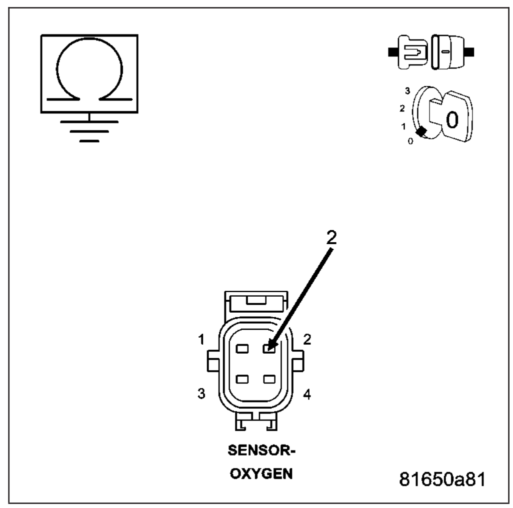
**Yes** >> Go To 4

**No** >> Repair the excessive resistance in the (K299) O2 1/2 Heater Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. (Z42) O2 1/2 HEATER GROUND CIRCUIT OPEN

Measure the resistance between ground and the (Z42) O2 1/2 Heater ground circuit in the O2 Sensor harness connector.



**Is the resistance below 0.5 of an ohm?**

**Yes** >> Go To 5

**No** >> Repair the excessive resistance in the (Z42) O2 1/2 Heater ground circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

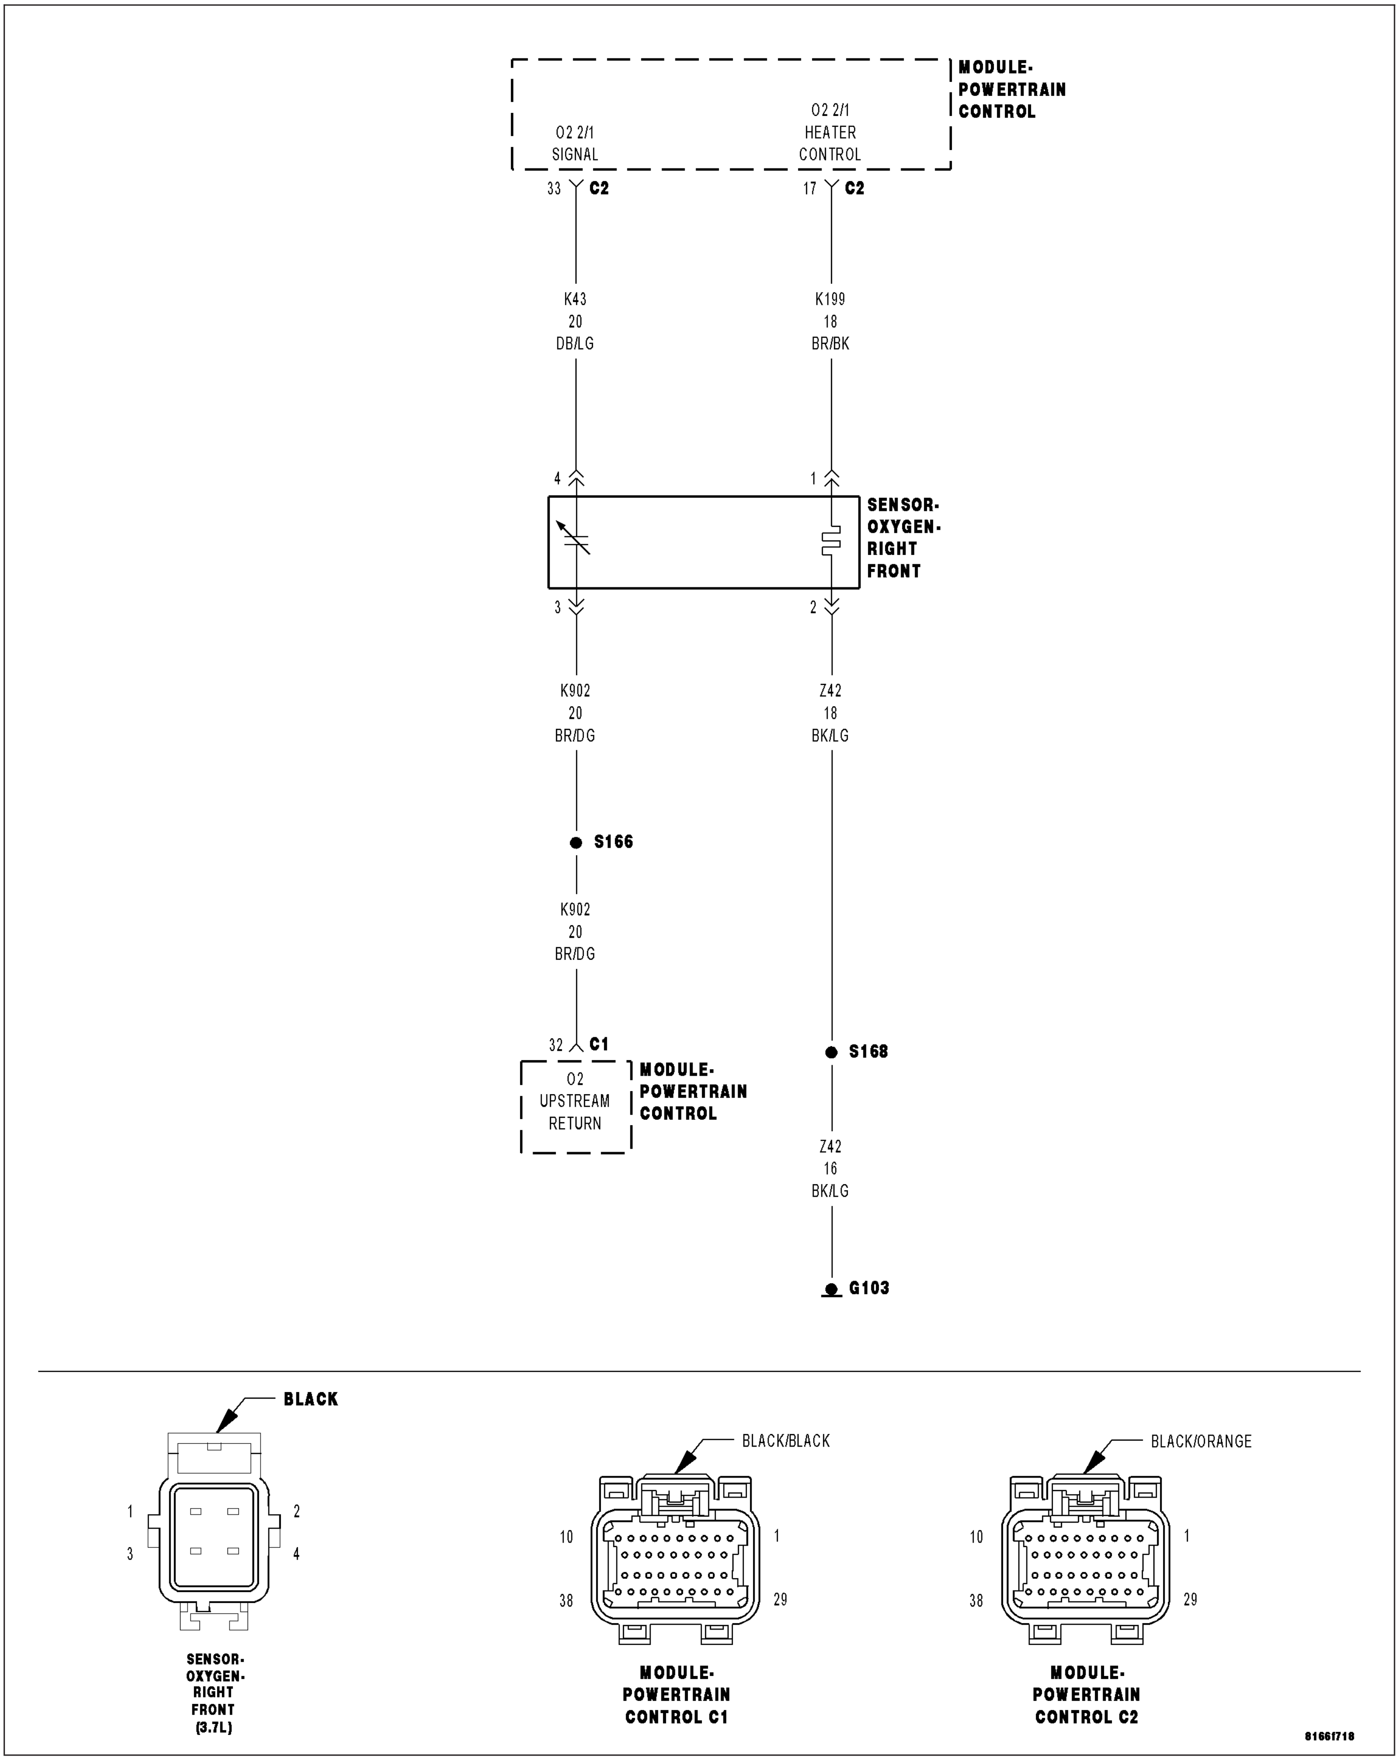
**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0151-O2 SENSOR 2/1 CIRCUIT LOW



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine running for less than 30 seconds and the O2 Sensor Heater Temperature is less than 251°C (484°F) with battery voltage greater 10.99 volts.
- **Set Condition:**
  The oxygen sensor signal voltage is below 2.5196 volts for 6 seconds after starting engine. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
| --- |
| (K902) O2 UPSTREAM RETURN CIRCUIT SHORTED TO GROUND |
| (K43) O2 2/1 SIGNAL CIRCUIT SHORTED TO GROUND |
| (K43) O2 2/1 SIGNAL CIRCUIT SHORTED TO THE (K902) O2 UPSTREAM RETURN CIRCUIT |
| (K43) O2 2/1 SIGNAL CIRCUIT SHORTED TO THE (Z42) HEATER GROUND CIRCUIT |
| O2 SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. O2 SENSOR BELOW 2.52 VOLTS

Start the engine.

Allow the engine to reach normal operating temperature.

With a scan tool, read the 2/1 O2 Sensor voltage.

**Is the voltage below 2.52 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (K43) O2 2/1 SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the 2/1 O2 Sensor harness connector.

Ignition on, engine not running.

With a scan tool, monitor the 2/1 O2 Sensor voltage.

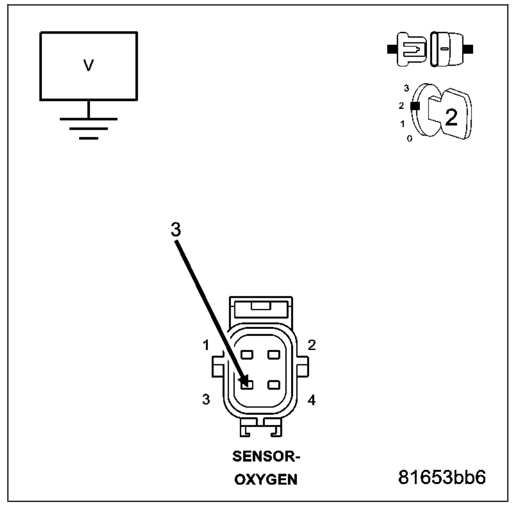
**Is the O2 Sensor voltage above 4.8 volts?**

**Yes** >> Go To 3

**No** >> Go To 5

## 3. O2 SENSOR

Measure the voltage on the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.



**Is the voltage at 2.5 volts?**

**Yes** >> Replace the 2/1 O2 Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

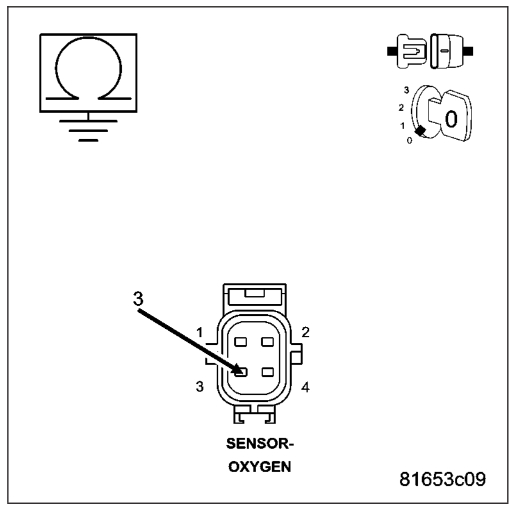
**No** >> Go To 4

## 4. (K902) O2 UPSTREAM RETURN CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C1 PCM harness connector.

Measure the resistance between ground and the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K902) O2 Upstream Return circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

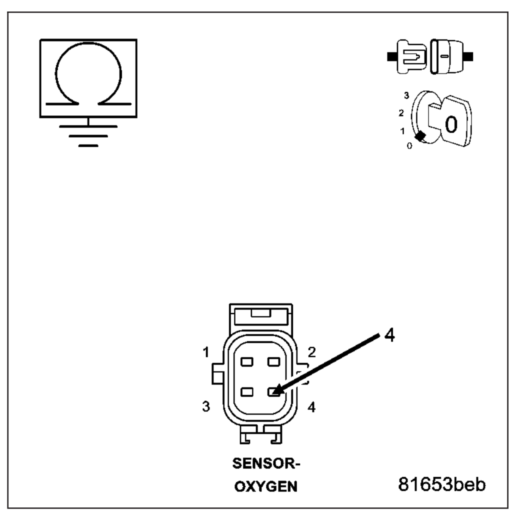
**No** >> Go To 8

## 5. (K43) O2 2/1 SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C1 and C2 PCM harness connectors.

Measure the resistance between ground and the (K43) O2 2/1 Signal circuit in the O2 Sensor harness connector.



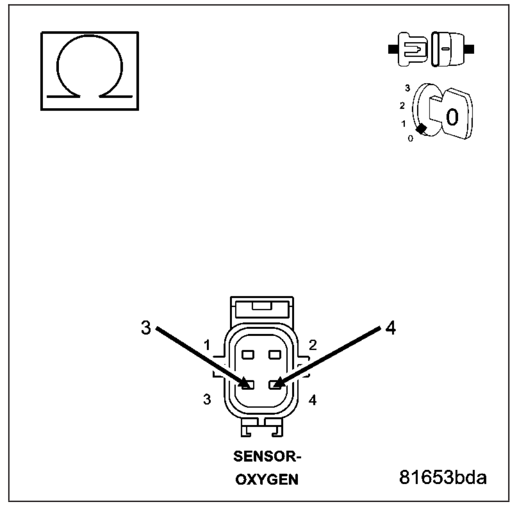
**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K43) O2 2/1 Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. (K43) O2 2/1 SIGNAL CIRCUIT SHORTED TO THE (K902) O2 UPSTREAM RETURN CIRCUIT

Measure the resistance between the (K43) O2 2/1 Signal circuit and the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.



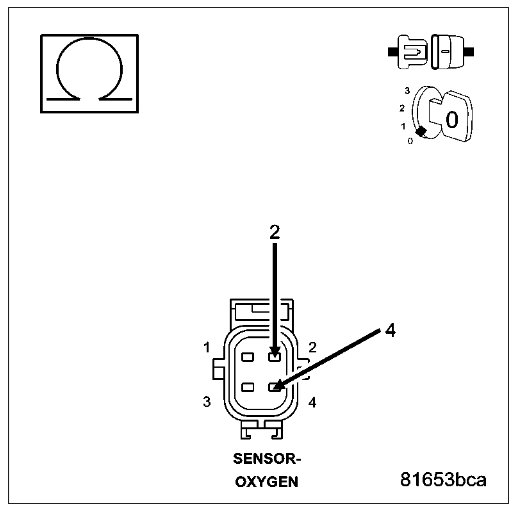
**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K902) O2 Upstream Return circuit and the (K43) O2 2/1 Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 7. (K43) O2 2/1 SIGNAL CIRCUIT SHORTED TO THE (Z42) HEATER GROUND CIRCUIT

Measure the resistance between the (K43) O2 2/1 Signal circuit and the (Z42) O2 Heater ground circuit in the O2 Sensor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (Z42) O2 Heater ground circuit and the (K43) O2 2/1 Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

## 8. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

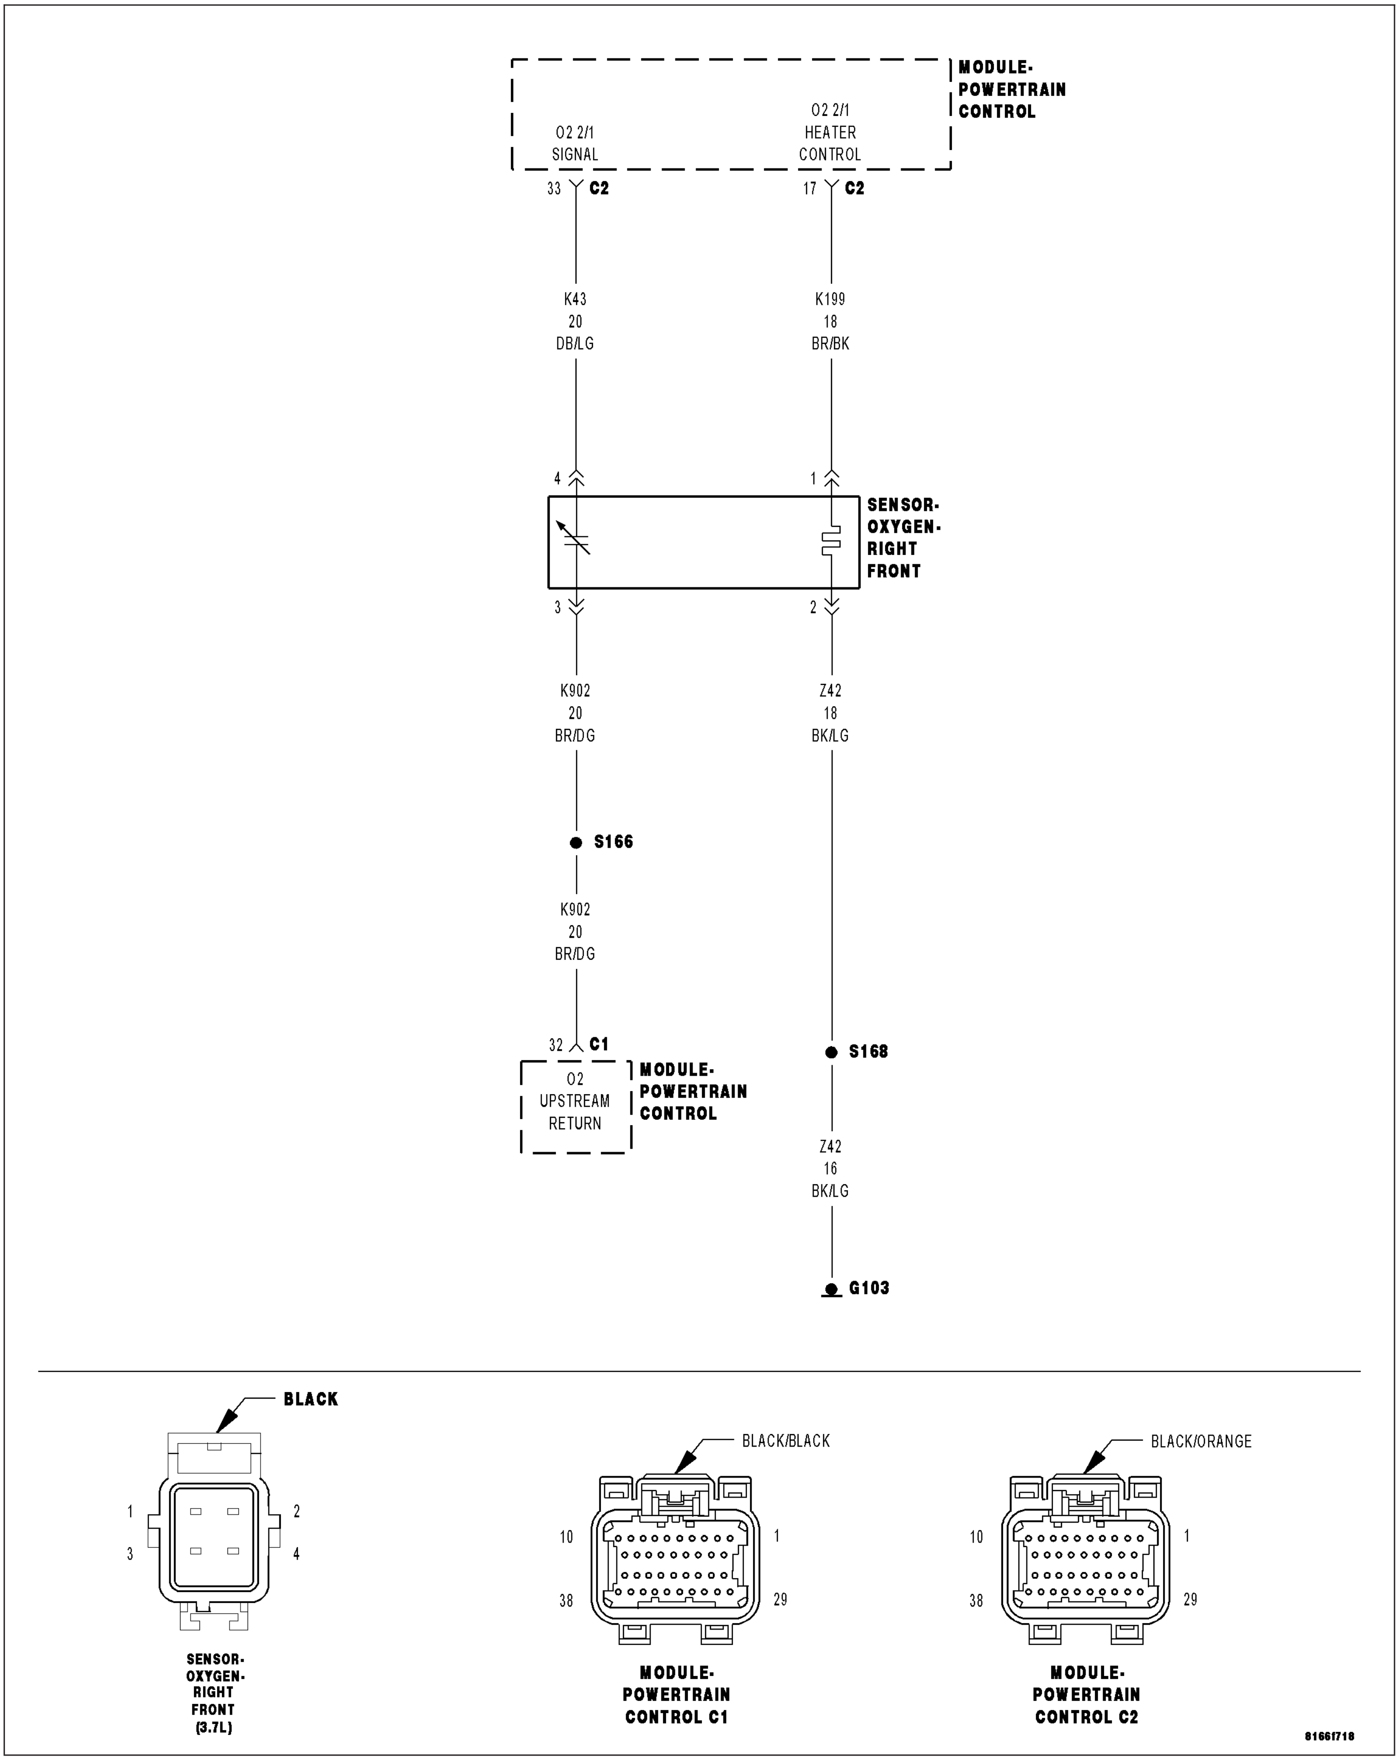
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0152-O2 SENSOR 2/1 CIRCUIT HIGH



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  O2 Sensor Heater Temperature is greater than 496°C (925°F) and battery voltage greater than 10.99 volts.
- **Set Condition:**
  The Oxygen Sensor voltage is above 3.99 volts for 40 seconds. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (K43) O2 2/1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K902) O2 UPSTREAM RETURN CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K43) O2 2/1 SIGNAL CIRCUIT OPEN |
| (K902) O2 UPSTREAM RETURN CIRCUIT OPEN |
| O2 SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. O2 SENSOR ABOVE 3.99 VOLTS

**NOTE: When only one O2 Sensor is shorted to voltage, the scan tool will display all O2 Sensor voltage readings at approximately 5.0 volts. When diagnosing this DTC, only diagnose the O2 Sensor that set the DTC.**

Start the engine.

Allow the engine to reach normal operating temperature.

With a scan tool, read the 2/1 O2 Sensor voltage.

**Is the voltage above 3.99 volts?**

**Yes** >> Go To 2

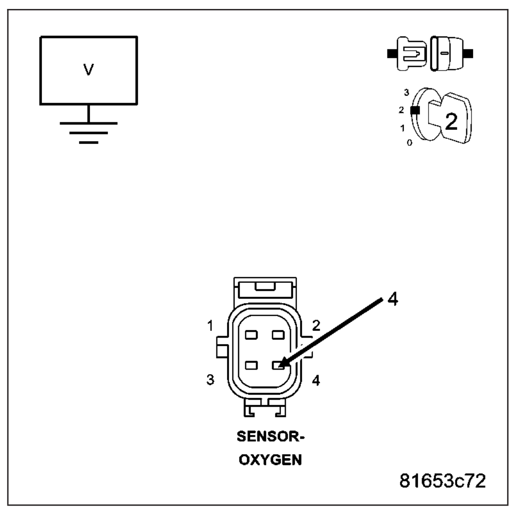
**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (K43) O2 2/1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Start the engine and allow the engine to idle.

Disconnect the 2/1 O2 Sensor harness connector.

Measure the voltage on the (K43) O2 Sensor 2/1 Signal circuit in the 2/1 O2 Sensor harness connector.



**NOTE: Measure the voltage in reference to ground, not the (K902) O2 Upstream Return circuit.**

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K43) O2 Sensor 2/1 Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. (K902) O2 UPSTREAM RETURN CIRCUIT SHORTED TO BATTERY VOLTAGE

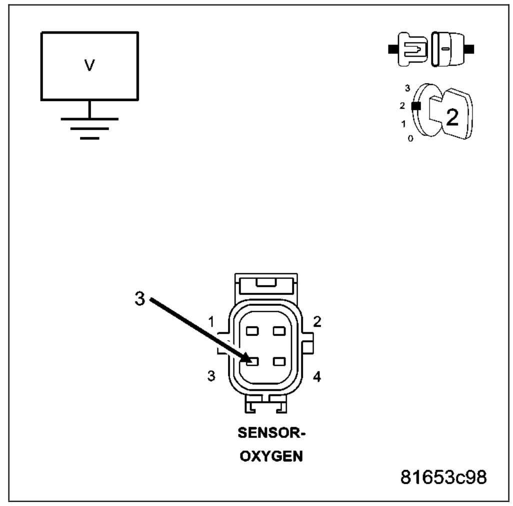
Turn the ignition off.

Disconnect the C1 PCM harness connector.

**WARNING: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Ignition on, engine not running.

Measure the voltage on the (K902) O2 Upstream Return circuit in the 2/1 O2 Sensor harness connector.



**Is there any voltage present?**

**Yes** >> Repair the short to battery voltage in the (K902) O2 Upstream Return circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. O2 SENSOR

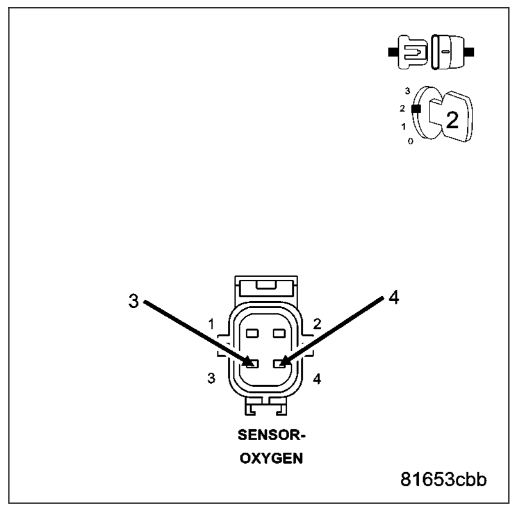
Turn the ignition off.

Connect the C1 PCM harness connector.

Connect a jumper wire between the (K43) O2 2/1 Signal circuit and the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.

Ignition on, engine not running.

With a scan tool, monitor the 2/1 O2 Sensor voltage.



**Is the voltage between 2.3 and 2.7 volts with the jumper wire in place?**

**Yes** >> Replace the O2 Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

**NOTE: Remove the jumper wire before continuing.**

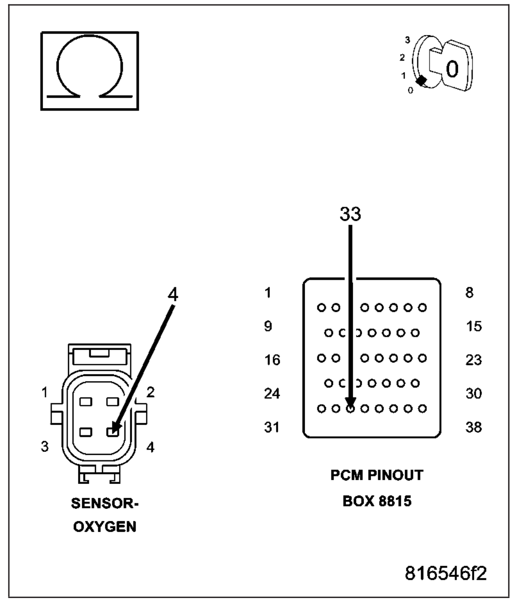
## 5. (K43) O2 2/1 SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the C1 and C2 PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K43) O2 2/1 Signal circuit from the 2/1 O2 Sensor harness connector to the appropriate terminal of special tool #8815.



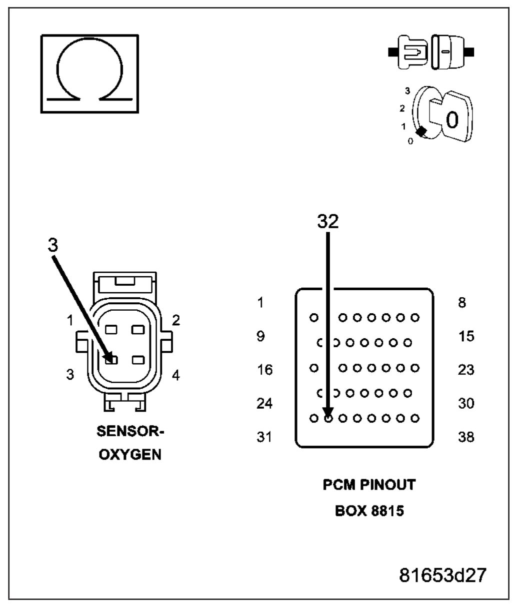
**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K43) O2 2/1 Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. (K902) O2 UPSTREAM RETURN CIRCUIT OPEN

Measure the resistance of the (K902) O2 Upstream Return circuit from the O2 Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K902) O2 Upstream Return circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

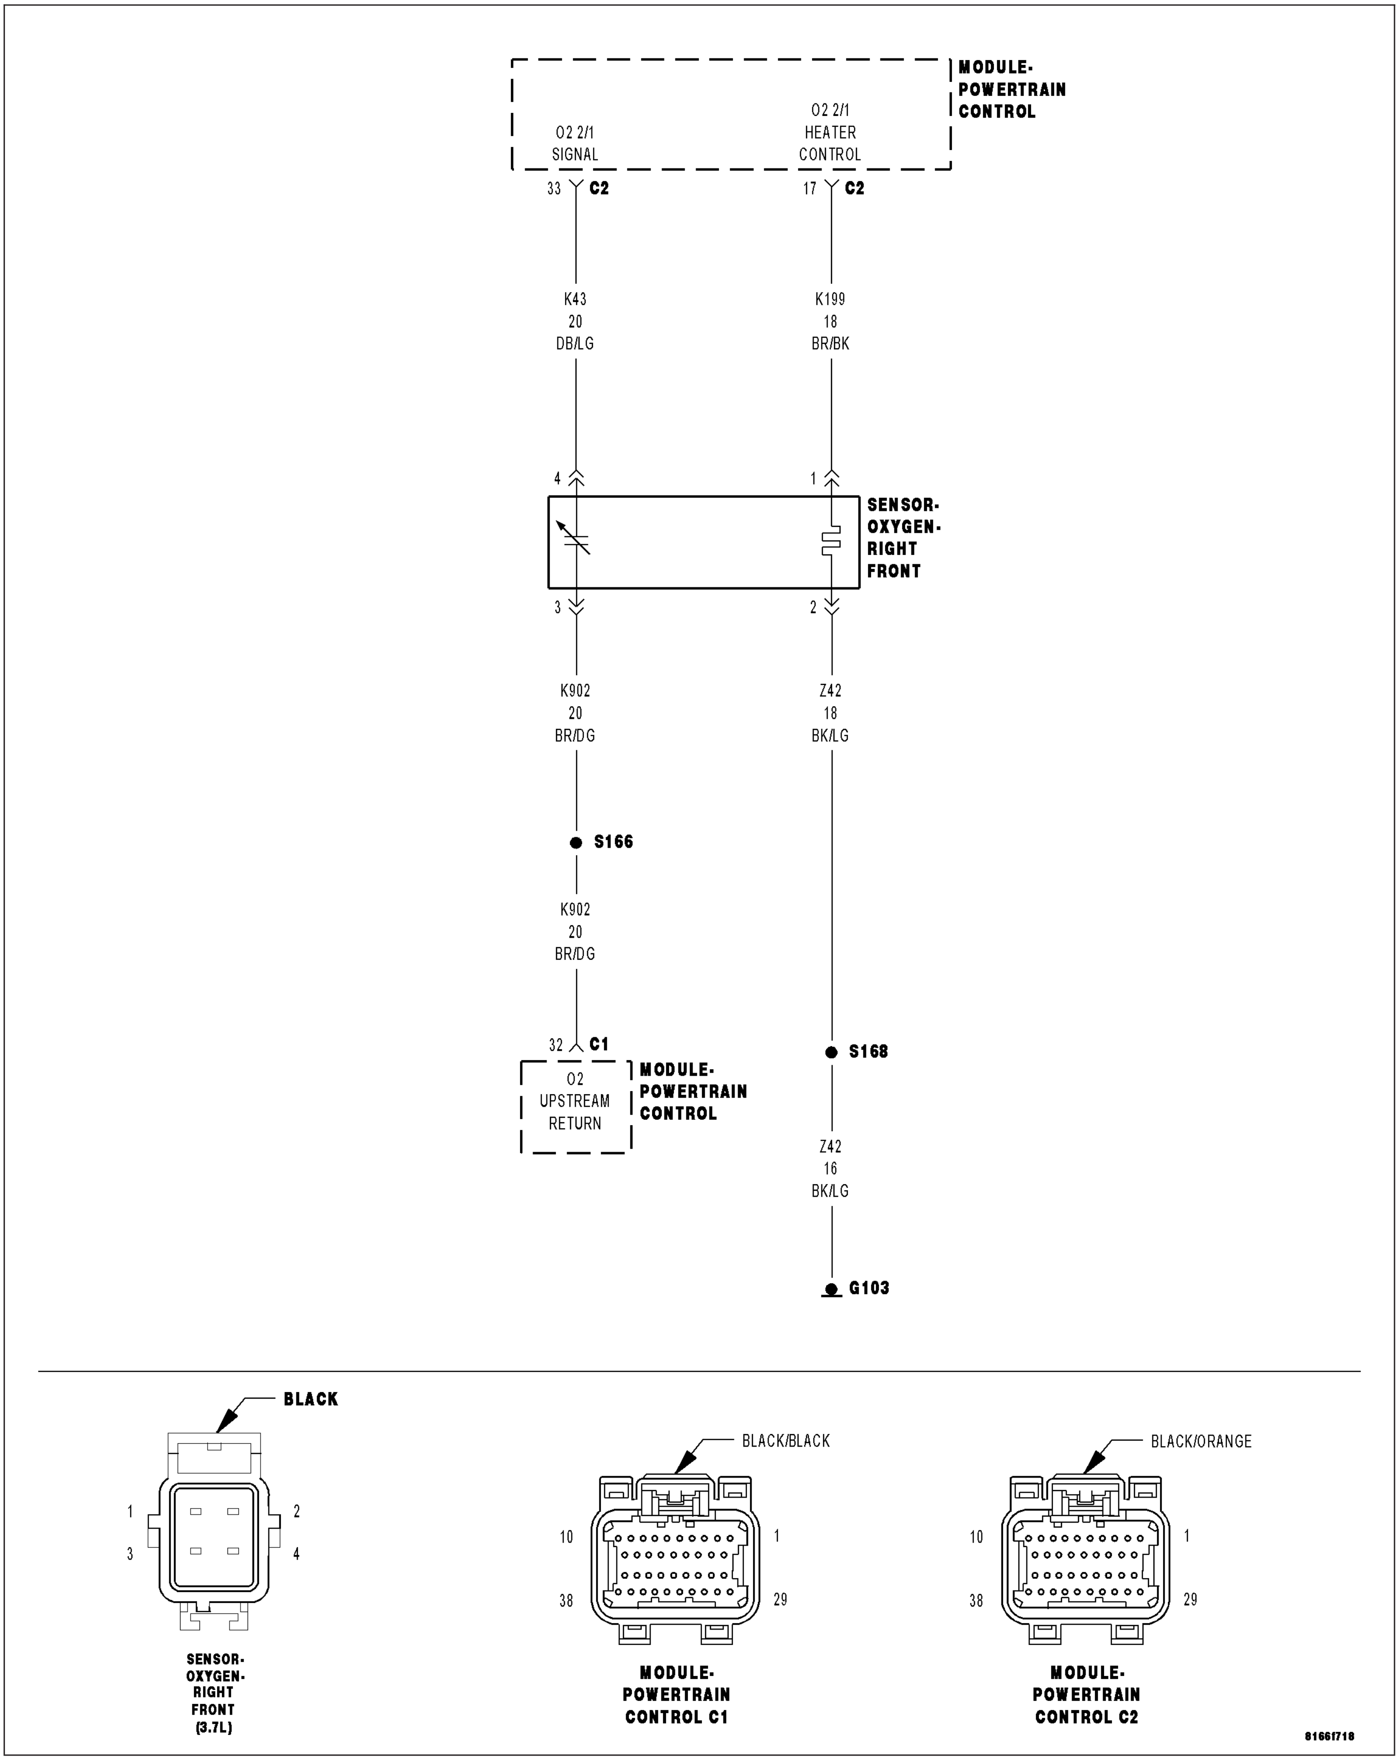
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0153-O2 SENSOR 2/1 SLOW RESPONSE



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

For an aged O2 sensor , the response rate to the air/fuel change is slower than when it was new. The O2 sensor tends to move less with the same air/fuel changes in a given time frame. Therefore by observing the activity of voltage readings from the upstream O2 sensor, the quality of the O2 sensor can be detected.

- **When Monitored:**
  Vehicle is started and driven between 20 and 55 MPH with the Throttle open for a minimum of 120 seconds. Coolant greater than 70°C (158°F). Catalytic Converter Temp greater than 600°C (1112°F) and EVAP Purge is active.
- **Set Condition:**
  O2 Sensor response is too slow for a calibrated amount of time. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| EXHAUST LEAK |
| (K43) O2 2/1 SIGNAL CIRCUIT |
| (K902) O2 UPSTREAM RETURN CIRCUIT |
| O2 SENSOR |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: Check for contaminants that may have damaged the O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant.**
Ignition on, engine not running.

**NOTE: After the repairs have been made, verify proper O2 Sensor operation. If all the O2 Sensor voltage readings have not returned to normal, follow the diagnostic procedure for the remaining O2 Sensors.**
With a scan tool, read DTCs and record the related Freeze Frame data.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 2. EXHAUST LEAK

Start the engine.

Inspect the exhaust system for leaks between the engine and the O2 Sensors.

Turn the ignition off.

If a leak is heard but unable to be located, it may be necessary to use special tool Miller Tool #8404A Evaporative Emissions Leak Detector (EELD) on the exhaust system to find leaks.

Connect the SMOKE supply tip (black hose) to the exhaust cone adapter (if equipped) and place it into the tail pipe.

Set the smoke/air control switch to SMOKE.

Press the remote smoke/air start button.

While still holding the remote smoke/air start button, use the white light (#8404-CLL) to follow the EVAP system path, and look for the source of the leak indicated by exiting smoke.

If a leak is concealed from view, release the remote smoke/air start button, and use the ultraviolet (UV) black light #8404-UVL and the yellow goggles 8404-20 to look for residual traces of dye that is left behind by the smoke.

The exiting smoke deposits a residual fluid that is either bright green or bright yellow in color when viewed with a UV light.

Be sure to check the exhaust manifold to cylinder head connection for leaks.

**Are there any exhaust leaks?**

**Yes** >> Repair or replace the leaking exhaust parts as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

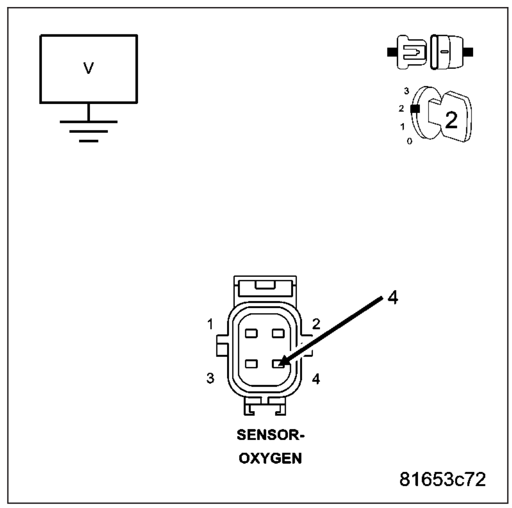
## 3. (K43) O2 2/1 SIGNAL CIRCUIT

Turn the ignition off

Disconnect the O2 Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (K43) O2 2/1 Signal circuit in the O2 Sensor harness connector.



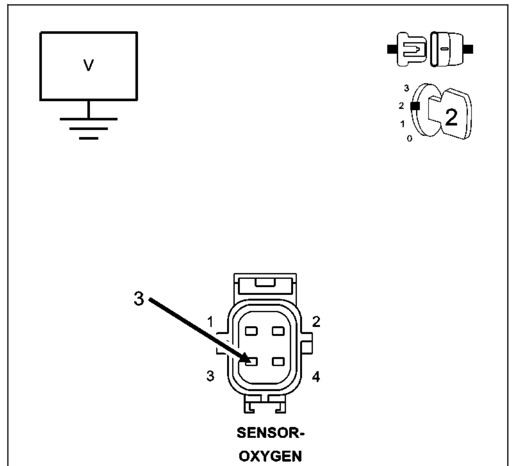
**Is the voltage approximately 5.0 volts?**

**Yes** >> Go To 4

**No** >> Check the (K43) O2 2/1 Signal circuit for a short to ground, open, or short to voltage. If OK, replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. (K902) O2 UPSTREAM RETURN CIRCUIT

Measure the voltage on the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.



81653c98

**Is the voltage at 2.5 volts?**

**Yes** >> Check the (K902) O2 Upstream Return circuit for a short to ground, open, or short to voltage. If OK, replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. O2 SENSOR

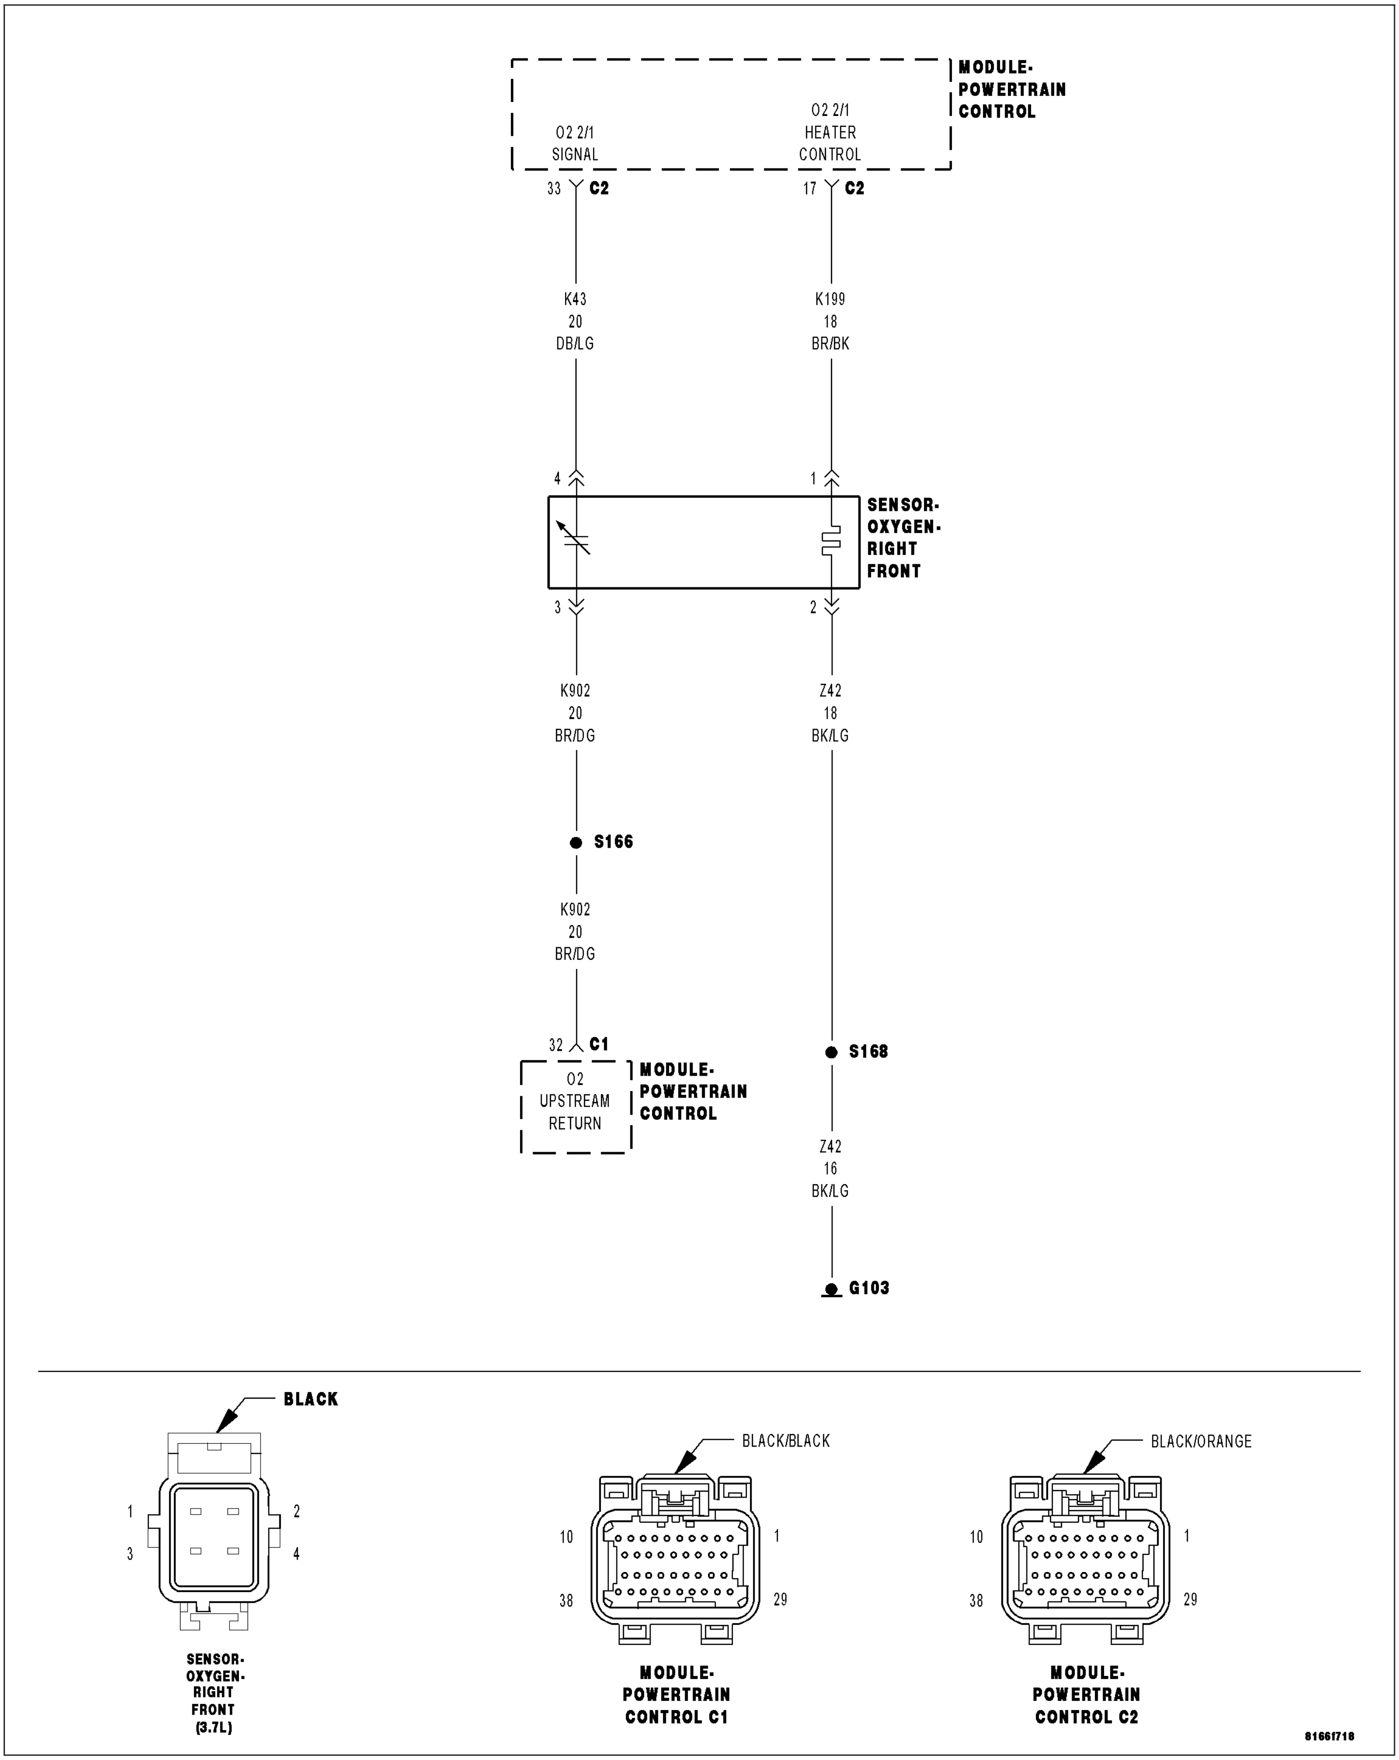
**If there are no possible causes remaining, view repair.**

**Repair**

Replace the O2 Sensor

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0155-O2 SENSOR 2/1 HEATER PERFORMANCE



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

This diagnostic provides a continuous check of the O2 heater circuit during operation. The heater circuit is momentarily disabled to allow a resistance measurement to be taken to infer heater temperature. The current delivery to the heater is duty cycled to maintain a specific target temperature. The error from the target temperature is continuously monitored to assess heater performance.

- **When Monitored:**
  Engine running and heater duty cycle greater than 0%. Battery voltage greater than 11.0 volts.
- **Set Condition:**
  No sensor output is received when the PCM powers up the sensor heater for more than 50 seconds. Two trip fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (K199) O2 2/1 HEATER CONTROL CIRCUIT OPEN |
| (Z42) O2 HEATER GROUND CIRCUIT OPEN |
| O2 SENSOR HEATER ELEMENT |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. O2 SENSOR HEATER OPERATION

Turn the ignition off.

**NOTE: Wait a minimum of 8 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize between 4.6 and 5.0 volts.**

Ignition on, engine not running.

With a scan tool, actuate the O2 Heater Test.

With the scan tool, monitor 2/1 O2 Sensor voltage for at least 2 minutes.

**Does the voltage stay above 4.5 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. O2 SENSOR HEATER ELEMENT

Turn the ignition off.

**NOTE: Allow the O2 sensor to cool down to room temperature.**

Disconnect the 2/1 O2 Sensor harness connector.

Measure the resistance of the O2 Heater Element across the O2 Sensor connector between the O2 Heater Control terminal and the O2 Heater ground terminal.

**NOTE: O2 Heater Element resistance values should be measured at 70°F (21.1°C). The resistance value will vary with different temperature values.**

**Is the resistance of the O2 Sensor Heater Element between 2.0 and 30.0 ohms?**

**Yes** >> Go To 3

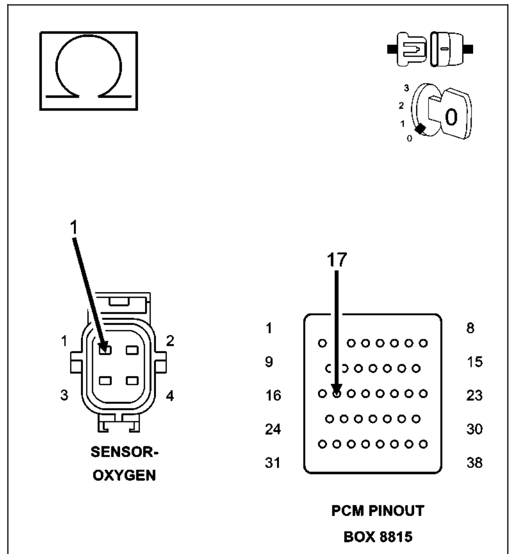
**No** >> Replace the O2 Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. (K199) O2 2/1 HEATER CONTROL CIRCUIT OPEN

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K199) O2 2/1 Heater Control circuit from the O2 harness connector to the appropriate terminal of special tool #8815.



81650c75

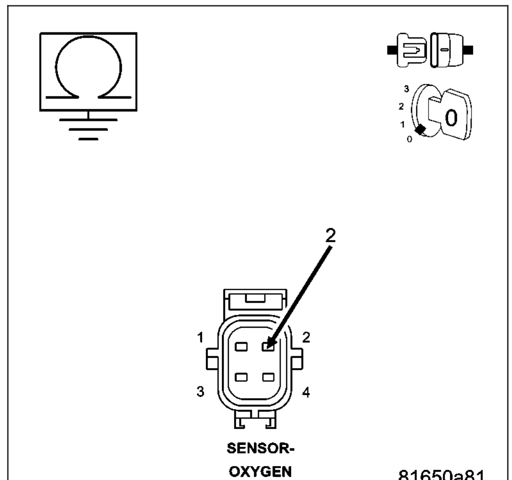
**Is the resistance below 0.5 of an ohm?**

**Yes** >> Go To 4

**No** >> Repair the excessive resistance in the (K199) O2 2/1 Heater Control circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. (Z42) O2 SENSOR HEATER GROUND CIRCUIT OPEN

Measure the resistance between ground and the (Z42) O2 Heater ground circuit in the O2 Sensor harness connector.



81650a81

**Is the resistance below 0.5 of an ohm?**

**Yes** >> Go To 5

**No** >> Repair the excessive resistance in the (Z42) O2 Heater ground circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

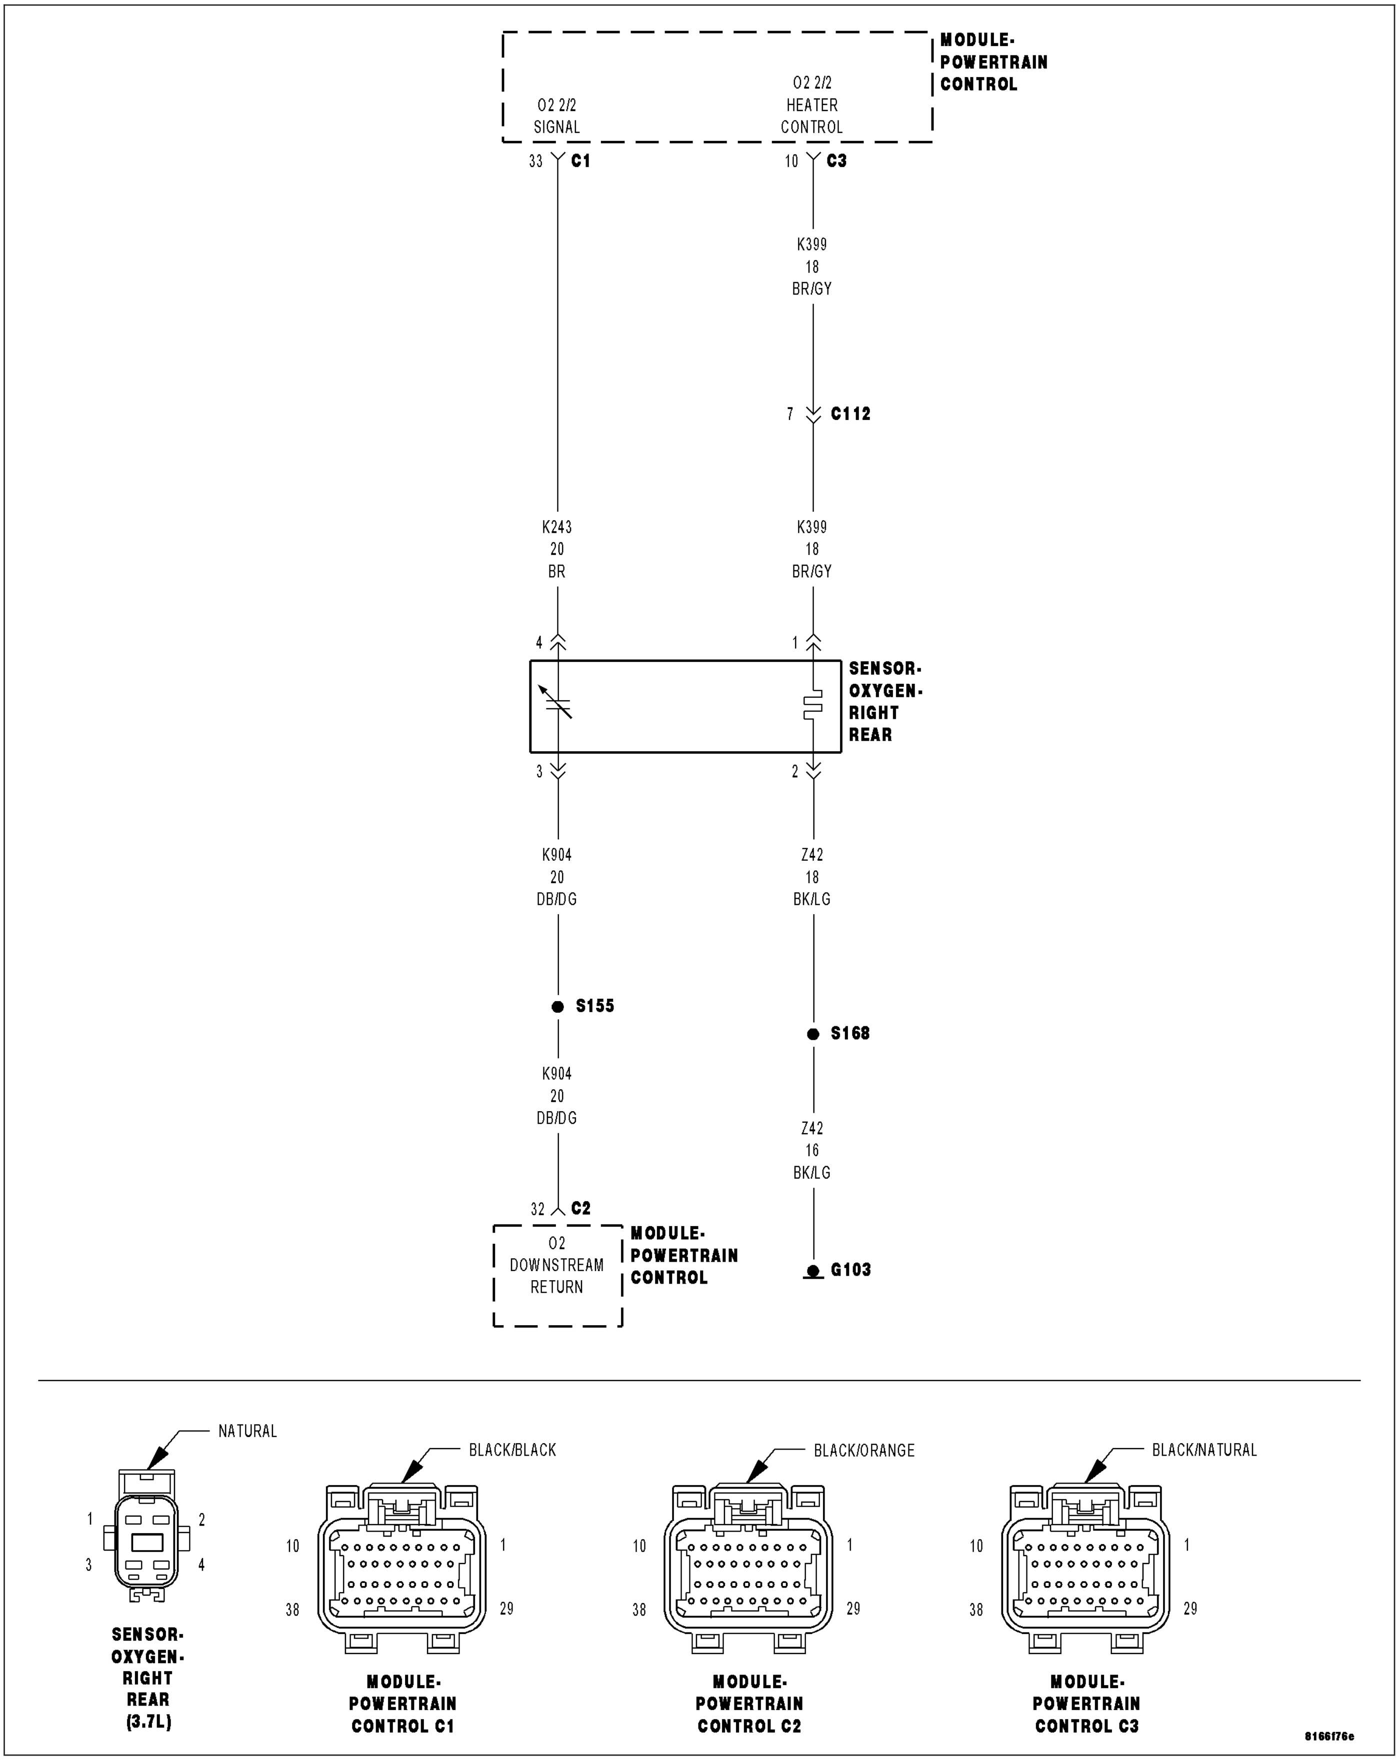
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0157-O2 SENSOR 2/2 CIRCUIT LOW



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine running for less than 30 seconds and the O2 Sensor Heater Temperature is less than 251°C (484°F) with battery voltage greater 10.99 volts.
- **Set Condition:**
  The oxygen sensor signal voltage is below 2.5196 volts for 6 seconds after starting engine. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (K904) O2 DOWNSTREAM RETURN CIRCUIT SHORTED TO GROUND |
| (K243) O2 2/2 SIGNAL CIRCUIT SHORTED TO GROUND |
| (K243) O2 SIGNAL CIRCUIT SHORTED TO THE (K904) O2 DOWNSTREAM RETURN CIRCUIT |
| (K243) O2 SIGNAL CIRCUIT SHORTED TO THE (Z42) O2 2/2 HEATER GROUND CIRCUIT |
| O2 SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. O2 SENSOR BELOW 2.52 VOLTS

Start the engine.

Allow the engine to reach normal operating temperature.

With a scan tool, read the 2/2 O2 Sensor voltage.

**Is the voltage below 2.52 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (K243) O2 2/2 SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the 2/2 O2 Sensor harness connector.

Ignition on, engine not running.

With a scan tool, monitor the 2/2 O2 Sensor voltage.

**Is the O2 Sensor voltage above 4.8 volts?**

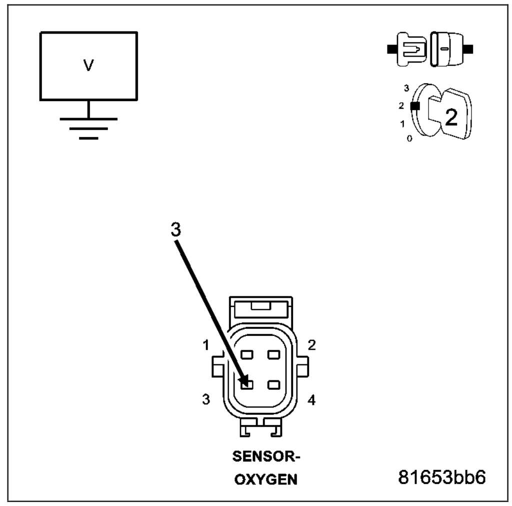
**Yes** >> Go To 3

**No** >> Go To 5

## 3. O2 SENSOR

Measure the voltage on the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**Is the voltage at 2.5 volts?**



**Yes** >> Replace the O2 Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

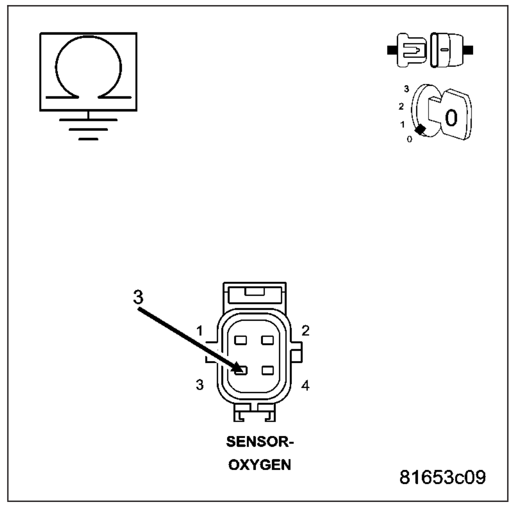
## 4. (K904) O2 DOWNSTREAM RETURN CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**Is the resistance below 100 ohms?**



**Yes** >> Repair the short to ground in the (K904) O2 Downstream Return circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

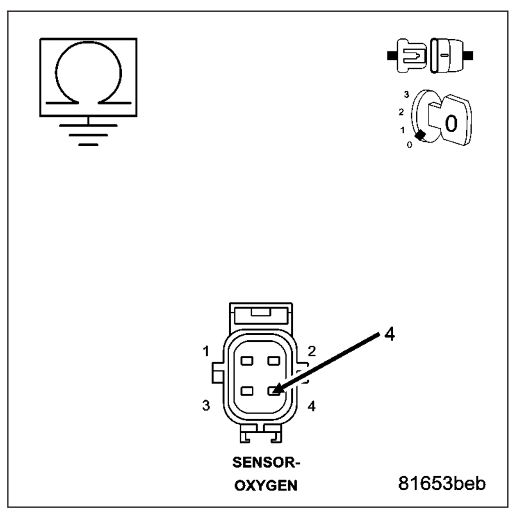
## 5. (K243) O2 2/2 SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C1 and C2 PCM harness connectors.

Measure the resistance between ground and the (K243) O2 2/2 Signal circuit in the O2 Sensor harness connector.

**Is the resistance below 100 ohms?**

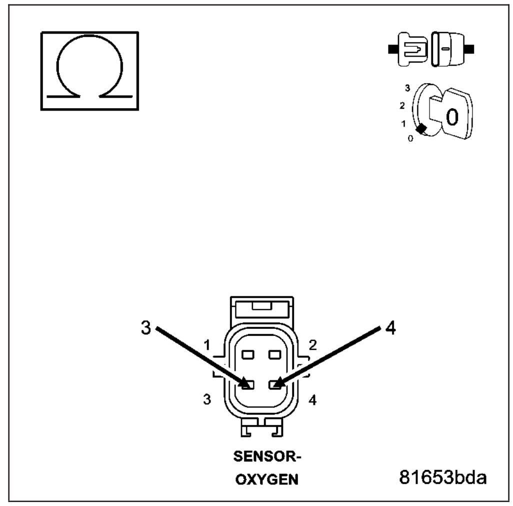


**Yes** >> Repair the short to ground in the (K243) O2 2/2 Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. (K243) O2 2/2 SIGNAL CIRCUIT SHORTED TO THE (K904) O2 DOWNSTREAM RETURN CIRCUIT

Measure the resistance between the (K243) O2 2/2 Signal circuit and the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.



**Is the resistance below 100 ohms?**

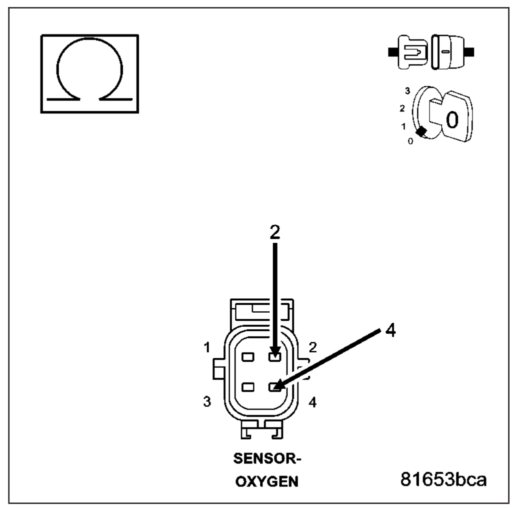
**Yes** >> Repair the short between the (K904) O2 Downstream Return circuit and the (K243) O2 2/2 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 7. (K243) O2 2/2 SIGNAL CIRCUIT SHORTED TO THE (Z42) O2 2/2 HEATER GROUND CIRCUIT

Measure the resistance between the (K243) O2 2/2 Signal circuit and the (Z42) O2 2/2 Heater ground circuit in the O2 Sensor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (Z42) O2 2/2 Heater ground circuit and the (K243) O2 2/2 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

## 8. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

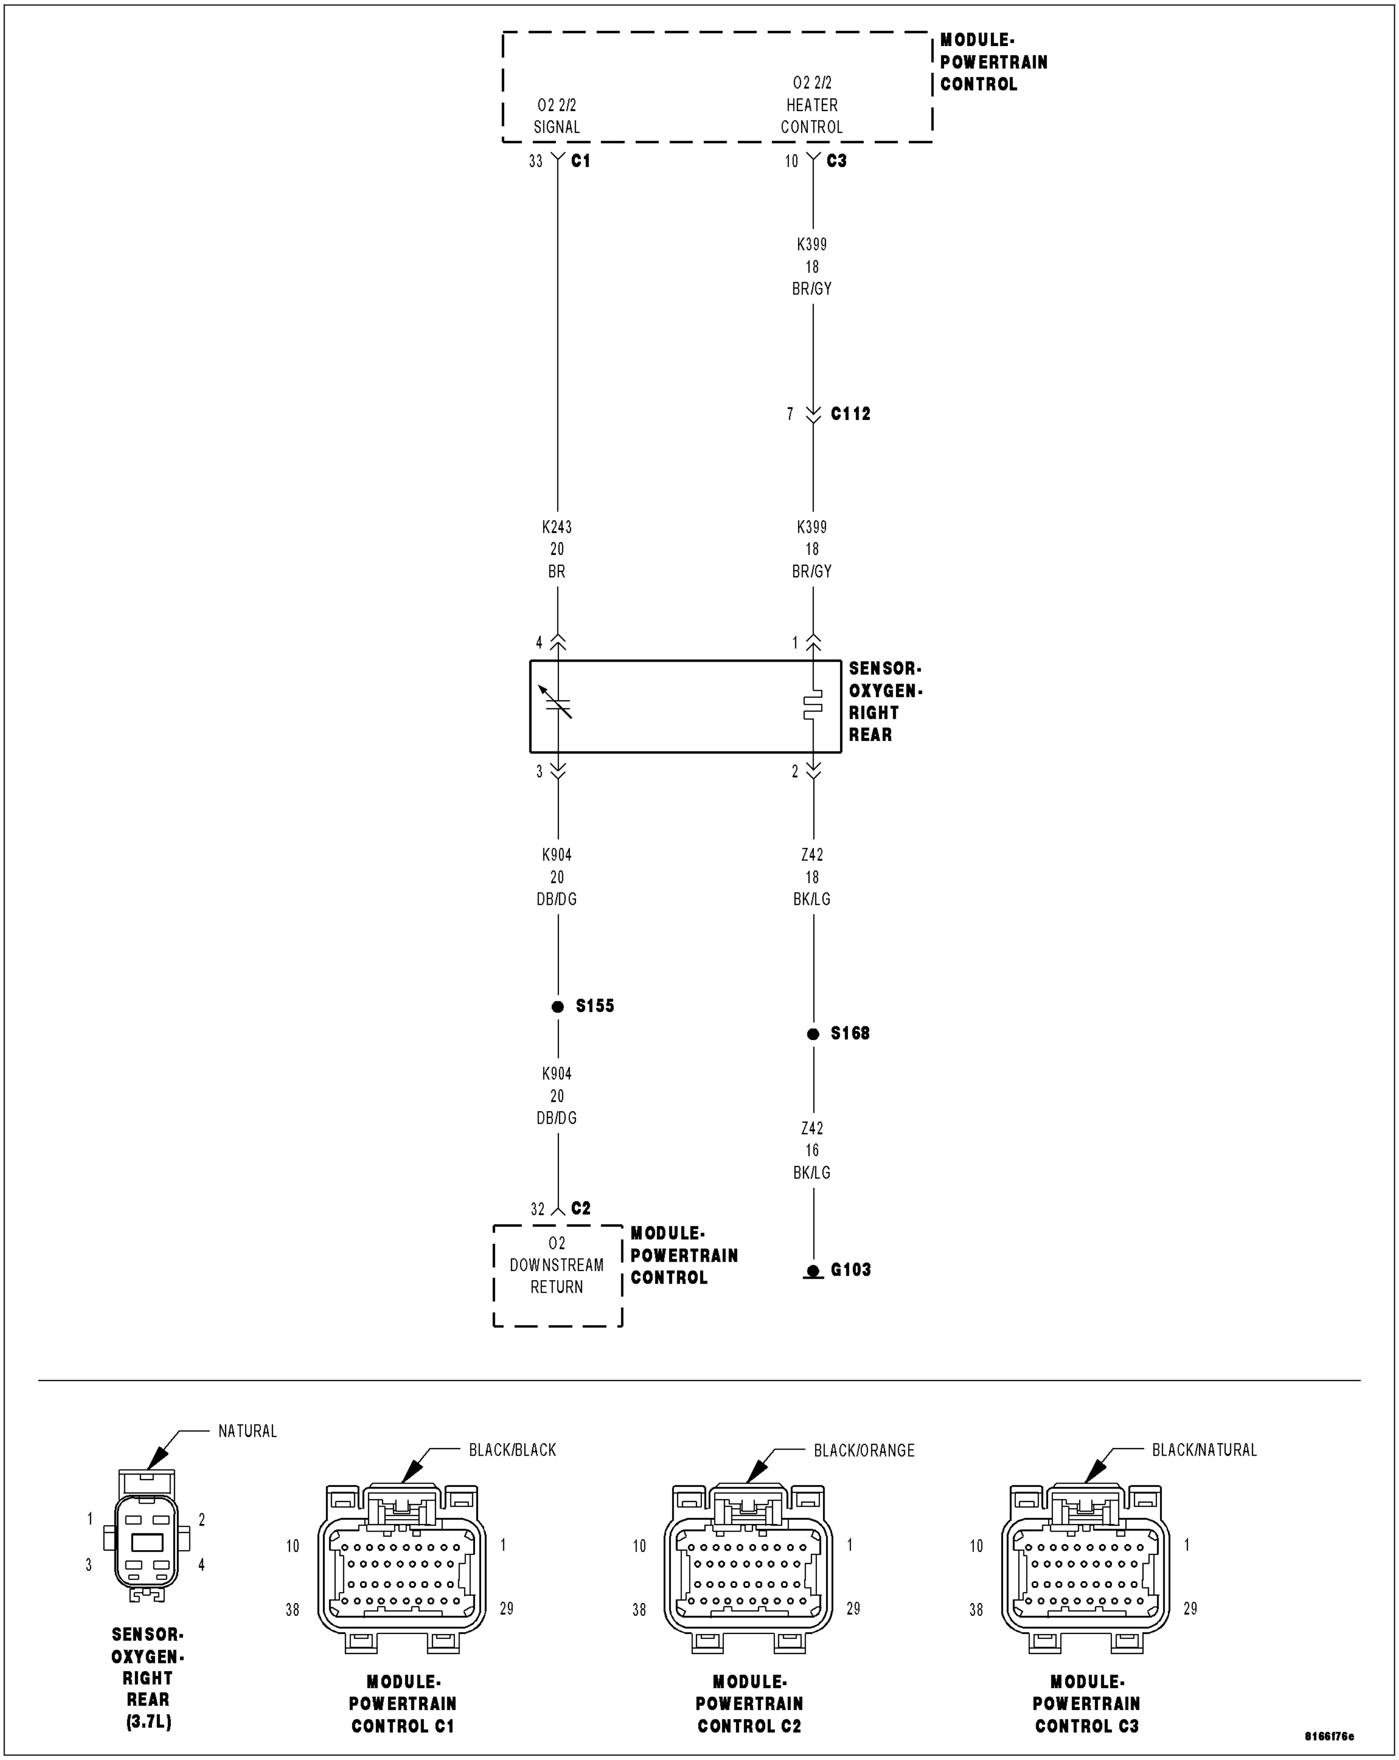
**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0158-O2 SENSOR 2/2 CIRCUIT HIGH



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  O2 Sensor Heater Temperature is greater than 496°C (925°F) and battery voltage greater than 10.99 volts.
- **Set Condition:**
  The Oxygen Sensor voltage is above 3.99 volts for 40 seconds. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (K243) O2 2/2 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K904) O2 DOWNSTREAM RETURN CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K243) O2 2/2 SIGNAL CIRCUIT OPEN |
| (K904) O2 DOWNSTREAM RETURN CIRCUIT OPEN |
| O2 SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. O2 SENSOR ABOVE 3.99 VOLTS

**NOTE: When only one O2 Sensor is shorted to voltage, the scan tool will display all O2 Sensor voltage readings at approximately 5.0 volts. When diagnosing this DTC, only diagnose the O2 Sensor that set the DTC.**

Start the engine.

Allow the engine to reach normal operating temperature.

With a scan tool, read the 2/2 O2 Sensor voltage.

**Is the voltage above 3.99 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (K243) O2 2/2 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Start the engine and allow the engine to idle.

Disconnect the 2/2 O2 Sensor harness connector.

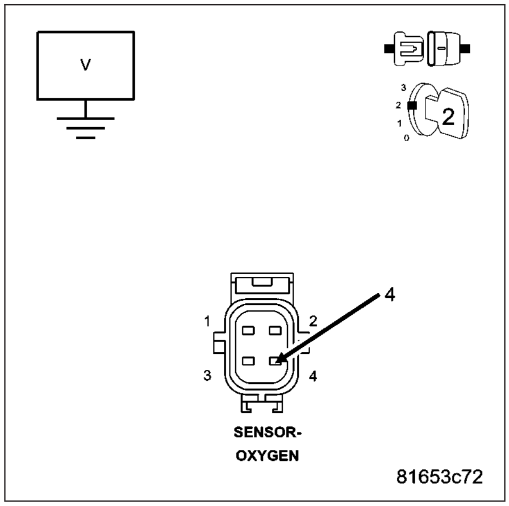
Measure the voltage on the (K243) O2 Sensor 2/2 Signal circuit in the O2 Sensor harness connector.

**NOTE: Measure the voltage in reference to ground, not the (K904) O2 Downstream Return circuit.**

**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K243) O2 Sensor 2/2 Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3



81653c72

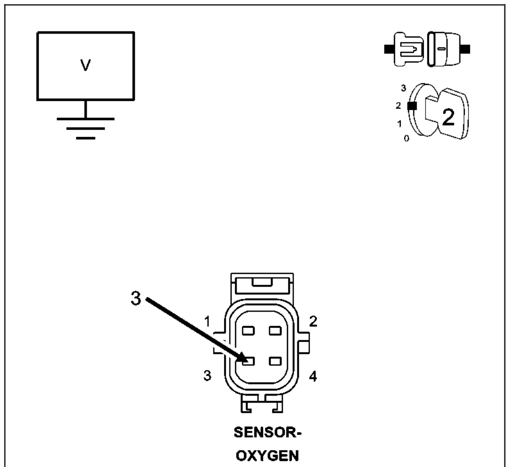
## 3. (K904) O2 DOWNSTREAM RETURN CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (K904) O2 Downstream Return circuit in the 2/2 O2 Sensor harness connector.



81653c98

**Is there any voltage present?**

**Yes** >> Repair the short to battery voltage in the (K904) O2 Downstream Return circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. O2 SENSOR

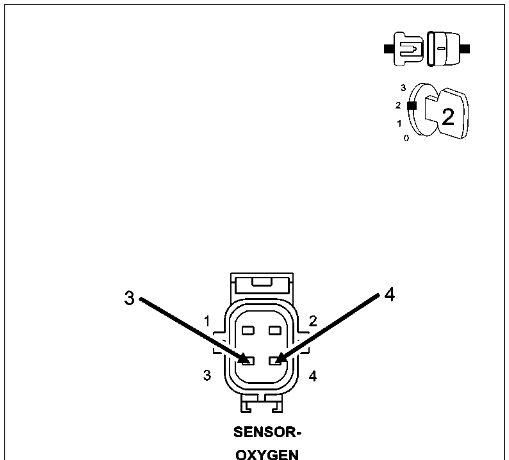
Turn the ignition off.

Connect the C2 PCM harness connector.

Connect a jumper wire between the (K243) O2 2/2 Signal circuit and the (K904) O2 Downstream Return circuit in the 2/2 O2 Sensor harness connector.

Ignition on, engine not running.

With a scan tool, monitor the 2/2 O2 Sensor voltage.



81653cbb

**Is the voltage between 2.3 and 2.7 volts with the jumper wire installed?**

**Yes** >> Replace the O2 Sensor.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

**NOTE: Remove the jumper wire before continuing.**

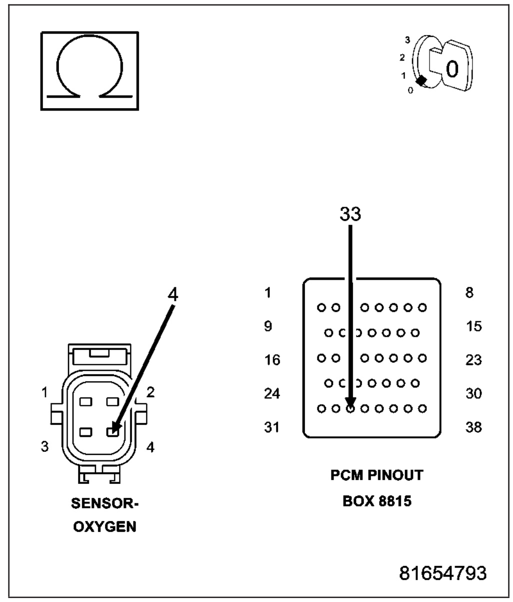
## 5. (K243) O2 2/2 SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the C1 and C2 PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K243) O2 2/2 Signal circuit from the O2 Sensor harness connector to the appropriate terminal of special tool #8815.



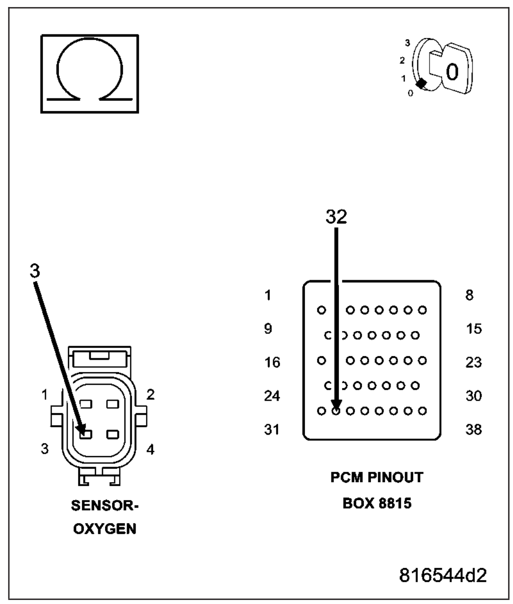
**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K243) O2 2/2 Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. (K904) O2 DOWNSTREAM RETURN CIRCUIT OPEN

Measure the resistance of the (K904) O2 Downstream Return circuit from the O2 Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K904) O2 Downstream Return circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

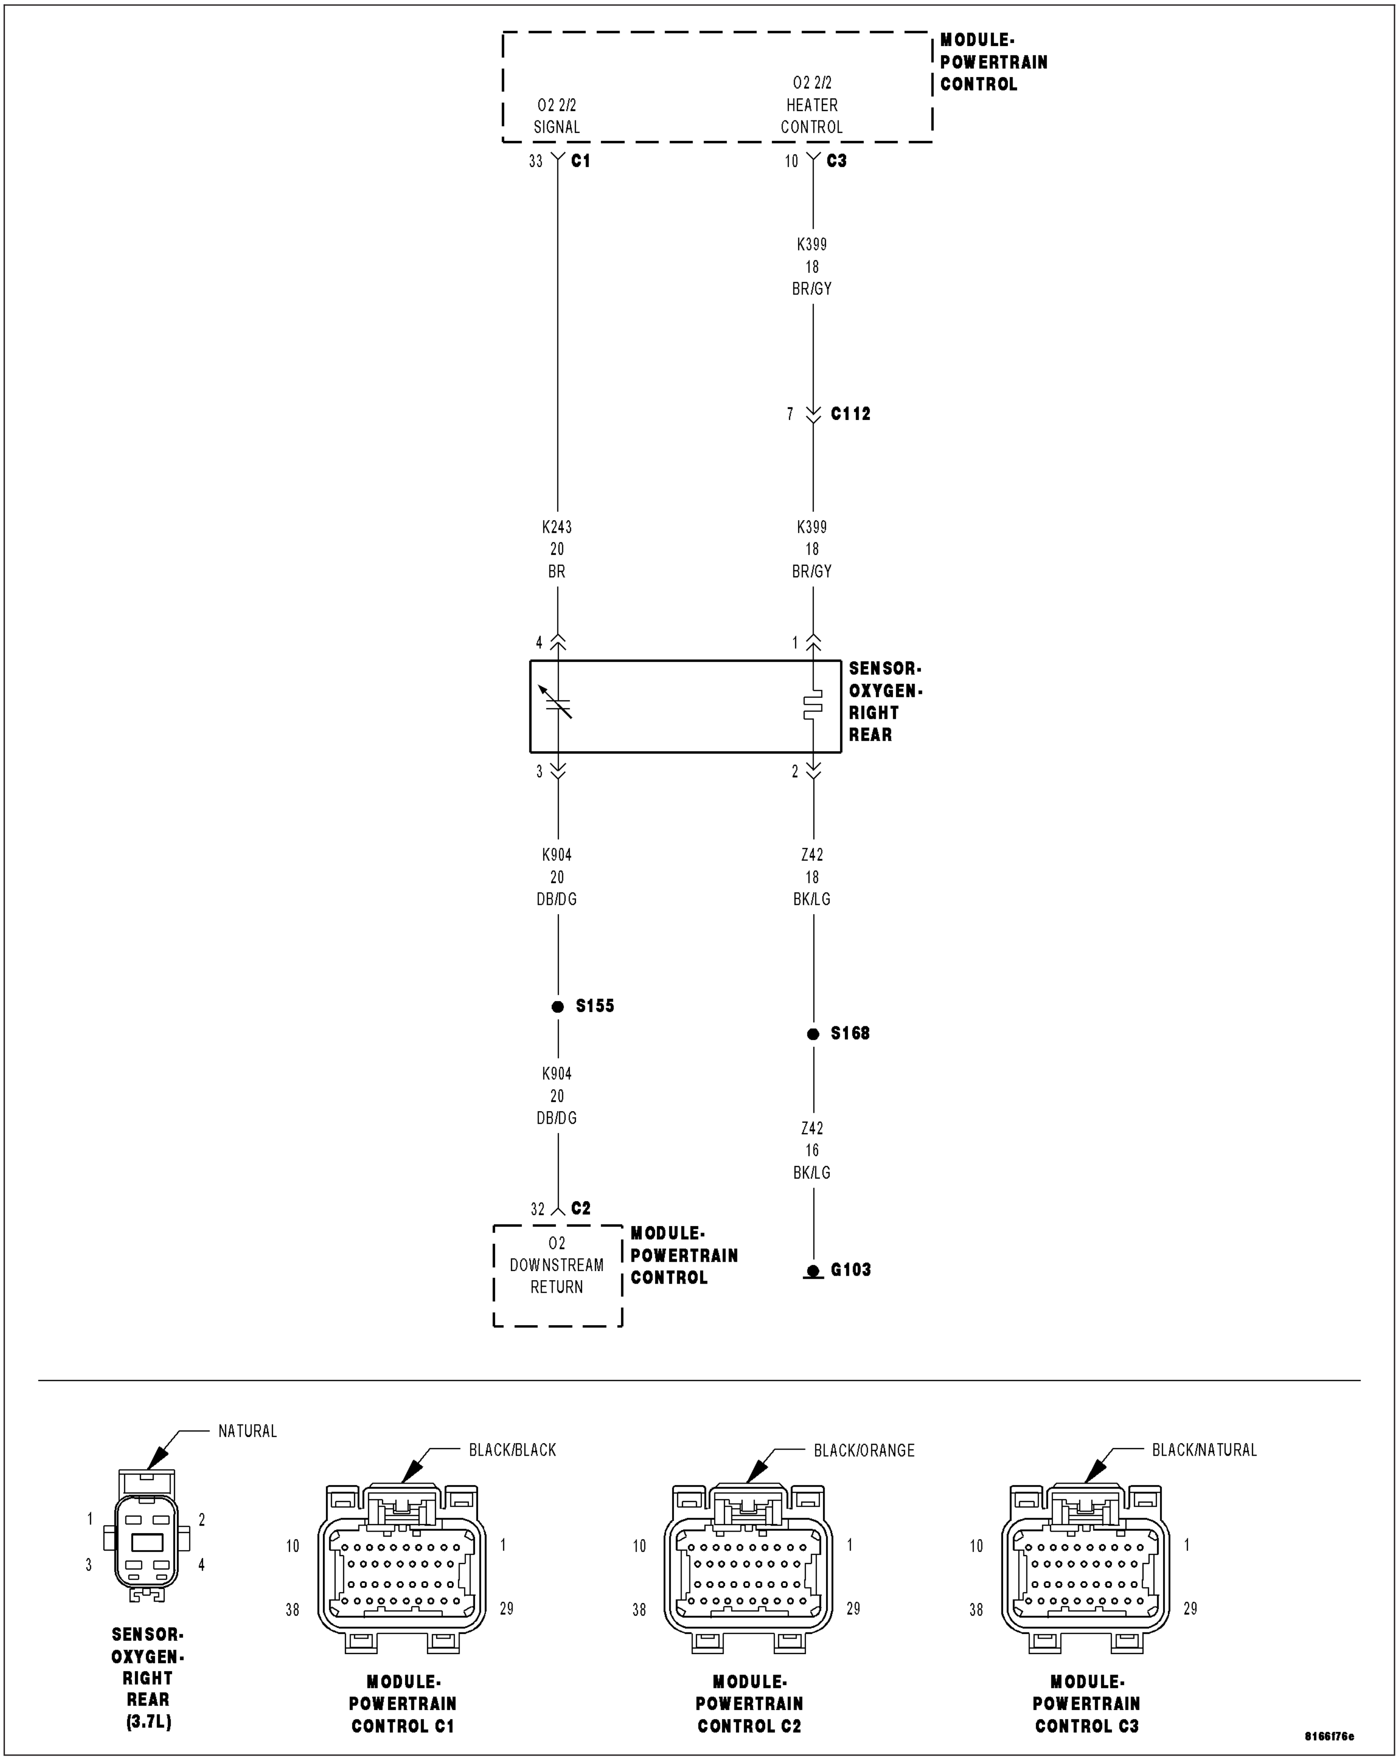
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0159-O2 SENSOR 2/2 SLOW RESPONSE



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The downstream O2 Sensor is located in the exhaust path behind the catalytic converter, is monitored for proper response to assure optimum catalytic converter efficiency. The downstream O2 response monitor is intended to diagnose a downstream O2 sensor that is not moving or stuck in a voltage window and to insure accurate information for catalyst monitor diagnosis.

- **When Monitored:**
  Vehicle is started and driven between 20 and 55 MPH with the Throttle open for a minimum of 120 seconds. Coolant greater than 70°C (158°F). Catalytic Converter Temp greater than 600°C (1112°F) and EVAP Purge is active.
- **Set Condition:**
  The oxygen sensor signal voltage switches less than 16 times from lean to rich within 20 seconds during monitoring. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| EXHAUST LEAK |
| (K243) O2 2/2 SIGNAL CIRCUIT |
| (K904) O2 DOWNSTREAM RETURN CIRCUIT |
| O2 SENSOR |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: Check for contaminants that may have damaged the O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant.**
Ignition on, engine not running.

**NOTE: After the repairs have been made, verify proper O2 Sensor operation. If all the O2 Sensor voltage readings have not returned to normal, follow the diagnostic procedure for the remaining O2 Sensors.**
With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. EXHAUST LEAK

Start the engine.

Inspect the exhaust system for leaks between the engine and the O2 Sensors.

**Are there any exhaust leaks?**

**Yes** >> Repair or replace the leaking exhaust parts as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

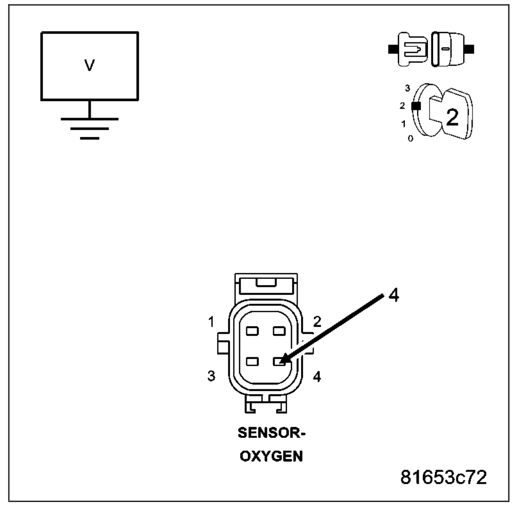
## 3. (K243) O2 2/2 SIGNAL CIRCUIT

Turn the ignition off

Disconnect the 2/2 O2 Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (K243) O2 2/2 Signal circuit in the O2 Sensor harness connector.



**Is the voltage approximately 5.0 volts?**

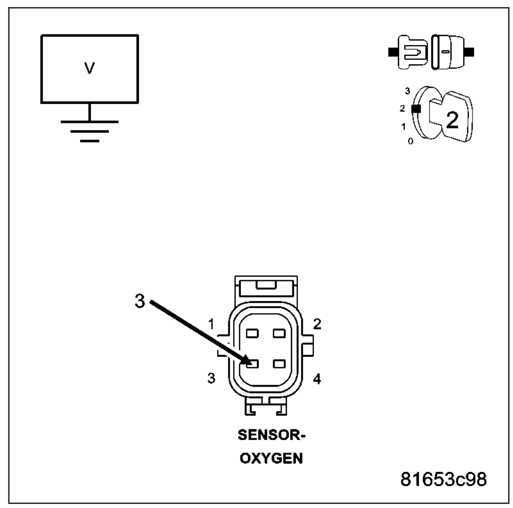
**Yes** >> Go To 4

**No** >> Check the (K243) O2 2/2 Signal circuit for a short to ground, open, or short to voltage. If OK, replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. (K904) O2 DOWNSTREAM RETURN CIRCUIT

Measure the voltage on the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.



**Is the voltage at 2.5 volts?**

**Yes** >> Check the (K904) O2 Downstream Return circuit for a short to ground, open, or short to voltage. If OK, replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. O2 SENSOR

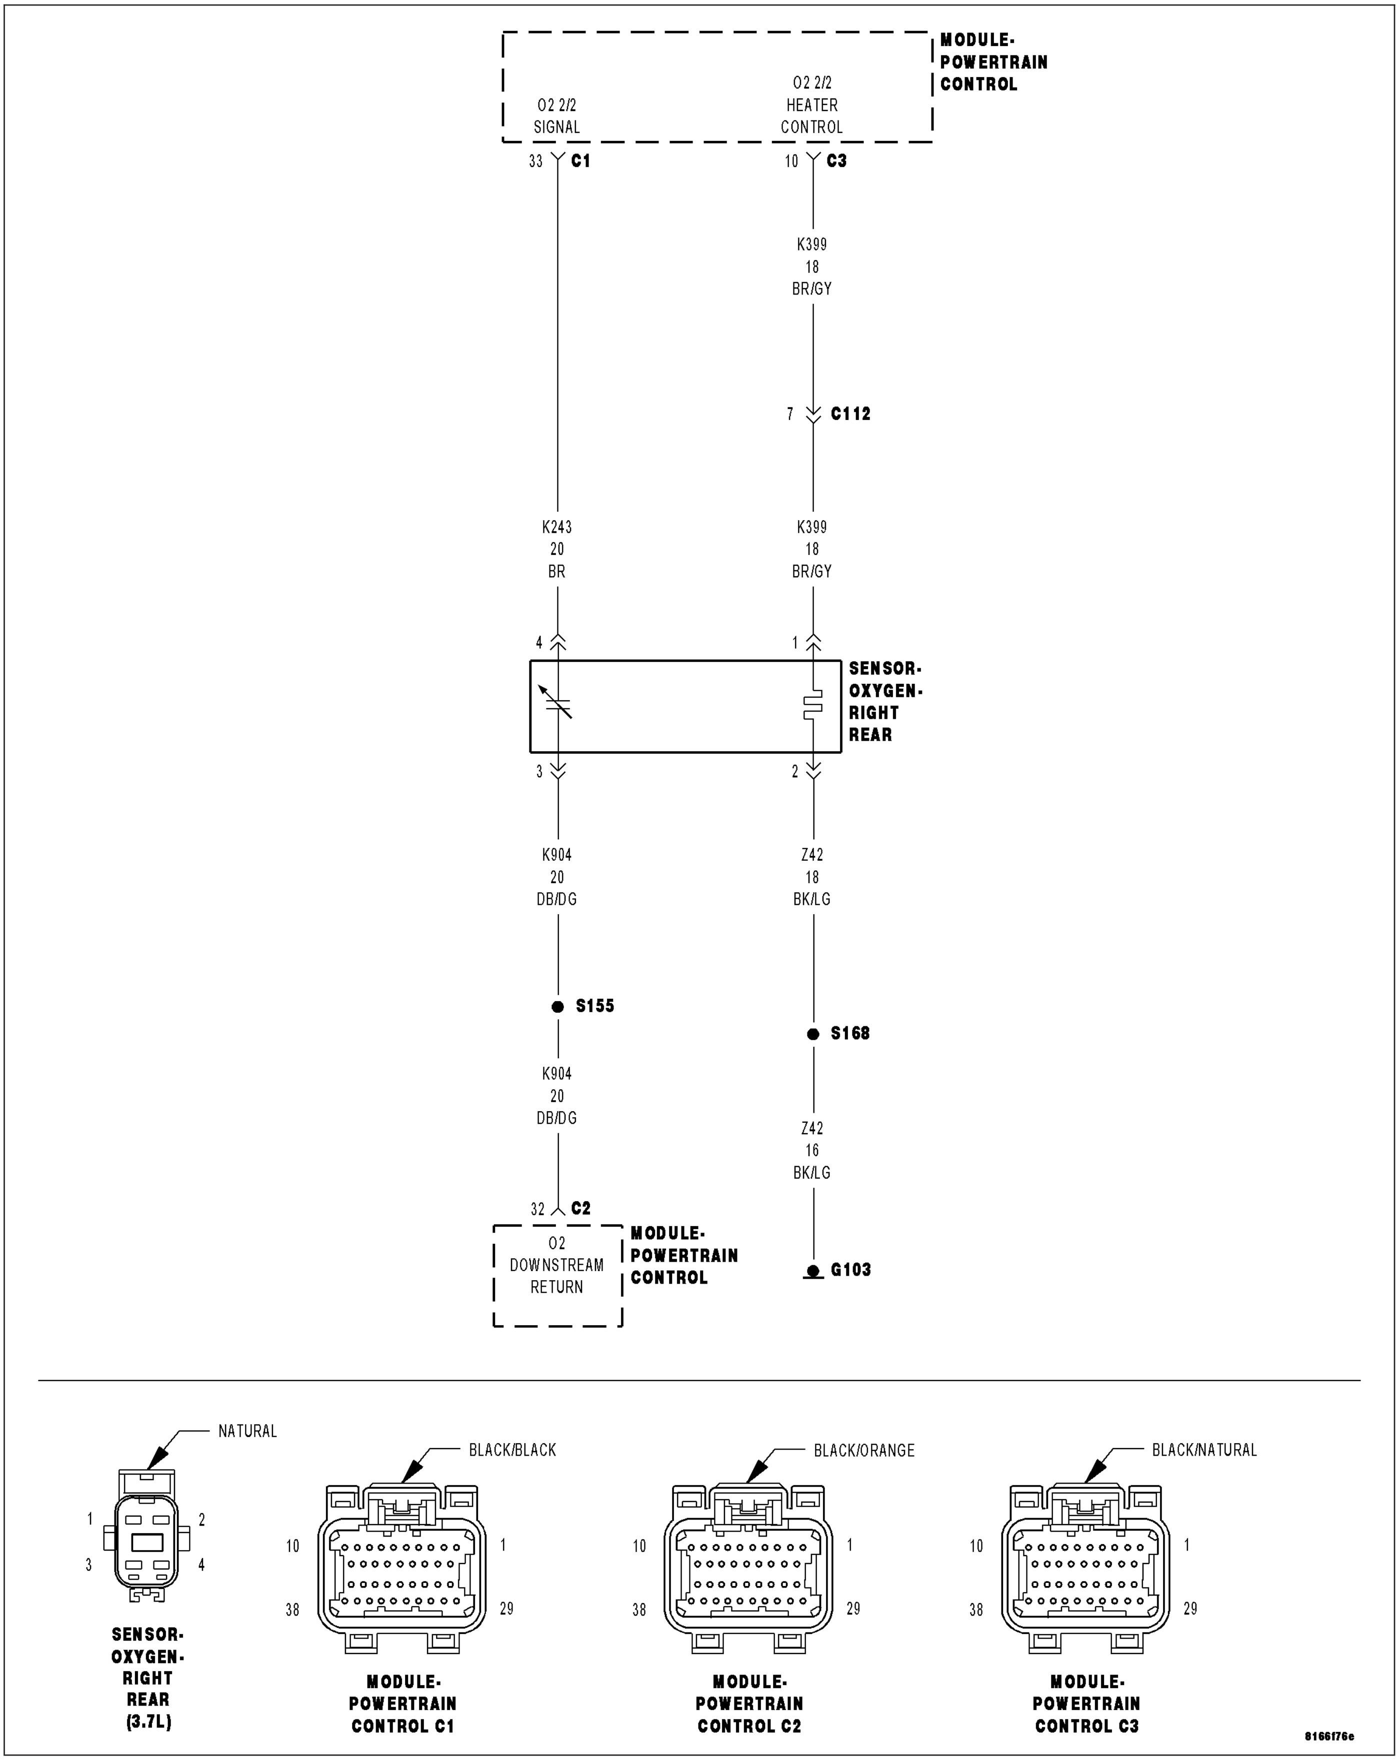
**If there are no possible causes remaining, view repair.**

**Repair**

Replace the O2 Sensor

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0161-O2 SENSOR 2/2 HEATER PERFORMANCE



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

This diagnostic provides a continuous check of the O2 heater circuit during operation. The heater circuit is momentarily disabled to allow a resistance measurement to be taken to infer heater temperature. The current delivery to the heater is duty cycled to maintain a specific target temperature. The error from the target temperature is continuously monitored to assess heater performance.

- **When Monitored:**
  Engine running and heater duty cycle greater than 0%. Battery voltage greater than 11.0 volts.
- **Set Condition:**
  No sensor output is received when the PCM powers up the sensor heater for more than 50 seconds. Two trip fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (K399) O2 2/2 HEATER CONTROL CIRCUIT OPEN |
| (Z42) O2 2/2 HEATER GROUND CIRCUIT OPEN |
| O2 SENSOR HEATER ELEMENT |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING.**

## Diagnostic Test

### 1. O2 SENSOR HEATER OPERATION

Turn the ignition off.

**NOTE: Wait a minimum of 8 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize between 4.6 and 5.0 volts.**

Ignition on, engine not running.

With a scan tool, actuate the O2 Heater Test.

With a scan tool, monitor 2/2 O2 Sensor voltage for at least 2 minutes.

**Does the voltage stay above 4.5 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. O2 SENSOR HEATER ELEMENT

Turn the ignition off.

**NOTE: Allow the O2 sensor to cool down to room temperature.**

Disconnect the 2/2 O2 Sensor harness connector.

Measure the resistance of the 2/2 O2 Heater Element, between the O2 Heater Control terminal and the O2 Heater ground terminal in the O2 Sensor connector.

**NOTE: O2 Heater Element resistance values should be measured at 70°F (21.1°C). The resistance value will vary with different temperature values.**

**Is the resistance of the O2 Sensor Heater Element between 2.0 and 30.0 ohms?**

**Yes** >> Go To 3

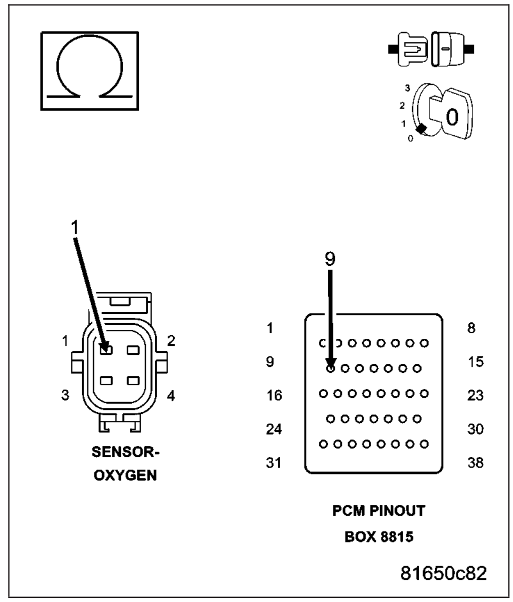
**No** >> Replace the O2 Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. (K399) O2 2/2 HEATER CONTROL CIRCUIT OPEN

Disconnect the C3 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K399) O2 2/2 Heater Control circuit from the O2 harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 0.5 of an ohm?**

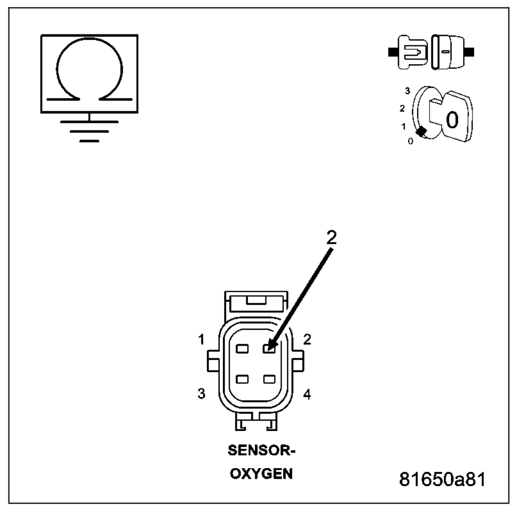
**Yes** >> Go To 4

**No** >> Repair the excessive resistance in the (K399) O2 2/2 Heater Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. (Z42) O2 2/2 HEATER GROUND CIRCUIT OPEN

Measure the resistance between ground and the (Z42) O2 2/2 Heater ground circuit in the O2 Sensor harness connector.



**Is the resistance below 0.5 of an ohm?**

**Yes** >> Go To 5

**No** >> Repair the excessive resistance in the (Z42) O2 2/2 Heater ground circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

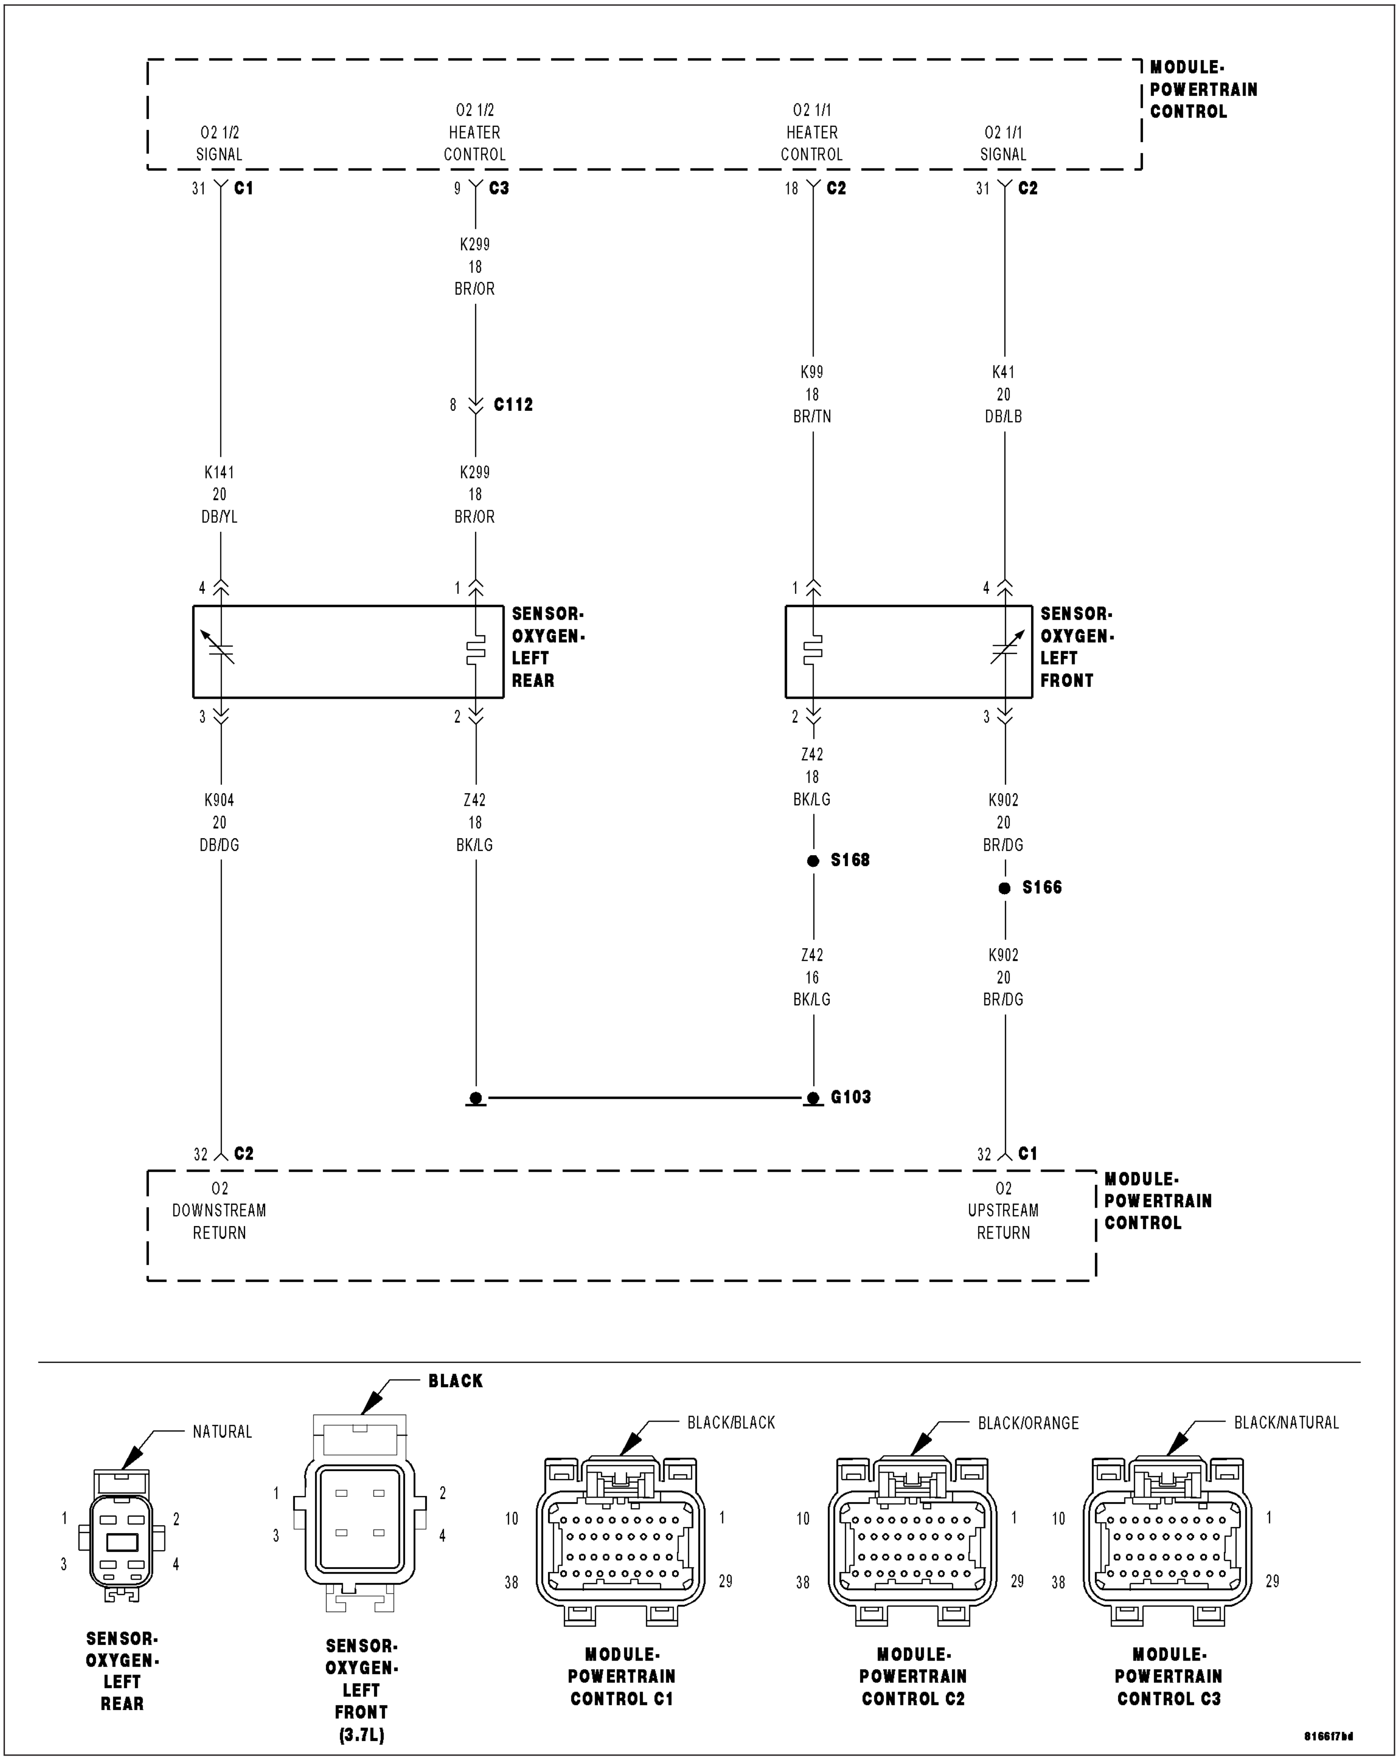
**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0171-FUEL SYSTEM 1/1 LEAN



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The fuel feedback system will maintain a stoiciometric fuel/air mixture, 14.7:1, by modifying the injector pulsewidth according to the oxygen content of the exhaust gas. The PCM makes short term and long term fuel corrections to maintain stoiciometric fuel/air ratio for best catalytic converter efficiency. Short term fuel correction is based on upstream O2 sensor output and is designed for quick engine response. The long term fuel correction compensated for variations in the engine specifications, sensor tolerances and component aging and is designed to correct rich and lean conditions over a longer period of time.

- **When Monitored:**
  With the engine running in closed loop mode, the ambient/battery temperature above 20 deg. F and altitude below 8500 ft.
- **Set Condition:**
  If the PCM multiplies short term compensation by long term adaptive and a certain percentage is exceeded for two trips, a freeze frame is stored, the MIL illuminates and a trouble code is stored. Two Trip Fault. Three good trips to turn off the MIL

| Possible Causes |
|---|
| RESTRICTED FUEL SUPPLY LINE |
| FUEL PUMP INLET STRAINER PLUGGED |
| FUEL PUMP MODULE |
| O2 SIGNAL CIRCUIT |
| O2 RETURN CIRCUIT |
| O2 SENSOR HEATER OPERATION |
| O2 SENSOR |
| MAP SENSOR OPERATION |
| ECT SENSOR OPERATION |
| ENGINE MECHANICAL PROBLEM |
| FUEL FILTER/PRESSURE REGULATOR (HIGH) |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Diagnose all other trouble codes before continuing.

**NOTE: Check for contaminants that may have damaged an O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 2. CHECKING FUEL PRESSURE

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Install a fuel pressure gauge to the fuel rail.

Ignition on, engine not running.

With a scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

Turn the ignition off.

**Choose a conclusion that best matches your fuel pressure reading.**

**Within Specification**

Go To 3

**Above Specification**

Replace the fuel filter/pressure regulator.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**Below Specification**

Go To 12

**CAUTION: Stop All Actuations.**

## 3. O2 SENSOR OPERATION

Start the engine.

Allow the engine to reach normal operating temperature.

**NOTE: If one of the O2 Sensor's Signal or Return circuit is shorted to ground the scan tool will display all O2 Sensor voltage readings low. The O2 Sensor that is shorted to ground will display a voltage reading near or at 0 volts.**

**NOTE: If one of the O2 Sensor Signal or Return circuits are shorted to voltage, the scan tool will display all O2 Sensor voltage readings high.**

**NOTE: After the repairs have been made, verify proper O2 Sensor operation. If all the O2 Sensor voltage readings have not returned to normal, follow the diagnostic procedure for the remaining O2 Sensors.**

With a scan tool, monitor all of the O2 Sensor voltage readings.

**Is the voltage switching between 2.5 and 3.4 volts for all the O2 Sensors?**

**Yes** >> Go To 4

**No** >> Go To 8

## 4. 1/1 O2 SENSOR HEATER OPERATION

Turn the ignition off.

**NOTE: Wait a minimum of 10 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize at 5.0 volts.**

Ignition on, engine not running.

With a scan tool, actuate the 1/1 O2 Heater Test.

With the scan tool, monitor 1/1 O2 Sensor voltage for at least 2 minutes.

**Does the voltage stay above 4.5 volts?**

**Yes** >> Replace the 1/1 O2 Sensor.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. MAP SENSOR OPERATION

Turn the ignition off.

Connect a Vacuum Gauge to a Manifold Vacuum source.

Start the engine.

Allow the engine to idle.

**NOTE: If engine will not idle, maintain a constant RPM above idle.**

With the scan tool, read the MAP Sensor vacuum value.

**Is the scan tool reading within 1″ of the Vacuum Gauge reading?**

**Yes** >> Go To 6

**No** >> Replace the MAP Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. ECT SENSOR OPERATION

**NOTE: For this test to be valid, the thermostat must be operating correctly.**

**NOTE: This test works best if performed on a cold engine (cold soak)**

Ignition on, engine not running.

With a scan tool, read the Engine Coolant Temperature (ECT) Sensor value. If the engine was allowed to sit overnight (cold soak), the temperature value should be a sensible value that is somewhere close to the ambient temperature.

**NOTE: If engine coolant temperature is above 82°C (180°F), allow the engine to cool until 65°C (150°F) is reached.**

Start the Engine.

During engine warm-up, monitor the ECT Sensor value. The temperature value change should be a smooth transition from start up to normal operating temperature 82°C (180°F). The value should reach at least 82°C (180°F).

**Did the ECT value increase smoothly and did it reach at least 180°F (82°C)?**

**Yes** >> Go To 7

**No** >> Replace the Engine Coolant Temperature Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. ENGINE MECHANICAL PROBLEM

Turn the ignition off.

Check for any of the following conditions/mechanical problems.

AIR INDUCTION SYSTEM - must be free from leaks.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

FUEL INJECTOR - plugged or restricted injector; control wire not connected to correct injector

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 11

## 8. 1/1 O2 SENSOR

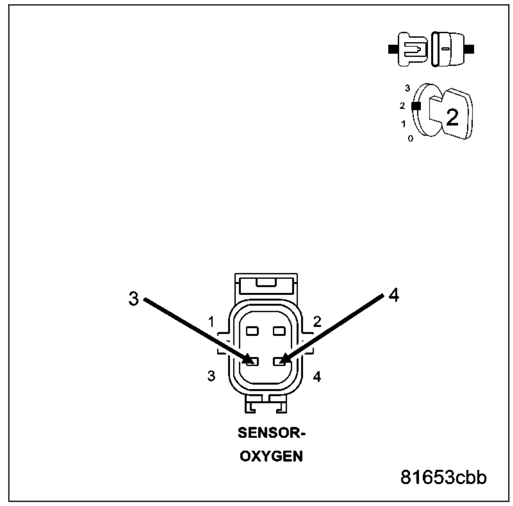
Ignition on, engine not running.

Disconnect the 1/1 O2 Sensor harness connector.

With a scan tool, monitor the 1/1 O2 Sensor voltage.

O2 Sensor voltage should read 5.0 volts on the scan tool with the connector disconnected.

Connect a jumper wire between the (K41) Signal circuit and the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.



**NOTE: The voltage should drop from 5.0 volts to 2.5 volts with the jumper wire in place.**

**Did the O2 Sensor voltage change from 5.0 volts to 2.5 volts with the jumper wire installed?**

**Yes** >> Replace the O2 Sensor.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 9

**NOTE: Remove the jumper wire before continuing.**

## 9. (K41) O2 SENSOR 1/1 SIGNAL CIRCUIT

With a scan tool, monitor the 1/1 O2 Sensor voltage reading with the jumper wire removed.

**NOTE: The scan tool will display all O2 Sensor voltage readings approximately 5.0 volts when only one O2 Sensor's Signal circuit is shorted to voltage.**

**NOTE: The scan tool will display one O2 Sensor voltage close to zero and the others will read lower than normal when one O2 Sensor Signal circuit contains excessive resistance.**

**Is the voltage above 4.8 volts?**

**Yes** >> Go To 10

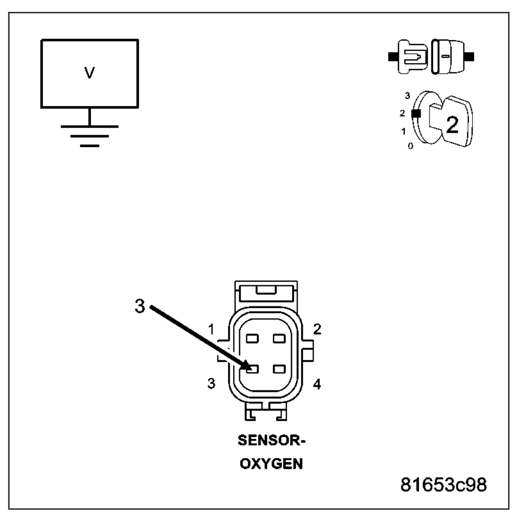
**No** >> Check the (K41) O2 Sensor 1/1 Signal circuit for a short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 10. (K902) O2 UPSTREAM RETURN CIRCUIT

Disconnect the 1/1 O2 Sensor harness connector.

Measure the voltage on the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.



**Is the voltage at 2.5 volts?**

**Yes** >> Go To 11

**No** >> Check the O2 Return circuit for a short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertriain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 11. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 12. RESTRICTED FUEL SUPPLY LINE

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special 5/16 fuel line adapter tool #6539 between disconnected fuel line and the fuel pump module.

Attach a fuel pressure test gauge to the T fitting on tool #6539.

Ignition on, engine not running.

With a scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**CAUTION: Stop All Actuations.**

**Is the fuel pressure within specification?**

**Yes** >> Repair or replace fuel supply line as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 13

## 13. FUEL PUMP INLET STRAINER

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released.**

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

**Yes** >> Replace the Fuel Pump Inlet Strainer.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 14

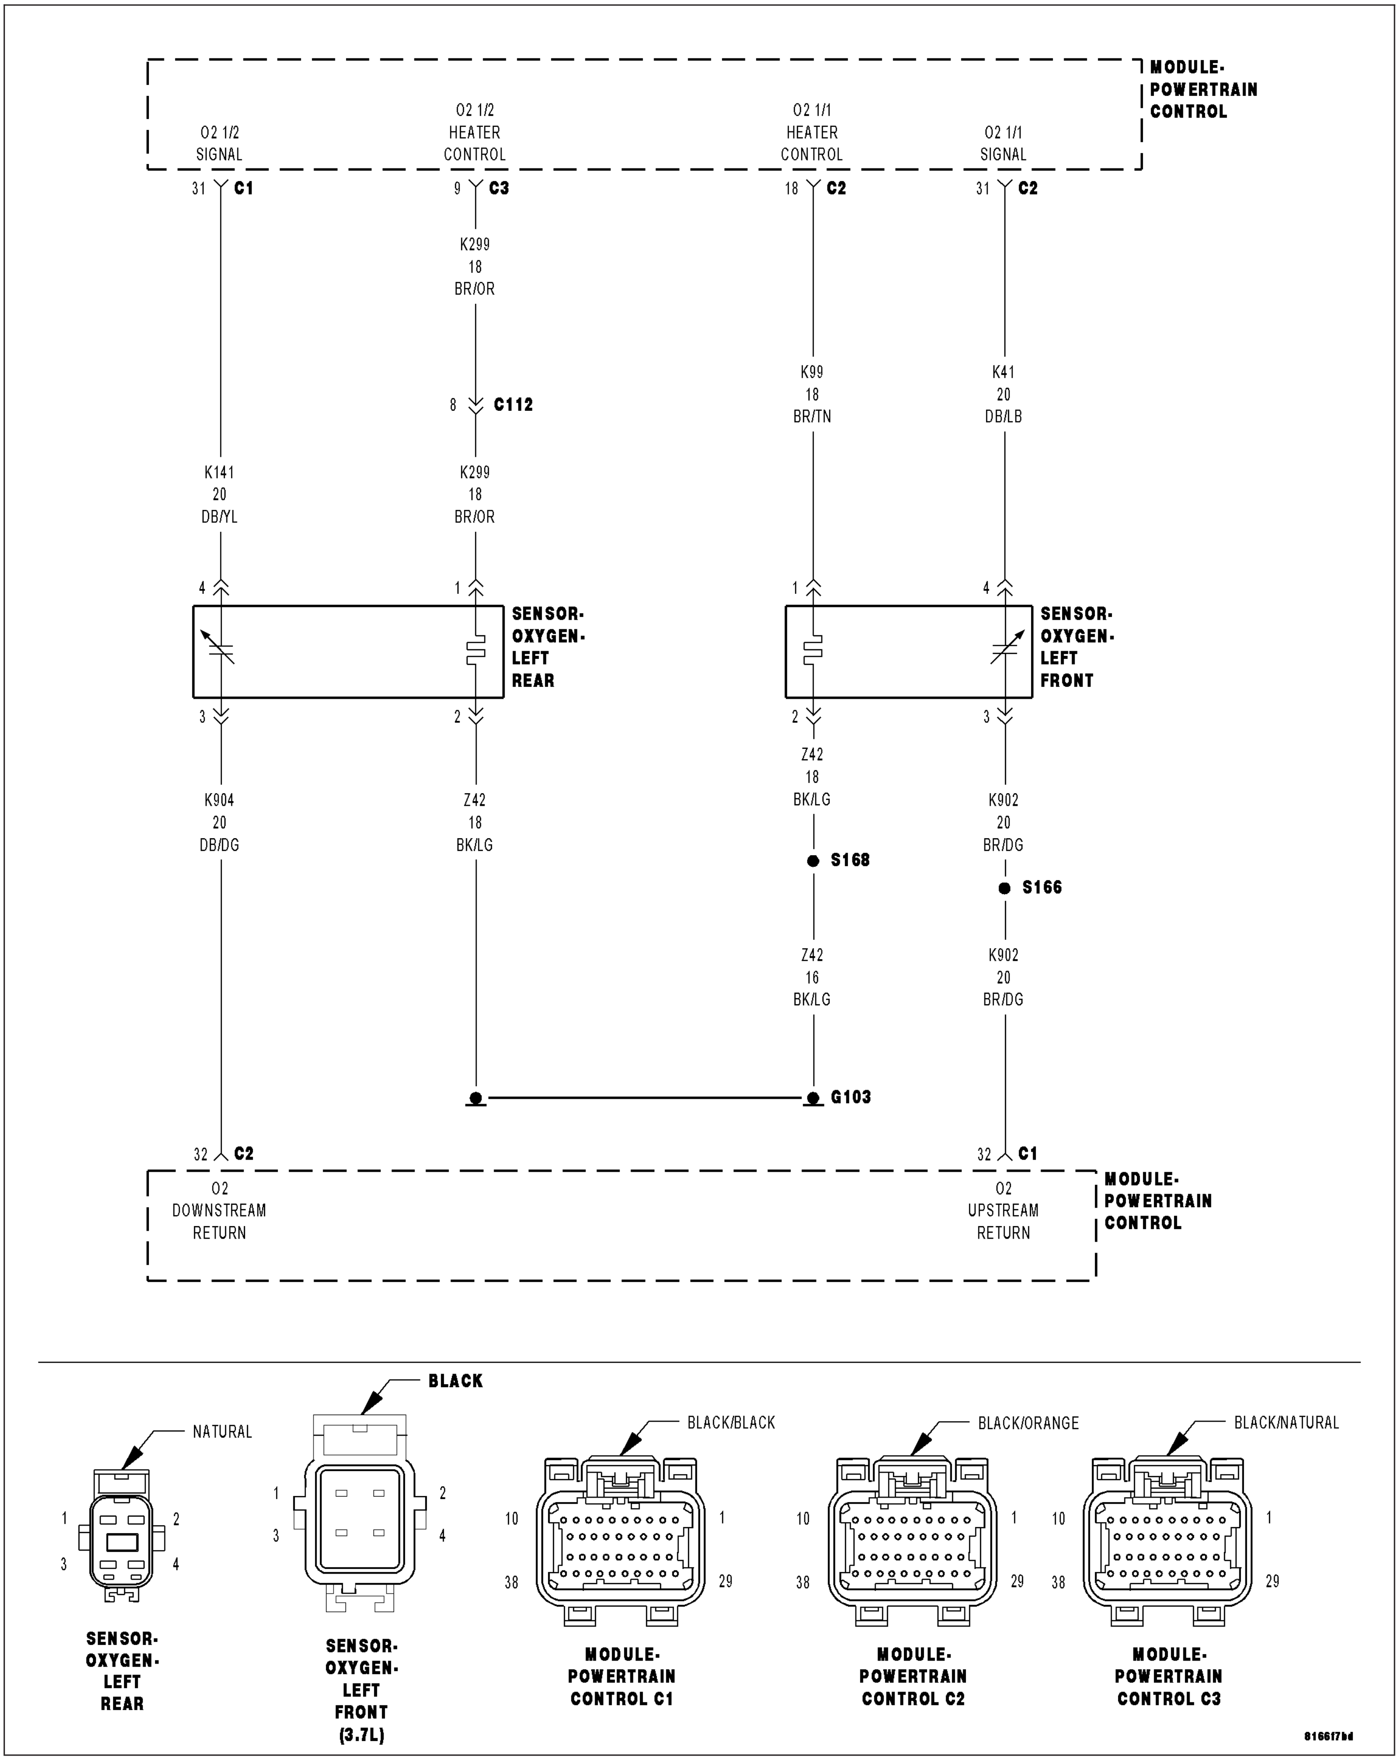
## 14. FUEL PUMP MODULE

**If there are no possible causes remaining, view repair.**

**Repair**

Replace the Fuel Pump Module.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0172-FUEL SYSTEM 1/1 RICH



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The fuel feedback system will maintain a stoiciometric fuel/air mixture, 14.7:1, by modifying the injector pulse width according to the oxygen content of the exhaust gas. The PCM makes short term and long term fuel corrections to maintain stoiciometric fuel/air ratio for best catalytic converter efficiency. Short term fuel correction is based on upstream O2 sensor output and is designed for quick engine response. The long term fuel correction compensated for variations in the engine specifications, sensor tolerances and component aging and is designed to correct rich and lean conditions over a longer period of time.

- **When Monitored:**
  With the engine running in closed loop mode, the ambient/battery temperature above 20 deg. F and altitude below 8500 ft.
- **Set Condition:**
  If the PCM multiplies short term compensation by long term adaptive and a purge fuel multiplier and the result is below a certain value for 30 seconds over two trips, a freeze frame is stored, the MIL illuminates and a trouble code is stored. Two Trip Fault. Three good trips to turn off the MIL.

| **Possible Causes** |
|---|
| O2 SENSOR HEATER OPERATION |
| EVAP PURGE SOLENOID OPERATION |
| O2 SIGNAL CIRCUIT |
| O2 RETURN CIRCUIT |
| O2 SENSOR |
| MAP SENSOR |
| ECT SENSOR |
| ENGINE MECHANICAL PROBLEM |
| FUEL FILTER/PRESSURE REGULATOR (HIGH) |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: Check for contaminates that may have damaged an O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 2. CHECKING FUEL PRESSURE

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Install a fuel pressure gauge to the fuel rail.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

Turn the ignition off.

**Choose a conclusion that best matches your fuel pressure reading.**

**Within Specification**

Go To 3

**Above Specification**

Replace the fuel filter/pressure regulator.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**CAUTION: Stop All Actuations.**

## 3. O2 SENSOR OPERATION

Start the engine.

Allow the engine to reach normal operating temperature.

**NOTE: If one of the O2 Sensors Signal or Return circuit is shorted to ground or voltage, all the other O2 Sensor voltage readings will be affected.**

**NOTE: After the repairs have been made, verify proper O2 Sensor operation. If all the O2 Sensor voltage readings have not returned to normal, follow the diagnostic procedure for the remaining O2 Sensors.**

With the scan tool, monitor the 1/1 O2 Sensor voltage reading.

**Is the voltage switching between 2.5 and 3.4 volts?**

**Yes** >> Go To 4

**No** >> Go To 9

## 4. 1/1 O2 SENSOR HEATER OPERATION

Turn the ignition off.

**NOTE: Wait a minimum of 10 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize at 5.0 volts.**

Ignition on, engine not running.

With the scan tool, perform the 1/1 O2 Heater Test.

With the scan tool, monitor the O2 Sensor voltage while performing the Heater test for at least 2 minutes.

**Does the voltage stay above 4.5 volts during the Heater test?**

**Yes** >> Replace the O2 Sensor.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. MAP SENSOR OPERATION

Turn the ignition off.

Connect a Vacuum Gauge to a Manifold Vacuum source.

Start the engine.

Allow the engine to idle.

**NOTE: If engine will not idle, maintain a constant RPM above idle.**

With a scan tool, read the MAP Sensor vacuum value.

**Is the scan tool reading within 1″ of the Vacuum Gauge reading?**

**Yes** >> Go To 6

**No** >> Replace the MAP Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**NOTE: Remove the vacuum gauge before continuing.**

## 6. ECT SENSOR OPERATION

**NOTE: For this test to be valid, the thermostat must be operating correctly.**

**NOTE: This test works best if performed on a cold engine (cold soak)**

Ignition on, engine not running.

With a scan tool, read the Engine Coolant Temperature Sensor value. If the engine was allowed to sit overnight (cold soak), the temperature value should be a sensible value that is somewhere close to the ambient temperature.

**NOTE: If engine coolant temperature is above 82°C (180°F), allow the engine to cool until 65°C (150°F) is reached.**

Start the Engine.

During engine warm-up, monitor the Engine Coolant Temperature value. The temp value change should be a smooth transition from start up to normal operating temp 82°C (180°F). The value should reach at least 82°C (180°F).

**Did the ECT value increase smoothly and reach at least 180°F (82°C)?**

**Yes** >> Go To 7

**No** >> Replace the Engine Coolant Temperature Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. EVAP PURGE SOLENOID OPERATION

Turn the ignition off.

Disconnect the hoses at the Evap Purge Solenoid.

Using a hand vacuum pump, apply 10 inches of vacuum to the Evap Purge Solenoid vacuum source port on the component side.

**Did the Evap Purge Solenoid hold vacuum?**

**Yes** >> Go To 8

**No** >> Replace the EVAP Purge Solenoid.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**NOTE: Connect the vacuum hoses before continuing.**

## 8. ENGINE MECHANICAL PROBLEM

Check for any of the following conditions/mechanical problems.

AIR INDUCTION SYSTEM - must be free from restrictions.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

FUEL INJECTOR - plugged or restricted injector; control wire not connected to correct injector

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 12

## 9. 1/1 O2 SENSOR

**NOTE: Perform the following test on the O2 Sensors whose voltage was not switching properly in the previous step.**

Ignition on, engine not running.

Disconnect the 1/1 O2 Sensor harness connector.

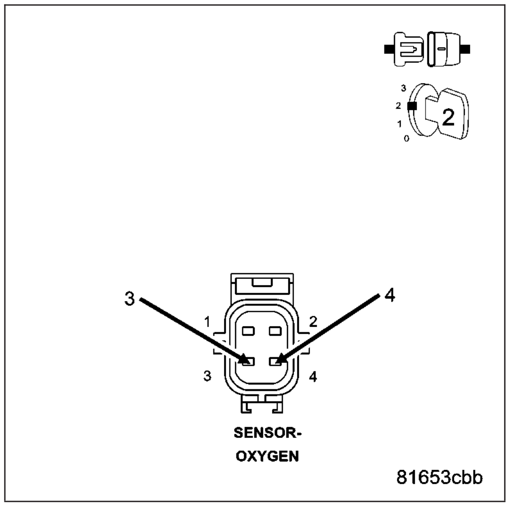
With a scan tool, monitor the 1/1 O2 Sensor voltage.

O2 Sensor voltage should read 5.0 volts on the scan tool with the connector disconnected.

Connect a jumper wire between the (K41) O2 Sensor 1/1 Signal circuit and the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.

**NOTE: The voltage should drop from 5.0 volts down to 2.5 volts with the jumper wire connected.**

**Did the O2 Sensor voltage drop from 5 volts to 2.5 volts when the jumper wire was installed?**

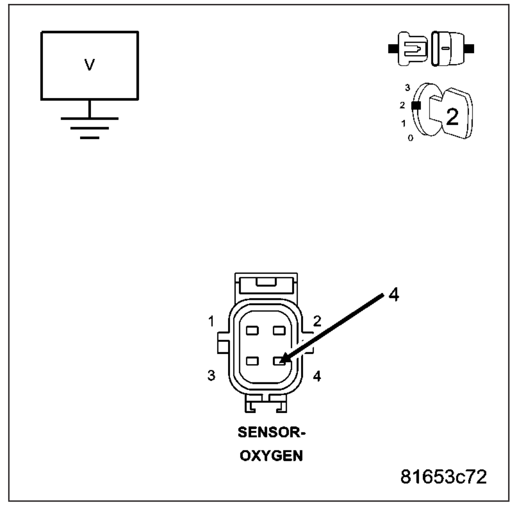


**Yes** >> Replace the 1/1 O2 Sensor
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 10

**NOTE: Remove the jumper wire before continuing.**

## 10. (K41) O2 SENSOR 1/1 SIGNAL CIRCUIT



**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

Start the engine.

Measure the voltage on the (K41) O2 Sensor 1/1 Signal circuit in the O2 Sensor harness connector.

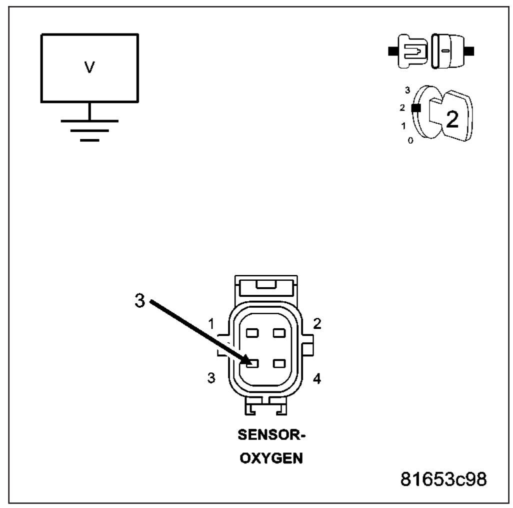
**Is the voltage above 4.8 volts?**

**Yes** >> Check the (K41) O2 Sensor 1/1 Signal circuit for damage, short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 11

## 11. (K902) O2 SENSOR UPSTREAM RETURN CIRCUIT



Engine still running.

Measure the voltage on the (K902) O2 Upstream Return circuit in the 1/1 O2 Sensor harness connector.

**Is the voltage at 2.5 volts?**

**Yes** >> Go To 12

**No** >> Check the (K902) O2 Upstream Return circuit for damage, short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**NOTE: Turn the ignition off before continuing.**

## 12. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

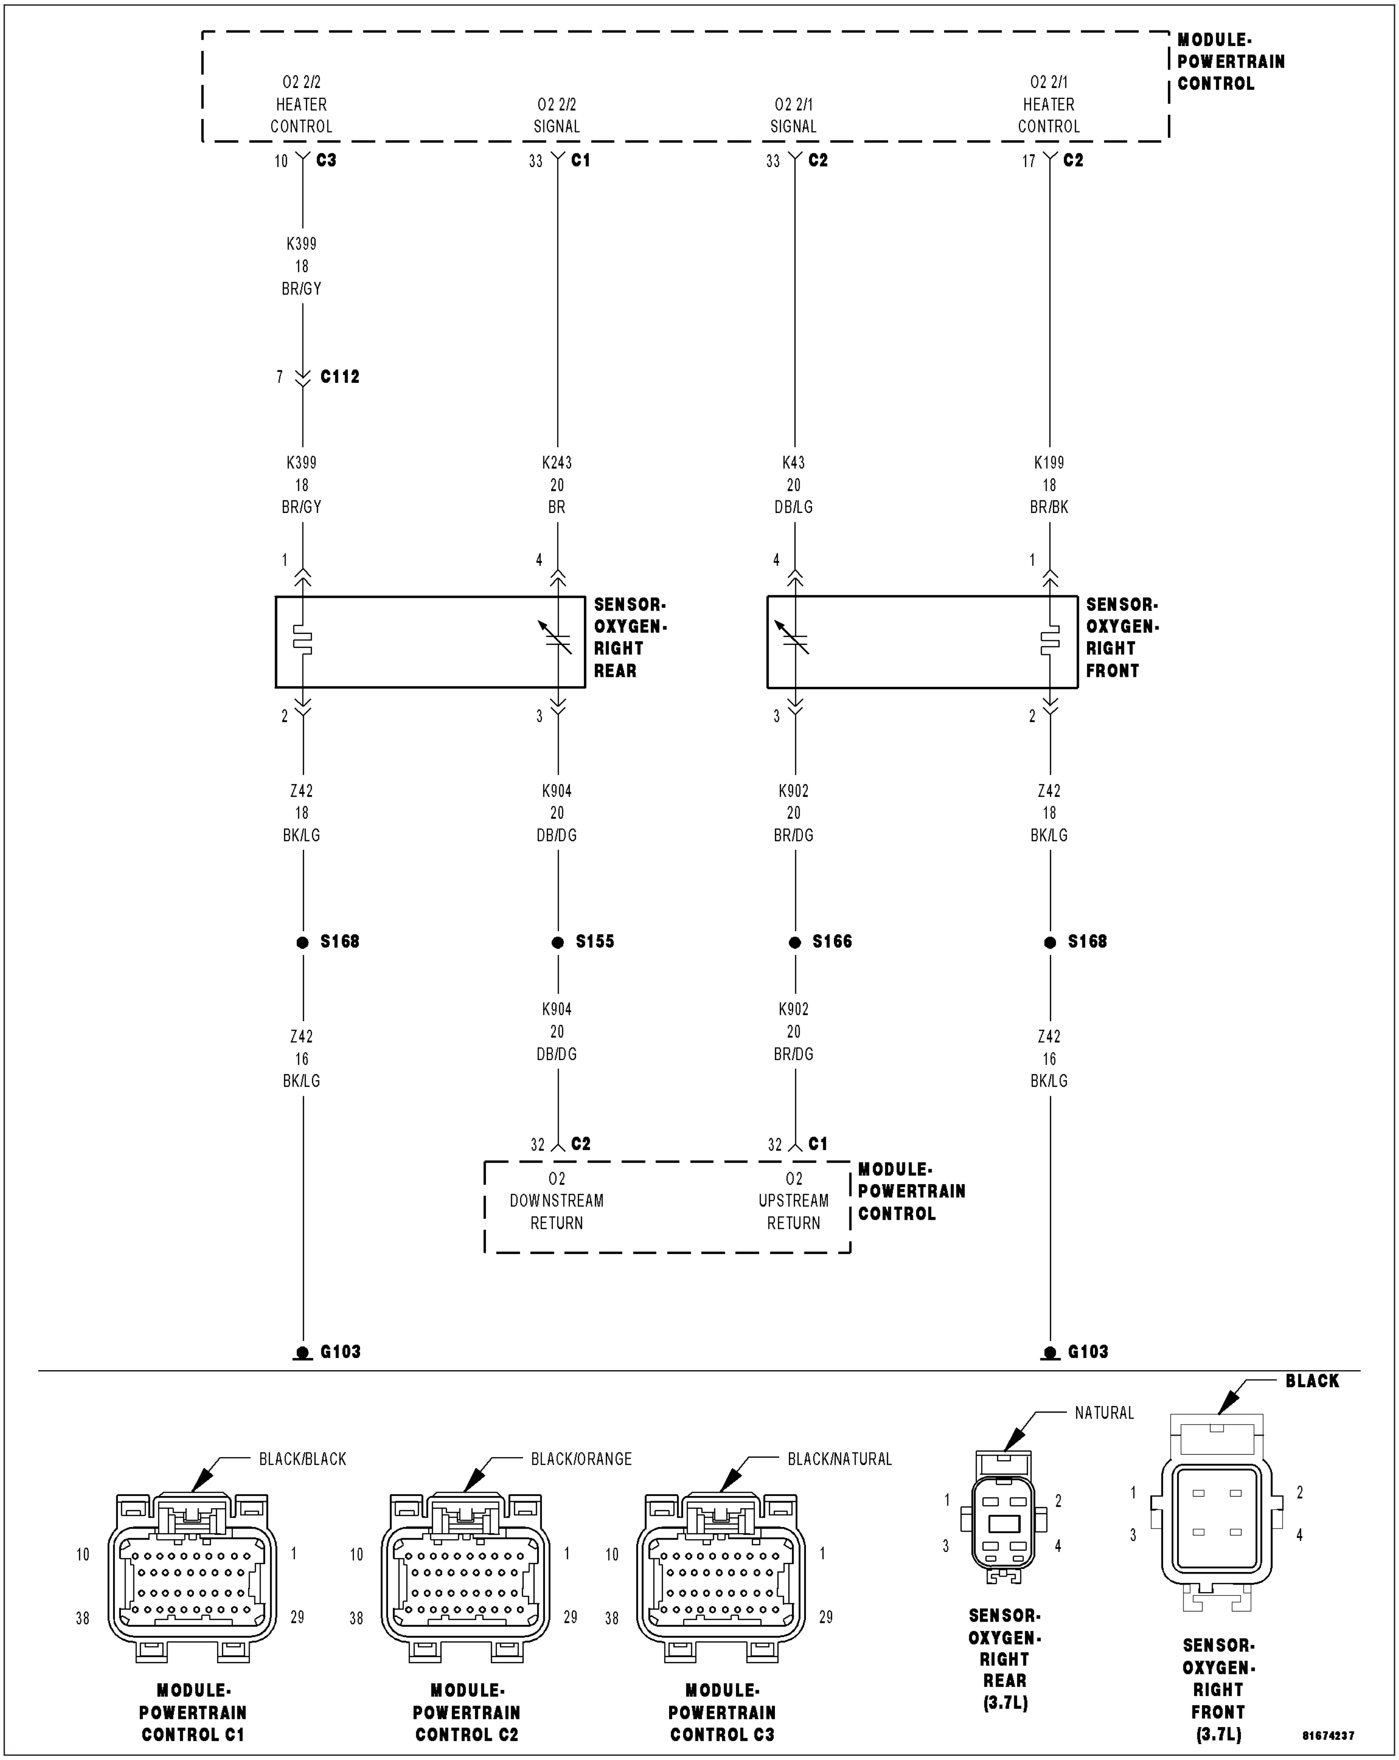
**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0174-FUEL SYSTEM 2/1 LEAN



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The fuel feedback system will maintain a stoiciometric fuel/air mixture, 14.7:1, by modifying the injector pulse width according to the oxygen content of the exhaust gas. The PCM makes short term and long term fuel corrections to maintain stoiciometric fuel/air ratio for best catalytic converter efficiency. Short term fuel correction is based on upstream O2 sensor output and is designed for quick engine response. The long term fuel correction compensated for variations in the engine specifications, sensor tolerances and component aging and is designed to correct rich and lean conditions over a longer period of time.

- **When Monitored:**
  With the engine running in closed loop mode, the ambient/battery temperature above 20 deg. F and altitude below 8500 ft.
- **Set Condition:**
  If the PCM multiplies short term compensation by long term adaptive and a certain percentage is exceeded for two trips, a freeze frame is stored, the MIL illuminates and a trouble code is stored. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
| --- |
| RESTRICTED FUEL SUPPLY LINE |
| FUEL PUMP INLET STRAINER PLUGGED |
| FUEL PUMP MODULE |
| O2 SIGNAL CIRCUIT |
| O2 RETURN CIRCUIT |
| O2 SENSOR HEATER OPERATION |
| O2 SENSOR |
| MAP SENSOR OPERATION |
| ECT SENSOR OPERATION |
| ENGINE MECHANICAL PROBLEM |
| FUEL FILTER/PRESSURE REGULATOR (HIGH) |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Diagnose all other trouble codes before continuing.

**NOTE: Check for contaminants that may have damaged an O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 2. CHECKING FUEL PRESSURE

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Install a fuel pressure gauge to the fuel rail.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

Turn the ignition off.

**Choose a conclusion that best matches your fuel pressure reading.**

**Within Specification**

Go To 3

**Above Specification**

Replace the fuel filter/pressure regulator.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**Below Specification**

Go To 12

**CAUTION: Stop All Actuations.**

## 3. O2 SENSOR OPERATION

Start the engine.

Allow the engine to reach normal operating temperature.

**NOTE: If one of the O2 Sensor's Signal or Return circuit is shorted to ground the scan tool will display all O2 Sensor voltage readings low. The O2 Sensor that is shorted to ground will display a voltage reading near or at 0 volts.**

**NOTE: If one of the O2 Sensor Signal or Return circuits are shorted to voltage, the scan tool will display all O2 Sensor voltage readings high.**

**NOTE: After the repairs have been made, verify proper O2 Sensor operation. If all the O2 Sensor voltage readings have not returned to normal, follow the diagnostic procedure for the remaining O2 Sensors.**

With the scan tool, monitor the 2/1 O2 Sensor voltage reading.

**Is the voltage switching between 2.5 and 3.4 volts?**

**Yes** >> Go To 4

**No** >> Go To 8

## 4. 2/1 O2 SENSOR HEATER OPERATION

Turn the ignition off.

**NOTE: Wait a minimum of 10 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize at 5.0 volts.**

**NOTE: Perform the following test on all O2 Sensors.**

Ignition on, engine not running.

With a scan tool, actuate the 2/1 O2 Heater Test.

With the scan tool, monitor 2/1 O2 Sensor voltage for at least 2 minutes.

**Does the voltage stay above 4.5 volts?**

**Yes** >> Replace the 2/1 O2 Sensor.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. MAP SENSOR OPERATION

Turn the ignition off.

Connect a Vacuum Gauge to a Manifold Vacuum source.

Start the engine.

Allow the engine to idle.

**NOTE: If engine will not idle, maintain a constant RPM above idle.**

With the scan tool, read the MAP Sensor vacuum value.

**Is the scan tool reading within 1″ of the Vacuum Gauge reading?**

**Yes** >> Go To 6

**No** >> Replace the MAP Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. ECT SENSOR OPERATION

**NOTE: For this test to be valid, the thermostat must be operating correctly.**

**NOTE: This test works best if performed on a cold engine (cold soak).**

Ignition on, engine not running.

With the scan tool, read the Engine Coolant Temperature (ECT) Sensor value. If the engine was allowed to sit overnight (cold soak), the temperature value should be a sensible value that is somewhere close to the ambient temperature.

**NOTE: If engine coolant temperature is above 82°C (180°F), allow the engine to cool until 65°C (150°F) is reached.**

Start the Engine.

During engine warm-up, monitor the ECT Sensor value. The temperature value change should be a smooth transition from start up to normal operating temperature 82°C (180°F). The value should reach at least 82°C (180°F).

**Did the ECT value increase smoothly and did it reach at least 180°F (82°C)?**

**Yes** >> Go To 7

**No** >> Replace the Engine Coolant Temperature Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. ENGINE MECHANICAL PROBLEM

Turn the ignition off.

Check for any of the following conditions/mechanical problems.

AIR INDUCTION SYSTEM - must be free from leaks.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

FUEL INJECTOR - plugged or restricted injector; control wire not connected to correct injector

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 11

## 8. O2 SENSOR

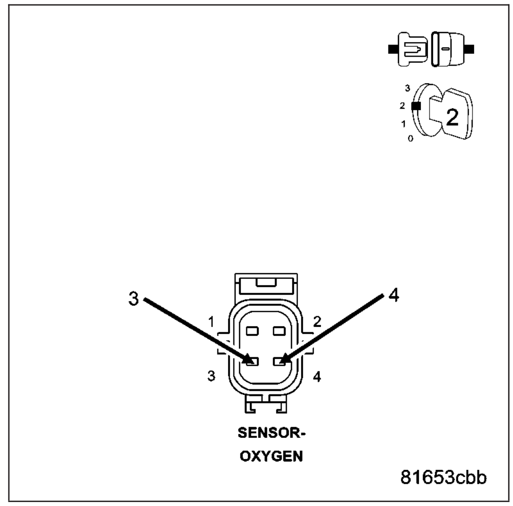
Ignition on, engine not running.

Disconnect the 2/1 O2 Sensor harness connector.

With the scan tool, monitor the 2/1 O2 Sensor voltage.

O2 Sensor voltage should read 5.0 volts on the scan tool with the connector disconnected.

Connect a jumper wire between the (K43) O2 Sensor 2/1 Signal circuit and the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.



**NOTE: The voltage should drop from 5.0 volts to 2.5 volts with the jumper wire in place.**

**Did the O2 Sensor voltage change from 5.0 volts to 2.5 volts when the jumper wire was installed?**

**Yes** >> Replace the 2/1 O2 Sensor.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 9

**NOTE: Remove the jumper wire before continuing.**

## 9. O2 SENSOR SIGNAL CIRCUIT

With the scan tool, monitor all the O2 Sensor voltage reading with the jumper wire removed.

**NOTE: The scan tool will display all O2 Sensor voltage readings approximately 5.0 volts when only one O2 Sensor's Signal circuit is shorted to voltage.**

**NOTE: The scan tool will display one O2 Sensor voltage close to zero and the others will read lower than normal when one O2 Sensor Signal circuit contains excessive resistance.**

**Is the voltage above 4.8 volts?**

**Yes** >> Go To 10

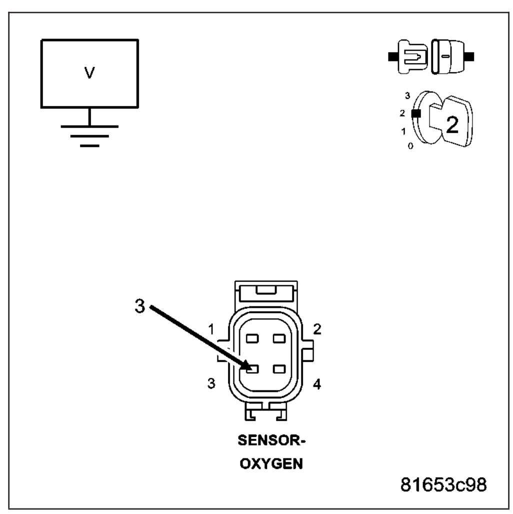
**No** >> Check all the O2 Signal circuits for a short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 10. (K902) O2 UPSTREAM RETURN CIRCUIT

Disconnect the 2/1 O2 Sensor harness connector.

Measure the voltage on the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.



**Is the voltage at 2.5 volts?**

**Yes** >> Go To 11

**No** >> Check the (K902) O2 Upstream Return circuit for a short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 11. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 12. RESTRICTED FUEL SUPPLY LINE

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special 5/16 fuel line adapter tool #6539 between disconnected fuel line and the fuel pump module.

Attach a fuel pressure test gauge to the T fitting on tool #6539.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**CAUTION: Stop All Actuations.**

**Is the fuel pressure within specification?**

**Yes** >> Repair or replace fuel supply line as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 13

## 13. FUEL PUMP INLET STRAINER

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released.**

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

**Yes** >> Replace the Fuel Pump Inlet Strainer.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 14

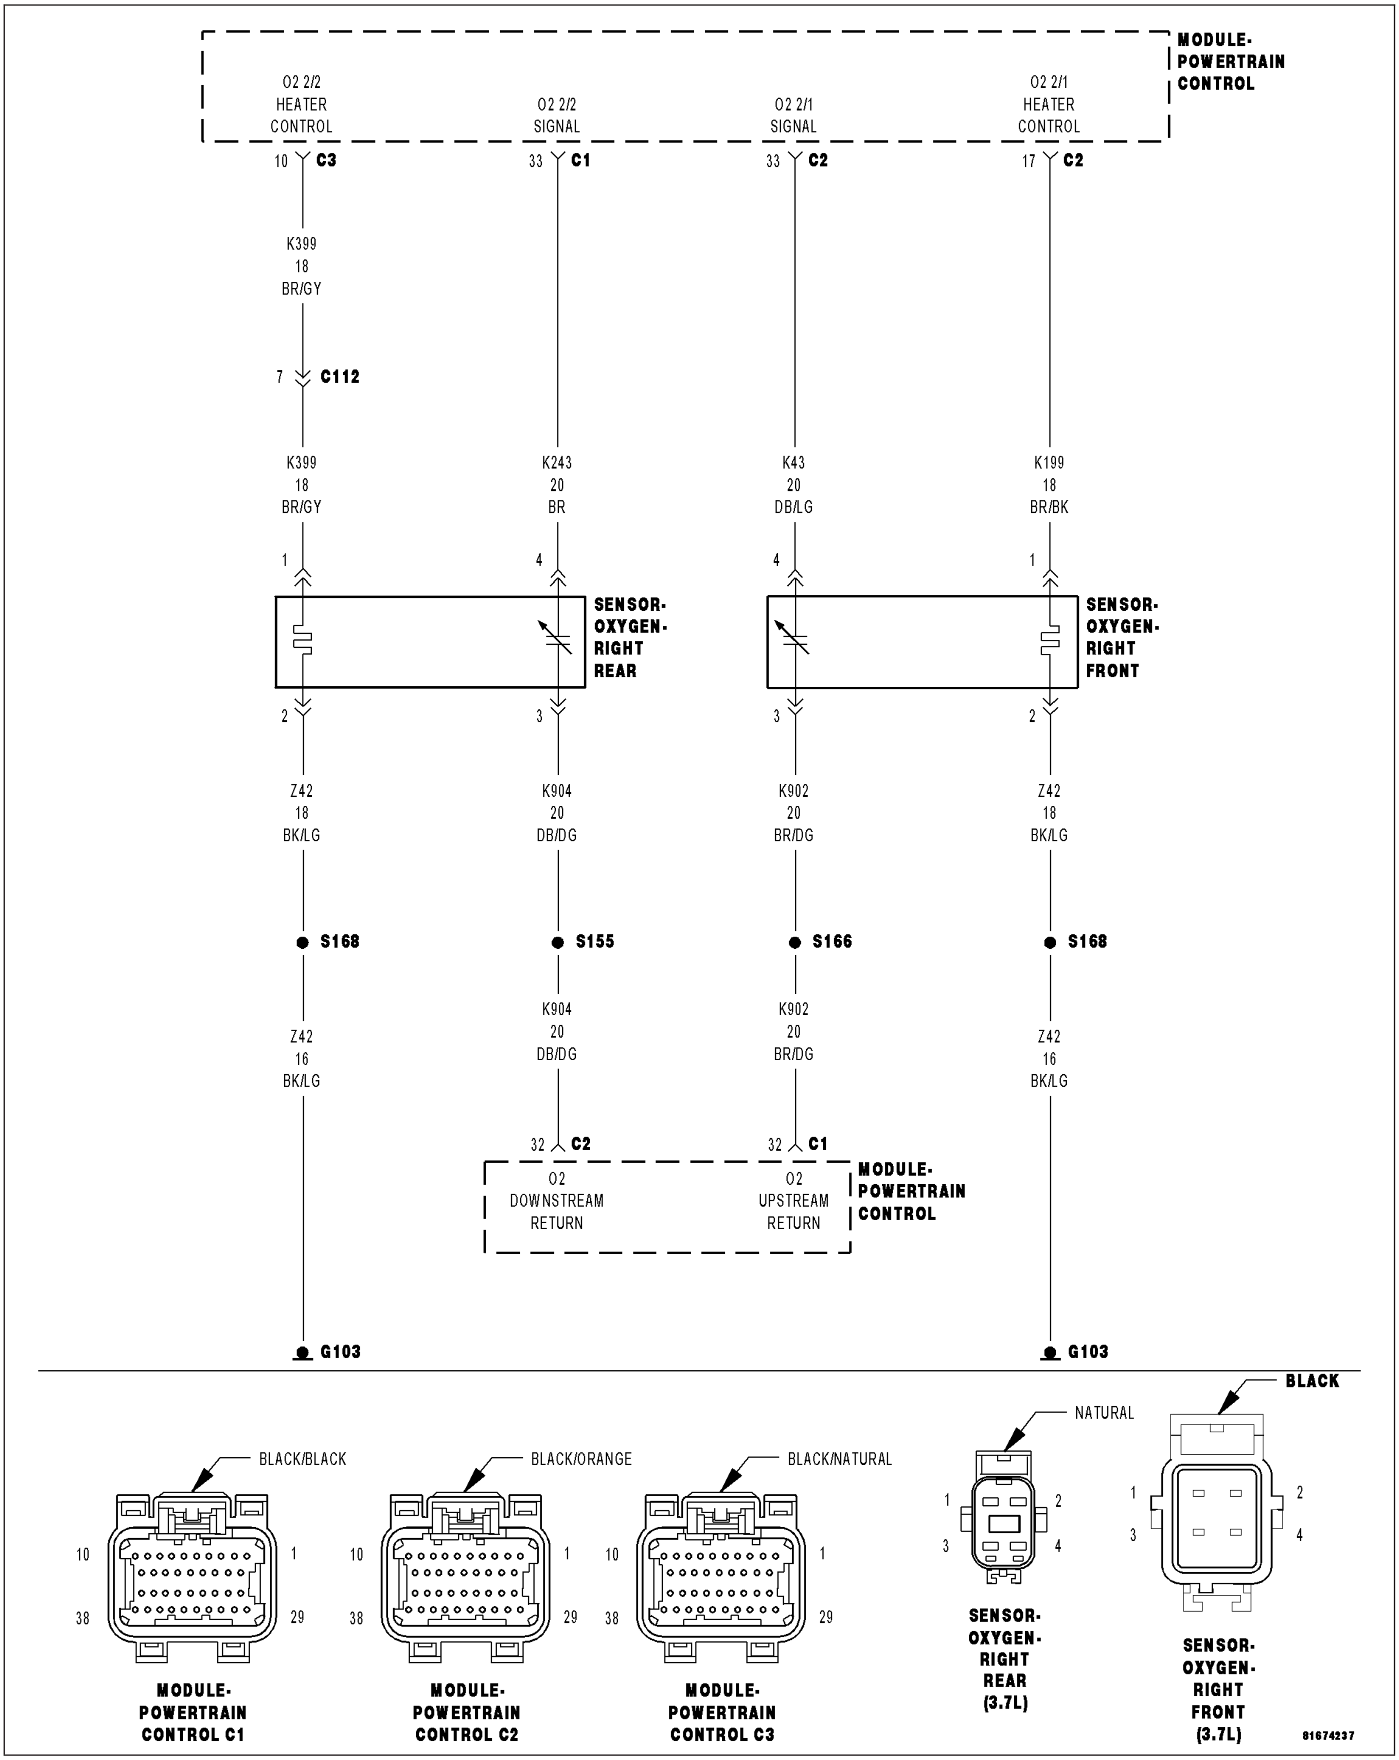
## 14. FUEL PUMP MODULE

**If there are no possible causes remaining, view repair.**

**Repair**

Replace the Fuel Pump Module.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0175-FUEL SYSTEM 2/1 RICH



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The fuel feedback system will maintain a stoiciometric fuel/air mixture, 14.7:1, by modifying the injector pulse width according to the oxygen content of the exhaust gas. The PCM makes short term and long term fuel corrections to maintain stoiciometric fuel/air ratio for best catalytic converter efficiency. Short term fuel correction is based on upstream O2 sensor output and is designed for quick engine response. The long term fuel correction compensated for variations in the engine specifications, sensor tolerances and component aging and is designed to correct rich and lean conditions over a longer period of time.

- **When Monitored:**
  With the engine running in closed loop mode, the ambient/battery temperature above 20 deg. F and altitude below 8500 ft.
- **Set Condition:**
  If the PCM multiplies short term compensation by long term adaptive and a purge fuel multiplier and the result is below a certain value for 30 seconds over two trips, a freeze frame is stored, the MIL illuminates and a trouble code is stored. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| O2 SENSOR HEATER OPERATION |
| EVAP PURGE SOLENOID OPERATION |
| O2 SIGNAL CIRCUIT |
| O2 RETURN CIRCUIT |
| O2 SENSOR |
| MAP SENSOR |
| ECT SENSOR |
| ENGINE MECHANICAL PROBLEM |
| FUEL FILTER/PRESSURE REGULATOR (HIGH) |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: Check for contaminates that may have damaged an O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 2. CHECKING FUEL PRESSURE

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Install a fuel pressure gauge to the fuel rail.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

Turn the ignition off.

**Choose a conclusion that best matches your fuel pressure reading.**

**Within Specification**

Go To 3

**Above Specification**

Replace the fuel filter/pressure regulator.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**CAUTION: Stop All Actuations.**

## 3. O2 SENSOR OPERATION

Start the engine.

Allow the engine to reach normal operating temperature.

**NOTE: If one of the O2 Sensors Signal or Return circuit is shorted to ground or voltage, all the other O2 Sensor voltage readings will be affected.**

**NOTE: After the repairs have been made, verify proper O2 Sensor operation. If all the O2 Sensor voltage readings have not returned to normal, follow the diagnostic procedure for the remaining O2 Sensors.**

With the scan tool, monitor the 2/1 O2 Sensor voltage reading.

**Is the voltage switching between 2.5 and 3.4 volts?**

**Yes** >> Go To 4

**No** >> Go To 9

## 4. 2/1 O2 SENSOR HEATER OPERATION

Turn the ignition off.

**NOTE: Wait a minimum of 10 minutes to allow the O2 Sensor to cool down before continuing the test. Allow the O2 Sensor voltage to stabilize at 5.0 volts.**

Ignition on, engine not running.

With the scan tool, perform the 2/1 O2 Heater Test for each O2 Sensor.

With the scan tool, monitor the 2/1 O2 Sensor voltage while performing the Heater test for at least 2 minutes.

**Does the voltage stay above 4.5 volts for each Sensor?**

**Yes** >> Replace the 2/1 O2 Sensor.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. MAP SENSOR OPERATION

Turn the ignition off.

Connect a Vacuum Gauge to a Manifold Vacuum source.

Start the engine.

Allow the engine to idle.

**NOTE: If engine will not idle, maintain a constant RPM above idle.**

With the scan tool, read the MAP Sensor vacuum value.

**Is the scan tool reading within 1″ of the Vacuum Gauge reading?**

**Yes** >> Go To 6

**No** >> Replace the MAP Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**NOTE: Remove the vacuum gauge before continuing.**

## 6. ECT SENSOR OPERATION

**NOTE: For this test to be valid, the thermostat must be operating correctly.**

**NOTE: This test works best if performed on a cold engine (cold soak).**

Ignition on, engine not running.

With the scan tool, read the Engine Coolant Temperature Sensor value. If the engine was allowed to sit overnight (cold soak), the temperature value should be a sensible value that is somewhere close to the ambient temperature.

**NOTE: If engine coolant temperature is above 82°C (180°F), allow the engine to cool until 65°C (150°F) is reached.**

Start the Engine.

During engine warm-up, monitor the Engine Coolant Temperature value. The temp value change should be a smooth transition from start up to normal operating temp 82°C (180°F). The value should reach at least 82°C (180°F).

**Did the ECT value increase smoothly and reach at least 180°F (82°C)?**

**Yes** >> Go To 7

**No** >> Replace the Engine Coolant Temperature Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. EVAP PURGE SOLENOID OPERATION

Turn the ignition off.

Disconnect the hoses at the Evap Purge Solenoid.

Using a hand vacuum pump, apply 10 inches of vacuum to the Evap Purge Solenoid vacuum source port on the component side.

**Did the Evap Purge Solenoid hold vacuum?**

**Yes** >> Go To 8

**No** >> Replace the EVAP Purge Solenoid.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**NOTE: Connect the vacuum hoses before continuing.**

## 8. ENGINE MECHANICAL PROBLEM

Check for any of the following conditions/mechanical problems.

AIR INDUCTION SYSTEM - must be free from restrictions.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

FUEL INJECTOR - plugged or restricted injector; control wire not connected to correct injector

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 12

## 9. 2/1 O2 SENSOR

Ignition on, engine not running.

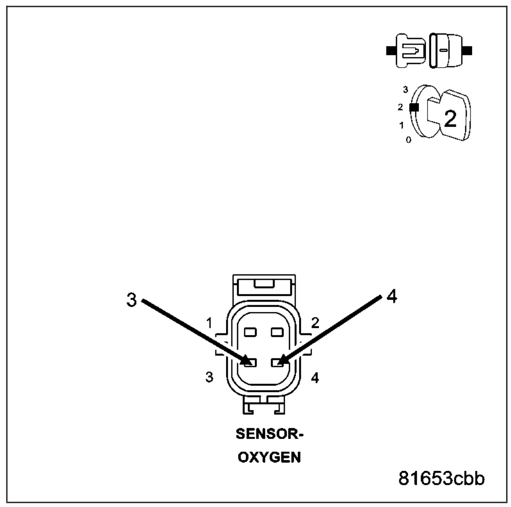
Disconnect the 2/1 O2 Sensor harness connector.

With the scan tool, monitor the 2/1 O2 Sensor voltage.

O2 Sensor voltage should read 5.0 volts on the scan tool with the connector disconnected.

Connect a jumper wire between the (K43) O2 Sensor 2/1 Signal circuit and the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.

**NOTE: The voltage should drop from 5.0 volts down to 2.5 volts with the jumper wire connected.**



**Did the O2 Sensor voltage drop from 5 volts to 2.5 volts when the jumper wire was installed?**

**Yes** >> Replace the O2 Sensor
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 10

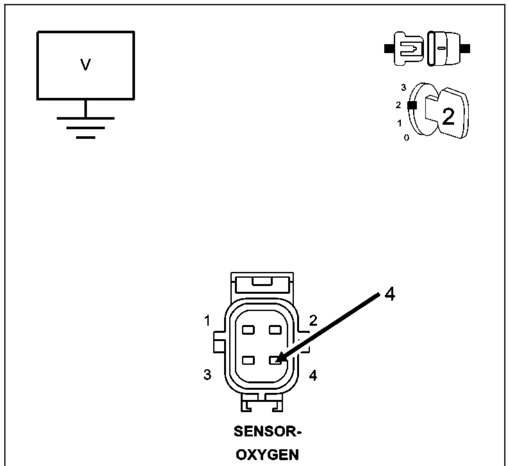
**NOTE: Remove the jumper wire before continuing.**

## 10. O2 SENSOR SIGNAL CIRCUIT

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

Start the engine.

Measure the voltage on the (K43) O2 Sensor 2/1 Signal circuit in the O2 Sensor harness connector.



81653c72

**Is the voltage above 4.8 volts?**

**Yes** >> Check the (K43) O2 Sensor 2/1 Signal circuit for damage, short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

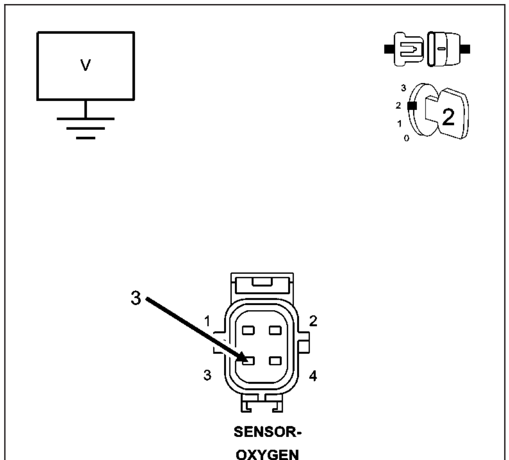
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 11

## 11. (K902) O2 SENSOR UPSTREAM RETURN CIRCUIT

Engine still running.

Measure the voltage on the (K902) O2 Upstream Return circuit in the O2 Sensor harness connector.



81653c98

**Is the voltage at 2.5 volts?**

**Yes** >> Go To 12

**No** >> Check the (K902) O2 Upstream Return circuit for damage, short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform (NGC) POWERTRAIN VERIFICATION TEST VER - 5. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**NOTE: Turn the ignition off before continuing.**

## 12. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

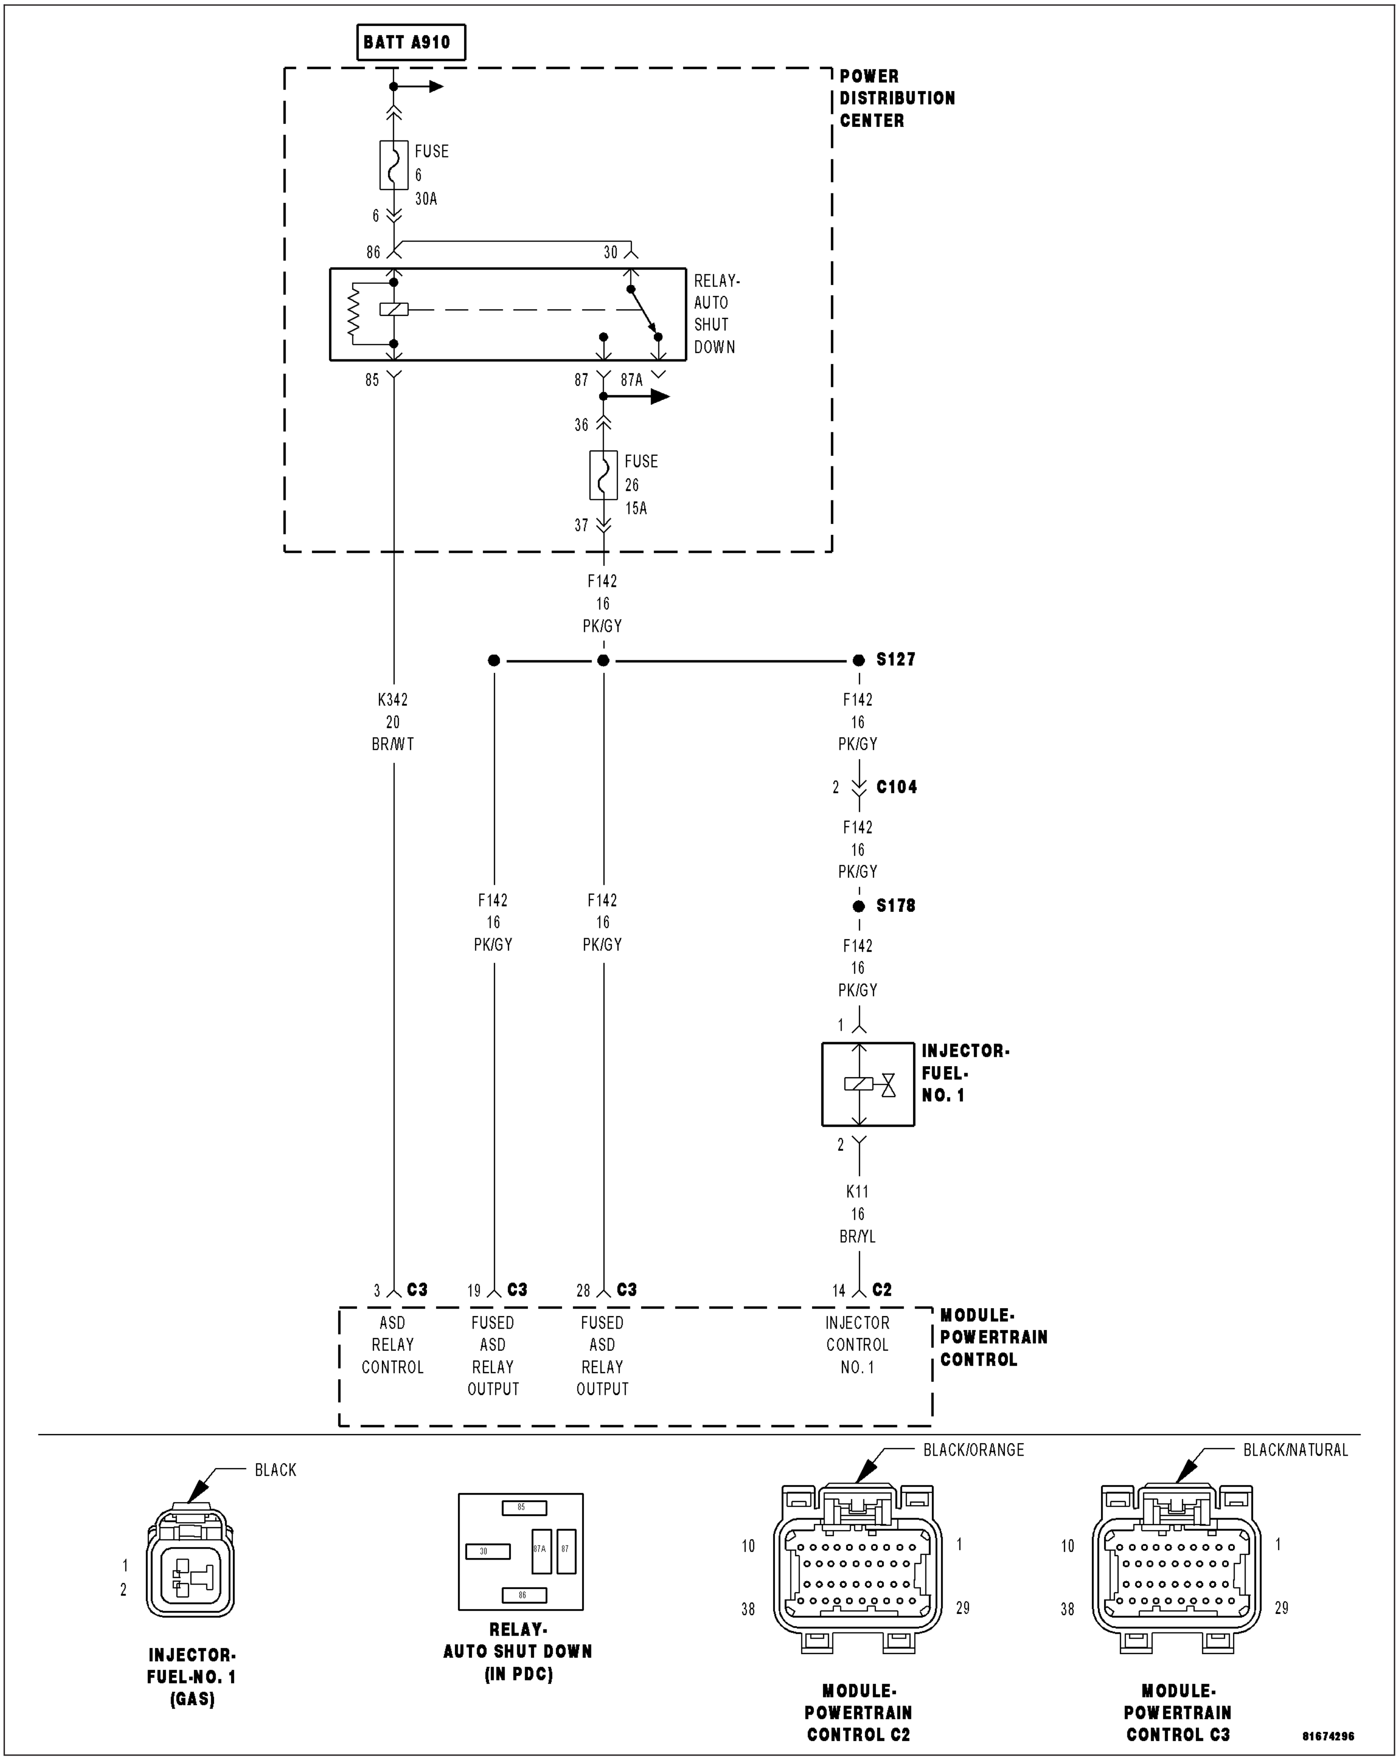
**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0201-FUEL INJECTOR 1 CIRCUIT



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With battery voltage greater than 10 volts. Auto Shutdown Relay energized. Engine speed less than 3000 rpm.
- **Set Condition:**
  No inductive spike is detected after injector turn off for more than 3.2 seconds. One trip fault. Three good trips to clear the MIL.

| Possible Causes |
|---|
| (F142) ASD RELAY OUTPUT CIRCUIT |
| (K11) INJECTOR CONTROL NO.1 CIRCUIT OPEN |
| (K11) INJECTOR CONTROL NO.1 CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.
With a scan tool, read DTCs.

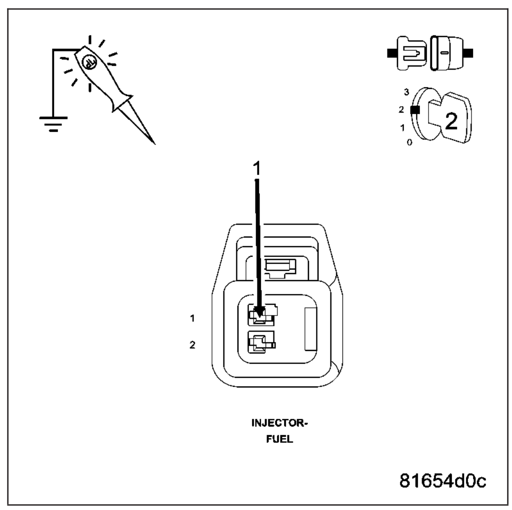
**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (F142) ASD RELAY OUTPUT CIRCUIT

Turn the ignition off.
Disconnect the No.1 Fuel Injector harness connector.
Ignition on, engine not running.
With the scan tool, actuate the ASD Relay.
Using a 12-volt test light connected to ground, backprobe the (F142) ASD Relay Output circuit in the Fuel Injector harness connector.



**Does the test light illuminate brightly?**

**Yes** >> Go To 3

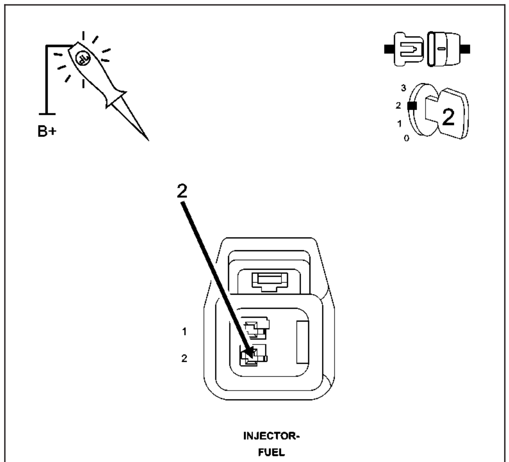
**No** >> Repair the excessive resistance or short to ground in the (F142) ASD Relay Output circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. FUEL INJECTOR

Using a 12-volt test light connected to 12-volts, backprobe the (K11) Injector Control No.1 circuit.

With the scan tool, actuate the Fuel Injector.

**What is the state of the test light during the actuation?**



81654d1d

**Brightly Blinking.**

Replace the Fuel Injector.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**ON Constantly.**

Go To 4

**OFF Constantly.**

Go To 5

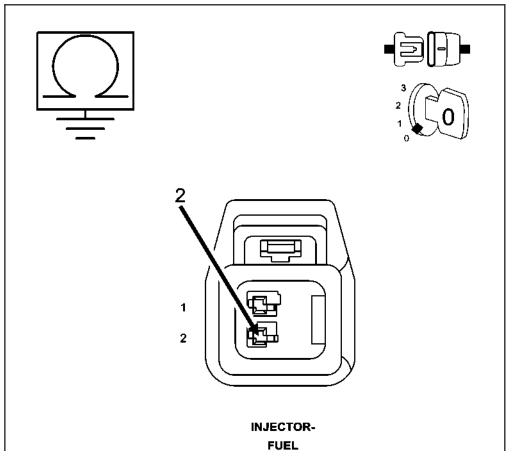
## 4. (K11) INJECTOR CONTROL NO.1 CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K11) Injector Control No.1 circuit in the Injector harness connector.

**Is the resistance below 100 ohms?**



81654d74

**Yes** >> Repair the short to ground in the (K11) Injector Control No.1 circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

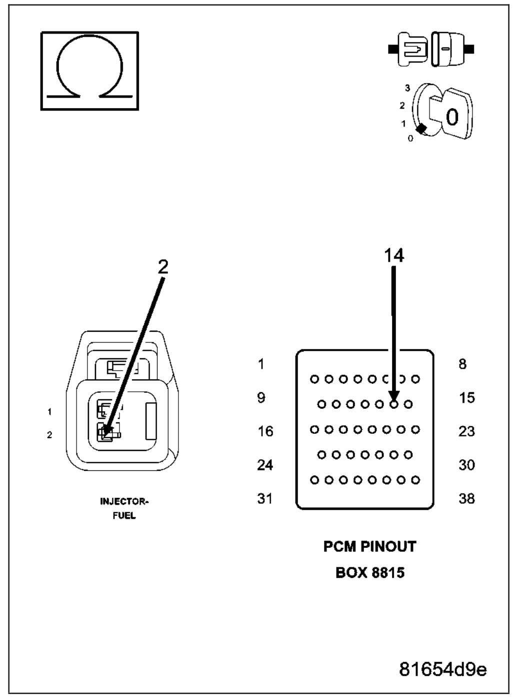
## 5. (K11) INJECTOR CONTROL NO.1 CIRCUIT OPEN

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K11) Injector Control No.1 circuit from the Fuel Injector harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K11) Injector Control No.1 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

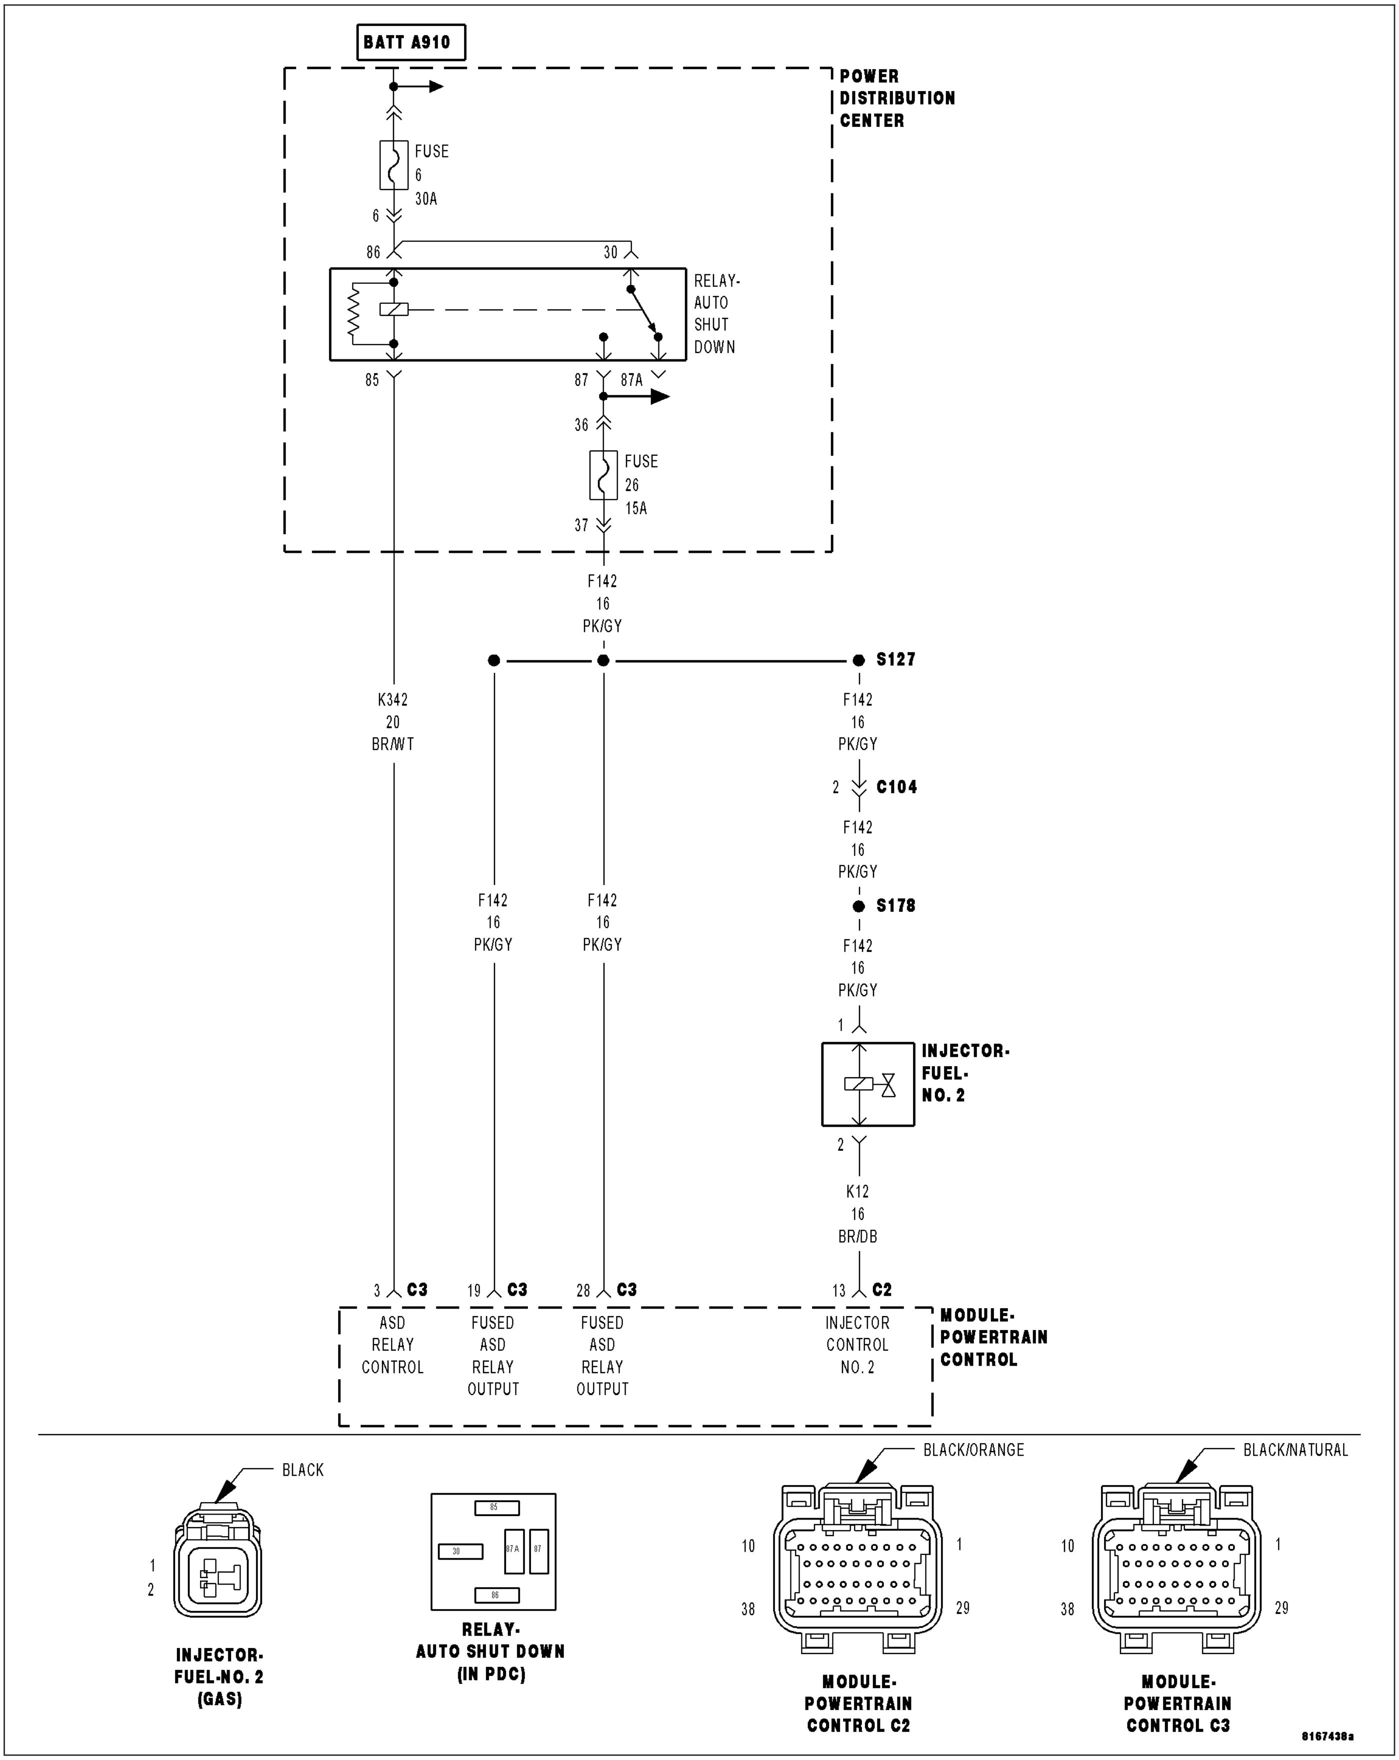
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0202-FUEL INJECTOR 2 CIRCUIT



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With battery voltage greater than 10 volts. Auto Shutdown Relay energized. Engine speed less than 3000 rpm.
- **Set Condition:**
  No inductive spike is detected after injector turn off for more than 3.2 seconds. One trip fault. Three good trips to clear the MIL.

| Possible Causes |
|---|
| (F142) ASD RELAY OUTPUT CIRCUIT |
| (K12) INJECTOR CONTROL NO.2 CIRCUIT OPEN |
| (K12) INJECTOR CONTROL NO.2 CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (F142) ASD RELAY OUTPUT CIRCUIT

Turn the ignition off.

Disconnect the No.2 Fuel Injector harness connector.

Ignition on, engine not running.

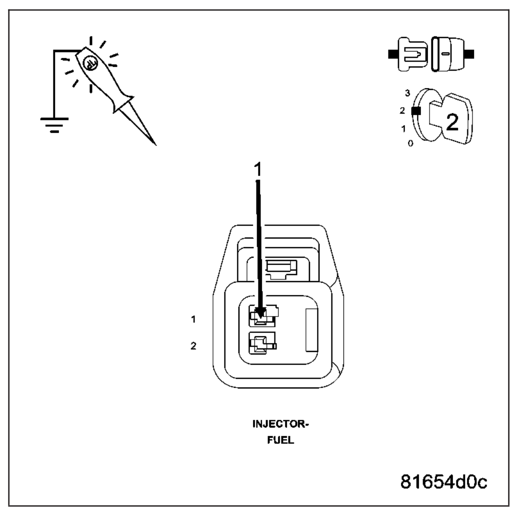
With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, backprobe the (F142) ASD Relay Output circuit in the No.2 Fuel Injector harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the excessive resistance or short to ground in the (F142) ASD Relay Output circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

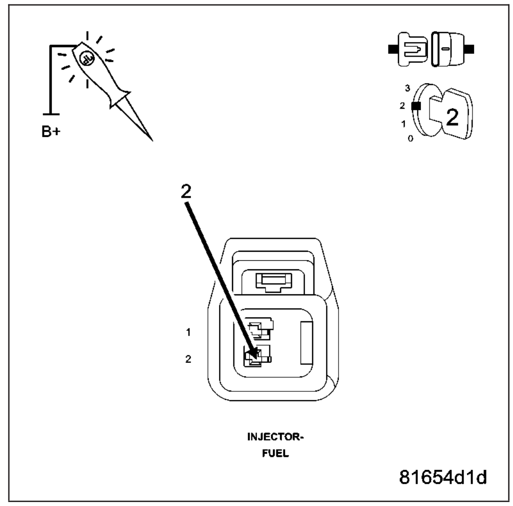


## 3. FUEL INJECTOR

Using a 12-volt test light connected to 12-volts, backprobe the (K12) Injector Control No.2 circuit.

With the scan tool, actuate the No.2 Fuel Injector.

**What is the state of the test light during the actuation?**



**Brightly Blinking.**

Replace the Fuel Injector.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**ON Constantly.**

Go To 4

**OFF Constantly.**

Go To 5

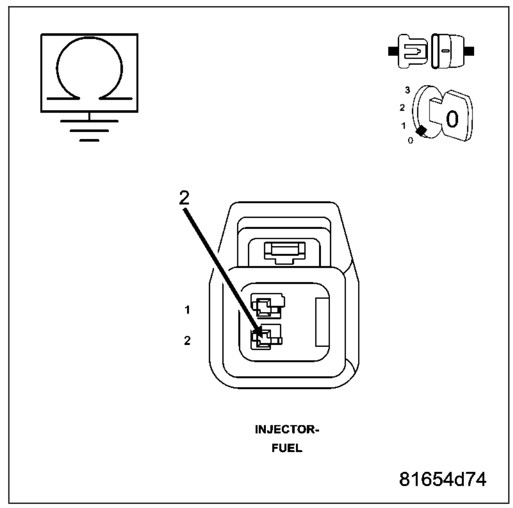
## 4. (K12) INJECTOR CONTROL NO.2 CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K12) Injector Control No.2 circuit in the Injector harness connector.

**Is the resistance below 100 ohms?**



**Yes** >> Repair the short to ground in the (K12) Injector Control No.2 circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

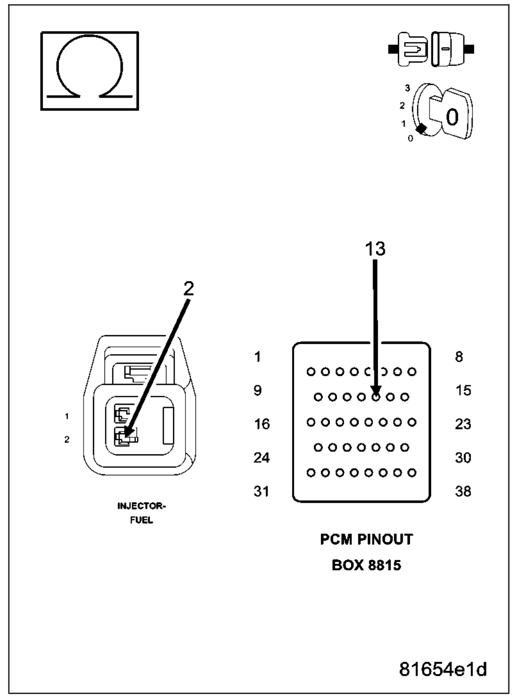
## 5. (K12) INJECTOR CONTROL NO.2 CIRCUIT OPEN

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K12) Injector Control No.2 circuit from the Fuel Injector harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K12) Injector Control No.2 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

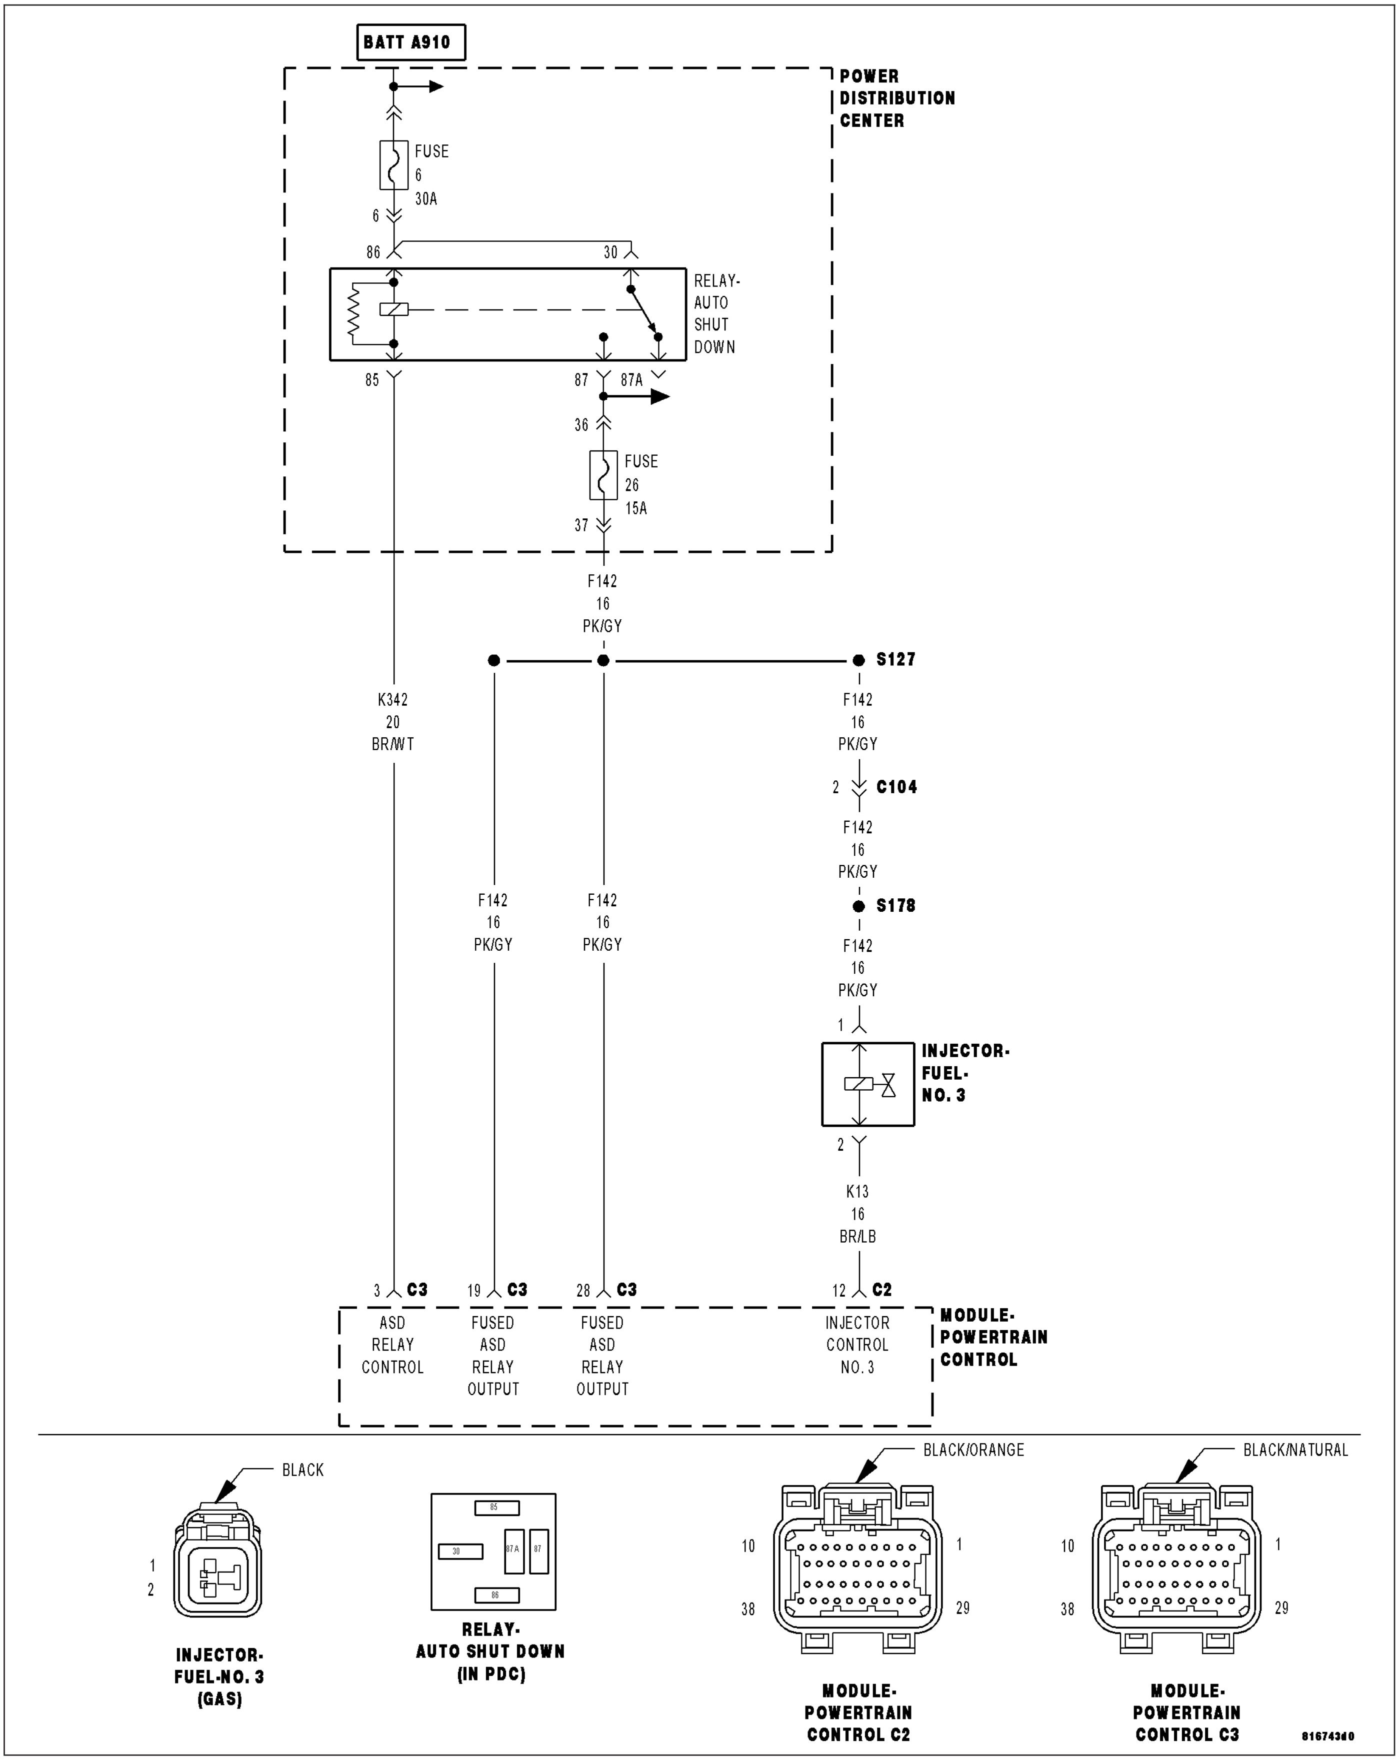
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0203-FUEL INJECTOR 3 CIRCUIT



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With battery voltage greater than 10 volts. Auto Shutdown Relay energized. Engine speed less than 3000 rpm.
- **Set Condition:**
  No inductive spike is detected after injector turn off for more than 3.2 seconds. One trip fault. Three good trips to clear the MIL.

| Possible Causes |
|---|
| (F142) ASD RELAY OUTPUT CIRCUIT |
| (K13) INJECTOR CONTROL NO.3 CIRCUIT OPEN |
| (K13) INJECTOR CONTROL NO.3 CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (F142) ASD RELAY OUTPUT CIRCUIT

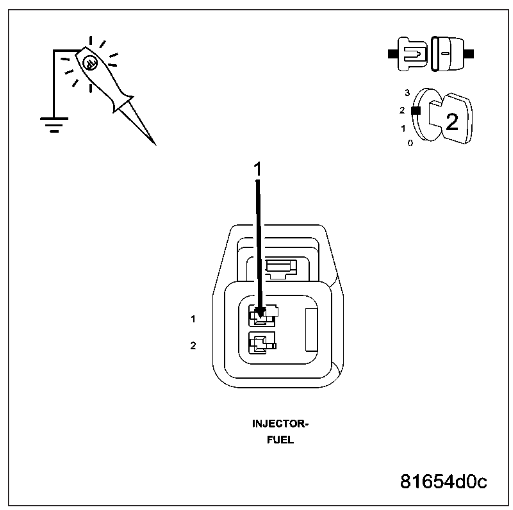
Turn the ignition off.

Disconnect the No.3 Fuel Injector harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, backprobe the (F142) ASD Relay Output circuit in the No.3 Fuel Injector harness connector.



**Does the test light illuminate brightly?**

**Yes** >> Go To 3

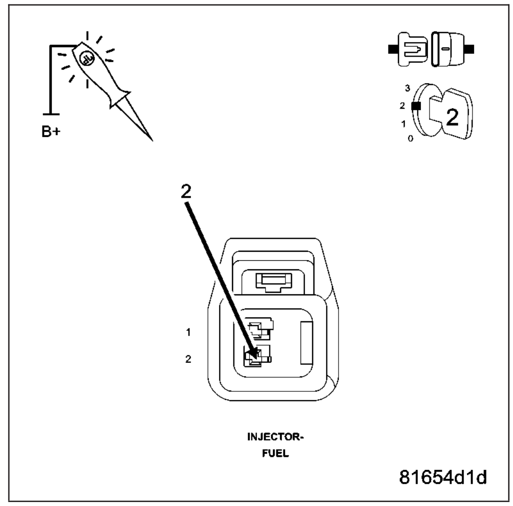
**No** >> Repair the excessive resistance or short to ground in the (F142) ASD Relay Output circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. FUEL INJECTOR

Using a 12-volt test light connected to 12-volts, backprobe the (K13) Injector Control No.3 circuit.

With the scan tool, actuate the No.3 Fuel Injector.

**What is the state of the test light during the actuation?**



**Brightly Blinking.**

Replace the Fuel Injector.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE

**ON Constantly.**

Go To 4

**OFF Constantly.**

Go To 5

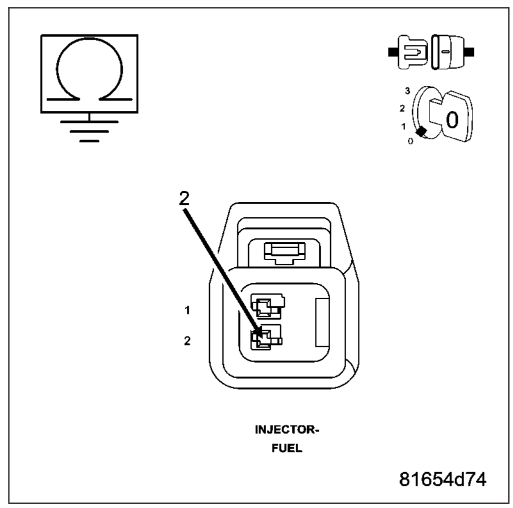
## 4. (K13) INJECTOR CONTROL NO.3 CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K13) Injector Control No.3 circuit in the Injector harness connector.

**Is the resistance below 100 ohms?**



**Yes** >> Repair the short to ground in the (K13) Injector Control No.3 circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

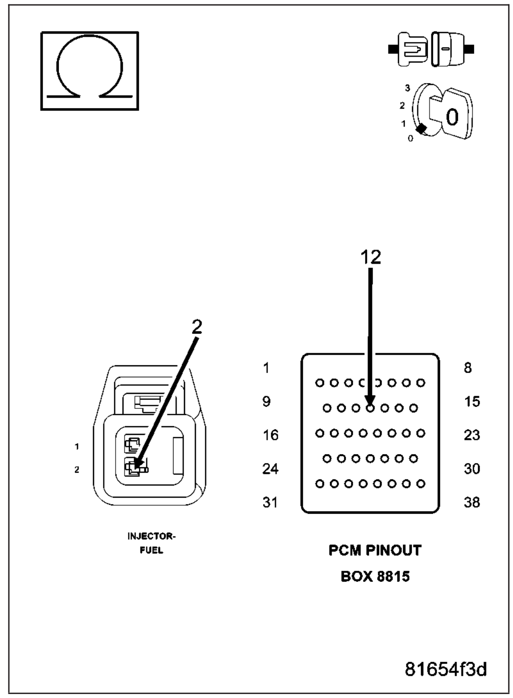
## 5. (K13) INJECTOR CONTROL NO.3 CIRCUIT OPEN

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K13) Injector Control No.3 circuit from the Fuel Injector harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K13) Injector Control No.3 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

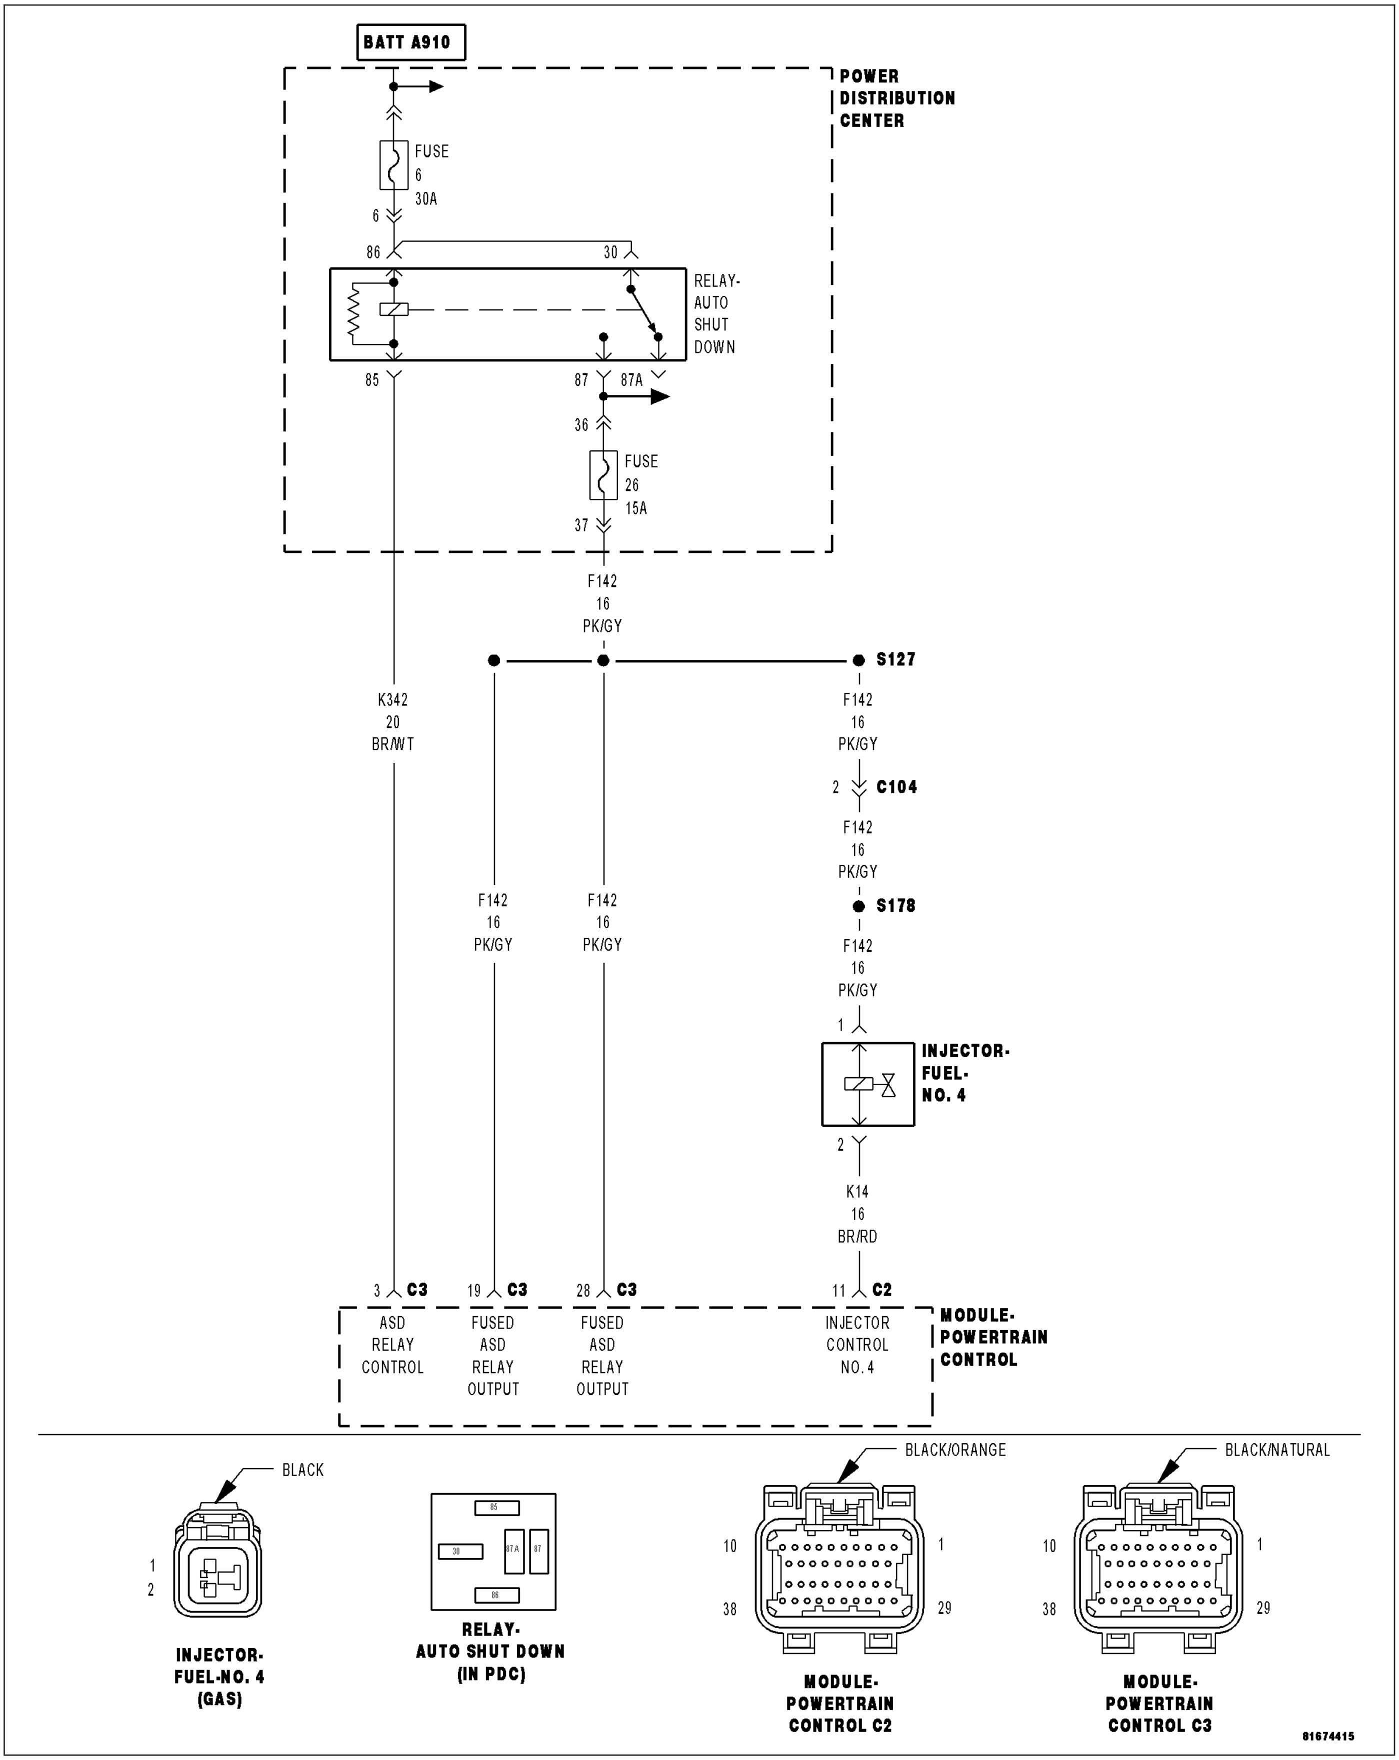
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0204-FUEL INJECTOR 4 CIRCUIT



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With battery voltage greater than 10 volts. Auto Shutdown Relay energized. Engine speed less than 3000 rpm.
- **Set Condition:**
  No inductive spike is detected after injector turn off for more than 3.2 seconds. One trip fault. Three good trips to clear the MIL.

| Possible Causes |
|---|
| (F142) ASD RELAY OUTPUT CIRCUIT |
| (K14) INJECTOR CONTROL NO.4 CIRCUIT OPEN |
| (K14) INJECTOR CONTROL NO.4 CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (F142) ASD RELAY OUTPUT CIRCUIT

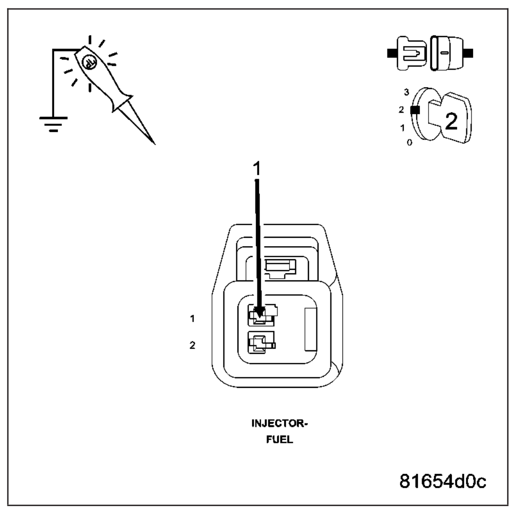
Turn the ignition off.

Disconnect the No.4 Fuel Injector harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, backprobe the (F142) ASD Relay Output circuit in the No.4 Fuel Injector harness connector.



**Does the test light illuminate brightly?**

**Yes** >> Go To 3

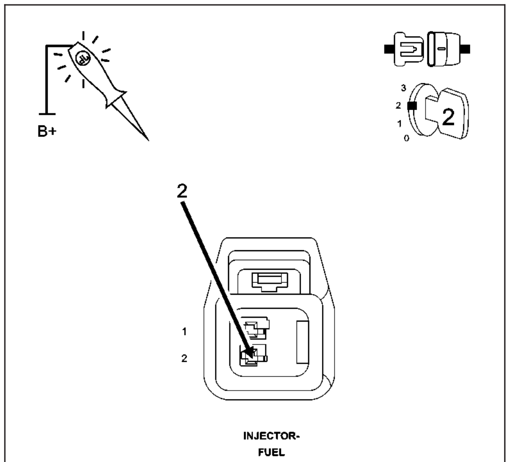
**No** >> Repair the excessive resistance or short to ground in the (F142) ASD Relay Output circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. FUEL INJECTOR

Using a 12-volt test light connected to 12-volts, backprobe the (K14) Injector Control No.4 circuit.

With the scan tool, actuate the No.4 Fuel Injector.

**What is the state of the test light during the actuation?**



81654d1d

**Brightly Blinking.**

Replace the Fuel Injector.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**ON Constantly.**

Go To 4

**OFF Constantly.**

Go To 5

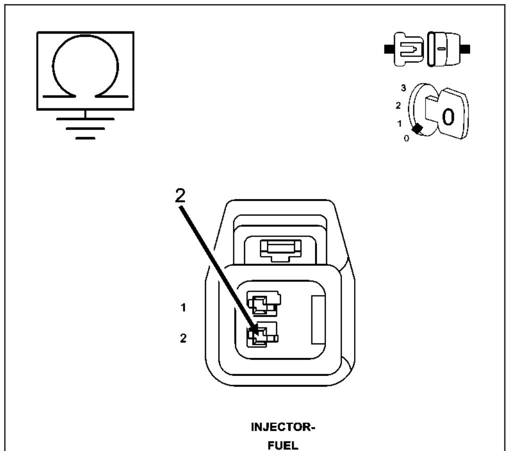
## 4. (K14) INJECTOR CONTROL NO.4 CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K14) Injector Control No.4 circuit in the Injector harness connector.

**Is the resistance below 100 ohms?**



81654d74

**Yes** >> Repair the short to ground in the (K14) Injector Control No.4 circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

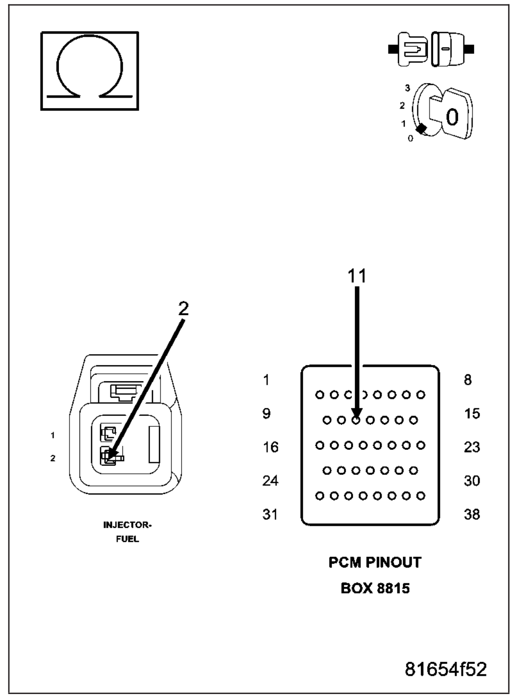
## 5. (K14) INJECTOR CONTROL NO.4 CIRCUIT OPEN

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K14) Injector Control No.4 circuit from the Fuel Injector harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K14) Injector Control No.4 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

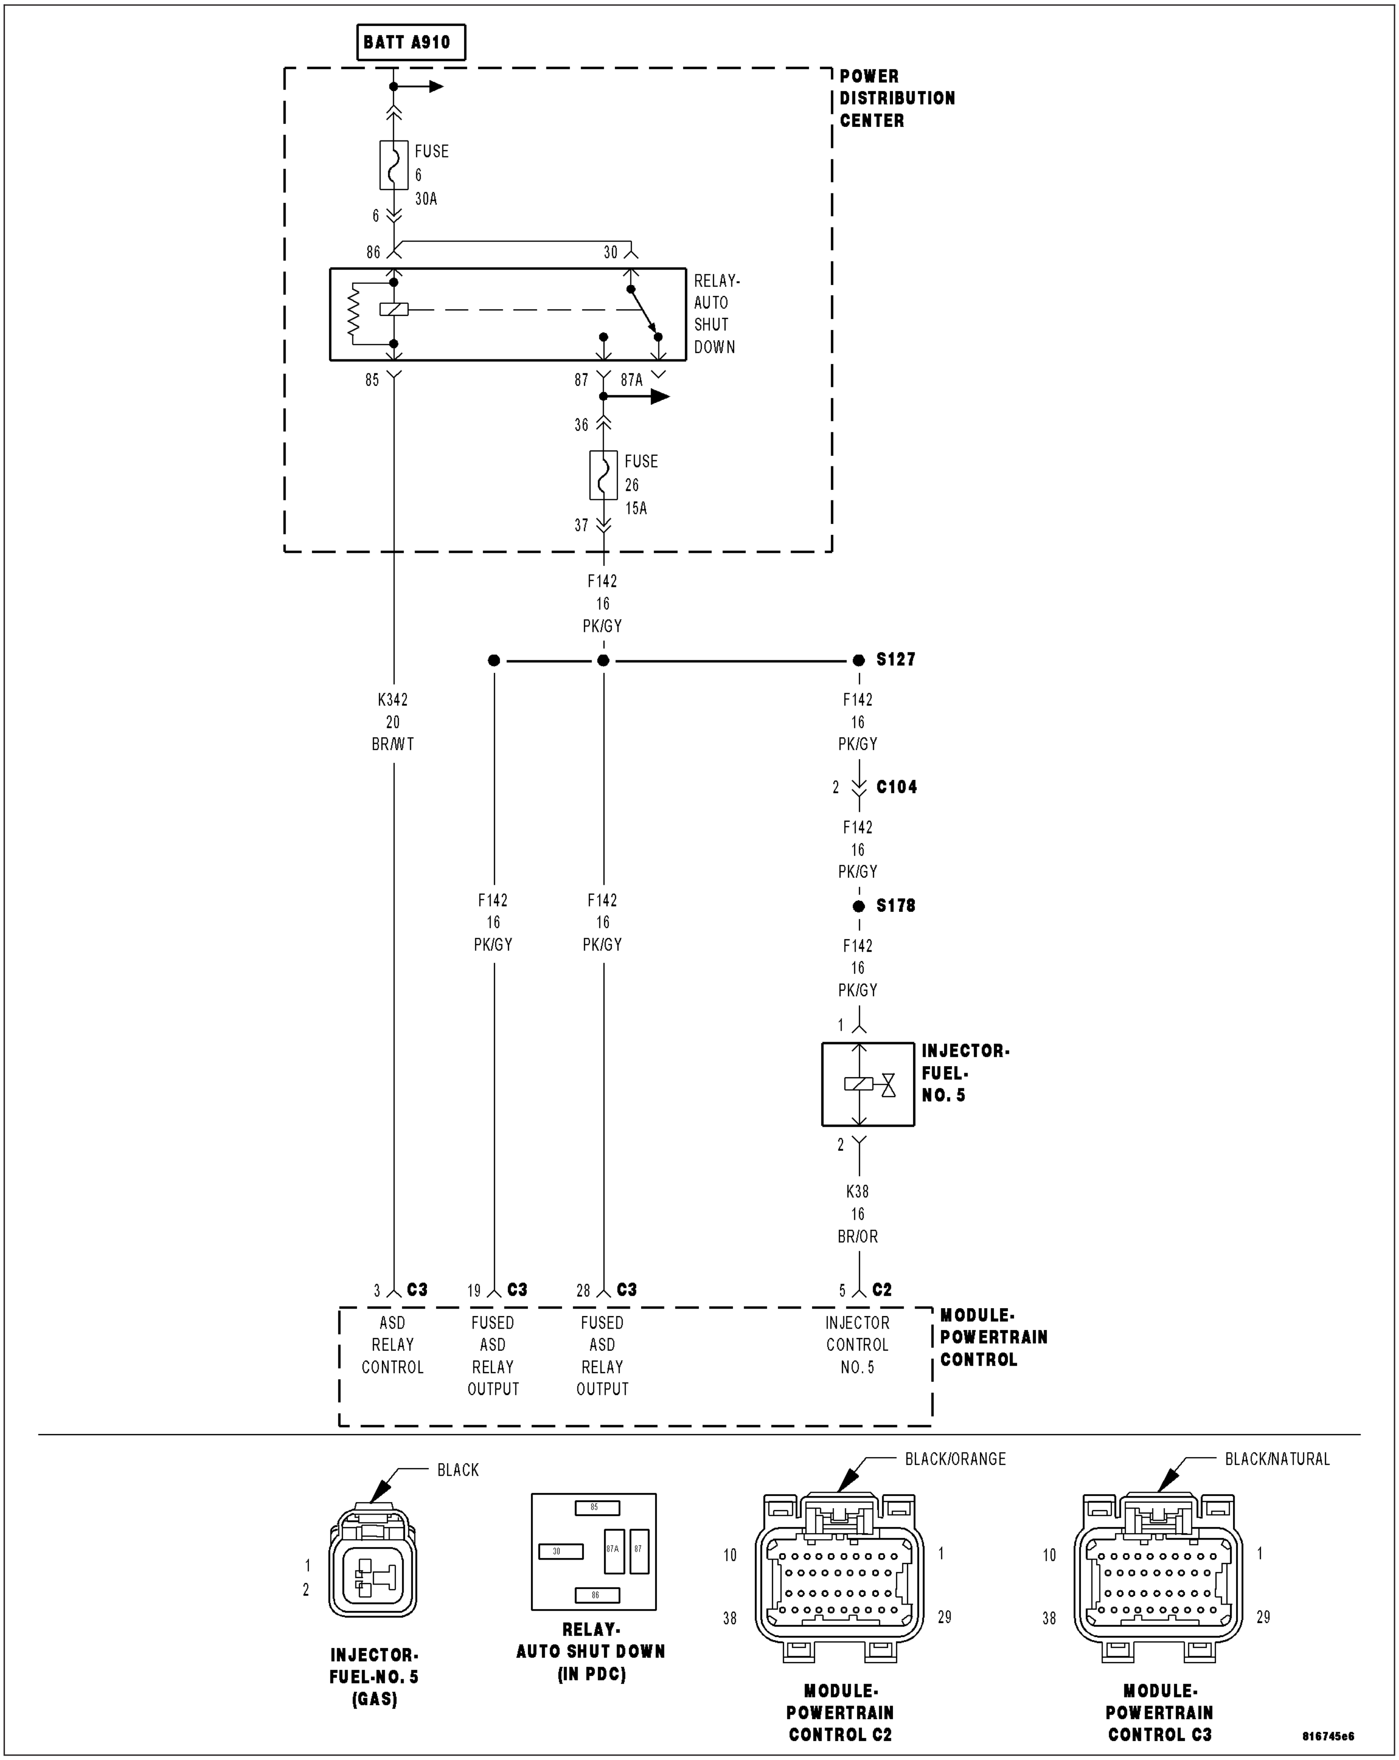
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0205-FUEL INJECTOR 5 CIRCUIT



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With battery voltage greater than 10 volts. Auto Shutdown Relay energized. Engine speed less than 3000 rpm.
- **Set Condition:**
  No inductive spike is detected after injector turn off for more than 3.2 seconds. One trip fault. Three good trips to clear the MIL.

| Possible Causes |
|---|
| (F142) ASD RELAY OUTPUT CIRCUIT |
| (K38) INJECTOR CONTROL NO.5 CIRCUIT OPEN |
| (K38) INJECTOR CONTROL NO.5 CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (F142) ASD RELAY OUTPUT CIRCUIT

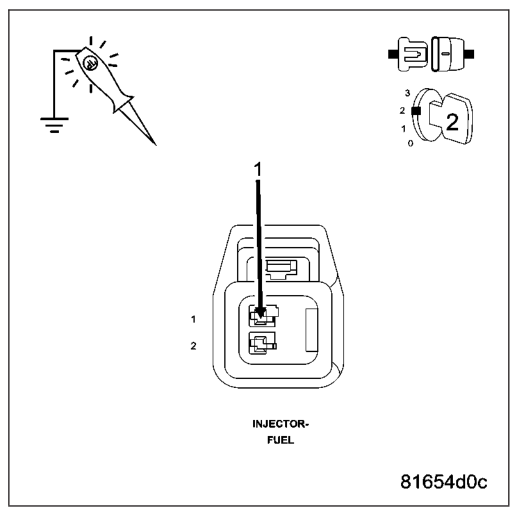
Turn the ignition off.

Disconnect the No.5 Fuel Injector harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, backprobe the (F142) ASD Relay Output circuit in the No.5 Fuel Injector harness connector.



**Does the test light illuminate brightly?**

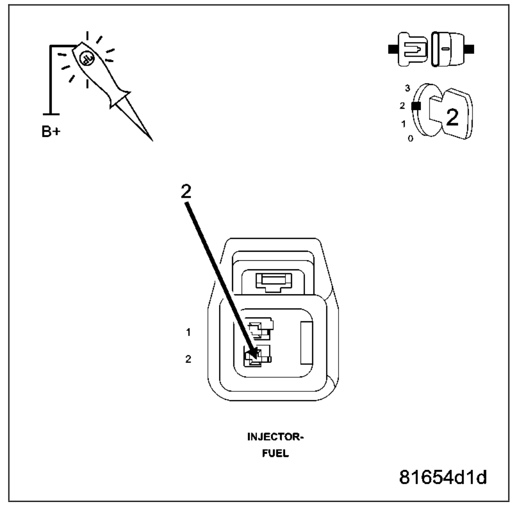
**Yes** >> Go To 3

**No** >> Repair the excessive resistance or short to ground in the (F142) ASD Relay Output circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. FUEL INJECTOR

Using a 12-volt test light connected to 12-volts, backprobe the (K38) Injector Control No.5 circuit.

With the scan tool, actuate the No.5 Fuel Injector.



**What is the state of the test light during the actuation?**

**Brightly Blinking.**

Replace the Fuel Injector.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**ON Constantly.**

Go To 4

**OFF Constantly.**

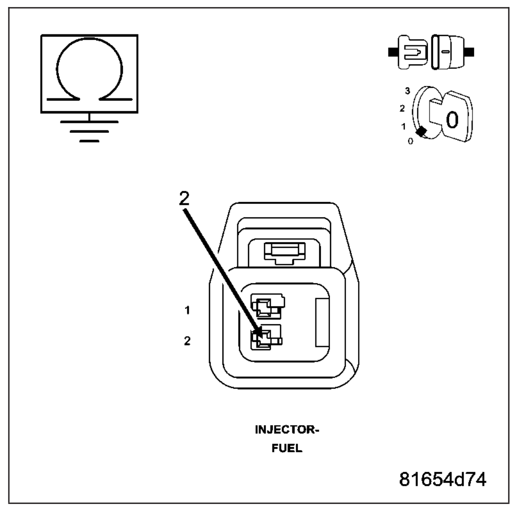
Go To 5

## 4. (K38) INJECTOR CONTROL NO.5 CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K38) Injector Control No.5 circuit in the Injector harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K38) Injector Control No.5 circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

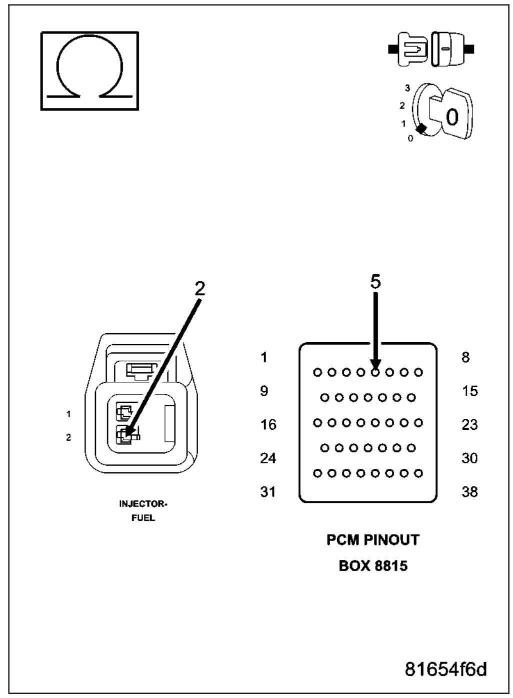
## 5. (K38) INJECTOR CONTROL NO.5 CIRCUIT OPEN

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K38) Injector Control No.5 circuit from the Fuel Injector harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K38) Injector Control No.5 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

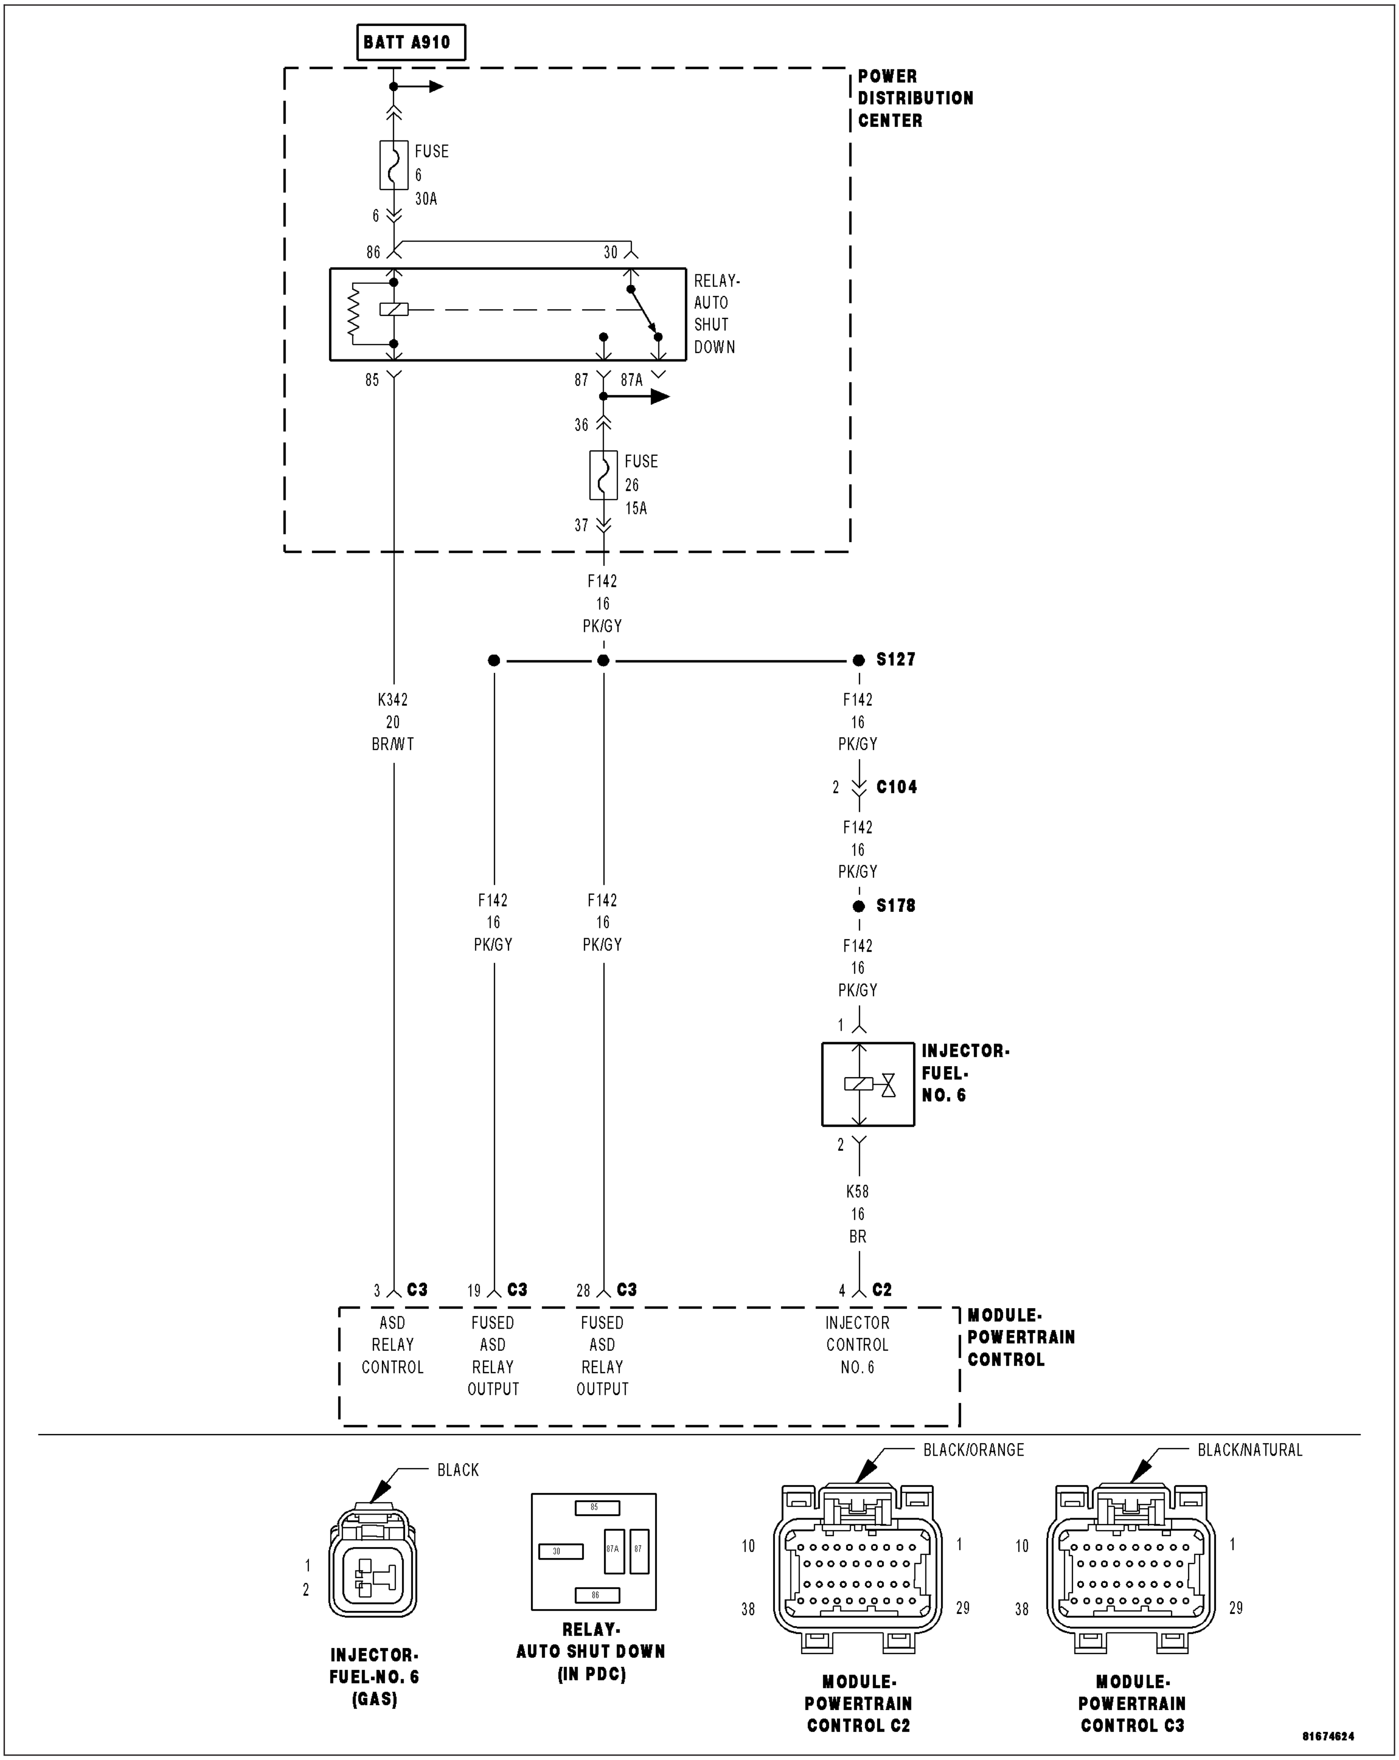
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0206-FUEL INJECTOR 6 CIRCUIT



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With battery voltage greater than 10 volts. Auto Shutdown Relay energized. Engine speed less than 3000 rpm.
- **Set Condition:**
  No inductive spike is detected after injector turn off for more than 3.2 seconds. One trip fault. Three good trips to clear the MIL.

| Possible Causes |
|---|
| (F142) ASD RELAY OUTPUT CIRCUIT |
| (K58) INJECTOR CONTROL NO.6 CIRCUIT OPEN |
| (K58) INJECTOR CONTROL NO.6 CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (F142) ASD RELAY OUTPUT CIRCUIT

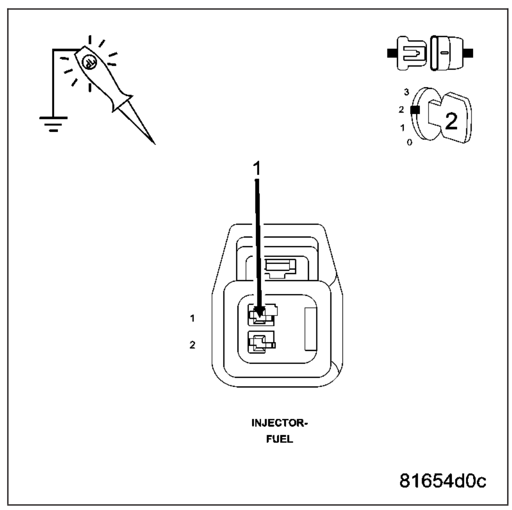
Turn the ignition off.

Disconnect the No.6 Fuel Injector harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, backprobe the (F142) ASD Relay Output circuit in the No.6 Fuel Injector harness connector.



**Does the test light illuminate brightly?**

**Yes** >> Go To 3

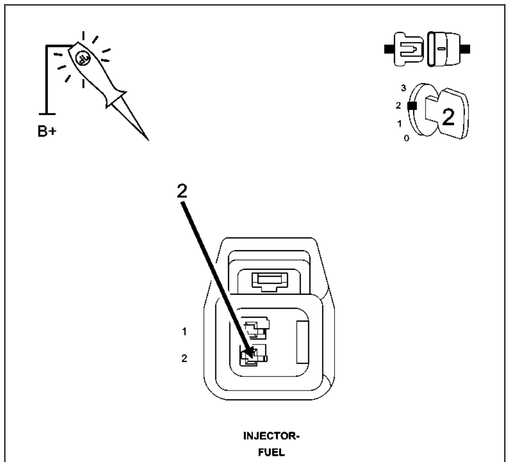
**No** >> Repair the excessive resistance or short to ground in the (F142) ASD Relay Output circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. FUEL INJECTOR

Using a 12-volt test light connected to 12-volts, backprobe the (K58) Injector Control No.6 circuit.

With the scan tool, actuate the No.6 Fuel Injector.

**What is the state of the test light during the actuation?**



81654d1d

**Brightly Blinking.**

Replace the Fuel Injector.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**ON Constantly.**

Go To 4

**OFF Constantly.**

Go To 5

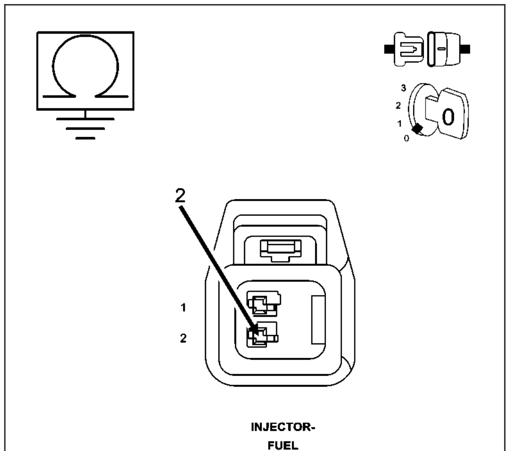
## 4. (K58) INJECTOR CONTROL NO.6 CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K58) Injector Control No.6 circuit in the Injector harness connector.

**Is the resistance below 100 ohms?**



81654d74

**Yes** >> Repair the short to ground in the (K58) Injector Control No.6 circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

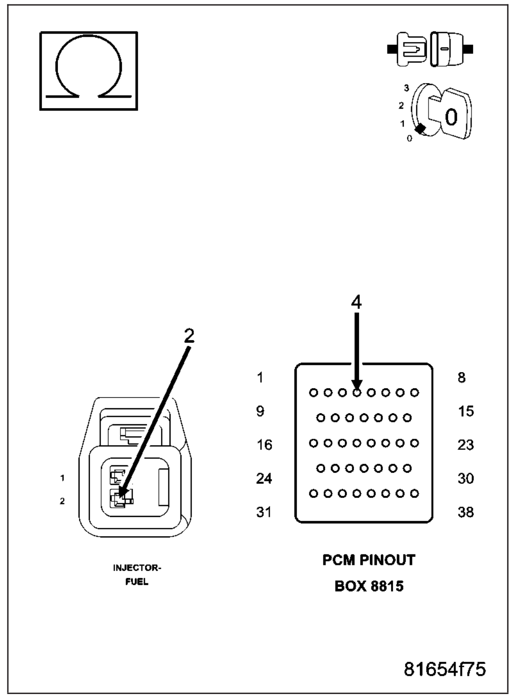
## 5. (K58) INJECTOR CONTROL NO.6 CIRCUIT OPEN

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K58) Injector Control No.6 circuit from the Fuel Injector harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K58) Injector Control No.6 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0300-MULTIPLE CYLINDER MISFIRE

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Any time the engine is running, and the adaptive numerator has been successfully updated.
- **Set Condition:**
  The threshold to set the fault is application specific; it is tied to the level of misfire that will cause emissions to increase to 1.5 times the standard or in some cases 1%. It is always a two trip fault above the calibrated RPM. It takes 1 soft fail to set a malfunction and two trips to set the MIL. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (F142) AND (A142) ASD RELAY OUTPUT CIRCUITS |
| INJECTOR CONTROL CIRCUIT |
| COIL CONTROL CIRCUIT |
| IGNITION WIRE |
| SPARK PLUG |
| IGNITION COIL |
| FUEL PUMP INLET STRAINER PLUGGED |
| RESTRICTED FUEL SUPPLY LINE |
| FUEL PUMP MODULE |
| FUEL PRESSURE LEAK DOWN |
| FUEL INJECTOR |
| ENGINE MECHANICAL PROBLEM |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. CYLINDER MIS-FIRE CONDITION ACTIVE

**NOTE: Check for any TSB's that apply to a Misfire condition. Review the vehicle repair history for any misfire condition repairs that have been performed.**

Star the engine.

Observe the WHICH CYLINDER IS MISFIRING screen for at least one minute on the scan tool.

**Is there a misfire present?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. VISUAL INSPECTION

**NOTE: Anything that affects the speed of the crankshaft can cause a misfire DTC.**

**NOTE: When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.**

- Visually inspect the engine for any of the following conditions.
- Worn serpentine belt
- Binding Engine-Driven accessories: A/C Compressor, P/S Pump, Water pump.
- Misalignment Water pump, P/S Pump and A/C Compressor pulleys
- Corroded PCM power and ground circuits.
- Improper CKP, CMP, MAP, and TP Sensor mounting

- Poor connector/terminal to component connection. i.e., CKP sensor, Fuel Injector, Ign coil, etc.
- Vacuum leaks
- Restricted Air Induction system or Exhaust system.
- Internal engine component failures.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. (A142) AND (F142) ASD RELAY OUTPUT CIRCUIT

Turn the ignition off.

Disconnect the Ignition Coil harness connector of the misfiring cylinders.

Disconnect the Fuel Injector harness connector of the misfiring cylinders.

Ignition on, engine not running.

With a scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (A142) ASD Relay Output circuit in the Ignition Coil harness connector and the (F142) ASD Relay Output circuit in the Fuel Injector harness connector, while the relay is actuating.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the excessive resistance or short to ground in the (A142) or (F142) ASD Relay Output circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. IGNITION SYSTEM OPERATION

Turn the ignition off.

Connect the Ignition Coil harness connectors.

Remove the Ignition Coils.

Leave the Fuel Injector harness connector of the cylinder being tested disconnected.

Install a spark tester on the Ignition Coil.

While cranking the engine observe the spark coming from the spark tester.

**NOTE: A crisp blue spark that is able to jump the gap of the spark tester should be generated.**

**Is good spark present?**

**Yes** >> Go To 5

**No** >> Go To 14

**NOTE: Connect the Fuel Injector harness connector before continuing.**

## 5. SPARK PLUG

Turn the ignition off.

Remove the Spark Plug.

Inspect the Spark Plug for the following conditions.

- Cracks
- Carbon Tracking
- Foreign Material
- Gap size out of specifications
- Loose or broke electrode

**NOTE: Lightly tap the bottom of the spark plug on a solid surface. The electrode in the spark plug should not move.**

**Does the Spark Plug have any problems?**

**Yes** >> Replace the Spark Plug.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. FUEL PRESSURE CHECK

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Install a fuel pressure gauge to the fuel rail.

Start the engine and observe the fuel pressure reading.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Choose a conclusion that best matches your fuel pressure reading.**

**Within Specification**
Go To 7

**Below Specification**
Go To 12

**Above Specification**
Replace the fuel filter/pressure regulator.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. FUEL PRESSURE LEAK DOWN

**NOTE: Before continuing visually and physically inspect the fuel delivery system for external leaks or damage. Repair /replace as necessary.**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death**

Install special tool #6539 (5/16″) or #6631 (3/8″) fuel line adapter.

Install the fuel pressure gauge.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**NOTE: Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and the engine.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**NOTE: The pressure should not fall below 241 KPa (35 psi)**

**Does the gauge fall below the listed specification?**

**Yes** >> Replace the leaking Fuel Injector(s).
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

## 8. FUEL INJECTOR OPERATION

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

**CAUTION: After each Fuel Injector actuation, start the engine to clean the cylinder of fuel. Failure to do so could cause engine damage.**

Remove special tool #C4390.

Start the engine and allow the fuel pressure to reach maximum pressure.

Ignition on, engine not running.

Using the scan tool, actuate the Fuel Injector for the cylinder that indicated the misfire.

Monitor the fuel pressure gauge.

**Does the fuel pressure gauge indicate a drop in fuel pressure?**

**Yes** >> Go To 9

**No** >> Go To 10

**NOTE: Turn the ignition off, remove the Fuel Pressure gauge, and connect the fuel lines before continuing.**

## 9. ENGINE MECHANICAL PROBLEM

Check for any of the following conditions/mechanical problems.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

CAM LOBES - must not be worn excessively

CYLINDER LEAKAGE TEST - must be within specifications

VALVE SPRINGS - cannot be weak or broken

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 17

## 10. FUEL INJECTOR

Turn the ignition off.

Disconnect the Fuel Injector harness connector of the misfiring cylinder.

Ignition on, engine not running.

**NOTE: When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.**

With the scan tool, erase DTCs.

Using a 12-volt test light connected to 12-volts, probe the Injector Control circuit.

With the scan tool, actuate the Fuel Injector.

**Does the test light blink/flicker?**

**Yes** >> Replace the Fuel Injector.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 11

## 11. INJECTOR CONTROL CIRCUIT

Turn the ignition off.

Disconnect the Fuel Injector harness connector.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Check the Injector Control circuit for an open, short to ground, and short to voltage.

**Was a problem found with the Injector Control circuit?**

**Yes** >> Repair the excessive resistance or short in the Injector Control circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 17

## 12. FUEL SUPPLY LINE RESTRICTED

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special tool #6539 (5/16″) #6631(3/8″) fuel line adapter and the fuel pressure gauge between the fuel supply line and the fuel pump module.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Is the fuel pressure within specification?**

**Yes** >> Repair or replace fuel supply line as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 13

## 13. FUEL PUMP INLET STRAINER

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

**Yes** >> Replace the Fuel Pump Inlet Strainer.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Before continuing, check the Fuel Pump Module harness connector terminals for corrosion, damage, or terminal push out. Make sure the ground circuit is operating properly. Repair as necessary. Replace the Fuel Pump Module.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 14. IGNITION WIRE

**NOTE: If the vehicle being tested does not have an ignition wire answer YES to this test and continue.**
Turn the ignition off.

Remove the ignition wire.

Measure the resistance of the ignition wire.

**Is the resistance below 10K ohms?**

**Yes** >> Go To 15

**No** >> Replace the Ignition Wire.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 15. IGNITION COIL

Disconnect the Ignition Coil harness connector.

Remove the Fuel Pump Relay or ASD Relay.

Using a 12-volt test light connected to 12-volts, probe the Ignition Coil Control circuit.

Crank the engine for 5 second while observing the test light.

**NOTE: The primary resistance of the 3.7L Ignition coil is 0.6 to 0.9 of an ohm at 77°F (25°C).**

**Does the test light brightly blink/flicker?**

**Yes** >> Replace the Ignition Coil.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 16

## 16. COIL CONTROL CIRCUIT

Turn the ignition off.

Disconnect the Ignition Coil harness connector.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**
Check the Coil Control circuit for an open, short to ground, and short to voltage.

**Was a problem found with the Coil Control circuit?**

**Yes** >> Repair the Coil Control circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 17

## 17. PCM

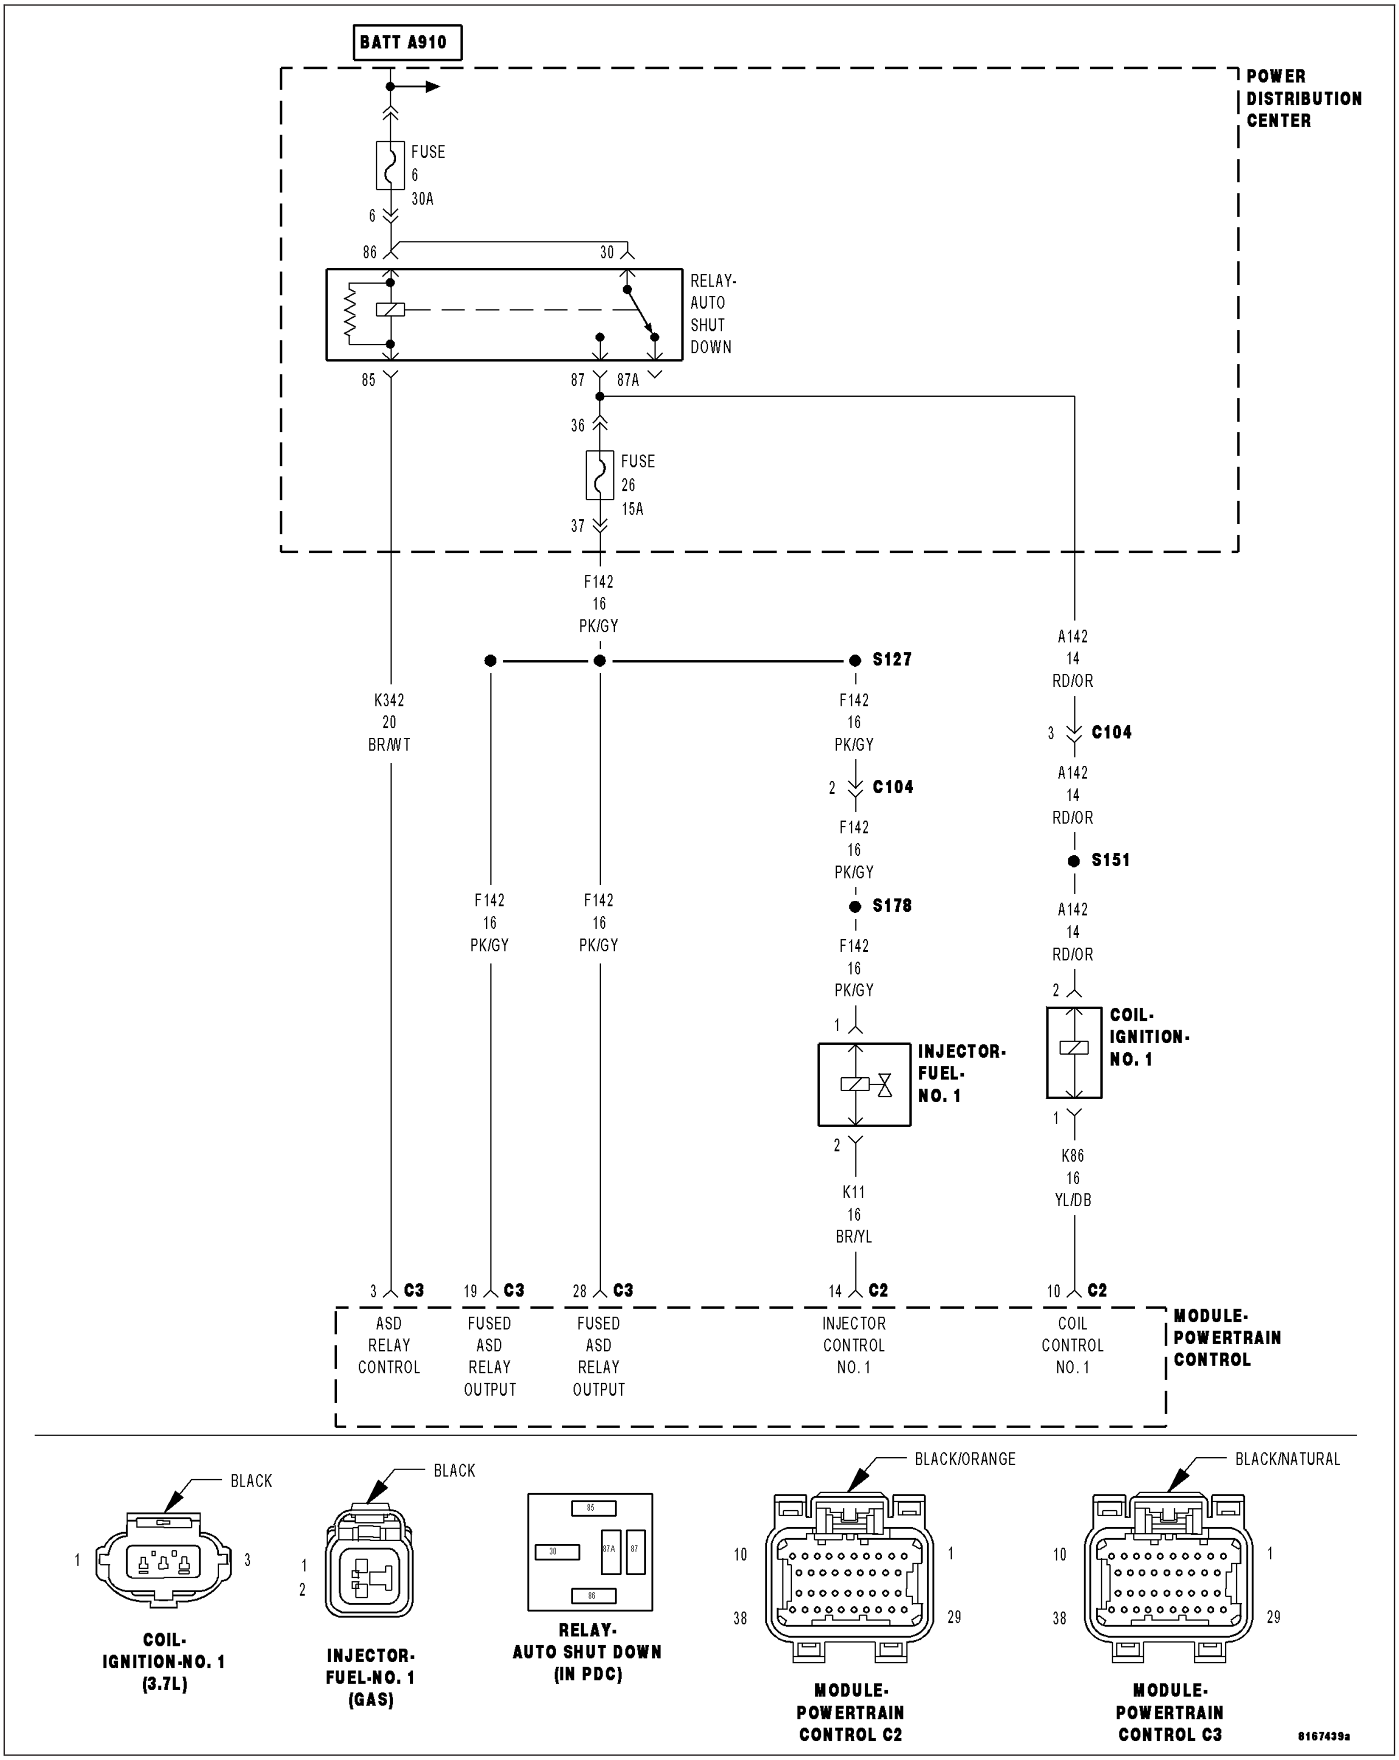
**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0301-CYLINDER 1 MISFIRE



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Any time the engine is running, and the adaptive numerator has been successfully updated.
- **Set Condition:**
  The threshold to set the fault is application specific; it is tied to the level of misfire that will cause emissions to increase to 1.5 times the standard or in some cases 1%. It is always a two trip fault above the calibrated RPM. It takes 1 soft fail to set a malfunction and two trips to set the MIL. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (A142) AND (F142) ASD RELAY OUTPUT CIRCUIT |
| (K11) INJECTOR CONTROL NO.1 CIRCUIT |
| (K86) COIL CONTROL NO.1 CIRCUIT |
| IGNITION WIRE |
| SPARK PLUG |
| IGNITION COIL |
| FUEL PUMP INLET STRAINER PLUGGED |
| RESTRICTED FUEL SUPPLY LINE |
| FUEL PUMP MODULE |
| FUEL PRESSURE LEAK DOWN |
| FUEL INJECTOR |
| ENGINE MECHANICAL PROBLEM |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. CYLINDER MIS-FIRE CONDITION ACTIVE

Engine running.

Observe the WHICH CYLINDER IS MISFIRING screen for at least one minute on the scan tool.

**Is there a misfire present at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. VISUAL INSPECTION

**NOTE: Anything that affects the speed of the crankshaft can cause a misfire DTC.**

**NOTE: When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.**

- Visually inspect the engine for any of the following conditions.
- Worn serpentine belt
- Binding Engine-Driven accessories: A/C Compressor, P/S Pump, Water pump.
- Misalignment Water pump, P/S Pump and A/C Compressor pulleys
- Corroded PCM power and ground circuits.
- Improper CKP, CMP, MAP, and TP Sensor mounting
- Poor connector/terminal to component connection. i.e., CKP sensor, Fuel Injector, Ign coil, etc.
- Vacuum leaks
- Restricted Air Induction system or Exhaust system.

- Internal engine component failures.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. (A142) AND (F142) ASD RELAY OUTPUT CIRCUITS

Turn the ignition off.

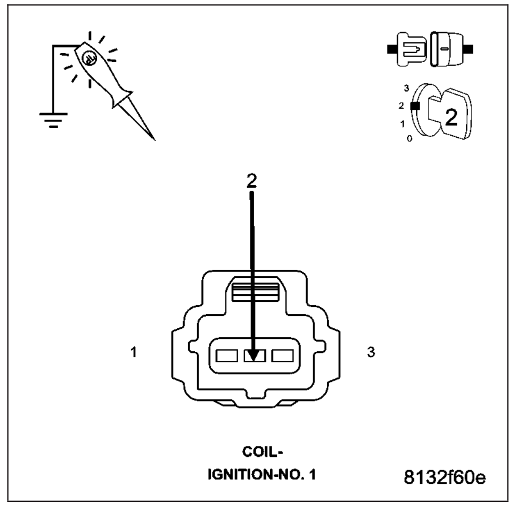
Disconnect the Ignition Coil No.1 harness connector.

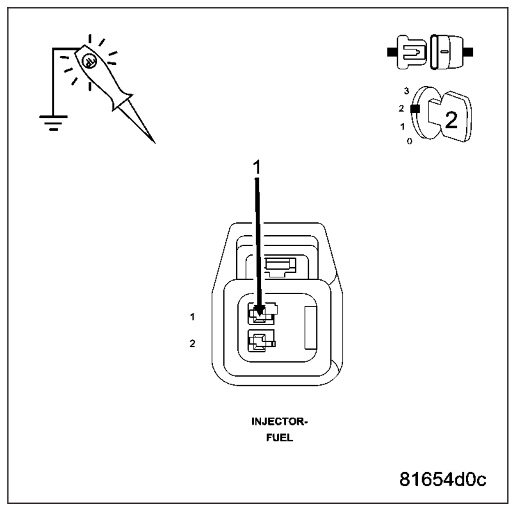
Disconnect the Fuel Injector No.1 harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (A142) ASD Relay Output circuit in the Ignition Coil harness connector and the (F142) ASD Relay Output circuit in the Fuel Injector harness connector, while the relay is actuating.





**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the excessive resistance or short to ground in the (A142) or (F142) ASD Relay Output circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. IGNITION SYSTEM OPERATION

Turn the ignition off.

Connect the Ignition Coil No.1 harness connector.

Remove the Ignition Coil.

Leave the Fuel Injector harness connector of the cylinder being tested disconnected.

Install a spark tester on the Ignition Coil.

While cranking the engine observe the spark coming from the spark tester.

**NOTE: A crisp blue spark that is able to jump the gap of the spark tester should be generated.**

**Is good spark present?**

**Yes** >> Go To 5

**No** >> Go To 14

**NOTE: Connect the Fuel Injector harness connector before continuing.**

## 5. SPARK PLUG

Turn the ignition off.

Remove the Spark Plug.

Inspect the Spark Plug for the following conditions.

- Cracks
- Carbon Tracking
- Foreign Material
- Gap size out of specifications
- Loose or broke electrode

**NOTE: Lightly tap the bottom of the spark plug on a solid surface. The electrode in the spark plug should not move.**

**Were any of the above conditions present?**

**Yes** >> Replace the Spark Plug.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. FUEL PRESSURE CHECK

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Install a fuel pressure gauge to the fuel rail.

Start the engine and observe the fuel pressure reading.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Choose a conclusion that best matches your fuel pressure reading.**

**Within Specification**
Go To 7

**Below Specification**
Go To 12

**Above Specification**
Replace the fuel filter/pressure regulator.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. FUEL PRESSURE LEAK DOWN

**NOTE: Before continuing visually and physically inspect the fuel delivery system for external leaks or damage. Repair / replace as necessary.**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death**

Install special tool #6539 (5/16″) or #6631 (3/8″) fuel line adapter.

Install the fuel pressure gauge.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**NOTE: Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and the engine.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**NOTE: The pressure should not fall below 241 KPa (35 psi).**

**Does the gauge fall below the listed specification?**

**Yes** >> Replace the leaking Fuel Injector(s).
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

## 8. FUEL INJECTOR OPERATION

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

**CAUTION: After each Fuel Injector actuation, start the engine to clean the cylinder of fuel. Failure to do so could cause engine damage.**

Remove special tool #C4390.

Start the engine and allow the fuel pressure to reach maximum pressure.

Ignition on, engine not running.

Using the scan tool, actuate the No.1 Fuel Injector.

Monitor the fuel pressure gauge.

**Does the fuel pressure gauge indicate a drop in fuel pressure?**

**Yes** >> Go To 9

**No** >> Go To 10

**NOTE: Turn the ignition off, remove the Fuel Pressure gauge, and connect the fuel lines before continuing.**

## 9. ENGINE MECHANICAL PROBLEM

Check for any of the following conditions/mechanical problems.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

CAM LOBES - must not be worn excessively

CYLINDER LEAKAGE TEST - must be within specifications

VALVE SPRINGS - cannot be weak or broken

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 16

## 10. FUEL INJECTOR

Turn the ignition off.

Disconnect the No.1 Fuel Injector harness connector.

Ignition on, engine not running.

**NOTE: When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.**

With the scan tool, erase DTCs.

Using a 12-volt test light connected to 12-volts, probe the (K11) Injector Control No.1 circuit.

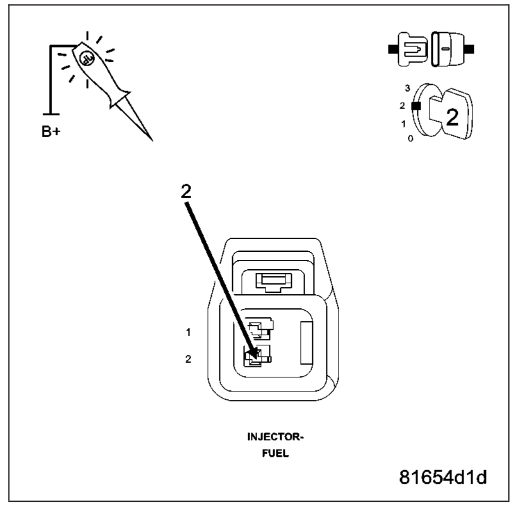
With the scan tool, actuate the Fuel Injector.

**Does the test light blink/flicker?**

**Yes** >> Replace the Fuel Injector.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 11



## 11. (K11) INJECTOR CONTROL NO.1 CIRCUIT

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

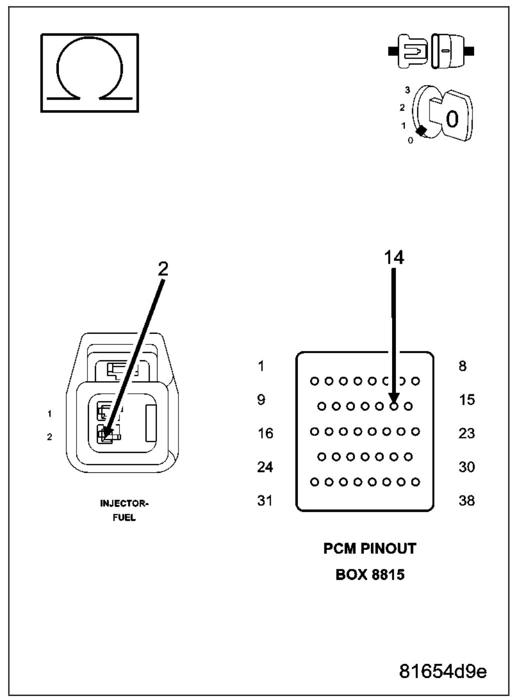
Check the (K11) Injector Control No.1 circuit for an open, short to ground, and short to voltage.

**Was a problem found with the (K11) Injector Control No.1 circuit?**

**Yes** >> Repair the excessive resistance or short in the (K11) Injector Control No.1 circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/ POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go To 16



## 12. FUEL SUPPLY LINE RESTRICTED

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special tool #6539 (5/16″) #6631(3/8″) fuel line adapter and the fuel pressure gauge between the fuel supply line and the fuel pump module.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Is the fuel pressure within specification?**

**Yes** >> Repair or replace fuel supply line as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 13

## 13. FUEL PUMP INLET STRAINER

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

**Yes** >> Replace the Fuel Pump Inlet Strainer.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Before continuing, check the Fuel Pump Module harness connector terminals for corrosion, damage, or terminal push out. Make sure the ground circuit is operating properly. Repair as necessary. Replace the Fuel Pump Module.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 14. IGNITION COIL

Disconnect the Ignition Coil harness connector.

Remove the Fuel Pump Relay.

Using a 12-volt test light connected to 12-volts, probe the (K86) Coil Control No.1 circuit.

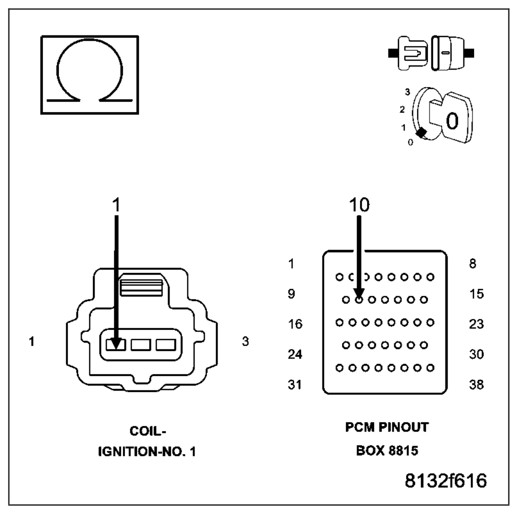
Crank the engine for 5 second while observing the test light.

**NOTE: The primary resistance of the 3.7L Ignition coil is 0.6 to 0.9 of an ohm at 77°F (25°C).**

**Does the test light brightly blink/flicker?**

**Yes** >> Replace the Ignition Coil.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 15



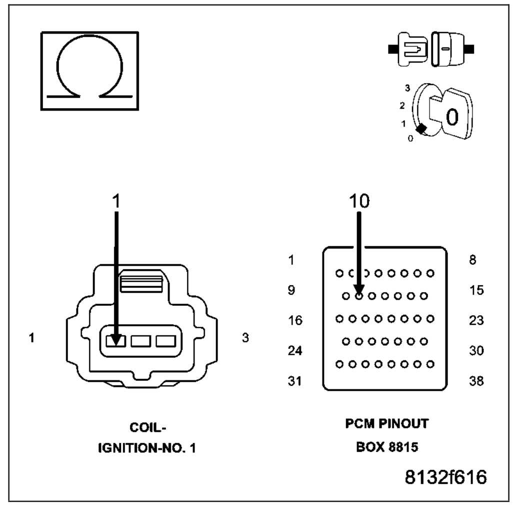
## 15. (K86) COIL CONTROL NO.1 CIRCUIT

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Check the (K86) Coil Control No.1 circuit for an open, short to ground, and short to voltage.



**Was a problem found with the (K86) Coil Control No.1 circuit?**

**Yes** >> Repair the (K86) Coil Control No.1 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 16

## 16. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

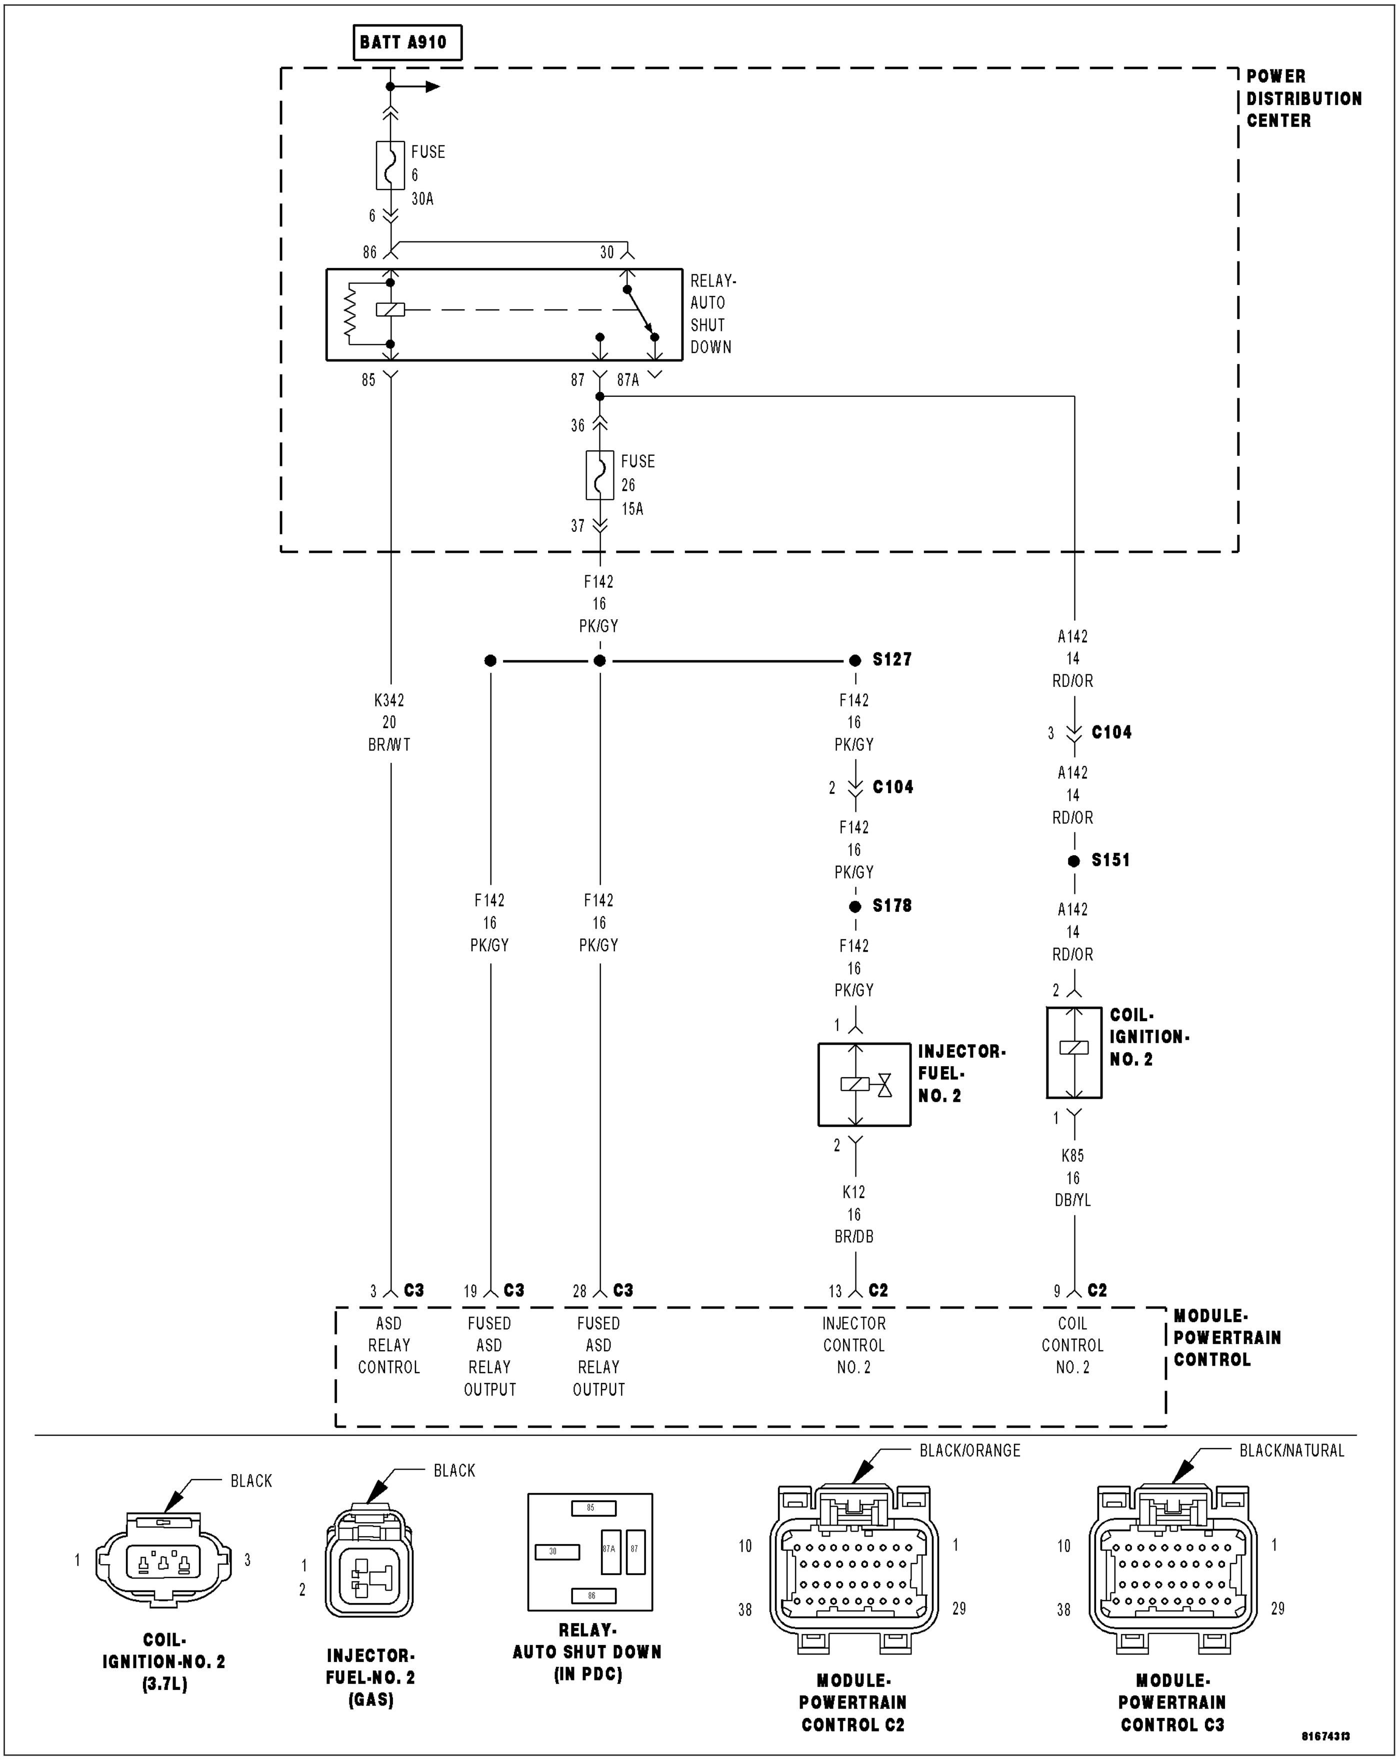
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0302-CYLINDER 2 MISFIRE



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Any time the engine is running, and the adaptive numerator has been successfully updated.
- **Set Condition:**
  The threshold to set the fault is application specific; it is tied to the level of misfire that will cause emissions to increase to 1.5 times the standard or in some cases 1%. It is always a two trip fault above the calibrated RPM. It takes 1 soft fail to set a malfunction and two trips to set the MIL. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (A142) AND (F142) ASD RELAY OUTPUT CIRCUIT |
| (K12) INJECTOR CONTROL NO.2 CIRCUIT |
| (K85) COIL CONTROL NO.2 CIRCUIT |
| IGNITION WIRE |
| SPARK PLUG |
| IGNITION COIL |
| FUEL PUMP INLET STRAINER PLUGGED |
| RESTRICTED FUEL SUPPLY LINE |
| FUEL PUMP MODULE |
| FUEL PRESSURE LEAK DOWN |
| FUEL INJECTOR |
| ENGINE MECHANICAL PROBLEM |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. CYLINDER MIS-FIRE CONDITION ACTIVE

Engine running.

Observe the WHICH CYLINDER IS MISFIRING screen for at least one minute with the scan tool.

**Is there a misfire present?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. VISUAL INSPECTION

**NOTE: Anything that affects the speed of the crankshaft can cause a misfire DTC.**

**NOTE: When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.**

- Visually inspect the engine for any of the following conditions.
- Worn serpentine belt
- Binding Engine-Driven accessories: A/C Compressor, P/S Pump, Water pump.
- Misalignment Water pump, P/S Pump and A/C Compressor pulleys
- Corroded PCM power and ground circuits.
- Improper CKP, CMP, MAP, and TP Sensor mounting
- Poor connector/terminal to component connection. i.e., CKP sensor, Fuel Injector, Ign coil, etc.
- Vacuum leaks
- Restricted Air Induction system or Exhaust system.

- Internal engine component failures.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. (A142) AND (F142) ASD RELAY OUTPUT CIRCUITS

Turn the ignition off.

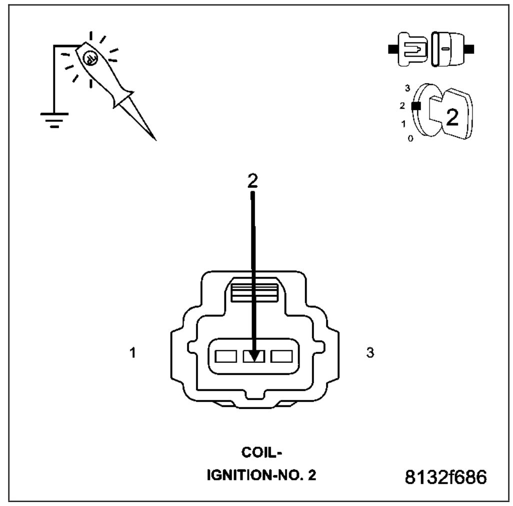
Disconnect the Ignition Coil No.2 harness connector.

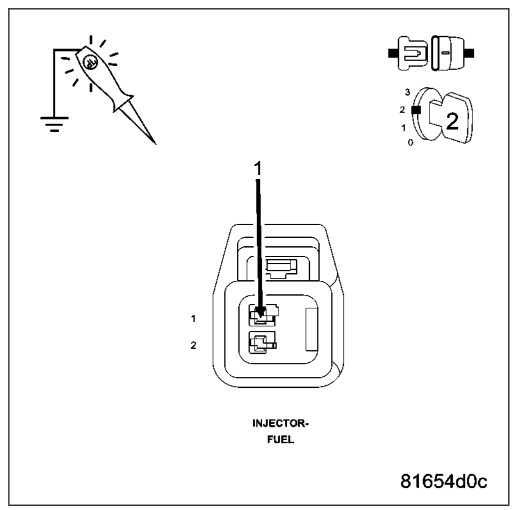
Disconnect the Fuel Injector No.2 harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (A142) ASD Relay Output circuit in the Ignition Coil harness connector and (F142) ASD Relay Output circiut in the Fuel Injector harness connector, while the relay is actuating.





**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the excessive resistance or short to ground in the (A142) or (F142) ASD Relay Output circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. IGNITION SYSTEM OPERATION

Turn the ignition off.

Connect the Ignition Coil No.2 harness connector.

Remove the Ignition Coil.

Leave the Fuel Injector harness connector of the cylinder being tested disconnected.

Install a spark tester on the Ignition Coil.

While cranking the engine observe the spark coming from the spark tester.

**NOTE: A crisp blue spark that is able to jump the gap of the spark tester should be generated.**

**Is good spark present?**

**Yes** >> Go To 5

**No** >> Go To 14

**NOTE: Connect the Fuel Injector harness connector before continuing.**

## 5. SPARK PLUG

Turn the ignition off.

Remove the Spark Plug.

Inspect the Spark Plug for the following conditions.

- Cracks
- Carbon Tracking
- Foreign Material
- Gap size out of specifications
- Loose or broke electrode

**NOTE: Lightly tap the bottom of the spark plug on a solid surface. The electrode in the spark plug should not move.**

**Were any of the above conditions present?**

**Yes** >> Replace the Spark Plug.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. FUEL PRESSURE CHECK

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Install a fuel pressure gauge to the fuel rail.

Start the engine and observe the fuel pressure reading.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Choose a conclusion that best matches your fuel pressure reading.**

**Within Specification**
Go To 7

**Below Specification**
Go To 12

**Above Specification**
Replace the fuel filter/pressure regulator.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. FUEL PRESSURE LEAK DOWN

**NOTE: Before continuing visually and physically inspect the fuel delivery system for external leaks or damage. Repair / replace as necessary.**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Install special tool #6539 (5/16″) or #6631 (3/8″) fuel line adapter.

Install the fuel pressure gauge.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**NOTE: Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and the engine.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**NOTE: The pressure should not fall below 241 KPa (35 psi)**

**Does the gauge fall below the listed specification?**

**Yes** >> Replace the leaking Fuel Injector(s).
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

## 8. FUEL INJECTOR OPERATION

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

**CAUTION: After each Fuel Injector actuation, start the engine to clean the cylinder of fuel. Failure to do so could cause engine damage.**

Remove special tool #C4390.

Start the engine and allow the fuel pressure to reach maximum pressure.

Ignition on, engine not running.

Using scan tool, actuate the No.2 Fuel Injector.

Monitor the fuel pressure gauge.

**Does the fuel pressure gauge indicate a drop in fuel pressure?**

**Yes** >> Go To 9

**No** >> Go To 10

**NOTE: Turn the ignition off, remove the Fuel Pressure gauge, and connect the fuel lines before continuing.**

## 9. ENGINE MECHANICAL PROBLEM

Check for any of the following conditions/mechanical problems.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

CAM LOBES - must not be worn excessively

CYLINDER LEAKAGE TEST - must be within specifications

VALVE SPRINGS - cannot be weak or broken

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 16

## 10. FUEL INJECTOR

Turn the ignition off.

Disconnect the No.2 Fuel Injector harness connector.

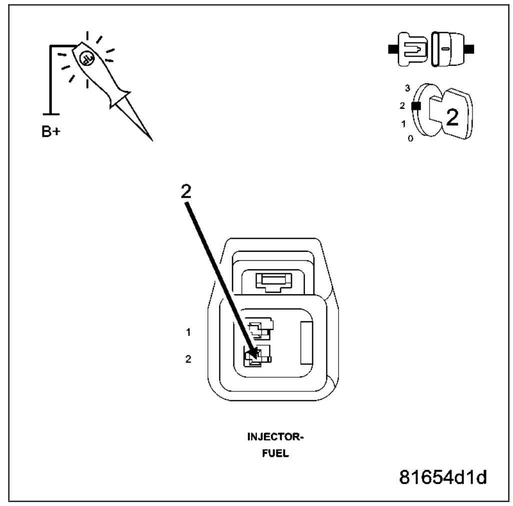
Ignition on, engine not running.

**NOTE: When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.**

With the scan tool, erase DTCs.

Using a 12-volt test light connected to 12-volts, probe the (K12) Injector Control No.2 circuit.

With the scan tool, actuate the Fuel Injector.



**Does the test light blink/flicker?**

**Yes** >> Replace the Fuel Injector.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 11

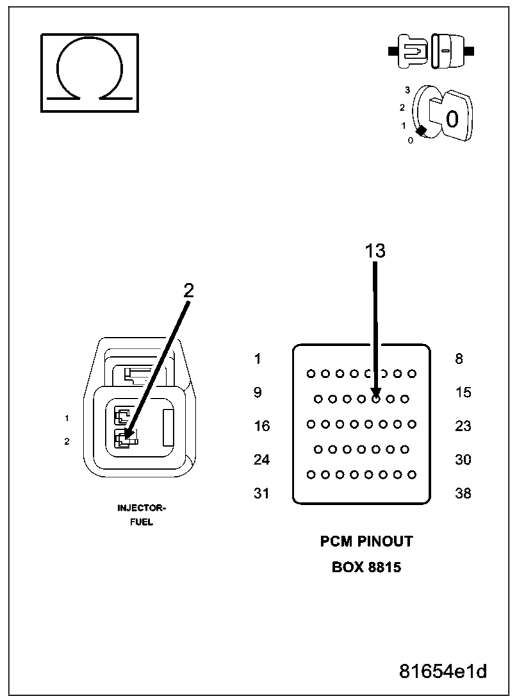
## 11. (K12) INJECTOR CONTROL NO.2 CIRCUIT

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Check the (K12) Injector Control No.2 circuit for an open, short to ground, and short to voltage.



**Was a problem found with the (K12) Injector Control No.2 circuit?**

**Yes** >> Repair the excessive resistance or short in the (K12) Injector Control No.2 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 16

## 12. FUEL SUPPLY LINE RESTRICTED

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special tool #6539 (5/16″) #6631(3/8″) fuel line adapter and the fuel pressure gauge between the fuel supply line and the fuel pump module.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Is the fuel pressure within specification?**

**Yes** >> Repair or replace fuel supply line as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 13

## 13. FUEL PUMP INLET STRAINER

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

**Yes** >> Replace the Fuel Pump Inlet Strainer.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Before continuing, check the Fuel Pump Module harness connector terminals for corrosion, damage, or terminal push out. Ensure the ground circuit is operating properly. Repair as necessary. Replace the Fuel Pump Module.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

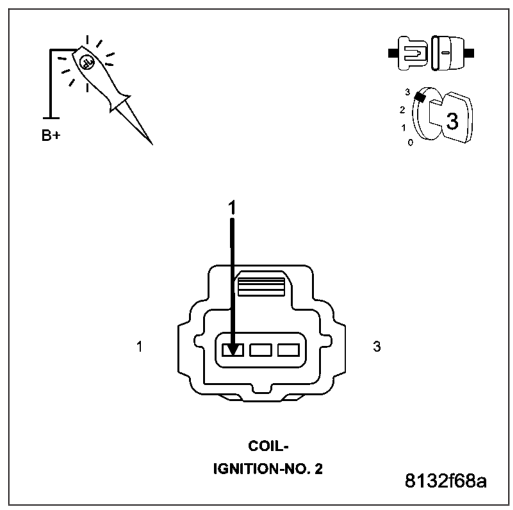
## 14. IGNITION COIL

Disconnect the Ignition Coil harness connector.

Remove the Fuel Pump Relay.

Using a 12-volt test light connected to 12-volts, probe the (K85) Coil Control No.2 circuit.

Crank the engine for 5 second while observing the test light.



**NOTE: The primary resistance of the 3.7L Ignition coil is 0.6 to 0.9 of an ohm at 77°F (25°C).**

**Does the test light brightly blink/flicker?**

**Yes** >> Replace the Ignition Coil.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 15

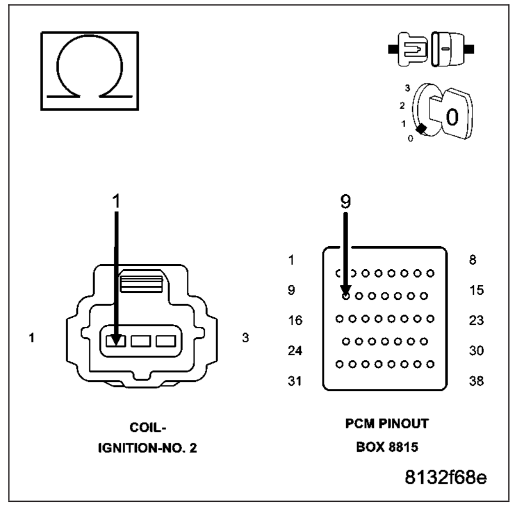
## 15. (K85) COIL CONTROL NO.2 CIRCUIT

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Check the (K85) Coil Control No.2 circuit for an open, short to ground, and short to voltage.



**Was a problem found with the (K85) Coil Control No.2 circuit?**

**Yes** >> Repair the (K85) Coil Control No.2 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 16

## 16. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

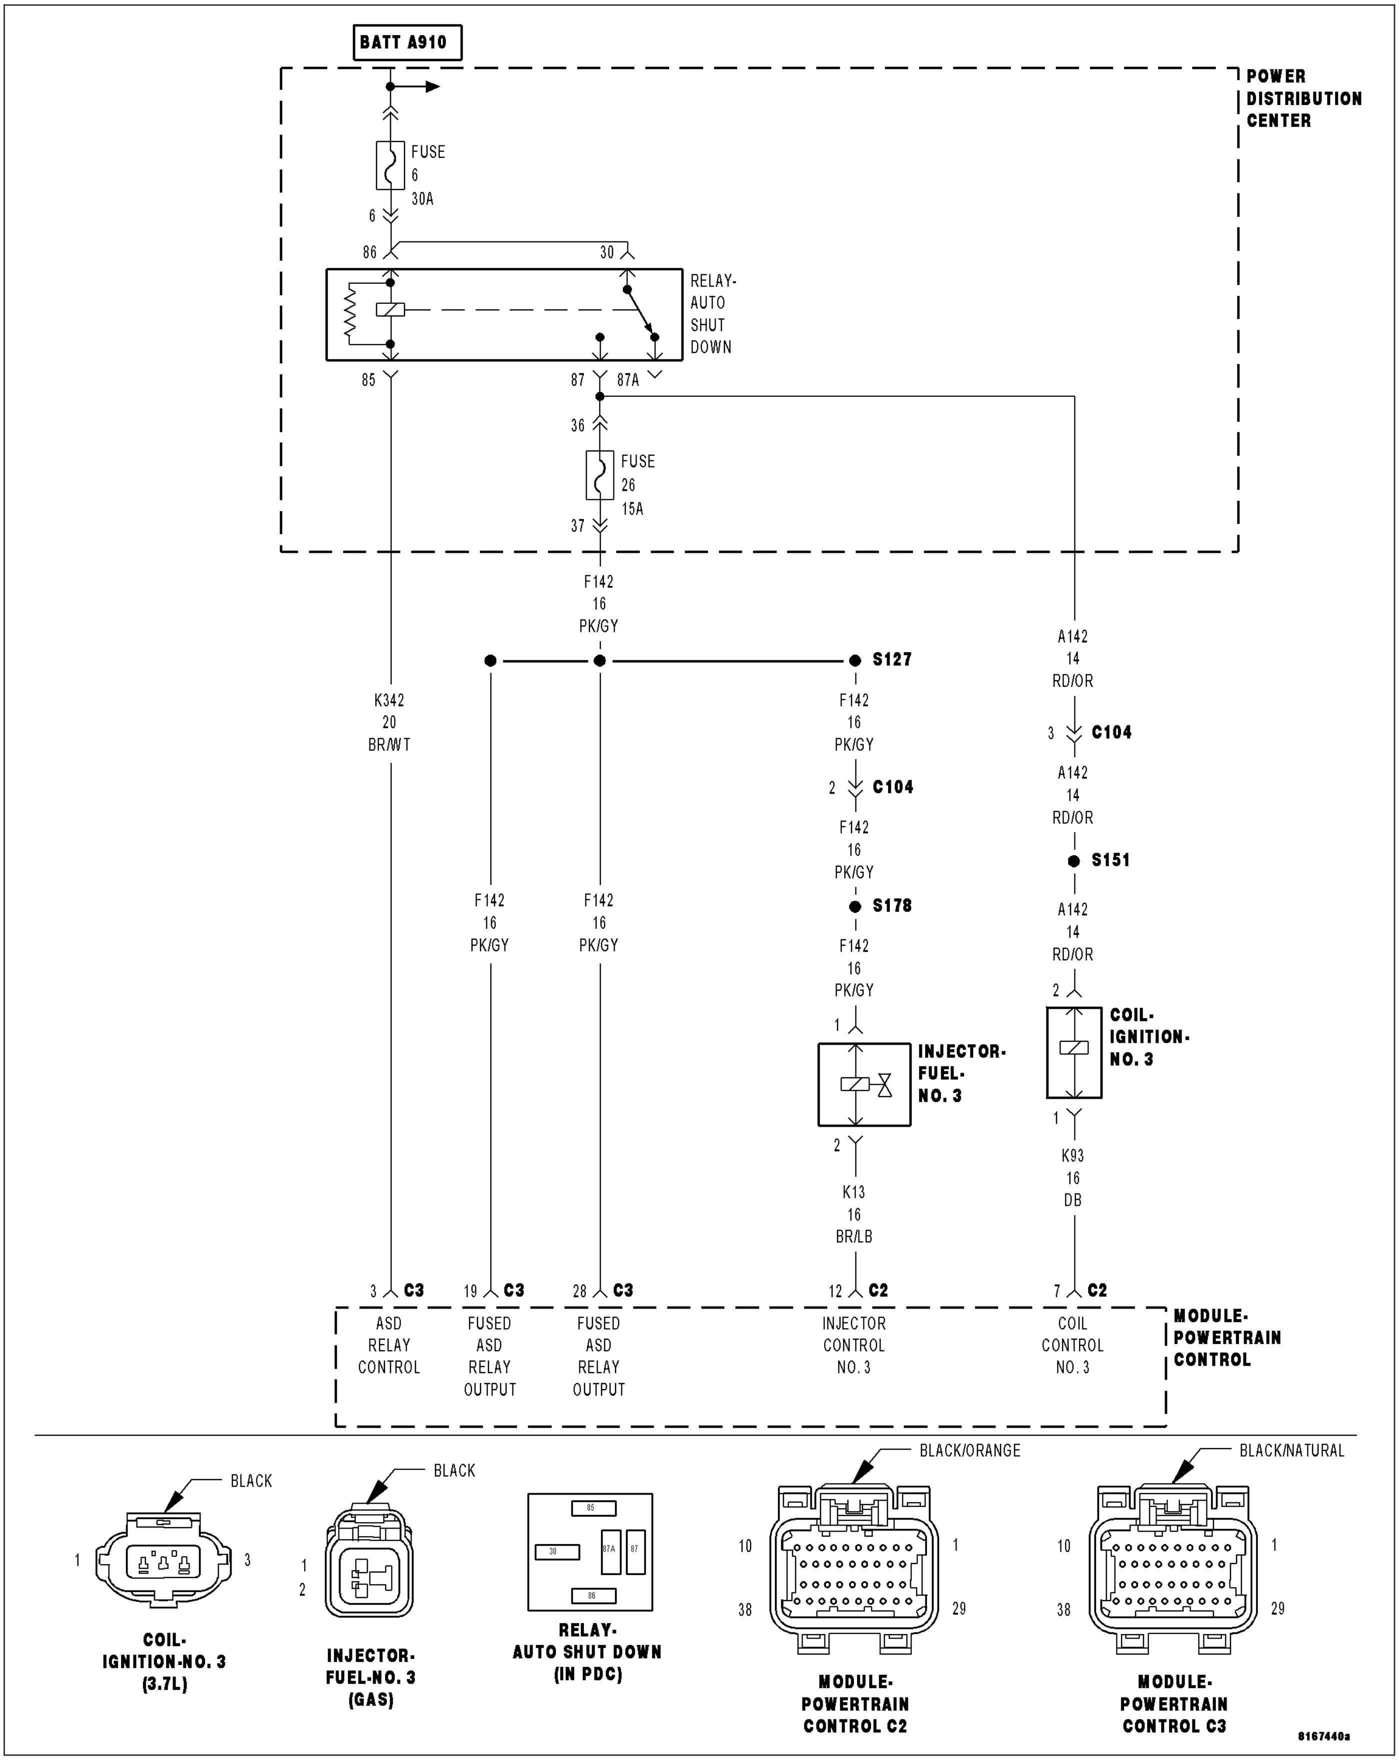
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0303-CYLINDER 3 MISFIRE



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Any time the engine is running, and the adaptive numerator has been successfully updated.
- **Set Condition:**
  The threshold to set the fault is application specific; it is tied to the level of misfire that will cause emissions to increase to 1.5 times the standard or in some cases 1%. It is always a two trip fault above the calibrated RPM. It takes 1 soft fail to set a malfunction and two trips to set the MIL. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (A142) AND (F142) ASD RELAY OUTPUT CIRCUIT |
| (K13) INJECTOR CONTROL NO.3 CIRCUIT |
| (K93) COIL CONTROL NO.3 CIRCUIT |
| IGNITION WIRE |
| SPARK PLUG |
| IGNITION COIL |
| FUEL PUMP INLET STRAINER PLUGGED |
| RESTRICTED FUEL SUPPLY LINE |
| FUEL PUMP MODULE |
| FUEL PRESSURE LEAK DOWN |
| FUEL INJECTOR |
| ENGINE MECHANICAL PROBLEM |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. CYLINDER MIS-FIRE CONDITION ACTIVE

Engine running.

Observe the WHICH CYLINDER IS MISFIRING screen for at least one minute with the scan tool.

**Is there a misfire present at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. VISUAL INSPECTION

**NOTE: Anything that affects the speed of the crankshaft can cause a misfire DTC.**

**NOTE: When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.**

- Visually inspect the engine for any of the following conditions.
- Worn serpentine belt
- Binding Engine-Driven accessories: A/C Compressor, P/S Pump, Water pump.
- Misalignment Water pump, P/S Pump and A/C Compressor pulleys
- Corroded PCM power and ground circuits.
- Improper CKP, CMP, MAP, and TP Sensor mounting
- Poor connector/terminal to component connection. i.e., CKP sensor, Fuel Injector, Ign coil, etc.
- Vacuum leaks
- Restricted Air Induction system or Exhaust system.

- Internal engine component failures.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. (A142) AND (F142) ASD RELAY OUTPUT CIRCUITS

Turn the ignition off.

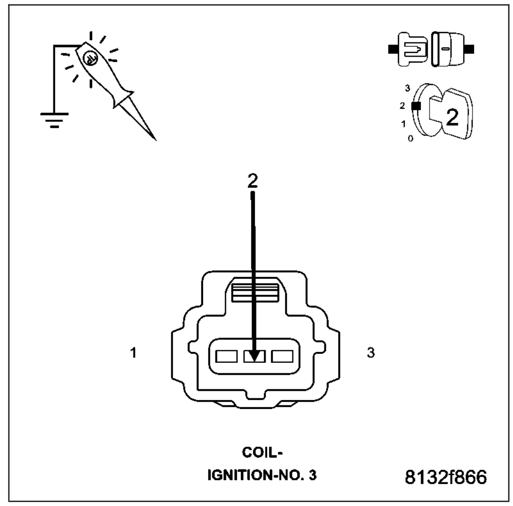
Disconnect the No.3 Ignition Coil harness connector.

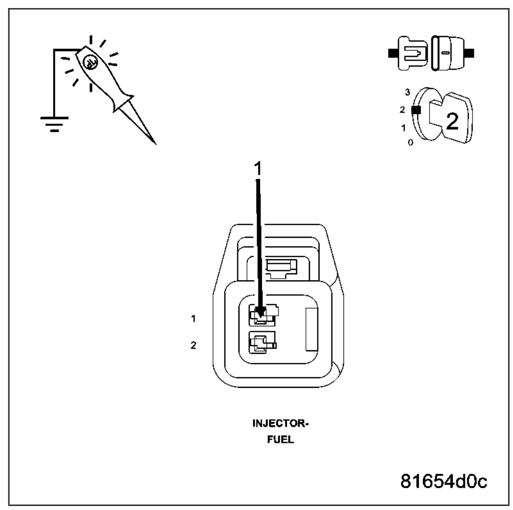
Disconnect the No.3 Fuel Injector harness connector.

Ignition on, engine not running.

With a scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (A142) ASD Relay Output circuit in the Ignition Coil harness connector and (F142) ASD Relay Output circuit in the Fuel Injector harness connector, while the relay is actuating.





**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the excessive resistance or short to ground in the (A142) or (F142) ASD Relay Output circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. IGNITION SYSTEM OPERATION

Turn the ignition off.

Connect the Ignition Coil No.3 harness connector.

Remove the Ignition Coil.

Leave the Fuel Injector harness connector of the cylinder being tested disconnected.

Install a spark tester on the Ignition Coil.

While cranking the engine observe the spark coming from the spark tester.

**NOTE: A crisp blue spark that is able to jump the gap of the spark tester should be generated.**

**Is good spark present?**

**Yes** >> Go To 5

**No** >> Go To 14

**NOTE: Connect the Fuel Injector harness connector before continuing.**

## 5. SPARK PLUG

Turn the ignition off.

Remove the Spark Plug.

Inspect the Spark Plug for the following conditions.

- Cracks
- Carbon Tracking
- Foreign Material
- Gap size out of specifications
- Loose or broke electrode

**NOTE: Lightly tap the bottom of the spark plug on a solid surface. The electrode in the spark plug should not move.**

**Were any of the above conditions present?**

**Yes** >> Replace the Spark Plug.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. FUEL PRESSURE CHECK

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Install a fuel pressure gauge to the fuel rail.

Start the engine and observe the fuel pressure reading.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Choose a conclusion that best matches your fuel pressure reading.**

**Within Specification**

Go To 7

**Below Specification**

Go To 12

**Above Specification**

Replace the fuel filter/pressure regulator.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. FUEL PRESSURE LEAK DOWN

**NOTE: Before continuing visually and physically inspect the fuel delivery system for external leaks or damage. Repair / replace as necessary.**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death**

Install special tool #6539 (5/16″) or #6631 (3/8″) fuel line adapter.

Install the fuel pressure gauge.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**NOTE: Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and the engine.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**NOTE: The pressure should not fall below 241 KPa (35 psi).**

**Does the gauge fall below the listed specification?**

**Yes** >> Replace the leaking Fuel Injector(s).
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

## 8. FUEL INJECTOR OPERATION

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

**CAUTION: After each Fuel Injector actuation, start the engine to clean the cylinder of fuel. Failure to do so could cause engine damage.**

Remove special tool #C4390.

Start the engine and allow the fuel pressure to reach maximum pressure.

Ignition on, engine not running.

Using a scan tool, actuate the No.3 Fuel Injector.

Monitor the fuel pressure gauge.

**Does the fuel pressure gauge indicate a drop in fuel pressure?**

**Yes** >> Go To 9

**No** >> Go To 10

**NOTE: Turn the ignition off, remove the Fuel Pressure gauge, and connect the fuel lines before continuing.**

## 9. ENGINE MECHANICAL PROBLEM

Check for any of the following conditions/mechanical problems.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

CAM LOBES - must not be worn excessively

CYLINDER LEAKAGE TEST - must be within specifications

VALVE SPRINGS - cannot be weak or broken

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 16

## 10. FUEL INJECTOR

Turn the ignition off.

Disconnect the No.3 Fuel Injector harness connector.

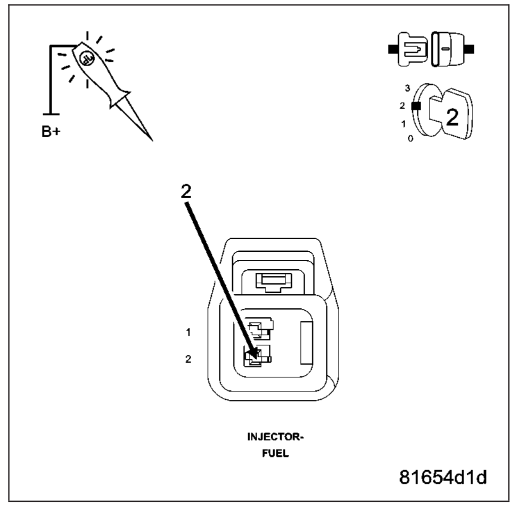
Ignition on, engine not running.

**NOTE: When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.**

With the scan tool, erase DTCs.

Using a 12-volt test light connected to 12-volts, probe the (K13) Injector Control No.3 circuit.

With the scan tool, actuate the Fuel Injector.



**Does the test light blink/flicker?**

**Yes** >> Replace the Fuel Injector.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 11

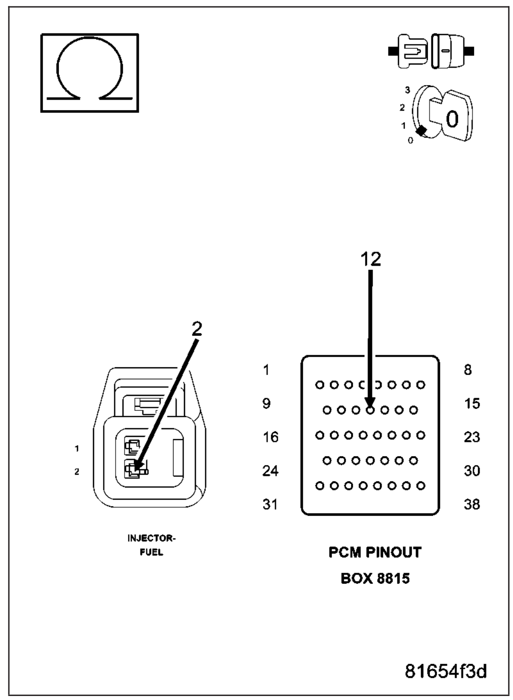
## 11. (K13) INJECTOR CONTROL NO.3 CIRCUIT

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Check the (K13) Injector Control No.3 circuit for an open, short to ground, and short to voltage.



**Was a problem found with the (K13) Injector Control No.3 circuit?**

**Yes** >> Repair the excessive resistance or short in the (K13) Injector Control No.3 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 16

## 12. FUEL SUPPLY LINE RESTRICTED

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special tool #6539 (5/16″) #6631(3/8″) fuel line adapter and the fuel pressure gauge between the fuel supply line and the fuel pump module.

Ignition on, engine not running.

With a scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Is the fuel pressure within specification?**

**Yes** >> Repair or replace fuel supply line as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 13

## 13. FUEL PUMP INLET STRAINER

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

**Yes** >> Replace the Fuel Pump Inlet Strainer.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Before continuing, check the Fuel Pump Module harness connector terminals for corrosion, damage, or terminal push out. Make sure the ground circuit is operating properly. Repair as necessary. Replace the Fuel Pump Module.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 14. IGNITION COIL

Disconnect the No.3 Ignition Coil harness connector.

Remove the Fuel Pump Relay.

Using a 12-volt test light connected to 12-volts, probe the (K93) Coil Control No.3 circuit.

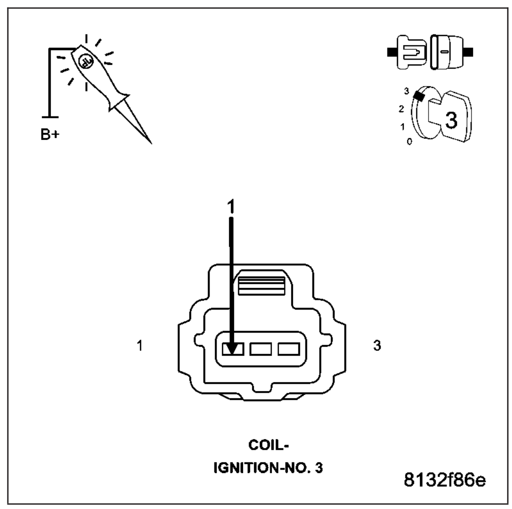
Crank the engine for 5 second while observing the test light.

**NOTE: The primary resistance of the 3.7L Ignition coil is 0.6 to 0.9 of an ohm at 77°F (25°C).**

**Does the test light brightly blink/flicker?**

**Yes** >> Replace the Ignition Coil.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 15



## 15. (K93) COIL CONTROL NO.3 CIRCUIT

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Check the (K93) Coil Control No.3 circuit for an open, short to ground, and short to voltage.

**Was a problem found with the (K93) Coil Control No.3 circuit?**

**Yes** >> Repair the (K93) Coil Control No.3 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 16

## 16. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

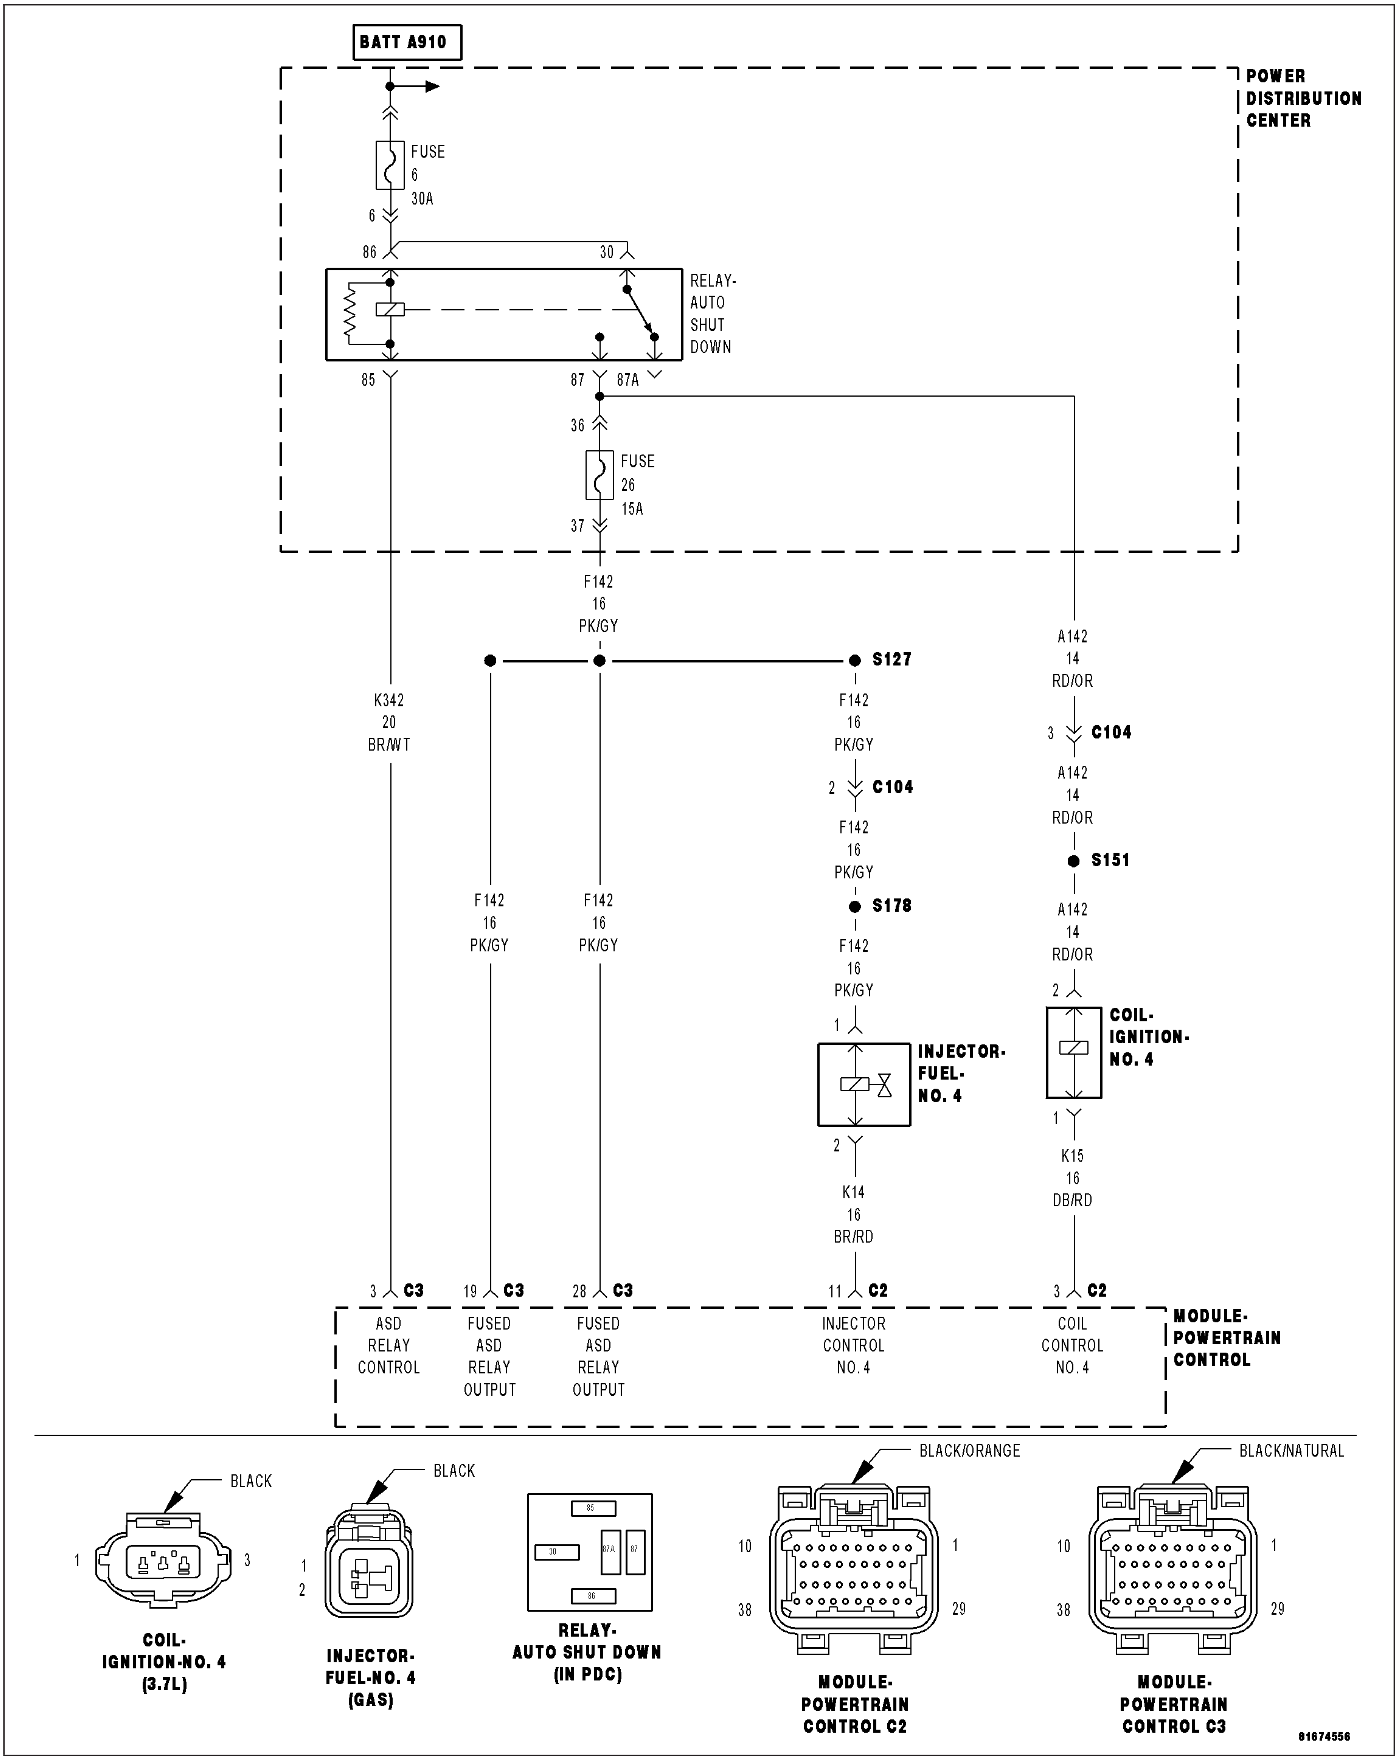
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

# P0304-CYLINDER 4 MISFIRE



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Any time the engine is running, and the adaptive numerator has been successfully updated.
- **Set Condition:**
  The threshold to set the fault is application specific; it is tied to the level of misfire that will cause emissions to increase to 1.5 times the standard or in some cases 1%. It is always a two trip fault above the calibrated RPM. It takes 1 soft fail to set a malfunction and two trips to set the MIL. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (A142) AND (F142) ASD RELAY OUTPUT CIRCUIT |
| (K14) INJECTOR CONTROL NO.4 CIRCUIT |
| (K15) COIL CONTROL NO.4 CIRCUIT |
| IGNITION WIRE |
| SPARK PLUG |
| IGNITION COIL |
| FUEL PUMP INLET STRAINER PLUGGED |
| RESTRICTED FUEL SUPPLY LINE |
| FUEL PUMP MODULE |
| FUEL PRESSURE LEAK DOWN |
| FUEL INJECTOR |
| ENGINE MECHANICAL PROBLEM |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. CYLINDER MIS-FIRE CONDITION ACTIVE

Engine running.

Observe the WHICH CYLINDER IS MISFIRING screen for at least one minute with the scan tool.

**Is there a misfire present at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. VISUAL INSPECTION

**NOTE: Anything that affects the speed of the crankshaft can cause a misfire DTC.**

**NOTE: When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.**

- Visually inspect the engine for any of the following conditions.
- Worn serpentine belt
- Binding Engine-Driven accessories: A/C Compressor, P/S Pump, Water pump.
- Misalignment Water pump, P/S Pump and A/C Compressor pulleys
- Corroded PCM power and ground circuits.
- Improper CKP, CMP, MAP, and TP Sensor mounting
- Poor connector/terminal to component connection. i.e., CKP sensor, Fuel Injector, Ign coil, etc.
- Vacuum leaks
- Restricted Air Induction system or Exhaust system.

- Internal engine component failures.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. (A142) AND (F142) ASD RELAY OUTPUT CIRCUITS

Turn the ignition off.

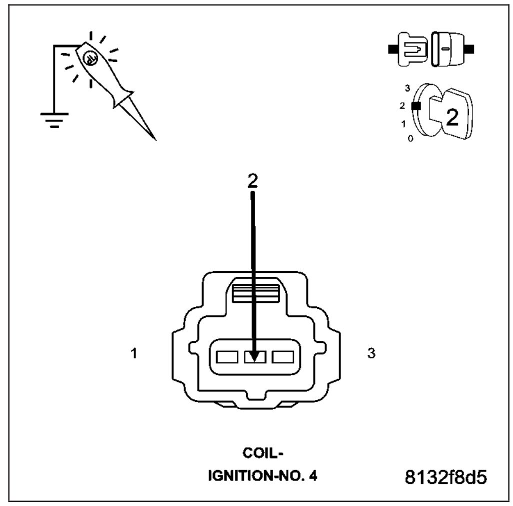
Disconnect the No.4 Ignition Coil harness connector.

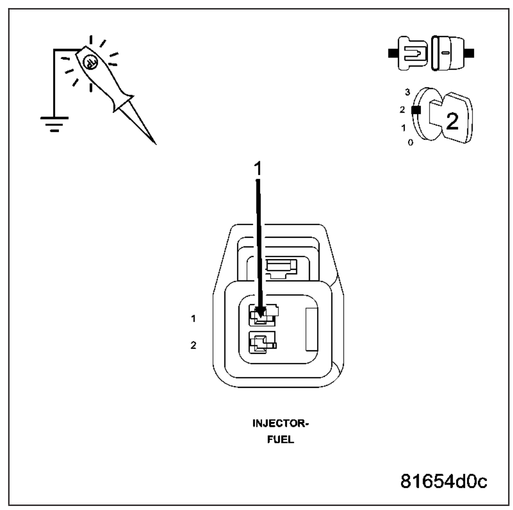
Disconnect the No.4 Fuel Injector harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (A142) ASD Relay Output circuit in the Ignition Coil harness connector and the (F142) ASD Relay Output circuit in the Fuel Injector harness connector, while the relay is actuating.





**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the excessive resistance or short to ground in the (A142) or (F142) ASD Relay Output circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. IGNITION SYSTEM OPERATION

Turn the ignition off.

Connect the No.4 Ignition Coil harness connector.

Remove the No.4 Ignition Coil.

Leave the Fuel Injector harness connector of the cylinder being tested disconnected.

Install a spark tester on the Ignition Coil.

While cranking the engine observe the spark coming from the spark tester.

**NOTE: A crisp blue spark that is able to jump the gap of the spark tester should be generated.**

**Is good spark present?**

**Yes** >> Go To 5

**No** >> Go To 14

**NOTE: Connect the Fuel Injector harness connector before continuing.**

## 5. SPARK PLUG

Turn the ignition off.

Remove the Spark Plug.

Inspect the Spark Plug for the following conditions.

- Cracks
- Carbon Tracking
- Foreign Material
- Gap size out of specifications
- Loose or broke electrode

**NOTE: Lightly tap the bottom of the spark plug on a solid surface. The electrode in the spark plug should not move.**

**Were any of the above conditions present?**

**Yes** >> Replace the Spark Plug.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. FUEL PRESSURE CHECK

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Install a fuel pressure gauge to the fuel rail.

Start the engine and observe the fuel pressure reading.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Choose a conclusion that best matches your fuel pressure reading.**

**Within Specification**
Go To 7

**Below Specification**
Go To 12

**Above Specification**
Replace the fuel filter/pressure regulator.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. FUEL PRESSURE LEAK DOWN

**NOTE: Before continuing visually and physically inspect the fuel delivery system for external leaks or damage. Repair / replace as necessary.**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death**

Install special tool #6539 (5/16″) or #6631 (3/8″) fuel line adapter.

Install the fuel pressure gauge.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**NOTE: Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and the engine.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**NOTE: The pressure should not fall below 241 KPa (35 psi)**

**Does the gauge fall below the listed specification?**

**Yes** >> Replace the leaking Fuel Injector(s).
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

## 8. FUEL INJECTOR OPERATION

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

**CAUTION: After each Fuel Injector actuation, start the engine to clean the cylinder of fuel. Failure to do so could cause engine damage.**

Remove special tool #C4390.

Start the engine and allow the fuel pressure to reach maximum pressure.

Ignition on, engine not running.

Using the scan tool, actuate the No.4 Fuel Injector.

Monitor the fuel pressure gauge.

**Does the fuel pressure gauge indicate a drop in fuel pressure?**

**Yes** >> Go To 9

**No** >> Go To 10

**NOTE: Turn the ignition off, remove the Fuel Pressure gauge, and connect the fuel lines before continuing.**

## 9. ENGINE MECHANICAL PROBLEM

Check for any of the following conditions/mechanical problems.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

CAM LOBES - must not be worn excessively

CYLINDER LEAKAGE TEST - must be within specifications

VALVE SPRINGS - cannot be weak or broken

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 16

## 10. FUEL INJECTOR

Turn the ignition off.

Disconnect the No.4 Fuel Injector harness connector.

Ignition on, engine not running.

**NOTE: When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.**

With the scan tool, erase DTCs.

Using a 12-volt test light connected to 12-volts, probe the (K14) Injector Control No.4 circuit.

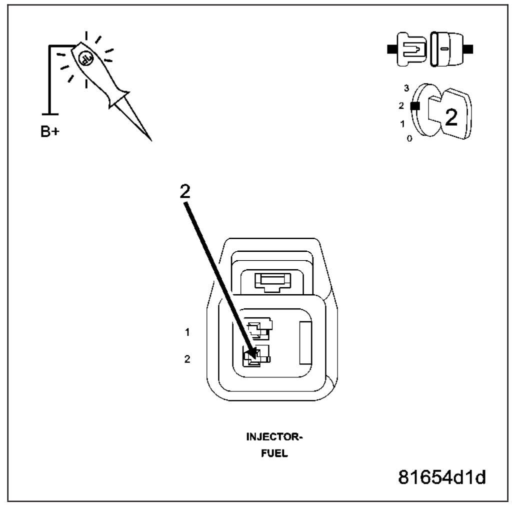
With the scan tool, actuate the Fuel Injector.

**Does the test light blink/flicker?**

**Yes** >> Replace the Fuel Injector.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 11



## 11. (K14) INJECTOR CONTROL NO.4 CIRCUIT

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

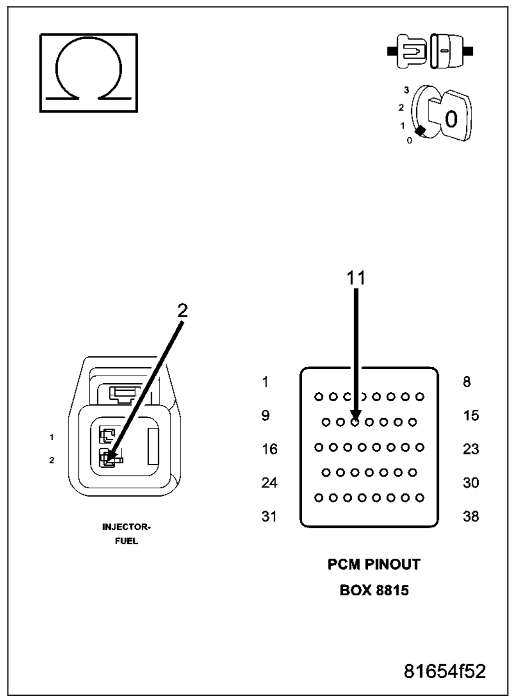
Check the (K14) Injector Control No.4 circuit for an open, short to ground, and short to voltage.

**Was a problem found with the (K14) Injector Control No.4 circuit?**

**Yes** >> Repair the excessive resistance or short in the (K14) Injector Control No.4 circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 16



## 12. FUEL SUPPLY LINE RESTRICTED

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special tool #6539 (5/16″) #6631(3/8″) fuel line adapter and the fuel pressure gauge between the fuel supply line and the fuel pump module.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Is the fuel pressure within specification?**

**Yes** >> Repair or replace fuel supply line as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 13

## 13. FUEL PUMP INLET STRAINER

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

**Yes** >> Replace the Fuel Pump Inlet Strainer.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Before continuing, check the Fuel Pump Module harness connector terminals for corrosion, damage, or terminal push out. Make sure the ground circuit is operating properly. Repair as necessary. Replace the Fuel Pump Module.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 14. IGNITION COIL

Disconnect the No.4 Ignition Coil harness connector.

Remove the Fuel Pump Relay.

Using a 12-volt test light connected to 12-volts, probe the (K15) Coil Control No.4 circuit.

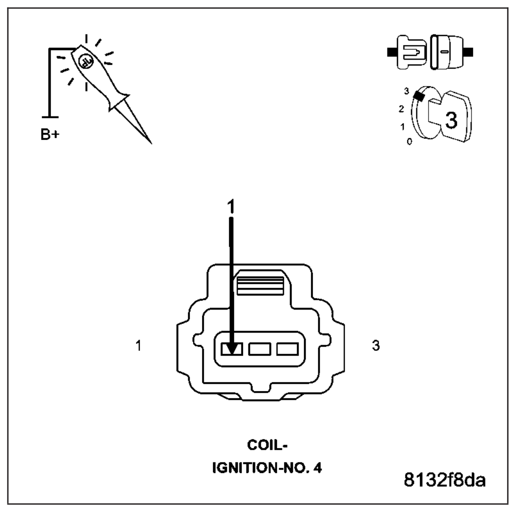
Crank the engine for 5 second while observing the test light.

**NOTE: The primary resistance of the 3.7L Ignition coil is 0.6 to 0.9 of an ohm at 77°F (25°C).**

**Does the test light brightly blink/flicker?**

**Yes** >> Replace the Ignition Coil.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 15



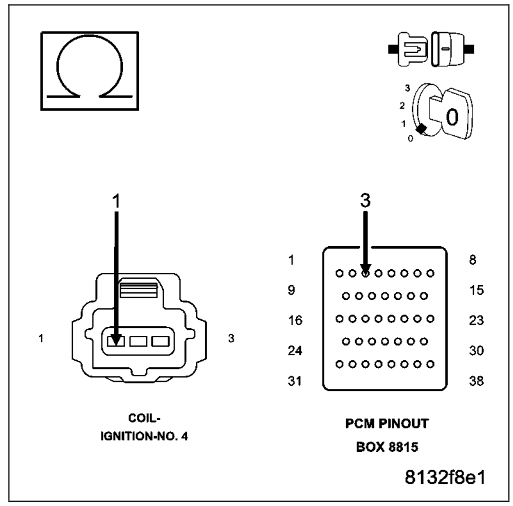
## 15. (K15) COIL CONTROL NO.4 CIRCUIT

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Check the (K15) Coil Control No.4 circuit for an open, short to ground, and short to voltage.



**Was a problem found with the (K15) Coil Control No.4 circuit?**

**Yes** >> Repair the (K15) Coil Control No.4 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 16

## 16. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

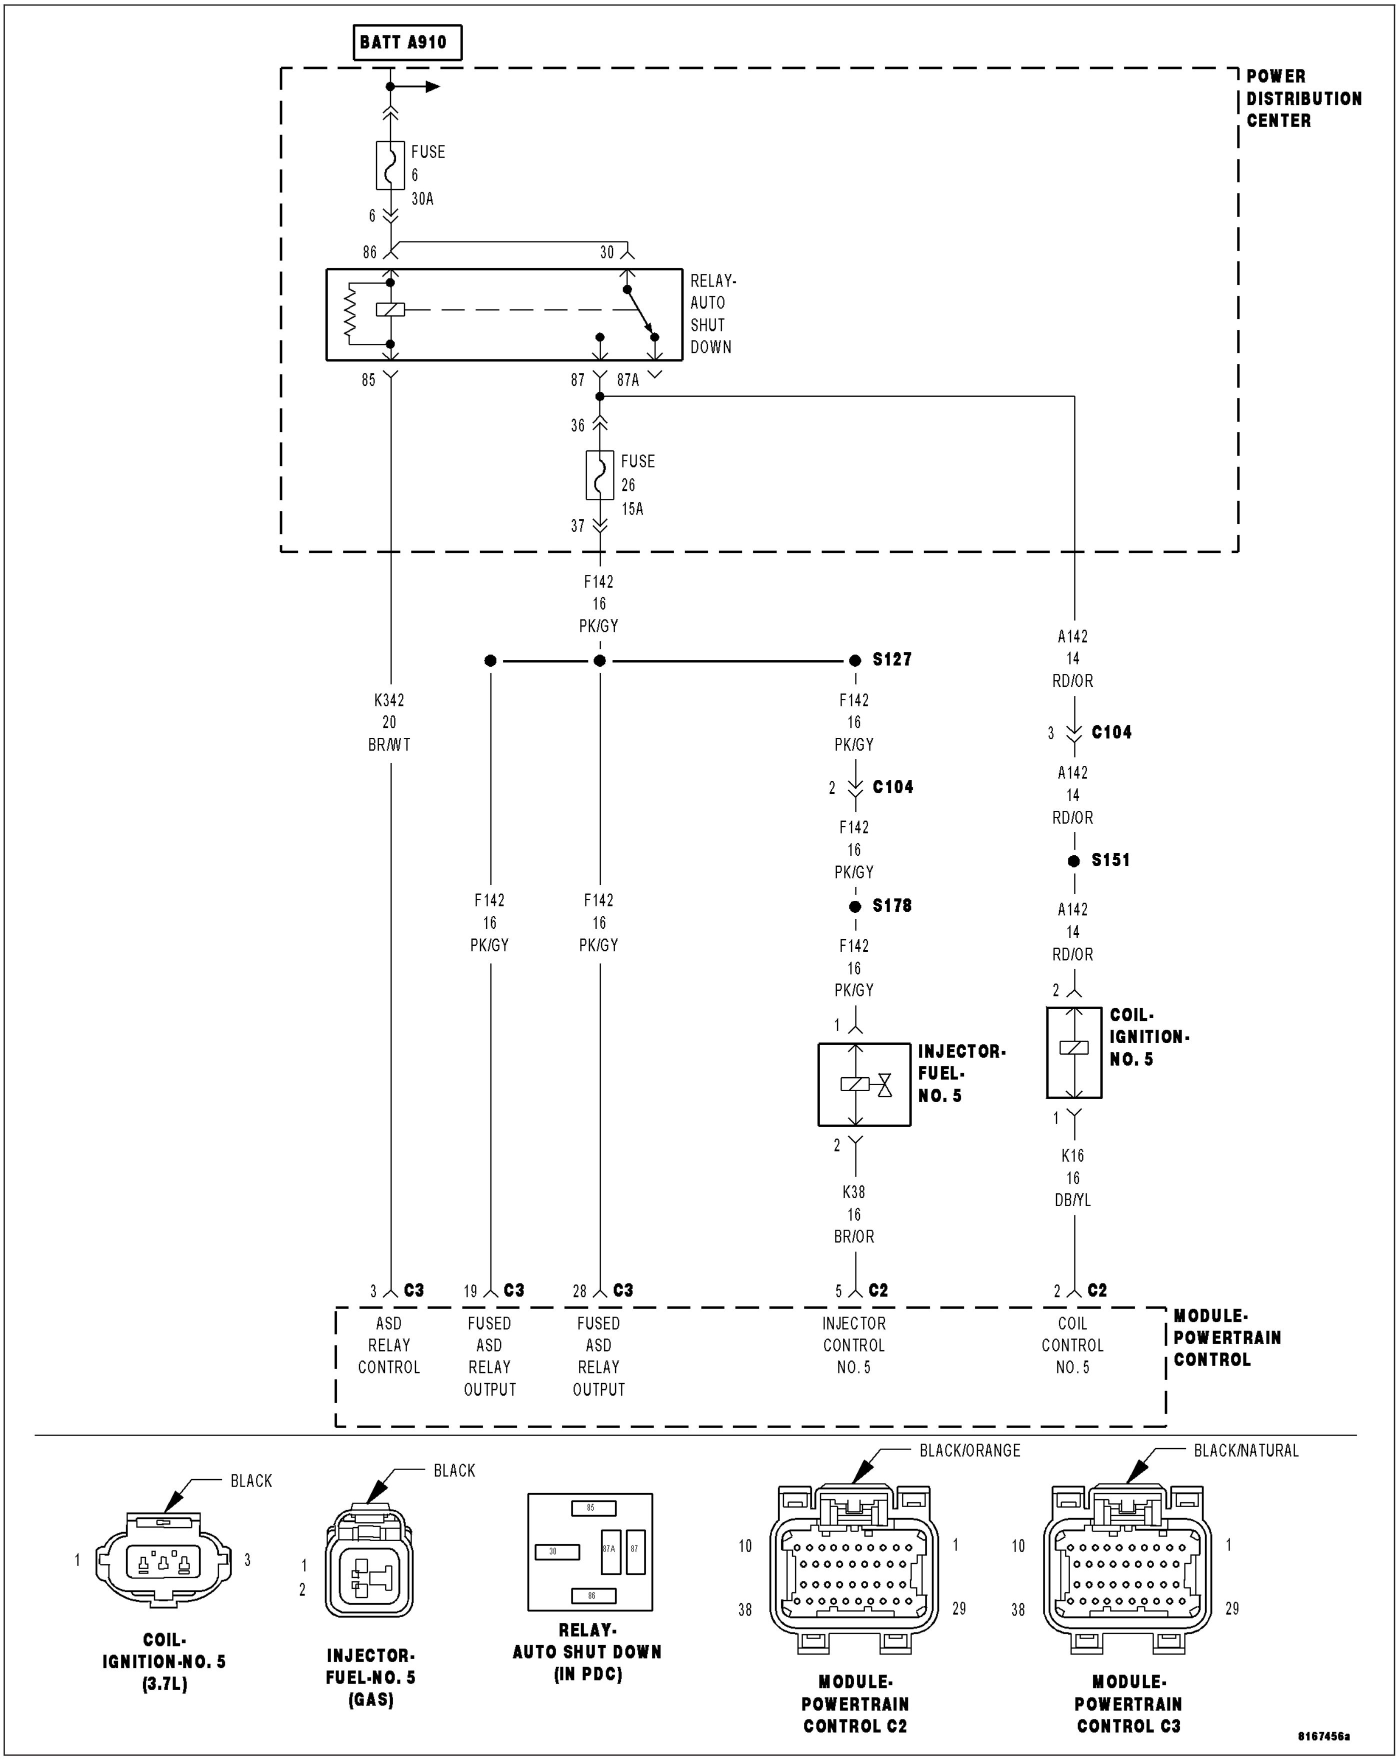
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0305-CYLINDER 5 MISFIRE



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Any time the engine is running, and the adaptive numerator has been successfully updated.
- **Set Condition:**
  The threshold to set the fault is application specific; it is tied to the level of misfire that will cause emissions to increase to 1.5 times the standard or in some cases 1%. It is always a two trip fault above the calibrated RPM. It takes 1 soft fail to set a malfunction and two trips to set the MIL. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (A142) AND (F142) ASD RELAY OUTPUT CIRCUIT |
| (K38) INJECTOR CONTROL NO.5 CIRCUIT |
| (K16) COIL CONTROL NO.5 CIRCUIT |
| IGNITION WIRE |
| SPARK PLUG |
| IGNITION COIL |
| FUEL PUMP INLET STRAINER PLUGGED |
| RESTRICTED FUEL SUPPLY LINE |
| FUEL PUMP MODULE |
| FUEL PRESSURE LEAK DOWN |
| FUEL INJECTOR |
| ENGINE MECHANICAL PROBLEM |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. CYLINDER MIS-FIRE CONDITION ACTIVE

Engine running.

Observe the WHICH CYLINDER IS MISFIRING screen for at least one minute with a scan tool.

**Is there a misfire present at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. VISUAL INSPECTION

**NOTE: Anything that affects the speed of the crankshaft can cause a misfire DTC.**

**NOTE: When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.**

- Visually inspect the engine for any of the following conditions.
- Worn serpentine belt
- Binding Engine-Driven accessories: A/C Compressor, P/S Pump, Water pump.
- Misalignment Water pump, P/S Pump and A/C Compressor pulleys
- Corroded PCM power and ground circuits.
- Improper CKP, CMP, MAP, and TP Sensor mounting
- Poor connector/terminal to component connection. i.e., CKP sensor, Fuel Injector, Ign coil, etc.
- Vacuum leaks
- Restricted Air Induction system or Exhaust system.

- Internal engine component failures.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. (A142) AND (F142) ASD RELAY OUTPUT CIRCUITS

Turn the ignition off.

Disconnect the No.5 Ignition Coil harness connector.

Disconnect the No.5 Fuel Injector harness connector.

Ignition on, engine not running.

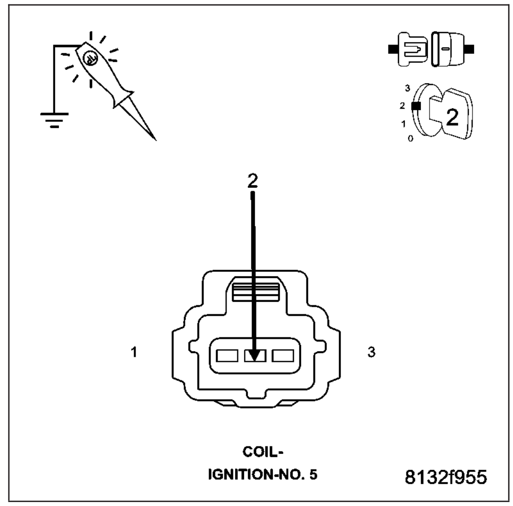
With the scan tool, actuate the ASD Relay.

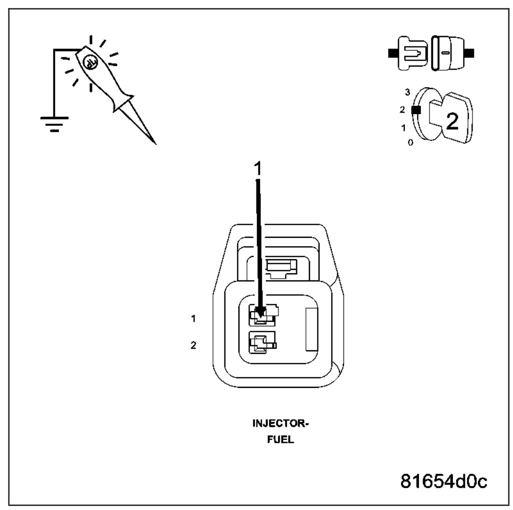
Using a 12-volt test light connected to ground, probe the (A142) ASD Relay Output circuit in the Ignition Coil harness connector and the (F142) ASD Relay Output circuit in the Fuel Injector harness connector, while the relay is actuating.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the excessive resistance or short to ground in the (A142) or (F142) ASD Relay Output circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)





## 4. IGNITION SYSTEM OPERATION

Turn the ignition off.

Connect the Ignition Coil No.5 harness connector.

Remove the Ignition Coil.

Leave the Fuel Injector harness connector of the cylinder being tested disconnected.

Install a spark tester on the Ignition Coil.

While cranking the engine observe the spark coming from the spark tester.

**NOTE: A crisp blue spark that is able to jump the gap of the spark tester should be generated.**

**Is good spark present?**

**Yes** >> Go To 5

**No** >> Go To 14

**NOTE: Connect the Fuel Injector harness connector before continuing.**

## 5. SPARK PLUG

Turn the ignition off.

Remove the Spark Plug.

Inspect the Spark Plug for the following conditions.

- Cracks
- Carbon Tracking
- Foreign Material
- Gap size out of specifications
- Loose or broke electrode

**NOTE: Lightly tap the bottom of the spark plug on a solid surface. The electrode in the spark plug should not move.**

**Were any of the above conditions present?**

**Yes** >> Replace the Spark Plug.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. FUEL PRESSURE CHECK

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Install a fuel pressure gauge to the fuel rail.

Start the engine and observe the fuel pressure reading.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Choose a conclusion that best matches your fuel pressure reading.**

**Within Specification**
Go To 7

**Below Specification**
Go To 12

**Above Specification**
Replace the fuel filter/pressure regulator.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. FUEL PRESSURE LEAK DOWN

**NOTE: Before continuing visually and physically inspect the fuel delivery system for external leaks or damage. Repair / replace as necessary.**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Install special tool #6539 (5/16″) or #6631 (3/8″) fuel line adapter.

Install the fuel pressure gauge.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**NOTE: Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and the engine.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**NOTE: The pressure should not fall below 241 KPa (35 psi).**

**Does the gauge fall below the listed specification?**

**Yes** >> Replace the leaking Fuel Injector(s).
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

## 8. FUEL INJECTOR OPERATION

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

**CAUTION: After each Fuel Injector actuation, start the engine to clean the cylinder of fuel. Failure to do so could cause engine damage.**

Remove special tool #C4390.

Start the engine and allow the fuel pressure to reach maximum pressure.

Ignition on, engine not running.

Using the scan tool, actuate the No.5 Fuel Injector.

Monitor the fuel pressure gauge.

**Does the fuel pressure gauge indicate a drop in fuel pressure?**

**Yes** >> Go To 9

**No** >> Go To 10

**NOTE: Turn the ignition off, remove the Fuel Pressure gauge, and connect the fuel lines before continuing.**

## 9. ENGINE MECHANICAL PROBLEM

Check for any of the following conditions/mechanical problems.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

CAM LOBES - must not be worn excessively

CYLINDER LEAKAGE TEST - must be within specifications

VALVE SPRINGS - cannot be weak or broken

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 16

## 10. FUEL INJECTOR

Turn the ignition off.

Disconnect the No.5 Fuel Injector harness connector.

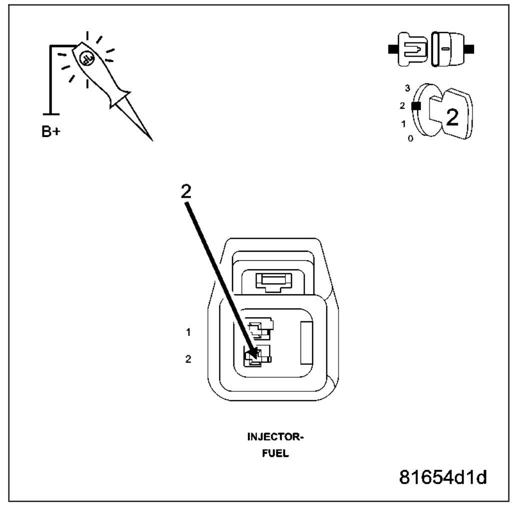
Ignition on, engine not running.

**NOTE: When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.**

With the scan tool, erase DTCs.

Using a 12-volt test light connected to 12-volts, probe the (K38) Injector Control No.5 circuit.

With the scan tool, actuate the Fuel Injector.



**Does the test light blink/flicker?**

**Yes** >> Replace the Fuel Injector.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 11

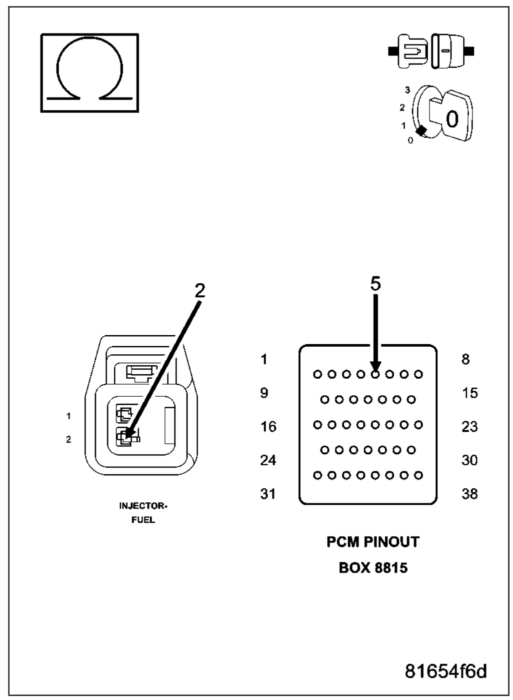
## 11. (K38) INJECTOR CONTROL NO.5 CIRCUIT

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Check the (K38) Injector Control No.5 circuit for an open, short to ground, and short to voltage.



**Was a problem found with the (K38) Injector Control No.5 circuit?**

**Yes** >> Repair the excessive resistance or short in the (K38) Injector Control No.5 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 16

## 12. FUEL SUPPLY LINE RESTRICTED

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special tool #6539 (5/16″) #6631(3/8″) fuel line adapter and the fuel pressure gauge between the fuel supply line and the fuel pump module.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Is the fuel pressure within specification?**

**Yes** >> Repair or replace fuel supply line as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 13

## 13. FUEL PUMP INLET STRAINER

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

**Yes** >> Replace the Fuel Pump Inlet Strainer.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Before continuing, check the Fuel Pump Module harness connector terminals for corrosion, damage, or terminal push out. Make sure the ground circuit is operating properly. Repair as necessary. Replace the Fuel Pump Module.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 14. IGNITION COIL

Disconnect the No.5 Ignition Coil harness connector.

Remove the Fuel Pump Relay.

Using a 12-volt test light connected to 12-volts, probe the (K16) Coil Control No.5 circuit.

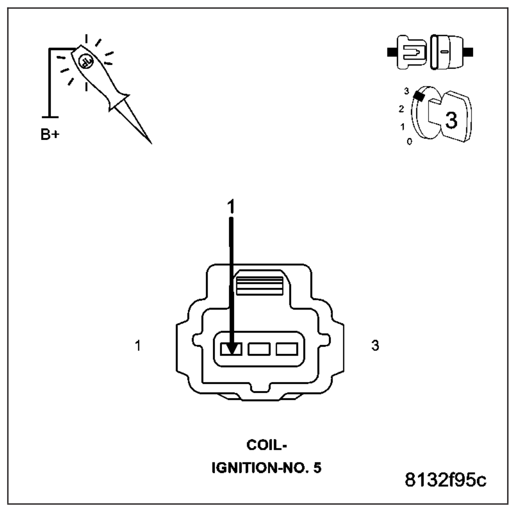
Crank the engine for 5 second while observing the test light.

**NOTE: The primary resistance of the 3.7L Ignition coil is 0.6 to 0.9 of an ohm at 77°F (25°C).**

**Does the test light brightly blink/flicker?**

**Yes** >> Replace the Ignition Coil.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 15



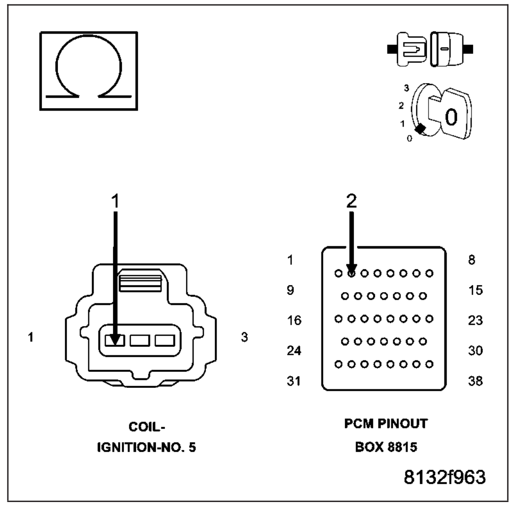
## 15. (K16) COIL CONTROL NO.5 CIRCUIT

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Check the (K16) Coil Control No.5 circuit for an open, short to ground, and short to voltage.



**Was a problem found with the (K16) Coil Control No.5 circuit?**

**Yes** >> Repair the (K16) Coil Control No.5 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 16

## 16. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

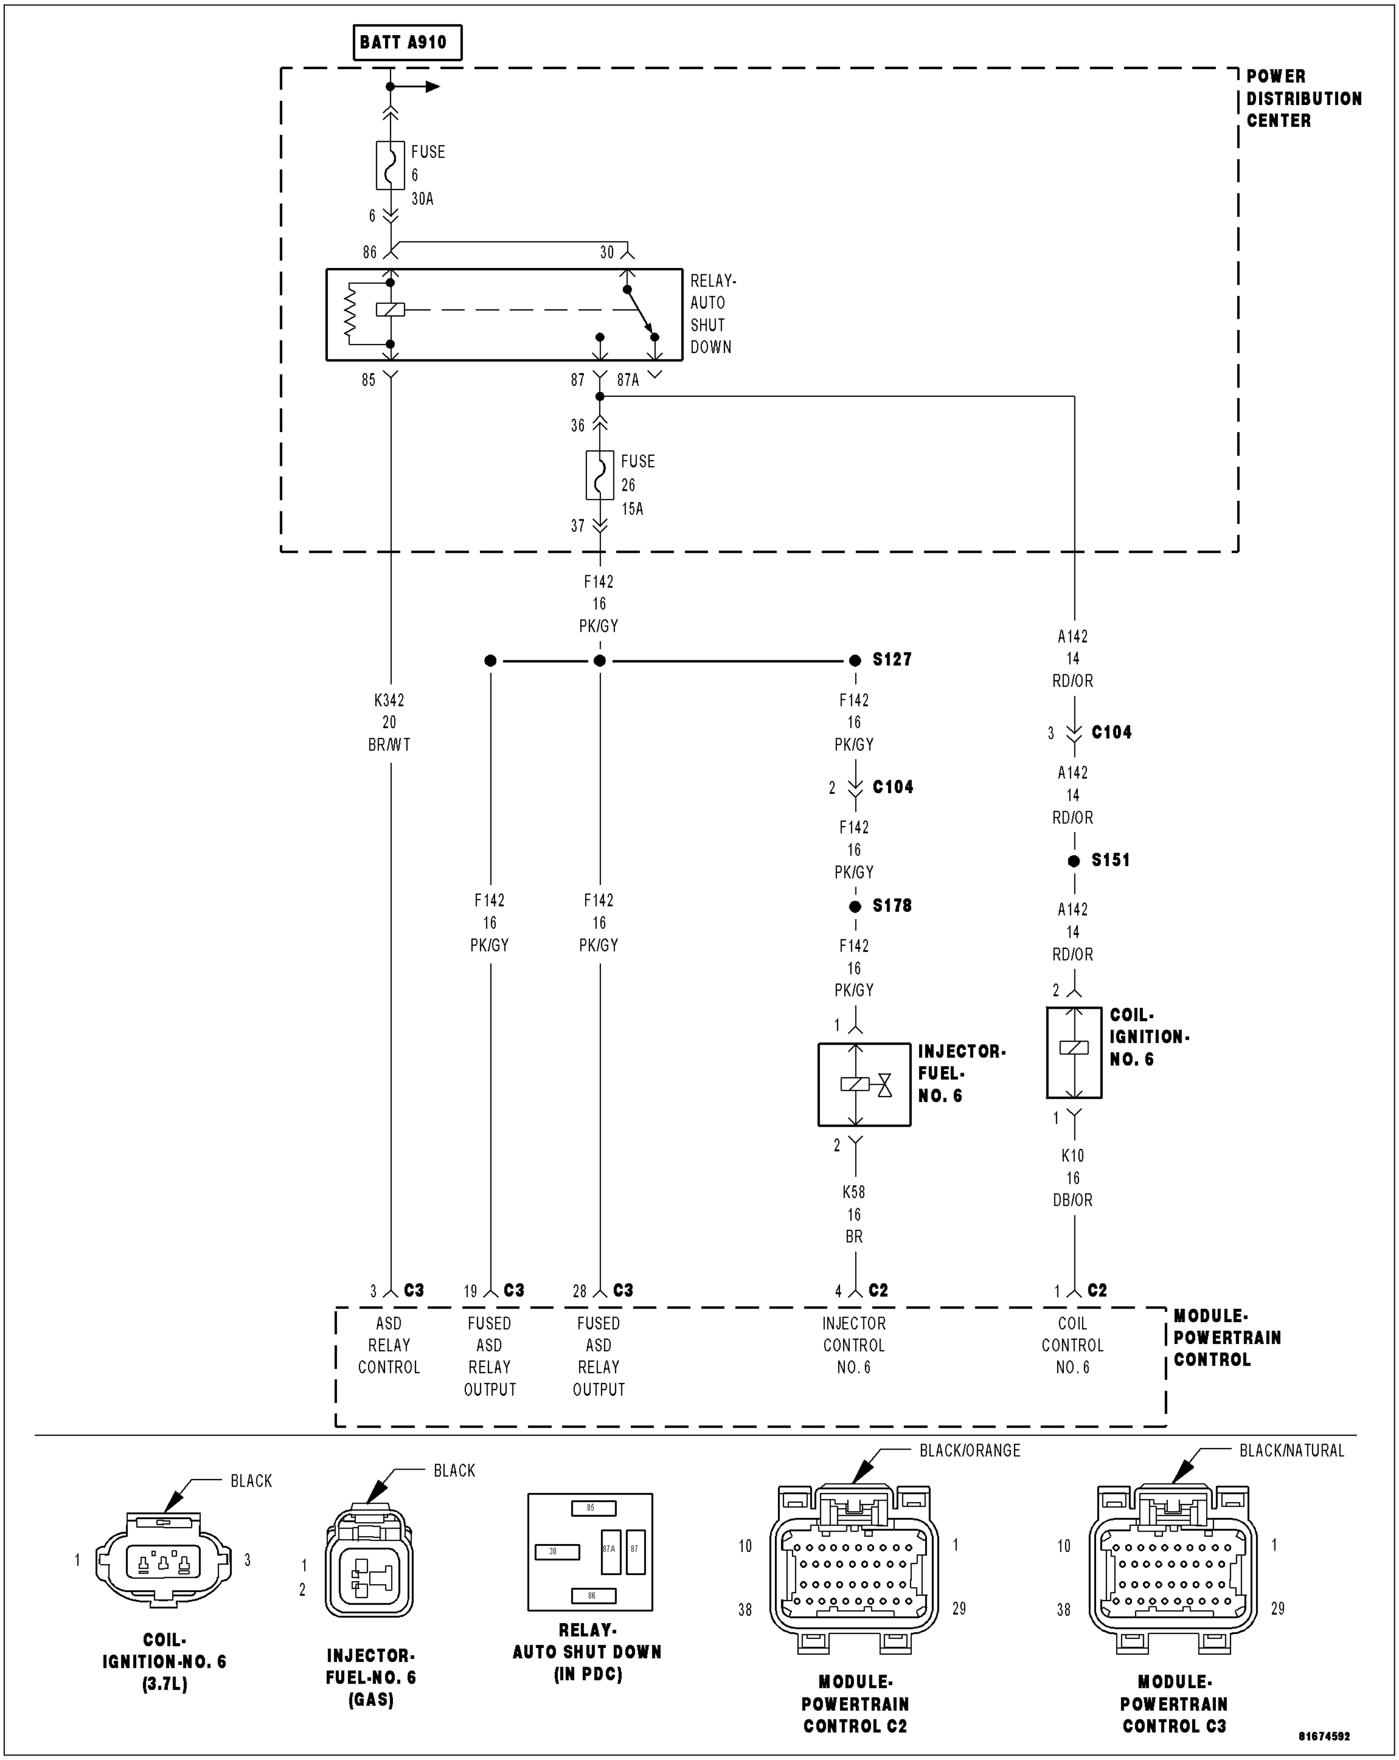
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0306-CYLINDER 6 MISFIRE



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Any time the engine is running, and the adaptive numerator has been successfully updated.
- **Set Condition:**
  The threshold to set the fault is application specific; it is tied to the level of misfire that will cause emissions to increase to 1.5 times the standard or in some cases 1%. It is always a two trip fault above the calibrated RPM. It takes 1 soft fail to set a malfunction and two trips to set the MIL. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (A142) AND (F142) ASD RELAY OUTPUT CIRCUIT |
| (K58) INJECTOR CONTROL NO.6 CIRCUIT |
| (K10) COIL CONTROL NO.6 CIRCUIT |
| IGNITION WIRE |
| SPARK PLUG |
| IGNITION COIL |
| FUEL PUMP INLET STRAINER PLUGGED |
| RESTRICTED FUEL SUPPLY LINE |
| FUEL PUMP MODULE |
| FUEL PRESSURE LEAK DOWN |
| FUEL INJECTOR |
| ENGINE MECHANICAL PROBLEM |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. CYLINDER MIS-FIRE CONDITION ACTIVE

Engine running.

Observe the WHICH CYLINDER IS MISFIRING screen for at least one minute with a scan tool.

**Is there a misfire present at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. VISUAL INSPECTION

**NOTE: Anything that affects the speed of the crankshaft can cause a misfire DTC.**

**NOTE: When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.**

- Visually inspect the engine for any of the following conditions.
- Worn serpentine belt
- Binding Engine-Driven accessories: A/C Compressor, P/S Pump, Water pump.
- Misalignment Water pump, P/S Pump and A/C Compressor pulleys
- Corroded PCM power and ground circuits.
- Improper CKP, CMP, MAP, and TP Sensor mounting
- Poor connector/terminal to component connection. i.e., CKP sensor, Fuel Injector, Ign coil, etc.
- Vacuum leaks
- Restricted Air Induction system or Exhaust system.

- Internal engine component failures.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. (A142) AND (F142) ASD RELAY OUTPUT CIRCUITS

Turn the ignition off.

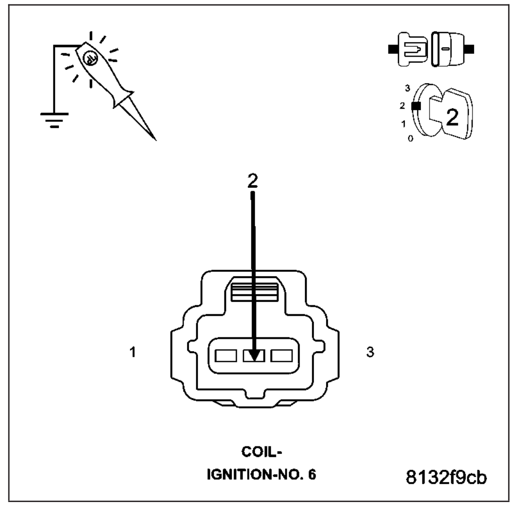
Disconnect the No.6 Ignition Coil harness connector.

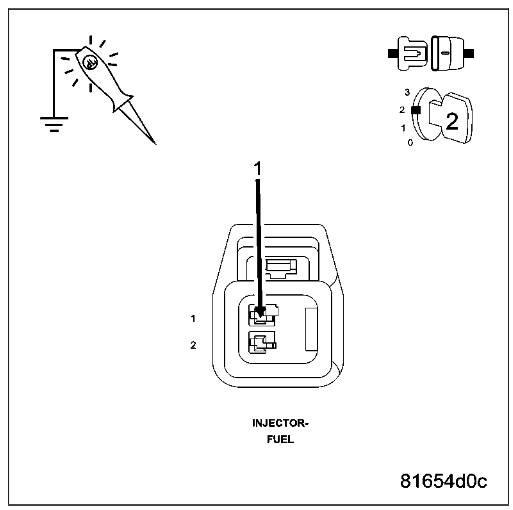
Disconnect the No.6 Fuel Injector harness connector.

Ignition on, engine not running.

With the scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (A142) ASD Relay Output circuit in the Ignition Coil harness connector and the (F142) ASD Relay Output circuit in the Fuel Injector harness connector, while the relay is actuating.





**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the excessive resistance or short to ground in the (A142) or (F142) ASD Relay Output circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. IGNITION SYSTEM OPERATION

Turn the ignition off.

Connect the Ignition Coil No.6 harness connector.

Remove the Ignition Coil.

Leave the Fuel Injector harness connector of the cylinder being tested disconnected.

Install a spark tester on the Ignition Coil.

While cranking the engine observe the spark coming from the spark tester.

**NOTE: A crisp blue spark that is able to jump the gap of the spark tester should be generated.**

**Is good spark present?**

**Yes** >> Go To 5

**No** >> Go To 14

**NOTE: Connect the Fuel Injector harness connector before continuing.**

## 5. SPARK PLUG

Turn the ignition off.

Remove the Spark Plug.

Inspect the Spark Plug for the following conditions.

- Cracks
- Carbon Tracking
- Foreign Material
- Gap size out of specifications
- Loose or broke electrode

**NOTE: Lightly tap the bottom of the spark plug on a solid surface. The electrode in the spark plug should not move.**

**Were any of the above conditions present?**

**Yes** >> Replace the Spark Plug.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. FUEL PRESSURE CHECK

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Install a fuel pressure gauge to the fuel rail.

Start the engine and observe the fuel pressure reading.

**Choose a conclusion that best matches your fuel pressure reading.**

**Within Specification**
Go To 7

**Below Specification**
Go To 12

**Above Specification**
Replace the fuel filter/pressure regulator.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

## 7. FUEL PRESSURE LEAK DOWN

**NOTE: Before continuing visually and physically inspect the fuel delivery system for external leaks or damage. Repair / replace as necessary.**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death**

Install special tool #6539 (5/16″) or #6631 (3/8″) fuel line adapter.

Install the fuel pressure gauge.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**NOTE: Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and the engine.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**NOTE: The pressure should not fall below 241 KPa (35 psi).**

**Does the gauge fall below the listed specification?**

**Yes** >> Replace the leaking Fuel Injector(s).
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

## 8. FUEL INJECTOR OPERATION

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

**CAUTION: After each Fuel Injector actuation, start the engine to clean the cylinder of fuel. Failure to do so could cause engine damage.**

Remove special tool #C4390.

Start the engine and allow the fuel pressure to reach maximum pressure.

Ignition on, engine not running.

Using the scan tool, actuate the No.6 Fuel Injector.

Monitor the fuel pressure gauge.

**Does the fuel pressure gauge indicate a drop in fuel pressure?**

**Yes** >> Go To 9

**No** >> Go To 10

**NOTE: Turn the ignition off, remove the Fuel Pressure gauge, and connect the fuel lines before continuing.**

## 9. ENGINE MECHANICAL PROBLEM

Check for any of the following conditions/mechanical problems.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

CAM LOBES - must not be worn excessively

CYLINDER LEAKAGE TEST - must be within specifications

VALVE SPRINGS - cannot be weak or broken

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 16

## 10. FUEL INJECTOR

Turn the ignition off.

Disconnect the No.6 Fuel Injector harness connector.

Ignition on, engine not running.

**NOTE: When a Misfire is detected for a particular cylinder, the PCM will shut down that cylinders Injector Control circuit.**

With the scan tool, erase DTCs.

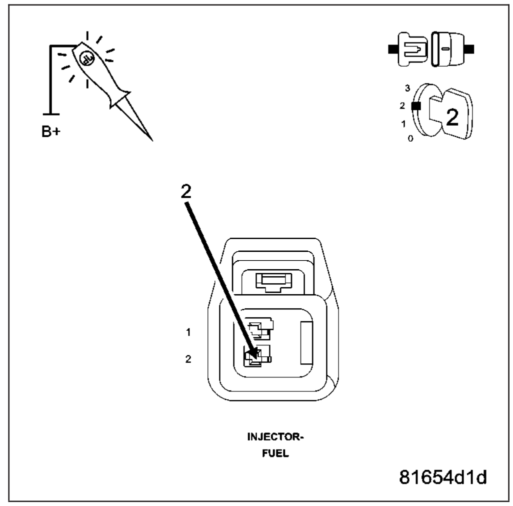
Using a 12-volt test light connected to 12-volts, probe the (K58) Injector Control No.6 circuit.

With the scan tool, actuate the Fuel Injector.

**Does the test light blink/flicker?**

**Yes** >> Replace the Fuel Injector.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 11



## 11. (K58) INJECTOR CONTROL NO.6 CIRCUIT

Turn the ignition off.

Disconnect the C2 PCM harness connector.

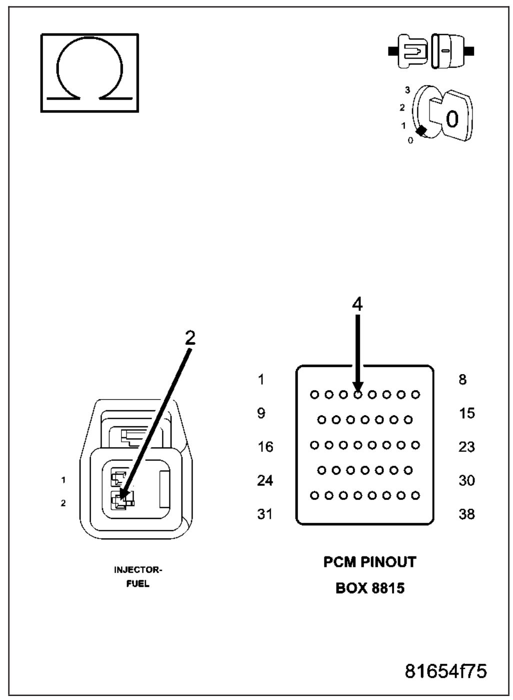
**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Check the (K58) Injector Control No.6 circuit for an open, short to ground, and short to voltage.

**Was a problem found with the (K58) Injector Control No.6 circuit?**

**Yes** >> Repair the excessive resistance or short in the (K58) Injector Control No.6 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 16



## 12. FUEL SUPPLY LINE RESTRICTED

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special tool #6539 (5/16″) #6631(3/8″) fuel line adapter and the fuel pressure gauge between the fuel supply line and the fuel pump module.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Is the fuel pressure within specification?**

**Yes** >> Repair or replace fuel supply line as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 13

## 13. FUEL PUMP INLET STRAINER

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

**Yes** >> Replace the Fuel Pump Inlet Strainer.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Before continuing, check the Fuel Pump Module harness connector terminals for corrosion, damage, or terminal push out. Make sure the ground circuit is operating properly. Repair as necessary. Replace the Fuel Pump Module.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 14. IGNITION COIL

Disconnect the No.6 Ignition Coil harness connector.

Remove the Fuel Pump Relay.

Using a 12-volt test light connected to 12-volts, probe the (K10) Coil Control No.6 circuit.

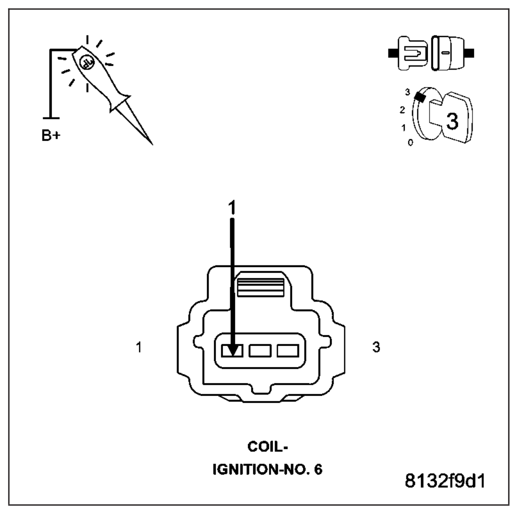
Crank the engine for 5 second while observing the test light.

**NOTE: The primary resistance of the 3.7L Ignition coil is 0.6 to 0.9 of an ohm at 77°F (25°C).**

**Does the test light brightly blink/flicker?**

**Yes** >> Replace the Ignition Coil.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

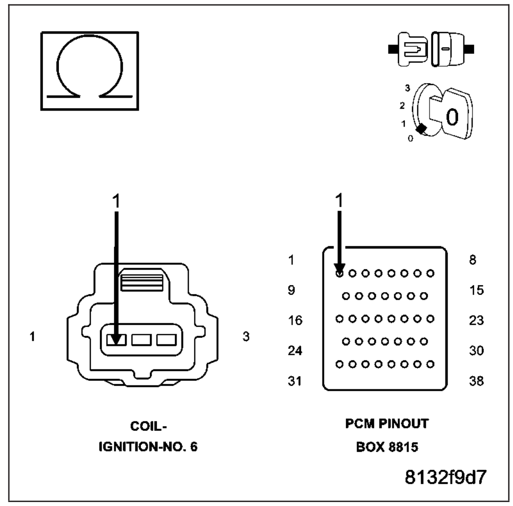
**No** >> Go To 15



## 15. (K10) COIL CONTROL NO.6 CIRCUIT

Turn the ignition off.

Disconnect the C2 PCM harness connector.



**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Check the (K10) Coil Control No.6 circuit for an open, short to ground, and short to voltage.

**Was a problem found with the (K10) Coil Control No.6 circuit?**

**Yes** >> Repair the (K10) Coil Control No.6 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 16

## 16. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

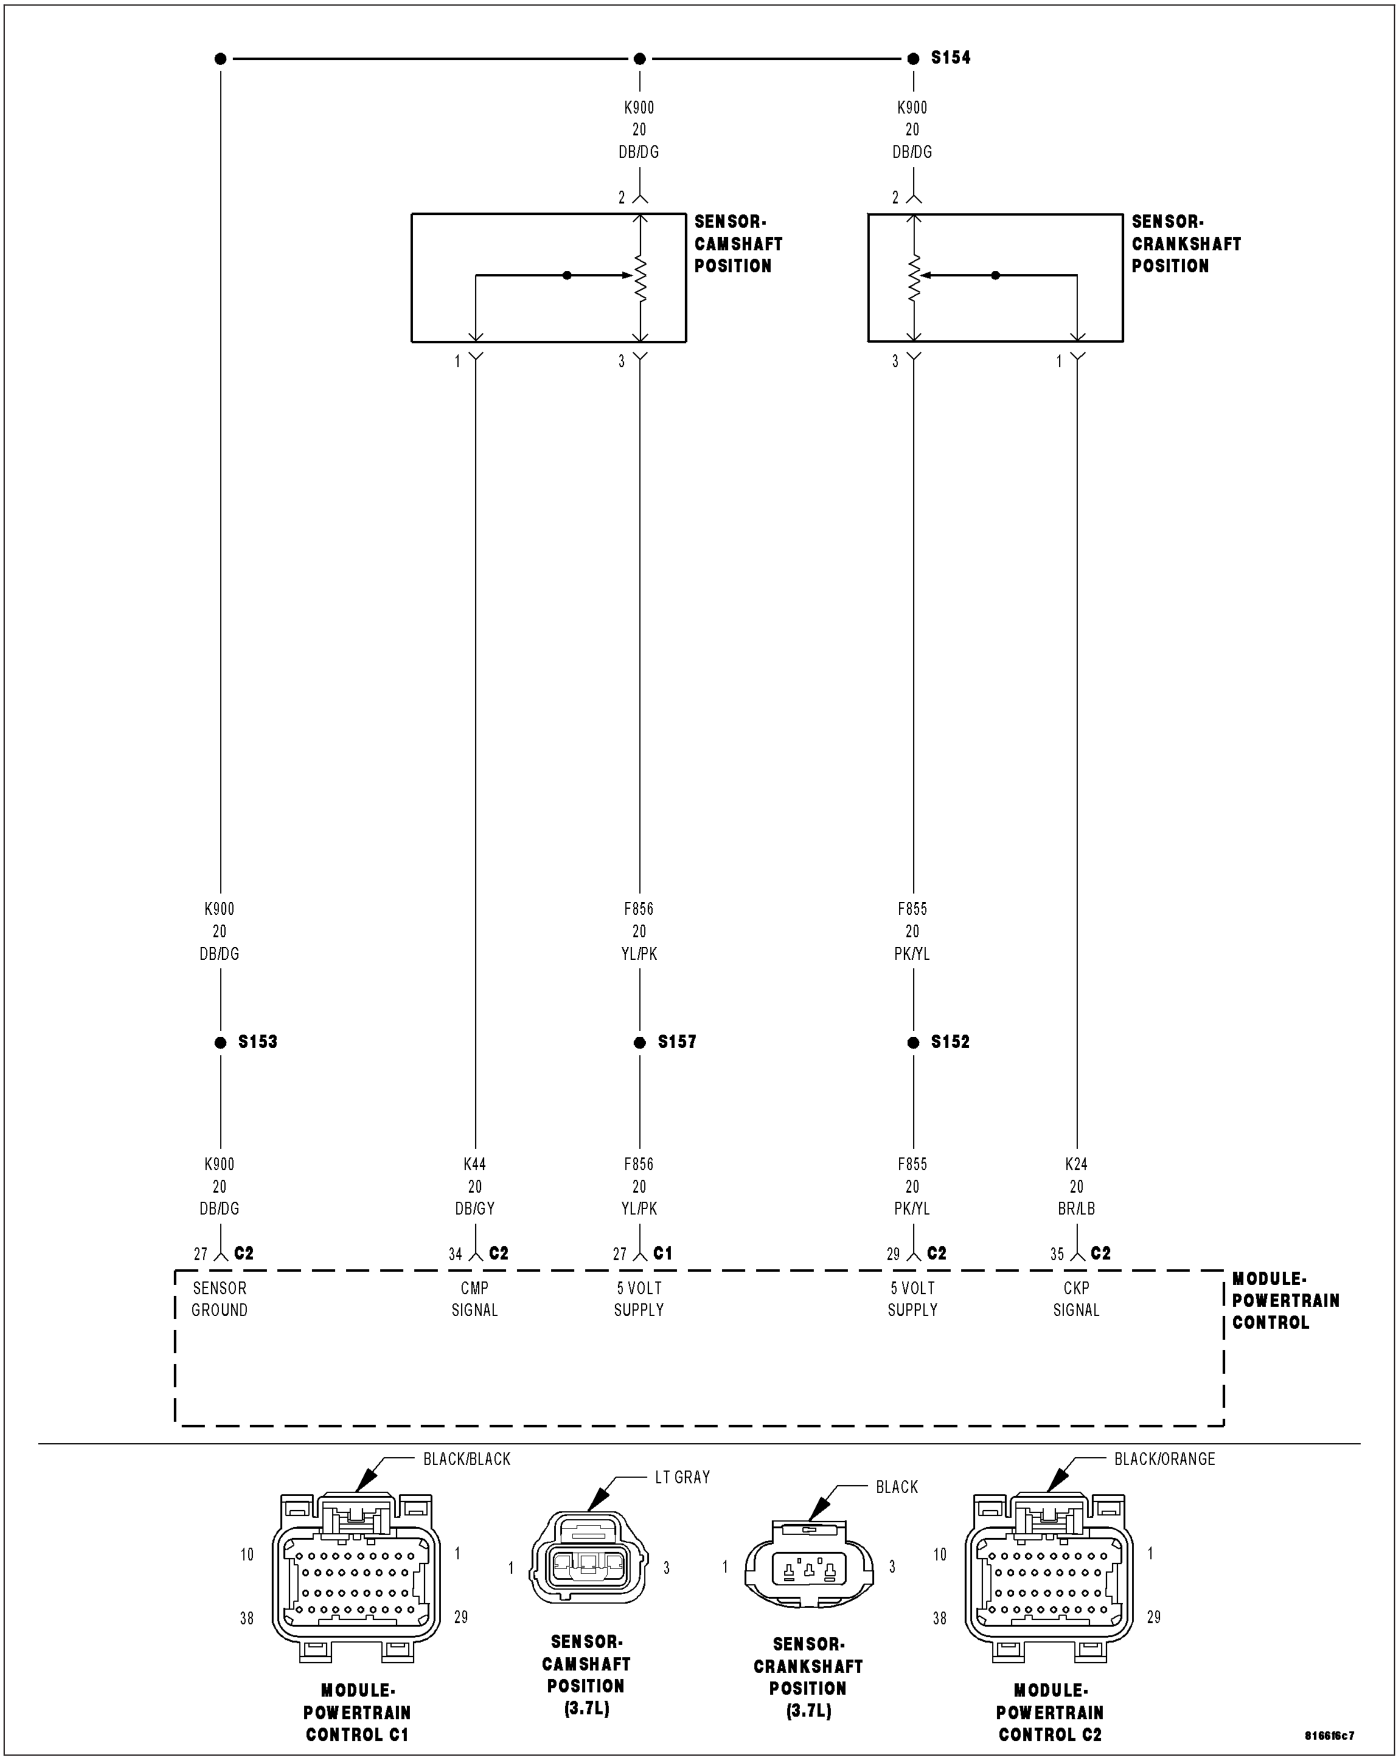
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0315-NO CRANK SENSOR LEARNED



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Under closed throttle decel and A/C off. ECT above 75°C (167°F). Engine start time is greater than 50 seconds.
- **Set Condition:**
  One of the CKP sensor target windows has more than 2.86% variance from the reference. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| TONE WHEEL/PULSE RING |
| WIRE HARNESS |
| CRANKSHAFT POSITION SENSOR |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, clear DTCs, PCM battery disconnect to reset the PCM.

Start the engine.

If the MIL has not yet illuminated, test drive the vehicle to try to get the code to reset.

**Does the code reset while cranking or during the test drive?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. WIRE HARNESS INSPECTION

Turn the ignition off.

Visually inspect the CKP wire harness. Look for any chafed, pierced, pinched, or partially broken wires.

Visually inspect the CKP wire harness connectors. Look for broken, bent, pushed out, or corroded terminals.

Make sure the Crankshaft Position Sensor is properly installed and the mounting bolt(s) are torqued to the proper specification.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

### 3. TONE WHEEL/FLEX PLATE INSPECTION

Remove the Crankshaft Position Sensor.

Inspect the Tone Wheel/Flex Plate slots for damage, foreign material, or excessive movement.

**Were any problems found?**

**Yes** >> Repair or replace the Tone Wheel/Flex Plate as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. CRANKSHAFT POSITION SENSOR

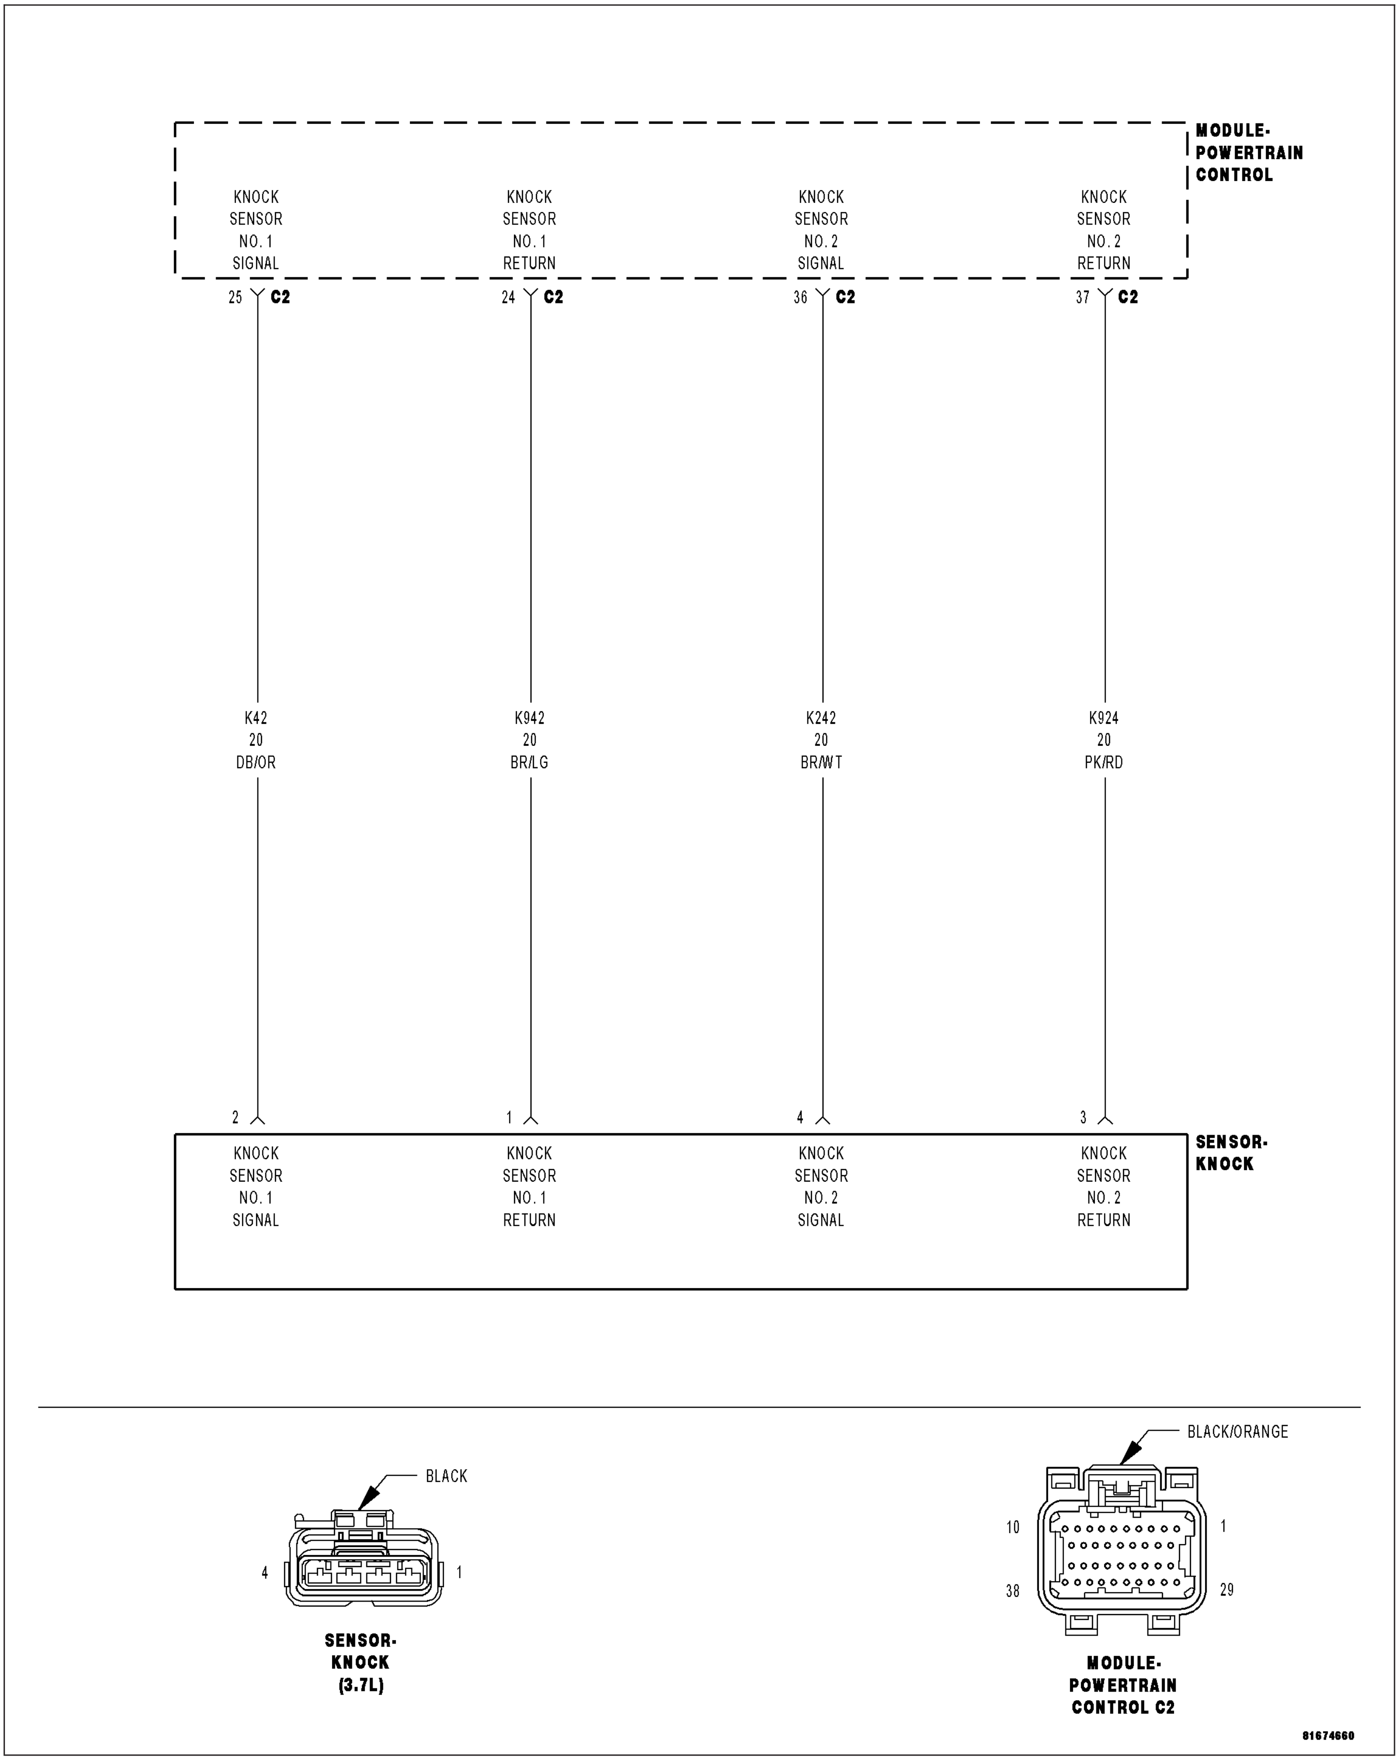
**If there are no possible causes remaining, view repair.**

**Repair**

Replace the Crankshaft Position Sensor.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0325-KNOCK SENSOR 1 CIRCUIT



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

Knock is the spontaneous auto-ignition of the remaining fuel/air mixture in the engine combustion chamber that occurs after normal combustion has started. It can occur under extreme vehicle operating conditions such as high engine temperature, high MAP, low humidity, and heavy loads to the engine. Knock is caused by excessive spark advance for the given engine operating conditions. Severe, continuous knock may be caused by carbon deposits, bad gasoline, and/or low octane fuel. Avoiding light audible knock is important for customer satisfaction while preventing excessive knock is important to protect engine components. The output voltage from the knock circuit represents the strength of the engine knock and is read by the engine controller. The knock system output voltage is not zero due to engine background noise, even when knock is not present. When the engine is operated under high load conditions where knock is possible, the knock voltage is tested to decide if it exceeds the knock voltage threshold. Knock has occurred when the knock voltage is at or above this knock threshold. When knock is detected a calibrated short term knock spark retard to be subtracted from the spark advance is calculated. The amount of retarded spark advance is based off a calibrated severity of the knock event. This retarded spark advance is used in the next ignition event to prevent further knock events. If knock continues, an additional amount of short term spark advance retard is added. When knock stops, short term knock spark retard is eliminated, the long term knock spark retard is reduced by a calibrated amount to recover some previously retarded spark advance. This decreases spark retard to improve engine performance.

- **When Monitored:**
  This monitor runs above 2000 rpm, under open throttle conditions. The Knock diagnostic does not run at idle or during decelerations. The high voltage test runs all the times the engine is running.
- **Set Condition:**
  The High voltage fault will set at 4.8 volts. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (K42) KNOCK SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K42) KNOCK SENSOR NO.1 SIGNAL CIRCUIT OPEN |
| (K942) KNOCK SENSOR NO.1 RETURN CIRCUIT OPEN |
| (K42) KNOCK SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO THE (K942) KNOCK SENSOR NO.1 RETURN CIRCUIT |
| (K42) KNOCK SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO GROUND |
| KNOCK SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 2. (K42) KNOCK SENSOR NO.1 SIGNAL SHORTED TO BATTERY VOLTAGE

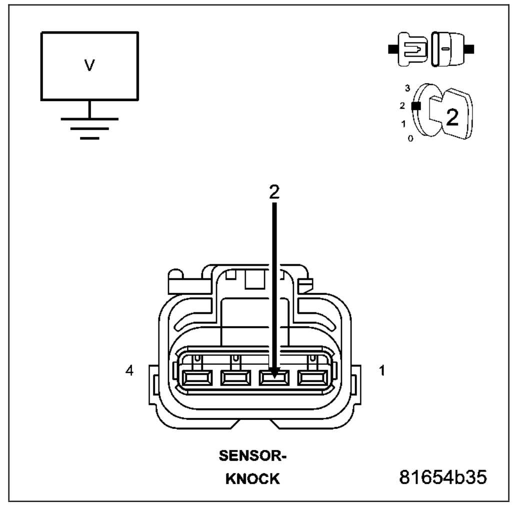
Turn the ignition off.

Disconnect the Knock Sensor harness connector.

Disconnect the C2 PCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (K42) Knock Sensor No.1 Signal circuit in the Knock Sensor harness connector.



**Is the voltage above 1.5 volts at idle and above 0.3 of a volt above 2000 RPM?**

**Yes** >> Repair the short to battery voltage in the (K42) Knock Sensor No.1 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

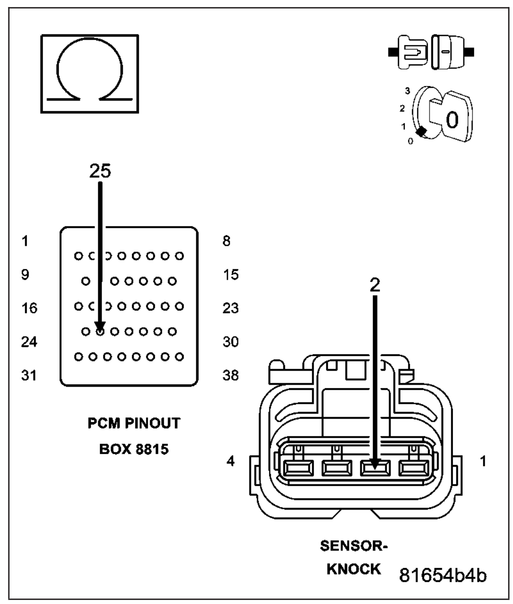
**No** >> Go To 3

## 3. (K42) KNOCK SENSOR NO.1 SIGNAL CIRCUIT OPEN

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K42) Knock Sensor No.1 Signal circuit from the Knock Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the open in the (K42) Knock Sensor No.1 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. (K942) KNOCK SENSOR NO.1 RETURN CIRCUIT OPEN

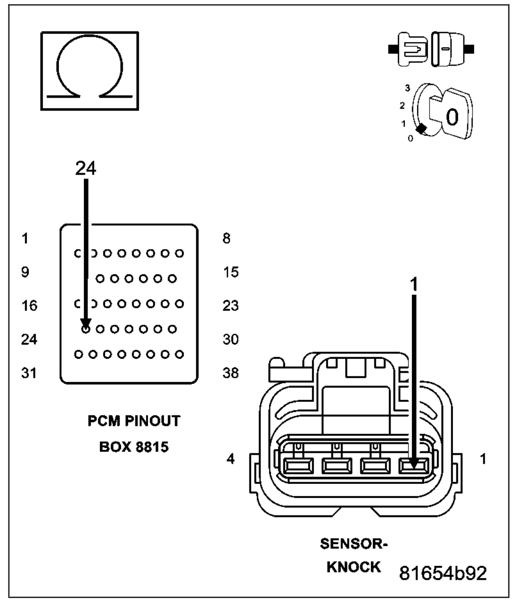
Measure the resistance of the (K942) Knock Sensor No.1 Return circuit from the Knock Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K942) Knock Sensor No.1 Return circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)



## 5. (K42) KNOCK SENSOR NO.1 SIGNAL SHORTED TO THE (K942) KNOCK SENSOR NO.1 RETURN CIRCUIT

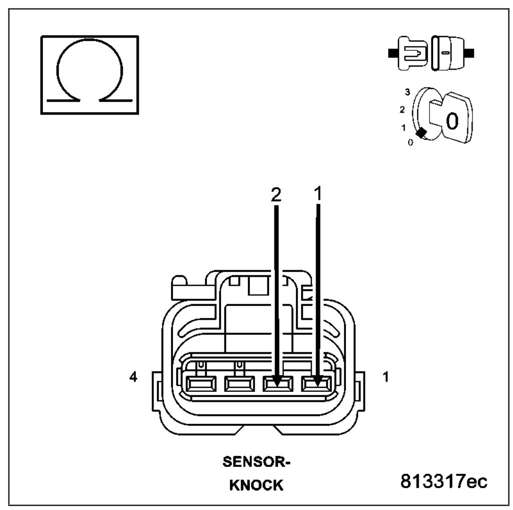
Measure the resistance between the (K42) Knock Sensor No.1 Signal circuit and the (K942) Knock Sensor No.1 Return circuit in the Knock Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K42) Knock Sensor No.1 Signal circuit and the (K942) Knock Sensor No.1 Return circuit.

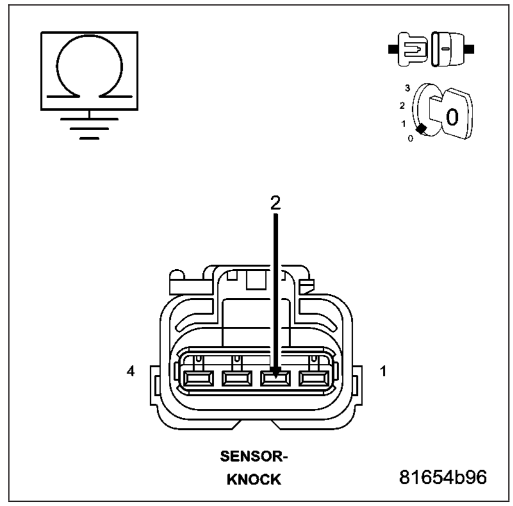
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6



## 6. (K42) KNOCK SENSOR NO.1 SIGNAL SHORTED TO GROUND

Measure the resistance between ground and the (K42) Knock Sensor No.1 Signal circuit in the Knock Sensor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K42) Knock Sensor No.1 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 7. KNOCK SENSOR

Replace the Knock Sensor.

Ignition on, engine not running.

With the scan tool, erase DTC.

Attempt to operate the vehicle using the information noted in the Freeze Frame.

With the scan tool, read DTCs.

**Does the scan tool display the DTC that was previously erased?**

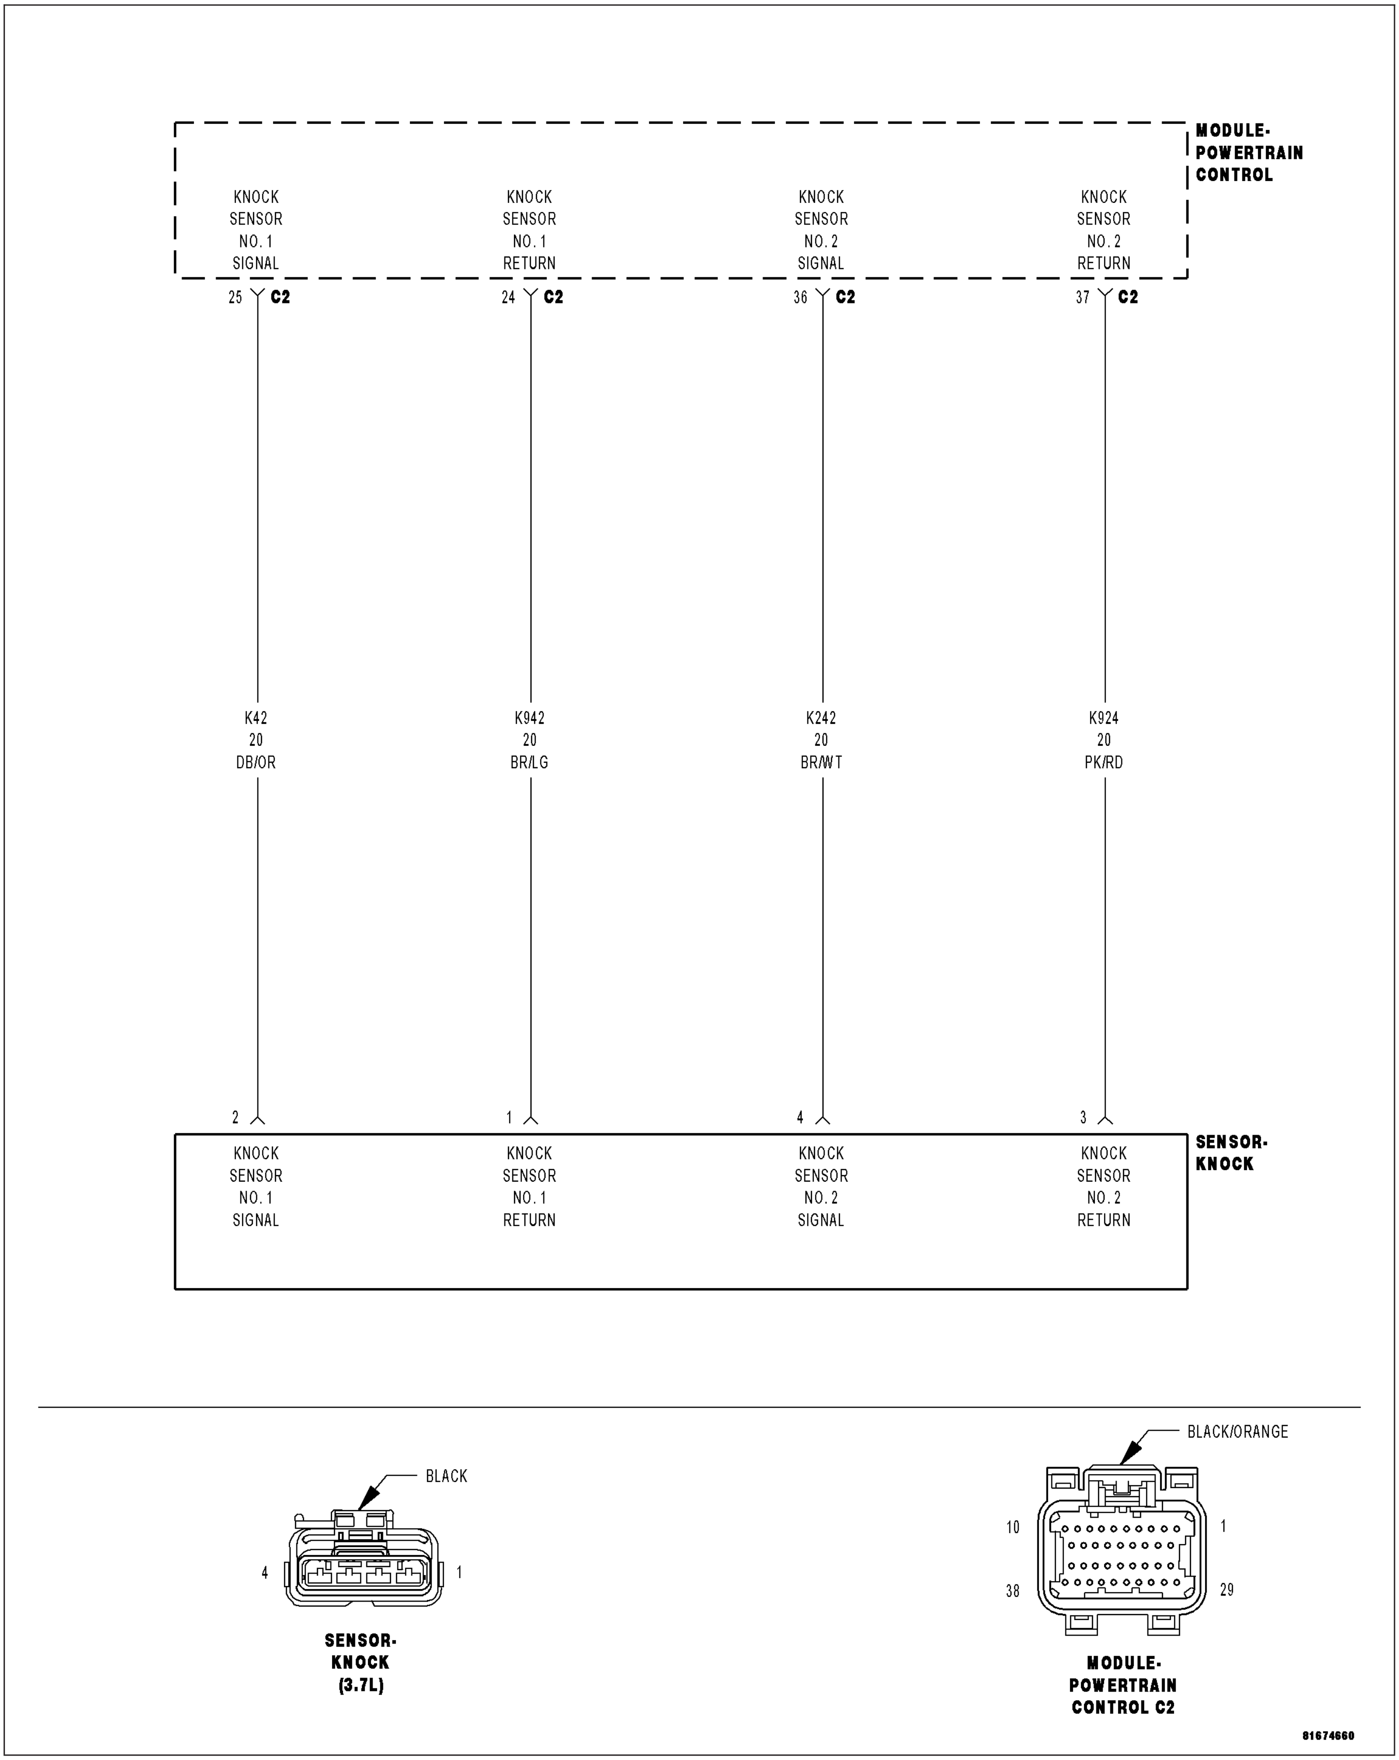
**Yes** >>

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary. Replace and program the Powertrain Control Module per Service Information.**

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Test Complete.

## P0330-KNOCK SENSOR 2 CIRCUIT



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

Knock is the spontaneous auto-ignition of the remaining fuel/air mixture in the engine combustion chamber that occurs after normal combustion has started. It can occur under extreme vehicle operating conditions such as high engine temperature, high MAP, low humidity, and heavy loads to the engine. Knock is caused by excessive spark advance for the given engine operating conditions. Severe, continuous knock may be caused by carbon deposits, bad gasoline, and/or low octane fuel. Avoiding light audible knock is important for customer satisfaction while preventing excessive knock is important to protect engine components. The output voltage from the knock circuit represents the strength of the engine knock and is read by the engine controller. The knock system output voltage is not zero due to engine background noise, even when knock is not present. When the engine is operated under high load conditions where knock is possible, the knock voltage is tested to decide if it exceeds the knock voltage threshold. Knock has occurred when the knock voltage is at or above this knock threshold. When knock is detected a calibrated short term knock spark retard to be subtracted from the spark advance is calculated. The amount of retarded spark advance is based off a calibrated severity of the knock event. This retarded spark advance is used in the next ignition event to prevent further knock events. If knock continues, an additional amount of short term spark advance retard is added. When knock stops, short term knock spark retard is eliminated, the long term knock spark retard is reduced by a calibrated amount to recover some previously retarded spark advance. This decreases spark retard to improve engine performance.

- **When Monitored:**
  This monitor runs above 2000 rpm, under open throttle conditions. The Knock diagnostic does not run at idle or during decelerations. The high voltage test runs all the times the engine is running.
- **Set Condition:**
  The High voltage fault will set at 4.8 volts. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (K242) KNOCK SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K242) KNOCK SENSOR NO.2 SIGNAL CIRCUIT OPEN |
| (K924) KNOCK SENSOR NO.2 RETURN CIRCUIT OPEN |
| (K242) KNOCK SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO THE (K924) KNOCK SENSOR NO.2 RETURN CIRCUIT |
| (K242) KNOCK SENSOR NO.2 SIGNAL CIRCUIT SHORTED TO GROUND |
| KNOCK SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 2. (K242) KNOCK SENSOR NO.2 SIGNAL SHORTED TO BATTERY VOLTAGE

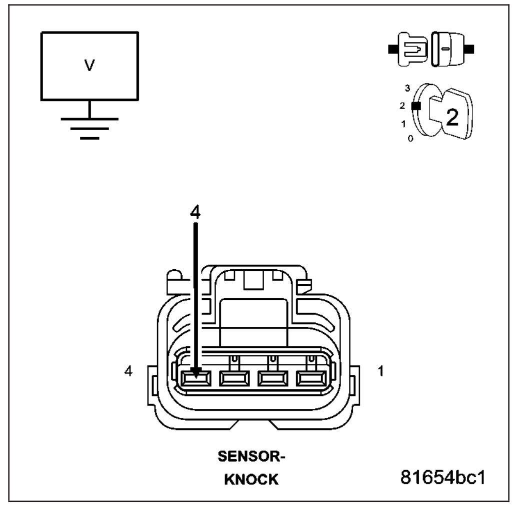
Turn the ignition off.

Disconnect the No.2 Knock Sensor harness connector.

Disconnect the C2 PCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (K242) Knock Sensor No.2 Signal circuit in the Knock Sensor harness connector.



**Is the voltage above 1.5 volts at idle and above 0.3 of a volt above 2000 RPM?**

**Yes** >> Repair the short to battery voltage in the (K242) Knock Sensor No.2 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

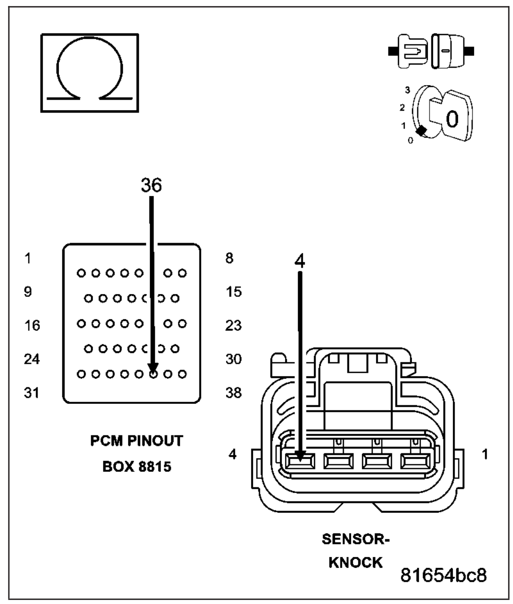
**No** >> Go To 3

## 3. (K242) KNOCK SENSOR NO.2 SIGNAL CIRCUIT OPEN

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K242) Knock Sensor No.2 Signal circuit from the Knock Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

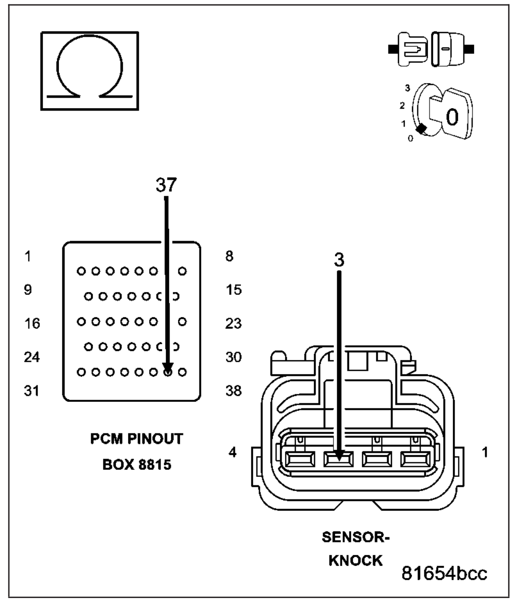
**Yes** >> Go To 4

**No** >> Repair the open in the (K242) Knock Sensor No.2 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. (K924) KNOCK SENSOR NO.2 RETURN CIRCUIT OPEN

Measure the resistance of the (K924) Knock Sensor No.2 Return circuit from the Knock Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

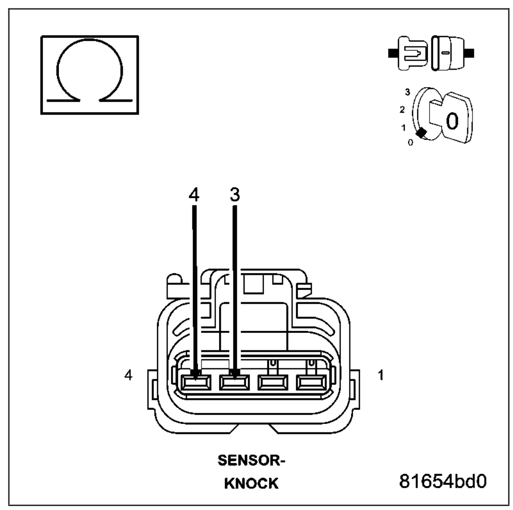
**Yes** >> Go To 5

**No** >> Repair the open in the (K924) Knock Sensor No.2 Return circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. (K242) KNOCK SENSOR NO.2 SIGNAL SHORTED TO THE (K924) KNOCK SENSOR NO.2 RETURN CIRCUIT

Measure the resistance between the (K242) Knock Sensor No.2 Signal circuit and the (K924) Knock Sensor No.2 Return circuit in the Knock Sensor harness connector.



**Is the resistance below 100 ohms?**

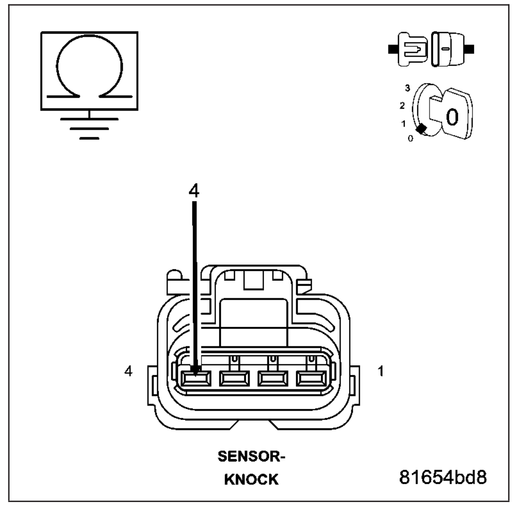
**Yes** >> Repair the short between the (K242) Knock Sensor No.2 Signal circuit and the (K924) Knock Sensor No.2 Return circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. (K242) KNOCK SENSOR NO.2 SIGNAL SHORTED TO GROUND

Measure the resistance between ground and the (K242) Knock Sensor No.2 Signal circuit in the Knock Sensor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K242) Knock Sensor No.2 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 7. KNOCK SENSOR

Replace the Knock Sensor.

Ignition on, engine not running.

With the scan tool, erase DTC.

Attempt to operate the vehicle using the information noted in the Freeze Frame.

With the scan tool, read DTCs.

**Does the scan tool display the DTC that was previously erased?**

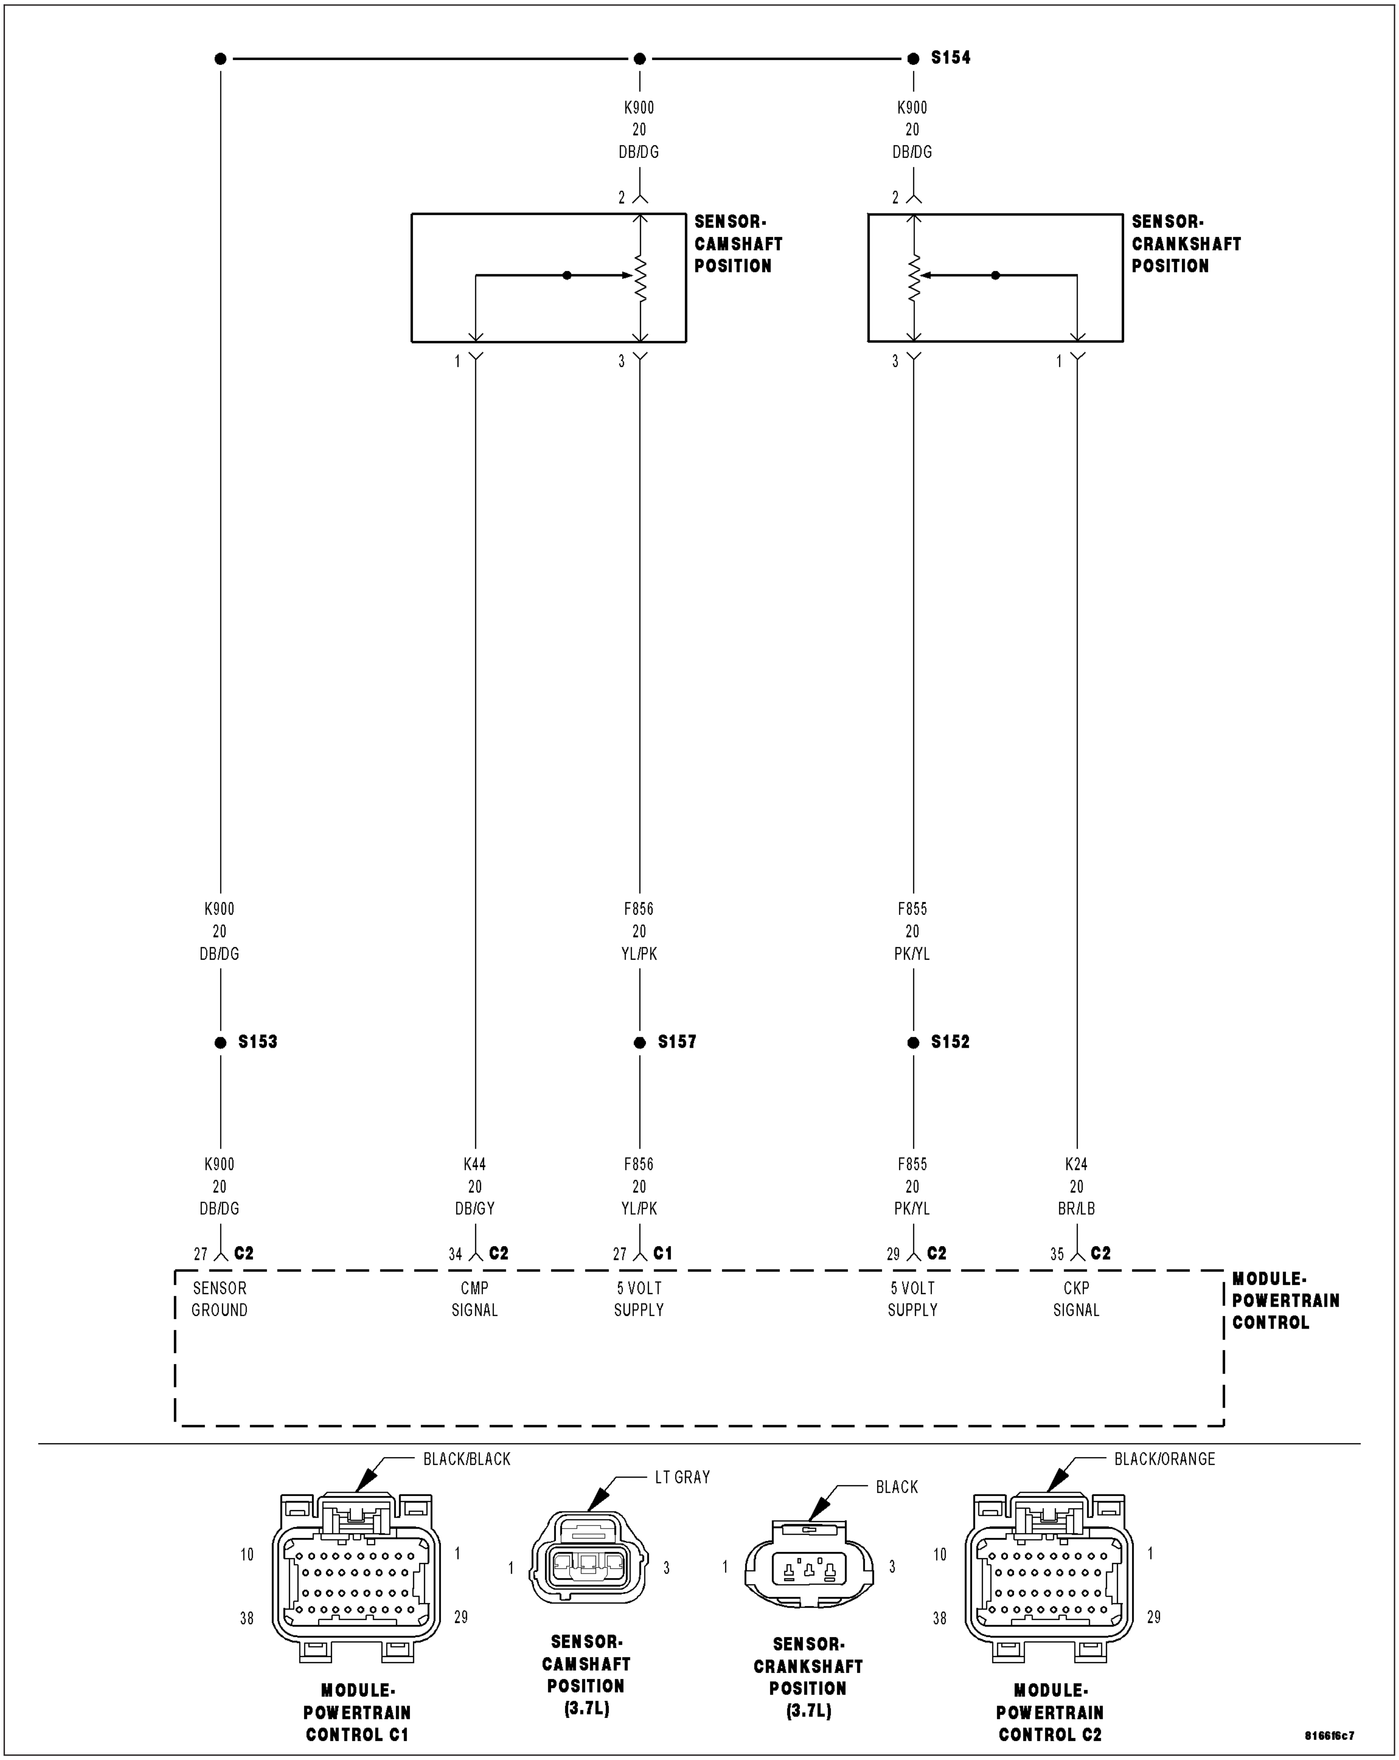
**Yes** >>

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary. Replace and program the Powertrain Control Module per Service Information.**

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Test Complete.

## P0335-CRANKSHAFT POSITION SENSOR CIRCUIT



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine cranking.
- **Set Condition:**
  No CKP signal is present during engine cranking, and at least 8 camshaft position sensor signals have occurred within 8 seconds. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (F855) 5-VOLT SUPPLY CIRCUIT OPEN |
| (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| (K24) CKP SIGNAL CIRCUIT OPEN |
| (K24) CKP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K24) CKP SIGNAL CIRCUIT SHORTED GROUND |
| (K24) CKP SIGNAL CIRCUIT SHORTED TO THE (F855) 5-VOLT SUPPLY CIRCUIT |
| (K900) SENSOR GROUND CIRCUIT OPEN |
| CRANKSHAFT POSITION SENSOR |
| CAMSHAFT POSITION SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Crank the engine.

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Go To 14

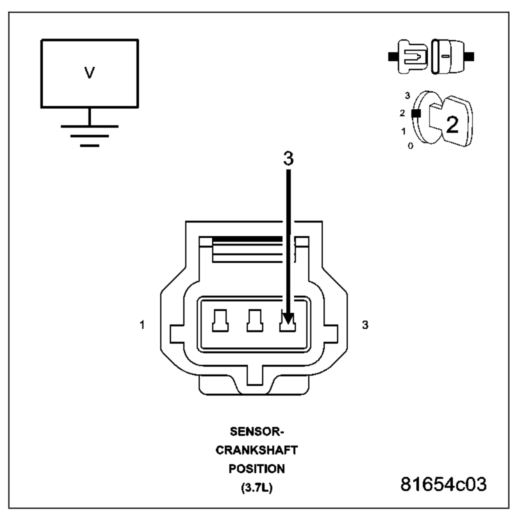
### 2. (F855) 5-VOLT SUPPLY CIRCUIT

Turn the ignition off.

Disconnect the CKP Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F855) 5-volt Supply circuit in the CKP Sensor harness connector.



**Is the voltage between 4.5 and 5.2 volts?**

**Yes** >> Go To 3

**No** >> Go To 10

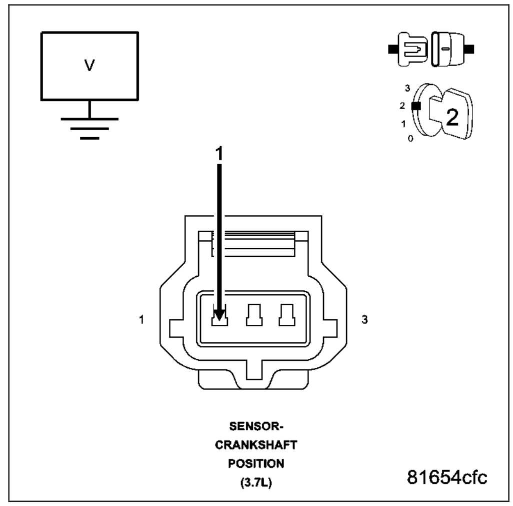
## 3. (K24) CKP SIGNAL CIRCUIT

Measure the voltage on the (K24) CKP Signal circuit in the CKP Sensor harness connector.

**Is the voltage between 4.5 and 5.0 volts?**

**Yes** >> Go To 4

**No** >> Go To 7



## 4. (K900) SENSOR GROUND CIRCUIT OPEN

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

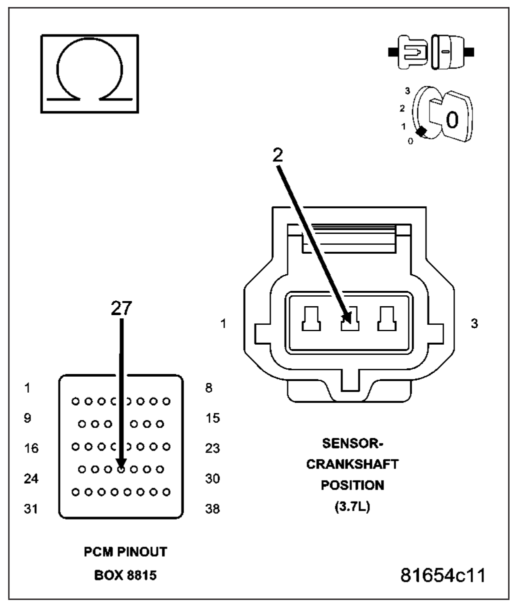
Measure the resistance of the (K900) Sensor ground circuit from the CKP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

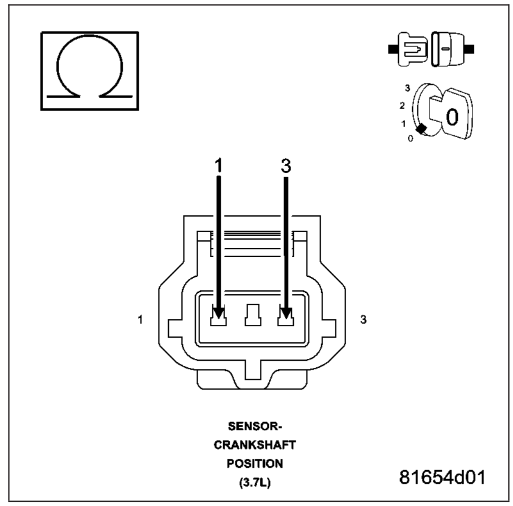
**No** >> Repair the open in the (K900) Sensor ground circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)



## 5. (K24) CKP SIGNAL CIRCUIT SHORTED TO THE (F855) 5-VOLT SUPPLY CIRCUIT

Measure the resistance between the (K24) CKP Signal circuit and the (F855) 5-volt Supply circuit in the CKP Sensor harness connector.



**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K24) CKP Signal circuit and the (F855) 5-volt Supply circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. CRANKSHAFT POSITION SENSOR

**NOTE: Inspect the slots on the flywheel for damage. If a problem is found repair as necessary.**

**If there are no possible causes remaining, view repair.**

**Repair**

Replace the Crankshaft Position Sensor.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

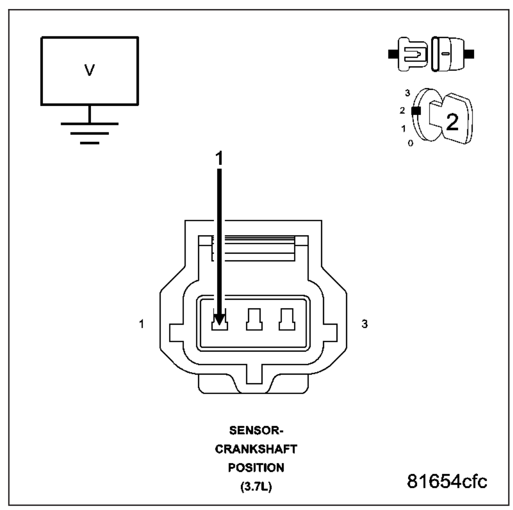
## 7. (K24) CKP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (K24) CKP Signal circuit in the CKP Sensor harness connector.



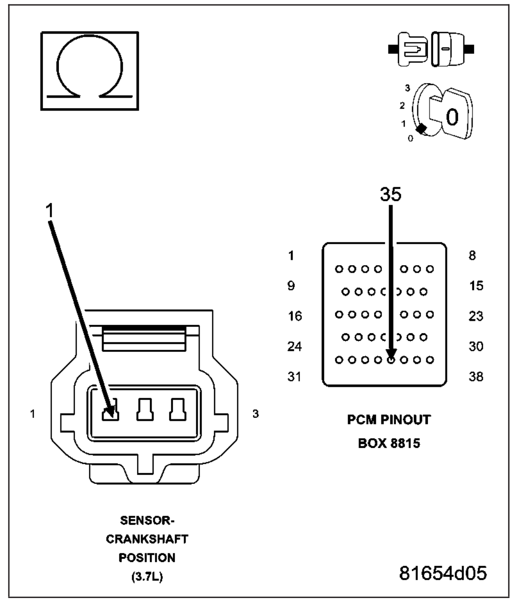
**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K24) CKP Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

## 8. (K24) CKP SIGNAL CIRCUIT OPEN



Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

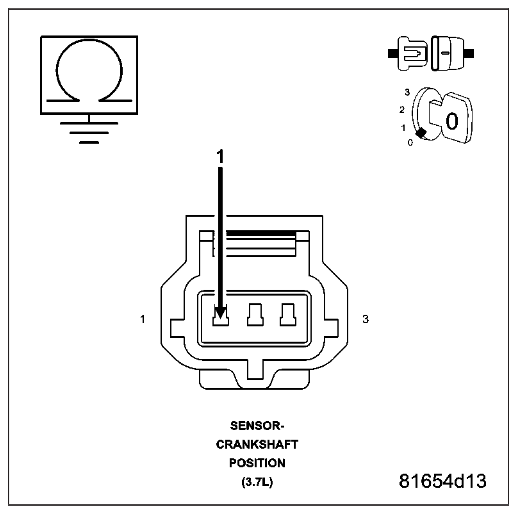
Measure the resistance of the (K24) CKP Signal circuit from the CKP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the open in the (K24) CKP Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 9. (K24) CKP SIGNAL CIRCUIT SHORTED TO GROUND



Measure the resistance between ground and the (K24) CKP Signal circuit in the CKP Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short to ground in the (K24) CKP Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 13

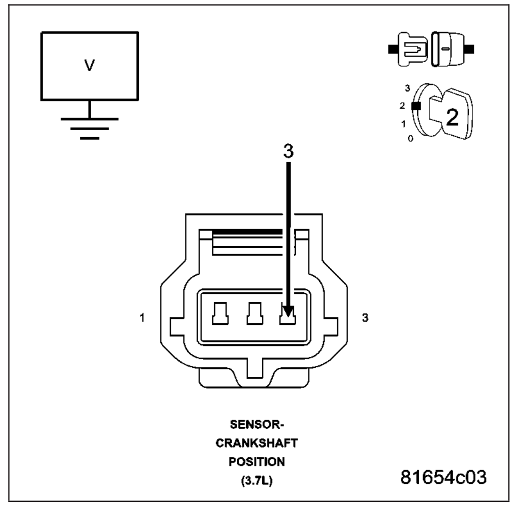
## 10. (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (F855) 5-volt Supply circuit in the CKP Sensor harness connector.



**Is the voltage above 5.5 volts?**

**Yes** >> Repair the short to battery voltage in the (F855) 5-volt Supply circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

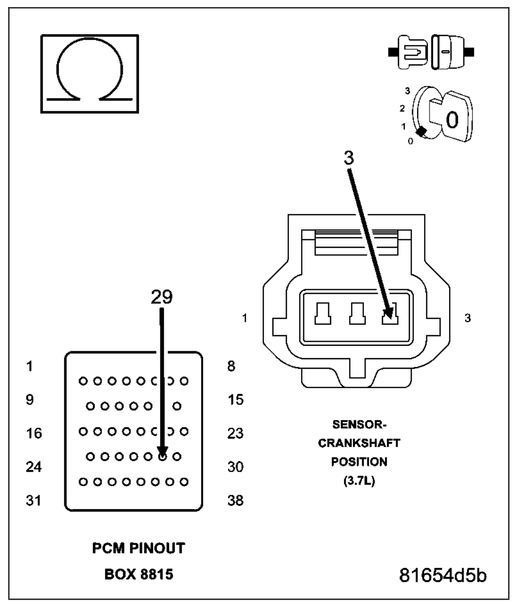
**No** >> Go To 11

## 11. (F855) 5-VOLT SUPPLY CIRCUIT OPEN

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F855) 5-volt Supply circuit from the CKP Sensor harness connector to the appropriate terminal of special tool #8815.



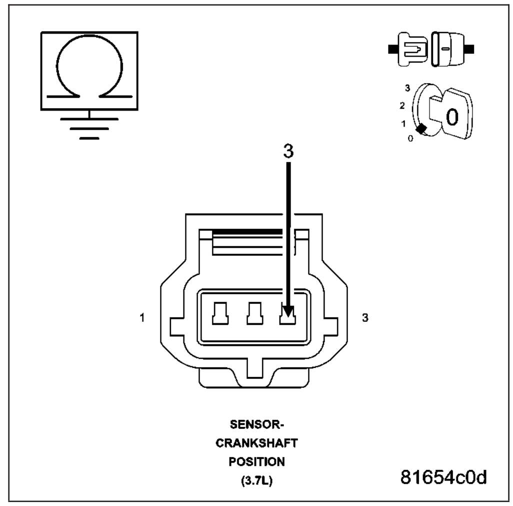
**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 12

**No** >> Repair the open in the (F855) 5-volt Supply circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 12. (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (F855) 5-volt Supply circuit in the CKP Sensor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F855) 5-volt Supply circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 13

## 13. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 14. ERRATIC CKP SENSOR SIGNAL

Turn the ignition off.

With a lab scope probe and the Miller special tool #6801, backprobe the (K24) CKP Signal circuit in the CKP harnessconnector.

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

Ignition on, engine not running.

Wiggle the related wire harness and lightly tap on the Crank Position Sensor.

Observe the lab scope screen.

Look for any pulses generated by the CKP Sensor.

Allow the engine to idle.

Observe the lab scope screen.

**Did the CKP Sensor generate any erratic pulses?**

**Yes** >> Inspect the related wire harness and replace the Crankshaft Position Sensor if no wiring problems were found.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 15

## 15. ERRATIC CMP SIGNAL

Turn the ignition off.

With a lab scope probe and the Miller special tool #6801, backprobe the (K44) CMP Signal circuit in the CMP harness connector.

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

Ignition on, engine not running.

Wiggle the related wire harness and lightly tap on the Cam Position Sensor.

Observe the lab scope screen.

Look for any pulses generated by the CMP Sensor.

Allow the engine to idle.

Observe the lab scope screen.

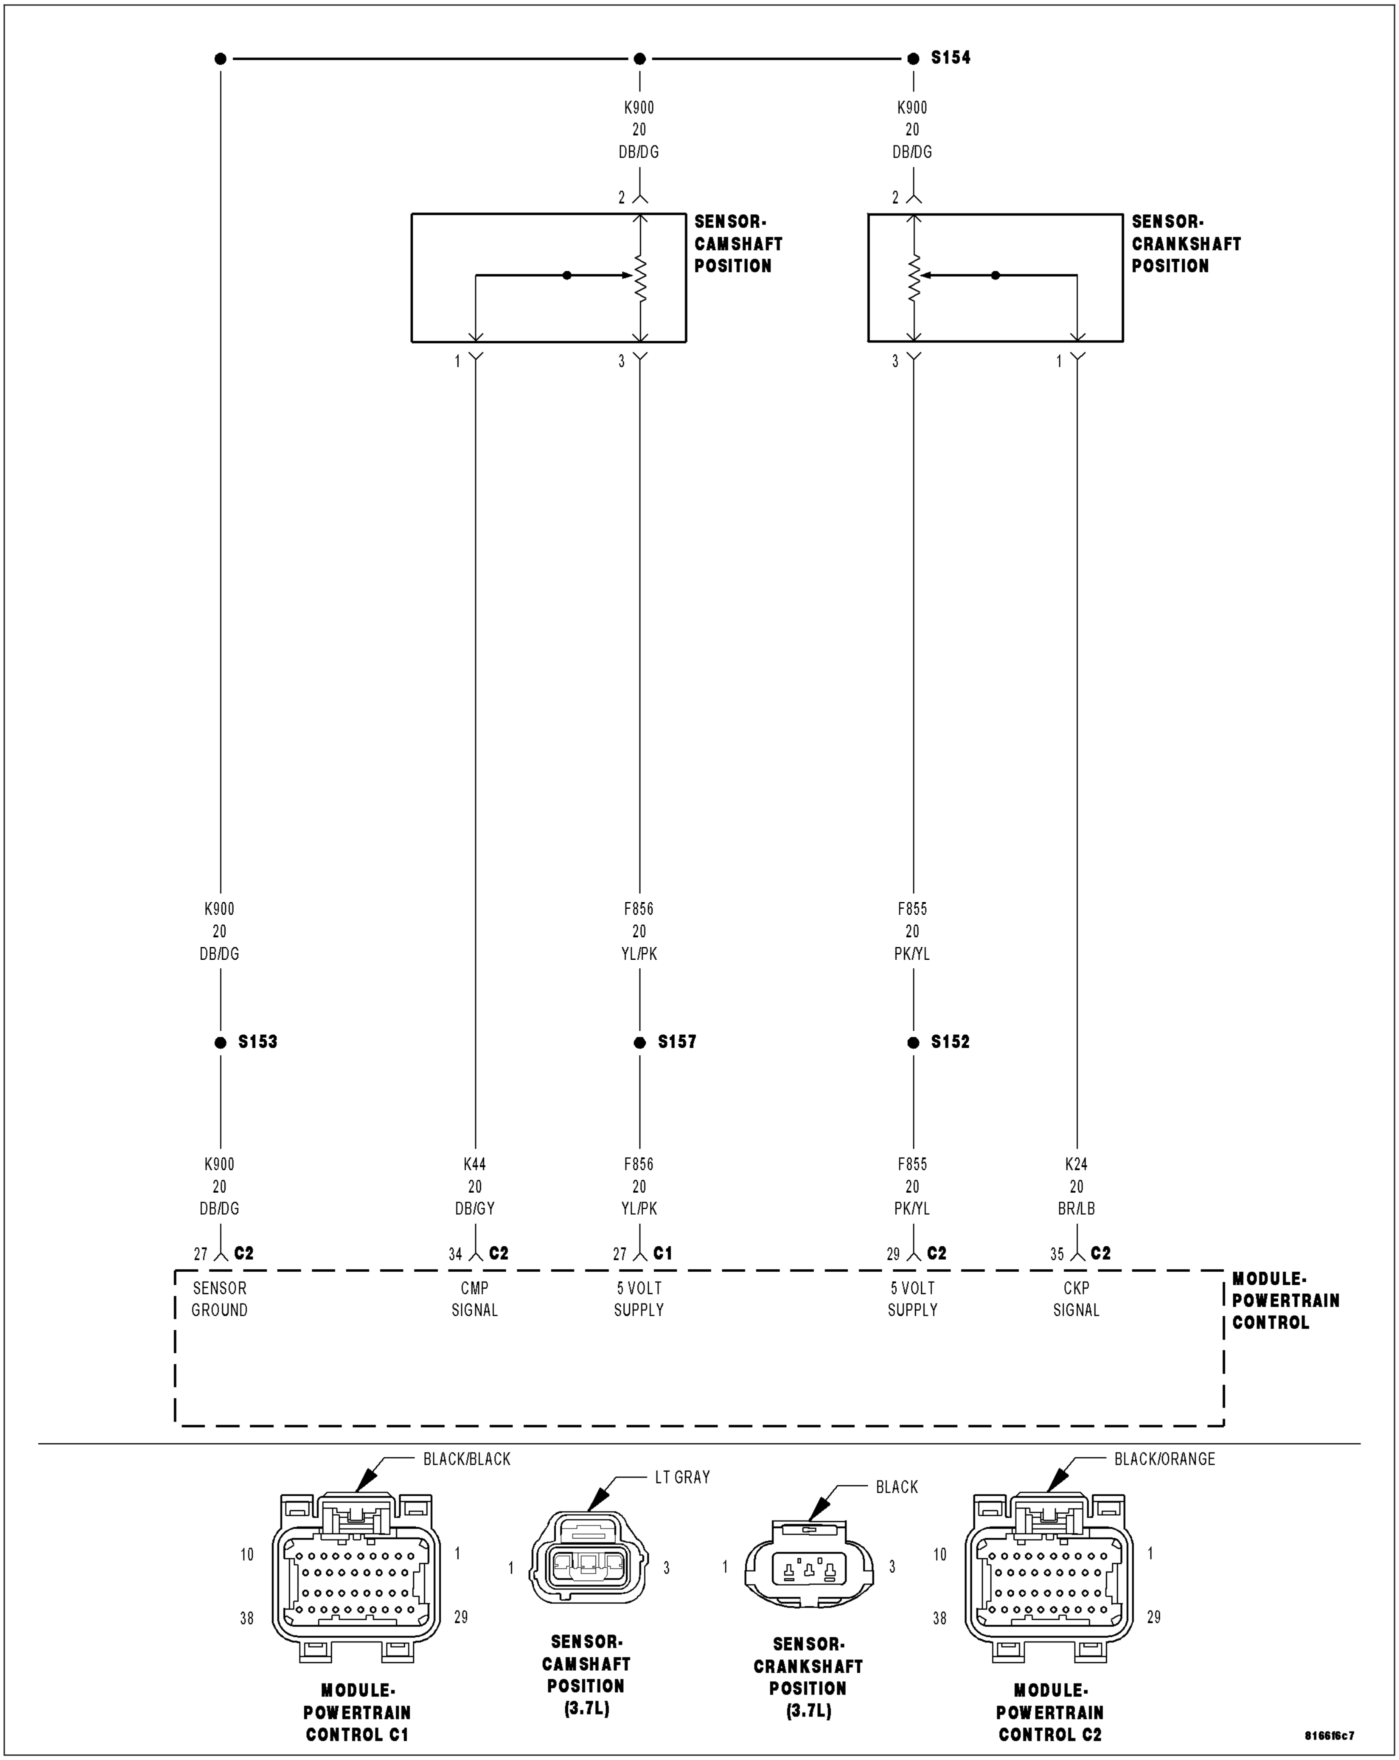
**Did the CMP Sensor generate any pulses?**

**Yes** >> Inspect the related wire harness and replace the Camshaft Position Sensor if no wiring problems were found.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Test Complete.

# P0339-CRANKSHAFT POSITION SENSOR INTERMITTENT



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  While cranking the engine and with the engine running.
- **Set Condition:**
  When the CKP Sensor failure counter reaches 20. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (F855) 5-VOLT SUPPLY CIRCUIT OPEN |
| (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| (K24) CKP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K24) CKP SIGNAL CIRCUIT OPEN |
| (K24) CKP SIGNAL CIRCUIT SHORTED TO GROUND |
| (K24) CKP SIGNAL CIRCUIT SHORTED TO THE (F855) 5-VOLT SUPPLY CIRCUIT |
| CRANKSHAFT POSITION SENSOR |
| TONE WHEEL/PULSE RING |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. CHECKING CRANKSHAFT POSITION SENSOR SIGNAL WITH A LAB SCOPE

Turn the ignition off.

With a lab scope probe and the Miller special tool #6801, backprobe the (K24) CKP Signal circuit in the Sensor harness connector.

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

Ignition on, engine not running.

Observe the lab scope screen.

Start the engine.

Observe the lab scope screen.

**Are there any irregular or missing signals?**

**Yes** >> Go To 3

**No** >> Go To 8

## 3. WIRE HARNESS INSPECTION

Turn the ignition off.

Visually inspect the related wire harness including the ground circuit. Look for any chafed, pierced, pinched, or partially broken wires.

Visually inspect the related wire harness connectors. Look for broken, bent, pushed out, or corroded terminals.

Make sure the Crankshaft Position Sensor and the Camshaft Position Sensor are properly installed and the mounting bolt(s) are torqued to the proper specification.

Refer to any TSBs that may apply.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. (F855) 5-VOLT SUPPLY CIRCUIT OPEN OR SHORTED TO GROUND

Disconnect the CKP Sensor connector.

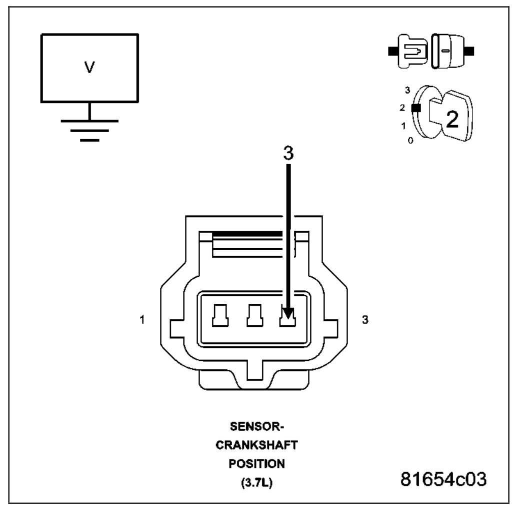
Ignition on, engine not running.

Measure the voltage on the (F855) 5-volt Supply circuit in the Sensor harness connector.

**Is the voltage between 4.5 and 5.2 volts?**

**Yes** >> Go To 5

**No** >> Repair the open or short to ground in the (F855) 5-volt Supply circuit. Use Miller special tool #8815 when checking for an open circuit to prevent PCM harness connector terminal damage.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)



## 5. TONE WHEEL/FLEX PLATE INSPECTION

Turn the ignition off.

Carefully disconnect the Negative Battery (Ground) cable.

Remove the Crankshaft Position Sensor.

Inspect the Tone Wheel/Flex Plate slots for damage, foreign material, or excessive movement.

**Were any problems found?**

**Yes** >> Repair or replace the Tone Wheel/Flex Plate as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. CHECKING CAMSHAFT POSITION SENSOR SIGNAL WITH A LAB SCOPE

Install the CKP Sensor and connect the battery cable.

**NOTE: An intermittent condition in the Cam Position Sensor can cause the P0339 to set.**

With the a lab scope probe and the Miller special tool #6801, backprobe the (K44) CMP Signal circuit in the Sensor harness connector.

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

Ignition on, engine not running.

Wiggle the related wire harness and lightly tap on the Cam Position Sensor.

Observe the lab scope screen.

Start the engine.

Observe the lab scope screen.

**Are there any irregular or missing signals?**

**Yes** >> Replace the Cam Position Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 7. CRANKSHAFT POSITION SENSOR

**If there are no possible causes remaining, view repair.**

**Repair**

Replace the Crankshaft Position Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 8. (K24) CKP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

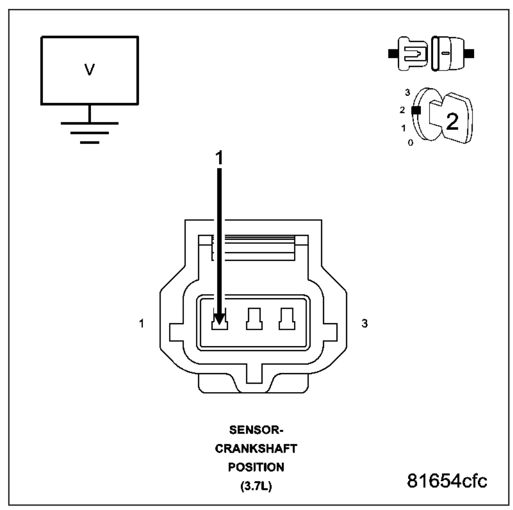
Disconnect the C2 PCM harness connector.

Disconnect the CKP Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (K24) CKP Signal circuit in the Sensor harness connector.

Wiggle the related wire harness while taking this measurement.



**Is the voltage above 1 volt?**

**Yes** >> Repair the short to battery voltage in the (K24) CKP Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 9

## 9. (K24) CKP SIGNAL CIRCUIT OPEN

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance in the (K24) CKP Signal circuit from the CKP harness connector to the appropriate terminal of special tool #8815.

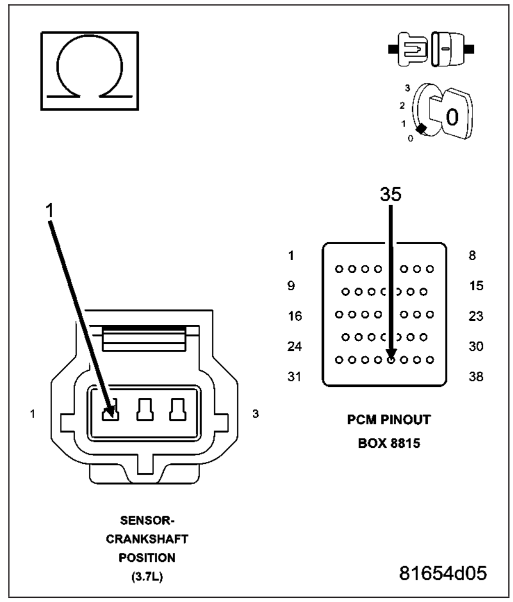
Wiggle the wire harness while taking this measurement.

**Is the resistance below 1.0 ohm?**

**Yes** >> Go To 10

**No** >> Repair the excessive resistance in the (K24) CKP Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)



## 10. (K24) CKP SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K24) CKP Signal circuit in the CKP Sensor harness connector.

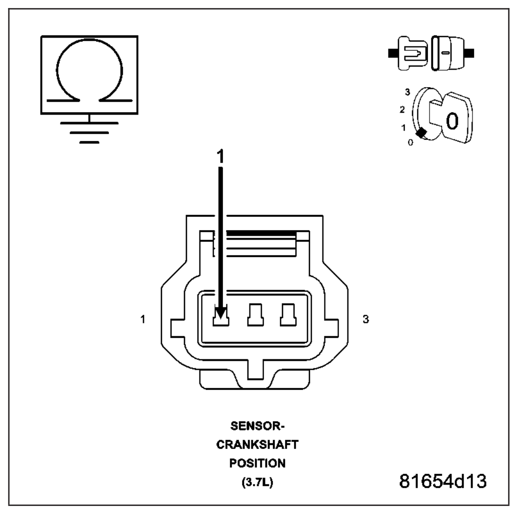
Wiggle the related wire harness while monitoring the resistance value.

**Does the resistance ever go below 100 ohms?**

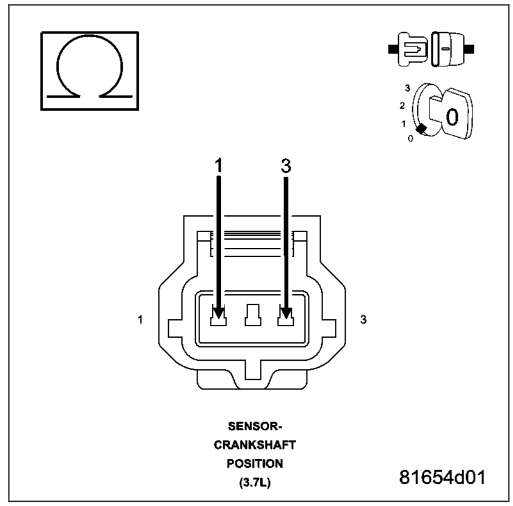
**Yes** >> Repair the short to ground in the (K24) Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 11



## 11. (K24) CKP SIGNAL CIRCUIT SHORTED TO THE (F855) 5-VOLT SUPPLY CIRCUIT



Measure the resistance between the (F855) 5-volt Supply circuit and the (K24) CKP Signal circuit in the CKP harness connector.

Wiggle the related wire harness while taking this measurement.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (F855) 5-volt Supply circuit and the (K24) CKP Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 12

## 12. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

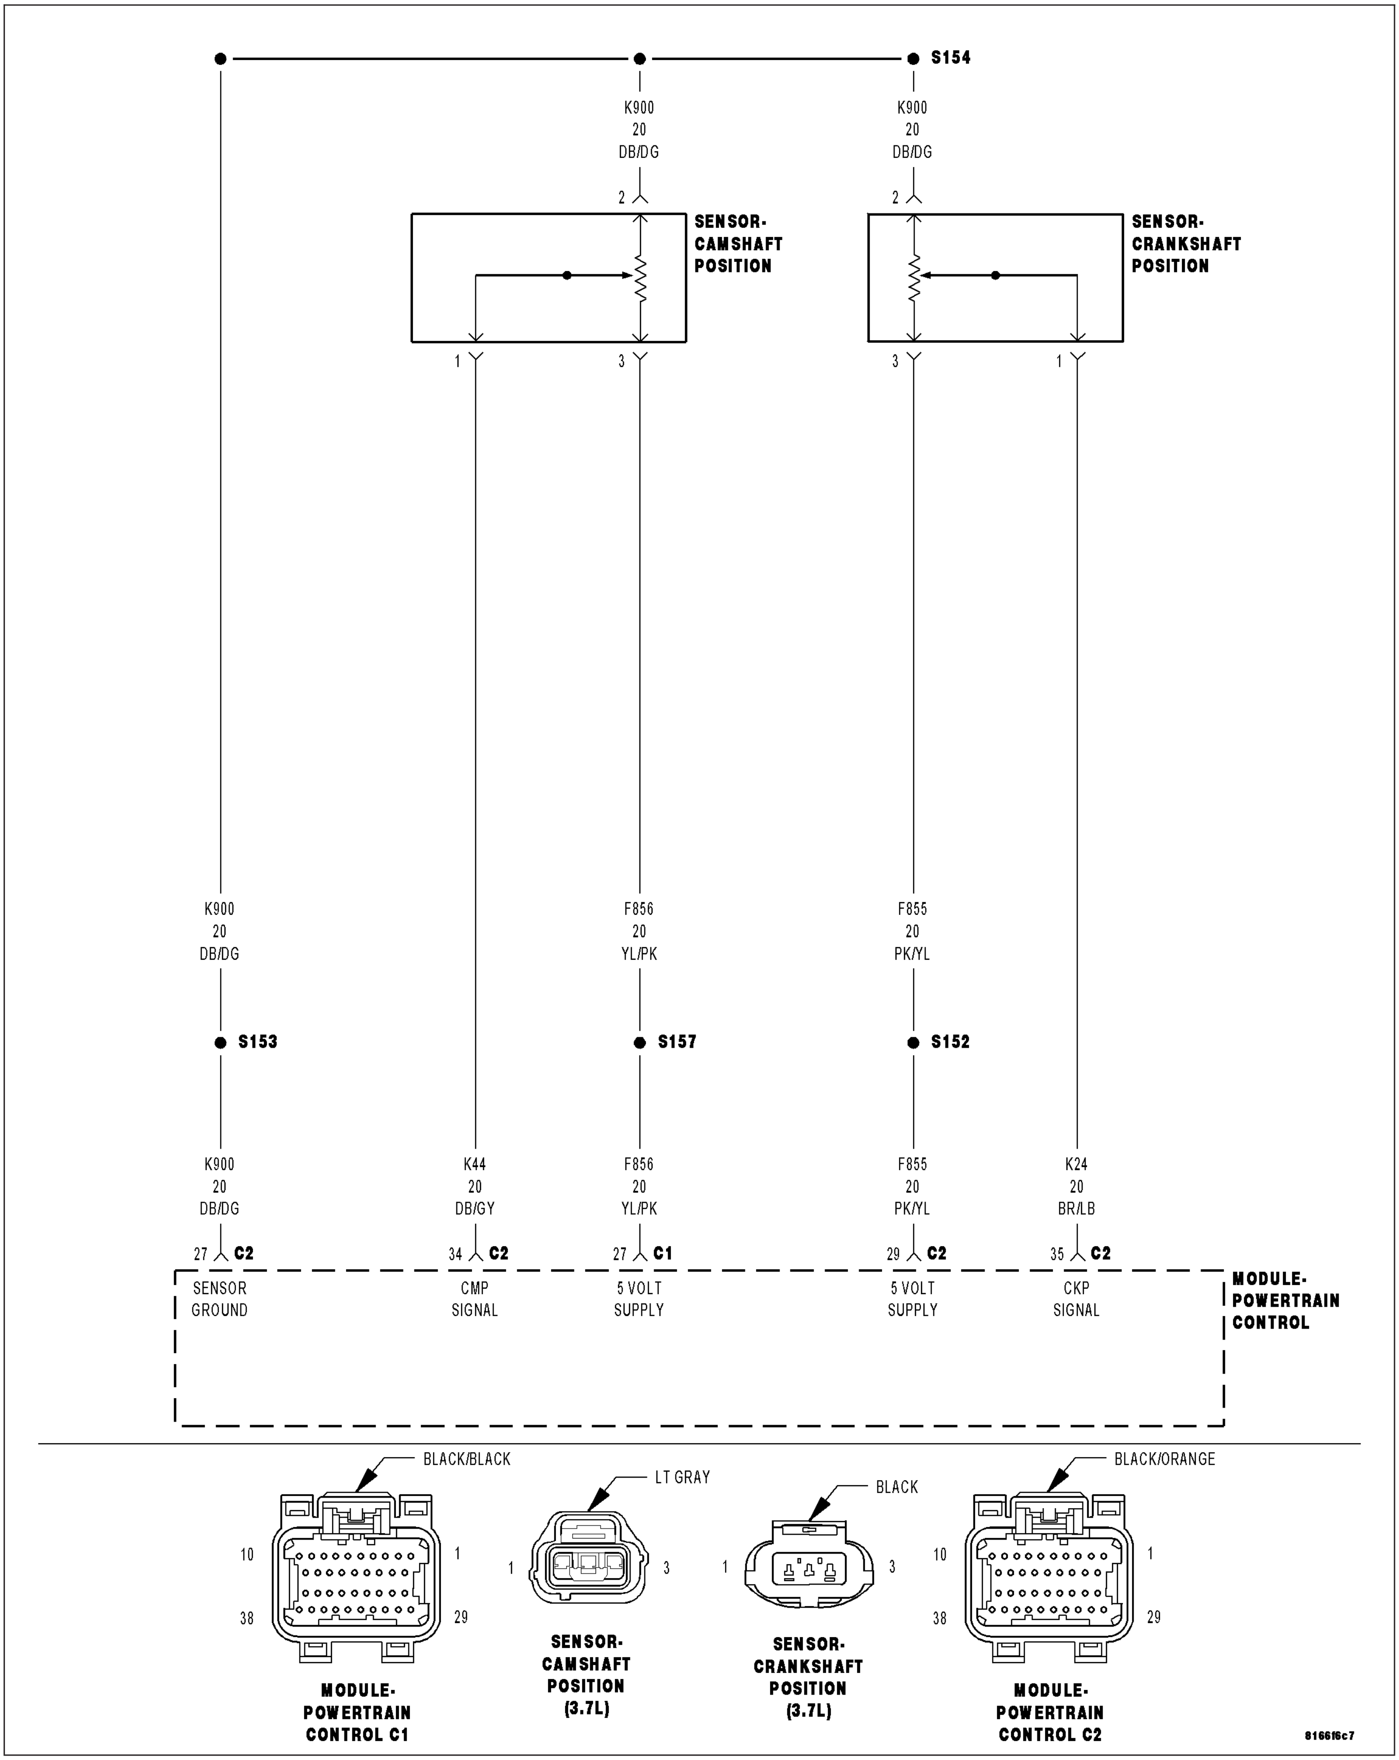
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0340-CAMSHAFT POSITION SENSOR CIRCUIT



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  During engine cranking and with the engine running. Battery voltage greater than 10 volts.
- **Set Condition:**
  At least 5 seconds or 2.5 engine revolutions have elapsed with crankshaft position sensor signals present but no camshaft position sensor signal. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (F856) 5-VOLT SUPPLY CIRCUIT OPEN |
| (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| (K44) CMP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K44) CMP SIGNAL CIRCUIT OPEN |
| (K44) CMP SIGNAL CIRCUIT SHORTED GROUND |
| (K44) CMP SIGNAL SHORTED TO THE (F856) 5-VOLT SUPPLY CIRCUIT |
| (K900) SENSOR GROUND CIRCUIT OPEN |
| CAMSHAFT POSITION SENSOR |
| CRANKSHAFT POSITION SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Crank the engine.

Ignition on, engine not running.

With a scan tool read the DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Go To 14

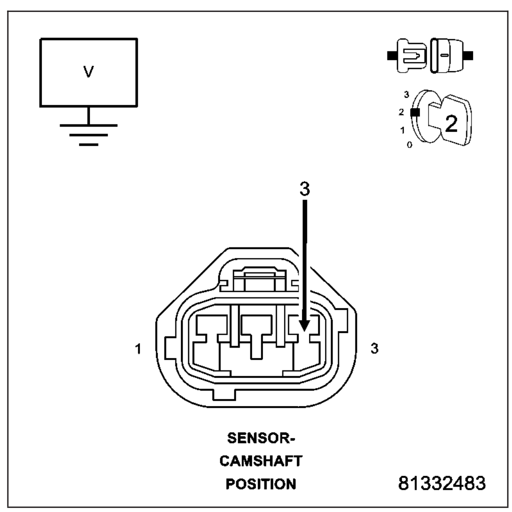
### 2. (F856) 5-VOLT SUPPLY CIRCUIT

Turn the ignition off.

Disconnect the CMP Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F856) 5-volt Supply circuit in the CMP Sensor harness connector.



**Is the voltage between 4.5 and 5.2 volts?**

**Yes** >> Go To 3

**No** >> Go To 10

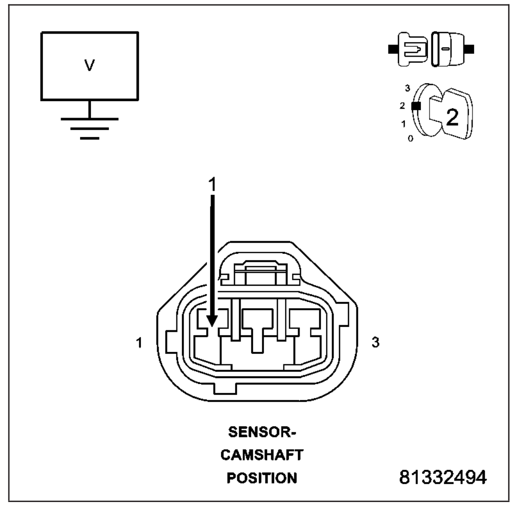
## 3. (K44) CMP SIGNAL CIRCUIT

Measure the voltage on the (K44) CMP Signal circuit in the CMP Sensor harness connector.

**Is the voltage between 4.5 and 5.0 volts?**

**Yes** >> Go To 4

**No** >> Go To 7



## 4. (K900) SENSOR GROUND CIRCUIT OPEN

Turn the ignition off.

Disconnect the C1 and C2 PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

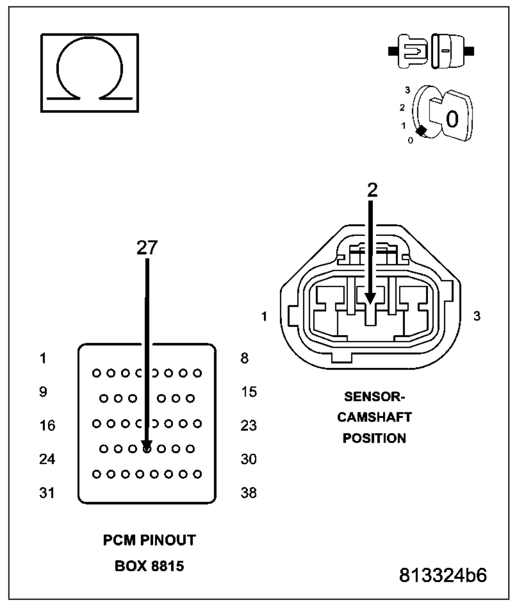
Measure the resistance of the (K900) Sensor ground circuit from the CMP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

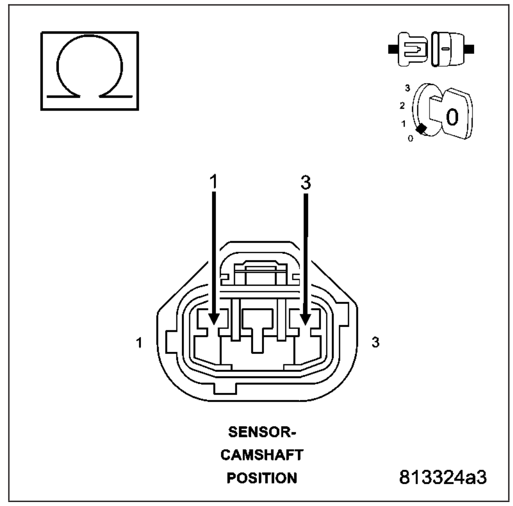
**No** >> Repair the open in the (K900) Sensor ground circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)



## 5. (K44) CMP SIGNAL SHORTED TO THE (F856) 5-VOLT SUPPLY CIRCUIT

Measure the resistance between the (K44) CMP Signal circuit and the (F856) 5-volt Supply circuit in the CMP Sensor harness connector.



**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K44) CMP Signal circuit and the (F856) 5-volt Supply circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. CAMSHAFT POSITION SENSOR

**NOTE: Inspect the Camshaft sprocket for damage per the Service Information. If a problem is found repair as necessary.**

**If there are no possible causes remaining, view repair.**

**Repair**

Replace the Camshaft Position Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

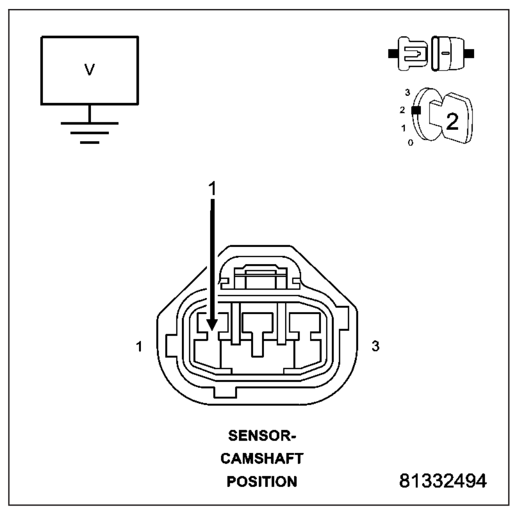
## 7. (K44) CMP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (K44) CMP Signal circuit in the CMP Sensor harness connector.



**Is the voltage above 0 volts?**

**Yes** >> Repair the short to battery voltage in the (K44) CMP Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

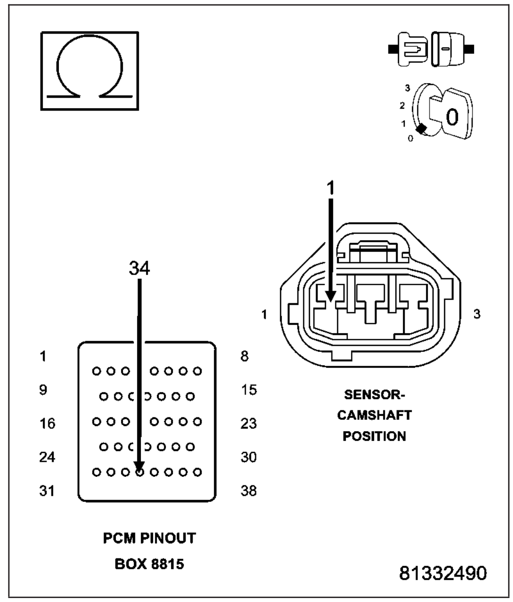
**No** >> Go To 8

## 8. (K44) CMP SIGNAL CIRCUIT OPEN

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K44) CMP Signal circuit from the CMP Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

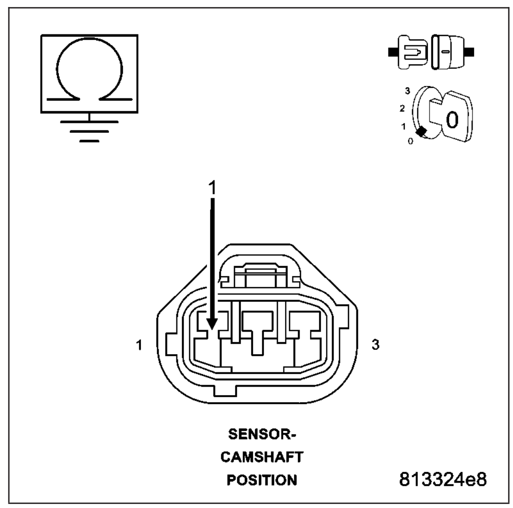
**Yes** >> Go To 9

**No** >> Repair the open in the (K44) CMP Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 9. (K44) CMP SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K44) CMP Signal circuit in the CMP Sensor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K44) CMP Signal circuit

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 10

## 10. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the C1 PCM harness connector.

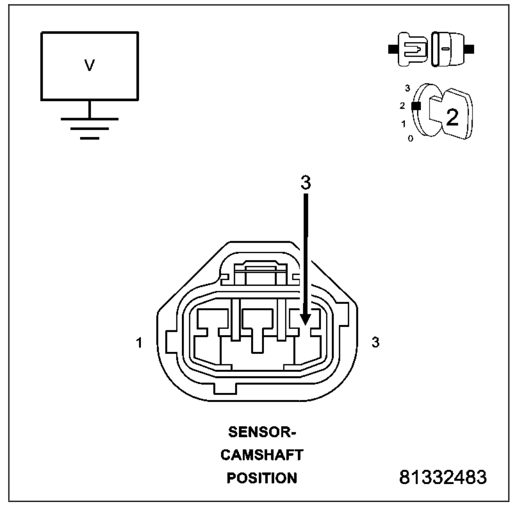
Ignition on, engine not running.

Measure the voltage on the (F856) 5-volt Supply circuit in the CMP Sensor harness connector.

**Is the voltage above 0 volts?**

**Yes** >> Repair the short to battery voltage in the (F856) 5-volt Supply circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 11



## 11. (F856) 5-VOLT SUPPLY CIRCUIT OPEN

Turn the ignition off.

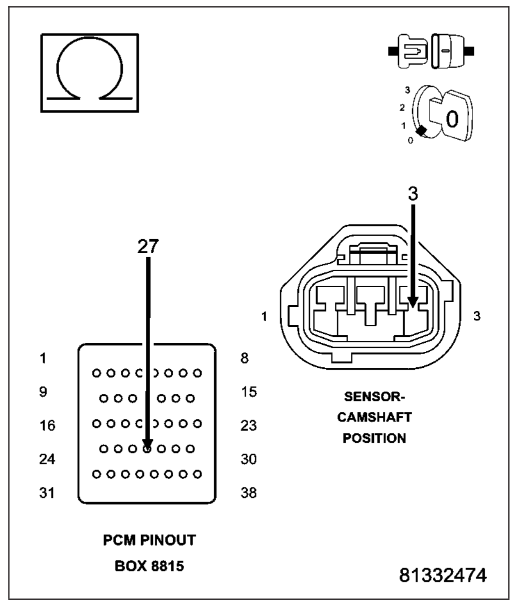
**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F856) 5-volt Supply circuit between the CMP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

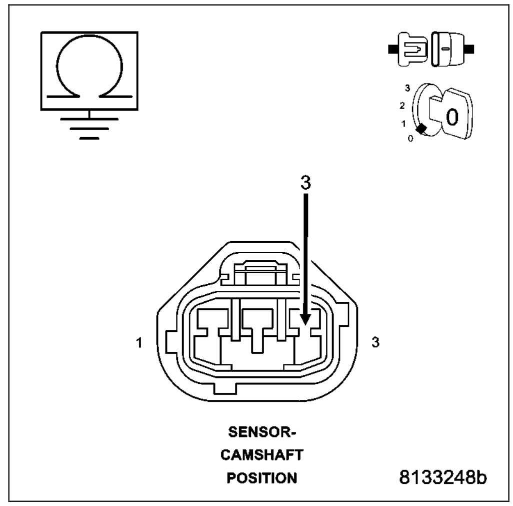
**Yes** >> Go To 12

**No** >> Repair the open in the (F856) 5-volt Supply circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)



## 12. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (F856) 5-volt Supply circuit in the CMP Sensor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F856) 5-volt Supply circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 13

## 13. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 14. ERRATIC CMP SIGNAL

With a lab scope probe and the Miller special tool #6801, back probe the (K44) CMP Signal circuit in the CMP harness connector.

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

Ignition on, engine not running.

Wiggle the related wire harness and lightly tap the Camshaft Position Sensor.

Observe the lab scope screen.

Allow the engine to idle.

Observe the lab scope screen.

**Did the CMP Sensor generate any erratic pulses?**

**Yes** >> Replace the Camshaft Position Sensor.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 15

## 15. ERRATIC CKP SIGNAL

Turn the ignition off.

With a lab scope probe and the Miller special tool #6801, backprobe the (K24) CKP Signal circuit in the CKP harness connector.

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

Ignition on, engine not running.

Wiggle the related wire harness and lightly tap on the Crankshaft Position Sensor.

Observe the lab scope screen.

Allow the engine to idle.

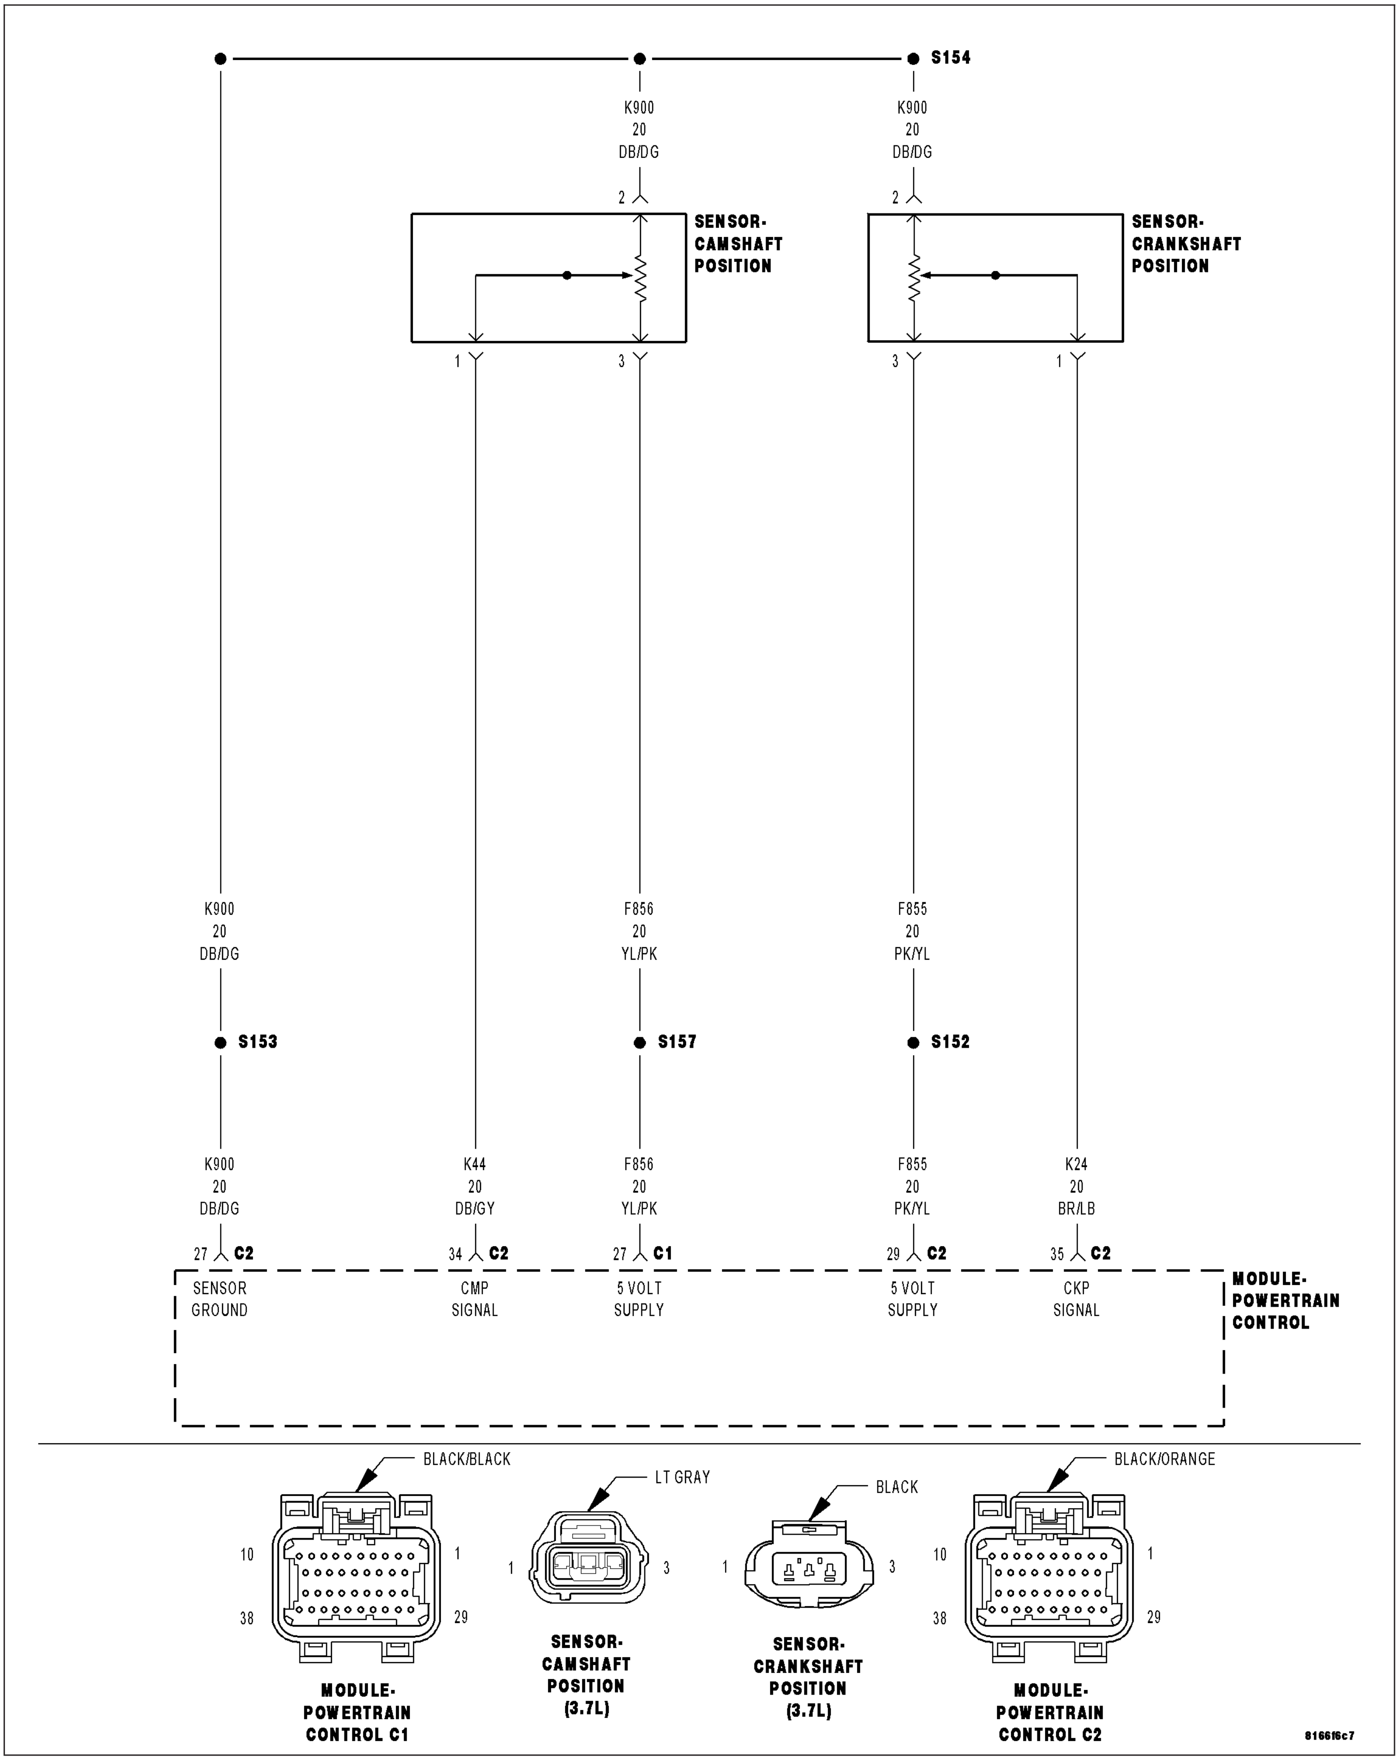
Observe the lab scope screen.

**Did the CKP Sensor generate any erratic pulses?**

**Yes** >> Replace the Crankshaft Position Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Test Complete.

## P0344-CAMSHAFT POSITION SENSOR INTERMITTENT



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  While cranking the engine and engine running.
- **Set Condition:**
  When the failure counter reaches 20. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
| --- |
| (F856) 5-VOLT SUPPLY CIRCUIT OPEN |
| (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| (K44) CMP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K44) CMP SIGNAL CIRCUIT OPEN |
| (K44) CMP SIGNAL CIRCUIT SHORTED TO GROUND |
| (K44) CMP SIGNAL CIRCUIT SHORTED TO THE (F856) 5-VOLT SUPPLY CIRCUIT |
| TONE WHEEL/PULSE RING |
| CAMSHAFT POSITION SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. CHECKING CAMSHAFT POSITION SENSOR SIGNAL WITH A LAB SCOPE

Turn the ignition off.

With a lab scope probe and the Miller special tool #6801, backprobe the (K44) CMP Signal circuit in the CMP harness connector.

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

Ignition on, engine not running.

Observe the lab scope screen.

Start the engine.

Observe the lab scope screen.

**Are there any irregular or missing signals?**

**Yes** >> Go To 3

**No** >> Go To 8

## 3. WIRE HARNESS INSPECTION

Turn the ignition off.

Visually inspect the related wire harness including the ground circuit. Look for any chafed, pierced, pinched, or partially broken wires.

Visually inspect the related wire harness connectors. Look for broken, bent, pushed out, or corroded terminals.

Make sure the Crankshaft Position Sensor and the Camshaft Position Sensor are properly installed and the mounting bolt(s) are torqued to the proper specification.

Refer to any TSBs that may apply.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

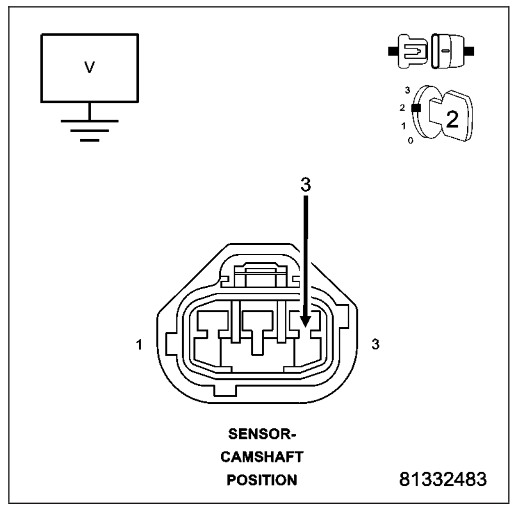
**No** >> Go To 4

## 4. (F856) 5-VOLT SUPPLY CIRCUIT OPEN OR SHORTED TO GROUND

Disconnect the CMP Sensor connector.

Ignition on, engine not running.

Measure the voltage on the (F856) 5-volt Supply circuit in the CMP harness connector.



**Is the voltage between 4.5 and 5.2 volts?**

**Yes** >> Go To 5

**No** >> Repair the open or short to ground in the (F856) 5-volt Supply circuit. Use Miller special tool #8815 when checking for an open circuit to prevent PCM harness connector terminal damage.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. TONE WHEEL/PULSE RING INSPECTION

Turn the ignition off.

Carefully disconnect the Battery Ground cable.

Remove the Camshaft Position Sensor.

Inspect the Tone Wheel/Pulse Ring for damage, foreign material, or excessive movement.

**Were any problems found?**

**Yes** >> Repair or replace the Tone Wheel/Pulse Ring as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. CHECKING CRANKSHAFT POSITION SENSOR SIGNAL WITH A LAB SCOPE

**NOTE: An intermittent condition in the Crank Position Sensor can cause the P0344 to set.**

Install the CMP Sensor and connect the Battery cable.

With a lab scope probe and the Miller special tool #6801, backprobe the (K24) CKP Signal circuit in the CKP harness connector.

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

Ignition on, engine not running.

Wiggle the related wire harness and lightly tap on the Crank Position Sensor.

Observe the lab scope screen.

Start the engine.

Observe the lab scope screen.

**Are there any irregular or missing signals?**

**Yes** >> Replace the Crank Position Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 7. CAMSHAFT POSITION SENSOR

**If there are no possible causes remaining, view repair.**

**Repair**

Replace the Camshaft Position Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 8. (K44) CMP SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the CMP Sensor connector.

Disconnect the C1 and C2 PCM harness connectors.

Ignition on, engine not running.

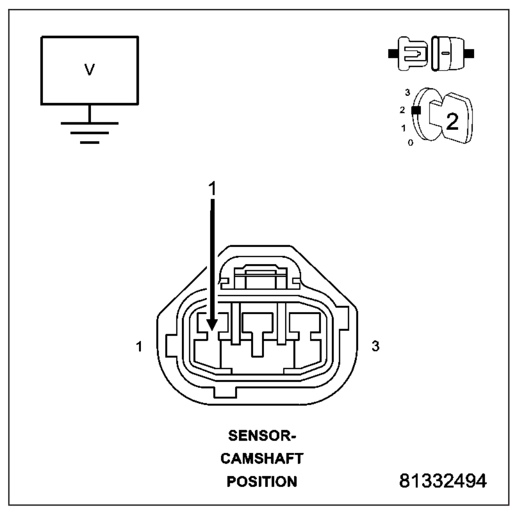
Measure the voltage on the (K44) CMP Signal circuit.

Wiggle the related wire harness while taking this measurement.

**Does the voltage ever increase above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K44) CMP Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 9



## 9. (K44) CMP SIGNAL CIRCUIT OPEN

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance in the (K44) CMP Signal circuit from the CMP harness connector to the appropriate terminal of special tool #8815.

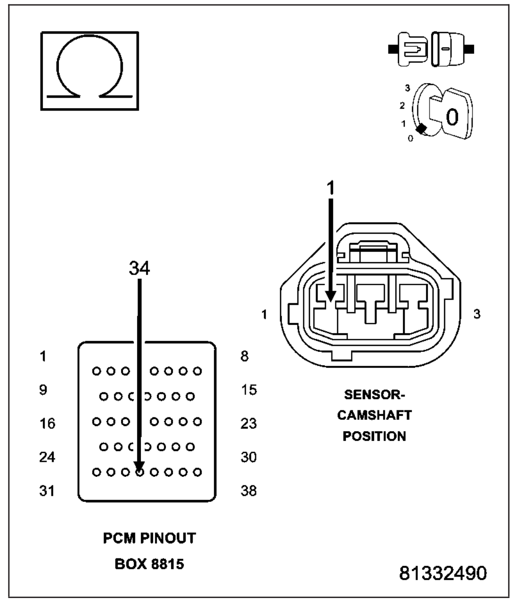
Wiggle the related wire harness while taking this measurement.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 10

**No** >> Repair the excessive resistance in the (K44) CMP Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)



## 10. (K44) CMP SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K44) CMP Signal circuit in the CMP Sensor harness connector.

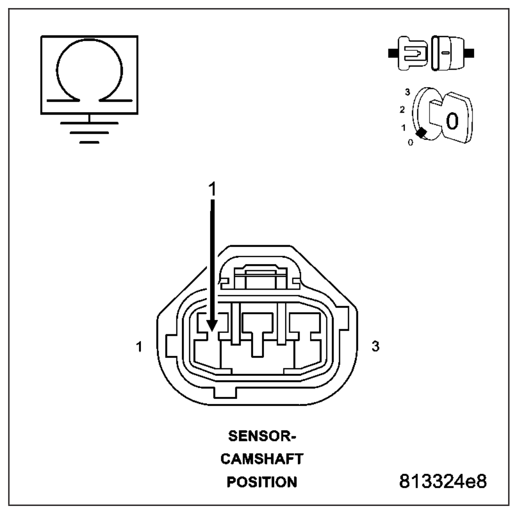
Wiggle the related wire harness while monitoring the resistance value.

**Does the resistance ever go below 100 ohms?**

**Yes** >> Repair the short to ground in the (K44) CMP Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 11



## 11. (K44) CMP SIGNAL CIRCUIT SHORTED TO THE (F856) 5-VOLT SUPPLY CIRCUIT

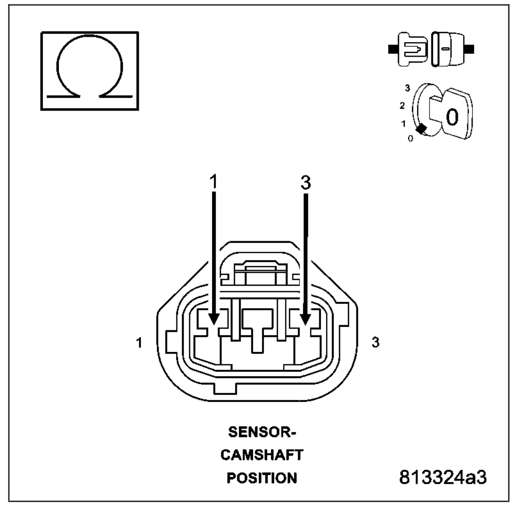
Measure the resistance between the (F856) 5-volt Supply circuit and the (K44) CMP Signal circuit in the CMP harness connector.

Wiggle the related wire harness while taking this measurement.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (F856) 5-volt Supply circuit and the (K44) CMP Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 12



## 12. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

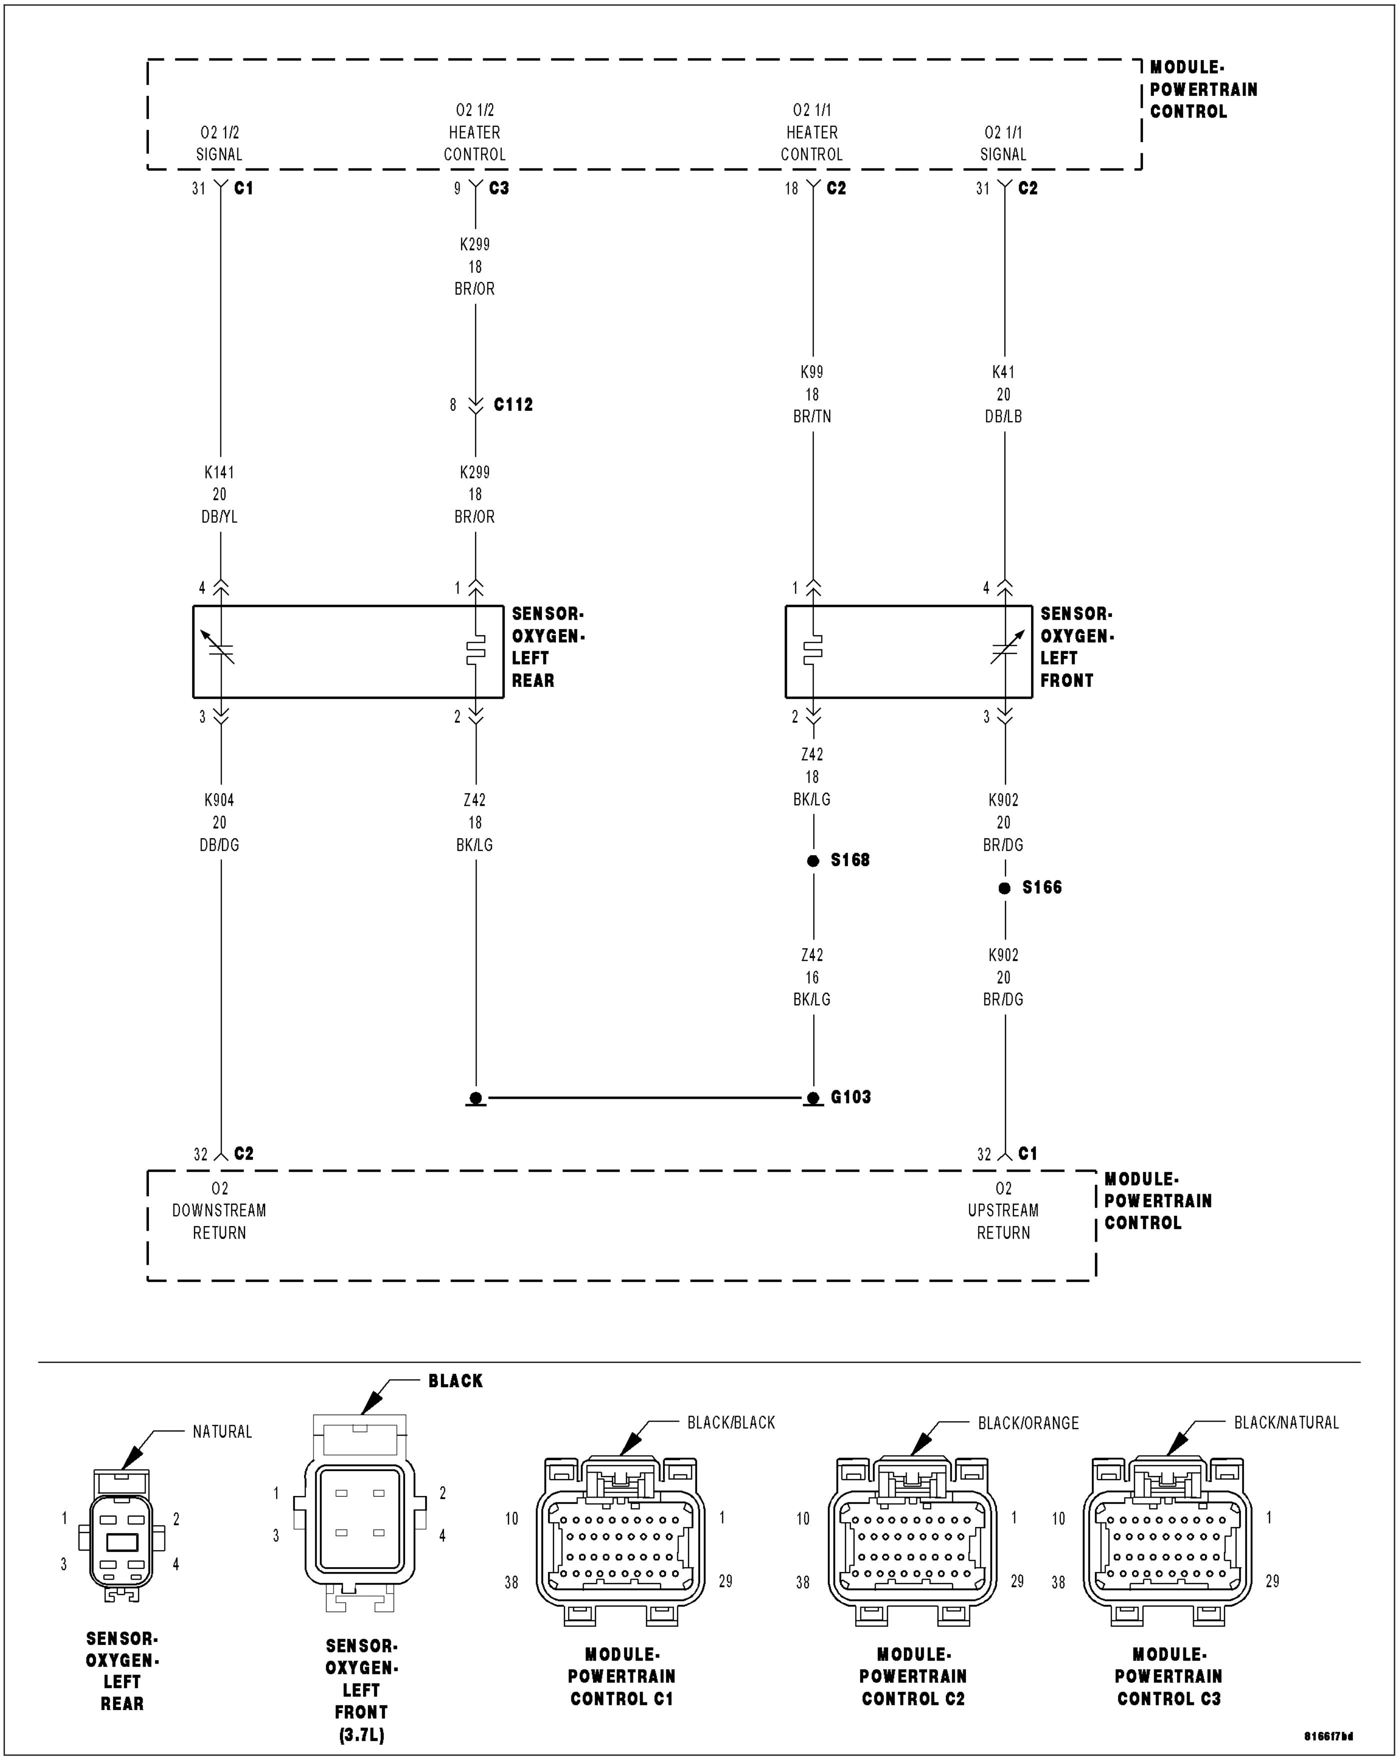
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0420-CATALYST 1/1 EFFICIENCY



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The State of Change (SOC) catalyst monitor uses the signals from both the upstream and downstream O2 sensors to detect aging of the catalyst. Based on the fact that when a catalyst ages, it loses some of its Oxygen Storage Capacity (OSC). As a result, part of the untreated exhaust gases can breakthrough the catalyst and causes the downstream O2 sensor to deviate from its neutral (Stoichiometric) position. By observing the activities in the downstream O2 signal, the degradation level of catalyst can be detected. In general, the higher the downstream O2 sensor SOC value, the more exhaust gas breakthrough and the lower the OSC of the catalytic converter.

- **When Monitored:**
  The monitor will run at between 1400 and 2300 RPM. It also runs between 40 and 70 KPA.
- **Set Condition:**
  If the final State of Change index is within the calibrated fail threshold. Two trip fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| EXHAUST LEAK |
| ENGINE MECHANICAL CONDITION |
| AGING O2 SENSOR |
| CATALYTIC CONVERTER |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: A new rear O2 Sensor along with an aging front O2 Sensor may cause the DTC to set. Review the repair history of the vehicle before continuing.**

**NOTE: If an O2 Sensor DTC set along with the Catalytic Converter Efficiency DTC diagnose the O2 Sensor DTC(s) before continuing.**

**NOTE: Check for contaminants that may have damaged the O2 Sensor and Catalytic Converter: contaminated fuel, unapproved silicone, oil and coolant, repair necessary.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. VISUALLY INSPECT CATALYTIC CONVERTER

Inspect the Catalytic Converter for the following damage.

Damage Catalytic Converter, dents or holes.

Severe discoloration caused by overheating the Catalytic Converter.

Catalytic Converter broke internally.

Inspect both ends of the converter, inlet and outlet.

Leaking Catalytic Converter.

**Were any problems found?**

**Yes** >> Replace the Catalytic Converter. Repair the condition that may have caused the failure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. EXHAUST LEAK

Start the engine.

Inspect the exhaust for leaks between the engine and the 1/1 O2 Sensor.

Inspect the exhaust for leaks between the engine and the 1/2 O2 Sensor.

Turn the ignition off.

If a leak is heard but unable to be located, it may be necessary to use special tool Miller Tool #8404A Evaporative Emissions Leak Detector (EELD) on the exhaust system to find leaks.

Connect the SMOKE supply tip (black hose) to the exhaust cone adapter (if equipped) and place it into the tail pipe.

Set the smoke/air control switch to SMOKE.

Press the remote smoke/air start button.

While still holding the remote smoke/air start button, use the white light (#8404-CLL) to follow the EVAP system path, and look for the source of the leak indicated by exiting smoke.

If a leak is concealed from view, release the remote smoke/air start button, and use the ultraviolet (UV) black light #8404-UVL and the yellow goggles 8404-20 to look for residual traces of dye that is left behind by the smoke.

The exiting smoke deposits a residual fluid that is either bright green or bright yellow in color when viewed with a UV light.

Be sure to check the exhaust manifold to cylinder head connection for leaks.

**Are there any exhaust leaks?**

**Yes** >> Repair or replace the leaking exhaust parts as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. ENGINE MECHANICAL CONDITION

Check the exhaust for excessive smoke caused by an internal problem in the engine.

**Is an engine mechanical condition present?**

**Yes** >> Repair the engine mechanical condition as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. AGING O2 SENSOR

A new rear O2 Sensor along with an aging front O2 Sensor may cause the DTC to set.

Review the vehicles repair history.

**Has the rear O2 Sensor been replaced without replacing the front O2 Sensor?**

**Yes** >> Replace the Front O2 Sensor as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

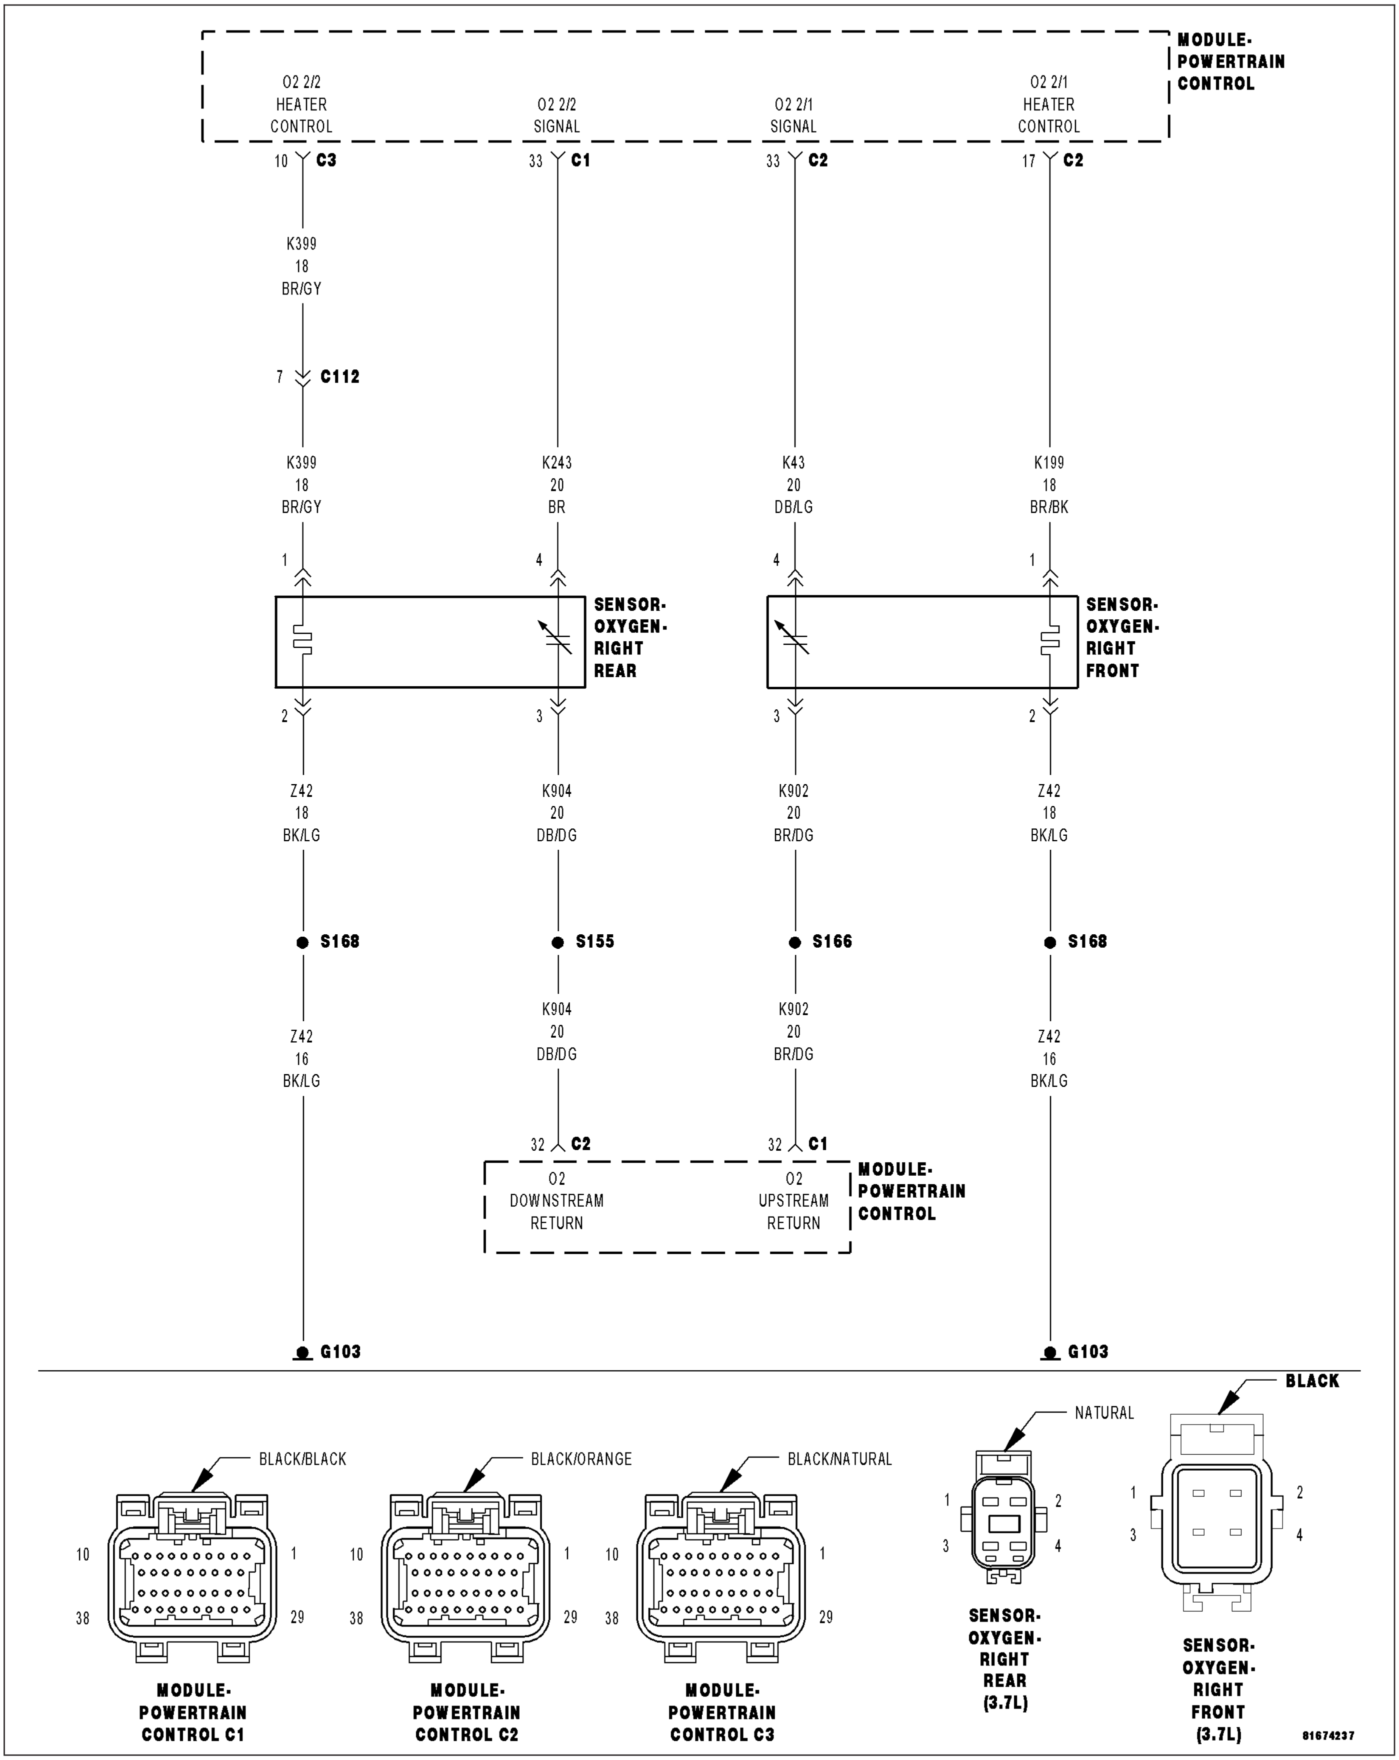
## 6. CATALYTIC CONVERTER

**If there are no possible cause remaining, view repair.**

**Repair**

Replace the Catalytic Converter.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0430-CATALYST 2/1 EFFICIENCY



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The State of Change (SOC) catalyst monitor uses the signals from both the upstream and downstream O2 sensors to detect aging of the catalyst. Based on the fact that when a catalyst ages, it loses some of its Oxygen Storage Capacity (OSC). As a result, part of the untreated exhaust gases can breakthrough the catalyst and causes the downstream O2 sensor to deviate from its neutral (Stoichiometric) position. By observing the activities in the downstream O2 signal, the degradation level of catalyst can be detected. In general, the higher the downstream O2 sensor SOC value, the more exhaust gas breakthrough and the lower the OSC of the catalytic converter.

- **When Monitored:**
  The monitor will run at between 1400 and 2300 RPM. It also runs between 40 and 70 KPA.
- **Set Condition:**
  If the final State of Change index is within the calibrated fail threshold. Two trip fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| EXHAUST LEAK |
| ENGINE MECHANICAL CONDITION |
| AGING O2 SENSOR |
| CATALYTIC CONVERTER |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: A new rear O2 Sensor along with an aging front O2 Sensor may cause the DTC to set. Review the repair history of the vehicle before continuing.**

**NOTE: If an O2 Sensor DTC set along with the Catalytic Converter Efficiency DTC diagnose the O2 Sensor DTC(s) before continuing.**

**NOTE: Check for contaminants that may have damaged the O2 Sensor and Catalytic Converter: contaminated fuel, unapproved silicone, oil and coolant, repair necessary.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. VISUALLY INSPECT CATALYTIC CONVERTER

Inspect the Catalytic Converter for the following damage.

Damage Catalytic Converter, dents or holes.

Severe discoloration caused by overheating the Catalytic Converter.

Catalytic Converter broke internally.

Inspect both ends of the converter, inlet and outlet.

Leaking Catalytic Converter.

**Were any problems found?**

**Yes** >> Replace the Catalytic Converter. Repair the condition that may have caused the failure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. EXHAUST LEAK

Start the engine.

Inspect the exhaust for leaks between the engine and the 2/1 O2 Sensor.

Inspect the exhaust for leaks between the engine and the 2/2 O2 Sensor.

Turn the ignition off.

If a leak is heard but unable to be located, it may be necessary to use special tool Miller Tool #8404A Evaporative Emissions Leak Detector (EELD) on the exhaust system to find leaks.

Connect the SMOKE supply tip (black hose) to the exhaust cone adapter (if equipped) and place it into the tail pipe.

Set the smoke/air control switch to SMOKE.

Press the remote smoke/air start button.

While still holding the remote smoke/air start button, use the white light (#8404-CLL) to follow the EVAP system path, and look for the source of the leak indicated by exiting smoke.

If a leak is concealed from view, release the remote smoke/air start button, and use the ultraviolet (UV) black light #8404-UVL and the yellow goggles 8404-20 to look for residual traces of dye that is left behind by the smoke.

The exiting smoke deposits a residual fluid that is either bright green or bright yellow in color when viewed with a UV light.

Be sure to check the exhaust manifold to cylinder head connection for leaks.

**Are there any exhaust leaks?**

**Yes** >> Repair or replace the leaking exhaust parts as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. ENGINE MECHANICAL CONDITION

Check the exhaust for excessive smoke caused by an internal problem in the engine.

**Is an engine mechanical condition present?**

**Yes** >> Repair the engine mechanical condition as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. AGING O2 SENSOR

A new rear O2 Sensor along with an aging front O2 Sensor may cause the DTC to set.

Review the vehicles repair history.

**Has the rear O2 Sensor been replaced without replacing the front O2 Sensor?**

**Yes** >> Replace the 2/1 O2 Sensor as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

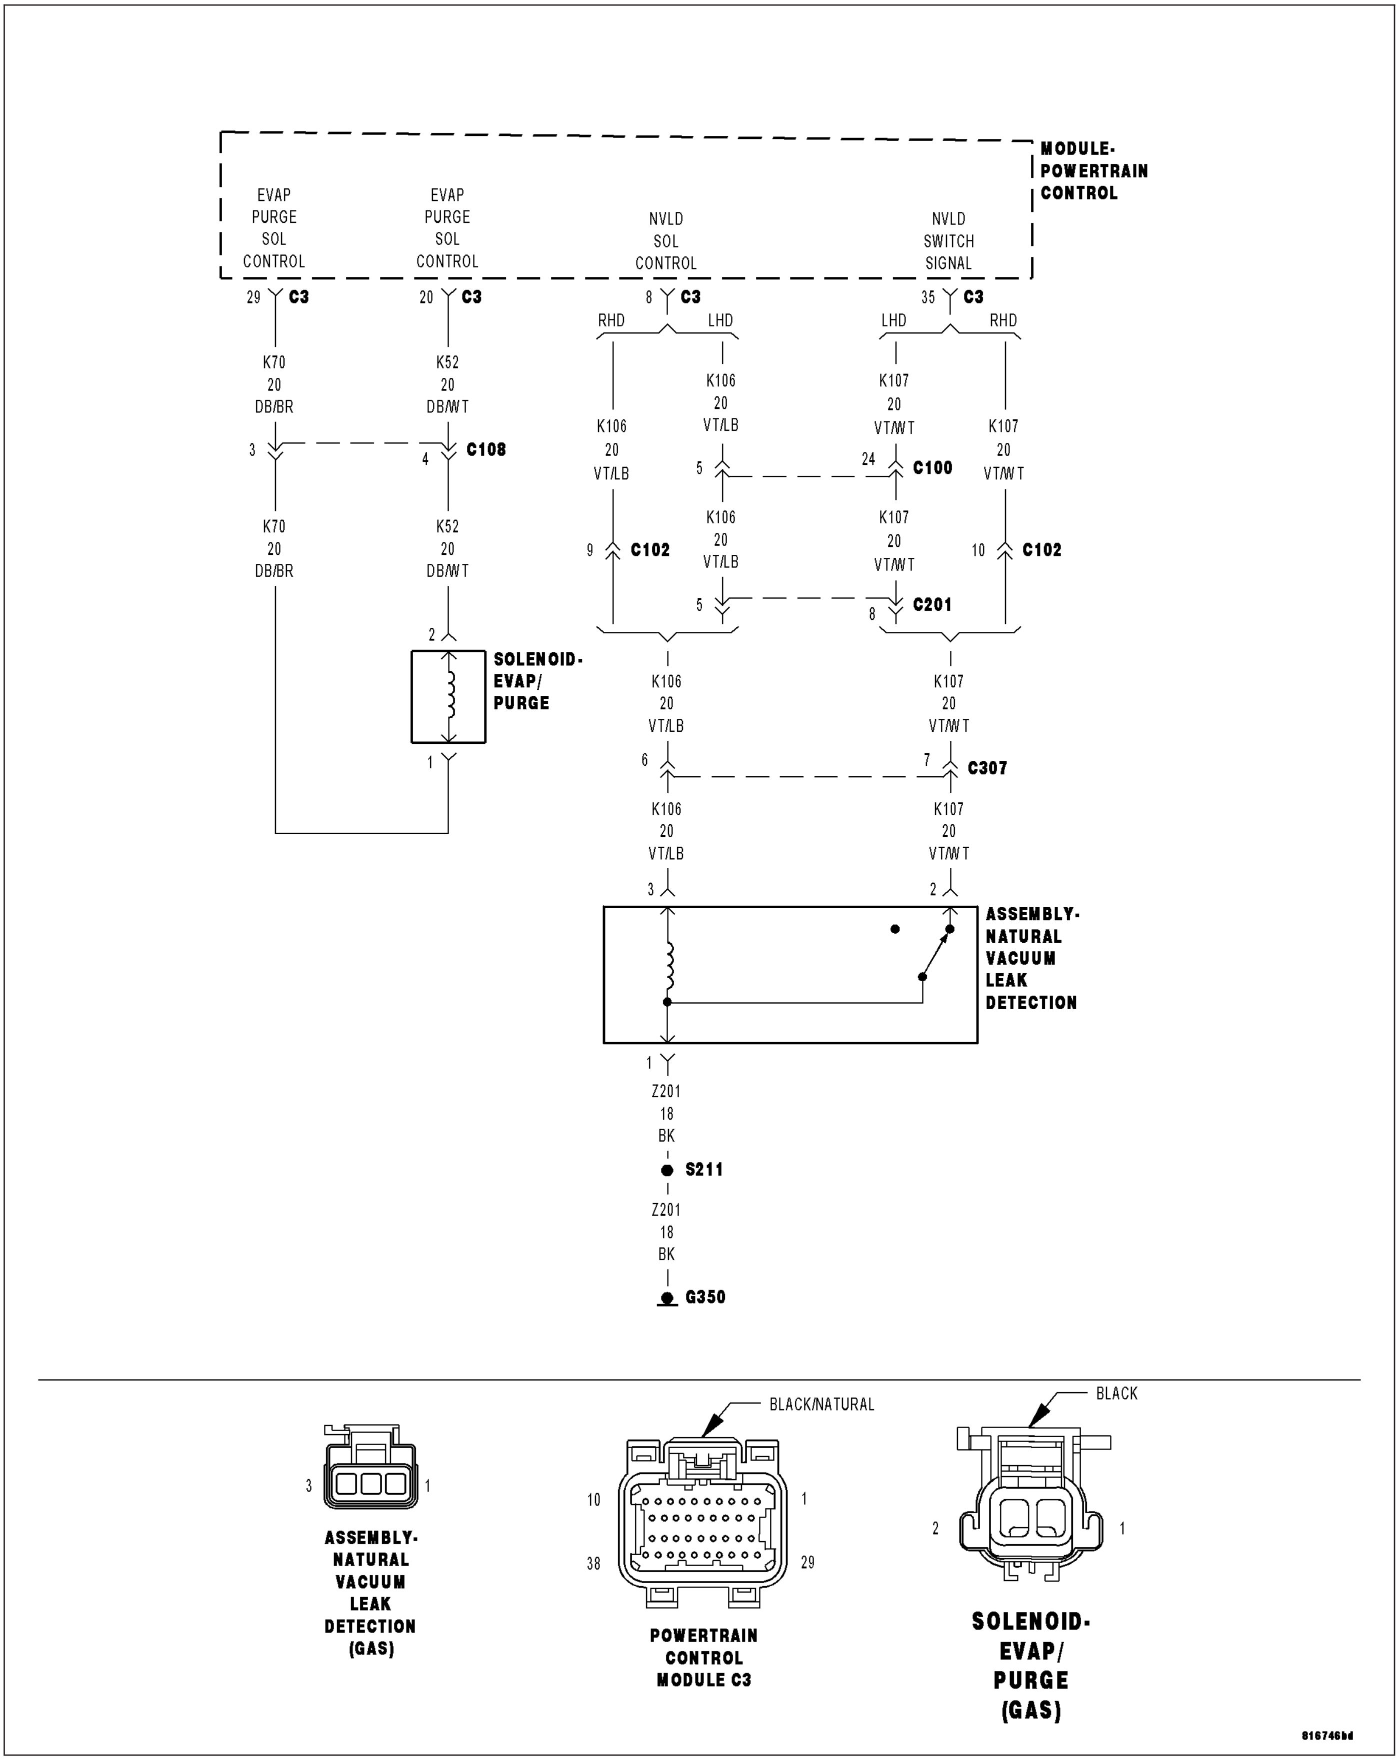
## 6. CATALYTIC CONVERTER

**If there are no possible cause remaining, view repair.**

**Repair**

Replace the Catalytic Converter.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0440-GENERAL EVAP SYSTEM FAILURE



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The theory behind the Natural Vacuum Leak Detection (NVLD) is adherence to the Ideal Gas Law. Pressure in a sealed vessel will change linearly as a function of the temperature of the gas in the vessel. Even small leaks will allow the pressure in the vessel to come to equilibrium with the atmospheric pressure. The General Evap test runs by commanding purge flow during the leak size test and evaluates the NVLD vacuum switch.

- **When Monitored:**
  Engine running after a cold start. Fuel Level greater than 12%. Fuel level below 88%. No NVLD switch during previous eng off time. No NVLD switch close during leak size purge draw. Ambient Temperature between 4°C and 32°C (39°F and 89°F).
- **Set Condition:**
  The PCM does not see the NVLD switch close during the medium/large leak test. The PCM then will increase the vacuum supply to the EVAP system by increasing flow through the EVAP Purge valve. If the switch does not close with an increase in vacuum an error is detected. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| EVAP PURGE SOLENOID VACUUM SUPPLY |
| (Z201) GROUND CIRCUIT OPEN |
| (K107) NVLD SWITCH SIGNAL CIRCUIT OPEN |
| EVAPORATIVE EMISSION LEAK DETECTION |
| NVLD ASSEMBLY |
| EVAP PURGE SOLENOID |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. VEHICLE HISTORY AND SERVICE BULLETIN INVESTIGATION

Ignition on, engine not running.

With a scan tool, read DTCs and record the related Freeze Frame data if any DTCs are present.

Whether or not any DTCs are present you will want to check the following items which may assist in repairing the customer's complaint successfully.

Check the vehicles repair history.

If the vehicle has a repair history that pertains to the customer's current complaint, review the repair.

Inspect the vehicle for any aftermarket accessories that may have been installed incorrectly.

Check for any service bulletin(s) related to the customer's complaint or DTCs.

If a service bulletin applies, follow the instructions per the service bulletin.

**Choose the following scenario that best applies.**

**The service bulletin repaired the customer's complaint.**
Testing complete.

**A DTC is present, no service bulletins apply, or the service bulletin didn't repair the customer's complaint.**
Go To 2

## 2. ACTIVE DTC

**NOTE: If any of the following DTCs are set (P0443, P0452, P0453, P0498, or P0499) diagnose them first before continuing with P0440.**

**NOTE: A loose gas cap could have caused this DTC to set. Make sure the gas cap is tight and in good condition.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 3

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. VISUAL AND PHYSICAL INSPECTION

Turn the ignition off.

Perform a visual and physical inspection of the entire Evaporative Emission system.

Check for the following conditions:

- Hoses disconnected or left off
- Holes or cracks
- Loose seal points
- Evidence of damaged components
- Incorrect routing of hoses and tubes
- Fuel Cap left off or bad gasket seal

**Were any of the above conditions found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. EVAP VACUUM SUPPLY HOSE INSPECTION

Carefully inspect the Evap Purge Solenoid vacuum supply hose for proper routing.

Check for a pinched or plugged hose from the throttle body or intake manifold to the Purge Solenoid.

Make sure the vacuum port at the throttle body or intake manifold is free from any blockage.

**Were any problems found?**

**Yes** >> Repair the vacuum supply, hose/tube as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. CHECKING EVAP PURGE SOLENOID FUNCTIONALITY

**NOTE: To continue testing you will need Miller Tool #8404 Evaporative Emission Leak Detector (EELD).**

**WARNING: Keep lit cigarettes, sparks, flames, and other ignition sources away from the test area to prevent the ignition of explosive gases, Keep the test area well ventilated.**

Connect the red power lead of the EELD to the battery positive terminal and the black ground lead to battery negative terminal.

Disconnect the vacuum hoses at the Evap Purge Solenoid.

Connect the SMOKE supply tip (black hose) to the “CAN” port on the Evap Purge Solenoid.

Set the smoke/air control switch to SMOKE.

While still holding the remote smoke/air start button, check to see if smoke is exiting the purge valve. This indicates that there is a leak internal to the purge valve.

**Is smoke visible from the EVAP Purge Solenoid?**

**Yes** >> Replace the Evap Purge Solenoid.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. CHECKING EVAP PURGE SOLENOID FUNCTIONALITY

**NOTE: This is an optional method of checking the purge valve for leaks if the EELD is unavailable.**

Disconnect the Smoke supply tip from the vacuum supply hoses at the EVAP Purge Solenoid.

Using a hand vacuum pump, apply 10 in Hg to the ″CAN″ side of the EVAP Purge Solenoid.

Observe the vacuum gauge for at least 15 seconds.

**Does the EVAP Purge Solenoid hold vacuum?**

**Yes** >> Go To 7

**No** >> Replace the Evap Purge Solenoid.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. NVLD SWITCH OPERATION

**CAUTION: Do not attempt to probe the NVLD Terminals to diagnose the switch function. This may damage the switch and disable the NVLD component. Follow procedures outlined in the service manual for NVLD switch testing using a scan tool.**

Connect the previously disconnected vacuum hose.

Start the engine.

Allow the engine to idle.

Using the scan tool, perform the NVLD FORCED MONITOR TEST.

Monitor the NVLD Switch state.

**NOTE: As the test runs, the NVLD Switch should go from an OPEN state to a CLOSED state and then return to OPEN when the test is complete This may take up to 10 minutes.**

**Did the NVLD Switch operate as described above?**

**Yes** >> Test complete.

**No** >> Go To 8

## 8. VERIFY NVLD SWITCH OPERATION

Start the engine.

Allow the engine to idle.

Using the scan tool, perform the NVLD FORCED MONITOR TEST for a second time.

While the NVLD FORCED MONITOR TEST is running, open/remove the gas cap.

Monitor the NVLD Switch state.

**Did the NVLD Switch go from OPEN to CLOSED?**

**Yes** >> Replace the NVLD Assembly.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 9

## 9. VERIFY EVAPORATIVE EMISSION LEAK

**WARNING: Keep lit cigarettes, sparks, flames, and other ignition sources away from the test area to prevent the ignition of explosive gases. Keep the test area well ventilated.**

Turn the ignition off.

To continue testing you will need Miller Tool #8404 Evaporative Emission Leak Detector (EELD).

**NOTE: The fuel tank should have between 20% and 80% of fuel tank capacity to properly test the Evap system.**

Connect the red power lead of EELD to the battery positive terminal and the black ground lead to battery negative terminal.

Block the vent hose of the EVAP Canister.

Connect shop air to the EELD.

Set the smoke/air control switch to AIR.

Insert the tester's AIR supply tip (clear hose) into the .040 orifice on the tester's control panel.

Press the remote smoke/air start button.

Position the red flag on the air flow meter so it is aligned with the indicator ball.

When the calibration is complete, release the remote button. The EELD flow meter is now calibrated in liters per minute.

Install the service port adapter #8404-14 on the vehicle's service port (if equipped) or install the #8404-ADP into the filter line.

Connect the Air supply hose from the EELD to the service port (if equipped) or to the #8404-ADP adapter.

Press the remote button to activate AIR flow.

Compare the flow meter indicator ball reading to the red flag.

ABOVE the red flag indicates a leak present.

BELOW the red flag indicates a sealed system.

**Is the indicator ball above the red flag?**

**Yes** >> Go To 10

**No** >> Go To 11

## 10. EVAPORATIVE EMISSION LEAK DETECTION

**NOTE: A thorough visual inspection of the Evap system hoses, tubes, and connections may save time in your diagnosis. Look for any physical damage or signs of wetness at connections. The strong smell of fuel vapors may aid diagnosis also.**

Remove the Air supply hose from the service port or the #8404-ADP adapter.

Connect the SMOKE supply tip (black hose) to the service port (if equipped) or to the #8404-ADP adapter.

Set the smoke/air control switch to SMOKE.

**NOTE: The flow meter indicator ball will not move at this point.**

Press the remote smoke/air start button.

**NOTE: Make sure that smoke has filled the EVAP system by continuing to press the remote smoke/air start button, remove the vehicle fuel cap, and wait for the smoke to exit. Once smoke is indicated reinstall the fuel cap.**

**NOTE: For optimal performance, introduce smoke into the system for an additional 60 seconds; continue introducing smoke at 15 second intervals, as necessary.**

While still holding the remote smoke/air start button, use the white light (#8404-CLL) to follow the EVAP system path, and look for the source of the leak indicated by exiting smoke.

If a leak is concealed from view (i.e., top of fuel tank), release the remote smoke/air start button, and use the ultra-violet (UV) black light #8404-UVL and the yellow goggles 8404-20 to look for residual traces of dye that are left behind by the smoke.

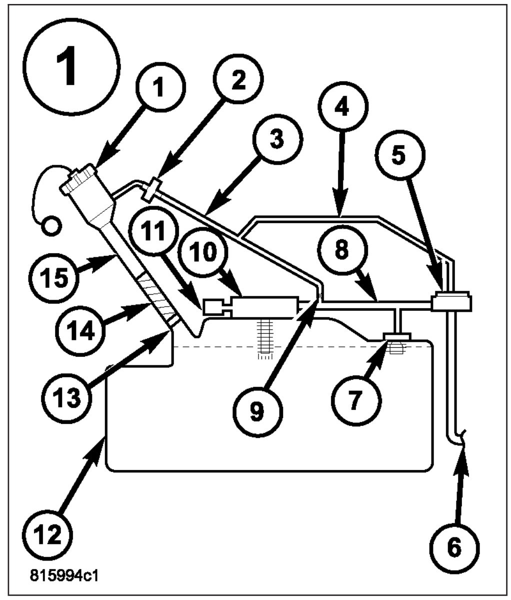
The exiting smoke deposits a residual fluid that is either bright green or bright yellow in color when viewed with a UV light.

**NOTE: The EVAP System is divided into three zones. A leak from any of these zones can cause this DTC to set. The lists below specify the possible leak points in that specific zone. For further assistance see the Zone Identification Charts below.**

---

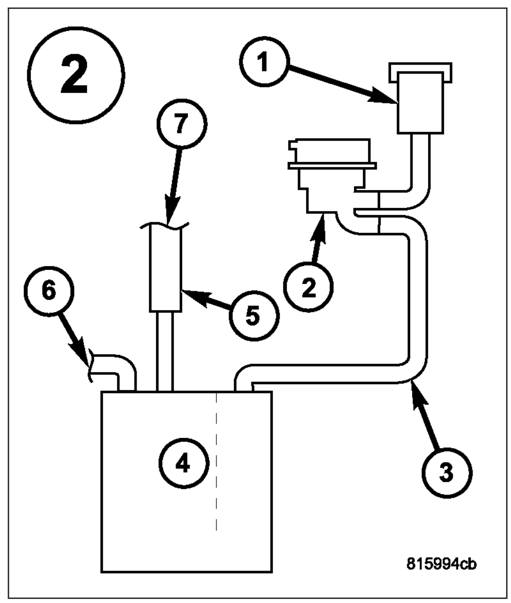
- ZONE 1

1 Fuel Cap
2 Recirculation Check Valve.
3 Vapor Recirculation Line.
4 Signal Vapor Line for FVM.
5 Flow Management Valve.
6 Fuel Tank to Canister Vapor Line connection.
7 Fuel Tank Vent (Check Valve).
8 Vapor Line to Canister.
9 Flow Control Orifice.
10 Control Valve.
11 Liquid Trap.
12 Fuel Tank.
13 Check valve.
14 Fuel Fill Tube to Tank connector.
15 Fuel Fill Tube
Damaged or disconnected EVAP system components.



- ZONE 2

1 Filter.
2 NVLD.
3 Canister Vent Line.
4 Evap Canister.
5 Chassis Purge Valve.
6 Fuel Tank to Canister Vapor Line connection.
7 Evap Purge connection.



- ZONE 3

1 Evap Purge Vacuum Line.
2 Connection to Chassis Line.
3 Connection to Canister.
4 Chassis Purge Line.
5 Evap Purge Vacuum Line.
6 Connection to Evap Purge Harness.
7 Chassis Evap Purge Line connection to Engine Vacuum.
8 Evap Purge Valve.
9 Service Port.

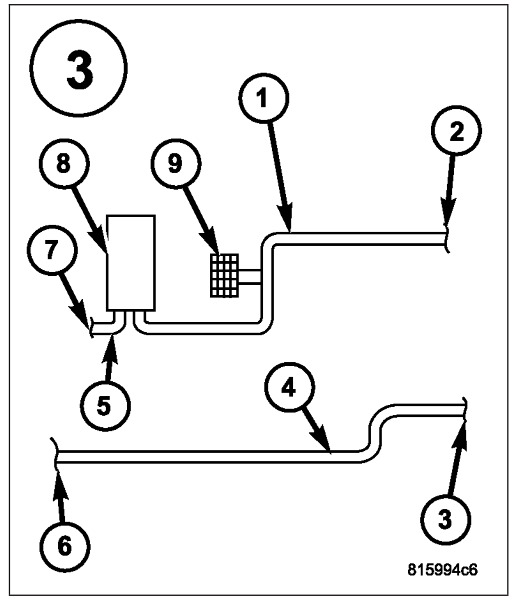
**NOTE: Carefully inspect the vent side of the EVAP Canister. Due to the filtering system in the canister the smoke or dye may or may not be visible. Introducing smoke into the filtered side of the canister may assist in locating the leak.**

**Was a leak found?**

**Yes** >> Repair or replace the leaking component as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 11

## 11. NVLD ASSEMBLY



Turn the ignition off.

Disconnect the NVLD electrical harness connector.

Check connectors - Clean/repair as necessary.

Ignition on, engine not running.

Connect a jumper wire between the (K107) NVLD Switch Signal circuit and the (Z201) Ground circuit in the NVLD electrical harness connector.

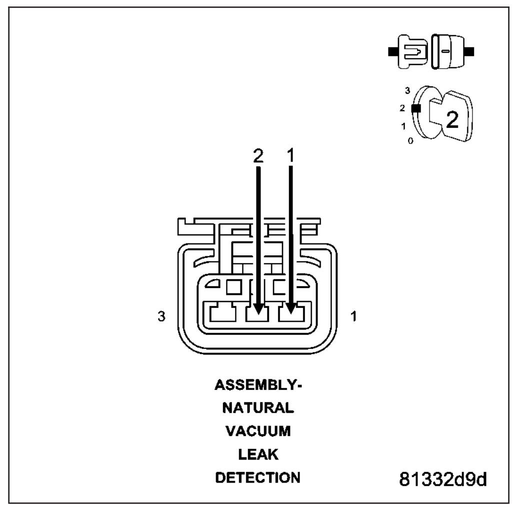
Monitor the NVLD Switch state on the scan tool.

**Does the Switch change from OPEN to CLOSED when the jumper wire is installed?**

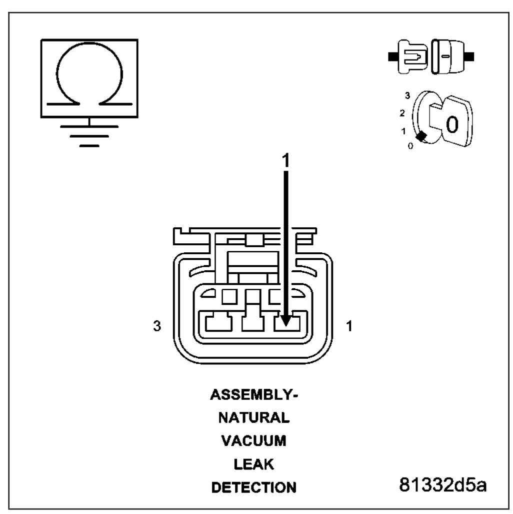
**Yes** >> Replace the NVLD Assembly.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 12

**NOTE: Remove the jumper wire before continuing.**



## 12. (Z201) GROUND CIRCUIT OPEN



Turn the ignition off.

Measure the resistance between the (Z201) Ground circuit and ground.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 13

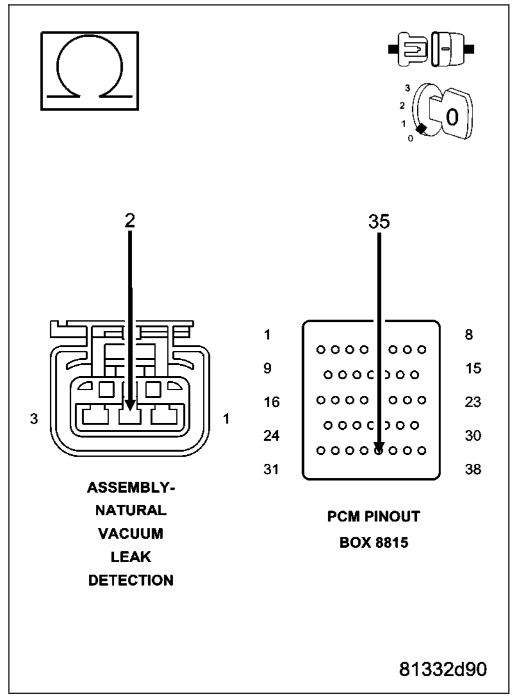
**No** >> Repair the open in the (Z201) Ground circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE).

## 13. (K107) NVLD SWITCH SIGNAL CIRCUIT OPEN

Disconnect the PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K107) NVLD Switch Signal circuit from the NVLD electrical harness connector to the appropriate terminal of the special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 14

**No** >> Repair the open in the (K107) Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 14. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

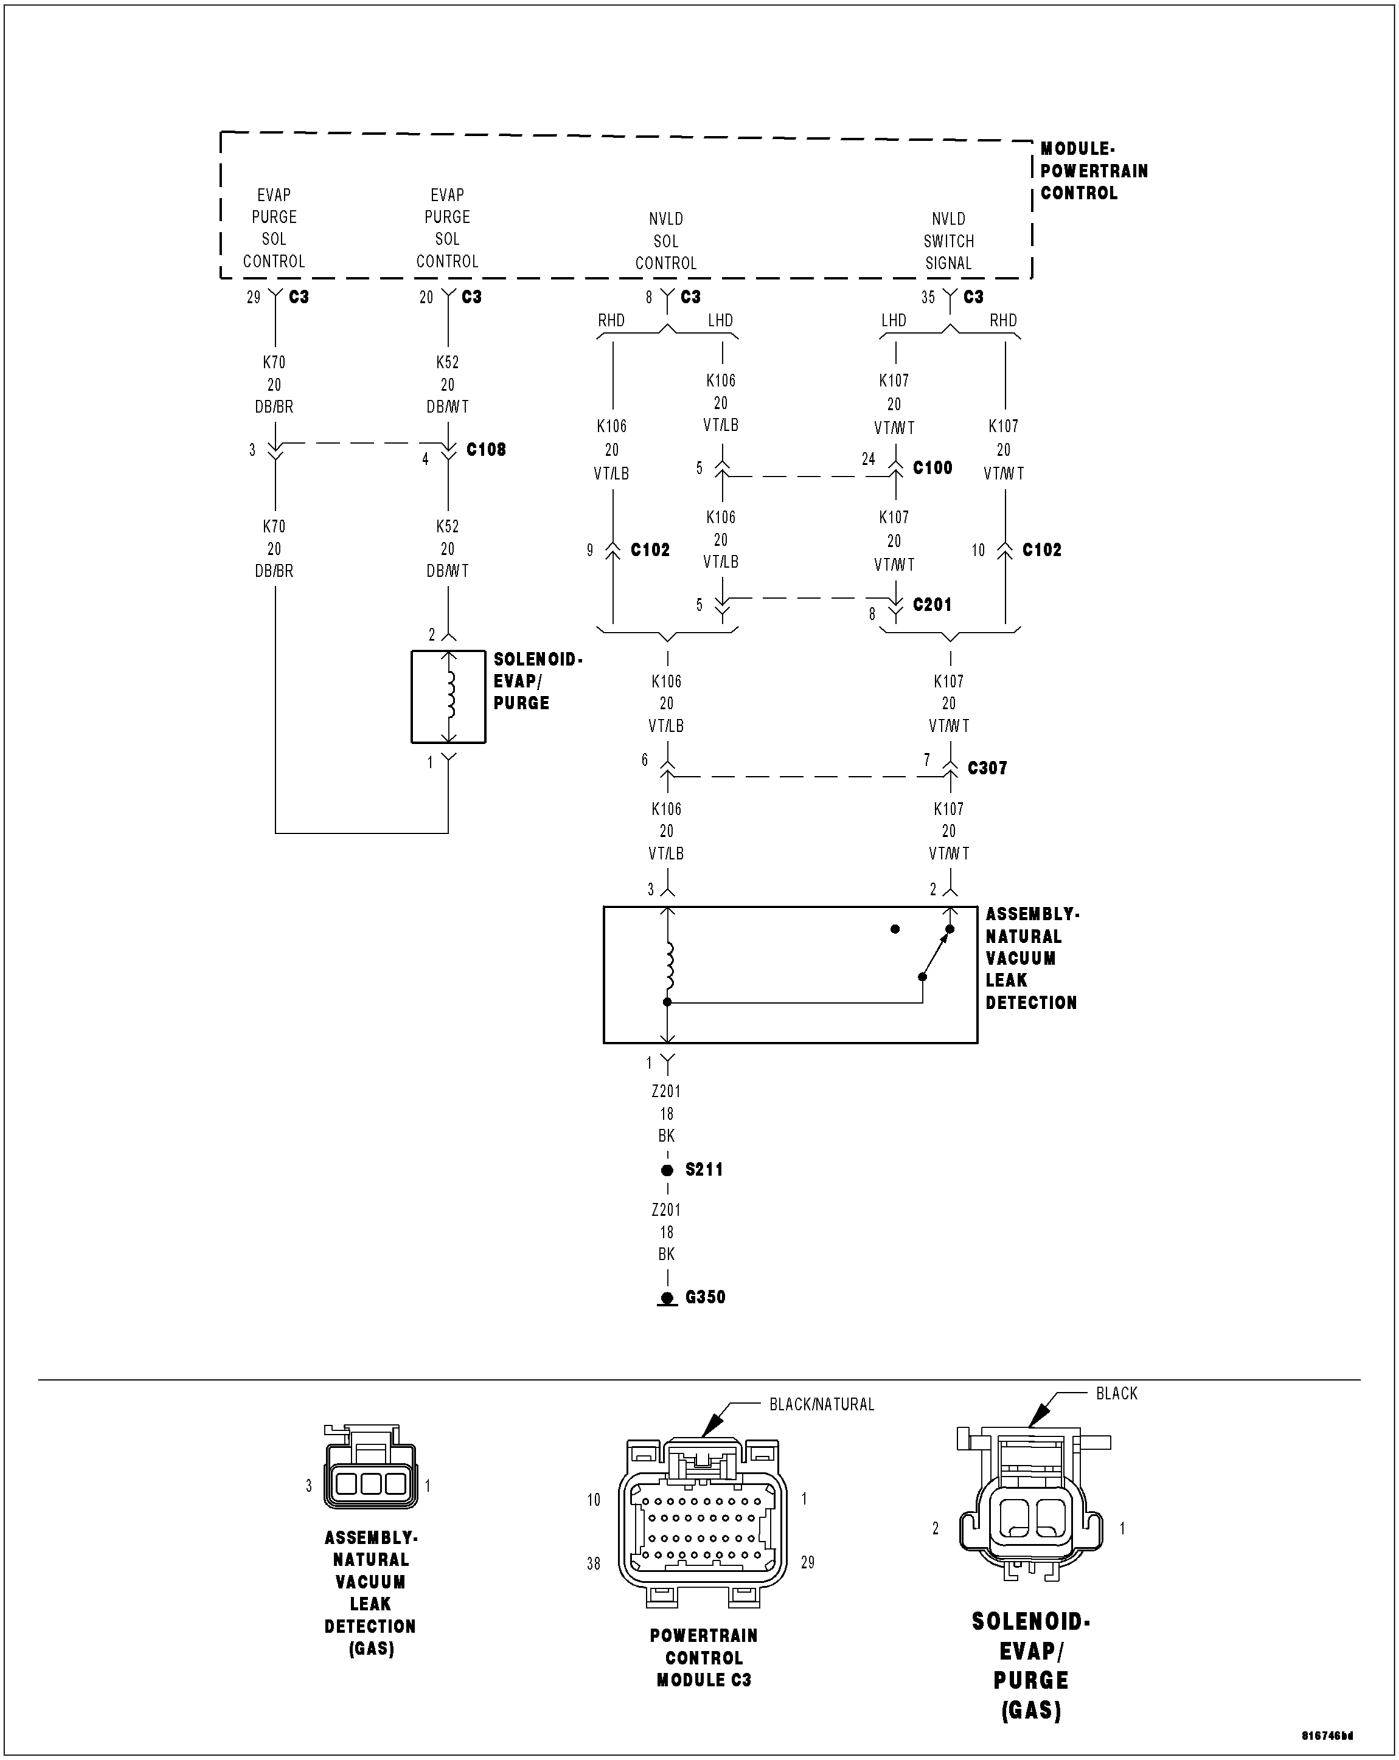
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0441-EVAP PURGE SYSTEM PERFORMANCE



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Cold start test. Engine Running. Small Leak Test Passed.
- **Set Condition:**
  The PCM activates the EVAP Purge solenoid gradually increases to maximum flow. During flow, the PCM looks for the NVLD switch to close. If the PCM does not see the NVLD switch close at maximum flow an error is detected. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
| --- |
| EVAP PURGE SOLENOID VACUUM SUPPLY |
| EVAP PURGE SOLENOID |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. VEHICLE HISTORY AND SERVICE BULLETIN INVESTIGATION

Ignition on, engine not running.

With a scan tool, read DTCs and record the related Freeze Frame data if any DTCs are present.

Whether or not any DTCs are present you will want to check the following items which may assist in repairing the customer's complaint successfully.

Check the vehicles repair history.

If the vehicle has a repair history that pertains to the customer's current complaint, review the repair.

Inspect the vehicle for any aftermarket accessories that may have been installed incorrectly.

Check for any service bulletin(s) related to the customer's complaint or DTCs.

If a service bulletin applies, follow the instructions per the service bulletin.

**Choose the following scenario that best applies.**

**The service bulletin repaired the customer's complaint.**
Testing complete.

**A DTC is present, no service bulletins apply, or the service bulletin didn't repair the customer's complaint.**
Go To 2

### 2. ACTIVE DTC

**NOTE: If any of the following DTCs are set (P0443, P0452, P0453, P0498, or P0499) diagnose them first before continuing with P0441.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 3

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. CHECKING EVAP PURGE SOLENOID FUNCTIONALITY

**NOTE: After disconnecting the Evap Purge vacuum connections, inspect the lines and solenoid for any signs of contamination or foreign materials.**

Using a hand vacuum pump, apply 10 in Hg to ″CAN″ side of the EVAP Purge Solenoid.

Ignition on, engine not running.

Observe the vacuum gauge.

With the scan tool, actuate the EVAP Purge Solenoid.

**Does the vacuum drop when the solenoid is actuated?**

**Yes** >> Go To 4

**No** >> Replace the Evap Purge Solenoid.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**NOTE: Remove the vacuum pump before continuing.**

## 4. EVAP VACUUM SUPPLY HOSE INSPECTION

Turn the ignition off.

Carefully inspect the Evap Purge Solenoid vacuum supply hose for proper routing.

Check for a pinched or plugged hose from the throttle body or intake manifold to the Purge Solenoid.

Inspect the vacuum port at the throttle body or intake manifold for any damage or plugging.

**Were any problems found?**

**Yes** >> Repair the vacuum supply hose/tube as necessary.
Perform the POWERTRAIN VERIFICATION TEST.

**No** >> Go To 5
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. NVLD SWITCH OPERATION

**CAUTION: Do not attempt to probe the NVLD Terminals to diagnose the switch function. This may damage the switch and disable the NVLD component. Follow procedures outlined in the service manual for NVLD switch testing using a scan tool.**

Connect the previously disconnected vacuum hose.

Start the engine.

Allow the engine to idle.

Using the scan tool, perform the NVLD FORCED MONITOR TEST.

Monitor the NVLD Switch state.

**NOTE: As the test runs, the NVLD Switch should go from an OPEN state to a CLOSED state and then return to OPEN when the test is complete This may take up to 10 minutes.**

**Did the NVLD Switch operate as described above?**

**Yes** >> Test complete.

**No** >> Go To 6

## 6. VERIFY NVLD SWITCH OPERATION

Start the engine.

Allow the engine to idle.

Using the scan tool, perform the NVLD FORCED MONITOR TEST for a second time.

While the NVLD FORCED MONITOR TEST is running, open/remove the gas cap.

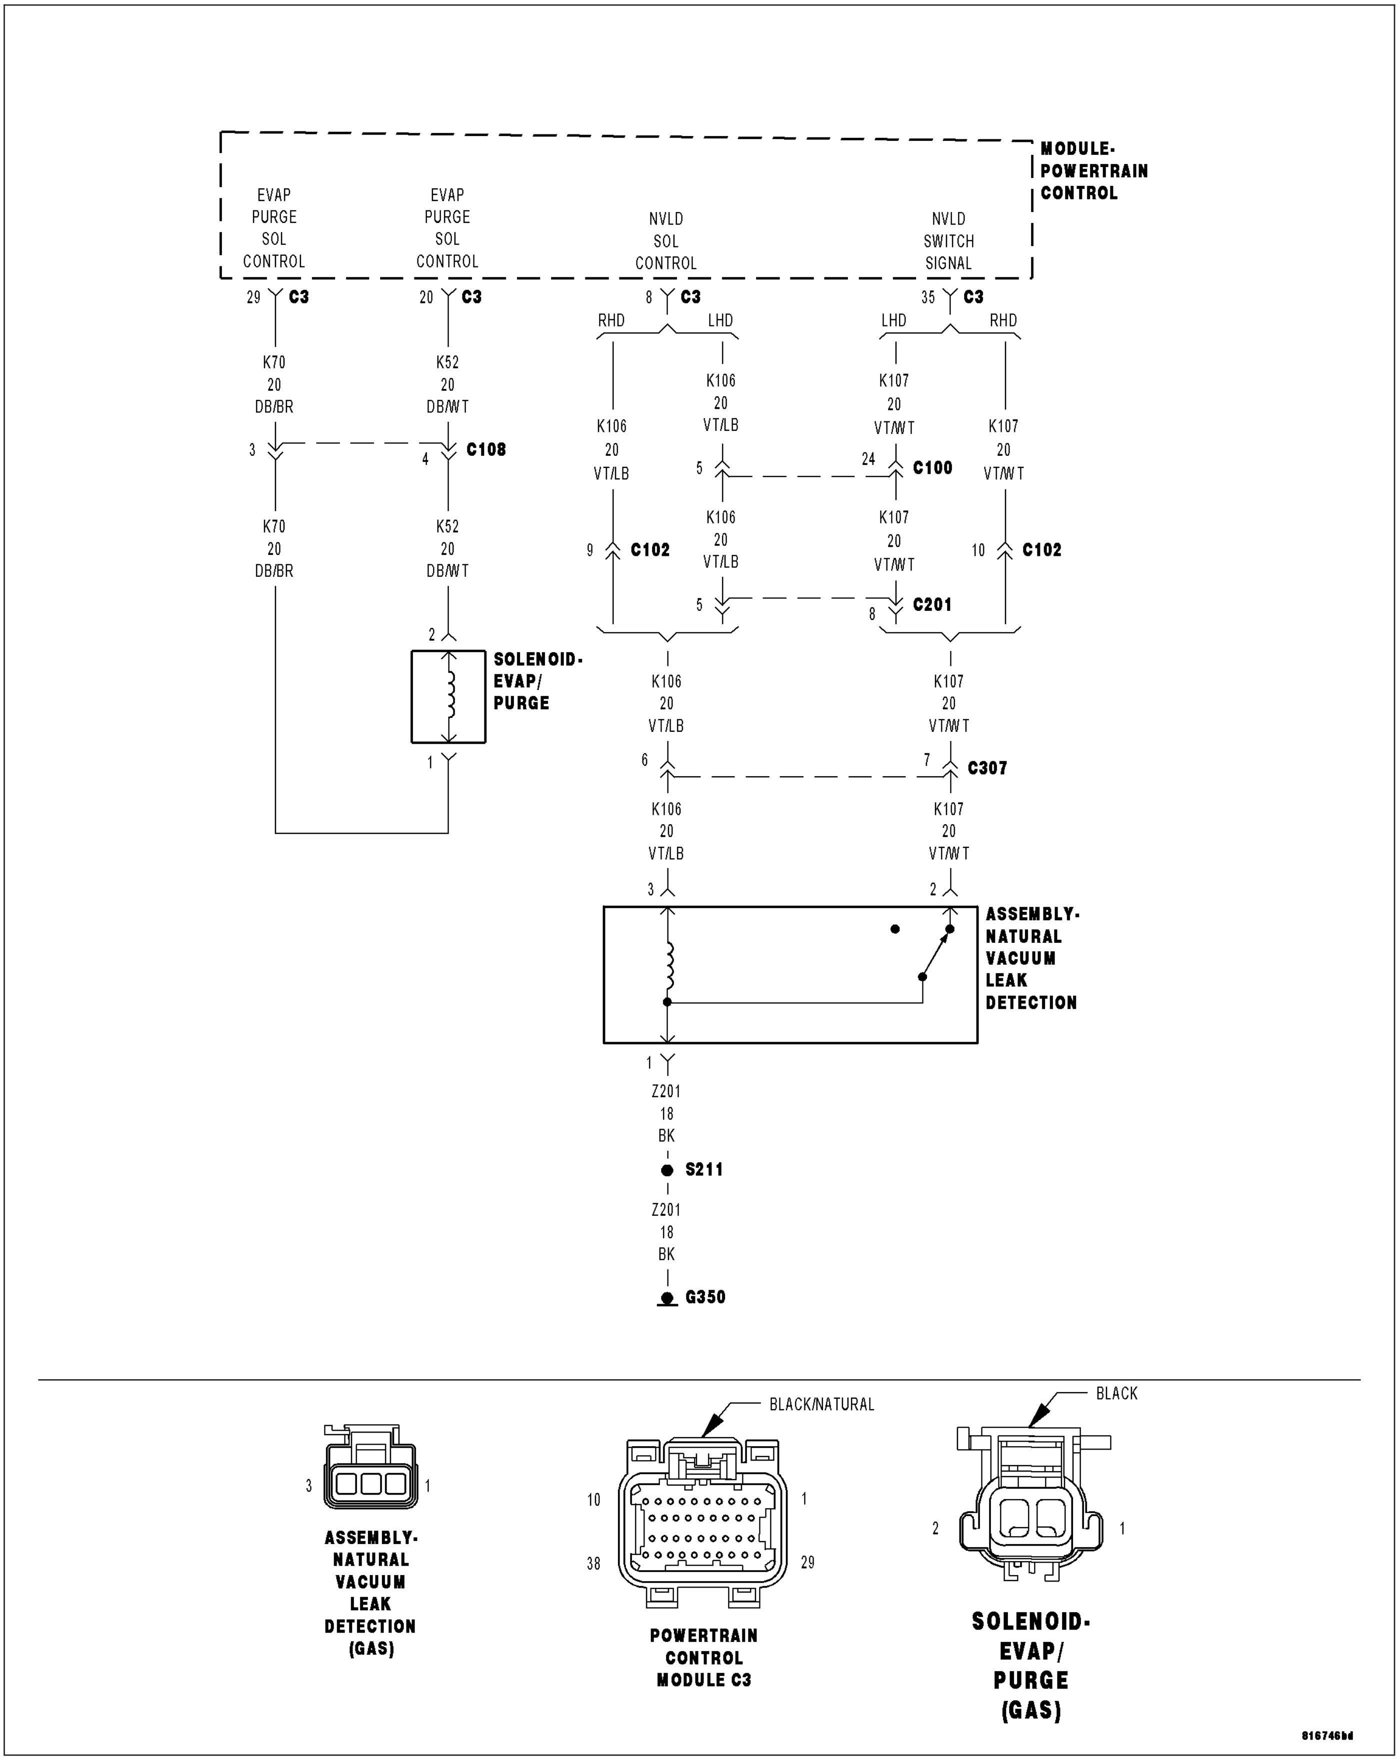
Monitor the NVLD Switch state.

**Did the NVLD Switch go from OPEN to CLOSED?**

**Yes** >> Replace the NVLD Assembly.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Test complete.

## P0443-EVAP PURGE SOLENOID CIRCUIT



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  The ignition on or engine running. Battery voltage greater than 10 volts.
- **Set Condition:**
  The PCM will set a trouble code if the actual state of the solenoid does not match the intended state for more than 4.4 seconds. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (K52) EVAP PURGE CONTROL CIRCUIT OPEN |
| (K52) EVAP PURGE SOLENOID CONTROL CIRCUIT SHORTED TO GROUND |
| (K70) EVAP PURGE SOLENOID SIGNAL CIRCUIT OPEN |
| (K70) EVAP PURGE SOLENOID SIGNAL CIRCUIT SHORTED TO GROUND |
| EVAP PURGE SOLENOID |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. VEHICLE HISTORY AND SERVICE BULLETIN INVESTIGATION

Ignition on, engine not running.

With a scan tool, read DTCs and record the related Freeze Frame data if any DTCs are present.

Whether or not any DTCs are present you will want to check the following items which may assist in repairing the customer's complaint successfully.

Check the vehicles repair history.

If the vehicle has a repair history that pertains to the customer's current complaint, review the repair.

Inspect the vehicle for any aftermarket accessories that may have been installed incorrectly.

Check for any service bulletin(s) related to the customer's complaint or DTCs.

If a service bulletin applies, follow the instructions per the service bulletin.

**Choose the following scenario that best applies.**

**The service bulletin repaired the customer's complaint.**
Testing complete.

**A DTC is present, no service bulletins apply, or the service bulletin didn't repair the customer's complaint.**
Go To 2

### 2. ACTIVE DTC

Ignition on, engine not running.

With the scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 3

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. EVAP PURGE SOLENOID OPERATION

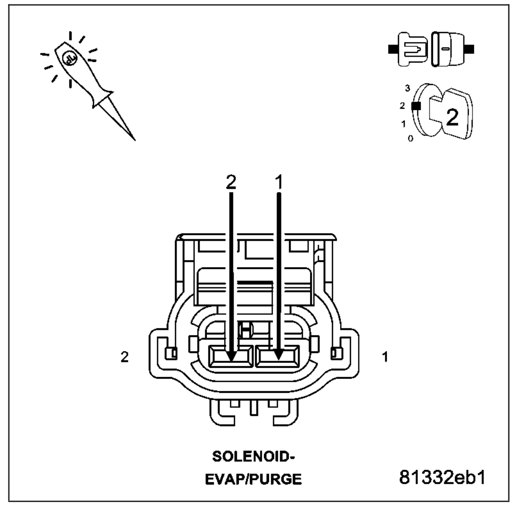
Turn the ignition off.

Disconnect the EVAP Purge Solenoid harness connector.

Ignition on, engine not running.

Using a 12-volt test light, jump across the (K52) Evap Purge Solenoid Control circuit and (K70) Evap Purge Solenoid Signal circuit in the EVAP Purge Solenoid harness connector.

With a scan tool, actuate the EVAP Purge Solenoid.



**Does the test light flash on and off?**

**Yes** >> Replace the EVAP Purge Solenoid.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

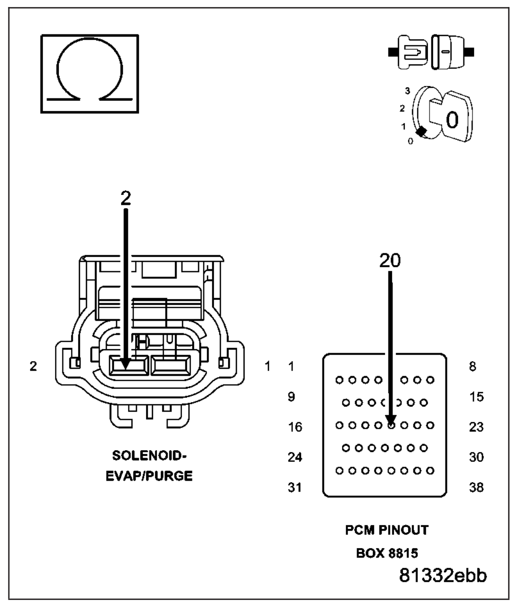
## 4. (K52) EVAP PURGE SOLENOID CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the C3 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K52) Evap Purge Solenoid Control circuit from the Evap Purge Solenoid harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K52) EVAP Purge Solenoid Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

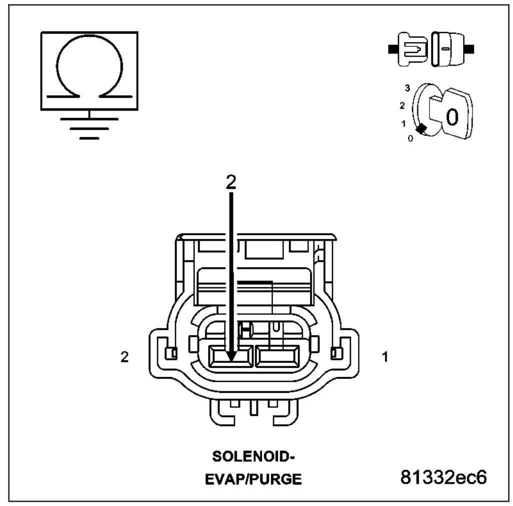
## 5. (K52) EVAP PURGE SOLENOID CONTROL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K52) Evap Purge Solenoid Control circuit in the Evap Purge Solenoid harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K52) EVAP Purge Solenoid Control circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6



## 6. (K70) EVAP PURGE SOLENOID SIGNAL CIRCUIT OPEN

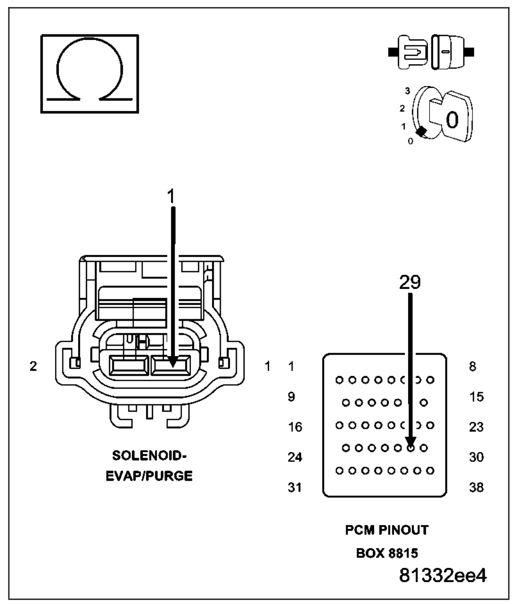
**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K70) Evap Purge Solenoid Signal circuit from the EVAP Purge Solenoid harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

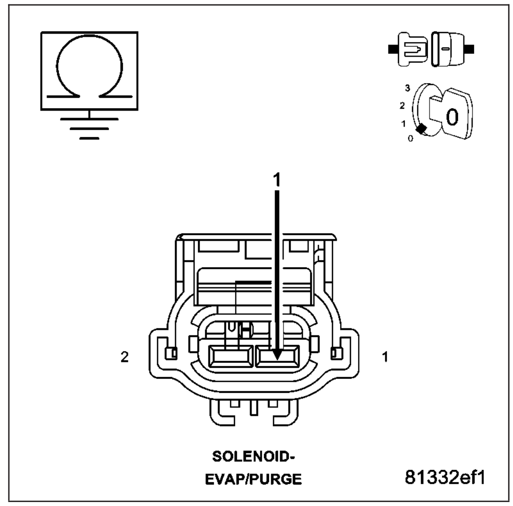
**Yes** >> Go To 7

**No** >> Repair the open in the (K70) Evap Purge Solenoid Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)



## 7. (K70) EVAP PURGE SOLENOID SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K70) Evap Purge Solenoid Signal circuit in the Evap Purge Solenoid harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K70) Evap Purge Solenoid Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

## 8. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

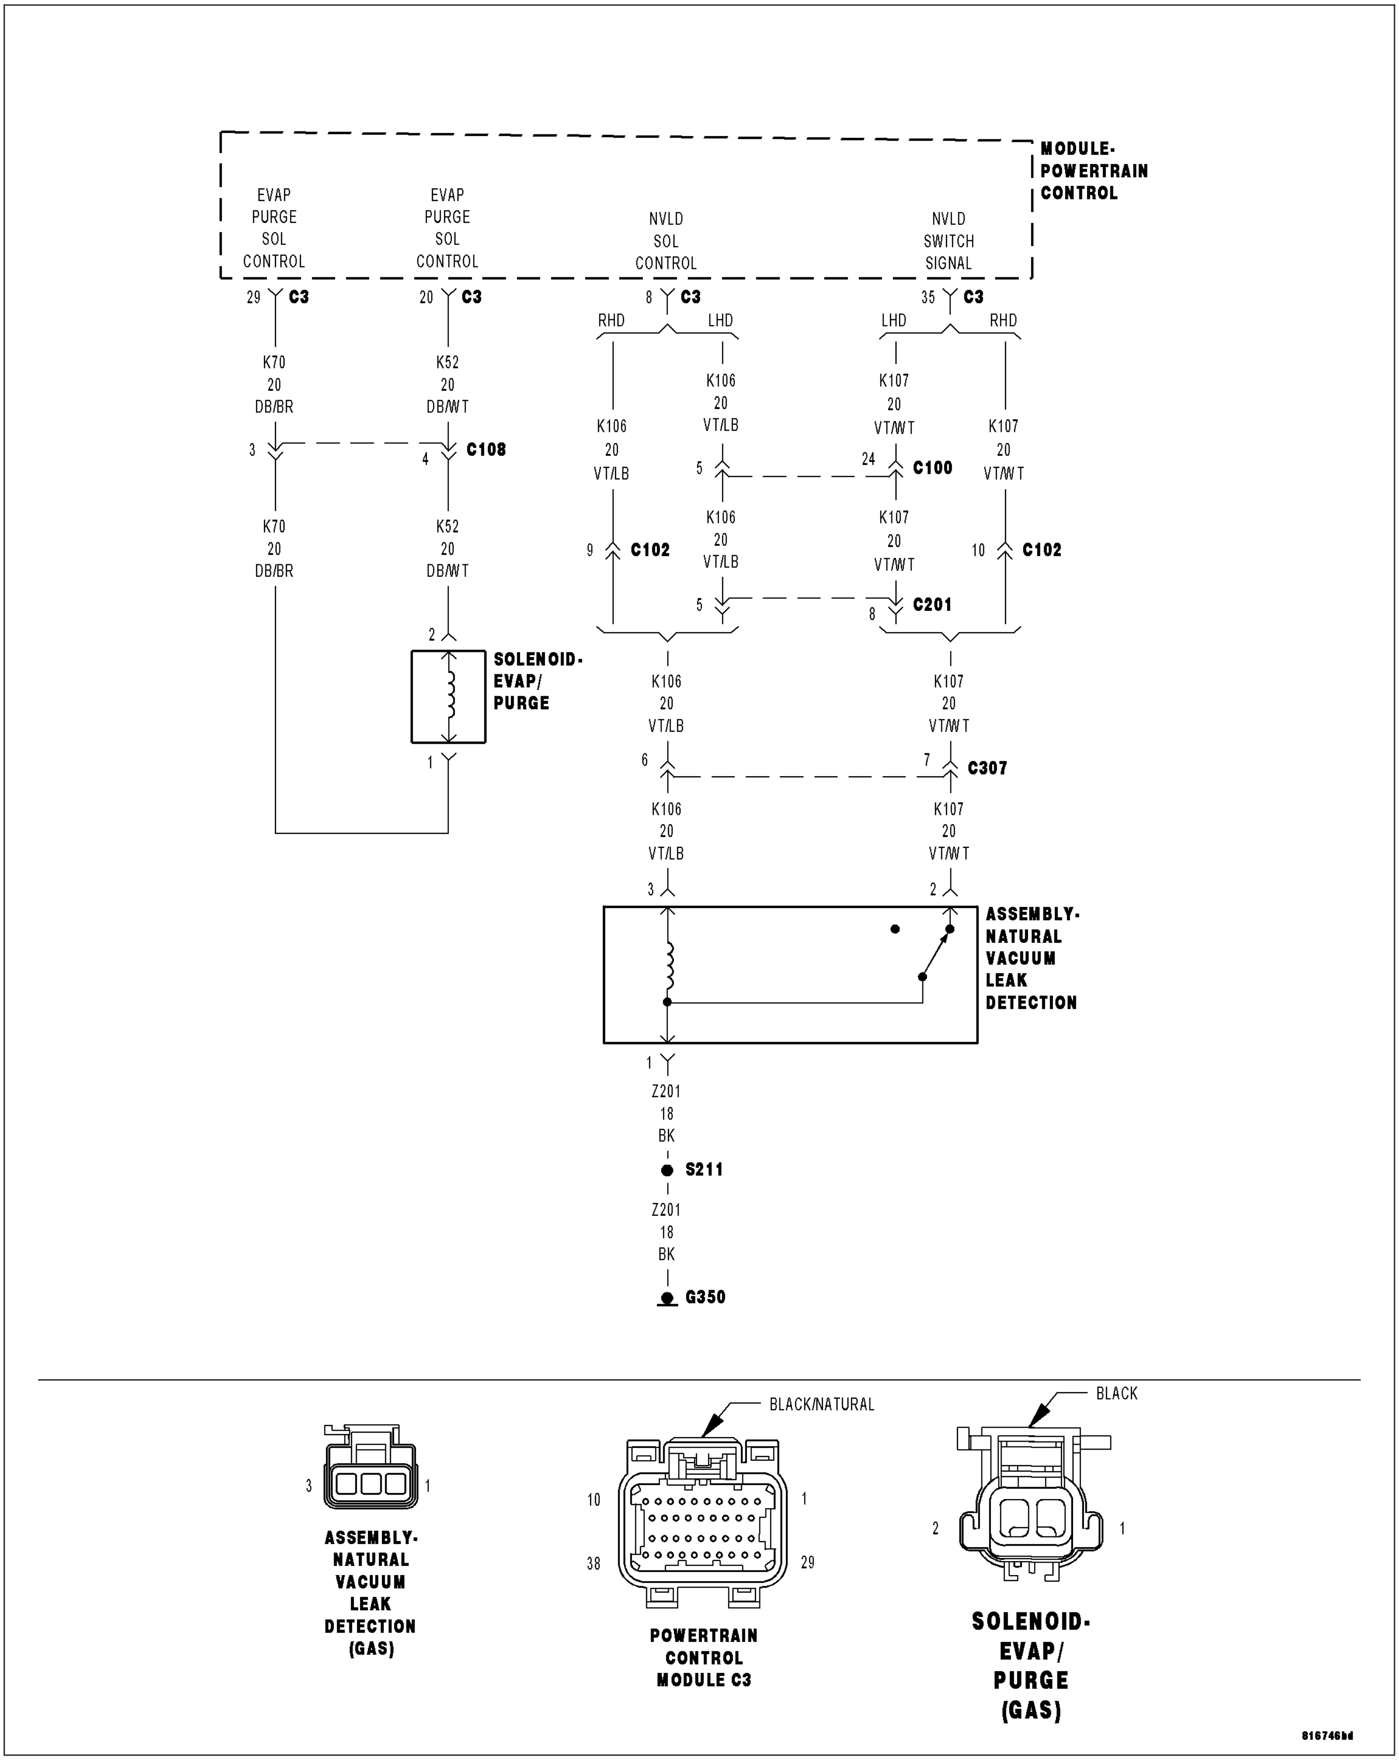
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0452-NVLD PRESSURE SWITCH STUCK CLOSED



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Immediately after the engine has been started.
- **Set Condition:**
  The PCM activates the NLVD Solenoid. If PCM does not see NVLD switch open an error is detected. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (K52) EVAP PURGE SOLENOID CONTROL CIRCUIT SHORTED TO GROUND |
| (K107) NVLD SWITCH SIGNAL CIRCUIT SHORTED TO GROUND |
| NVLD ASSEMBLY |
| EVAP PURGE SOLENOID |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. VEHICLE HISTORY AND SERVICE BULLETIN INVESTIGATION

Ignition on, engine not running.

With a scan tool, read DTCs and record the related Freeze Frame data if any DTCs are present.

Whether or not any DTCs are present you will want to check the following items which may assist in repairing the customer's complaint successfully.

Check the vehicles repair history.

If the vehicle has a repair history that pertains to the customer's current complaint, review the repair.

Inspect the vehicle for any aftermarket accessories that may have been installed incorrectly.

Check for any service bulletin(s) related to the customer's complaint or DTCs.

If a service bulletin applies, follow the instructions per the service bulletin.

**Choose the following scenario that best applies.**

**The service bulletin repaired the customer's complaint.**
Testing complete.

**A DTC is present, no service bulletins apply, or the service bulletin didn't repair the customer's complaint.**
Go To 2

### 2. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 3

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. EVAP PURGE SOLENOID OPERATION

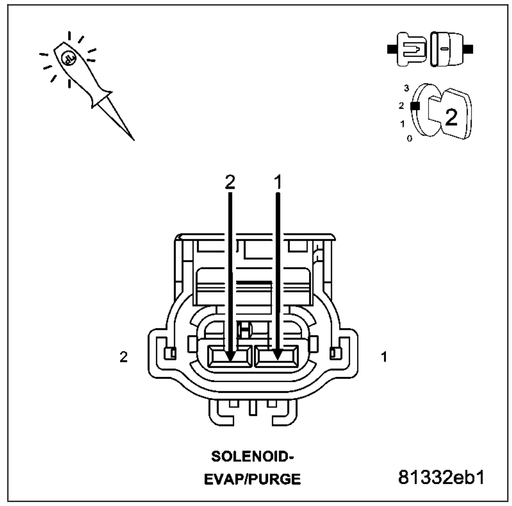
Turn the ignition off.

Disconnect the EVAP Purge Solenoid harness connector.

Ignition on, engine not running.

Using a 12-volt test light, jump across the Evap Purge Solenoid harness connector.

With the scan tool, actuate the EVAP Purge Solenoid.



**Does the test light flash on and off?**

**Yes** >> Go To 4

**No** >> Go To 8

## 4. EVAP PURGE SOLENOID LEAKS/STUCK OPEN

Turn the ignition off.

Connect the Evap Purge Solenoid harness connector.

Disconnect the vacuum hoses at the Evap Purge Solenoid.

**NOTE: After disconnecting the Evap Purge Solenoid vacuum connections, inspect the lines and solenoid for any signs of contamination from the EVAP Canister. This may indicate a faulty check valve. Replace/repair as necessary.**

Using a hand vacuum pump, apply 10 in Hg to the ″CAN″ of the EVAP Purge Solenoid.

**NOTE: Monitor the vacuum gauge for at least 15 seconds.**

**Does the EVAP Purge Solenoid hold vacuum?**

**Yes** >> Go To 5

**No** >> Replace the Evap Purge Solenoid.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. NVLD SWITCH OPERATION

Ignition on, engine not running.

Using the scan tool, monitor the NVLD Switch State with the vacuum pump still installed and holding vacuum.

**Does the scan tool display the NVLD state OPEN?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

**NOTE: Remove the vacuum pump and connect the vacuum hose before continuing.**

## 6. NVLD ASSEMBLY

Disconnect the NVLD electrical connector.

**Does the Switch change from CLOSED to OPEN?**

**Yes** >> Replace the NVLD Assembly.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

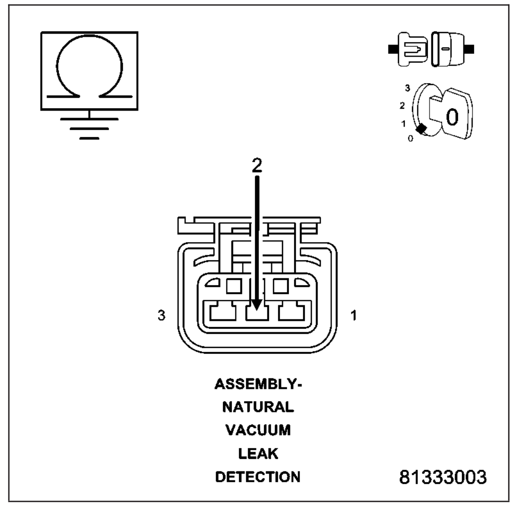
**No** >> Go To 7

## 7. (K107) SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C3 PCM harness connector.

Measure the resistance between ground and the (K107) NVLD Switch Signal circuit in the NVLD Assembly harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K107) NVLD Switch Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

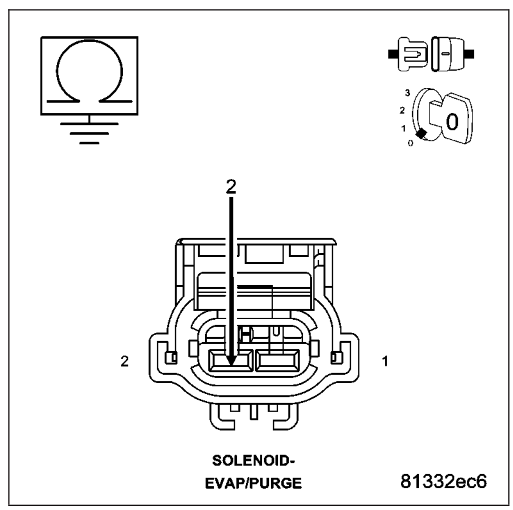
**No** >> Go To 9

## 8. (K52) EVAP PURGE SOLENOID CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C3 PCM harness connector.

Measure the resistance between ground and the (K52) Evap Purge Solenoid Control circuit in the EVAP Purge Solenoid harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K52) Evap Purge Sol Control circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 9

## 9. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

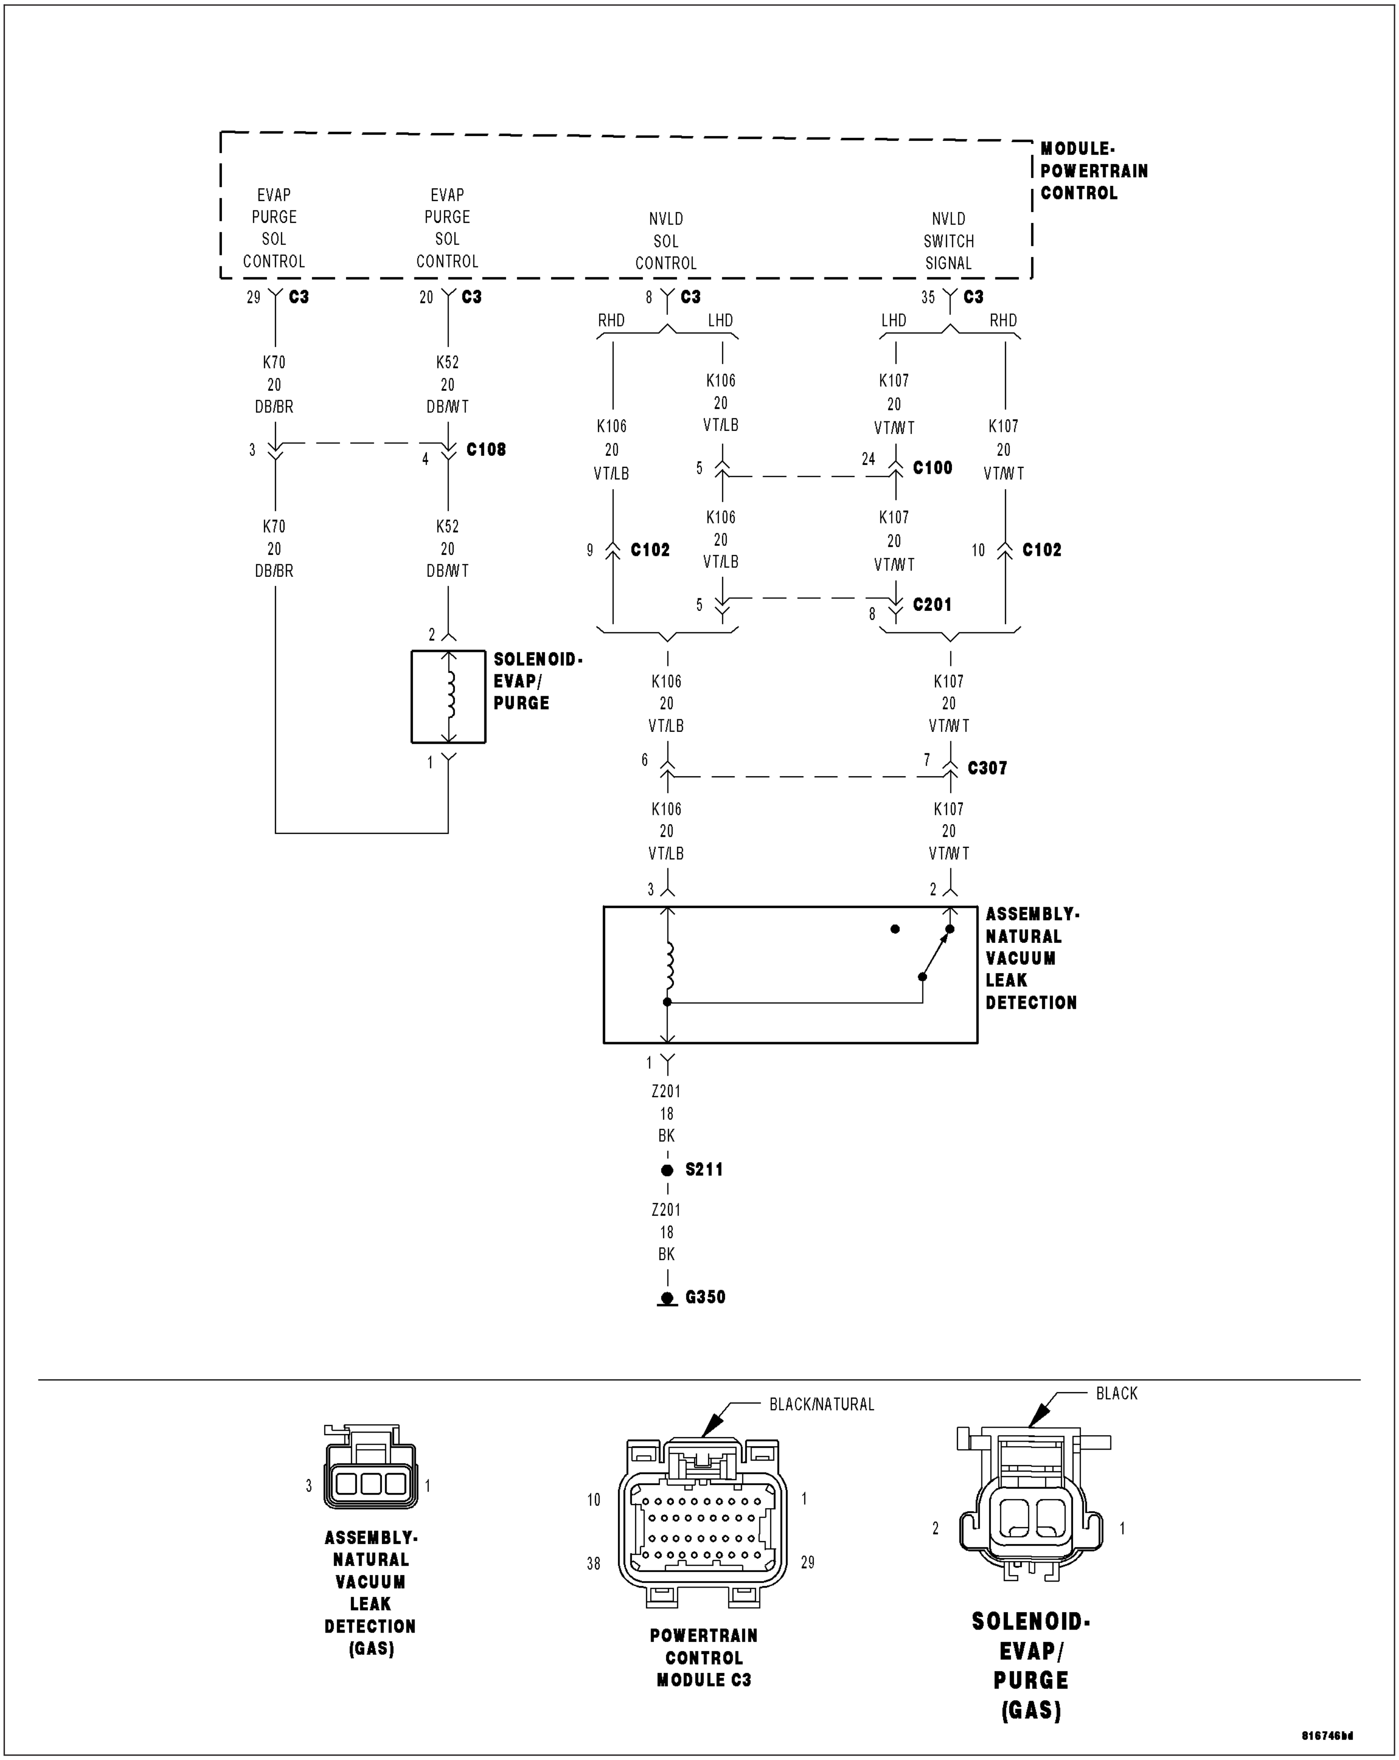
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0453-NVLD PRESSURE SWITCH STUCK OPEN



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine running.
- **Set Condition:**
  If the PCM does not see the NVLD switch close during test an error is detected. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (K107) NVLD SWITCH SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K107) NVLD SWITCH SIGNAL CIRCUIT OPEN |
| (K107) NVLD SWITCH SIGNAL CIRCUIT SHORTED TO THE (K106) NVLD SOLENOID CONTROL CIRCUIT |
| (Z201) GROUND CIRCUIT OPEN |
| NVLD ASSEMBLY |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. NVLD SWITCH OPERATION

Start the engine.

Allow the engine to idle.

Using a scan tool, perform the NVLD FORCED MONITOR TEST.

Monitor the NVLD Switch state.

**NOTE: As the test runs, the NVLD Switch should go from an OPEN state to a CLOSED state and then return to OPEN when the test is complete.**

**Did the NVLD Switch operate as described above?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 2

### 2. NVLD ASSEMBLY

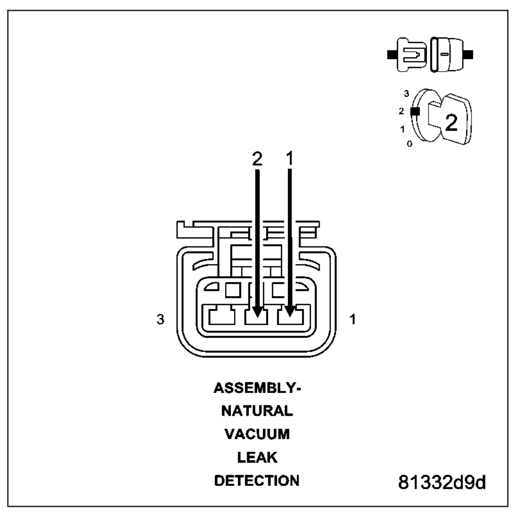
Turn the ignition off.

Disconnect the NVLD electrical harness connector.

Ignition on, engine not running.

Monitor the NVLD Switch state on the scan tool.

Connect a jumper wire between the (K107) NVLD Switch Signal circuit and the (Z201) Ground circuit in the NVLD harness connector.



**Does the Switch change from OPEN to CLOSED with the jumper wire installed?**

**Yes** >> Replace the NVLD Assembly.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

**NOTE: Remove the jumper wire before continuing.**

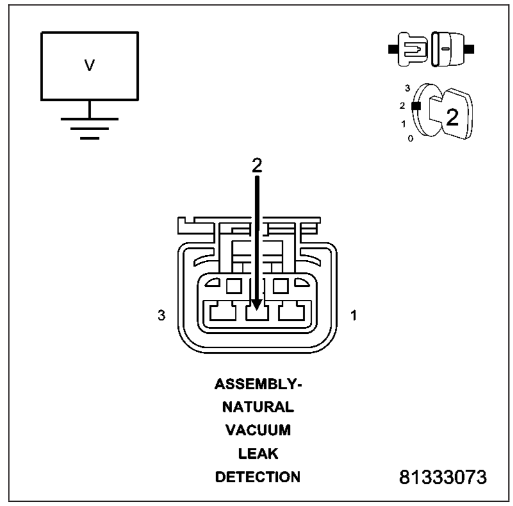
## 3. (K107) NVLD SWITCH SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the C3 PCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (K107) NVLD Switch Signal circuit in the NVLD electrical harness connector.



**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K107) NVLD Switch Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

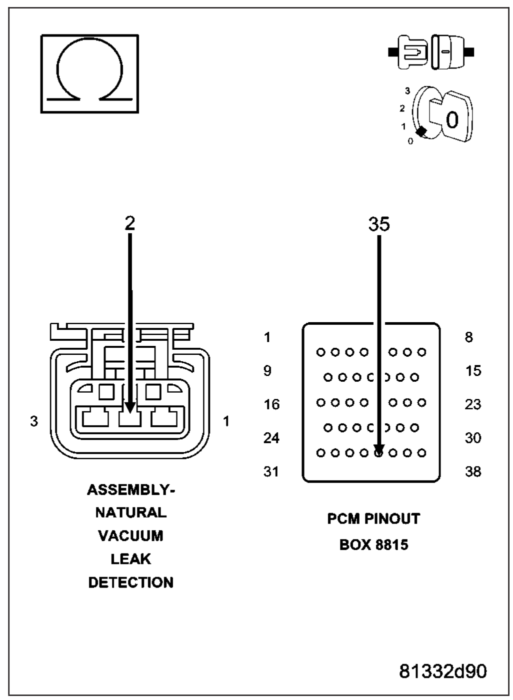
**No** >> Go To 4

## 4. (K107) NVLD SWITCH SIGNAL CIRCUIT OPEN

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K107) NVLD Switch Signal circuit from the NVLD electrical harness connector to the appropriate terminal of special tool # 8815.



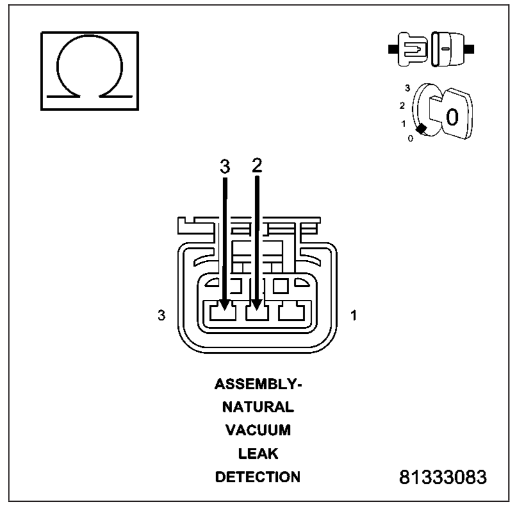
**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K107) NVLD Switch Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. (K107) NVLD SWITCH SIGNAL CIRCUIT SHORTED TO THE (K106) NVLD SOLENOID CONTROL CIRCUIT

Measure the resistance between the (K107) NVLD Switch Signal circuit and the (K106) NVLD Solenoid Control circuit in the NVLD electrical harness connector.



**Is the resistance below 5.0 ohms?**

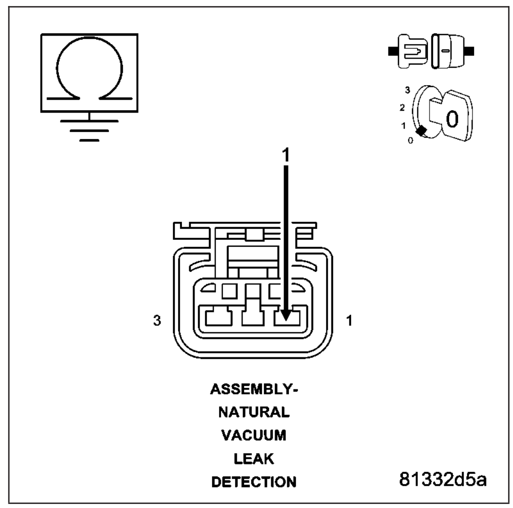
**Yes** >> Repair the short between the (K107) NVLD Switch Signal circuit and the (K106) NVLD Solenoid Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. (Z201) GROUND CIRCUIT OPEN

Measure the resistance between the (Z201) Ground circuit and ground.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (Z201) Ground circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

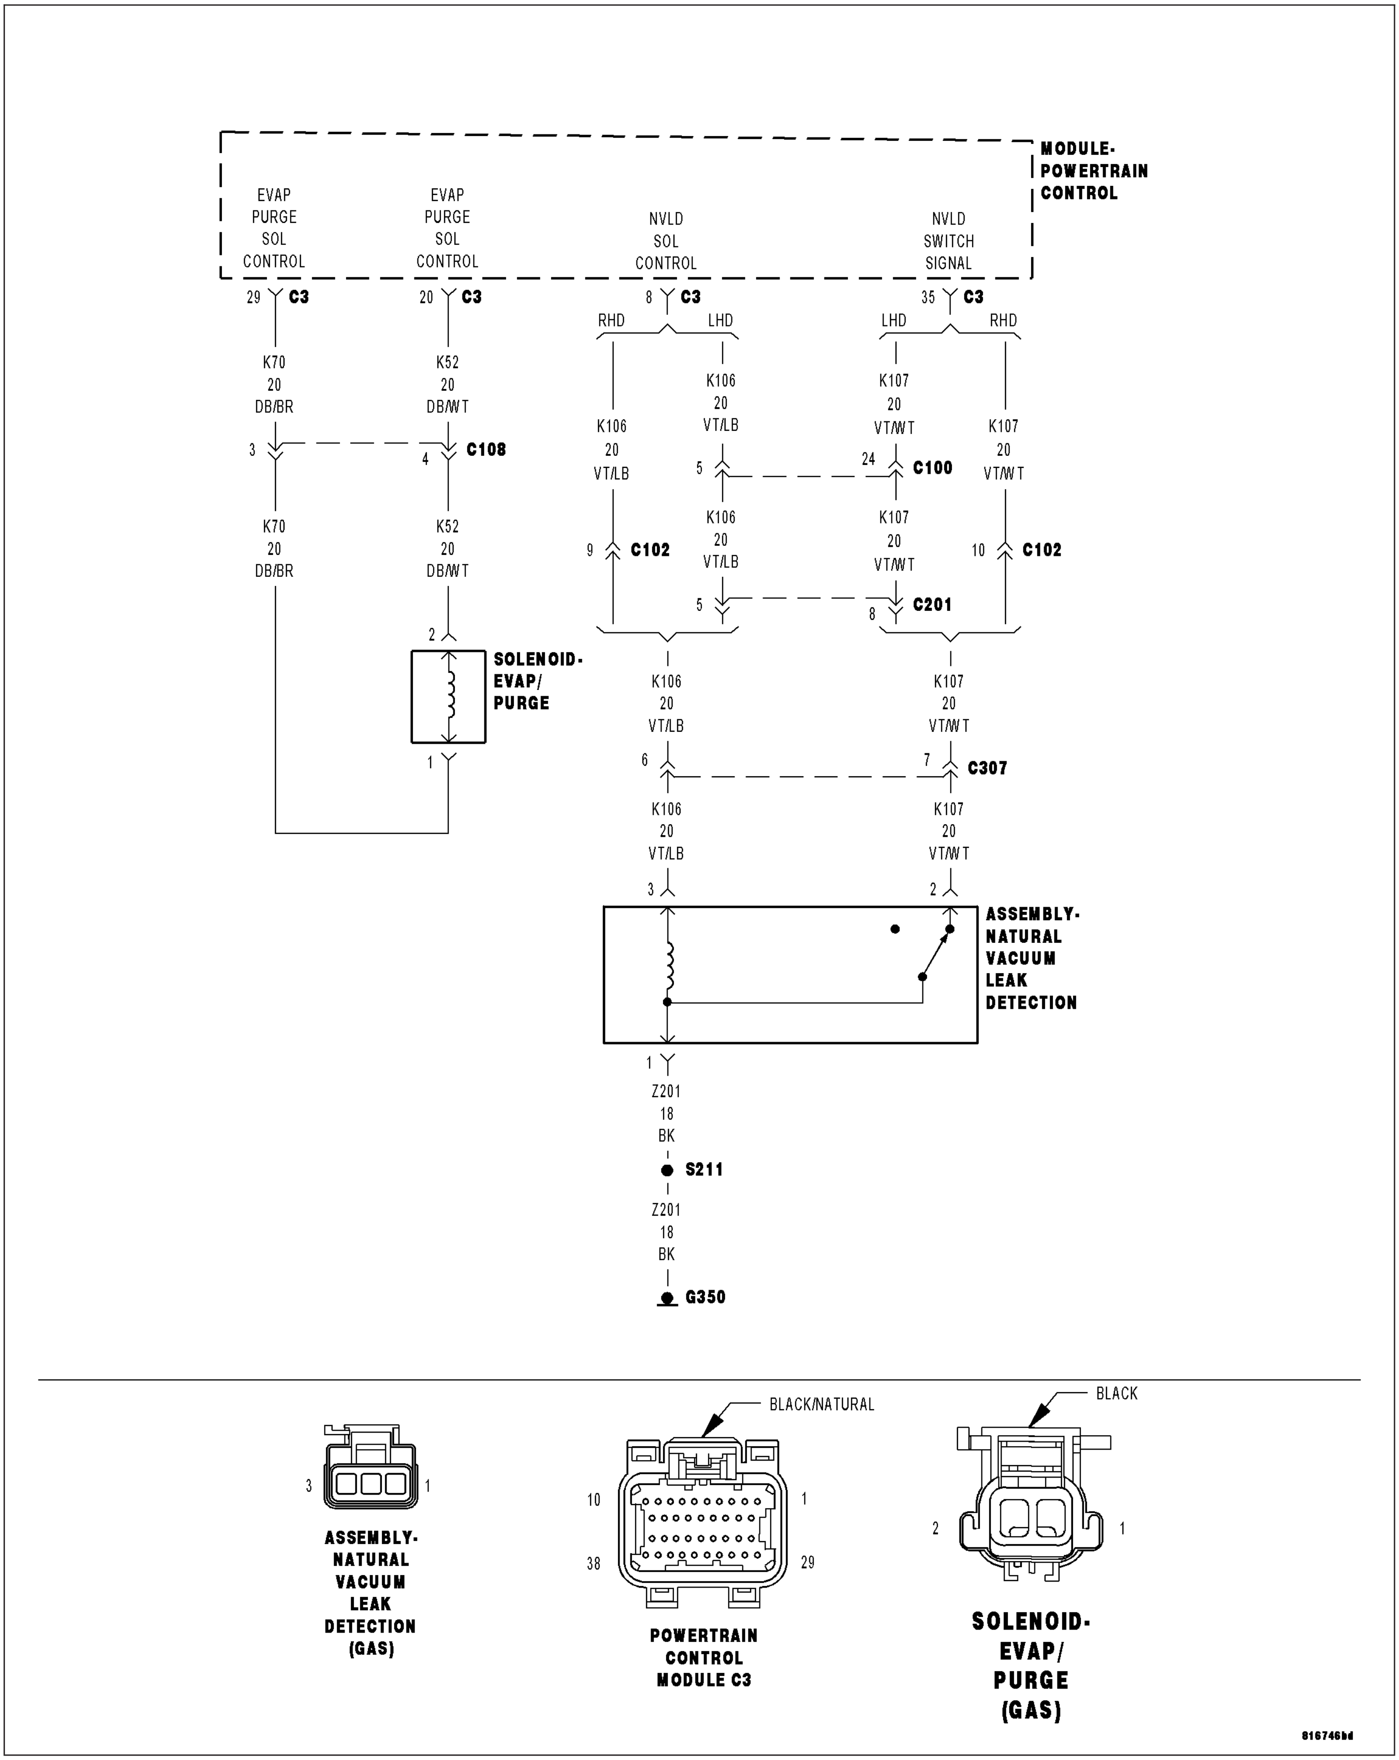
**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0455-EVAP PURGE SYSTEM LARGE LEAK



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The theory behind the Natural Vacuum Leak Detection (NVLD) is adherence to the Ideal Gas Law. Pressure in a sealed vessel will change linearly as a function of the temperature of the gas in the vessel. Even small leaks will allow the pressure in the vessel to come to equilibrium with the atmospheric pressure. After key-off and a calibrated amount of time, cool down from operating temperatures or diurnal ambient temperature the system pressure will force the system to go negative or draw a vacuum if there is no leak. When the vacuum level reaches 1” H2O (0.25 KPA) the NVLD vacuum switch closes. This sends a signal to the NGC freezing a timer and registering a pass. If a switch closure is not detected an assessment of leak size will be made.

- **When Monitored:**
  Engine Running. Cold start test. Fuel Level greater than 12%. Ambient Temperature between 4°C and 32°C (39°F and 89°F) Close Loop fuel system. Test runs when small leak test is maturing.
- **Set Condition:**
  The PCM activates the EVAP Purge Solenoid to pull the EVAP system into a vacuum to close the NVLD switch. Once the NVLD switch is closed, the PCM turns the EVAP Purge solenoid off to seal the EVAP system. If the NVLD switch reopens before the calibrated amount of time for a Large leak an error is detected. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| EVAP PURGE SYSTEM LEAK |
| EVAP PURGE SOLENOID |
| NVLD SWITCH |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. VEHICLE HISTORY AND SERVICE BULLETIN INVESTIGATION

Ignition on, engine not running.

With a scan tool, read DTCs and record the related Freeze Frame data if any DTCs are present.

Whether or not any DTCs are present you will want to check the following items which may assist in repairing the customer’s complaint successfully.

Check the vehicles repair history.

If the vehicle has a repair history that pertains to the customer’s current complaint, review the repair.

Inspect the vehicle for any aftermarket accessories that may have been installed incorrectly.

Check for any service bulletin(s) related to the customer’s complaint or DTCs.

If a service bulletin applies, follow the instructions per the service bulletin.

**Choose the following scenario that best applies.**

**The service bulletin repaired the customer’s complaint.**
Testing complete.

**A DTC is present, no service bulletins apply, or the service bulletin didn’t repair the customer’s complaint.**
Go To 2

## 2. ACTIVE DTC

Check for any related TSBs before continuing.

**NOTE: Since a hot vehicle can conceal a leak, it is best to perform this test at room temperature.**

**NOTE: A loose gas cap could have caused this DTC to set. Make sure gas cap is tight and in good condition. Make sure the gas cap meets OEM specifications.**

Ignition on, engine not running.

With a scan tool, read DTCs and record the related Freeze Frame data.

**Is the DTC active at this time?**

**Yes** >> Go To 3

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. VISUAL AND PHYSICAL INSPECTION

Perform a visual and physical inspection of the entire Evaporative Emission system.

Check for the follow conditions:

- Holes or cracks
- Loose seal points
- Evidence of damaged components
- Incorrect routing of hoses and tubes
- Fuel Cap gasket seal

**Were any of the above conditions found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. VERIFY EVAPORATIVE EMISSION LEAK

To continue testing you will need Miller Tool #8404A Evaporative Emission Leak Detector (EELD).

**WARNING: Keep lit cigarettes, sparks, flames, and other ignition sources away from the test area to prevent the ignition of explosive gases. Keep the test area well ventilated.**

**NOTE: The fuel tank should have between 20% and 80% of fuel tank capacity to properly test the Evap system.**

Connect the red power lead of the EELD to the battery positive terminal and the black ground lead to battery negative terminal.

Block the vent hose of the canister if using the service port.

Connect shop air to the EELD.

Set the smoke/air control switch to AIR.

Insert the tester's AIR supply tip (clear hose) into the appropriate calibration orifice on the tester's control panel (based on DTC leak size).

Press the remote smoke/air start button.

Position the red flag on the air flow meter so it is aligned with the indicator ball.

When the calibration is complete, release the remote button. The EELD flow meter is now calibrated in liters per minute to the size leak indicated by the DTC set in the PCM.

Install the service port adapter #8404-14 on the vehicle's service port and block the vent hose of the EVAP Canister (if equipped) or install the #8404-ADP service adaptor into the filter line.

Connect the Air supply hose from the EELD to the service port (if equipped) or to the #8404-ADP adapter.

Press the remote button to activate AIR flow.

**NOTE: Larger volume fuel tanks, lower fuel levels or if the vehicle is equipped with a Flow Management Valve may indicate high flow and will require 4 to 5 minutes to fill.**

Compare the flow meter indicator ball reading to the red flag.

ABOVE the red flag indicates a leak present.

BELOW the red flag indicates a sealed system.

**Is the indicator ball above the red flag?**

**Yes** >> Go To 5

**No** >> Refer to the Freeze Frame data recorded in step 1. If the data indicates that the vehicle was in motion when the DTC was set, verify that all hoses are properly connected.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. EVAPORATIVE EMISSION LEAK DETECTION

**NOTE: A thorough visual inspection of the Evap system hoses, tubes, and connections may save time in your diagnosis. Look for any physical damage or signs of wetness at connections. The strong smell of fuel vapors may aid diagnosis also.**

To continue testing, you will need Miller Tool #8404A Evaporative Emissions Leak Detector (EELD).

Remove the Air supply hose from the service port (if equipped) or from the #8404-ADP adapter.

Connect the SMOKE supply tip (black hose) to the service port (if equipped) or to the #8404-ADP adapter.

Set the smoke/air control switch to SMOKE.

**NOTE: The flow meter indicator ball will not move in the smoke mode.**

Press the remote smoke/air start button.

**NOTE: Make sure that smoke has filled the EVAP system by continuing to press the remote smoke/air start button, remove the vehicle fuel cap, and wait for the smoke to exit. Once smoke is indicated reinstall the fuel cap.**

**NOTE: For optimal performance, introduce smoke into the system for an additional 60 seconds; continue introducing smoke at 15 second intervals, as necessary.**

While still holding the remote smoke/air start button, use the white light (#8404-CLL) to follow the EVAP system path, and look for the source of the leak indicated by exiting smoke.

If a leak is concealed from view (i.e., top of fuel tank), release the remote smoke/air start button, and use the ultra-violet (UV) black light #8404-UVL and the yellow goggles 8404-20 to look for residual traces of dye that is left behind by the smoke.

The exiting smoke deposits a residual fluid that is either bright green or bright yellow in color when viewed with a UV light.

**NOTE: The EVAP System is divided into three zones. A leak from any of these zones can cause this DTC to set. The lists below specify the possible leak points in that specific zone. For further assistance see the Zone Identification Charts below.**

- ZONE 1

1 Fuel Cap

2 Recirculation Check Valve.

3 Vapor Recirculation Line.

4 Signal Vapor Line for FVM.

5 Flow Management Valve.

6 Fuel Tank to Canister Vapor Line connection.

7 Fuel Tank Vent (Check Valve).

8 Vapor Line to Canister.

9 Flow Control Orifice.

10 Control Valve.

11 Liquid Trap.

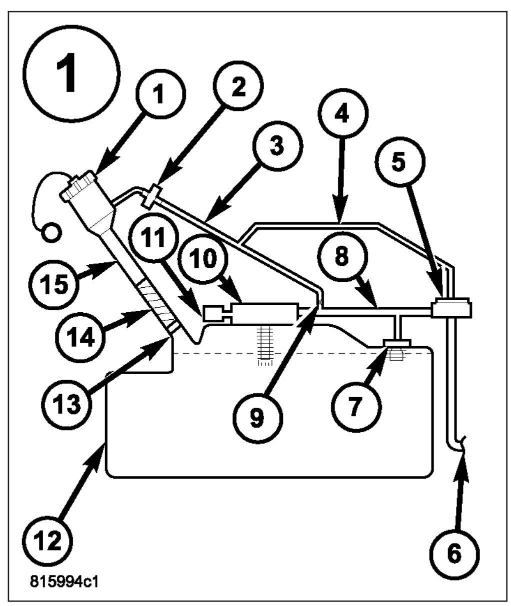
12 Fuel Tank.

13 Check valve.

14 Fuel Fill Tube to Tank connector.

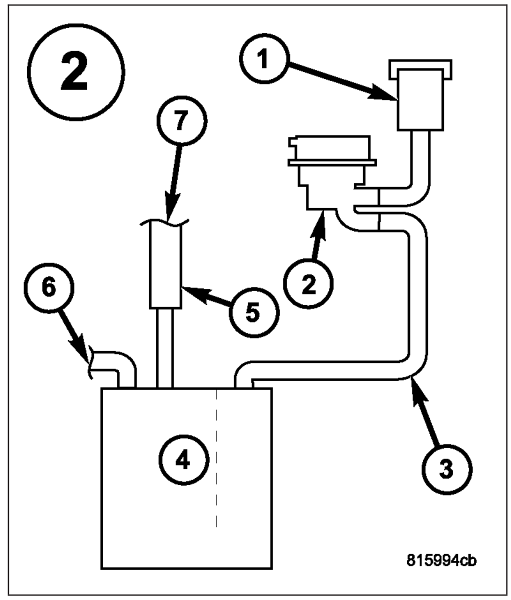
15 Fuel Fill Tube

Damaged or disconnected EVAP system components.



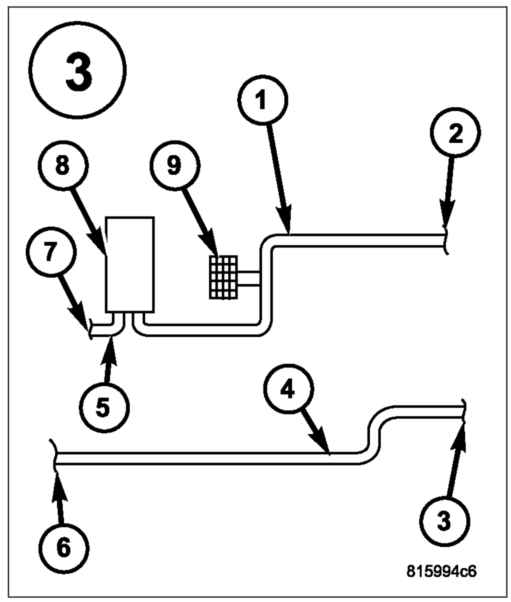
- ZONE 2

1 Filter.
2 NVLD.
3 Canister Vent Line.
4 Evap Canister.
5 Chassis Purge Valve.
6 Fuel Tank to Canister Vapor Line connection.
7 Evap Purge connection.



- ZONE 3

1 Evap Purge Vacuum Line.
2 Connection to Chassis Line.
3 Connection to Canister.
4 Chassis Purge Line.
5 Evap Purge Vacuum Line.
6 Connection to Evap Purge Harness.
7 Chassis Evap Purge Line connection to Engine Vacuum.
8 Evap Purge Valve.
9 Service Port.



**NOTE: Carefully inspect the vent side of the EVAP Canister. Due to the filtering system in the canister the smoke may not be as thick. Introducing smoke into the filtered side of the canister may assist in locating the leak.**

**Was a leak found at the gas cap?**

**Yes** >> Go To 6

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 6. LEAK AT GAS CAP

Remove the SMOKE supply tip (black hose) from the service port (if equipped) or to the #8404–ADP adapter.

Install gas cap adapter, Miller Tool #8382 (1/4 turn cap) or #6922 (screw cap) and #8399* (secondary seal depressor) and repeat test 5.

**Was a leak found at the gas cap adapter?**

**Yes** >> Replace the Fuel Filler tube assembly.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace the gas cap.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. EVAP PURGE SOLENOID OPERATION

**NOTE: After disconnecting the Evap Purge Solenoid vacuum connections, inspect the lines and solenoid for any signs of contamination from the EVAP Canister. This may indicate a faulty check valve. Replace/repair as necessary.**

Turn the ignition off.

Disconnect the vacuum hoses at the Evap Purge Solenoid.

Press the remote smoke/air start button on the EELD.

While holding the remote smoke/air start button, check to see if smoke is exiting the purge valve. This indicates that there is a leak internal to the purge valve.

**NOTE: Below is an optional method of checking the purge valve for leaks if the EELD is unavailable.**

Turn the ignition off.

Disconnect the vacuum hoses at the Evap Purge Solenoid.

Using a hand vacuum pump, apply 10 in HG to the “CAN” of the Evap Purge Solenoid.

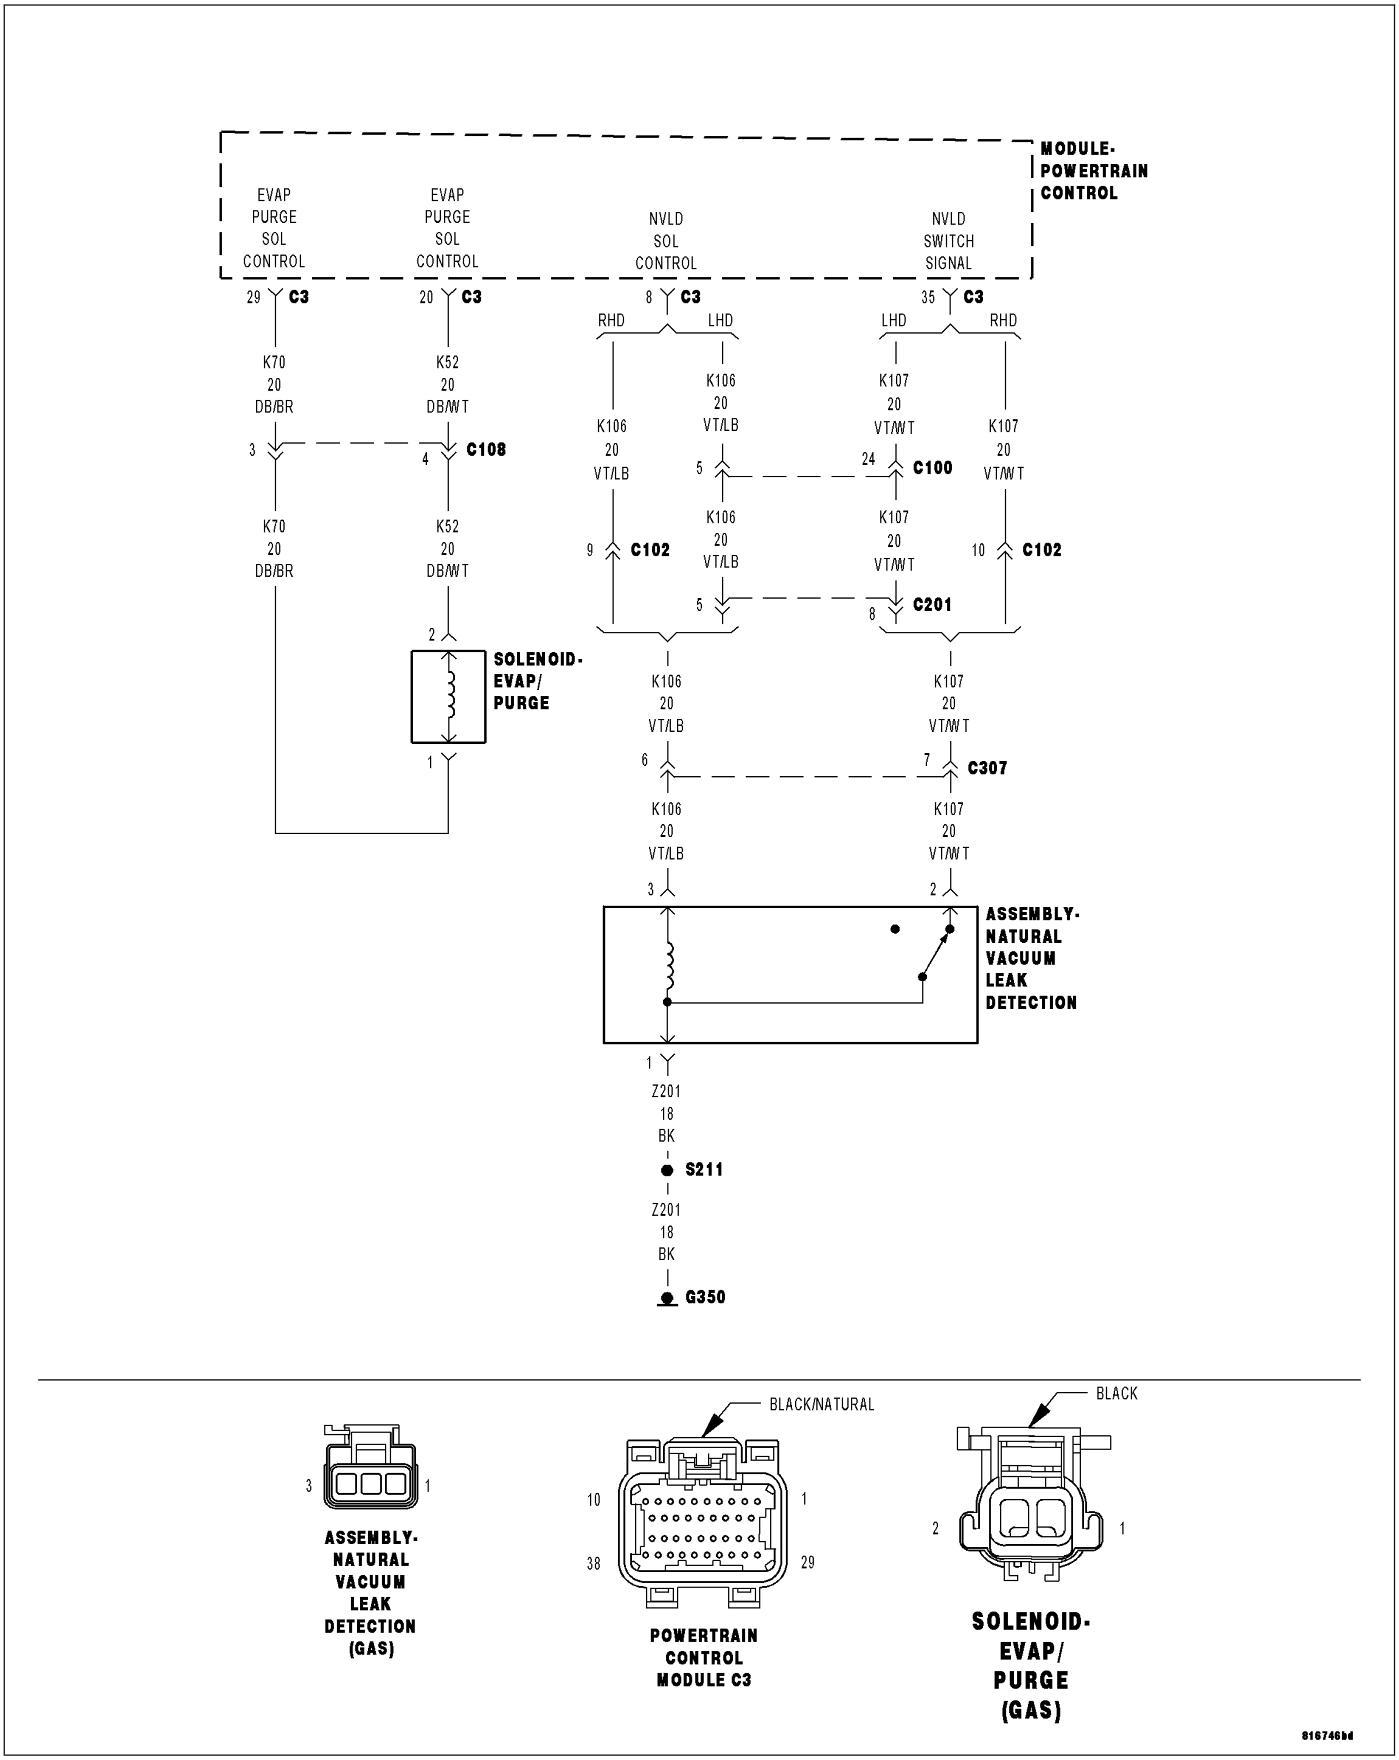
Monitor the vacuum gauge for at least 15 seconds.

**Is smoke visible from the EVAP Purge Solenoid if using the EELD, or not hold a vacuum?**

**Yes** >> Replace the NVLD.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace the Evap Purge Solenoid.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0456-EVAP PURGE SYSTEM SMALL LEAK



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The theory behind the Natural Vacuum Leak Detection (NVLD) is adherence to the Ideal Gas Law. Pressure in a sealed vessel will change linearly as a function of the temperature of the gas in the vessel. Even small leaks will allow the pressure in the vessel to come to equilibrium with the atmospheric pressure. After key-off and a calibrated amount of time, cool down from operating temperatures or diurnal ambient temperature the system pressure will force the system to go negative or draw a vacuum if there is no leak. When the vacuum level reaches 1” H2O (0.25 KPA) the NVLD vacuum switch closes. This sends a signal to the NGC freezing a timer and registering a pass. If a switch closure is not detected an assessment of leak size will be made.

- **When Monitored:**
  Ignition off. Fuel Level less than 88%. Ambient Temperature between 4°C and 43°C (39°F and 109°F) Close Loop fuel system.
- **Set Condition:**
  Due to temperature changes, a vacuum is created in the fuel tank and EVAP system. With the EVAP system sealed, the PCM monitors the NVLD switch. If the NVLD switch does not close within a calibrated time allowance, an error is detected by the PCM. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| EVAP PURGE SYSTEM LEAK |
| EVAP PURGE SOLENOID |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. VEHICLE HISTORY AND SERVICE BULLETIN INVESTIGATION

Ignition on, engine not running.

With a scan tool, read DTCs and record the related Freeze Frame data if any DTCs are present.

Whether or not any DTCs are present you will want to check the following items which may assist in repairing the customer’s complaint successfully.

Check the vehicles repair history.

If the vehicle has a repair history that pertains to the customer’s current complaint, review the repair.

Inspect the vehicle for any aftermarket accessories that may have been installed incorrectly.

Check for any service bulletin(s) related to the customer’s complaint or DTCs.

If a service bulletin applies, follow the instructions per the service bulletin.

**Choose the following scenario that best applies.**

**The service bulletin repaired the customer’s complaint.**
Testing complete.

**A DTC is present, no service bulletins apply, or the service bulletin didn’t repair the customer’s complaint.**
Go To 2

## 2. ACTIVE DTC

**NOTE: Since a hot vehicle can conceal a leak, it is best to perform this test at room temperature.**

**NOTE: A loose gas cap could have caused this DTC to set. Make sure gas cap is tight and in good condition. Make sure the gas cap meets OEM specifications.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 3

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. VISUAL AND PHYSICAL INSPECTION

Perform a visual and physical inspection of the entire Evaporative Emission system.

Check for the follow conditions:

- Holes or cracks
- Loose seal points
- Evidence of damaged components
- Incorrect routing of hoses and tubes
- Fuel Cap gasket seal

**Were any of the above conditions found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. VERIFY EVAPORATIVE EMISSION LEAK

To continue testing you will need Miller Tool #8404A Evaporative Emission Leak Detector (EELD).

**WARNING: Keep lit cigarettes, sparks, flames, and other ignition sources away from the test area to prevent the ignition of explosive gases. Keep the test area well ventilated.**

**NOTE: The fuel tank should have between 20% and 80% of fuel tank capacity to properly test the Evap system.**

Connect the red power lead of the EELD to the battery positive terminal and the black ground lead to battery negative terminal.

Block the vent hose of the canister if using the service port.

Connect shop air to the EELD.

Set the smoke/air control switch to AIR.

Insert the tester's AIR supply tip (clear hose) into the appropriate calibration orifice on the tester's control panel (based on DTC leak size).

Press the remote smoke/air start button.

Position the red flag on the air flow meter so it is aligned with the indicator ball.

When the calibration is complete, release the remote button. The EELD flow meter is now calibrated in liters per minute to the size leak indicated by the DTC set in the PCM.

Install the service port adapter #8404-14 on the vehicle's service port and block the vent hose of the EVAP Canister (if equipped) or install the #8404-ADP service adaptor into the filter line.

Connect the Air supply hose from the EELD to the service port (if equipped) or to the #8404-ADP adapter.

Press the remote button to activate AIR flow.

**NOTE: Larger volume fuel tanks, lower fuel levels or if the vehicle is equipped with a Flow Management Valve may indicate high flow and will require 4 to 5 minutes to fill.**

Compare the flow meter indicator ball reading to the red flag.

ABOVE the red flag indicates a leak present.

BELOW the red flag indicates a sealed system.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 6. LEAK AT GAS CAP

Remove the SMOKE supply tip (black hose) from the service port (if equipped) or to the #8404–ADP adapter.

Install gas cap adapter, Miller Tool #8382 (1/4 turn cap) or #6922 (screw cap) and #8399* (secondary seal depressor) and repeat test 5.

**Was a leak found at the gas cap adapter?**

**Yes** >> Replace the Fuel Filler tube assembly.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace the gas cap.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. EVAP PURGE SOLENOID OPERATION

**NOTE: After disconnecting the Evap Purge Solenoid vacuum connections, inspect the lines and solenoid for any signs of contamination from the EVAP Canister. This may indicate a faulty check valve. Replace/repair as necessary.**

Turn the ignition off.

Disconnect the vacuum hoses at the Evap Purge Solenoid.

Press the remote smoke/air start button on the EELD.

While holding the remote smoke/air start button, check to see if smoke is exiting the purge valve. This indicates that there is a leak internal to the purge valve.

**NOTE: Below is an optional method of checking the purge valve for leaks if the EELD is unavailable.**

Turn the ignition off.

Disconnect the vacuum hoses at the Evap Purge Solenoid.

Using a hand vacuum pump, apply 10 in HG to the “CAN” of the Evap Purge Solenoid.

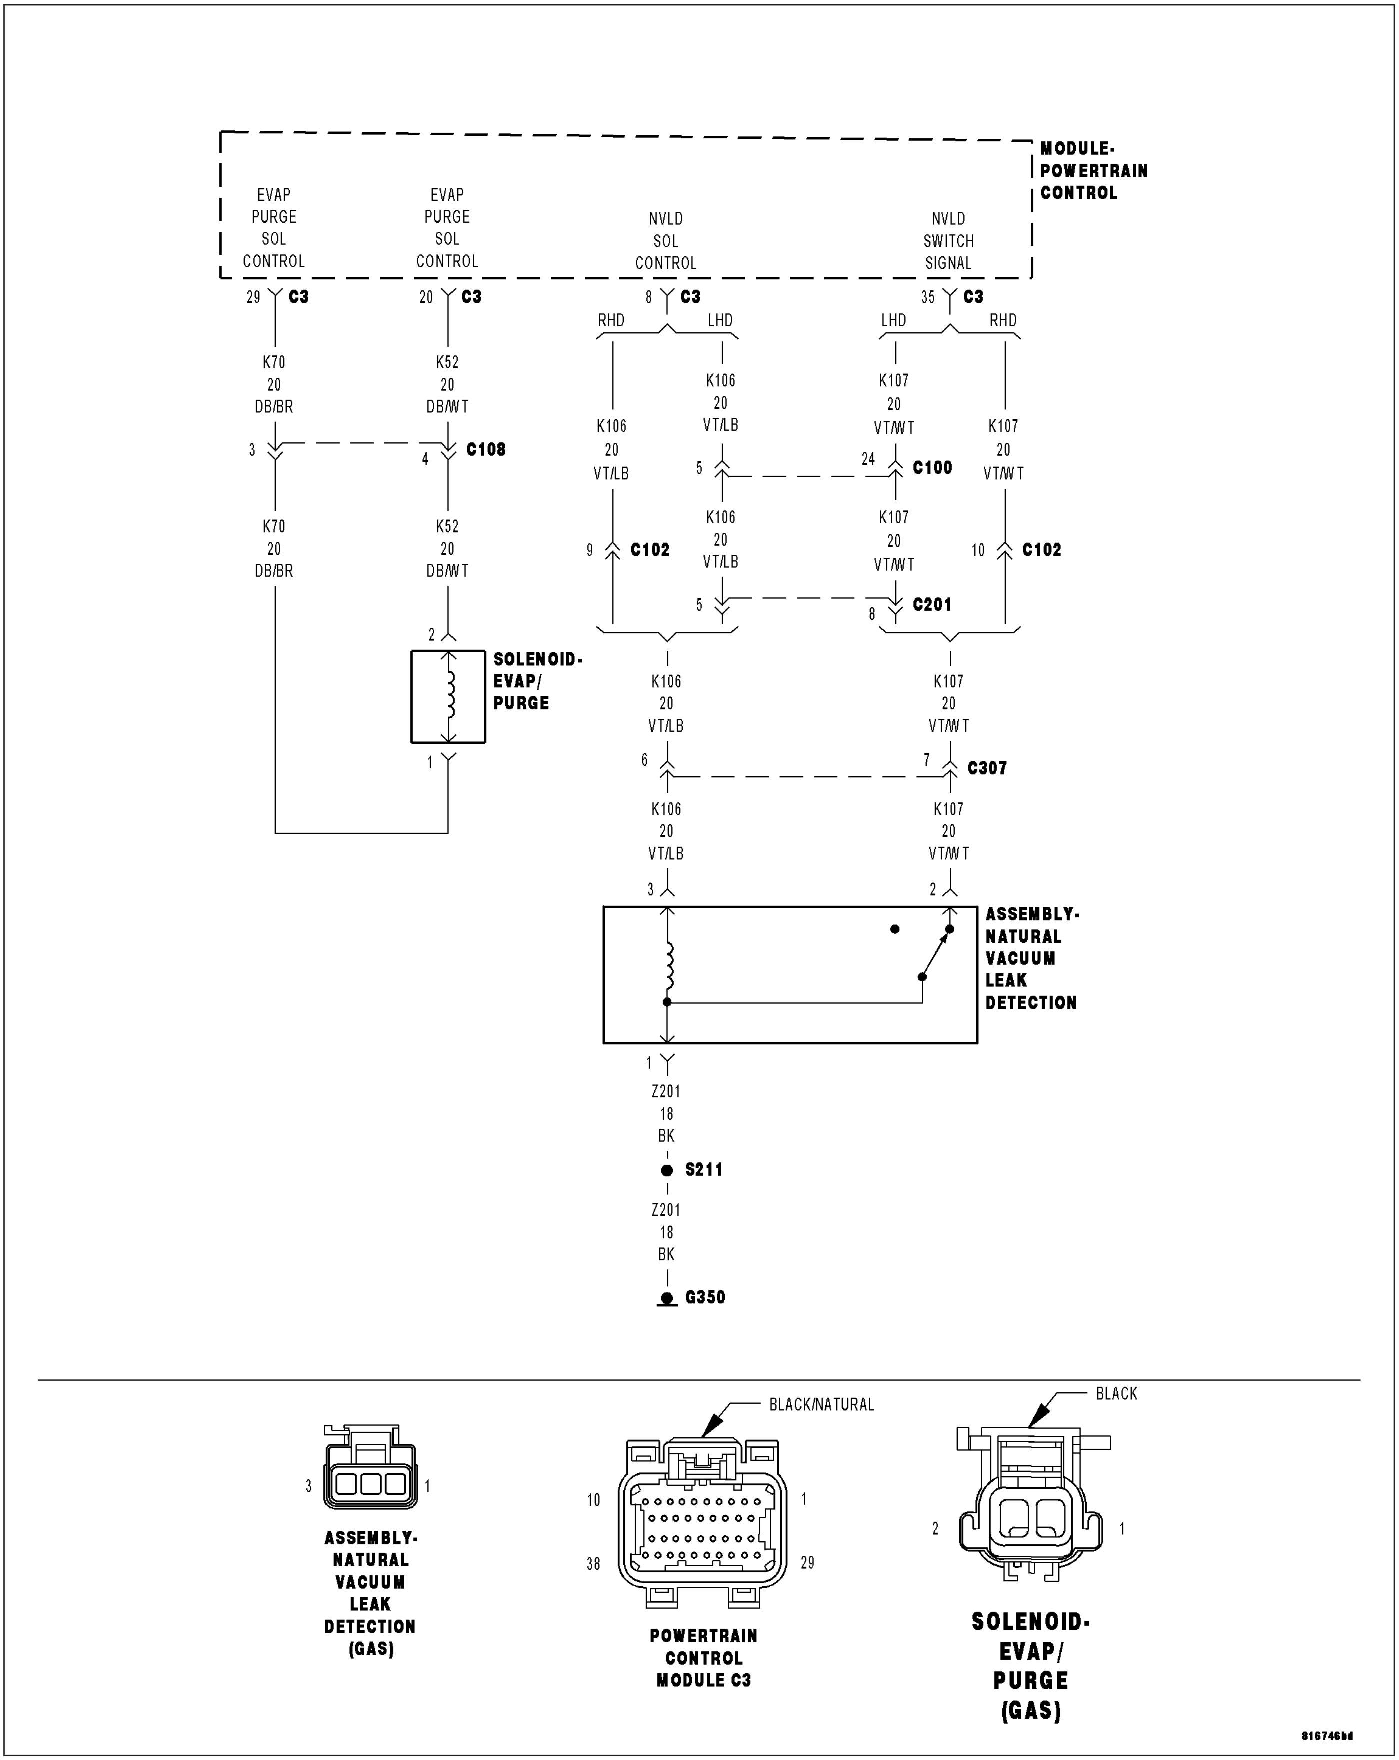
**NOTE: Monitor the vacuum gauge for at least 15 seconds.**

**Is smoke visible from the EVAP Purge Solenoid if using the EELD, or not hold a vacuum?**

**Yes** >> Replace the NVLD.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace the Evap Purge Solenoid.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0457-LOOSE FUEL CAP



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

Fuel level is recorded when the ignition key is turned off and is compared to the fuel level when the ignition key is turned back on. The PCM recognizes an increase in fuel level and will fail the Medium leak test because the fuel cap is broken or not installed properly. GAS CAP will be displayed in odometer to inform the owner that the cap is off of loose.

- **When Monitored:**
  Ignition on. Ambient Temperature between 4°C and 32°C (39°F and 89°F) Close Loop fuel system. Test runs after the medium leak test is inconclusive and the PCM has sensed a fuel increase.
- **Set Condition:**
  The PCM activates the EVAP Purge Solenoid to pull the EVAP system into a vacuum to close the NVLD switch. Once the NVLD switch is closed, the PCM turns the EVAP Purge Solenoid off to seal the EVAP system. If the NVLD switch reopens before the calibrated amount of time after a fuel tank fill, an error is detected. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| LOOSE OR MISSING FUEL CAP |
| FUEL FILL CAP |
| EVAP PURGE SYSTEM MEDIUM LEAK |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING) .**

## Diagnostic Test

### 1. VEHICLE HISTORY AND SERVICE BULLETIN INVESTIGATION

Ignition on, engine not running.

With a scan tool, read DTCs and record the related Freeze Frame data if any DTCs are present.

Whether or not any DTCs are present you will want to check the following items which may assist in repairing the customer's complaint successfully.

Check the vehicles repair history.

If the vehicle has a repair history that pertains to the customer's current complaint, review the repair.

Inspect the vehicle for any aftermarket accessories that may have been installed incorrectly.

Check for any service bulletin(s) related to the customer's complaint or DTCs.

If a service bulletin applies, follow the instructions per the service bulletin.

**Choose the following scenario that best applies.**

**The service bulletin repaired the customer's complaint.**
Testing complete.

**A DTC is present, no service bulletins apply, or the service bulletin didn't repair the customer's complaint.**
Go To 2.

### 2. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 3.

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. LOOSE OR MISSING FUEL FILL CAP

Inspect the fuel fill cap.

Inspect the cap for any abnormal defects.

**Was the cap off, missing, or broken?**

**Yes** >> Properly install the fuel fill cap and proceed to step.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4.

## 4. NVLD SERVICE TEST

With the scan tool perform the NVLD Service Test.

**Does the NVLD Service Test pass?**

**Yes** >> Test complete.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. VERIFY EVAPORATIVE EMISSION LEAK

To continue testing you will need Miller Tool #8404A Evaporative Emission Leak Detector (EELD).

**WARNING: Keep lit cigarettes, sparks, flames, and other ignition sources away from the test area to prevent the ignition of explosive gases. Keep the test area well ventilated.**

**NOTE: The fuel tank should have between 20% and 80% of fuel tank capacity to properly test the Evap system.**

Connect the red power lead of the EELD to the battery positive terminal and the black ground lead to battery negative terminal.

Block the vent hose of the canister if using the service port.

Connect shop air to the EELD.

Set the smoke/air control switch to AIR.

Insert the tester's AIR supply tip (clear hose) into the appropriate calibration orifice on the tester's control panel (based on DTC leak size).

Press the remote smoke/air start button.

Position the red flag on the air flow meter so it is aligned with the indicator ball.

When the calibration is complete, release the remote button. The EELD flow meter is now calibrated in liters per minute to the size leak indicated by the DTC set in the PCM.

Install the service port adapter #8404-14 on the vehicle's service port and block the vent hose of the EVAP Canister (if equipped) or install the #8404-ADP service adaptor into the filter line.

Connect the Air supply hose from the EELD to the service port (if equipped) or to the #8404-ADP adapter.

Press the remote button to activate AIR flow.

**NOTE: Larger volume fuel tanks, lower fuel levels or if the vehicle is equipped with a Flow Management Valve may indicate high flow and will require 4 to 5 minutes to fill.**

Compare the flow meter indicator ball reading to the red flag.

ABOVE the red flag indicates a leak present.

BELOW the red flag indicates a sealed system.

**Is the indicator ball above the red flag?**

**Yes** >> Go To 6.

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. EVAPORATIVE EMISSION LEAK DETECTION

**NOTE: A thorough visual inspection of the Evap system hoses, tubes, and connections may save time in your diagnosis. Look for any physical damage or signs of wetness at connections. The strong smell of fuel vapors may also aid diagnosis.**

To continue testing, you will need Miller Tool #8404A Evaporative Emissions Leak Detector (EELD).

Remove the Air supply hose from the service port (if equipped) or from the #8404-ADP adapter.

Connect the SMOKE supply tip (black hose) to the service port (if equipped) or to the #8404-ADP adapter.

Set the smoke/air control switch to SMOKE.

**NOTE: The flow meter indicator ball will not move in the smoke mode.**

Press the remote smoke/air start button.

**NOTE: Make sure that smoke has filled the EVAP system by continuing to press the remote smoke/air start button, remove the vehicle fuel cap, and wait for the smoke to exit. Once smoke is indicated reinstall the fuel cap.**

**NOTE: For optimal performance, introduce smoke into the system for an additional 60 seconds; continue introducing smoke at 15 second intervals, as necessary.**

While still holding the remote smoke/air start button, use the white light (#8404-CLL) to follow the EVAP system path, and look for the source of the leak indicated by exiting smoke.

If a leak is concealed from view (i.e., top of fuel tank), release the remote smoke/air start button, and use the ultra-violet (UV) black light #8404-UVL and the yellow goggles 8404-20 to look for residual traces of dye that is left behind by the smoke.

The exiting smoke deposits a residual fluid that is either bright green or bright yellow in color when viewed with a UV light.

**NOTE: The EVAP System is divided into three zones. A leak from any of these zones can cause this DTC to set. The lists below specify the possible leak points in that specific zone. For further assistance see the Zone Identification Charts below.**

- ZONE 1

1 Fuel Cap

2 Recirculation Check Valve.

3 Vapor Recirculation Line.

4 Signal Vapor Line for FVM.

5 Flow Management Valve.

6 Fuel Tank to Canister Vapor Line connection.

7 Fuel Tank Vent (Check Valve).

8 Vapor Line to Canister.

9 Flow Control Orifice.

10 Control Valve.

11 Liquid Trap.

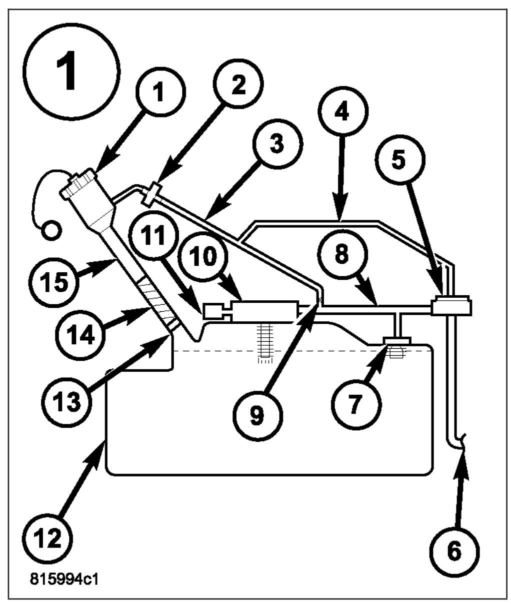
12 Fuel Tank.

13 Check valve.

14 Fuel Fill Tube to Tank connector.

15 Fuel Fill Tube

Damaged or disconnected EVAP system components.



- ZONE 2

1 Filter.

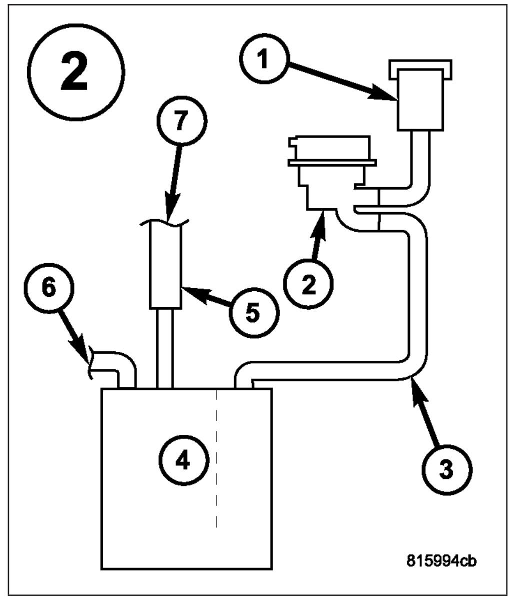
2 NVLD.

3 Canister Vent Line.

4 Evap Canister.

5 Chassis Purge Valve.

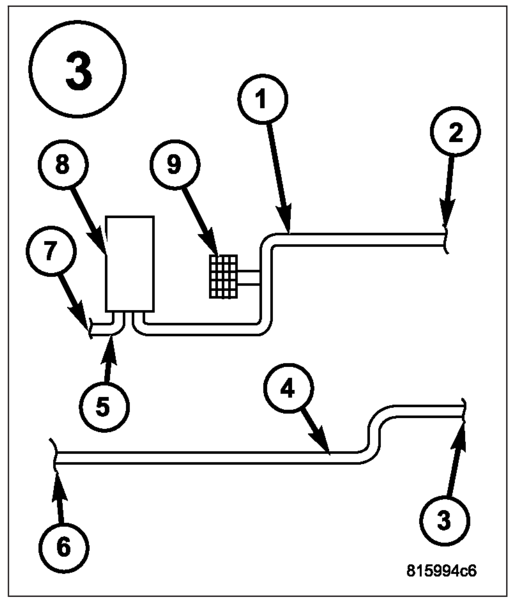
6 Fuel Tank to Canister Vapor Line connection.
7 Evap Purge connection.



---

- ZONE 3

1 Evap Purge Vacuum Line.
2 Connection to Chassis Line.
3 Connection to Canister.
4 Chassis Purge Line.
5 Evap Purge Vacuum Line.
6 Connection to Evap Purge Harness.
7 Chassis Evap Purge Line connection to Engine Vacuum.
8 Evap Purge Valve.
9 Service Port.



**NOTE: Carefully inspect the vent side of the EVAP Canister. Due to the filtering system in the canister the smoke may not be as thick. Introducing smoke into the filtered side of the canister may assist in locating the leak.**

**Was a leak found?**

**Yes** >> Go To 7.

**No** >> Go To 8.

## 7. LEAK AT GAS CAP

Remove the SMOKE supply tip (black hose) from the service port (if equipped) or to the #8404–ADP adapter.

Install gas cap adapter, Miller Tool #8382 (1/4 turn cap) or #6922 (screw cap) and #8399* (secondary seal depressor) and repeat test 5.

**Was a leak found at the gas cap adapter?**

**Yes** >> Replace the Fuel Filler tube assembly.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace the gas cap.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 8. EVAP PURGE SOLENOID OPERATION

**NOTE: After disconnecting the Evap Purge Solenoid vacuum connections, inspect the lines and solenoid for any signs of contamination from the EVAP Canister. This may indicate a faulty check valve. Replace/repair as necessary.**

Turn the ignition off.

Disconnect the vacuum hoses at the Evap Purge Solenoid.

Press the remote smoke/air start button on the EELD.

While holding the remote smoke/air start button, check to see if smoke is exiting the purge valve. This indicates that there is a leak internal to the purge valve.

**NOTE: Below is an optional method of checking the purge valve for leaks if the EELD is unavailable.**

Turn the ignition off.

Disconnect the vacuum hoses at the Evap Purge Solenoid.

Using a hand vacuum pump, apply 10 in HG to the “CAN” of the Evap Purge Solenoid.

**NOTE: Monitor the vacuum gauge for at least 15 seconds.**

**Is smoke visible from the EVAP Purge Solenoid if using the EELD, or not hold a vacuum?**

**Yes** >> Go To 9.

**No** >> Replace the Evap Purge Solenoid.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 9. NVLD SWITCH OPERATION

Reconnect all vacuum hoses.

Start the engine.

Allow the engine to idle.

Using the scan tool, perform the NVLD FORCED MONITOR TEST.

Monitor the NVLD Switch.

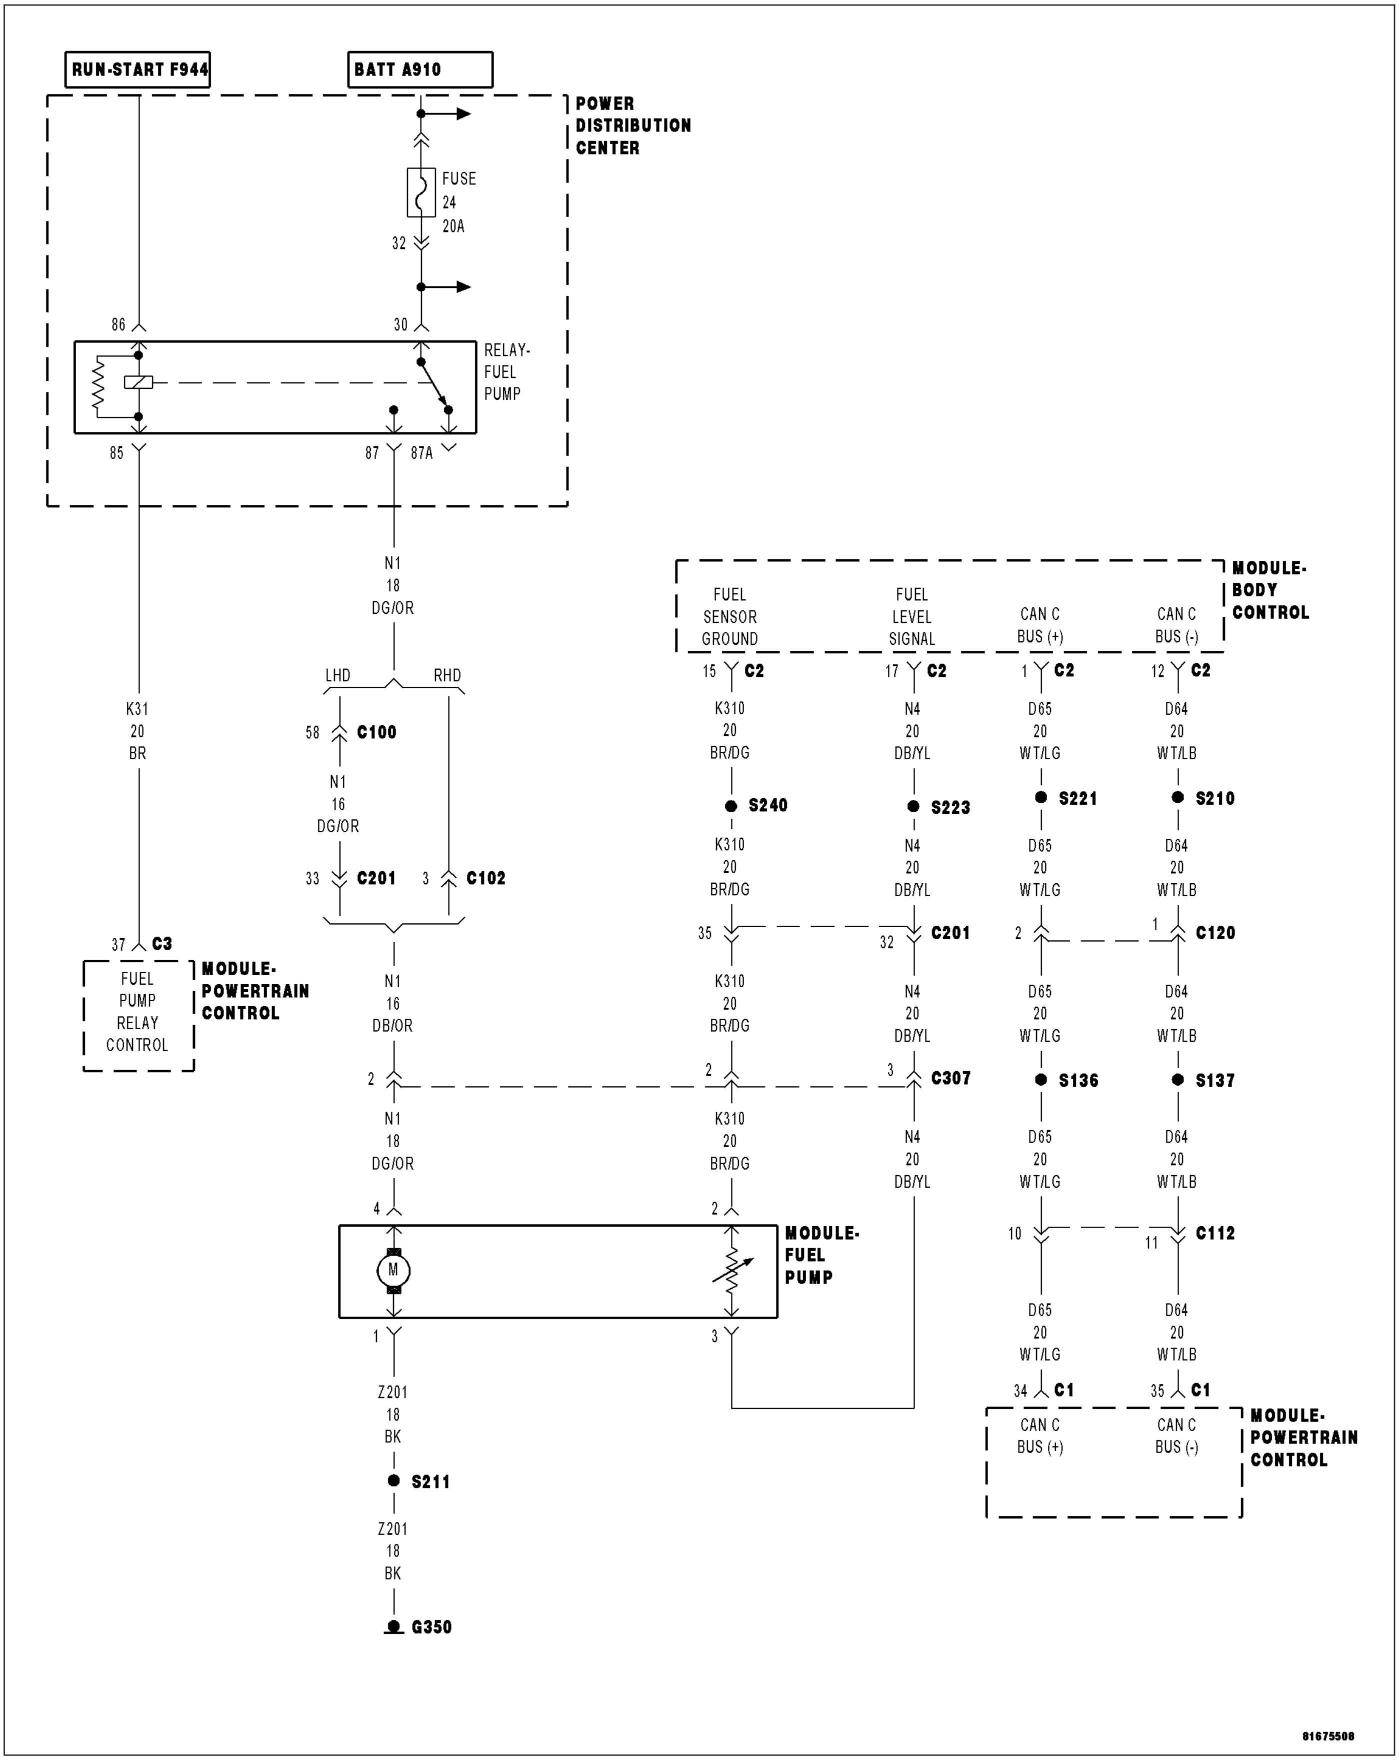
**NOTE: As the test runs, the NVLD Switch should go from an OPEN state to CLOSED. After the vacuum is released form the EVAP system the Switch state will return to OPEN.**

**Did the NVLD Switch operate as described above?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Replace the NVLD Assembly.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0461-FUEL LEVEL SENSOR 1 PERFORMANCE



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The fuel level rationality will set a fault for a fuel level reading that does not change over an accumulated mileage threshold to keep stuck high or stuck low fuel levels from disabling OBD monitors. If the vehicle is fitted with a saddle tank fuel system this feature includes diagnostics for both of the sending units and diagnostics for a siphon tube that has become disconnected or plugged. The power up test looks to see a large enough fuel level voltage change from the last key-off to the following engine run. The engine run test looks to see a fuel level voltage change over an accumulated mileage.

- **When Monitored:**
  TEST No.1: With the ignition on, the fuel level is compared to the previous key down after a 20 second delay. TEST No.2: The PCM monitors the fuel level at ignition on.
- **Set Condition:**
  TEST No.1: If the PCM does not see a difference in fuel level of greater than 0.1 volt the test will fail. TEST No.2: If the PCM does not see a change in the fuel level of .1765 over a set amount of miles the test will fail. Two trip fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (N4) FUEL LEVEL SIGNAL CIRCUIT OPEN |
| (N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO GROUND |
| (N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO THE (K310) SENSOR GROUND CIRCUIT |
| (N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| (K310) SENSOR GROUND CIRCUIT OPEN |
| FUEL TANK |
| FUEL LEVEL SENSOR |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: Diagnose any CAN C Bus communication DTCs before continuing.**

**NOTE: Diagnose P0462 or P0463 first, if set along with P0461.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. VISUALLY INSPECT FUEL TANK

Visually inspect the Fuel Tank for damage that may restrict the Fuel Sending Unit float from moving.

**Is the Fuel Tank OK?**

**Yes** >> Go To 3

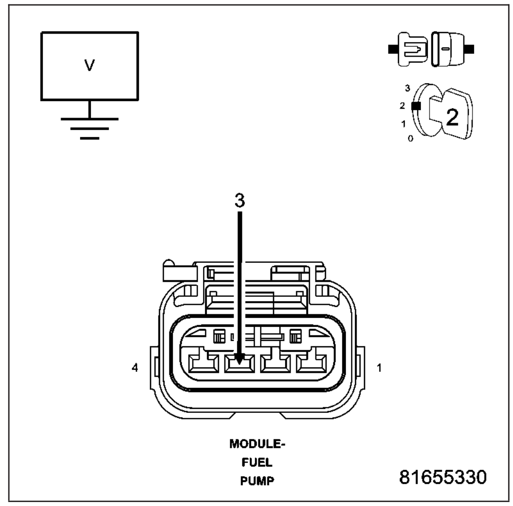
**No** >> Replace the Fuel Tank as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. (N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO VOLTAGE

Disconnect the Fuel Pump Module harness connector.

Ignition on, engine not running.

Measure the voltage on the (N4) Fuel Level Signal circuit in the Fuel Pump Module harness connector.



**Is the voltage above 0.5 of a volt?**

**Yes** >> Repair the short to voltage in the (N4) Fuel Level Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

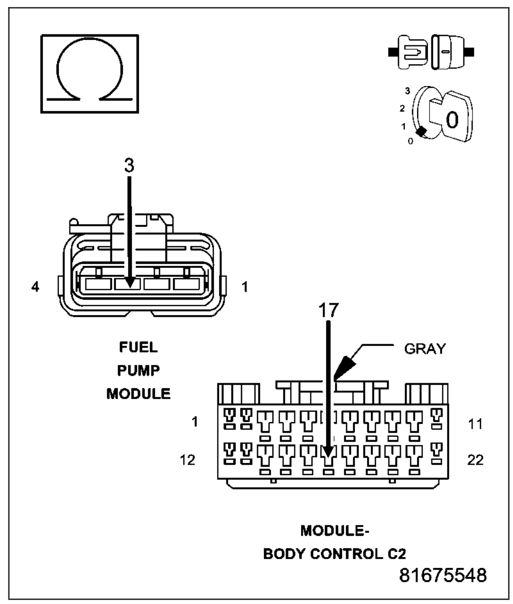
**No** >> Go To 4

## 4. (N4) FUEL LEVEL SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the C2 BCM harness connector.

Measure the resistance of the (N4) Fuel Level Signal circuit from the Fuel Pump Module harness connector to the C2 BCM harness connector.



**Is the resistance below 5.0 ohms?**

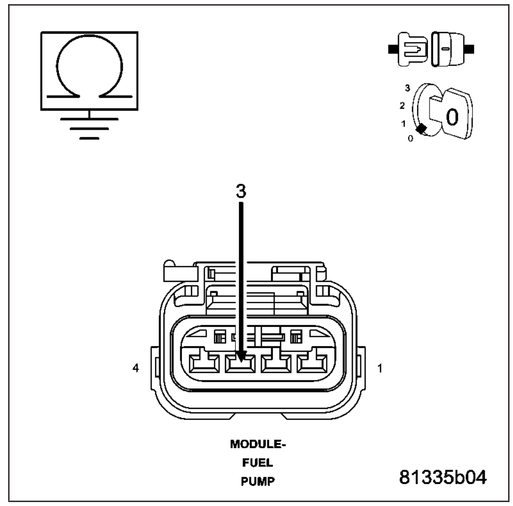
**Yes** >> Go To 5

**No** >> Repair the open in the (N4) Fuel Level Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. (N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (N4) Fuel Level Signal circuit in the Fuel Pump Module harness connector.



**Is the resistance below 100 ohms?**

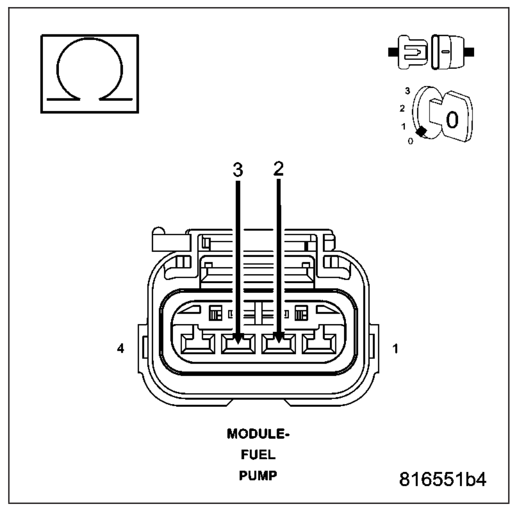
**Yes** >> Repair the short to ground in the (N4) Fuel Level Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. (N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO THE (K310) SENSOR GROUND CIRCUIT

Measure the resistance between the (K310) Sensor ground circuit and the (N4) Fuel Level Signal circuit in the Fuel Pump Module harness connector.



**Is the resistance below 100 ohms?**

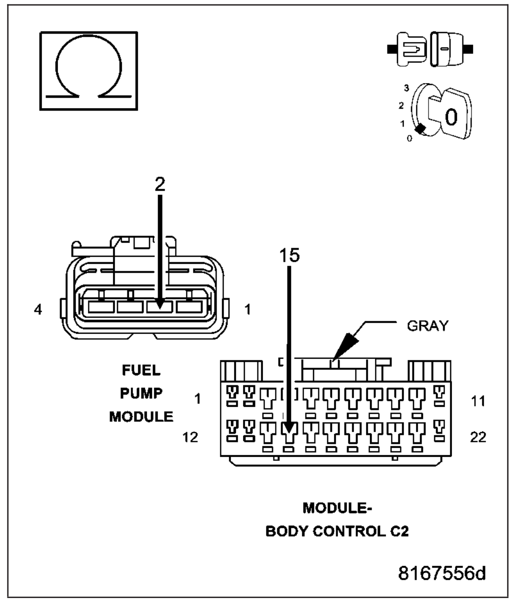
**Yes** >> Repair the short between the (K310) Sensor ground circuit and the (N4) Fuel Level Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 7. (K310) SENSOR GROUND CIRCUIT OPEN

Measure the resistance of the (K310) Sensor ground circuit from the Fuel Pump Module harness connector to the C2 BCM harness connector.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 8

**No** >> Repair the open in the (K310) Sensor ground circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 8. INTERNAL INSPECTION OF THE FUEL TANK

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Remove the Fuel Tank per Service Information.

Remove the Fuel Pump Module.

Visually inspect the inside of the Fuel Tank for any obstructions or deformities.

Inspect the Fuel Pump Module Float arm for damage.

**Were any problems found?**

**Yes** >> Repair or replace as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 9

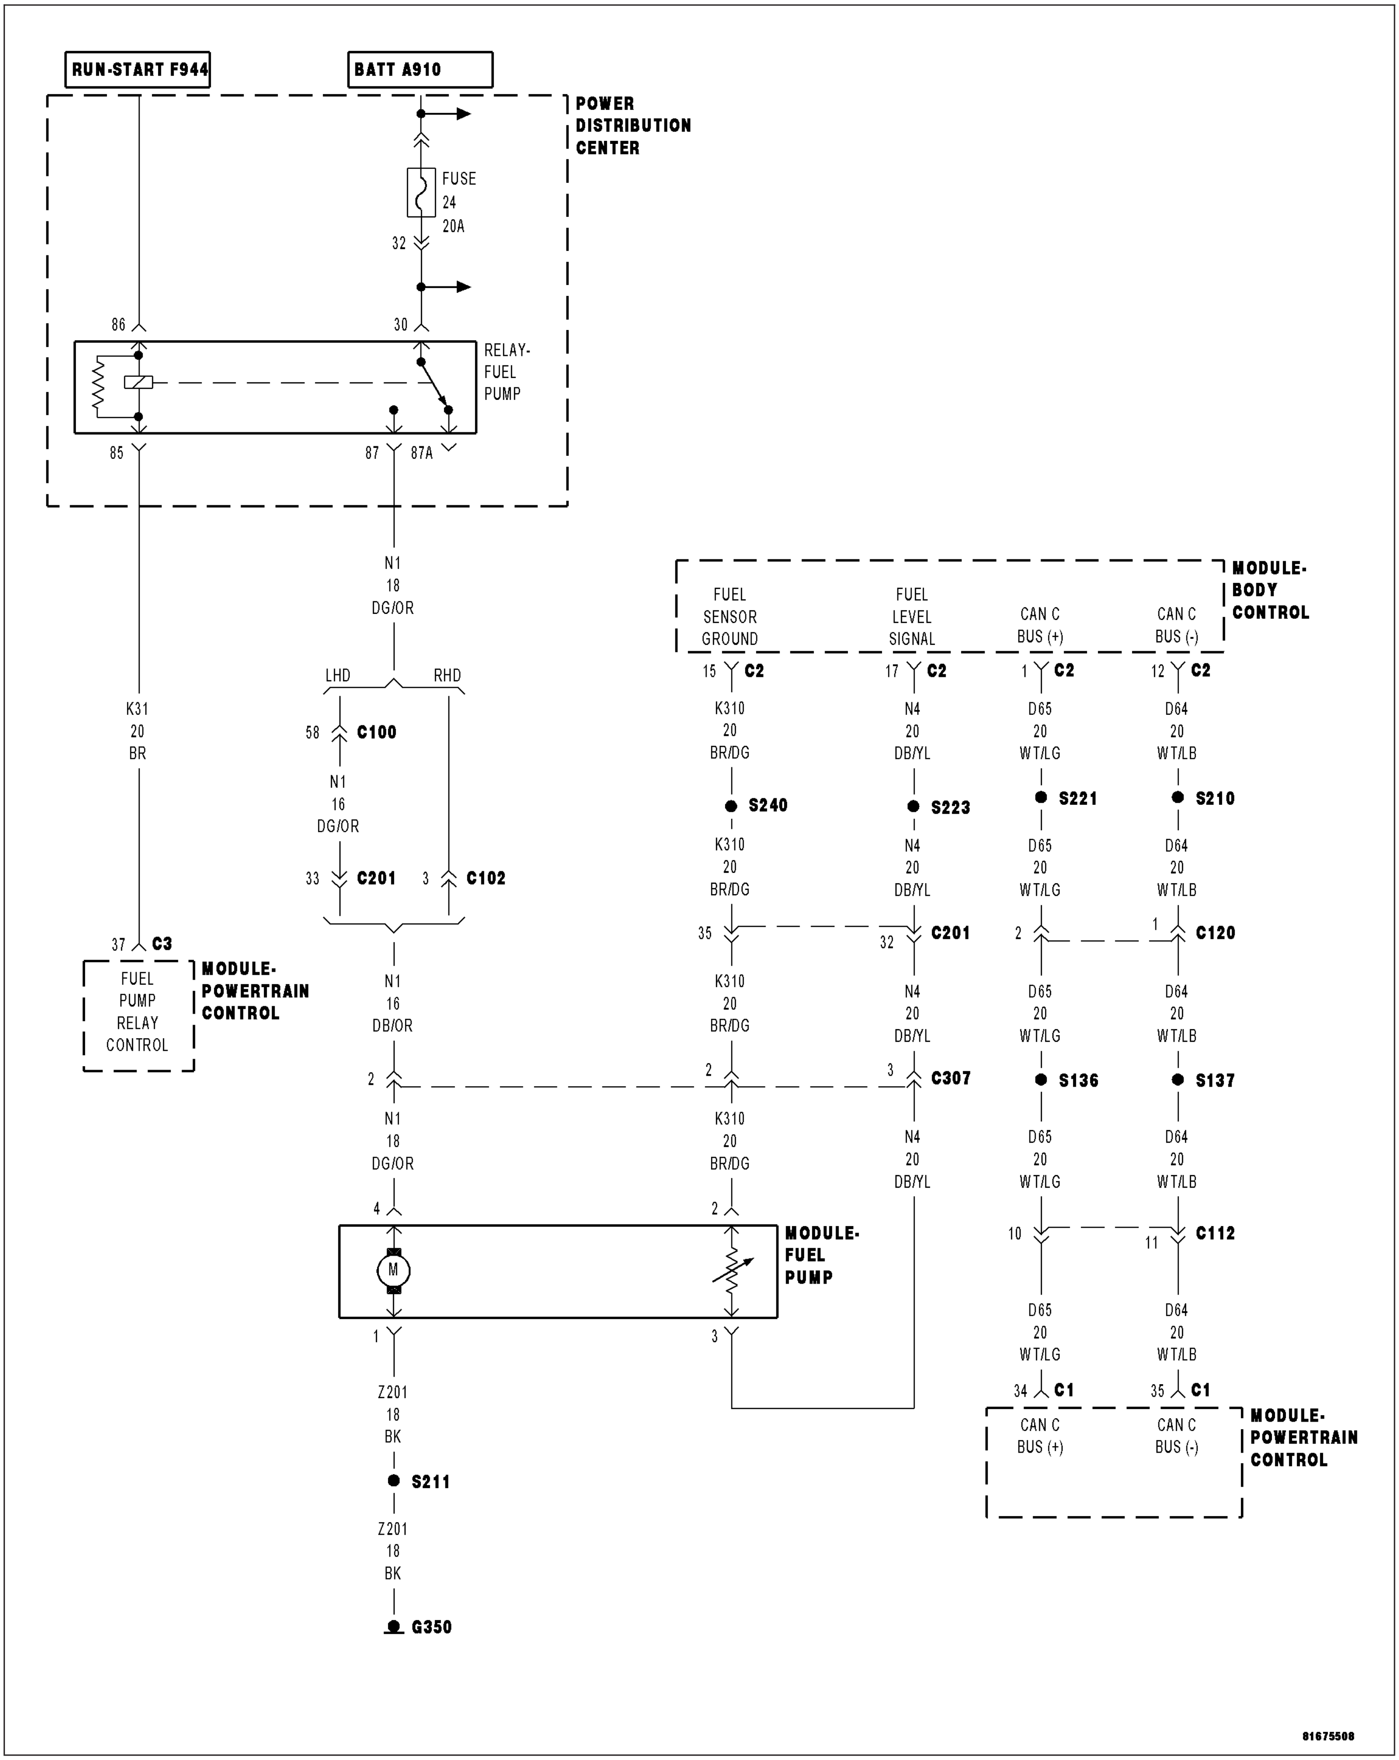
## 9. FUEL LEVEL SENSOR

**If there are no possible causes remaining, view repair.**

**Repair**

Replace the Fuel Level Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

# P0462-FUEL LEVEL SENSOR 1 CIRCUIT LOW



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on and battery voltage above 10.4 volts.
- **Set Condition:**
  The fuel level sensor signal voltage goes below 0.4 of a volt for more than 4.4 seconds. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO GROUND |
| (N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO THE (K310) SENSOR GROUND CIRCUIT |
| FUEL LEVEL SENSOR |
| CAN C BUS CIRCUIT OPEN OR SHORTED |
| BCM |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).**

## Diagnostic Test

### 1. FUEL LEVEL SENSOR VOLTAGE BELOW 0.4 OF A VOLT

**NOTE: Diagnose all CAN C communication DTCs before continuing.**
Ignition on, engine not running.

With the scan tool, read the Fuel Level Sensor voltage.

**Is the Fuel Level Sensor voltage below 0.4 of a volt?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. FUEL LEVEL SENSOR

Turn the ignition off.

Disconnect the Fuel Pump Module harness connector.

Ignition on, engine not running.

With the scan tool, read the Fuel Level Sensor voltage.

**Did the Fuel Level Sensor voltage change from below 0.4 of a volt to above 4.0 volts?**

**Yes** >> Replace the Fuel Level Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

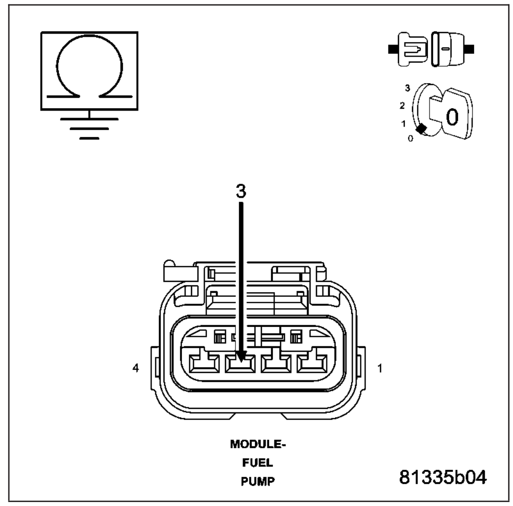
**No** >> Go To 3

## 3. (N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C2 BCM harness connector.

Measure the resistance between ground and the (N4) Fuel Level Signal circuit in the Fuel Pump Module harness connector.



**Is the resistance below 100 ohms?**

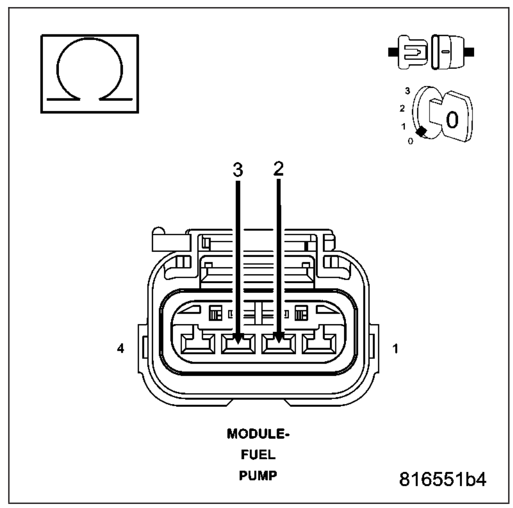
**Yes** >> Repair the short to ground in the (N4) Fuel Level Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. (N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO THE (K310) SENSOR GROUND CIRCUIT

Measure the resistance between the (N4) Fuel Level Signal circuit and the (K310) Sensor ground circuit in the Fuel Pump Module harness connector.



**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K310) Sensor ground circuit and the (N4) Fuel Level Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. BCM

**NOTE: Before continuing, check the BCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

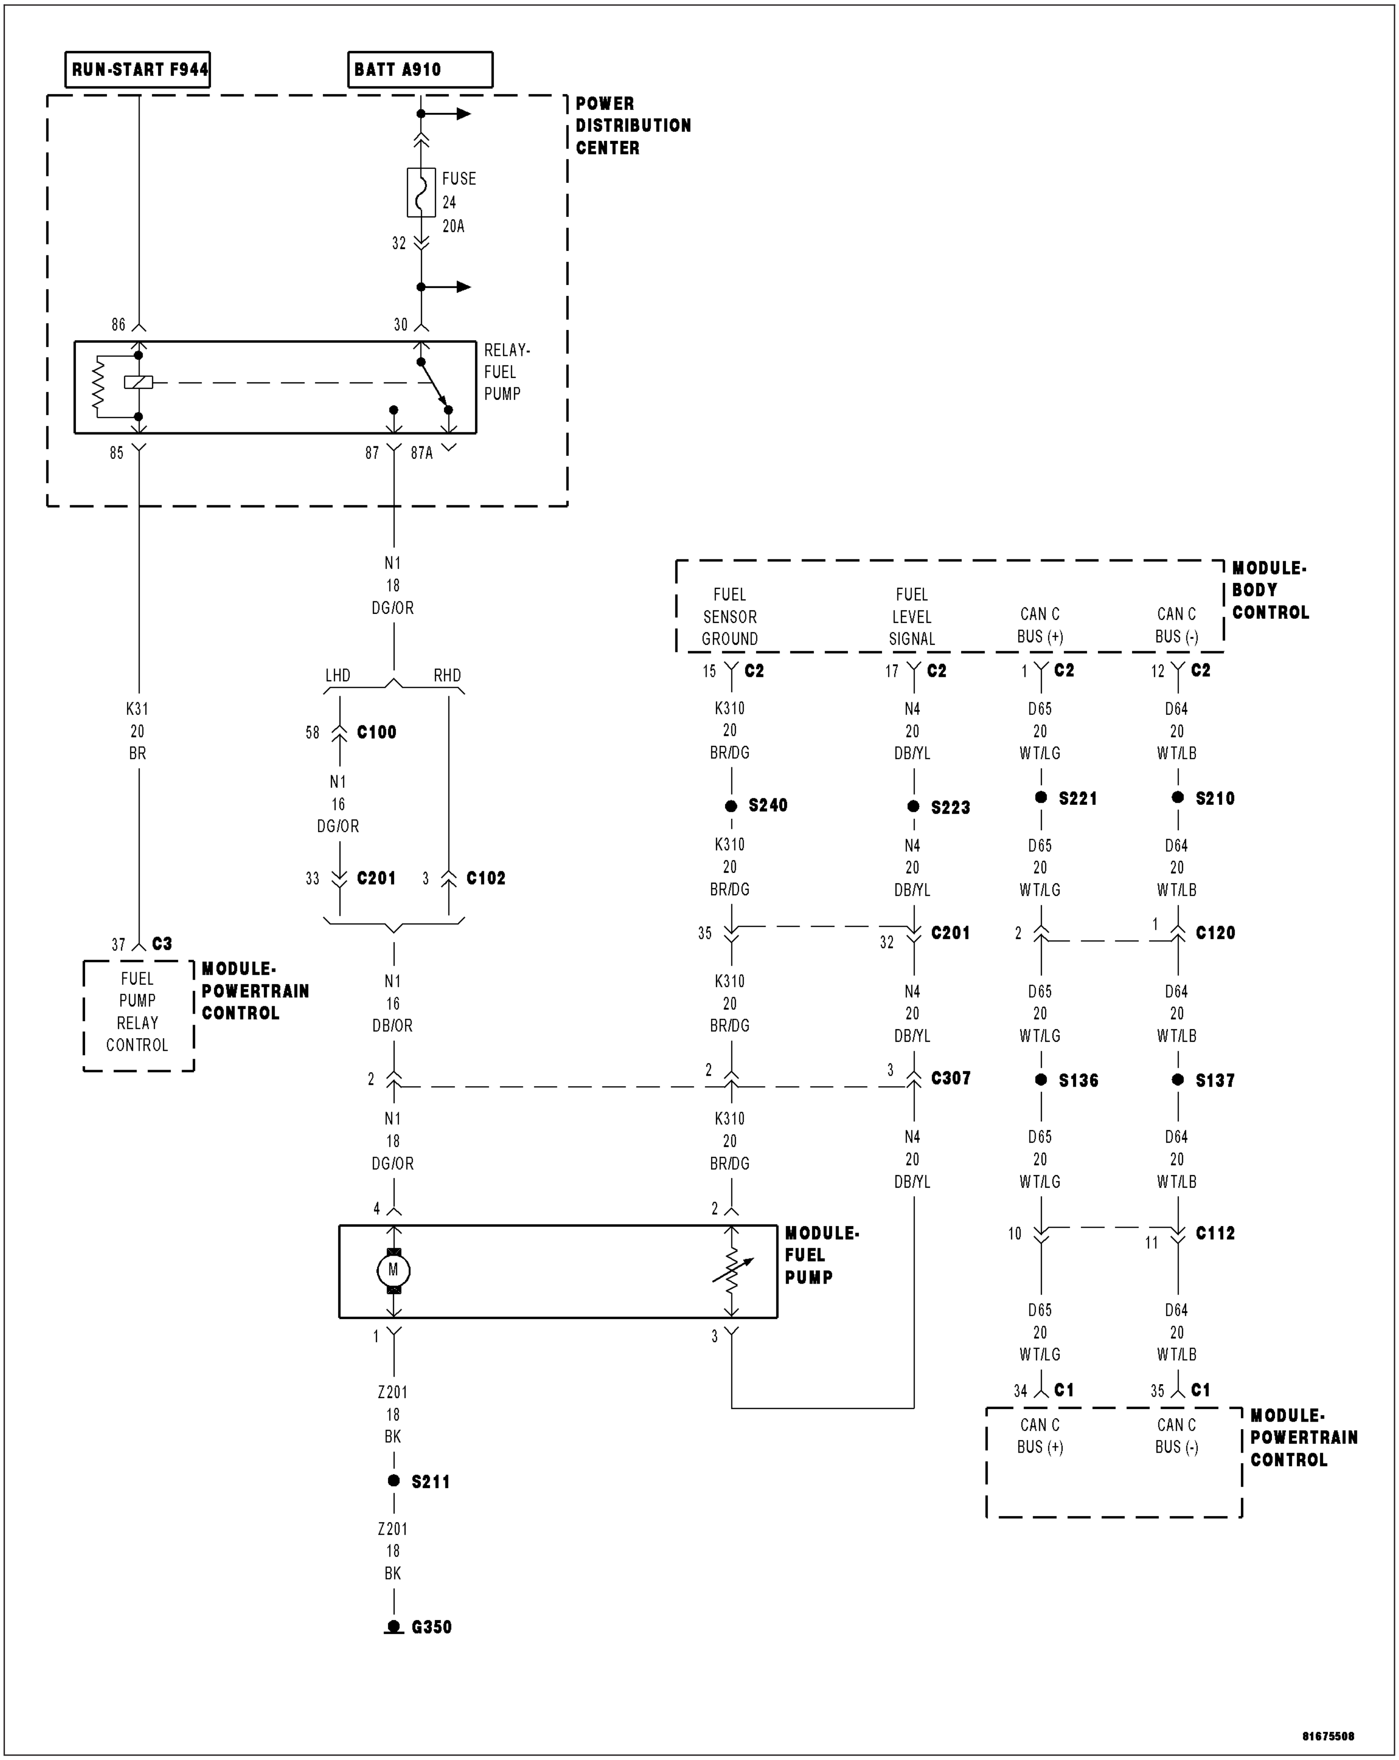
**Yes** >> Repair as necessary.

Perform the BODY VERIFICATION TEST. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE)

**No** >> Replace and program the Body Control Module per Service Information.

Perform the BODY VERIFICATION TEST. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE)

## P0463-FUEL LEVEL SENSOR 1 CIRCUIT HIGH



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on and battery voltage above 10.4 volts.
- **Set Condition:**
  The fuel level sensor signal voltage at the PCM goes above 4.9 volts for more than 90 seconds. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (N4) FUEL LEVEL SIGNAL CIRCUIT OPEN |
| (K310) SENSOR GROUND CIRCUIT OPEN |
| FUEL LEVEL SENSOR |
| CAN C BUS CIRCUITS OPEN OR SHORTED |
| BCM |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. FUEL LEVEL SENSOR VOLTS ABOVE 4.9 VOLTS

**NOTE: Diagnose and CAN C Bus communication DTCs before continuing.**

Ignition on, engine not running.

With a scan tool, read the Fuel Level Sensor voltage.

**Is the Fuel Level Sensor voltage above 4.9 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. FUEL LEVEL SENSOR

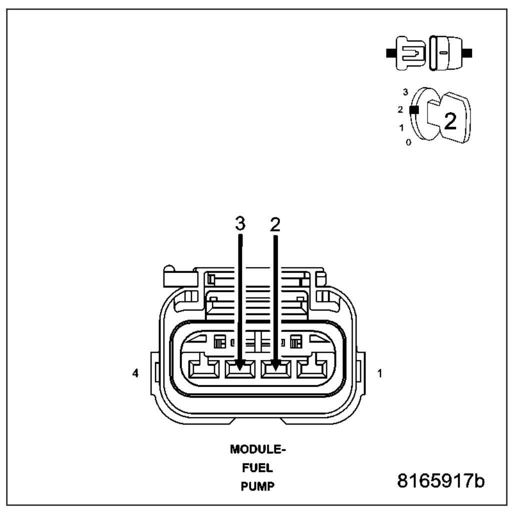
Turn the ignition off.

Disconnect the Fuel Pump Module electrical harness connector.

Ignition on, engine not running.

Connect a jumper wire between the (N4) Fuel Level Signal circuit and the (K310) Sensor ground circuit in the Fuel Pump Module harness connector.

With the scan tool, read the Fuel Level Sensor voltage.



**Did the Fuel Level Sensor voltage change from above 4.8 volts to below 0.4 of a volt with the jumper wire installed?**

**Yes** >> Replace the Fuel Level Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

**NOTE: Remove the jumper wire before continuing.**

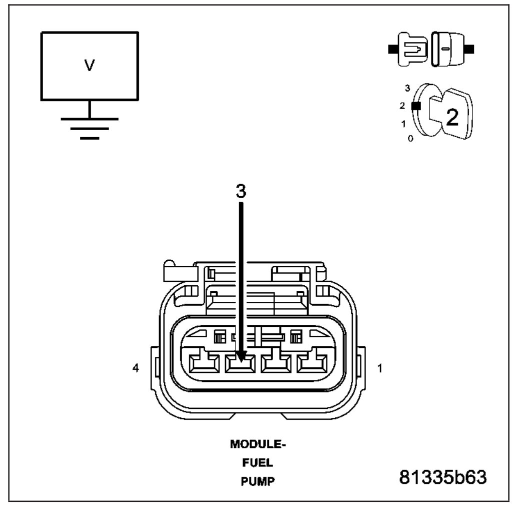
## 3. (N4) FUEL LEVEL SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the C2 BCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (N4) Fuel Level Signal circuit in the Fuel Pump Module harness connector.



**Is the voltage above 5.2 volts?**

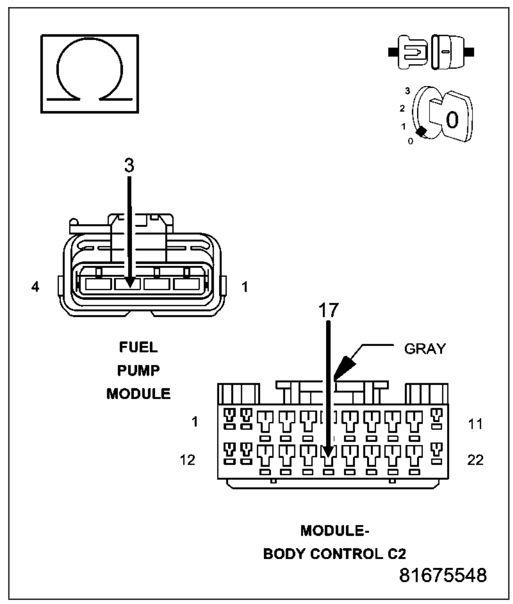
**Yes** >> Repair the short to battery voltage in the (N4) Fuel Level Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. (N4) FUEL LEVEL SIGNAL CIRCUIT OPEN

Turn the ignition off.

Measure the resistance of the (N4) Fuel Level Signal circuit from the Fuel Pump Module harness connector to the C2 BCM harness connector.



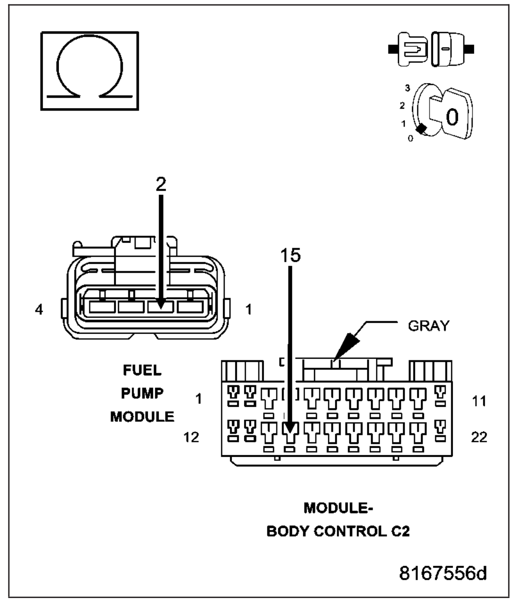
**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (N4) Fuel Level Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. (K310) SENSOR GROUND CIRCUIT OPEN

Measure the resistance of the (K310) Sensor ground circuit from the Fuel Pump Module harness connector to the C2 BCM harness connector.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K310) Sensor ground circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. BCM

**NOTE: Before continuing, check the BCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

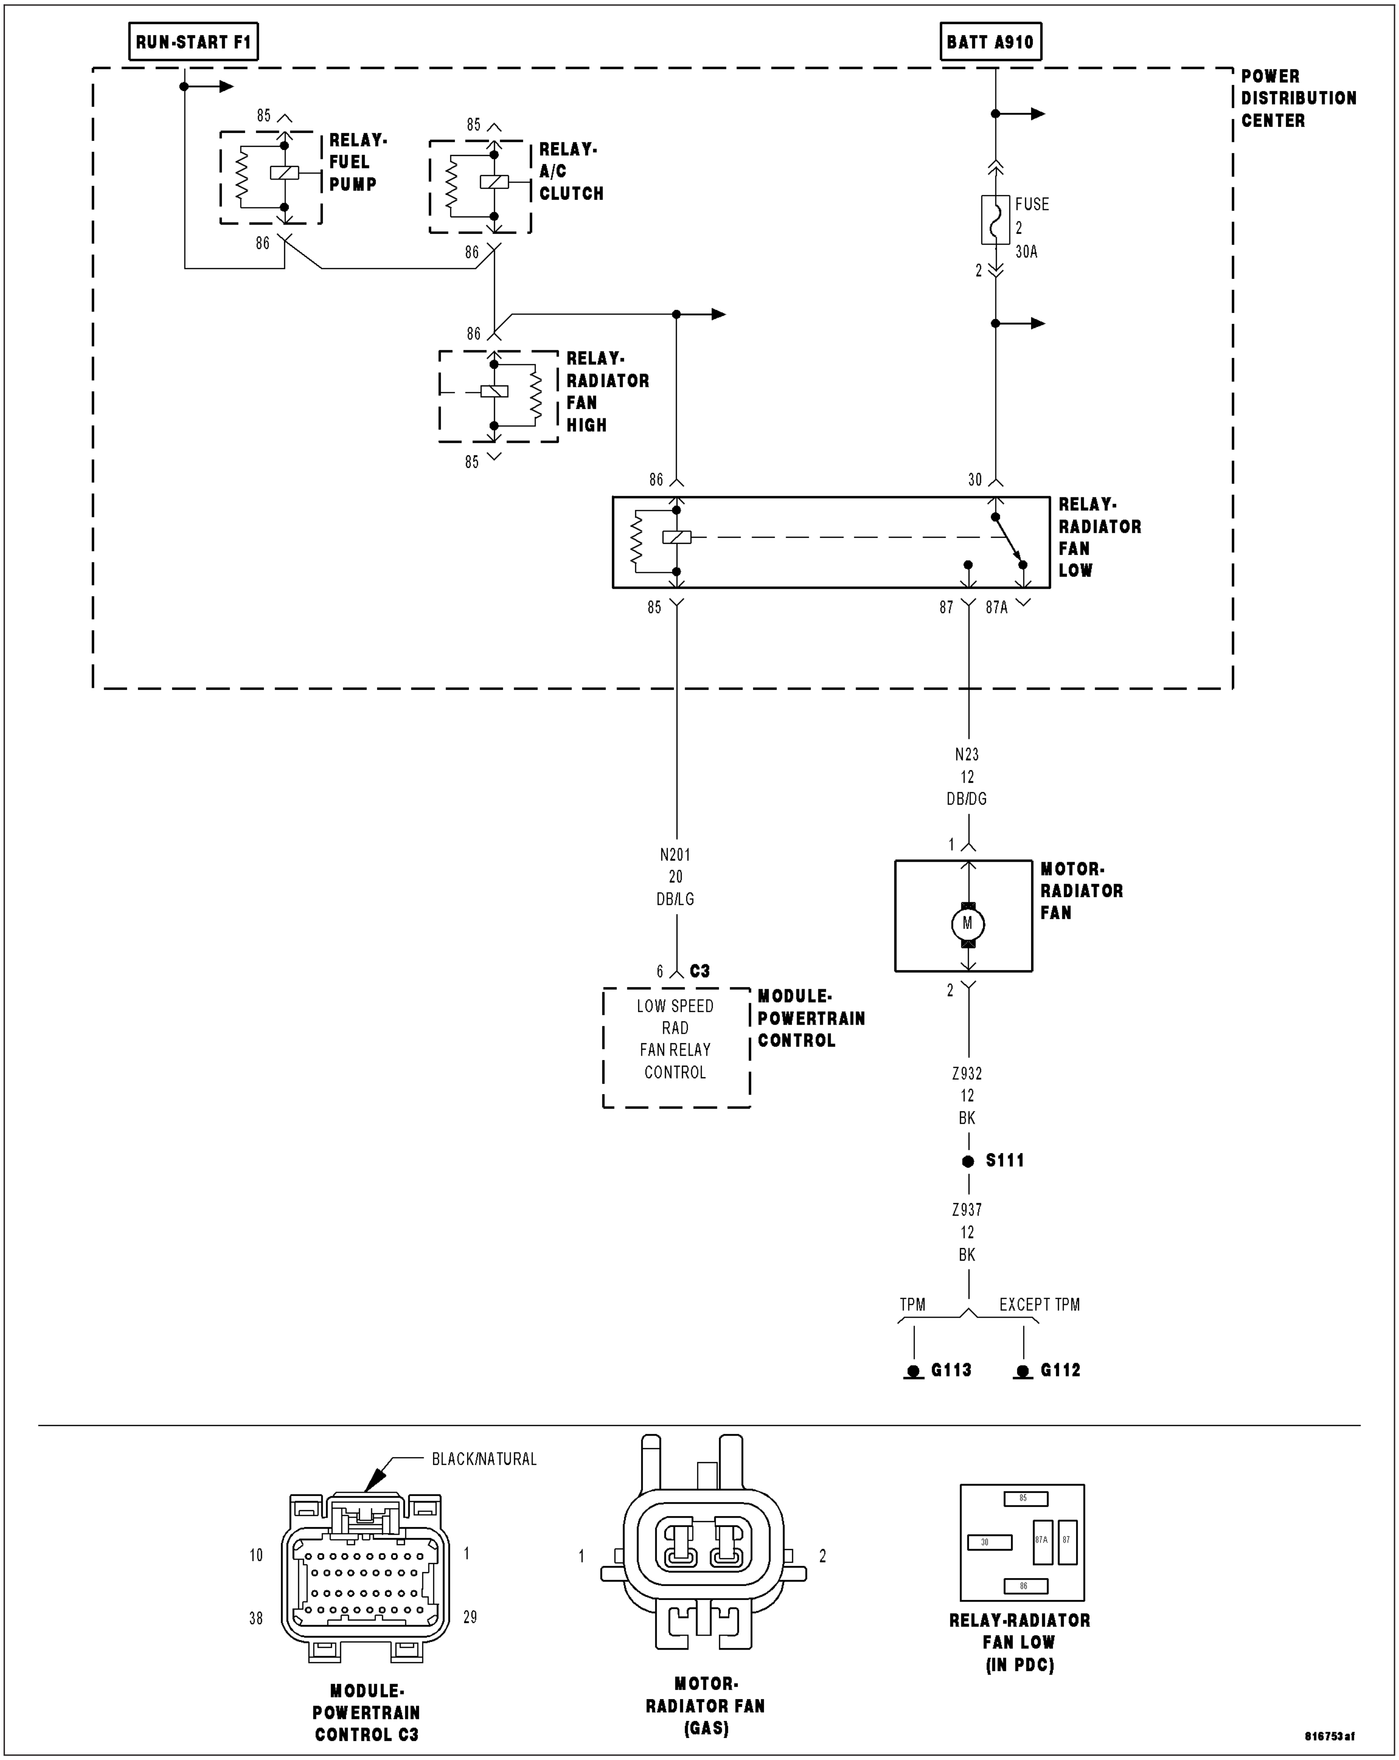
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the BODY VERIFICATION TEST. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE)

**No** >> Replace and program the Body Control Module per Service Information.
Perform the BODY VERIFICATION TEST. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE)

## P0480-COOLING FAN 1 CONTROL CIRCUIT



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the ignition on. Battery voltage greater than 10 volts.
- **Set Condition:**
  An open or shorted circuit is detected in the radiator fan relay control circuit for more than 2.7 seconds. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
| --- |
| INTERNAL (A16) FUSED B+ CIRCUIT |
| INTERNAL (F1) FUSED IGNITION SWITCH OUTPUT CIRCUIT |
| (N201) COOOLING FAN NO.1 RELAY CONTROL CIRCUIT OPEN |
| (N201) COOOLING FAN NO.1 RELAY CONTROL CIRCUIT SHORTED TO GROUND |
| LOW SPEED RADIATOR FAN RELAY |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. LOW SPEED RADIATOR FAN RELAY OPERATION

Ignition on, engine not running.

With a scan tool, actuate the Low Speed Radiator Fan Relay.

**Is the Cooling Fan Relay operating?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

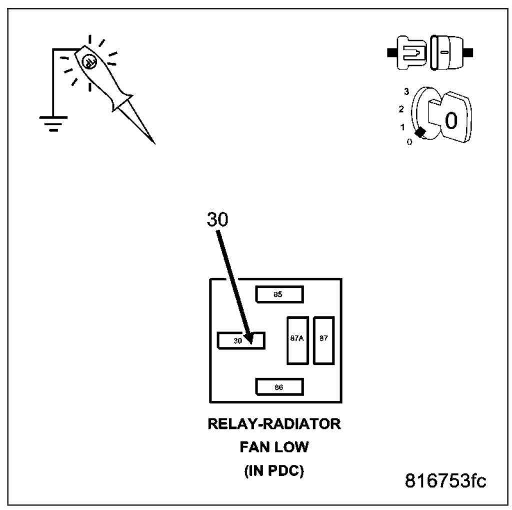
**No** >> Go To 2

### 2. (A16) FUSED B+ CIRCUIT

Turn the ignition off.

Remove the Low Speed Radiator Fan Relay.

Using a 12-volt test light connected to ground, probe the (A16) Fused B+ circuit.



**Does the test light illuminate brightly?**

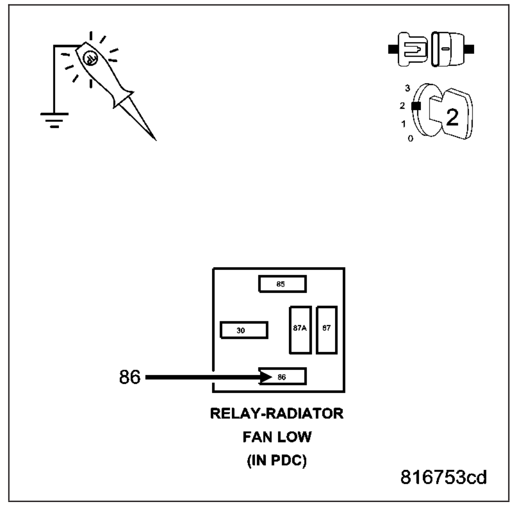
**Yes** >> Go To 3

**No** >> Repair the open or short to ground in the (A16) Fused B+ circuit. Inspect the related fuse and repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. (F1) FUSED IGNITION SWITCH OUTPUT CIRCUIT

Ignition on, engine not running.

Using a 12-volt test light connected to ground, probe the (F1) Fused Ignition Switch Output circuit.



**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the open or short to ground in the (F1) Fused Ignition Output circuit. Inspect the related fuse and repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. LOW SPEED RADIATOR FAN RELAY RESISTANCE

Turn the ignition off.

Measure the resistance of the Low Speed Radiator Fan Relay Coil.

**Is the resistance between 60 to 80 ohms?**

**Yes** >> Go To 5

**No** >> Replace the Low Speed Radiator Fan Relay.

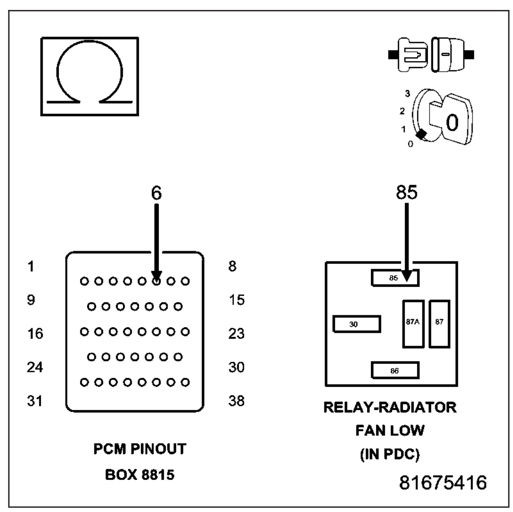
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. (N201) COOLING FAN NO.1 CONTROL CIRCUIT OPEN

Disconnect the C3 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis**

Measure the resistance of the (N201) Cooling Fan No.1 Relay Control circuit from the Relay to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

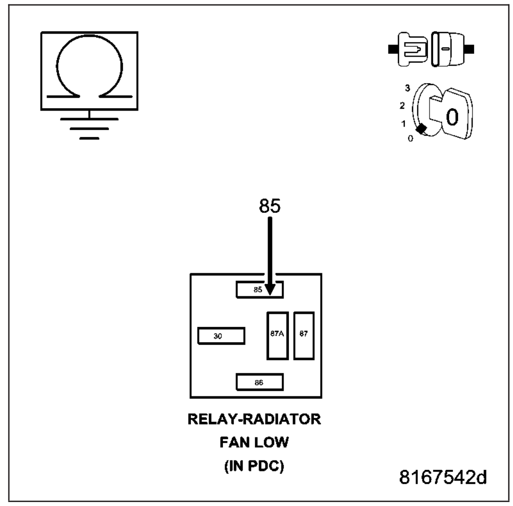
**Yes** >> Go To 6

**No** >> Repair the open in the (N201) Cooing Fan No.1 Relay Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. (N201) COOLING FAN NO.1 CONTROL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (N201) Cooling Fan No.1 Relay Control circuit at the Relay connection.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (N201) Cooling Fan No.1 Relay Control circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

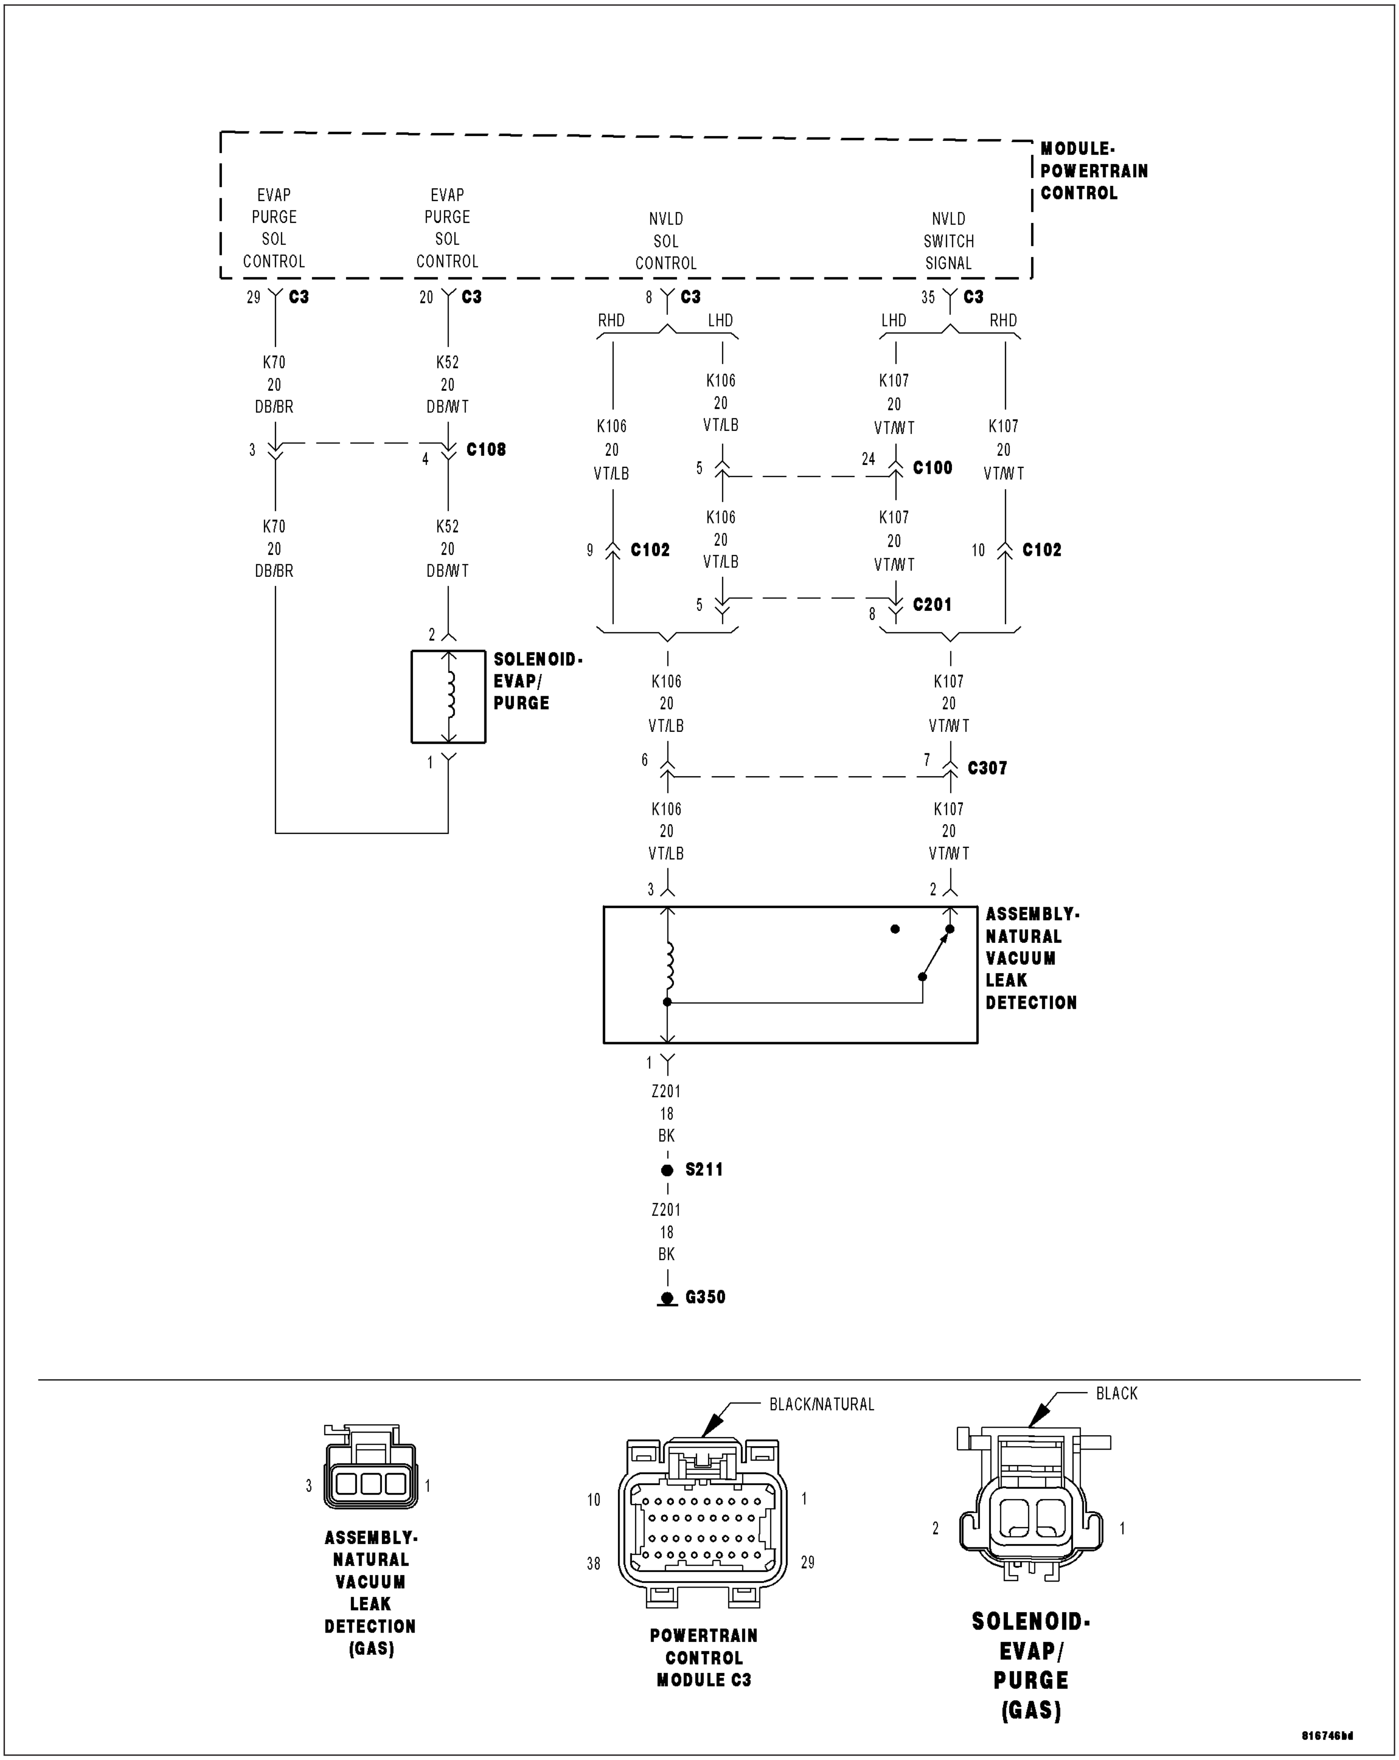
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0498-NVLD CANISTER VENT VALVE SOLENOID CIRCUIT LOW



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine running.
- **Set Condition:**
  The PCM detects a short in the NVLD Canister vent solenoid circuits for more than 5 seconds. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
| --- |
| (K106) NVLD SOLENOID CONTROL CIRCUIT SHORTED TO GROUND |
| NVLD ASSEMBLY |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. VEHICLE HISTORY AND SERVICE BULLETIN INVESTIGATION

Ignition on, engine not running.

With a scan tool, read DTCs and record the related Freeze Frame data if any DTCs are present.

Whether or not any DTCs are present you will want to check the following items which may assist in repairing the customer's complaint successfully.

Check the vehicles repair history.

If the vehicle has a repair history that pertains to the customer's current complaint, review the repair.

Inspect the vehicle for any aftermarket accessories that may have been installed incorrectly.

Check for any service bulletin(s) related to the customer's complaint or DTCs.

If a service bulletin applies, follow the instructions per the service bulletin.

**Choose the following scenario that best applies.**

**The service bulletin repaired the customer's complaint.**
Testing complete.

**A DTC is present, no service bulletins apply, or the service bulletin didn't repair the customer's complaint.**
Go To 2.

### 2. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 3

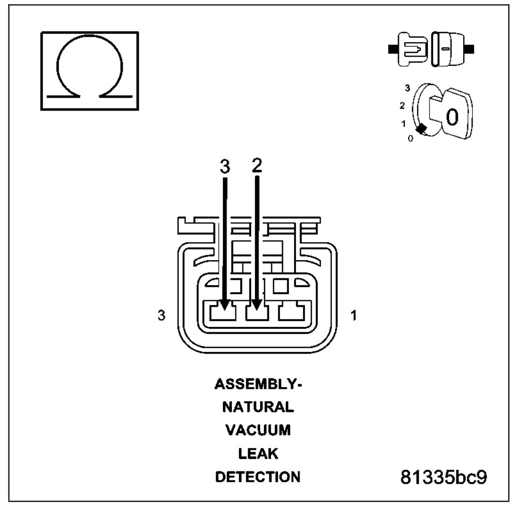
**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. NVLD SOLENOID

Turn the ignition off.

Disconnect the NVLD electrical harness connector.

Measure the resistance of the NVLD Solenoid Coil.



**Is the resistance between 7.5 to 8.5 ohms?**

**Yes** >> Go To 4

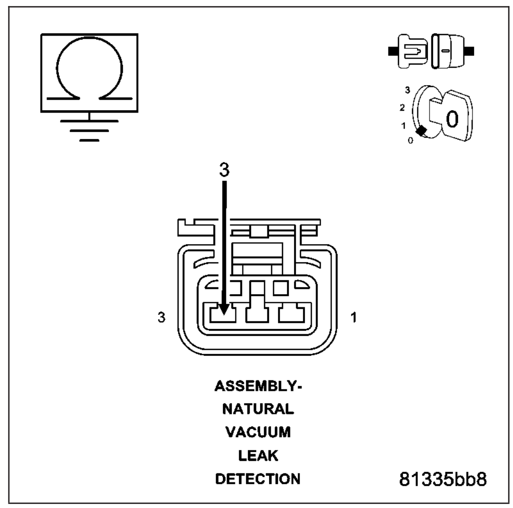
**No** >> Replace the NVLD Assembly.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. (K106) NVLD SOLENOID CONTROL CIRCUIT SHORTED TO GROUND

Disconnect the C3 PCM harness connector.

Measure the resistance between ground and the (K106) NVLD Solenoid Control circuit in the NVLD electrical harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K106) NVLD Solenoid Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

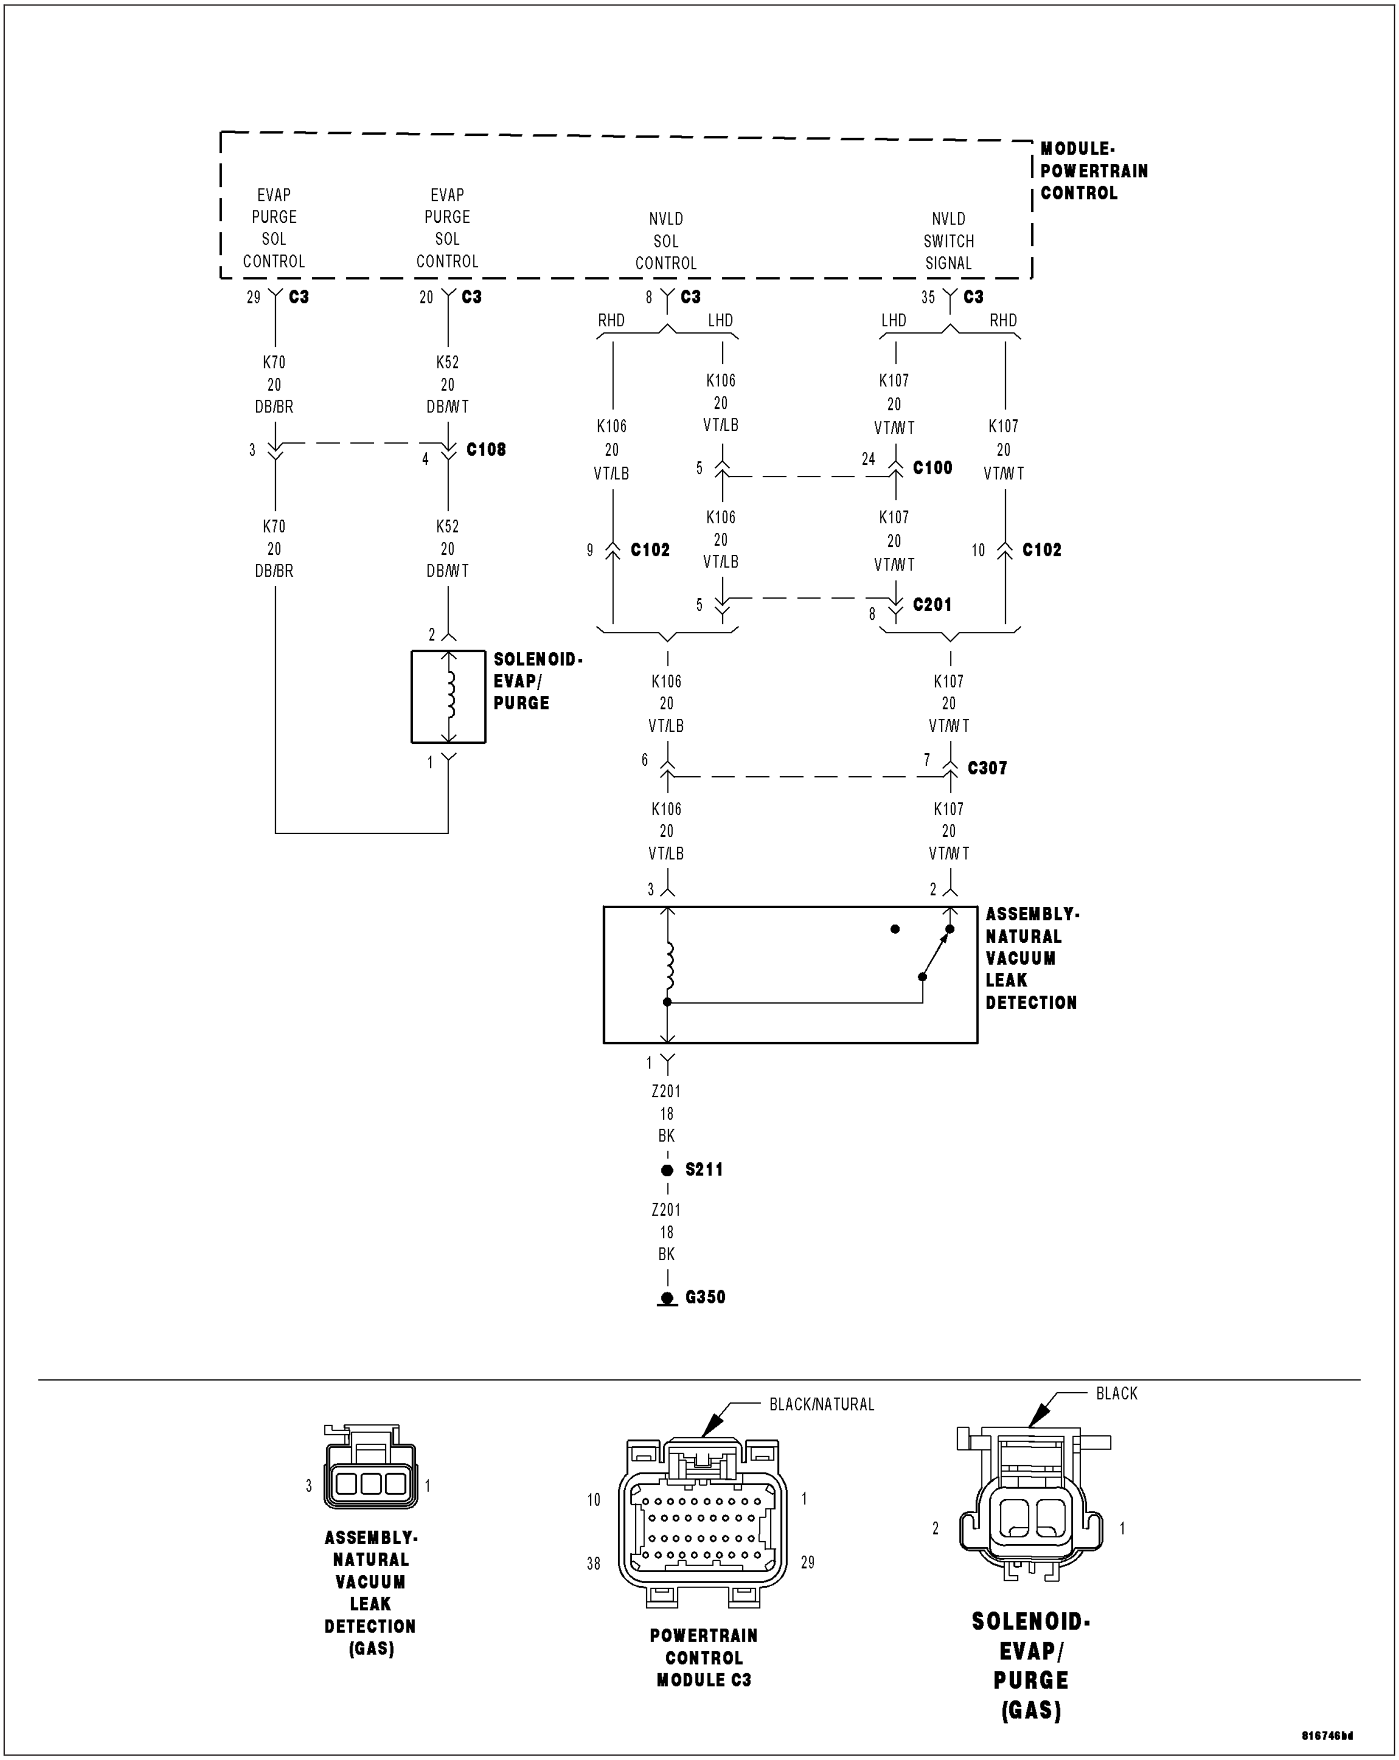
**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0499-NVLD CANISTER VENT VALVE SOLENOID CIRCUIT HIGH



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine running.
- **Set Condition:**
  The PCM detects an open in the NVLD Canister vent solenoid circuits for more than 9.375 seconds. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
| --- |
| (K106) NVLD SOLENOID CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K106) NVLD SOLENOID CONTROL CIRCUIT OPEN |
| (Z201) GROUND CIRCUIT OPEN |
| NVLD SOLENOID |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. VEHICLE HISTORY AND SERVICE BULLETIN INVESTIGATION

Ignition on, engine not running.

With a scan tool, read DTCs and record the related Freeze Frame data if any DTCs are present.

Whether or not any DTCs are present you will want to check the following items which may assist in repairing the customer's complaint successfully.

Check the vehicles repair history.

If the vehicle has a repair history that pertains to the customer's current complaint, review the repair.

Inspect the vehicle for any aftermarket accessories that may have been installed incorrectly.

Check for any service bulletin(s) related to the customer's complaint or DTCs.

If a service bulletin applies, follow the instructions per the service bulletin.

**Choose the following scenario that best applies.**

**The service bulletin repaired the customer's complaint.**
Testing complete.

**A DTC is present, no service bulletins apply, or the service bulletin didn't repair the customer's complaint.**
Go To 2.

### 2. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 3

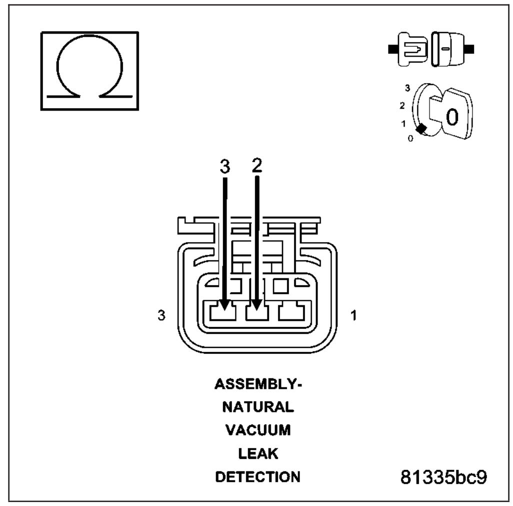
**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. NVLD SOLENOID

Turn the ignition off.

Disconnect the NVLD Assembly harness connector.

Measure the resistance of the NVLD Solenoid coil.



**Is the resistance between 7.5 to 8.5 ohms?**

**Yes** >> Go To 4

**No** >> Replace the NVLD Assembly.

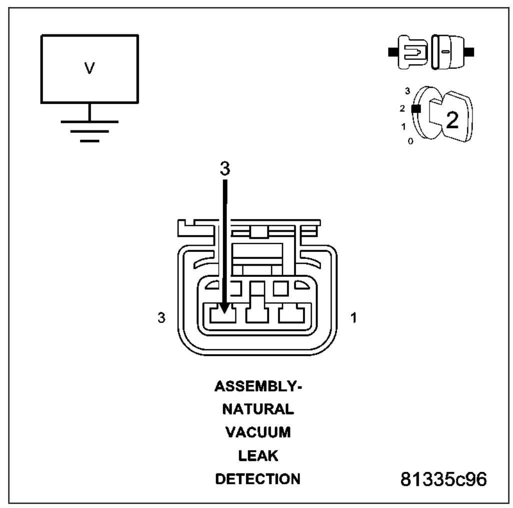
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. (K106) NVLD SOLENOID CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE

Disconnect the C3 PCM harness connector.

Take this measurement with the Ignition in the off (lock) position and in the Ignition on, engine off position.

Measure the voltage on the (K106) NVLD Solenoid Control circuit in the NVLD Assembly harness connector.



**Is the voltage above 1.0 volt?**

**Yes** >> Repair the short to battery voltage in the (K106) NVLD Solenoid Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

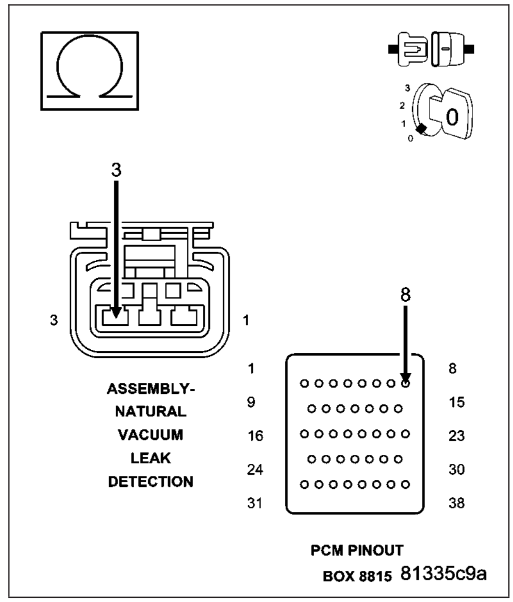
**No** >> Go To 5

## 5. (K106) NVLD SOLENOID CONTROL CIRCUIT OPEN

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K106) NVLD Solenoid Control circuit from the NVLD Assembly harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

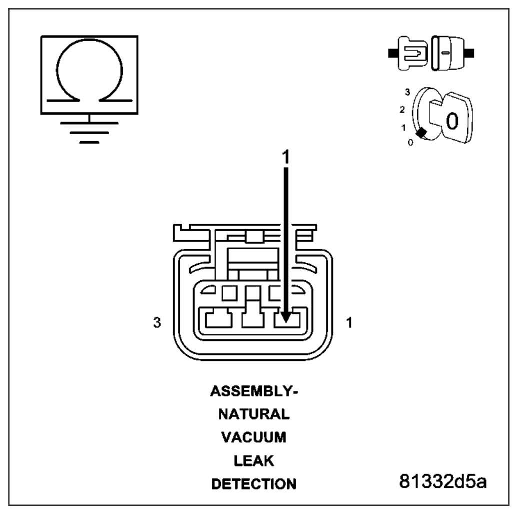
**Yes** >> Go To 6

**No** >> Repair the open in the (K106) NVLD Solenoid Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. (Z201) GROUND CIRCUIT OPEN

Measure the resistance between the (Z201) Ground circuit and ground.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (Z201) Ground circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

# P0501-VEHICLE SPEED SENSOR 1 PERFORMANCE

For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The vehicle speed sensor rationality is a continuous test that monitors the vehicle speed sensor for lack of activity. The rationality will not run if a limp-in exists for MAP, Throttle Position, and Engine Coolant Temperature. If vehicle speed sensor is below a minimum threshold for a period of time after the vehicle is operated at a sufficient load, a failure will be indicated.

- **When Monitored:**
  With the engine running, transmission not in park or neutral, brakes not applied, and engine rpm greater than 1500.
- **Set Condition:**
  This code will set if no vehicle speed signal is received from the ABS Module up to 120 seconds for 2 consecutive trips. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (B22) VEHICLE SPEED SIGNAL OPEN |
| (B22) VEHICLE SPEED SIGNAL SHORT TO GROUND |
| TIRE CIRCUMFERENCE |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. VISUAL INSPECTION

**NOTE: This code can set due to tire circumference differences and from the front or rear wheels being on a slippery surface while the opposite tires are not.**

This code may also set on a hard acceleration on loose gravel or during other off road driving conditions.

Check tire pressure of all the tires.

Check tire wear on all the tires.

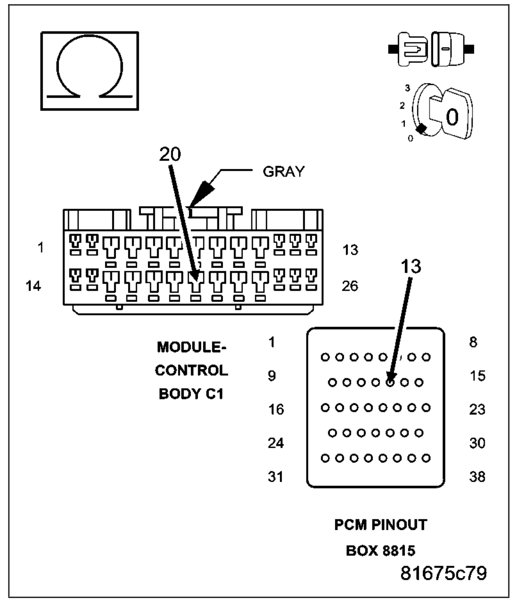
Ask the customer what the road and driving conditions were like when the fault set.

**Were any problems found?**

**Yes** >> Repair as necessary. If the code set during a front OR rear wheel spin condition, no repair is necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. (B22) VEHICLE SPEED SIGNAL CIRCUIT OPEN



Disconnect the C1 BCM harness connector.

Disconnect the C1 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (B22) Vehicle Speed Sensor Signal circuit from the C1 BCM harness connector to the appropriate terminal of special tool #8815.

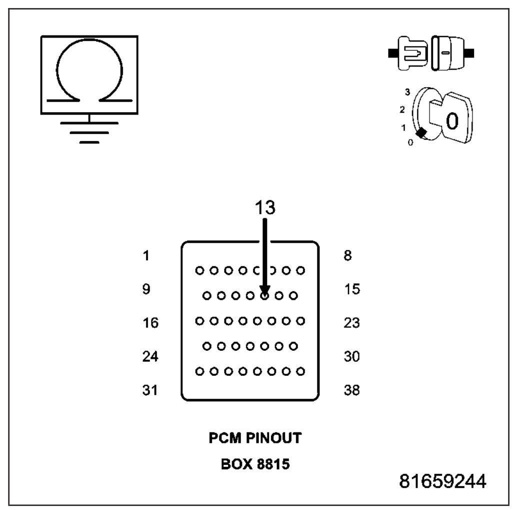
**Is the resistance above 5.0 ohms?**

**Yes** >> Repair the open in the (B22) Vehicle Speed Sensor Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. (B22) VEHICLE SPEED SIGNAL CIRCUIT SHORTED TO GROUND



Measure the resistance between ground and the (B22) Vehicle Speed Sensor Signal circuit connector at the appropriate terminal of special tool #8815.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (B22) Vehicle Speed Sensor Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

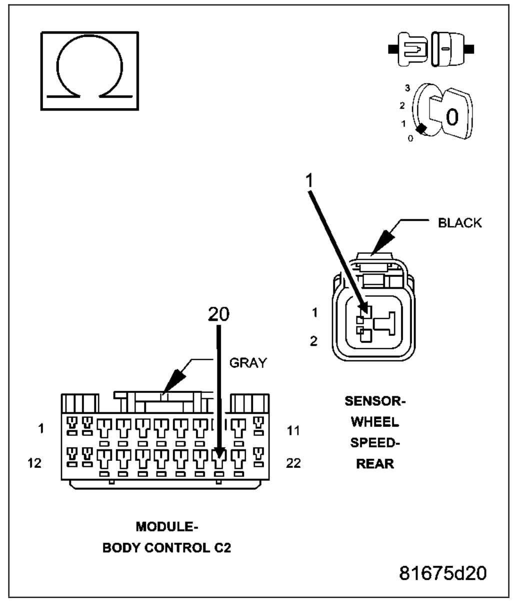
**No** >> Go To 5

## 5. (F512) VEHICLE SPEED SENSOR SUPPLY CIRCUIT OPEN

Disconnect the C2 BCM harness connector.

Disconnect the Vehicle Speed Sensor harness connector.

Measure the resistance of the (F512) Vehicle Speed Sensor Supply circuit from the Vehicle Speed Sensor harness connector to the C2 BCM harness connector.



**Is the resistance above 5.0 ohms?**

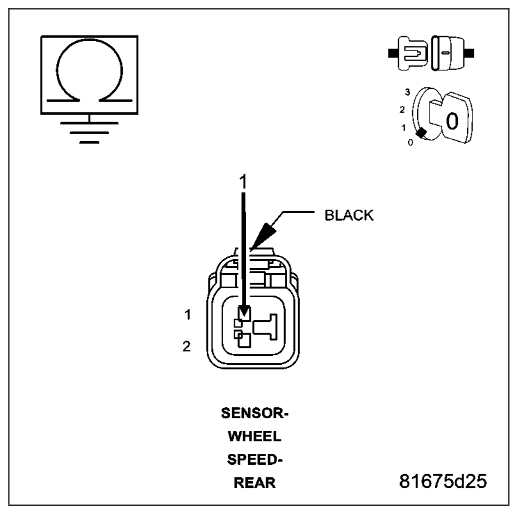
**Yes** >> Repair the open in the (F512) Vehicle Speed Sensor Supply circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. (F512) VEHICLE SPEED SENSOR SUPPLY CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (F512) Vehicle Speed Sensor Supply circuit at the Vehicle Speed Sensor harness connector.



**Is the resistance below 100 ohms?**

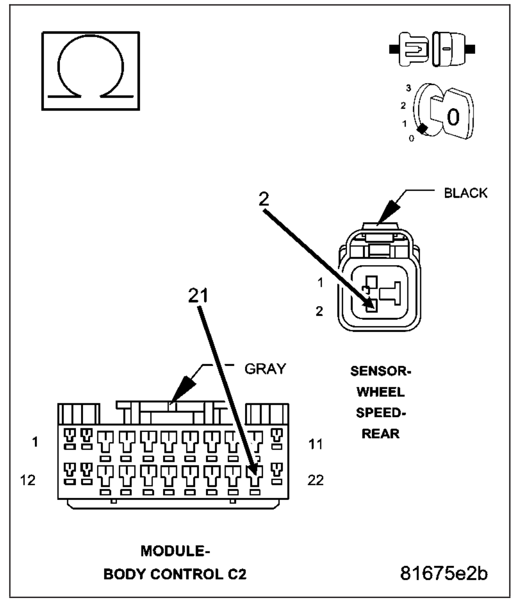
**Yes** >> Repair the short to ground in the (F512) Vehicle Speed Sensor Supply circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 7. (B12) VEHICLE SPEED SENSOR SIGNAL CIRCUIT OPEN

Measure the resistance of the (B12) Vehicle Speed Sensor Signal circuit from the Vehicle Speed Sensor harness connector to the C2 BCM harness connector.



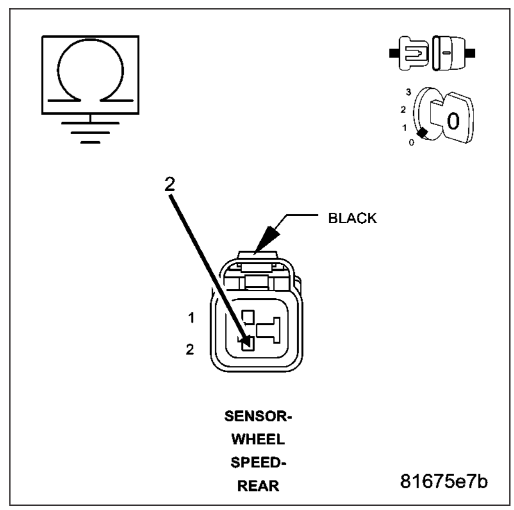
**Is the resistance above 5.0 ohms?**

**Yes** >> Repair the open in the (B12) Vehicle Speed Sensor Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

## 8. (B12) VEHICLE SPEED SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (B12) Vehicle Speed Sensor Signal circuit at the Vehicle Speed Sensor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (B12) Vehicle Speed Sensor Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 9

## 9. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

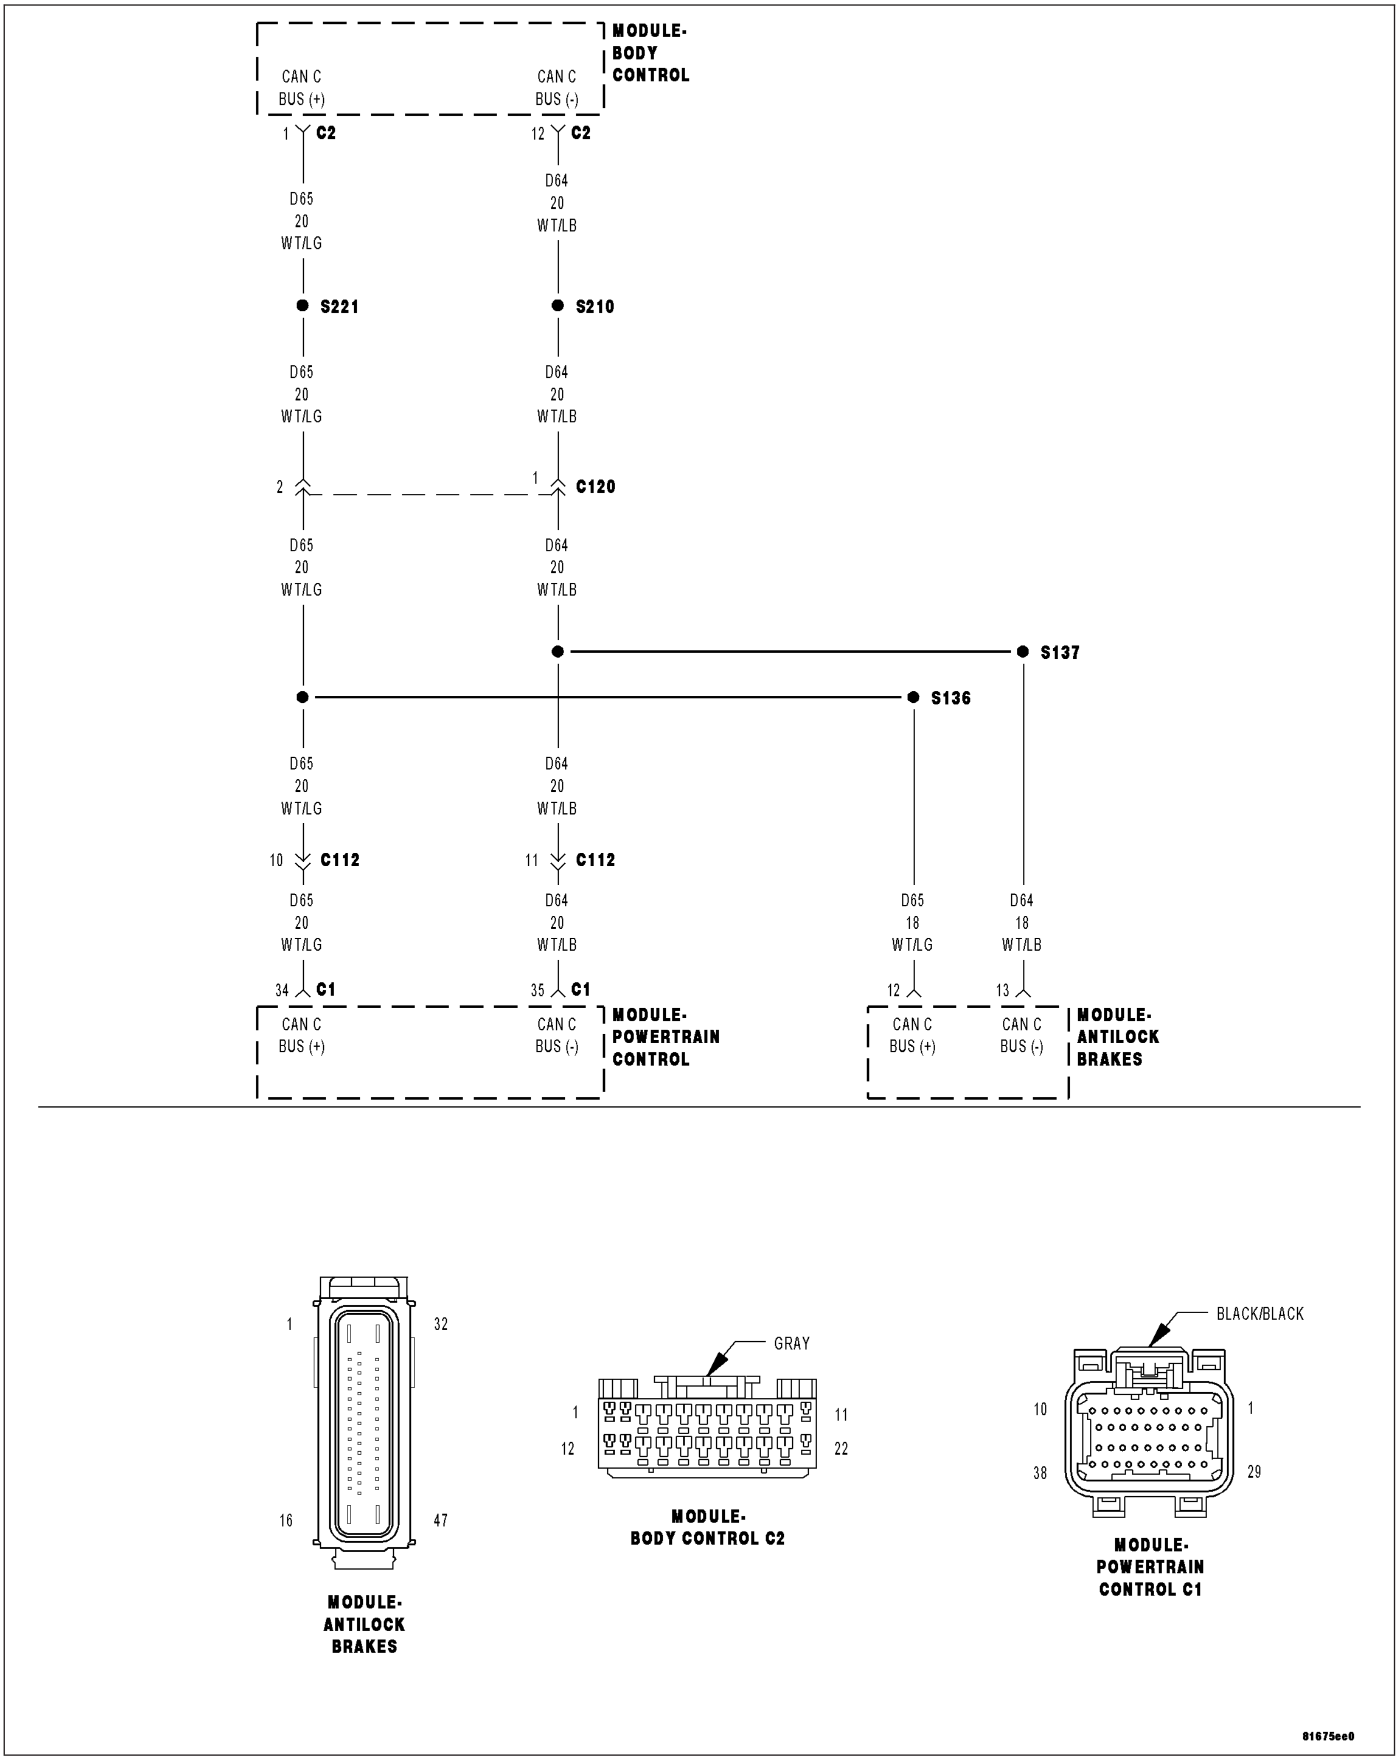
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0503-VEHICLE SPEED SENSOR 1 ERRATIC



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The vehicle speed sensor rationality is a continuous test that monitors the vehicle speed sensor for lack of activity. The rationality will not run if a limp-in exists for MAP, Throttle Position, and Engine Coolant Temperature. If vehicle speed sensor is below a minimum threshold for a period of time after the vehicle is operated at a sufficient load, a failure will be indicated.

- **When Monitored:**
  Ignition on and battery voltage greater than 10 volts. Transmission in Drive or Reverse.
- **Set Condition:**
  This code will set if no vehicle speed signal is received from the ABS Module up to 120 seconds for 2 consecutive trips. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
| --- |
| ACTIVE BUS OR COMMUNICATION DTCS |
| TIRE CIRCUMFERENCE |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

**NOTE: Check for any Bus Communication DTCs. If no Bus or Communication DTCs are set, check for active DTCs stored in the Anti-Lock Brake Module. Any bus or communication DTCs or VSS DTCs in the Anti-Lock Brake Module must be properly diagnosed before continuing.**

With a scan tool, read DTCs and record the related Freeze Frame data.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. VISUAL INSPECTION

**NOTE: This code can set due to tire circumference differences and from the front or rear wheels being on a slippery surface while the opposite tires are not.**

This code may also set on a hard acceleration on loose gravel or during other off road driving conditions.

Check tire pressure of all the tires.

Check tire wear on all the tires.

Ask the customer what the road and driving conditions were like when the fault set.

**Were any problems found?**

**Yes** >> Repair as necessary. If the code set during a front OR rear wheel spin condition, no repair is necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0506-IDLE SPEED PERFORMANCE LOWER THAN EXCEPTED

For a complete wiring diagram **Refer to Section 8W**.

### Theory of Operation

**The objective of the Idle “Speed Rationality is to monitor the ability to achieve and maintain a steady idle condition. The monitor will judge the functionality of the idle speed control system by monitoring RPM during idle. If RPM does not come within a calibrated band of target idle speed, a timer is started. If the timer reaches its maximum threshold without any sign of the RPM trending towards control, a soft failure is generated.**

- **When Monitored:**
  With the engine running at idle, MAF <250 mg/tdc, air temp >-17.8°C (0°F) and <-7°C (19.4°F) enable after coolant temp >70°C (158°F) or air temp >-7°C (19.4°F), coolant temp >-7°C (19.4°F) <130°C (266°F), canister purge <100% duty cycle, and no VSS, MAF/MAP, ECT, TPS, ETC, CRK Sensor DTCs nor any fuel system or injector DTCs.
- **Set Condition:**
  Engine speed is 100 RPM or more below idle speed for 7 seconds. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| AIR INDUCTION SYSTEM |
| THROTTLE BODY |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

### Diagnostic Test

#### 1. ACTIVE DTC

**NOTE: If any other DTCs are present, they must be diagnosed and repaired before continuing this test.**
Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

#### 2. AIR INDUCTION SYSTEM

Inspect the Air Induction System for the following problems.

Restrictions: Dirty Air Cleaner, Foreign material trap in the air intake tube, etc.

Leaks: Air Intake tube connection, Air Cleaner housing, etc.

**Were any problems found?**

**Yes** >> Repair or replace as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. THROTTLE BODY OPERATION

Inspect the throttle body for carbon build up, other restrictions, and a bent throttle plate using a straight edge.

If the throttle plate does not close entirely it may be bent and needs to be replaced.

Verify that the throttle cable between the Accelerator Pedal and Throttle Body is not binding.

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

**Were any problems found?**

**Yes** >> Repair or replace as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

# P0507-IDLE SPEED PERFORMANCE HIGHER THAN EXCEPTED

For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The objective of the Idle “Speed Rationality is to monitor the ability to achieve and maintain a steady idle condition. The monitor will judge the functionality of the idle speed control system by monitoring RPM during idle. If RPM does not come within a calibrated band of target idle speed, a timer is started. If the timer reaches its maximum threshold without any sign of the RPM trending towards control, a soft failure is generated.

- **When Monitored:**
  With the engine running at idle, MAF <250 mg/tdc, air temp >-17.8°C (0°F) and <-7°C (19.4°F) enable after coolant temp >70°C (158°F) or air temp >-7°C (19.4°F), coolant temp >-7°C (19.4°F) <130°C (266°F), canister purge <100% duty cycle, and no VSS, MAF/MAP, ECT, TPS, ETC, CRK Sensor DTCs nor any fuel system or injector DTCs.
- **Set Condition:**
  Engine speed is 200 RPM or more above idle speed for 7 seconds. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| AIR INDUCTION SYSTEM |
| VACUUM LEAKS |
| THROTTLE BODY |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: If any other DTCs are present, they must be diagnosed and repaired before continuing this test.**
Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. AIR INDUCTION SYSTEM

Inspect the Air Induction System for the following problems.

Restrictions: Dirty Air Cleaner, Foreign material trap in the air intake tube, etc.

Leaks: Air Intake tube connection, Air Cleaner housing, etc.

**Were any problems found?**

**Yes** >> Repair or replace as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. VACUUM LEAKS

Start the engine.

Inspect the vehicle for external vacuum leaks.

Inspect the engine for internal leaks.

**Were any vacuum leaks found?**

**Yes** >> Repair the vacuum leak as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. THROTTLE BODY OPERATION

Inspect the throttle body for carbon build up, other restrictions, and a bent throttle plate using a straight edge.

If the throttle plate does not close entirely it may be bent and needs to be replaced.

Verify that the throttle cable between the Accelerator Pedal and Throttle Body is not binding.

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

While the vehicle is running, lightly tap on IAC Motor, with your hand, and listen for the idle to fluctuate.

**Were any problems found?**

**Yes** >> Repair or replace as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

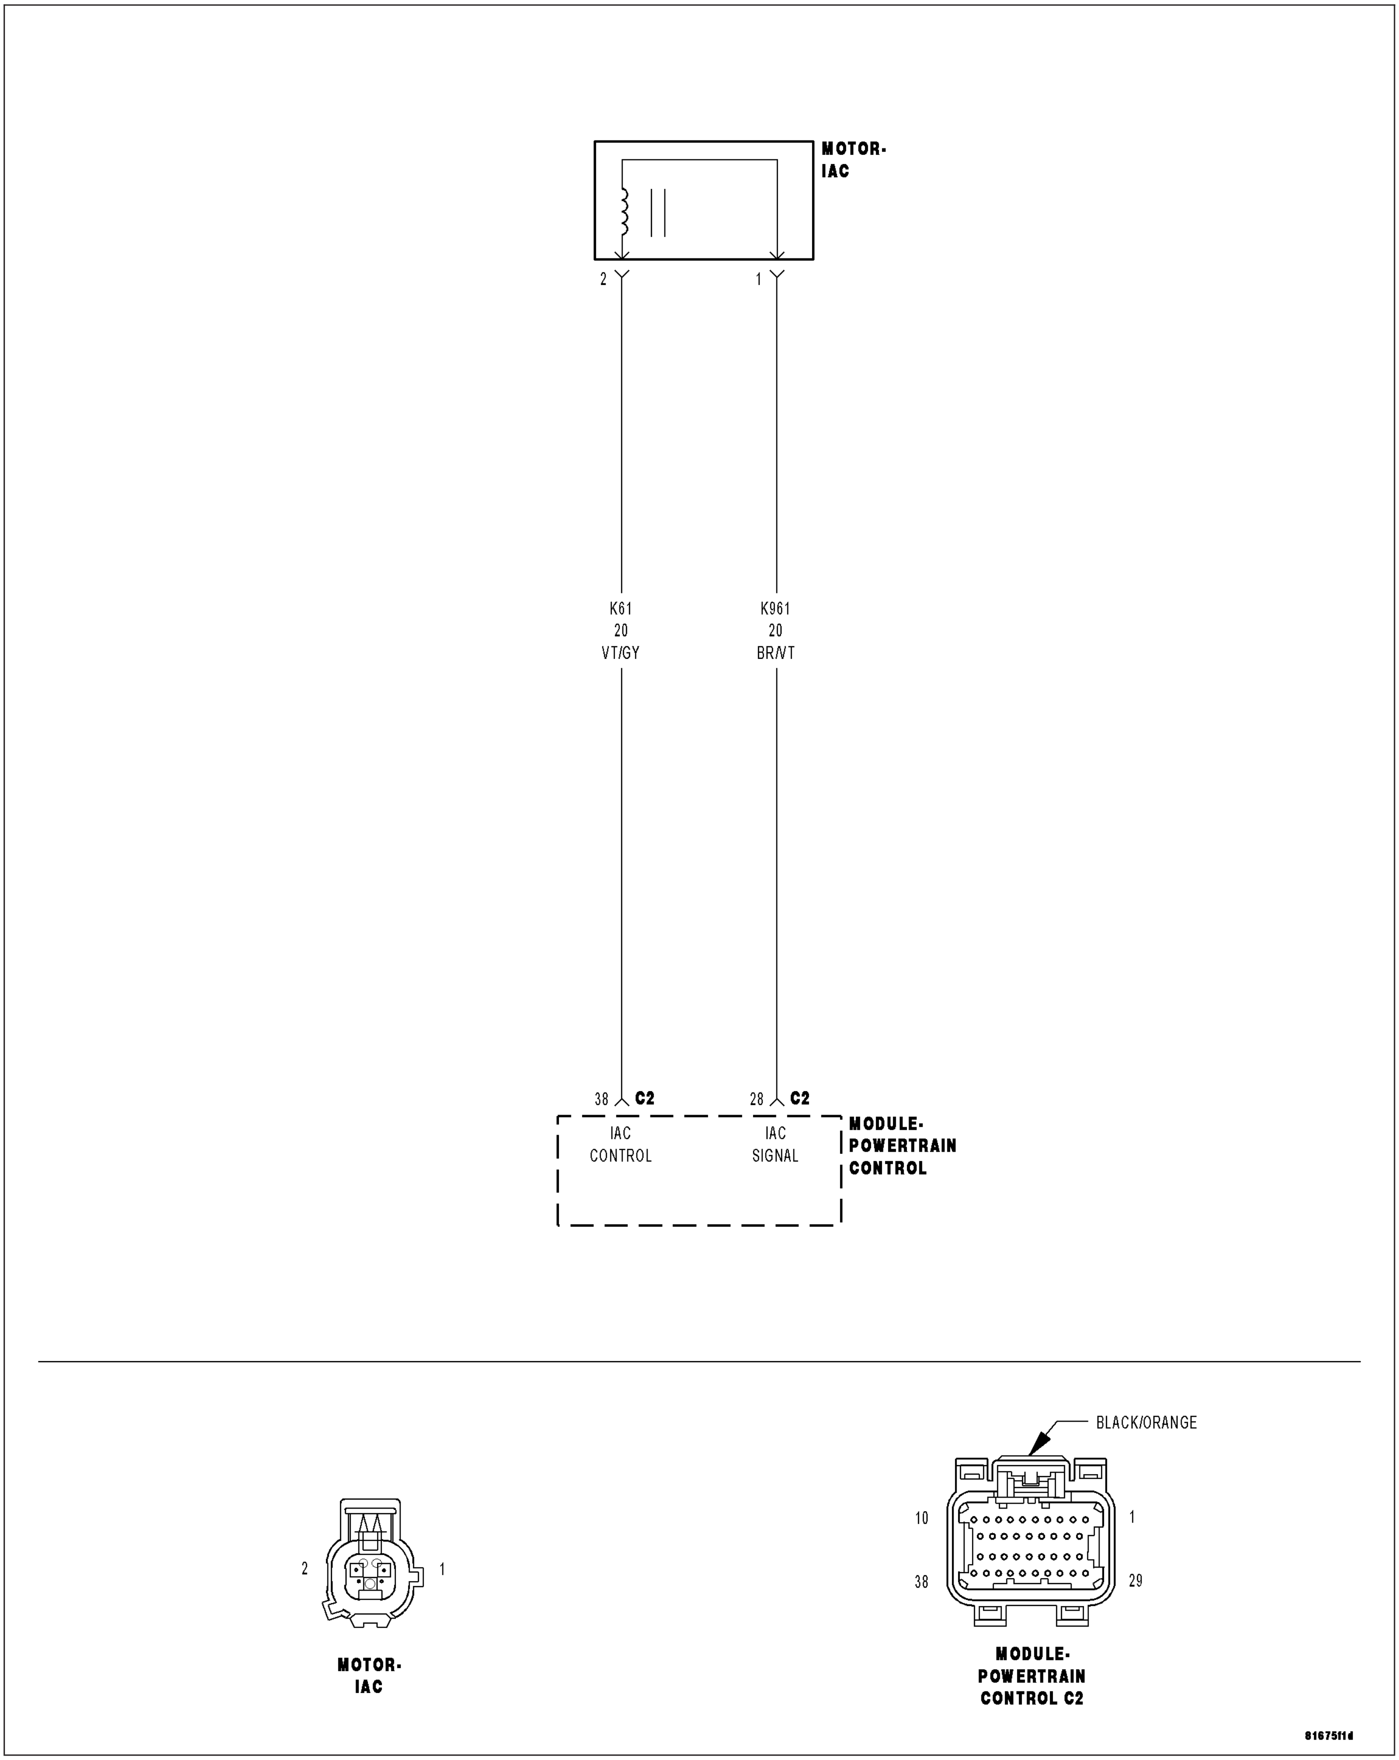
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0508-IDLE AIR CONTROL VALVE SENSE CIRCUIT LOW



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine running. Battery voltage greater than 10 volts. IAC motor operating.
- **Set Condition:**
  The PCM senses a short to ground or battery voltage on any of the Linear Idle Air Control (LIAC) control circuits for 2.75 seconds while the IAC motor is active. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (K61) IAC CONTROL CIRCUIT SHORTED TO GROUND |
| (K961) IAC SIGNAL CIRCUIT OPEN |
| (K961) IAC SIGNAL CIRCUIT SHORTED TO GROUND |
| (K61) IAC CONTROL CIRCUIT OPEN |
| IAC MOTOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. IAC MOTOR OPERATION

**NOTE: If the engine will not idle, maintain an engine speed between 800 and 1500 RPM.**
Start the engine.
Allow the engine to idle.
With a scan tool, read the IAC Current.

**Is the IAC Current below 146 mA?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. IAC MOTOR

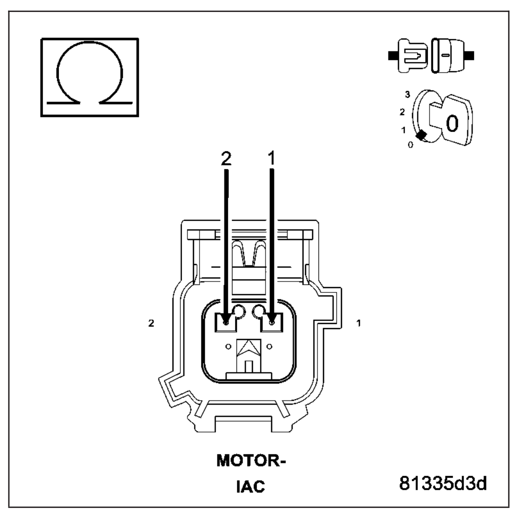
Turn the ignition off.
Disconnect the IAC Motor harness connector.
Remove the IAC Motor.

**NOTE: Inspect the IAC air passages for restrictions and damage to the IAC valve.**
Measure the resistance across the IAC Motor pin terminals (component).

**Is the resistance 9.7 +/- 1.0 ohms?**

**Yes** >> Go To 3

**No** >> Replace the IAC Motor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

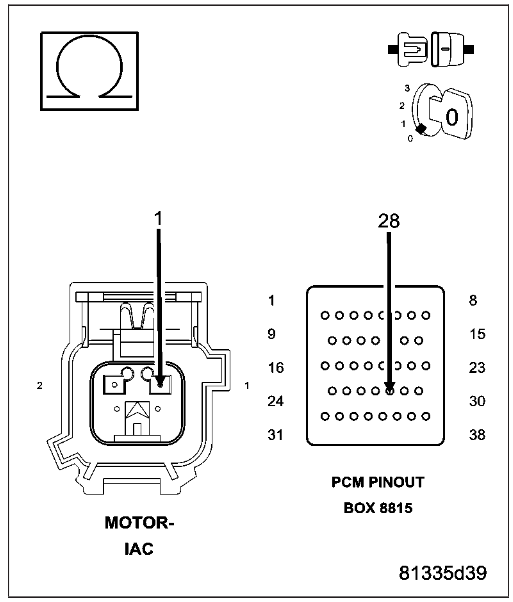


## 3. (K961) IAC SIGNAL CIRCUIT OPEN

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K961) IAC Signal circuit from the IAC Motor harness connector to the appropriate terminal of special tool #8815.



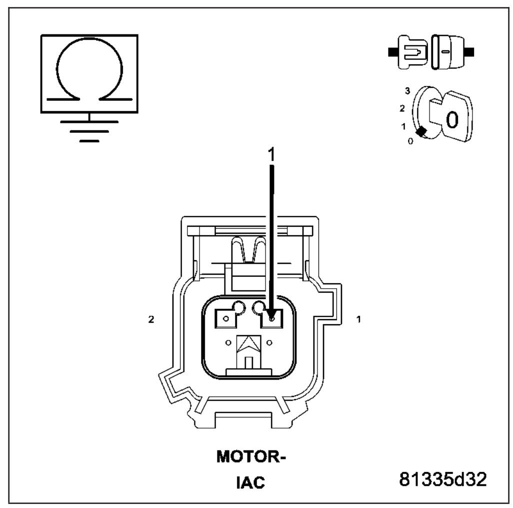
**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the open in the (K961) IAC Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. (K961) IAC SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K961) IAC Signal circuit in the IAC Motor harness connector.



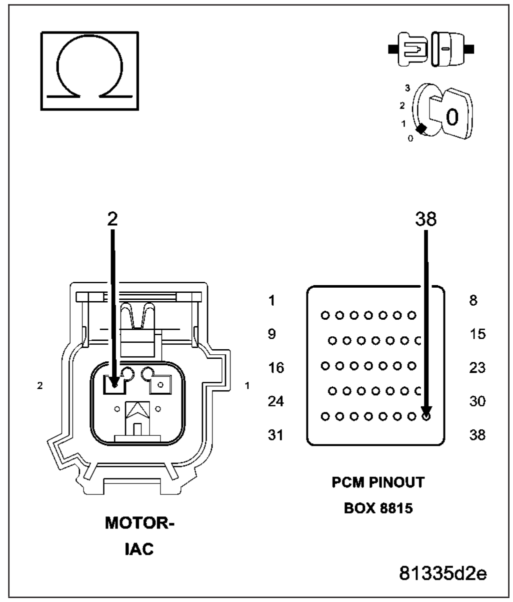
**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K961) IAC Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. (K61) IAC CONTROL CIRCUIT OPEN

Measure the resistance of the (K61) IAC Control circuit from the IAC Motor harness connector to the appropriate terminal of special tool #8815.



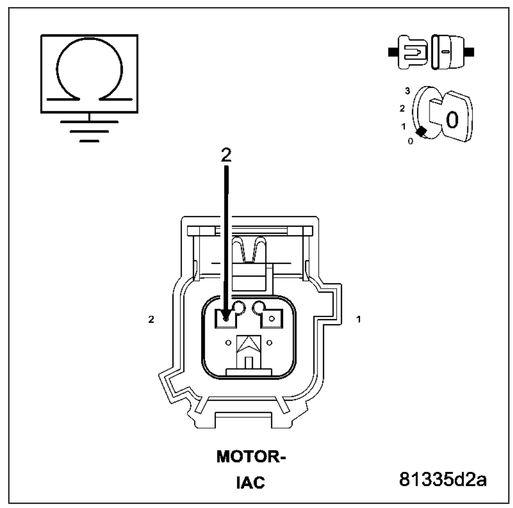
**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (K61) IAC Control circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. (K61) IAC CONTROL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K61) IAC Control circuit in the IAC Motor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K61) IAC Control circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

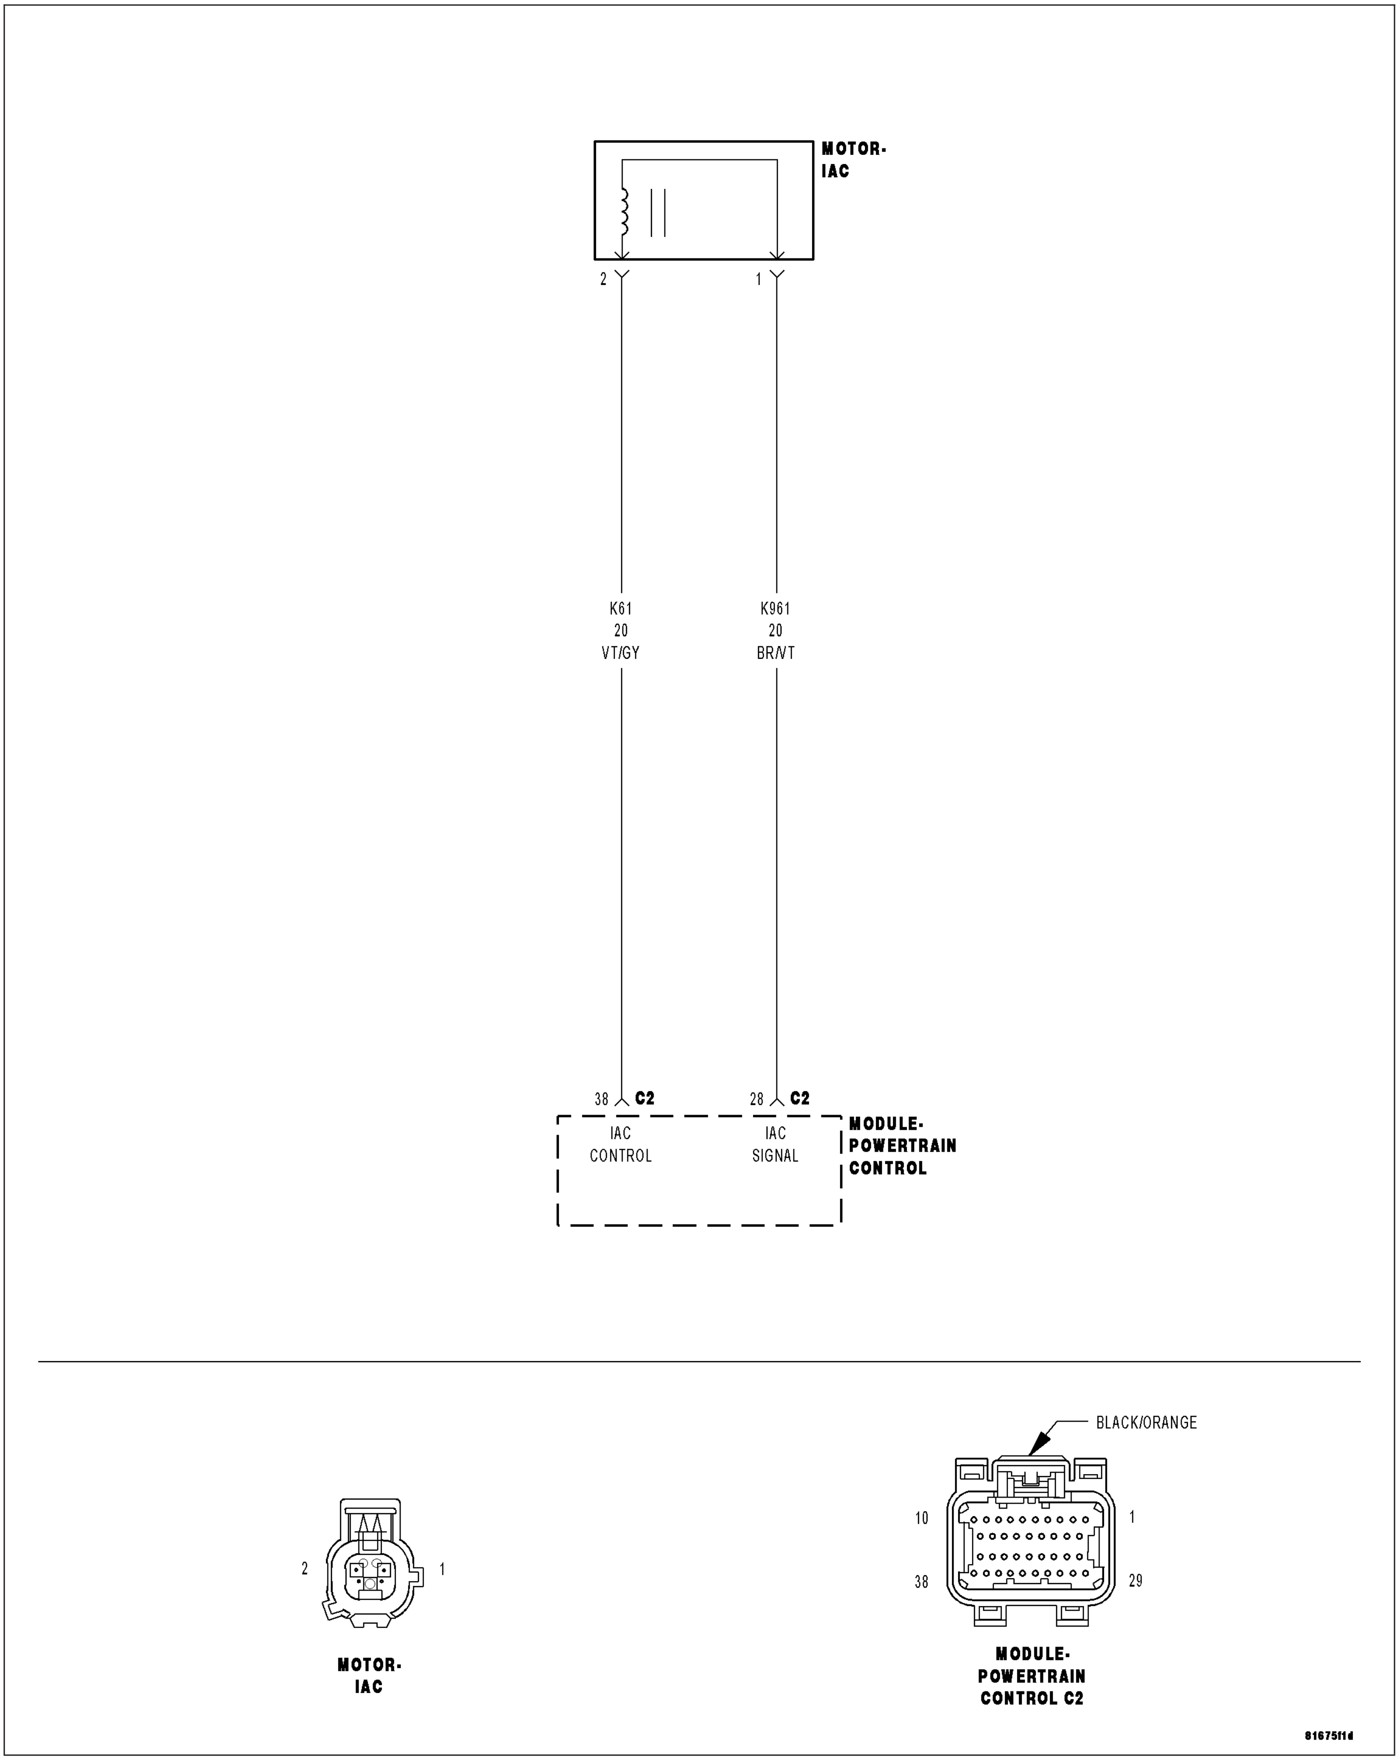
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0509-IDLE AIR CONTROL VALVE SENSE CIRCUIT HIGH



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine running. Battery voltage greater than 10 volts. IAC motor operating.
- **Set Condition:**
  The PCM senses a short to ground or battery voltage on any of the Linear Idle Air Control (LIAC) control circuits for 2.75 seconds while the IAC motor is active. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
| --- |
| (K961) IAC RETURN CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K61) IAC CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K61) IAC CONTROL CIRCUIT SHORTED TO THE (K961) IAC RETURN CIRCUIT |
| IAC MOTOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. IAC MOTOR OPERATION

**NOTE: If the engine will not idle, maintain an engine speed between 800 and 1500 RPM.**

Start the engine.

Allow the engine to idle.

With a scan tool, read the IAC Current.

**Is the IAC Current above 999 mA?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. IAC MOTOR

Turn the ignition off.

Disconnect the IAC Motor harness connector.

With the scan tool, monitor the IAC Current.

Ignition on, engine not running.

**Does the scan tool display IAC Current at 0 mA?**

**Yes** >> Replace the IAC Motor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

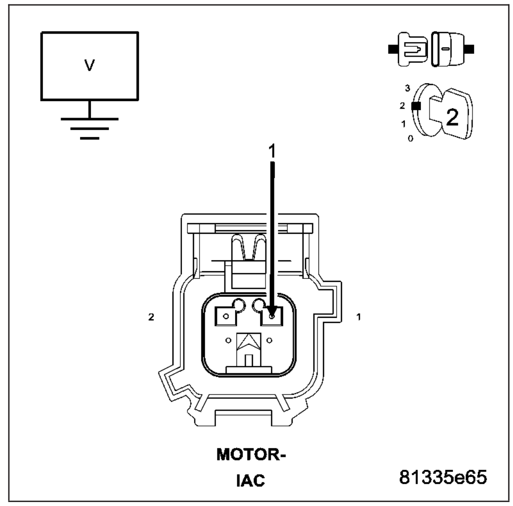
## 3. (K961) IAC SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (K961) IAC Signal circuit in the IAC Motor harness connector.



**Is the voltage above 0.5 of a volt?**

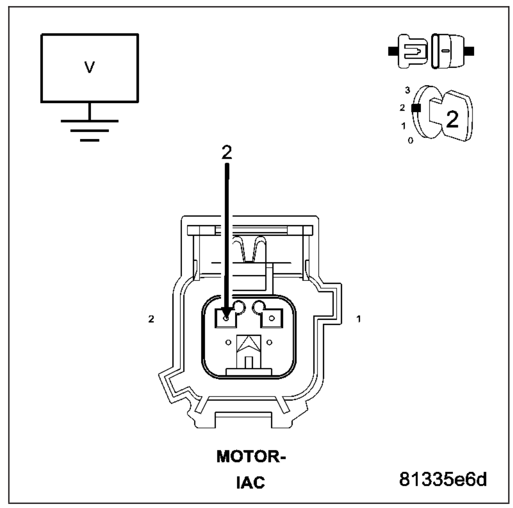
**Yes** >> Repair the short to battery voltage in the (K961) IAC Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. (K61) IAC CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Measure the voltage on the (K61) IAC Control circuit in the IAC Motor harness connector.



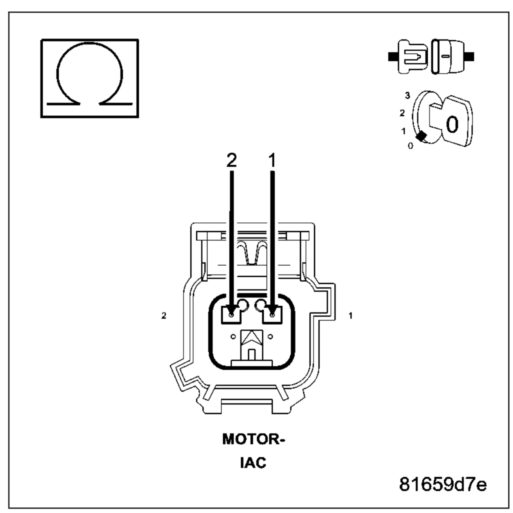
**Is the voltage above 0.5 of a volt?**

**Yes** >> Repair the short to battery voltage in the (K61) IAC Control circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. (K61) IAC CONTROL CIRCUIT SHORTED TO THE (K961) IAC RETURN CIRCUIT

Measure the resistance across the (K961) IAC Signal circuit and the (K61) IAC Control circuit in the IAC Motor harness connector.



**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K961) IAC Signal circuit and the (K61) IAC Control circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0513-INVALID SKIM KEY

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on.
- **Set Condition:**
  The PCM detects an invalid SKIM key. One Trip Fault.

| Possible Causes |
|---|
| INCORRECT VIN PROGRAMMED IN THE PCM |
| NO COMMUNICATION WITH SKIM |
| NO VIN PROGRAMMED IN THE PCM |
| IGNITION KEY |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With the scan tool, read the PCM DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Go To 6

### 2. NO COMMUNICATION WITH SKIM

With the scan tool, attempt to communicate with the SKIM.

**Can the scan tool communicate with the SKIM?**

**Yes** >> Go To 3

**No** >> Refer to Section 8 - Electrical VEHICLE THEFT SECURITY - ELECTRICAL DIAGNOSTICS and perform the appropriate Diagnostic Procedure.
Perform the SKIM VERIFICATION.

### 3. SKIM TROUBLE CODES SET

With the scan tool, check for SKIM DTCs.

**Are any DTCs present in the SKIM?**

**Yes** >> Refer to Section 8 - Electrical VEHICLE THEFT SECURITY - ELECTRICAL DIAGNOSTICS and perform the appropriate Diagnostic Procedure.
Perform the SKIM VERIFICATION.

**No** >> Go To 4

## 4. VIN PROGRAMMED INTO PCM

With the scan tool, display the VIN that is programmed in the PCM.

**Has a VIN been programmed into the PCM?**

**Yes** >> Go To 5

**No** >> Program the correct VIN into the PCM and retest.
Perform the SKIM VERIFICATION.

## 5. PCM

Turn the ignition off.

Replace and program the SKIM per Service Information.

Ignition on, engine not running.

With the scan tool, erase all SKIM and PCM DTCs.

Attempt to start and idle the engine.

With the scan tool, read the PCM DTCs.

**Does the scan tool display this code?**

**Yes** >>

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary. Replace and program the Powertrain Control Module per Service Information.**

Perform the SKIM VERIFICATION.

**No** >> Test Complete.

## 6. IGNITION KEY

**NOTE: You must obtain the SKIM pin number.**

**NOTE: This DTC could have been set if the SKIM harness connector was disconnected, or if the SKIM was replaced recently.**

**NOTE: All keys that the customer uses for this vehicle must be tested to verify they are operating properly.**

Ignition on, engine not running.

Verify the correct VIN is programmed into the PCM and SKIM.

Turn the ignition off.

With the next customer key turn the ignition key on and crank the engine to start.

With the scan tool, read the PCM DTCs. Look for P0513.

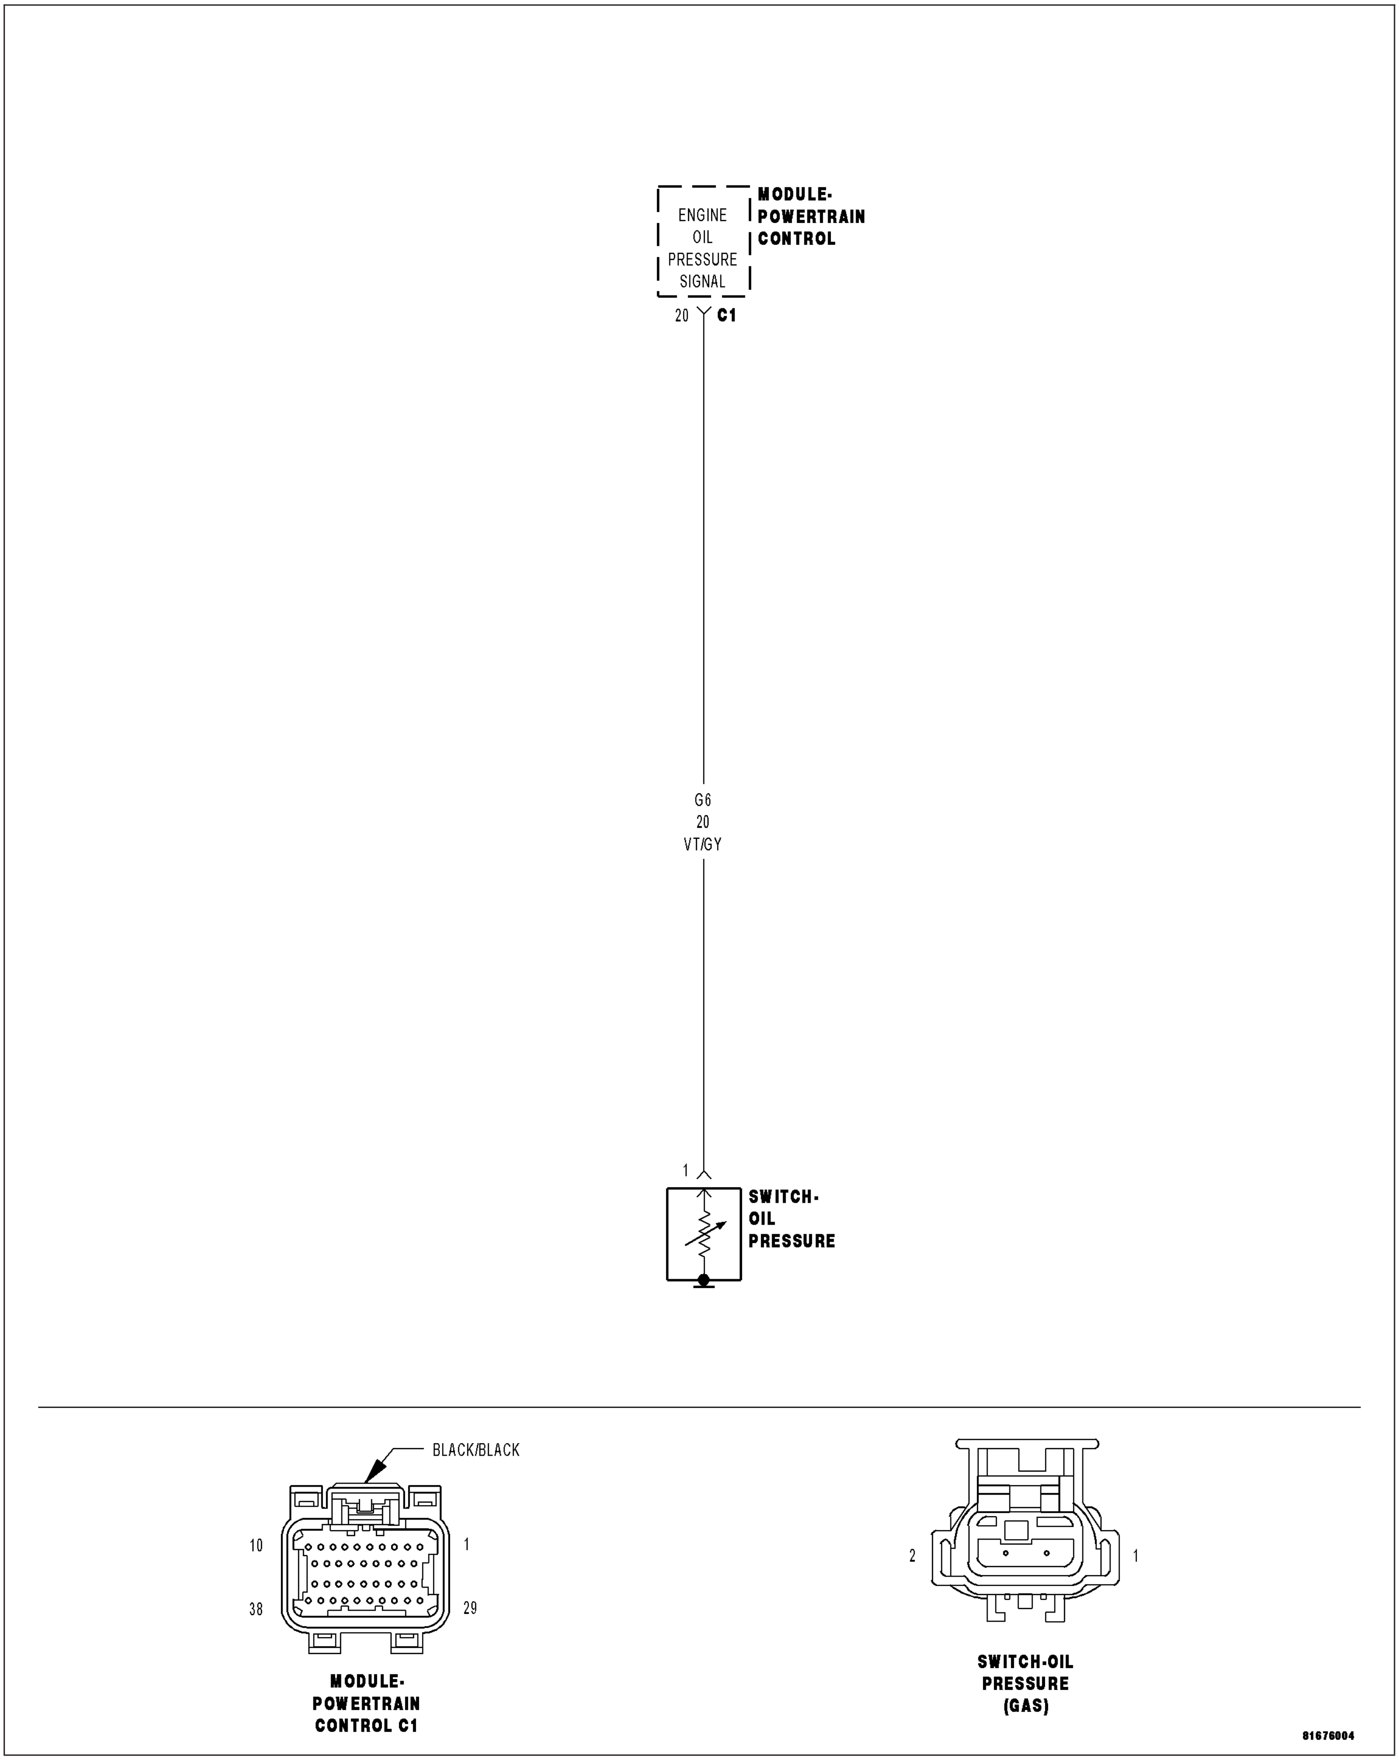
**Is the DTC P0513 still active?**

**Yes** >> Replace the Ignition Key.
Perform the SKIM VERIFICATION.

**No** >> Test Complete.

**NOTE: If this DTC cannot be reset, it could have been an actual theft attempt.**

## P0522-OIL PRESSURE TOO LOW



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the ignition key on and battery voltage above 10.4 volts.
- **Set Condition:**
  The oil pressure sensor voltage at PCM goes below 0.1 of a volt for 0.5 of a second. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (G6) OIL PRESSURE SIGNAL CIRCUIT OPEN |
| (G6) OIL PRESSURE SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (G6) OIL PRESSURE SIGNAL CIRCUIT SHORTED TO GROUND |
| OIL PRESSURE SWITCH |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. OIL PRESSURE SWITCH

Turn the ignition off.

Disconnect the Oil Pressure Switch harness connector.

Ignition on, engine not running.

Connect a jumper wire to the (G6) Oil Pressure Signal circuit in the Sensor harness connector.

With the scan tool monitor the Oil Pressure Switch state.

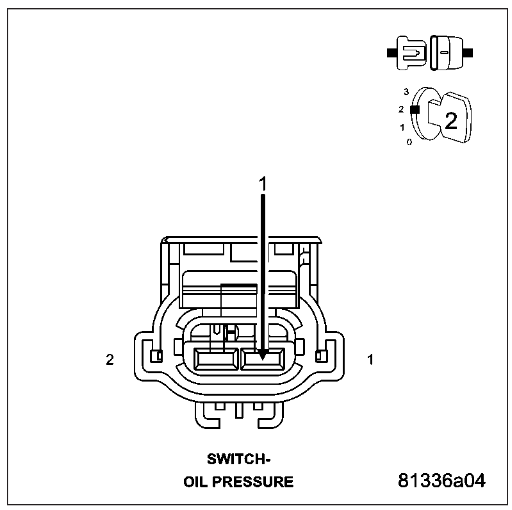
Touch the other end of the jumper wire to a known good Ground several times.

**Did the Oil Pressure Switch state change from High to Low when connecting and disconnecting the jumper wire to ground?**

**Yes** >> Replace the Oil Pressure Switch.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

**NOTE: Remove the jumper wire before continuing.**



## 3. (G6) OIL PRESSURE SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the C1 PCM harness connector.

Ignition on, engine not running.

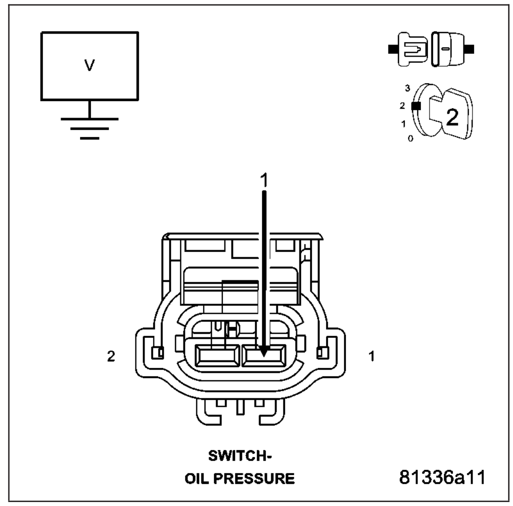
Measure the voltage on the (G6) Oil Pressure Signal circuit in the Switch harness connector.

**Is the voltage above 0 volts?**

**Yes** >> Repair the short to battery voltage on the (G6) Oil Pressure Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4



## 4. (G6) OIL PRESSURE SWITCH SIGNAL CIRCUIT OPEN

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

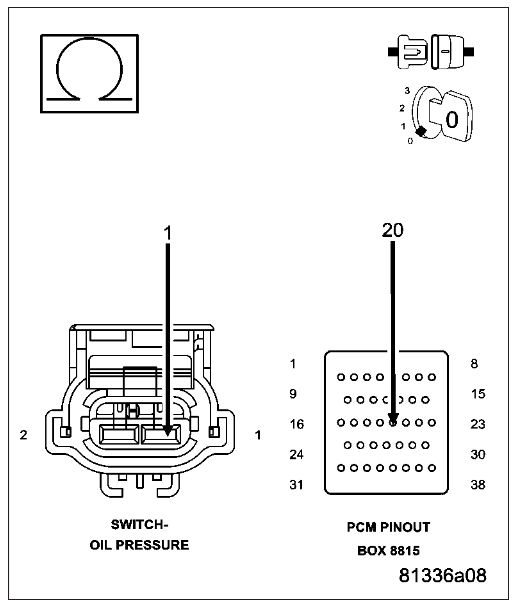
Measure the resistance of the (G6) Oil Pressure Signal circuit from the Oil Pressure Switch harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

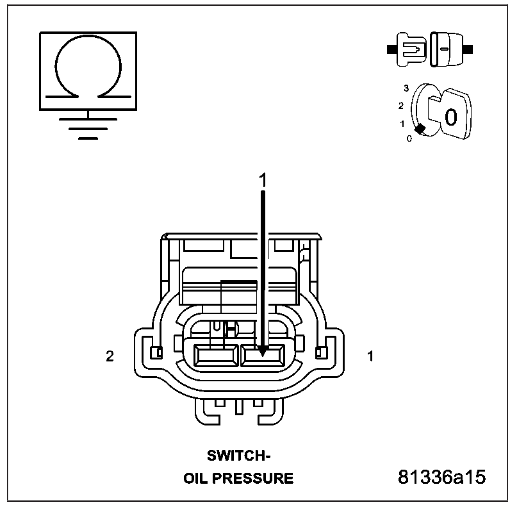
**No** >> Repair the open in the (G6) Oil Pressure Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)



## 5. (G6) SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between a known good ground and the (G6) Oil Pressure Signal circuit in the Switch connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (G6) Oil Pressure Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

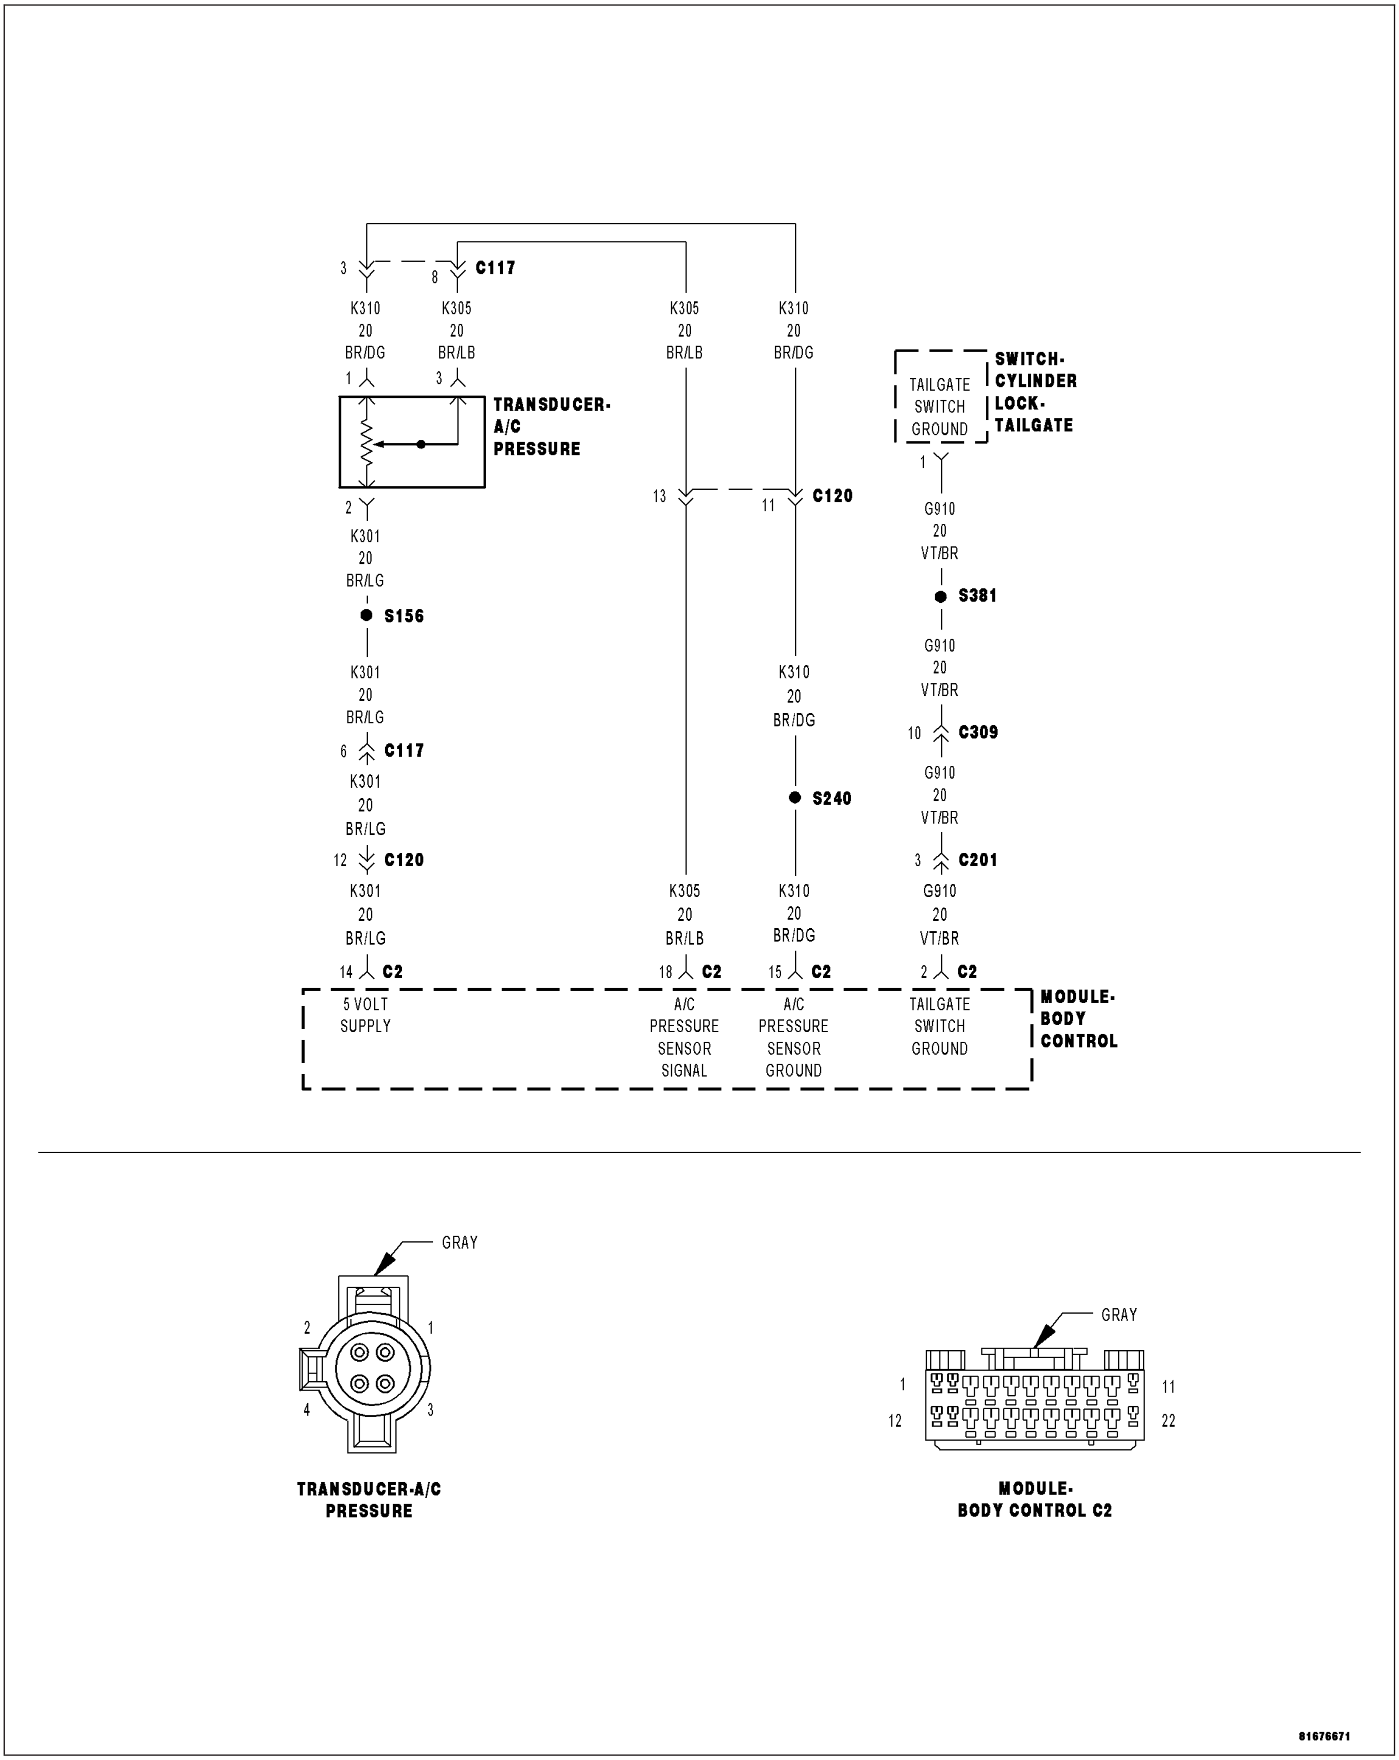
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0532-A/C PRESSURE SENSOR CIRCUIT LOW (ESP)



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine running, AC is learned, and AC Clutch Relay energized.
- **Set Condition:**
  The A/C pressure sensor signal voltage at the PCM goes below 0.58 of a volt for 2.6 seconds. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
| --- |
| (K301) 5-VOLT SUPPLY CIRCUIT OPEN |
| (K301) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| A/C PRESSURE TRANSDUCER |
| (C18) A/C PRESSURE SIGNAL CIRCUIT SHORTED TO GROUND |
| (C18) A/C PRESSURE SIGNAL CIRCUIT SHORTED TO THE (K310) SENSOR GROUND CIRCUIT |
| CAN C BUS CIRCUIT OPEN OR SHORTED |
| BCM |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. A/C PRESSURE TRANSDUCER VOLTAGE BELOW 0.6 OF A VOLT

**NOTE: Diagnose any CAN C Bus communication DTC's before continuing.**

**NOTE: Make sure the A/C refrigerant System is properly charged per Service Information.**

Start the engine.

With a scan tool, read the A/C Pressure Sensor voltage.

**Is the voltage below 0.6 of a volt?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

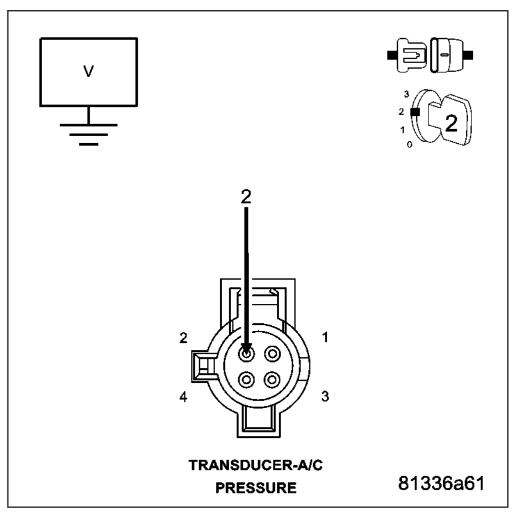
### 2. (K301) 5-VOLT SUPPLY CIRCUIT

Turn the ignition off.

Disconnect the A/C Pressure Transducer harness connector.

Ignition on, engine not running.

Measure the voltage on the (K301) 5-volt Supply circuit in the A/C Pressure Transducer harness connector.



**Is the voltage between 4.5 to 5.2 volts?**

**Yes** >> Go To 3

**No** >> Go To 6

## 3. A/C PRESSURE TRANSDUCER

With the scan tool, monitor the A/C Pressure Transducer voltage.

**Is the voltage above 0.6 of a volt?**

**Yes** >> Replace the A/C Pressure Transducer.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. (C18) A/C PRESSURE SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

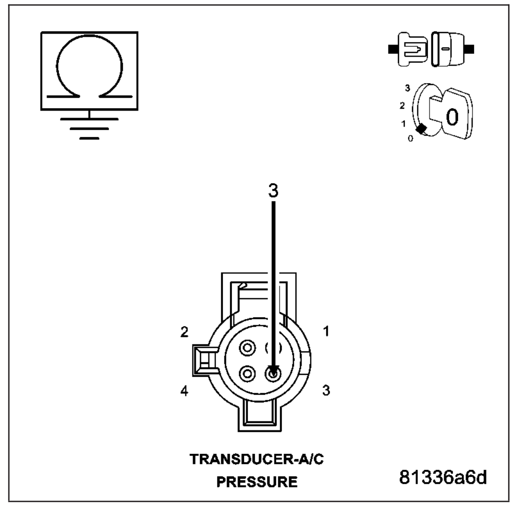
Disconnect the C2 BCM harness connector.

Measure the resistance between ground and the (C18) A/C Pressure Signal circuit in the A/C Pressure Transducer harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (C18) A/C Pressure Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5



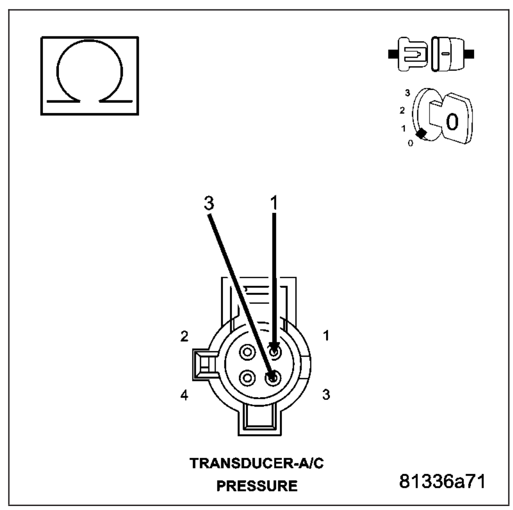
## 5. (C18) A/C PRESSURE SIGNAL CIRCUIT SHORTED TO THE (K310) SENSOR GROUND CIRCUIT

Measure the resistance between the (C18) A/C Pressure Signal circuit and the (K310) Sensor ground circuit in the A/C Pressure Transducer harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short between the (K310) Sensor ground circuit and the (C18) A/C Pressure Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8



## 6. (K301) 5-VOLT SUPPLY CIRCUIT OPEN

Turn the ignition off.

Disconnect the C2 BCM harness connector.

Measure the resistance of the (K301) 5-volt Supply circuit from the A/C Pressure Transducer harness connector to the C2 BCM harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K301) 5-volt Supply circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. (K301) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

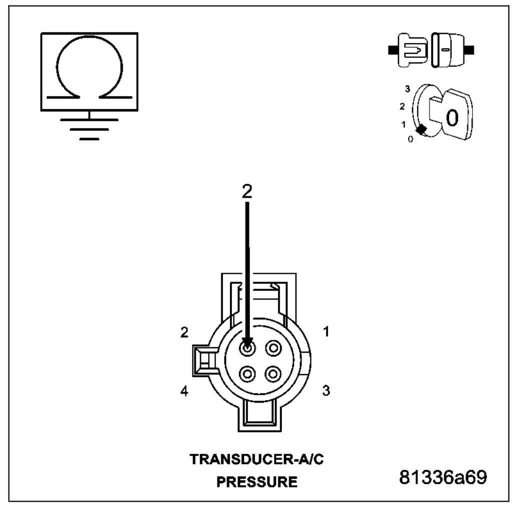
Measure the resistance between ground and the (K301) 5-volt Supply circuit in the A/C Pressure Transducer harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K301) 5-volt Supply circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8



## 8. BCM

**NOTE: Before continuing, check the BCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

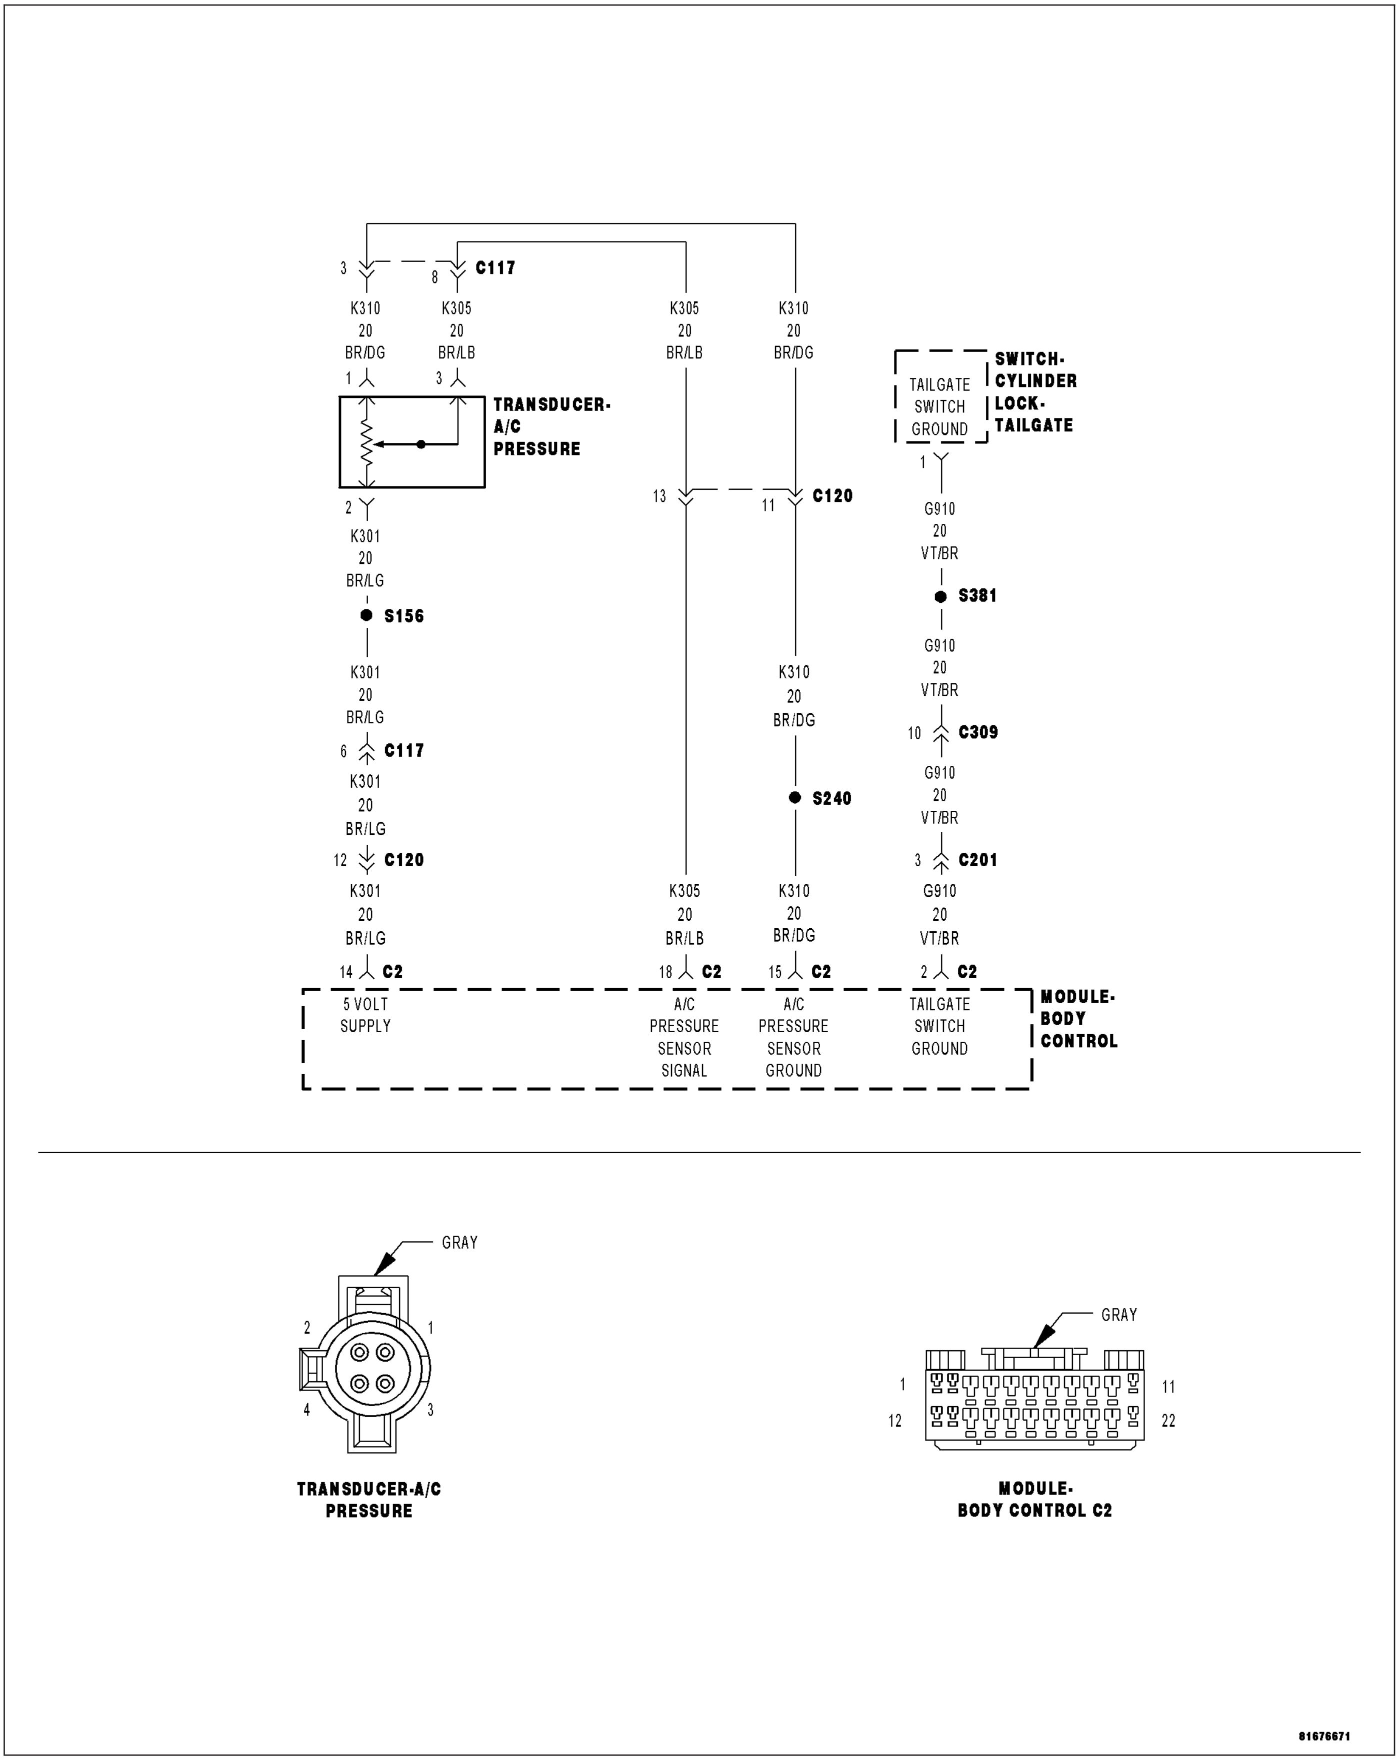
**Yes** >> Repair as necessary.

Perform the BODY VERIFICATION TEST. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE)

**No** >> Replace and program the Body Control Module per Service Information.

Perform the BODY VERIFICATION TEST. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE)

## P0533-A/C PRESSURE SENSOR CIRCUIT HIGH (ESP)



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine running and the AC Clutch Relay energized.
- **Set Condition:**
  The A/C pressure transducer signal at the PCM goes above 4.92 volts for more than 2.6 seconds. One trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (C18) A/C PRESSURE SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (C18) A/C PRESSURE SIGNAL CIRCUIT OPEN |
| (C18) A/C PRESSURE SIGNAL CIRCUIT SHORTED TO THE (K301) 5-VOLT SUPPLY CIRCUIT |
| (K310) SENSOR GROUND CIRCUIT OPEN |
| A/C PRESSURE TRANSDUCER |
| CAN C BUS CIRCUIT OPEN OR SHORTED |
| BCM |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. A/C PRESSURE TRANSDUCER VOLTAGE ABOVE 4.9 VOLTS

**NOTE: Diagnose any CAN C Bus Communication DTCs before continuing.**

**NOTE: Make sure the A/C refrigerant System is properly charged per Service Information.**

Start the engine.

With a scan tool, read the A/C Pressure Sensor voltage.

**Is the voltage above 4.9 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. A/C PRESSURE TRANSDUCER

Turn the ignition off.

Disconnect the A/C Pressure Transducer harness connector.

Connect a jumper wire between the (C18) A/C Pressure Signal circuit and the (K310) Sensor ground circuit in the Transducer harness connector.

Ignition on, engine not running.

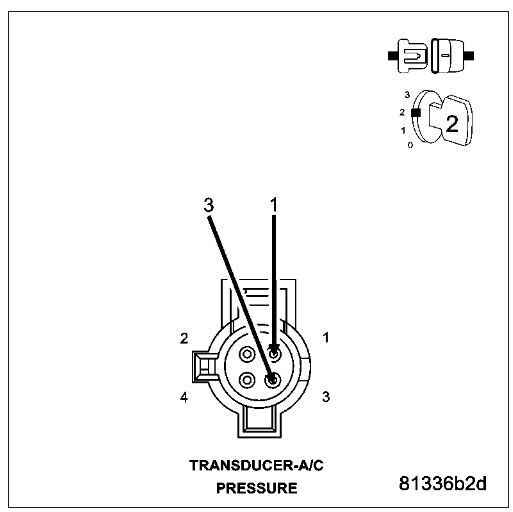
With the scan tool, monitor the A/C Pressure Transducer voltage.

**Is the voltage below 1.0 volt with the jumper wire installed?**

**Yes** >> Replace the A/C Pressure Transducer.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

**NOTE: Remove the jumper wire before continuing.**



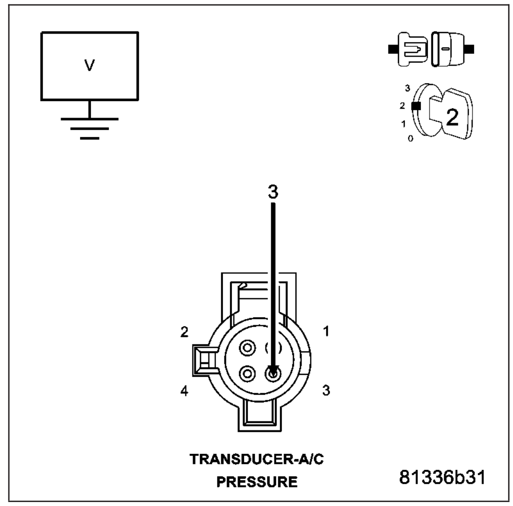
## 3. (C18) A/C PRESSURE SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the C2 BCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (C18) A/C Pressure Signal circuit in the A/C Pressure Transducer harness connector.



**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (C18) A/C Pressure Signal circuit.

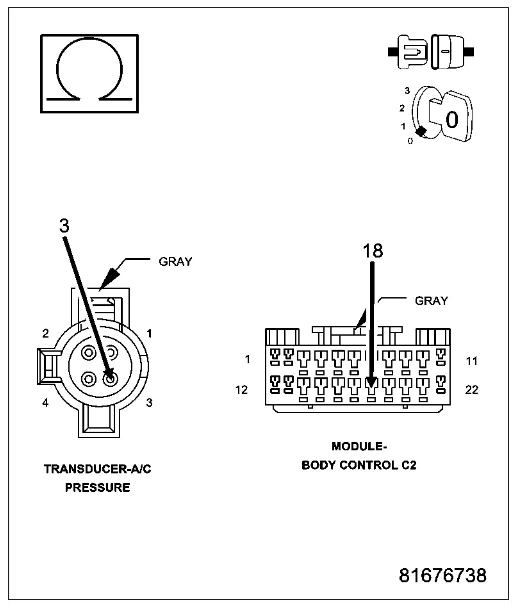
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. (C18) A/C PRESSURE SIGNAL CIRCUIT OPEN

Turn the ignition off.

Measure the resistance of the (C18) A/C Pressure Signal circuit from the A/C Pressure Transducer harness connector to the C2 BCM harness connector.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (C18) A/C Pressure Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. (C18) A/C PRESSURE SIGNAL CIRCUIT SHORTED TO THE (K301) 5-VOLT SUPPLY CIRCUIT

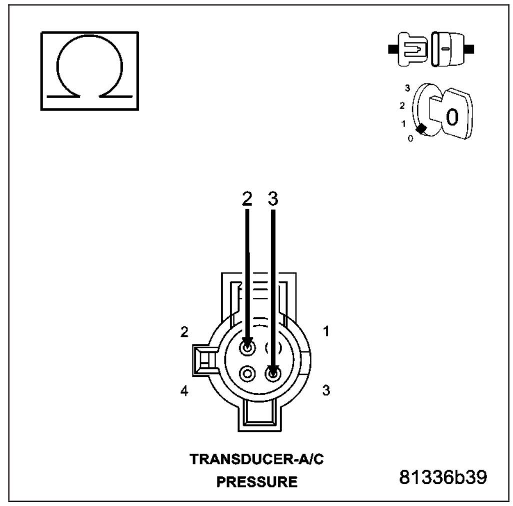
Measure the resistance between the (C18) A/C Pressure Signal circuit and the (K301) 5-volt Supply circuit in the A/C Pressure Transducer harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K301) 5-volt Supply circuit and the (C18) A/C Pressure Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6



## 6. (K310) SENSOR GROUND CIRCUIT OPEN

Disconnect the C2 BCM harness connector.

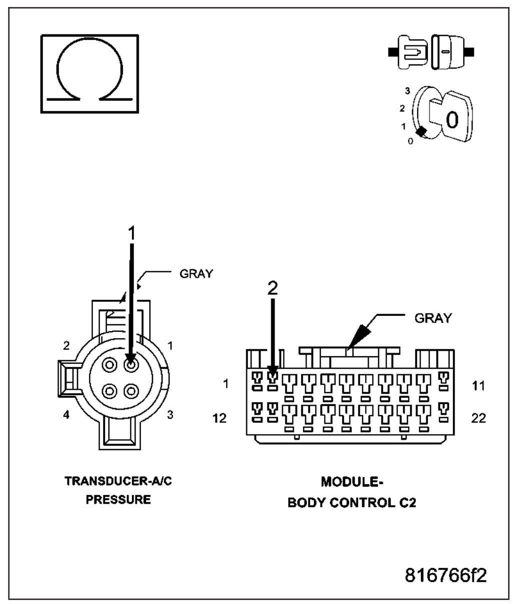
Measure the resistance of the (K310) Sensor ground circuit from the A/C Pressure Sensor harness connector to the C2 BCM harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K310) Sensor ground circuit

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)



## 7. BCM

**NOTE: Before continuing, check the BCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

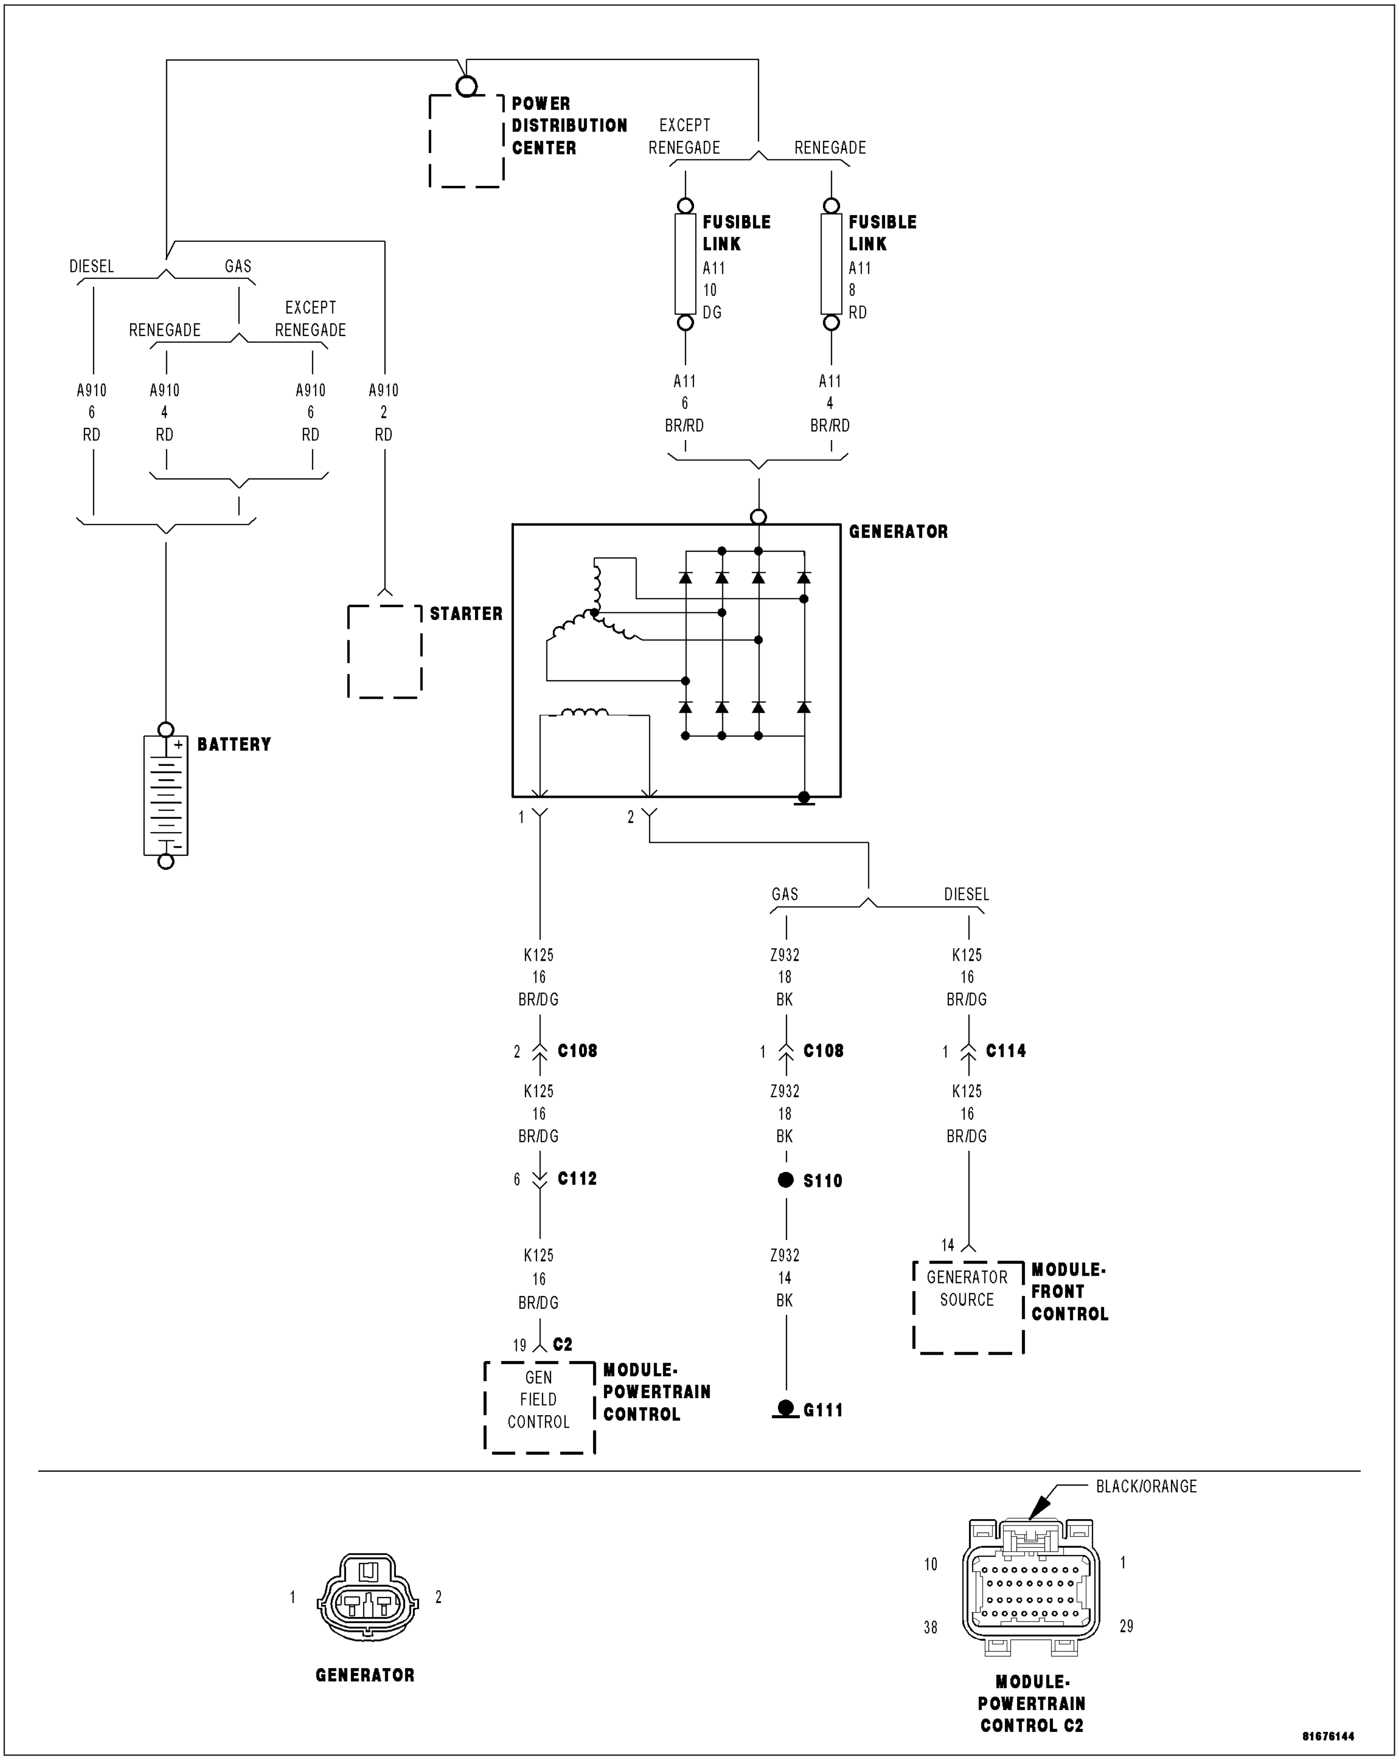
**Yes** >> Repair as necessary.

Perform the BODY VERIFICATION TEST. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE)

**No** >> Replace and program the Body Control Module per Service Information.

Perform the BODY VERIFICATION TEST. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE)

## P0562-BATTERY VOLTAGE LOW



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  The engine running. The engine speed greater than 1000 RPM.
- **Set Condition:**
  Battery voltage is 1 volt less than desired voltage for a set period of time. One Trip Fault.

| Possible Causes |
|---|
| RESISTANCE IN THE (A1) BATTERY POSITIVE CIRCUIT |
| RESISTANCE IN THE GENERATOR CASE GROUND |
| (K125) GENERATOR FIELD CONTROL CIRCUIT OPEN |
| (K125) GENERATOR FIELD CONTROL CIRCUIT SHORTED TO GROUND |
| OPEN FUSE LINK |
| (Z932) GROUND CIRCUIT OPEN |
| GENERATOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: Make sure the Battery is in good condition. Using the Midtronics Battery Tester, test the Battery before continuing.**

**NOTE: Inspect the vehicle for after market accessories that may exceed the Generator System output.**
Turn the ignition off.

**NOTE: Make sure the generator drive belt is in good operating condition.**

**NOTE: Inspect the fuses in the IPM. If an open fuse is found, use the wire diagram/schematic as a guide, inspect the wiring and connectors for damage.**
Ignition on, engine not running.

With the scan tool, read DTCs.

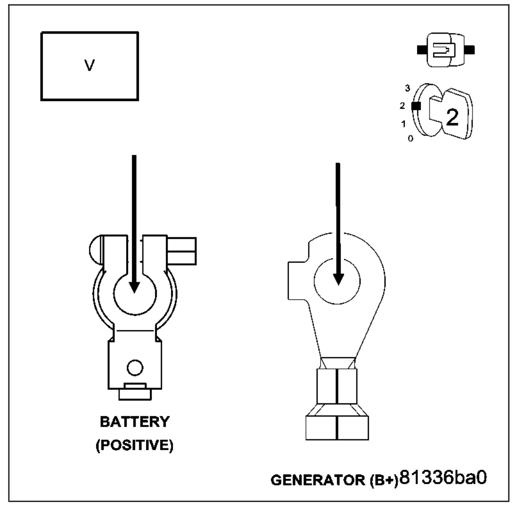
**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 2. (A1) B+ CIRCUIT HIGH RESISTANCE

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**



**NOTE: Make sure all wires are clear of the engine's moving parts.**

Measure the voltage between the (A1) B+ Terminal at the Generator and the Battery + Post.

Start the engine.

**Is the voltage above 0.4 of a volt?**

**Yes** >> Repair the excessive resistance in the (A1) B+ circuit between the Generator and Battery.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. GENERATOR CASE GROUND HIGH RESISTANCE

Ignition on, engine not running.

Start the engine.

Allow the engine to reach normal operating temperature.

**NOTE: Make sure all wires are clear of the engine's moving parts.**

Measure the voltage between the Generator case and Battery ground post.

**Is the voltage above 0.1 of a volt?**

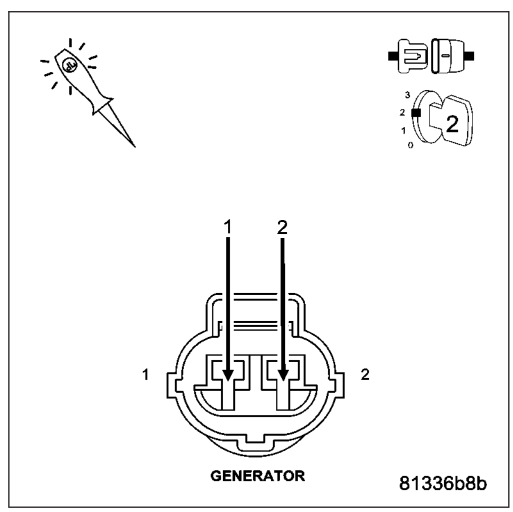
**Yes** >> Repair excessive resistance in the Generator Ground between the Generator Case and Battery ground side.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. GENERATOR OPERATION

Turn the ignition off.



Disconnect the Generator Field harness connector.

Using a 12-volt test light, jump it across the Generator Field harness connector.

Ignition on, engine not running.

With the scan tool, actuate the Gen Field Control circuit.

**Does the test light illuminate brightly and flash on and off?**

**Yes** >> Replace the Generator.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

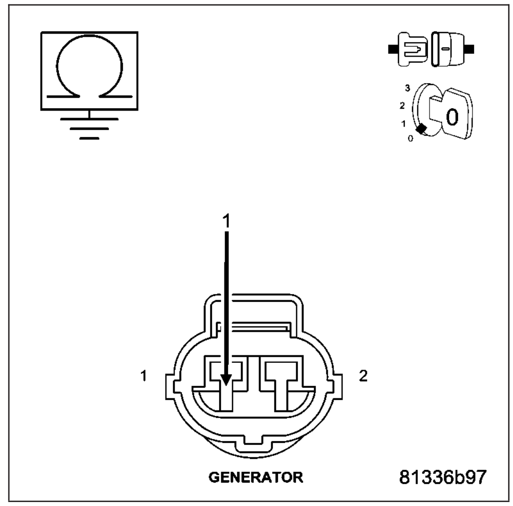
**No** >> Go To 5

## 5. (K125) GENERATOR FIELD CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K125) Gen Field Control circuit in the Generator Field harness connector.



**Is the resistance below 100 ohms?**

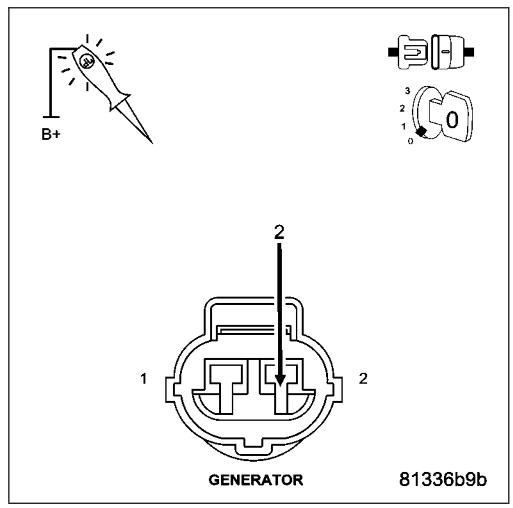
**Yes** >> Repair the short to ground in the (K125) Gen Field Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. (Z932) GROUND CIRCUIT OPEN

Using a 12-volt test light connected to 12-volts, probe the (Z932) Ground circuit in the Generator Field harness connector.



**Does the test light illuminate brightly?**

**Yes** >> Go To 7

**No** >> Repair the open in the (Z932) Ground circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. (K125) GENERATOR FIELD CONTROL CIRCUIT OPEN

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K125) Gen Field Control circuit from the Generator harness connector to the appropriate terminal of the special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 8

**No** >> Repair the open in the (K125) Gen Field Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 8. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

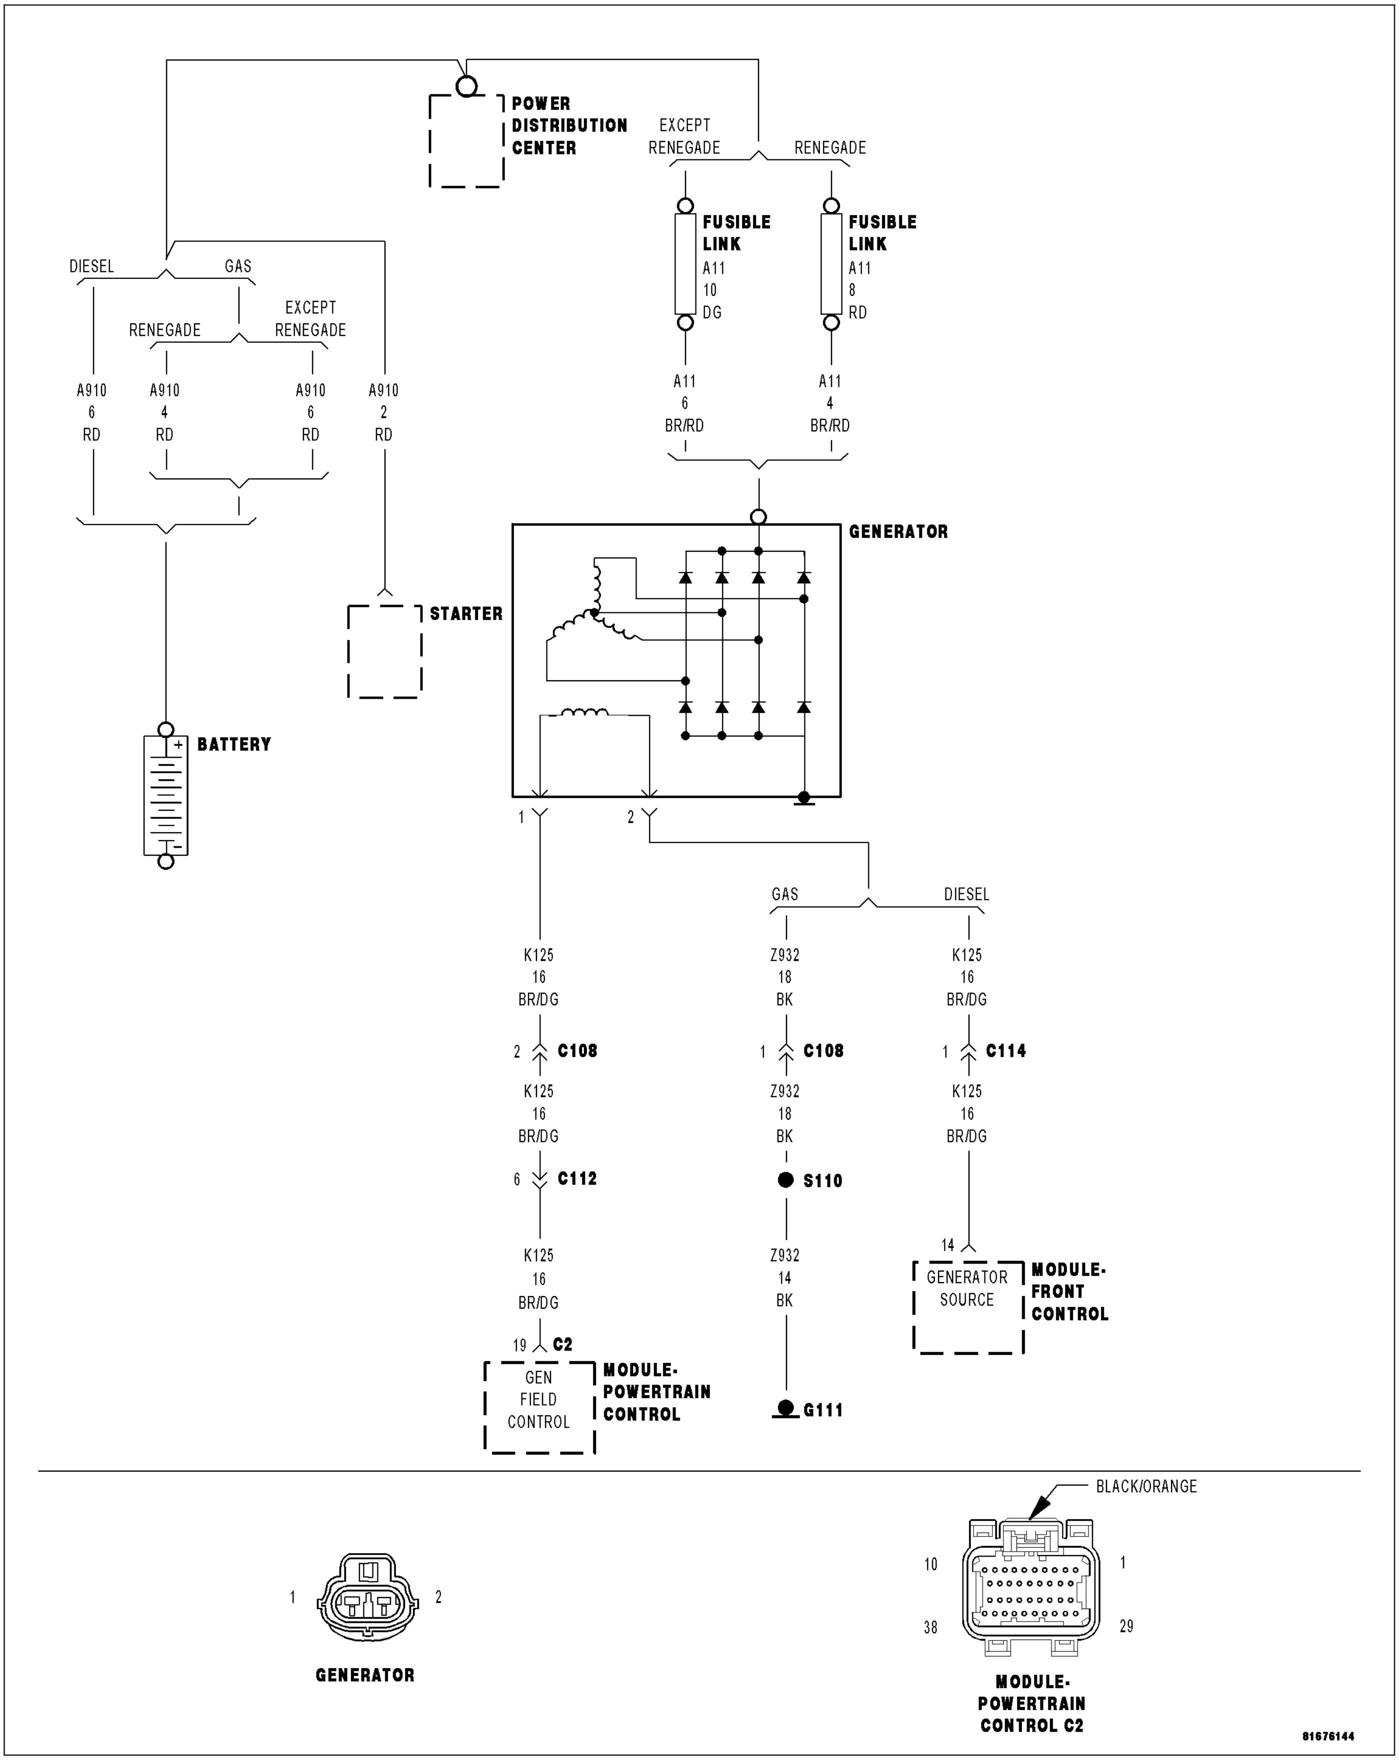
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0563-BATTERY VOLTAGE HIGH



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the ignition on. Engine RPM greater than 1000 RPM. With no other charging system codes set.
- **Set Condition:**
  Battery voltage is 1 volt greater than desired voltage for more than 10 seconds. Battery voltage greater than 15.75 volts. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (K125) GENERATOR FIELD CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| GENERATOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: Make sure the Battery is in good condition. Using the Midtronics Battery Tester, test the Battery before continuing.**

**NOTE: Inspect the vehicle for after market accessories that may exceed the Generator System output.**
Turn the ignition off.

**NOTE: Make sure the generator drive belt is in good operating condition.**

**NOTE: Inspect the fuses in the IPM. If a fuse is open use the wire diagram/schematic as a guide, inspect the wiring and connectors for damage.**
Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. GENERATOR OPERATION

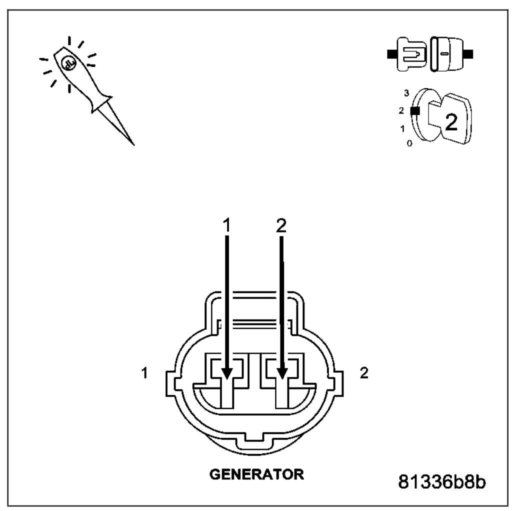
Turn the ignition off.

Disconnect the Generator Field harness connector.

Using a 12-volt test light, jump across the Generator Field harness connector.

Ignition on, engine not running.

With the scan tool, actuate the Generator Field Driver.



**Does the test light illuminate brightly and flash on and off?**

**Yes** >> Replace the Generator.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

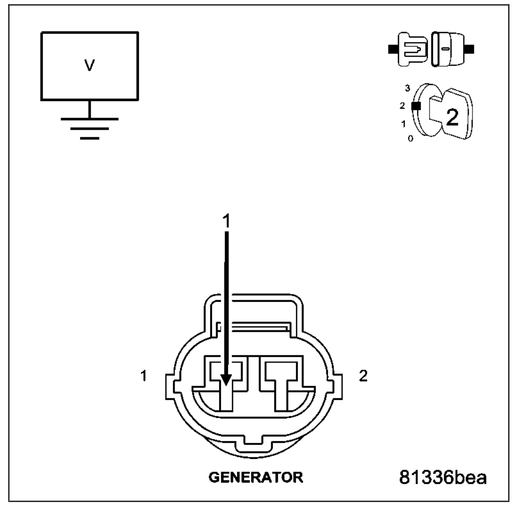
## 3. (K125) FIELD CIRCUIT SHORTED BATTERY VOLTAGE

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (K125) Gen Field Control circuit at the Generator Field harness connector.



**Is the voltage above 1.0 volt?**

**Yes** >> Repair the short to battery voltage in the (K125) Gen Field Control circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

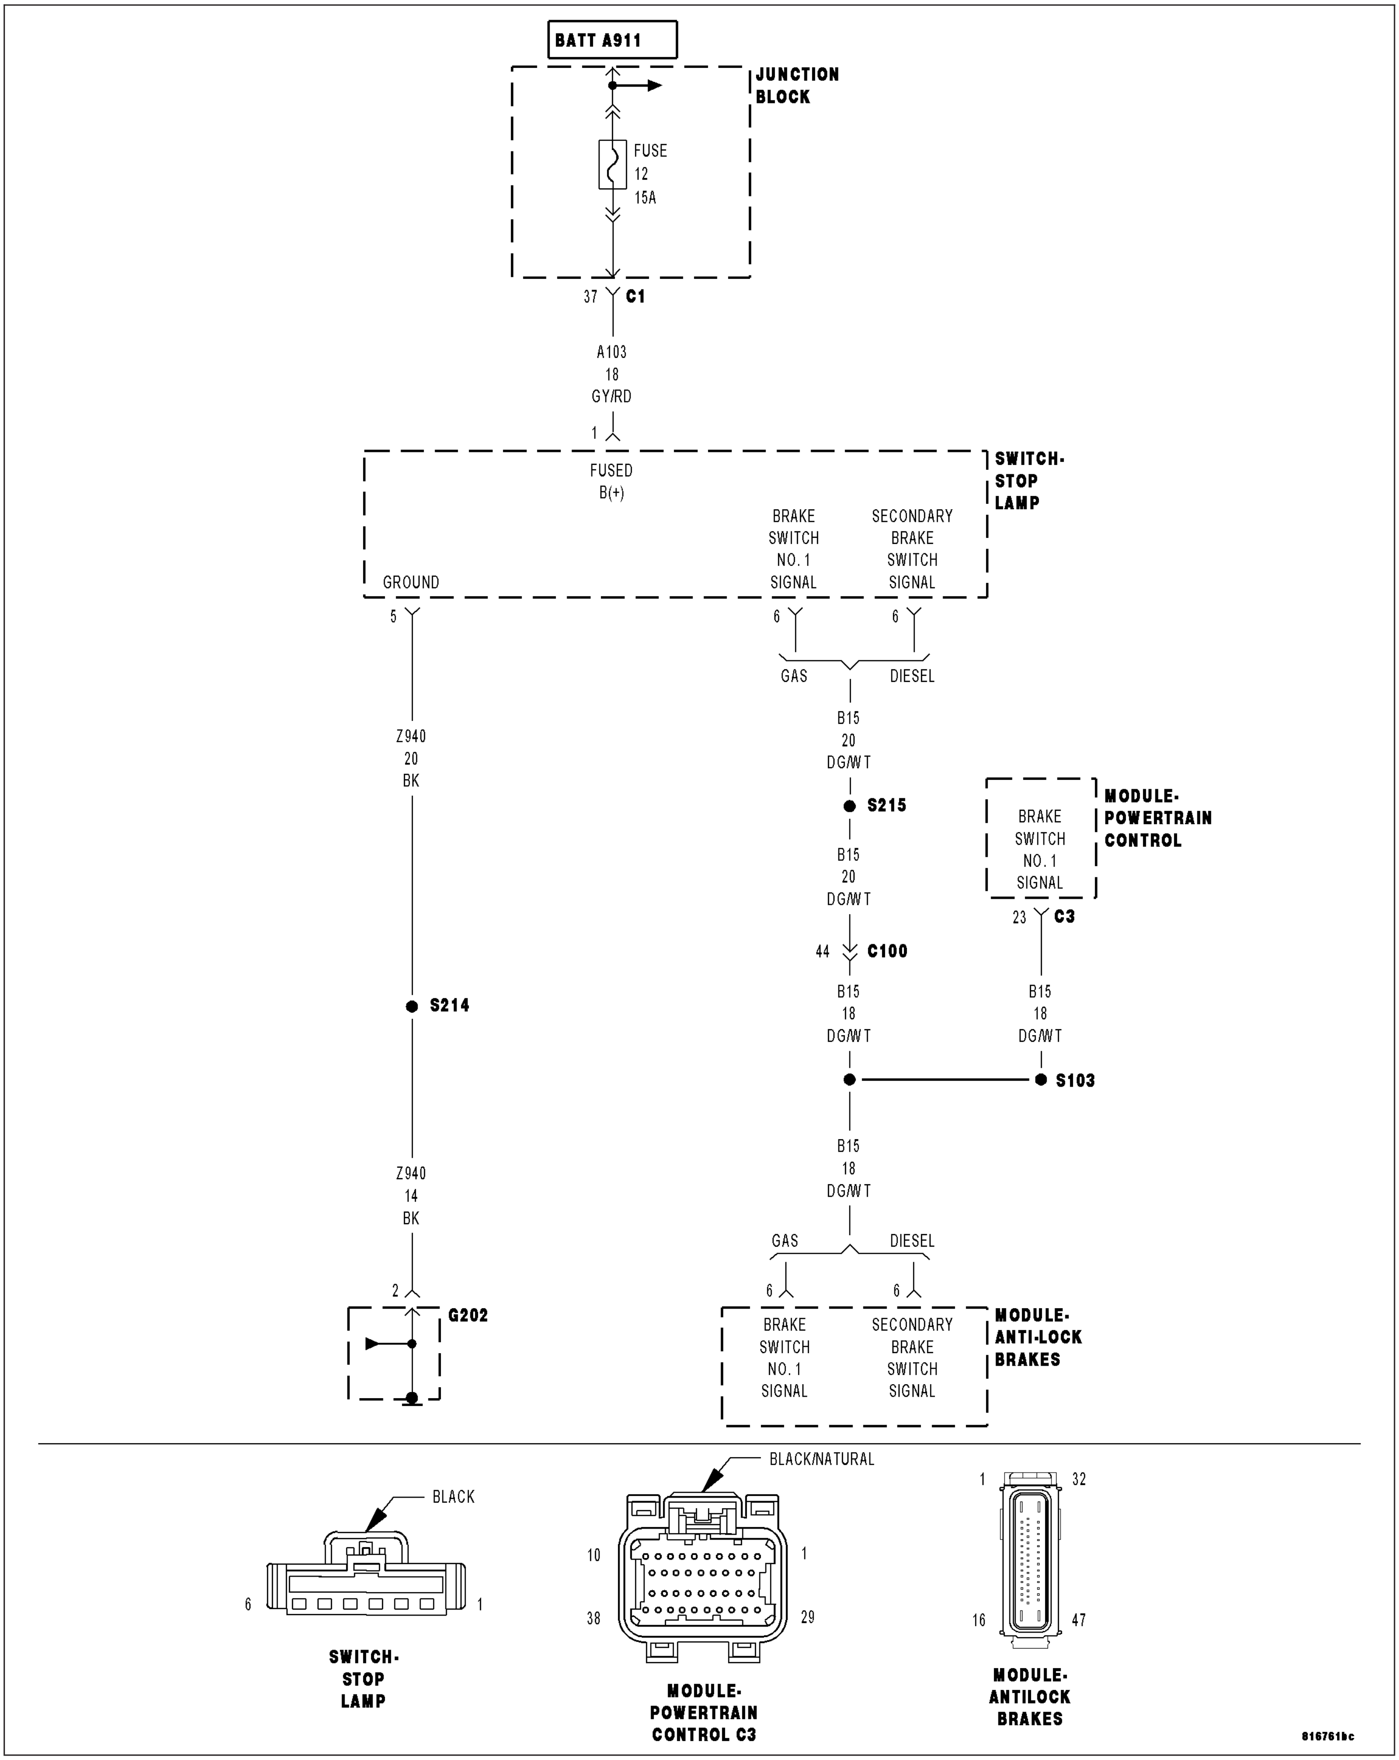
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0571-BRAKE SWITCH 1 PERFORMANCE



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The brake switch rationality checks both failure modes of the brake switch. The brake switch stuck on test checks for a high vehicle speed condition where the brake switch is unexpectedly depressed. The brake switch stuck off test checks for repeated vehicle stop maneuvers without the brake switch depressed.

- **When Monitored:**
  Ignition on.
- **Set Condition:**
  If the output of Brake Switch No.1 to the PCM looks like it is not applied, while Brake Lamp Switch Output circuit is applied the fault will mature in 60ms. Two Trip Fault.

| Possible Causes |
|---|
| (B15) BRAKE SWITCH NO.1 SIGNAL SHORTED TO GROUND |
| (Z940) GROUND CIRCUIT OPEN |
| STOP LAMP SWITCH |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: Make sure the Stop Lamp Switch is properly adjusted before continuing.**

**NOTE: Make sure the Stop Lamp Switch is properly wired, such as (B15) Brake Switch No.1 and (L50) Brake Lamp Switch Output circuit are not switched at the harness connector.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (B15) BRAKE SWITCH NO.1 SIGNAL SHORTED TO GROUND

Turn the ignition off.

Disconnect the Stop Lamp Switch harness connector.

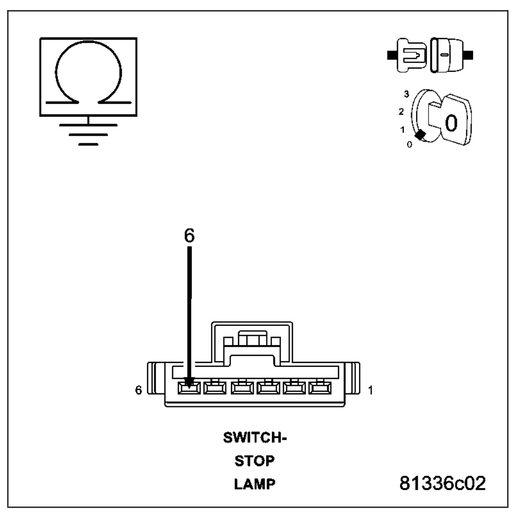
Disconnect the C3 PCM harness connector.

Measure the resistance between ground and the (B15) Brake Switch No.1 Signal circuit in the Stop Lamp Switch harness connector.

**Is the resistance below 100 ohms?**

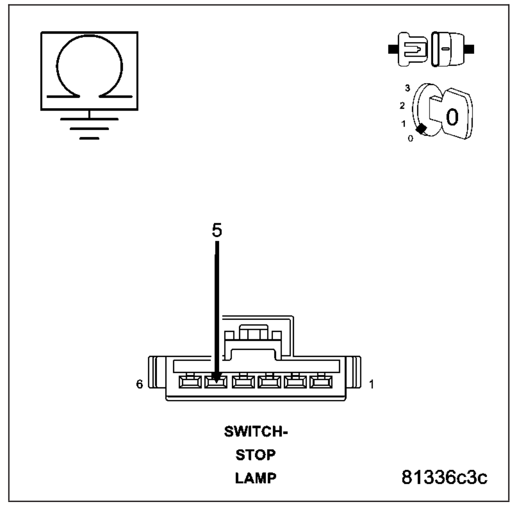
**Yes** >> Repair the short to ground in the (B15) Brake Switch No.1 Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3



## 3. (Z940) GROUND CIRCUIT OPEN

Measure the resistance between ground and the (Z940) Ground circuit in the Stop Lamp Switch harness connector.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the open in the (Z940) Ground circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. STOP LAMP SWITCH

Measure the resistance between the (Z940) Ground circuit terminal and the (B15) Brake Switch No.1 Signal terminal in the Stop Lamp Switch.

Apply and release the brake pedal while monitoring the ohmmeter.

**Does the resistance change from below 5.0 ohms to an open circuit for one or both of the measurements taken?**

**Yes** >> Go To 5

**No** >> Replace the Stop Lamp Switch.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

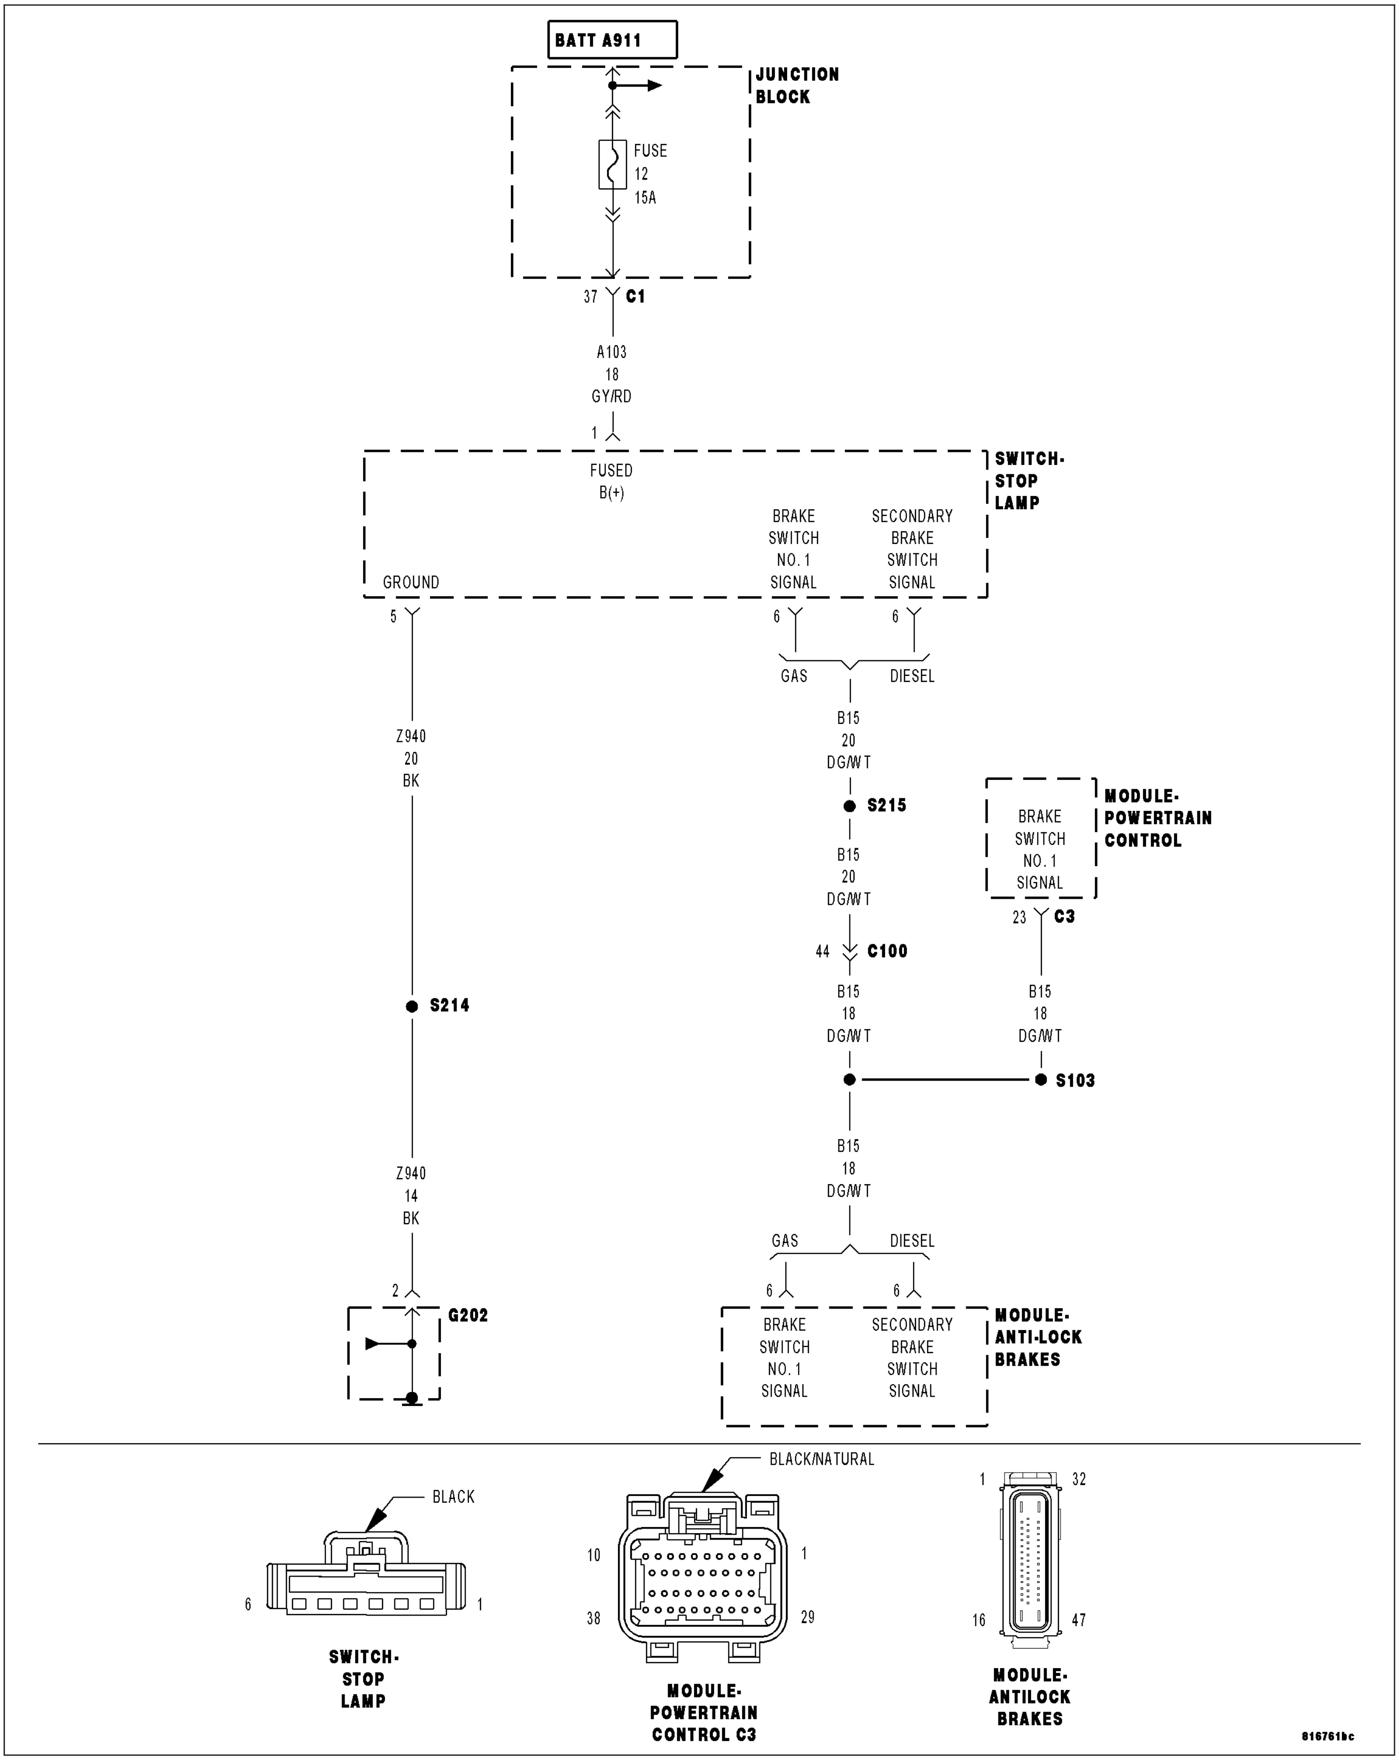
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0572-BRAKE SWITCH 1 STUCK ON



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on.
- **Set Condition:**
  When the PCM recognizes Brake Switch No.1 is mechanically stuck in the low/on position. Two Trip Fault. Three Global Good Trips to Clear.

| Possible Causes |
|---|
| (B15) BRAKE SWITCH NO.1 SIGNAL CIRCUIT SHORTED TO GROUND |
| STOP LAMP SWITCH |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: Verify battery voltage is greater than 10 volts.**
With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. STOP LAMP SWITCH

Turn the ignition off.

Remove the Stop Lamp Switch and disconnect the harness connector.

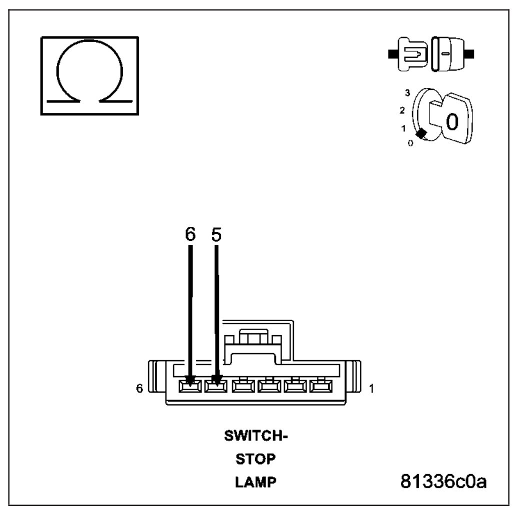
Measure the resistance between the (Z940) Ground circuit terminal and the (B15) Brake Switch No.1 Signal terminal in the Stop Lamp Switch.

Apply and release the brake pedal plunger while monitoring the ohmmeter.

**Does the resistance change from below 5.0 ohms to an open circuit?**

**Yes** >> Go To 3

**No** >> Replace the Stop Lamp Switch.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

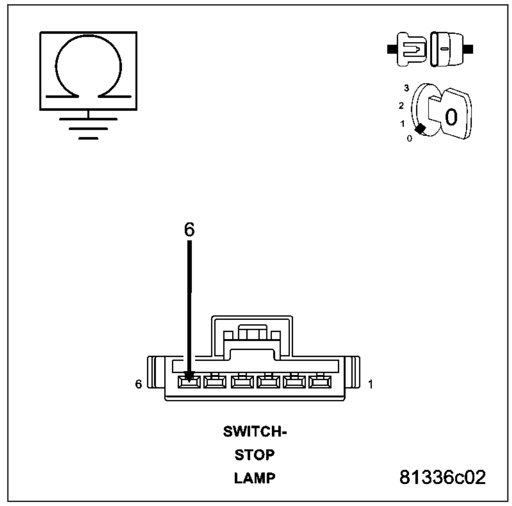


## 3. (B15) BRAKE SWITCH NO.1 SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C3 PCM harness connector.

Measure the resistance between ground and the (B15) Brake Switch No.1 Signal circuit in the Stop Lamp Switch harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (B15) Brake Switch No.1 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

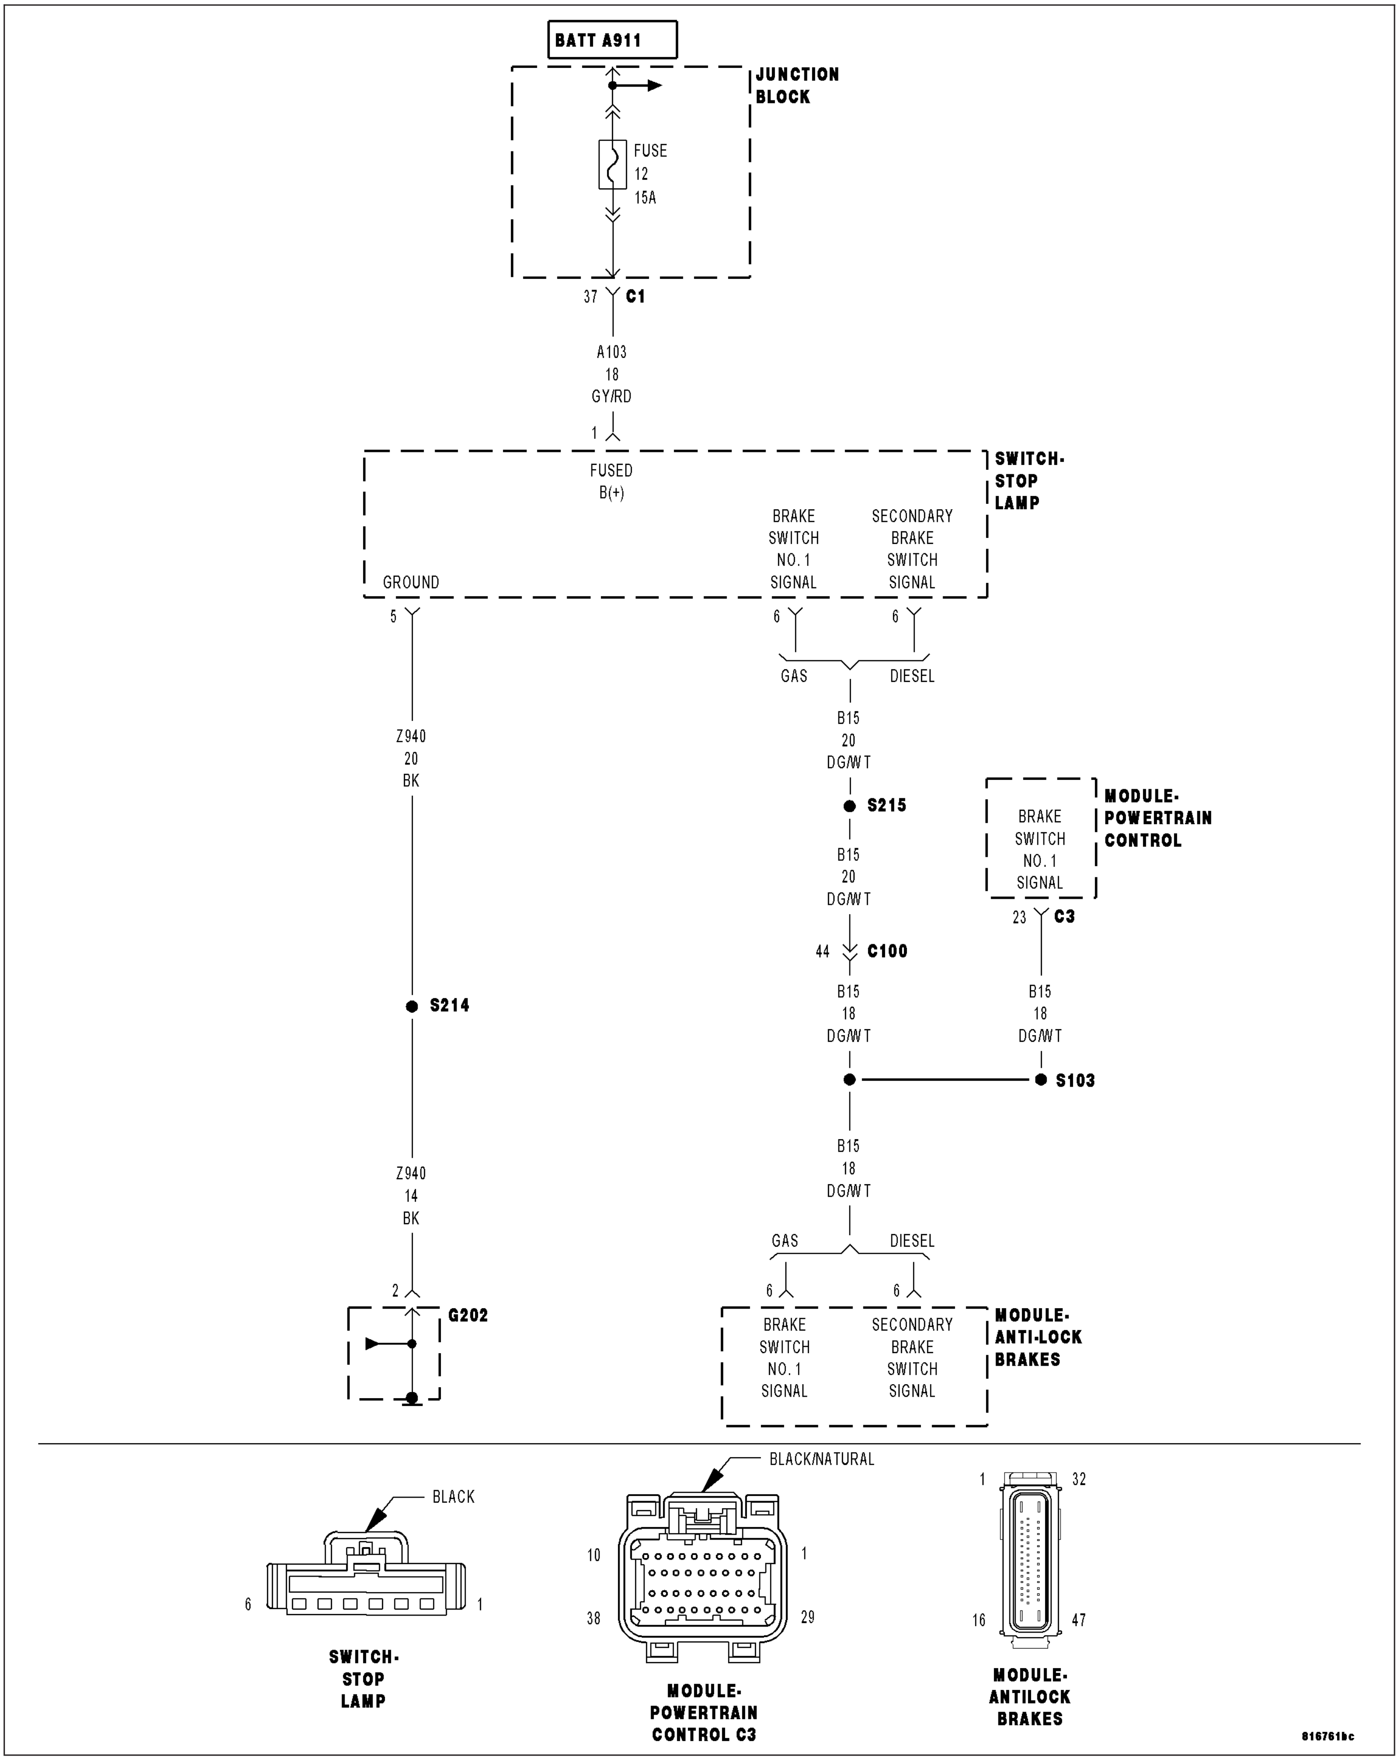
**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0573-BRAKE SWITCH 1 STUCK OFF



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on.
- **Set Condition:**
  When the PCM recognizes Brake Switch No.1 is stuck in the high/off position. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (B15) BRAKE SWITCH NO.1 SIGNAL CIRCUIT OPEN |
| (Z940) GROUND CIRCUIT OPEN |
| STOP LAMP SWITCH |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. STOP LAMP SWITCH

Turn the ignition off.

Disconnect the Stop Lamp Switch harness connector.

Measure the resistance between the (Z940) Ground circuit terminal and the (B15) Brake Switch No.1 Signal circuit terminal in the Stop Lamp Switch.

Apply and release the brake pedal while monitoring the ohmmeter.

**Does the resistance change from below 5.0 ohms to an open circuit?**

**Yes** >> Go To 3

**No** >> Replace the Stop Lamp Switch.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

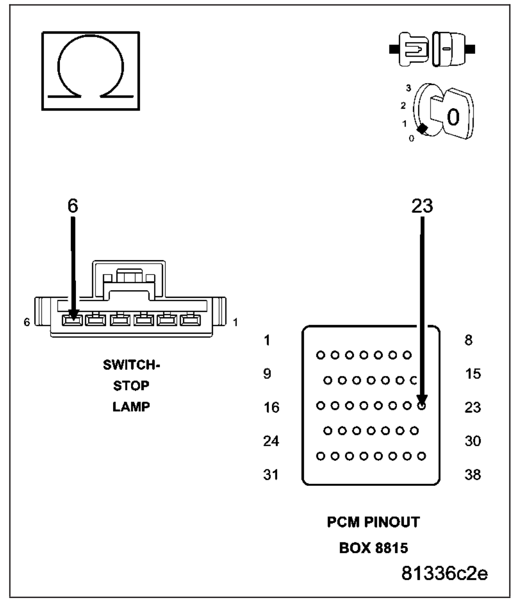
## 3. (B15) BRAKE SWITCH NO.1 SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the C3 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (B15) Brake Switch No.1 Signal circuit from the Stop Lamp Switch harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

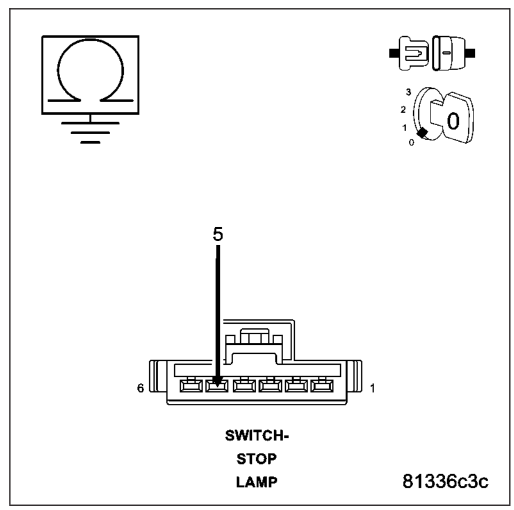
**Yes** >> Go To 4

**No** >> Repair the open in the (B15) Brake Switch No.1 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. (Z940) GROUND CIRCUIT OPEN

Measure the resistance between the (Z940) Ground circuit and ground in the Stop Lamp Switch harness connector.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (Z940) Ground circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

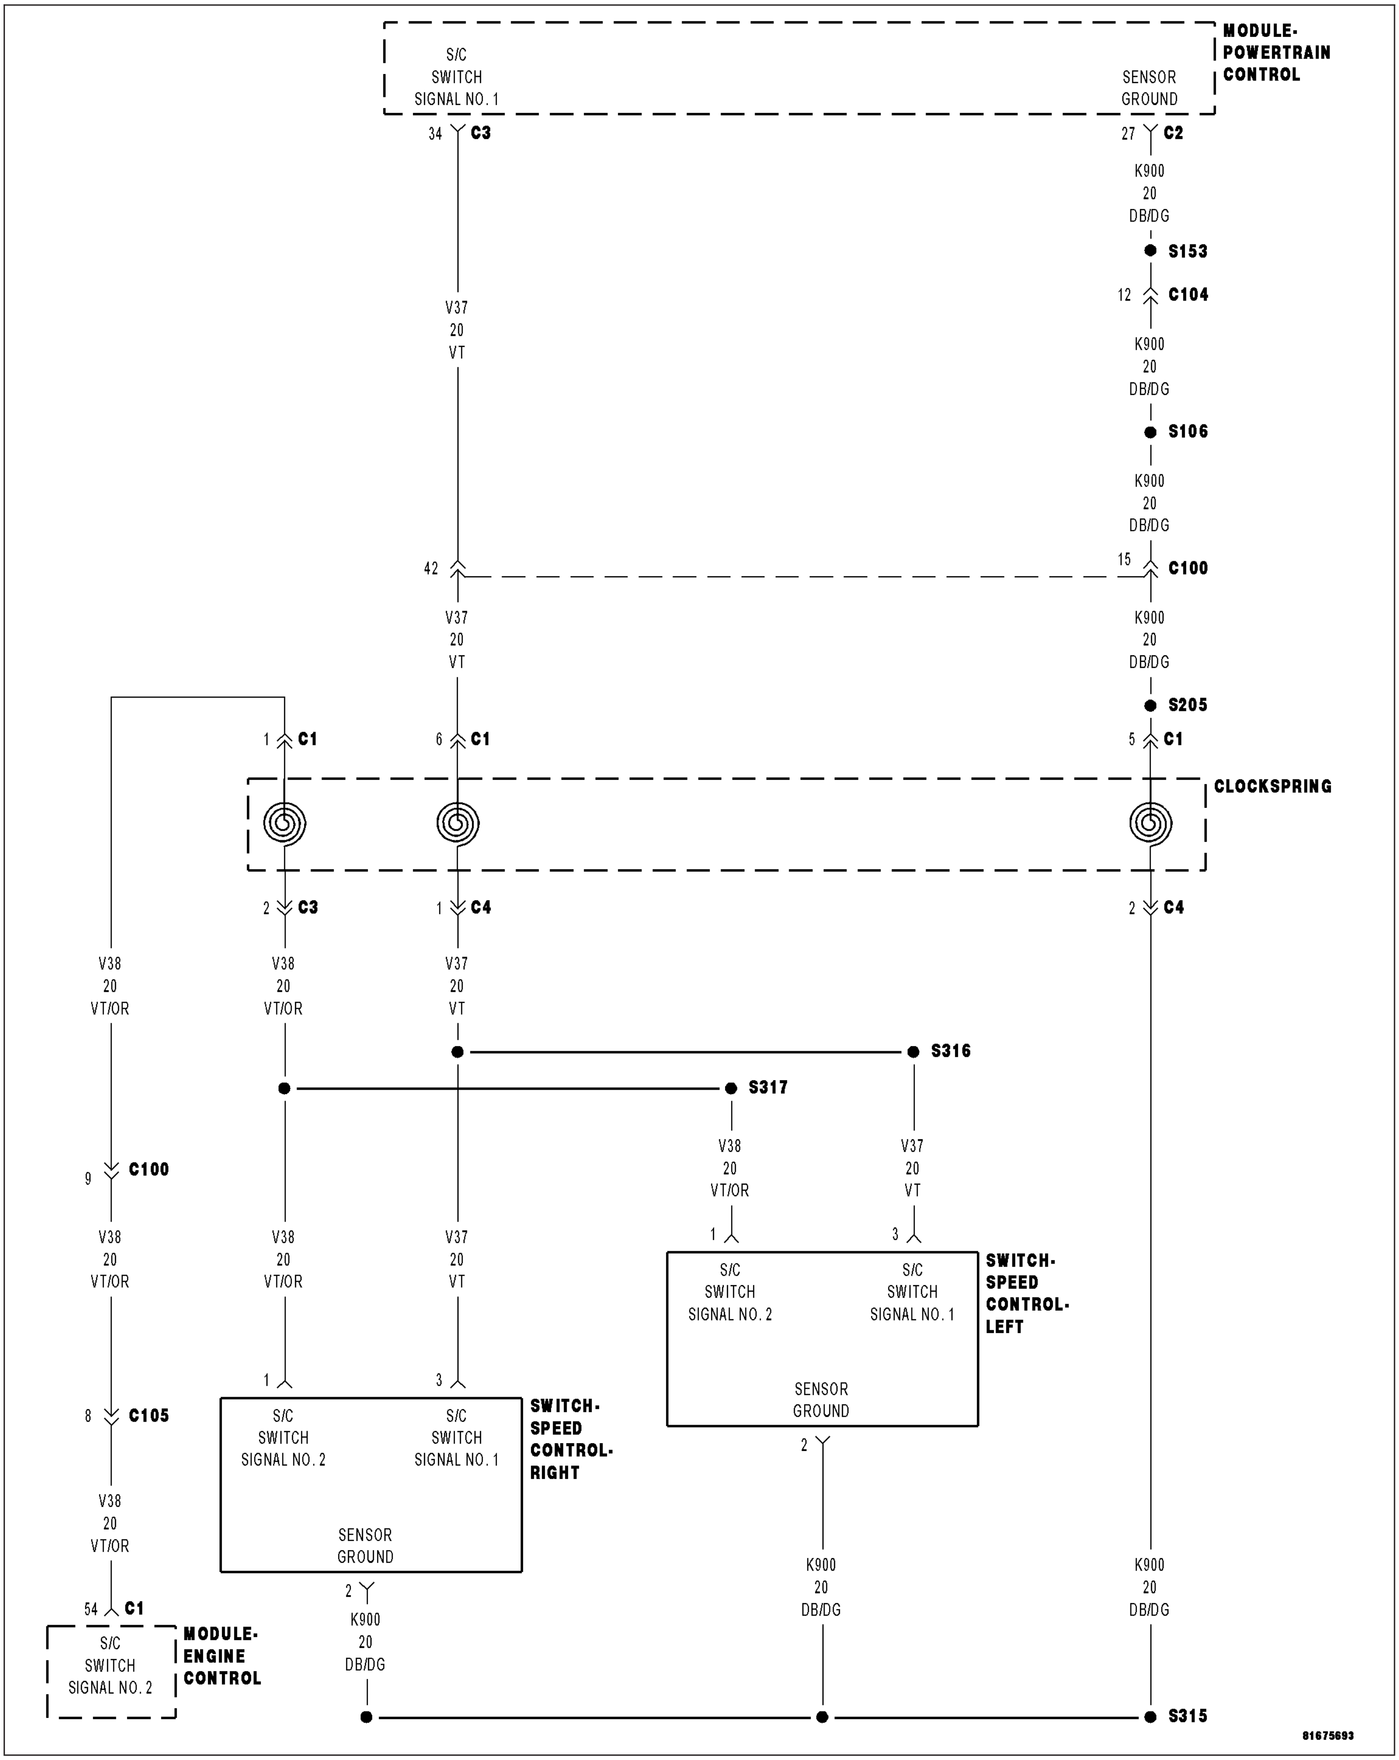
**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0580-SPEED CONTROL SWITCH 1 CIRCUIT LOW



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the ignition key on. Battery voltage above 10 volts.
- **Set Condition:**
  When switch voltage is less than 0.43 of a volt for 18.4 seconds. One trip fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (V37) S/C SIGNAL NO.1 CIRCUIT SHORTED TO GROUND |
| (V37) S/C SIGNAL NO.1 CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT |
| CLOCKSPRING |
| SPEED CONTROL ON/OFF SWITCH |
| SPEED CONTROL RESUME/ACCEL SWITCH |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. SPEED CONTROL SWITCH VOLTAGE LOW

**NOTE: Do not press any of the Speed Control Switch buttons.**
Ignition on, engine not running.
With a scan tool, read the Speed Control voltage.

**Is the Speed Control voltage below 1.0 volt?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. SPEED CONTROL ON/OFF SWITCH

Ignition on, engine not running.
With the scan tool, monitor the Speed Control Switch voltage.
Disconnect the Speed Control On/Off Switch harness connector per Service Information.

**Did the voltage change to above 4.7 volts?**

**Yes** >> Replace the Speed Control On/Off Switch.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

### 3. SPEED CONTROL RESUME/ACCEL SWITCH

With the scan tool, monitor the Speed Control Switch voltage.
Disconnect the Speed Control Resume/Accel Switch harness connector.

**Did the voltage change to above 4.7 volts?**

**Yes** >> Replace the Speed Control Resume/Accel Switch.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. CLOCKSPRING

Turn the ignition off.

Disconnect the clockspring 6-way harness connector (instrument panel wiring side) per Service Information.

Ignition on, engine not running.

With the scan tool, read the S/C Switch voltage.

**Did the S/C Switch volts change to 5.0 volts?**

**Yes** >> Replace the Clockspring.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. (V37) S/C NO.1 SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

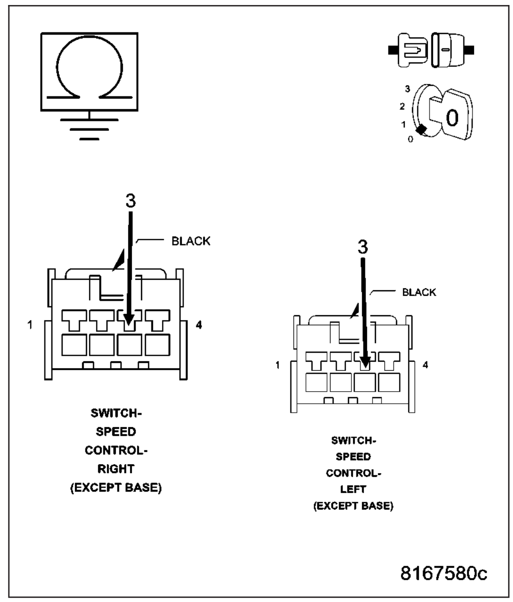
Disconnect the C3 PCM harness connector.

Measure the resistance between ground and the (V37) S/C Signal circuit in the Switch harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (V37) S/C Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6



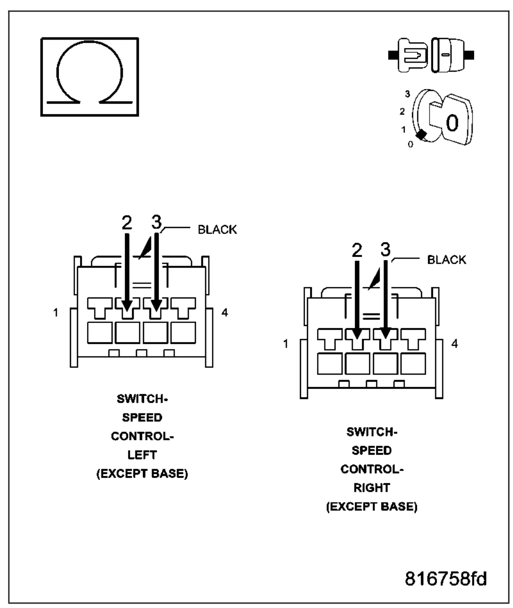
## 6. (V37) S/C SIGNAL NO.1 CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT

Measure the resistance between the (K900) Sensor ground circuit and the (V37) S/C Signal No.1 circuit in the Speed Control Switch.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (V37) S/C Signal No.1 circuit and the (K900) Sensor ground circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7



## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

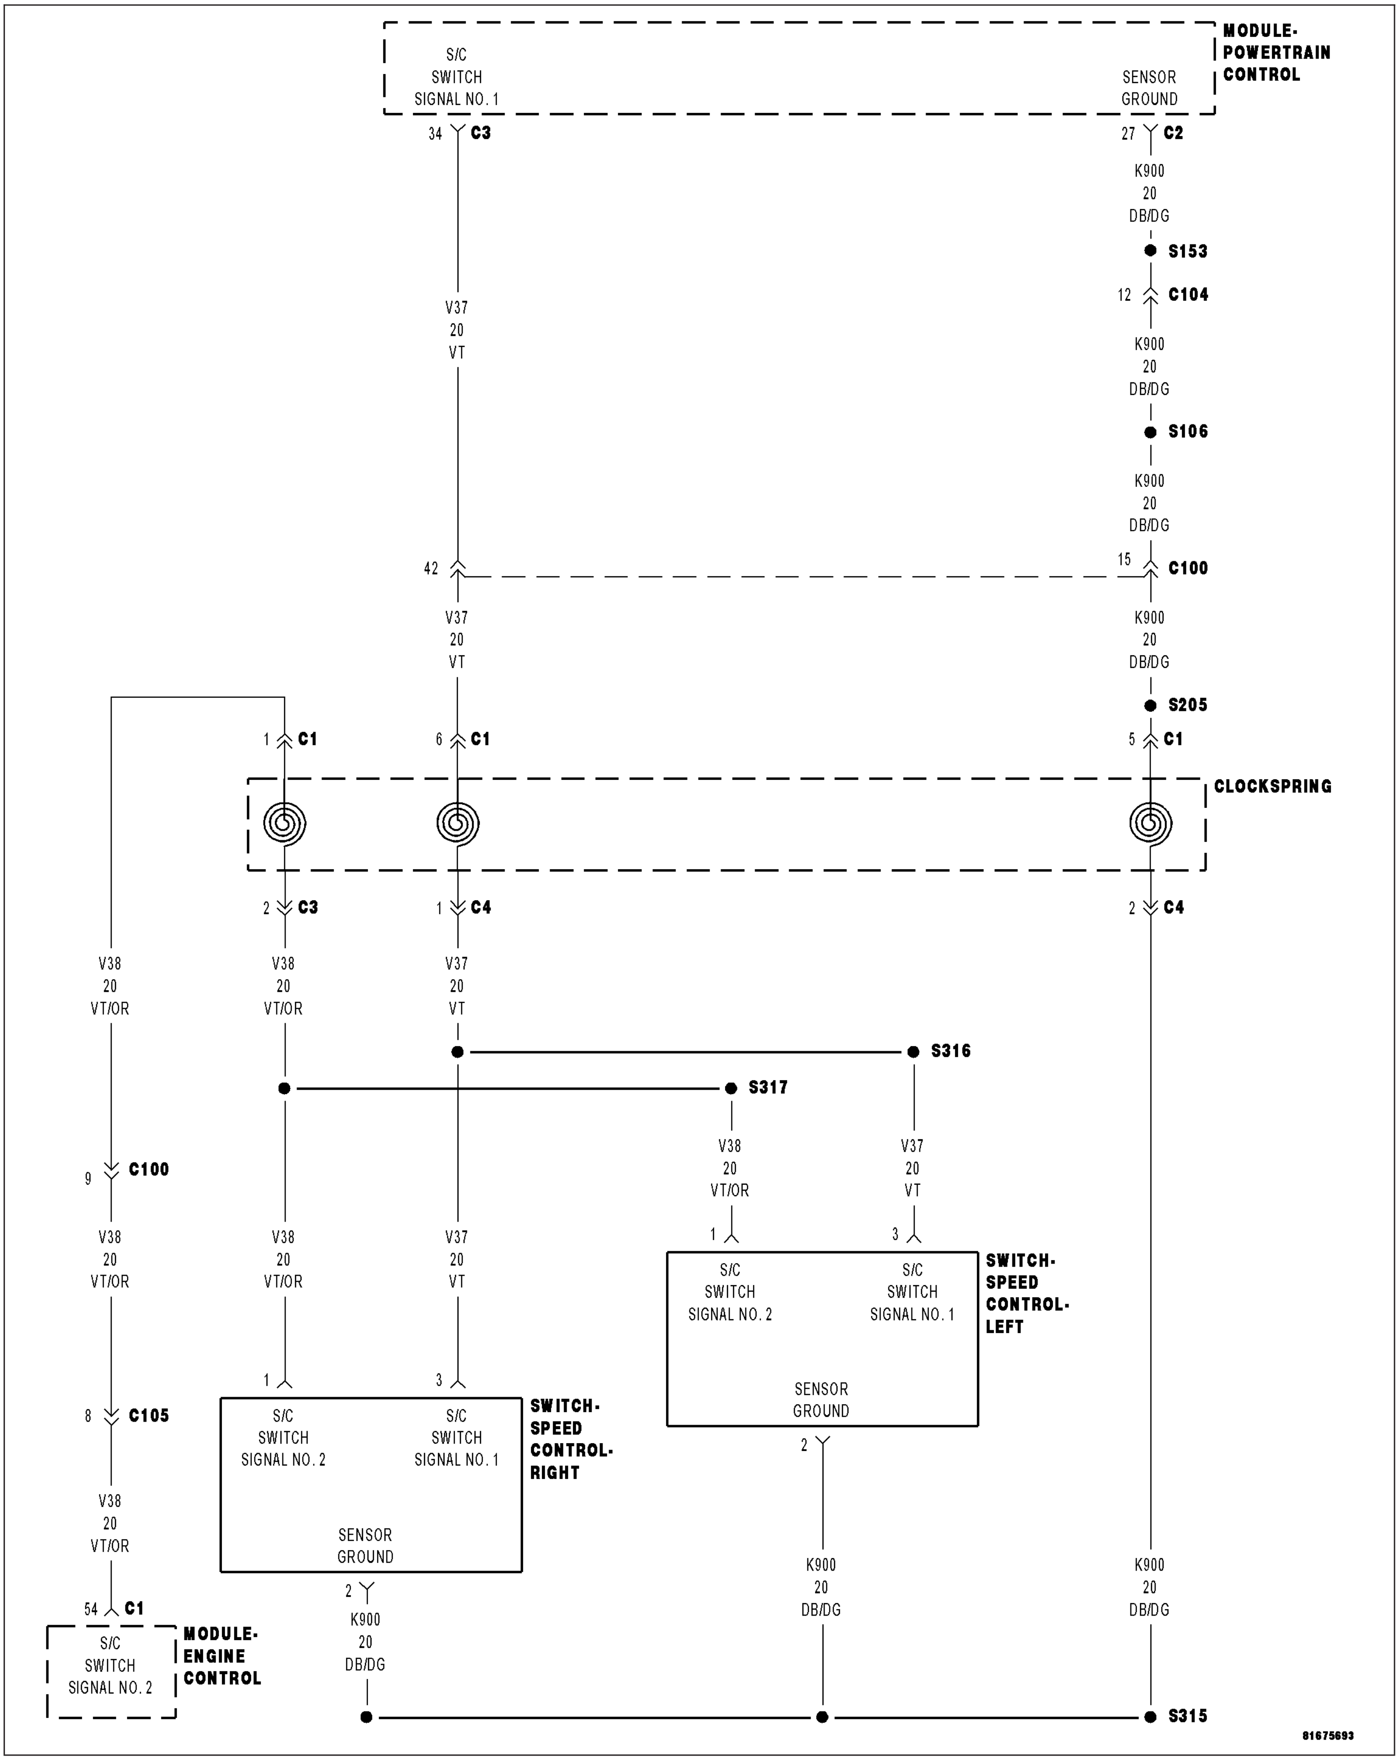
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0581-SPEED CONTROL SWITCH 1 CIRCUIT HIGH



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the ignition key on. Battery voltage above 10 volts.
- **Set Condition:**
  The PCM detects an open or short to voltage in the Speed Control Switch Signal circuit for more than 18.4 seconds. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (V37) S/C SWITCH NO.1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (V37) S/C SWITCH NO.1 SIGNAL CIRCUIT OPEN BETWEEN PCM AND CLOCKSPRING |
| (K900) SENSOR GROUND CIRCUIT OPEN BETWEEN PCM AND CLOCKSPRING |
| (K900) SENSOR GROUND CIRCUIT OPEN BETWEEN CLOCKSPRING AND S/C SWITCH |
| (V37) S/C SWITCH NO.1 SIGNAL CIRCUIT OPEN BETWEEN CLOCKSPRING AND S/C SWITCH |
| CLOCKSPRING |
| SPEED CONTROL SWITCH |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. SPEED CONTROL SWITCH VOLTAGE HIGH

**NOTE: Do not press any of the Speed Control Switch buttons.**
Ignition on, engine not running.
With a scan tool, read the Speed Control voltage.

**Is the Speed Control voltage above 4.8 volts?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. SPEED CONTROL SWITCHES

Turn the ignition off.
Remove the Speed Control Switches from the steering wheel.
Measure the resistance across each Speed Control Switch.
Monitor the ohmmeter while pressing each function button on each switch.
Resume/Accel - 15.4 kohms
Cancel - 1.24 kohms
Coast - 2.94 kohms
On/Off - 0.47 kohms
Set - 5.49 kohms

**Does the function on the Speed Control Switches have the correct resistance value?**

**Yes** >> Go To 3

**No** >> Replace the Speed Control Switch that had the incorrect resistance value.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. CLOCKSPRING

Disconnect the upper and lower 6-way clockspring harness connector per Service Information.

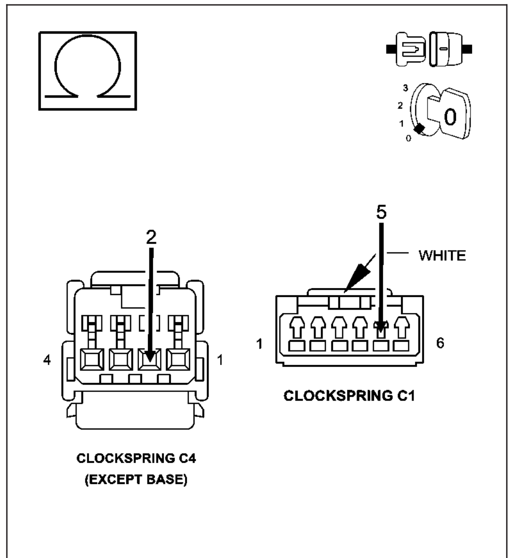
Measure the resistance of the (K900) Sensor ground circuit between the C4 and C1 clockspring connectors.

Measure the resistance of the (V37) S/C Switch No.1 Signal circuit between the C4 and C1 clockspring connectors.

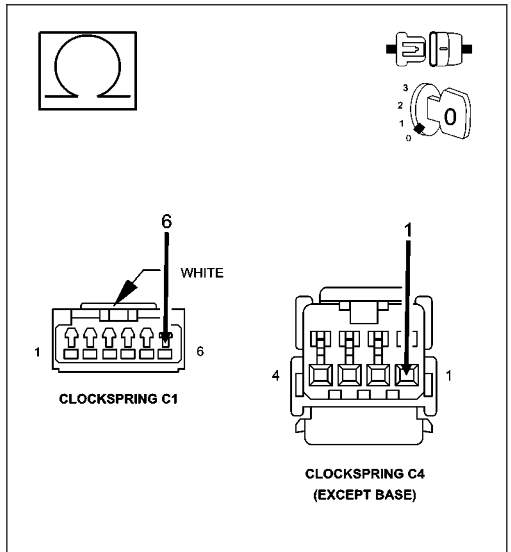
**Was the resistance above 5.0 ohms for either circuit?**

**Yes** >> Replace the clockspring.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

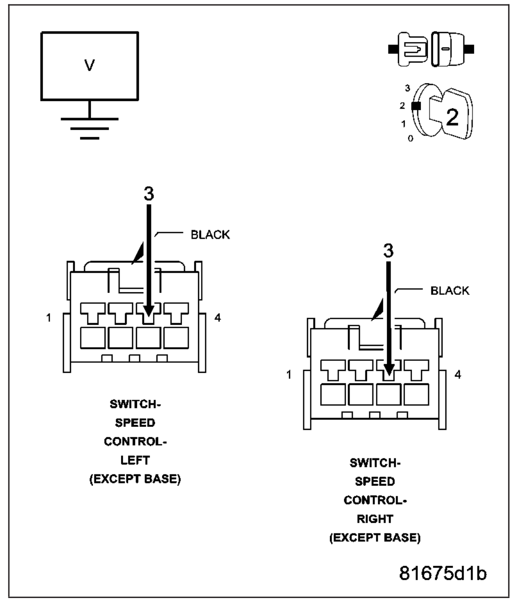


81675cce



81675ceb

## 4. (V37) S/C SWITCH NO.1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE



Connect the Clockspring harness connectors per Service Information.

Disconnect the C3 PCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (V37) S/C Switch No.1 Signal circuit in the Speed Control harness connector.

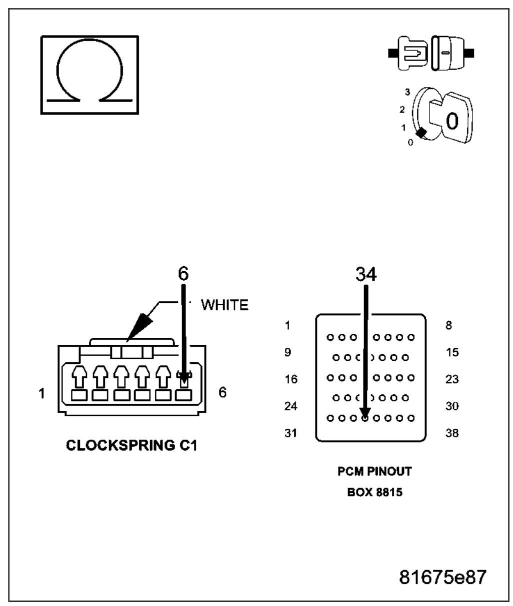
**Is the voltage above 5.3 volts?**

**Yes** >> Repair the short to battery voltage in the (V37) S/C Switch No.1 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. (V37) S/C SWITCH NO.1 SIGNAL CIRCUIT OPEN BETWEEN PCM AND CLOCKSPRING



Turn the ignition off.

Disconnect the C4 and C1 Clockspring harness connectors per Service Information.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (V37) S/C Switch No.1 Signal circuit from the C1 Clockspring harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

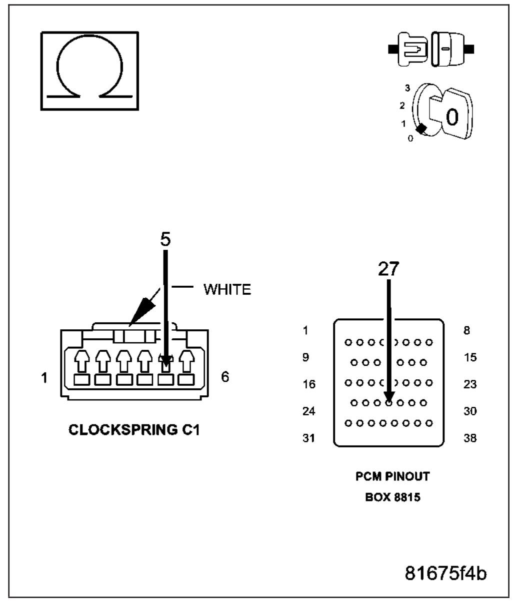
**No** >> Repair the open in the (V37) S/C Switch No.1 Signal circuit between the PCM and Clockspring.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. (K900) SENSOR GROUND CIRCUIT OPEN BETWEEN PCM AND CLOCKSPRING

**Disconnect the C2 PCM harness connector.**

Measure the resistance of the (K900) Sensor ground circuit from the C1 Clockspring harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

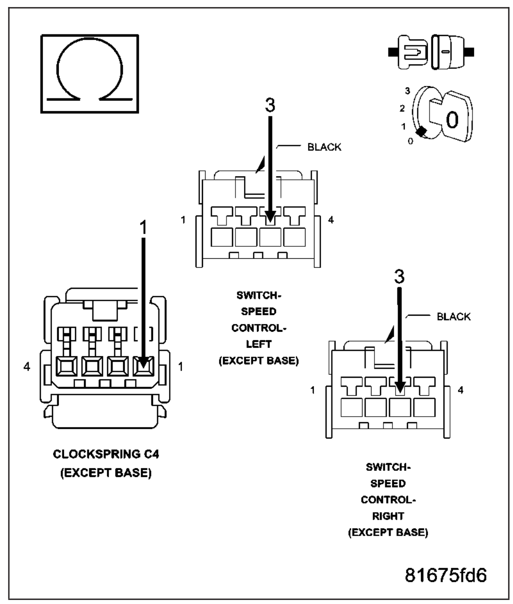
**Yes** >> Go To 7

**No** >> Repair the open (K900) Sensor ground circuit between the PCM and Clockspring.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. (V37) S/C SWITCH NO.1 SIGNAL CIRCUIT OPEN BETWEEN CLOCKSPRING AND S/C SWITCH

Measure the resistance of the (V37) S/C Switch No.1 Signal circuit from the C4 Clockspring harness connector to the left and right S/C Switch harness connectors.



**Is the resistance below 5.0 ohms from each switch?**

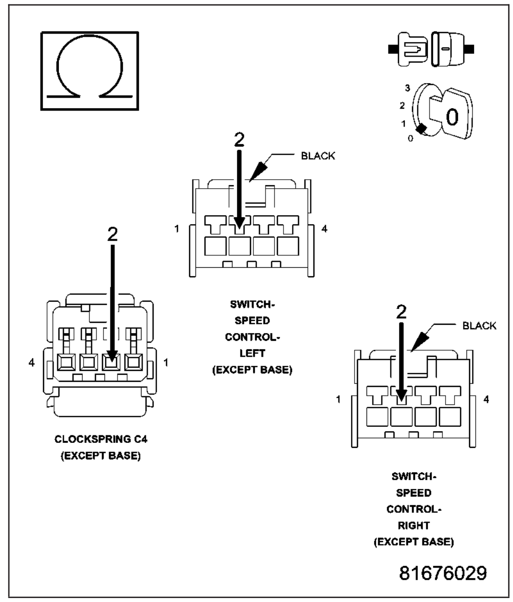
**Yes** >> Go To 8

**No** >> Repair the open in the (V37) S/C Switch No.1 Signal circuit, Clockspring to S/C Switch.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 8. (K900) SENSOR GROUND CIRCUIT OPEN BETWEEN CLOCKSPRING AND S/C SWITCH

Measure the resistance of the (K900) Sensor ground circuit from the left and right S/C Switch harness connectors to the C4 Clockspring harness connector.



**Is the resistance below 5.0 ohms from each switch?**

**Yes** >> Go To 9

**No** >> Repair the open in the (K900) Sensor ground circuit between the Clockspring and S/C Switch.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 9. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

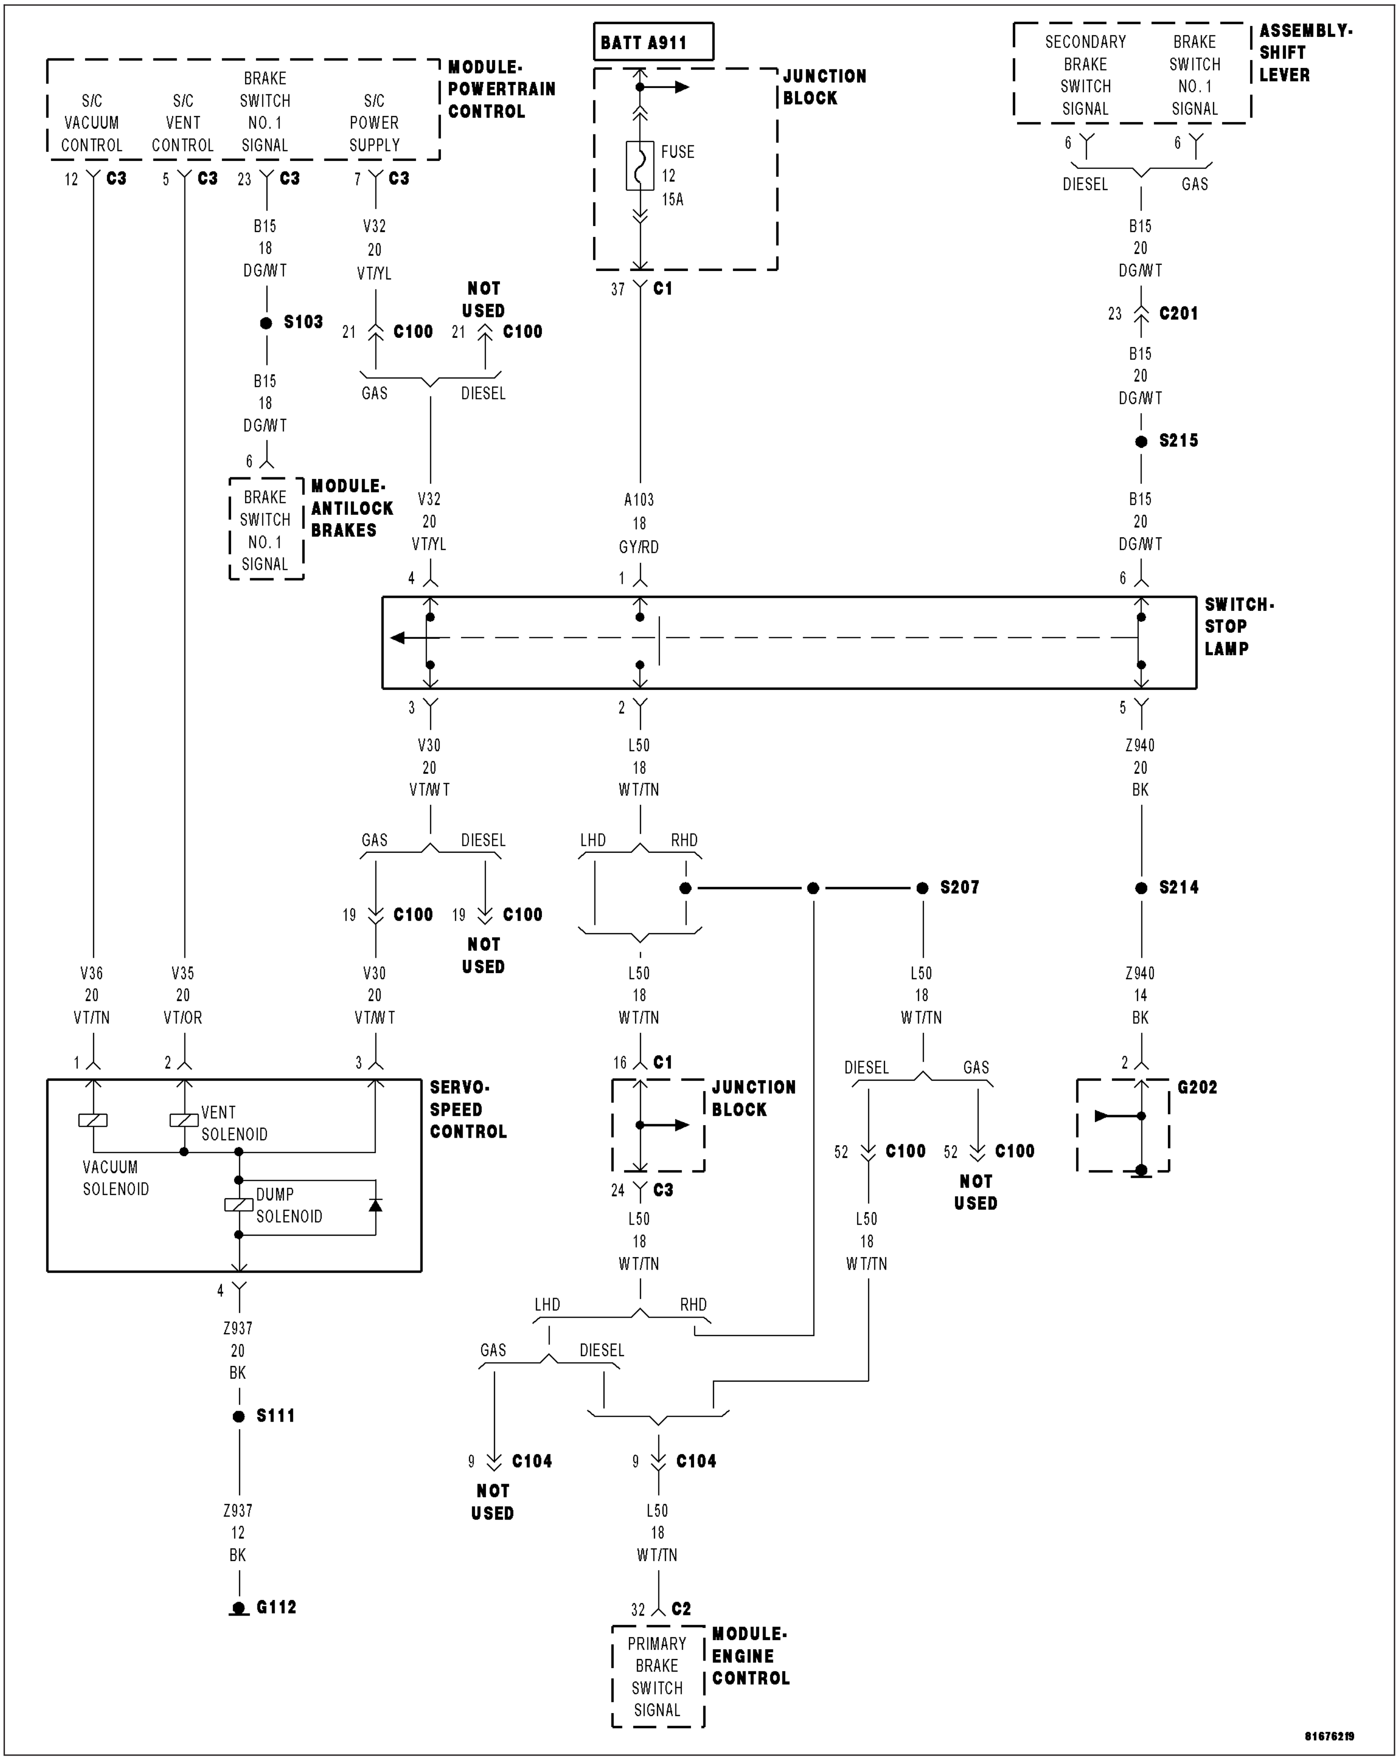
**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0582-SPEED CONTROL VACUUM CONTROL CIRCUIT



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on and battery voltage greater than 10 volts. Cruise is learned and powered and the brake is not pressed.
- **Set Condition:**
  An open or shorted condition detected in the Speed control vac solenoid control circuit for more than 0.325 of a second. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (V36) S/C VACUUM SOL CONTROL CIRCUIT SHORTED TO GROUND |
| (V36) S/C VACUUM SOL CONTROL CIRCUIT OPEN |
| SPEED CONTROL VACUUM SOLENOID |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. SPEED CONTROL VACUUM CONTROL

Ignition on, engine not running.

**NOTE: If this code is setting on a vehicle that doesn't have a S/C Servo, flash the correct code into the PCM or the wrong PCM may have previously been installed.**

With the scan tool, actuate the Speed Control Vacuum Solenoid and note operation.

**Does the Speed Control Vacuum Solenoid actuate properly?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 2

### 2. SPEED CONTROL VACUUM SOLENOID

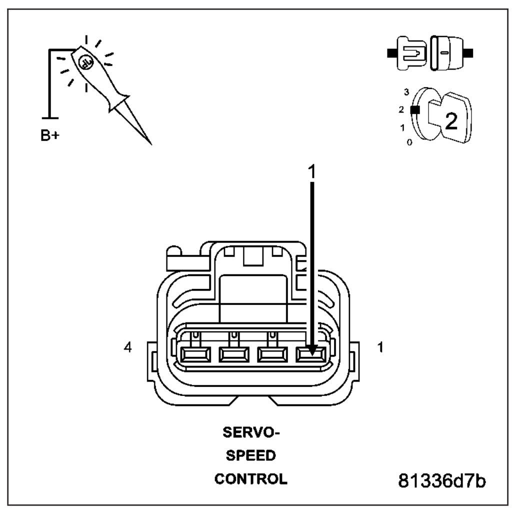
Turn the ignition off.

Disconnect the S/C Servo harness connector.

Ignition on, engine not running.

With the scan tool, actuate the S/C Vacuum Solenoid.

Using a 12-volt test light connected to ground, probe the (V36) S/C Vacuum control circuit.



**Does the test light illuminate brightly and flash?**

**Yes** >> Replace the Speed Control Servo.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

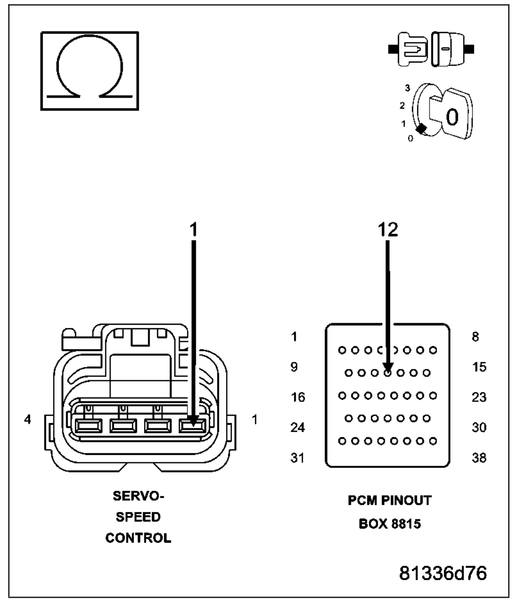
## 3. (V36) VACUUM SOLENOID CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the C3 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (V36) S/C Vacuum Control in the Speed Control Servo harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

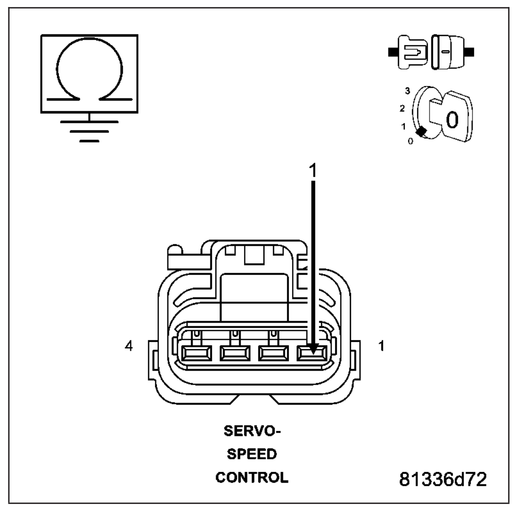
**Yes** >> Go To 4

**No** >> Repair the excessive resistance in the (V36) S/C Vacuum Sol Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. (V36) S/C VACUUM SOL CONTROL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (V36) S/C Vacuum Control circuit in the Speed Control Servo harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (V36) S/C Vacuum Sol Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

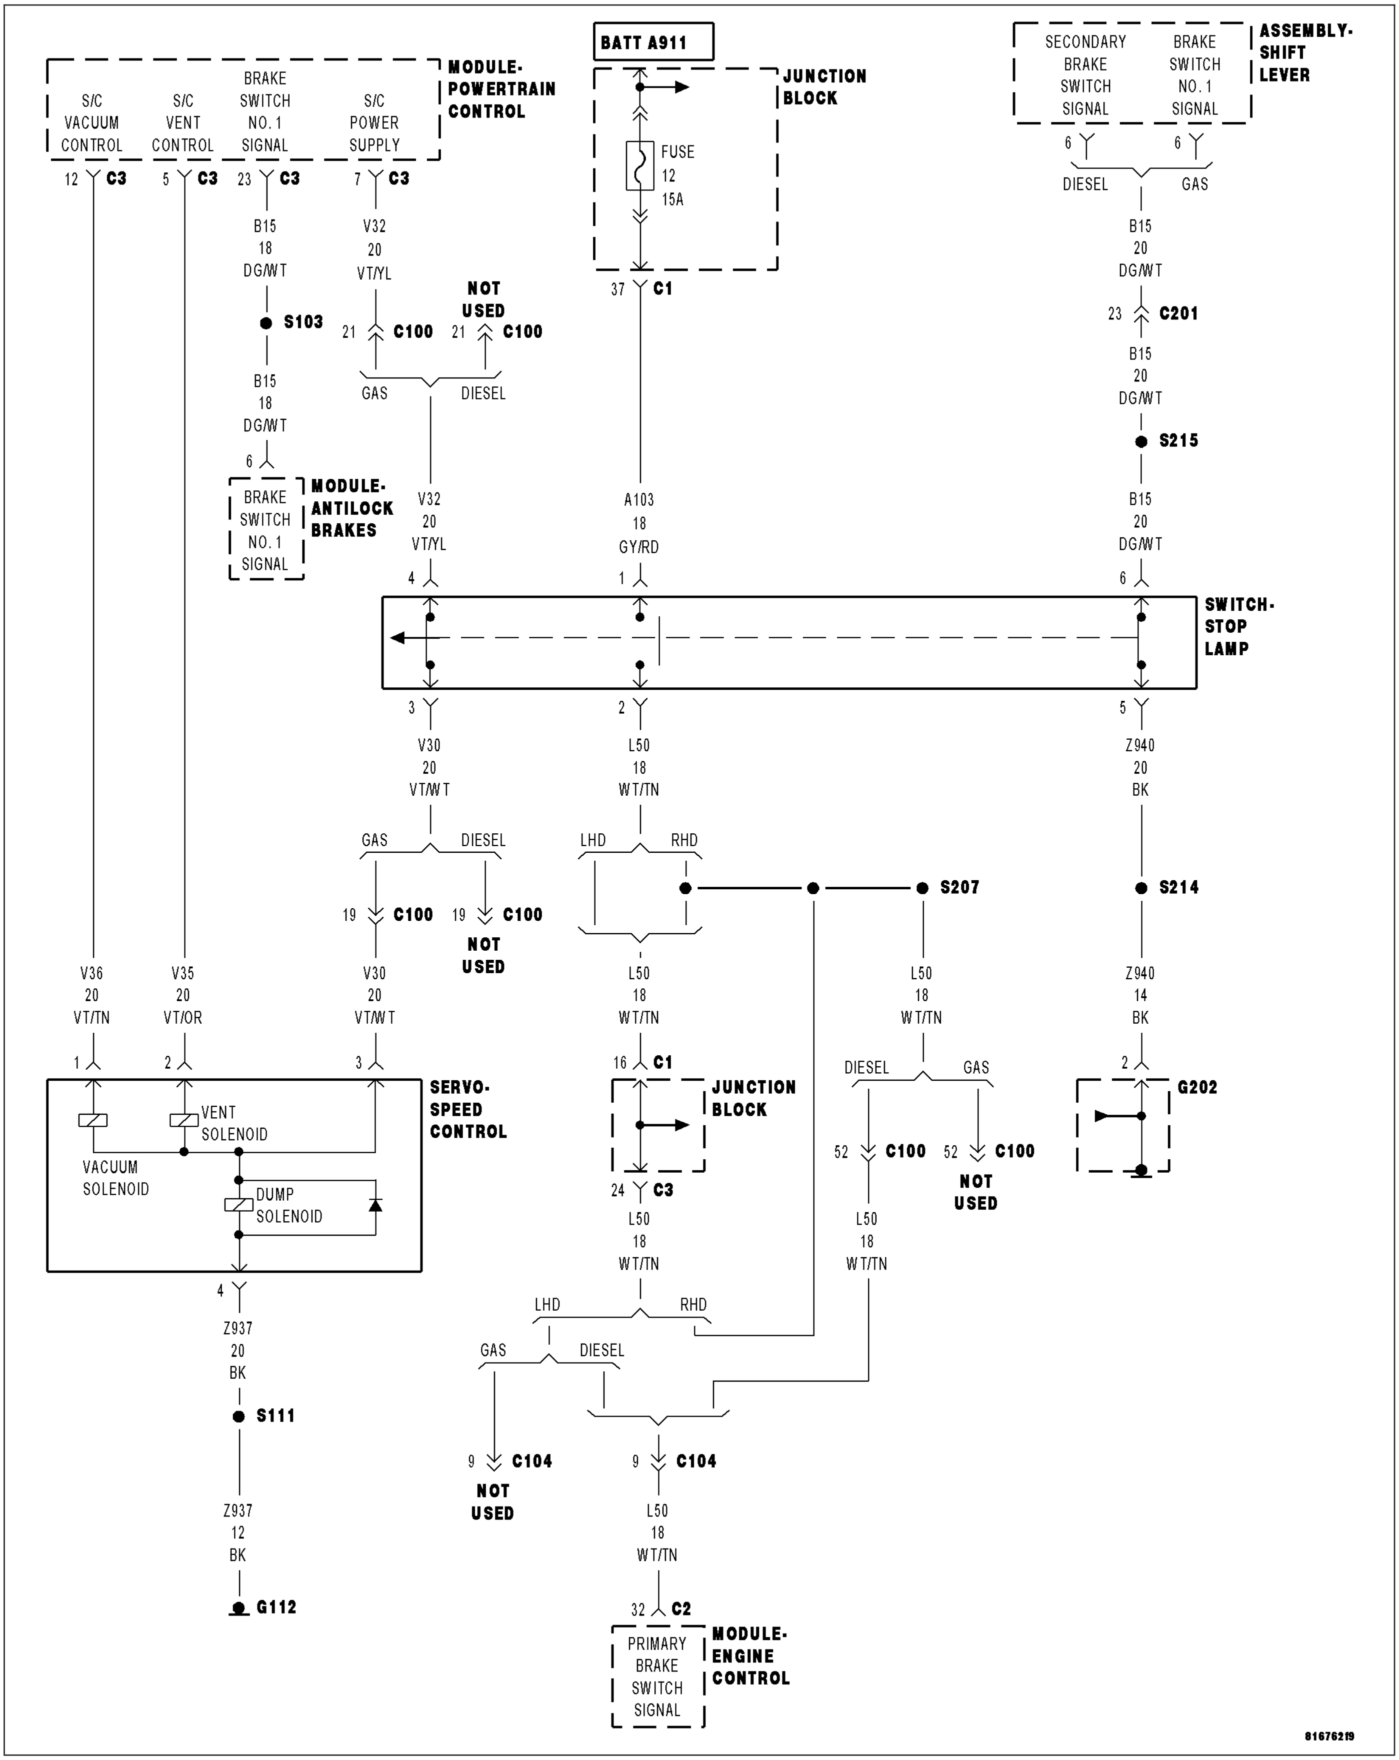
**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0586-SPEED CONTROL VENT CONTROL CIRCUIT



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine running, the speed control switched on and the brake is not pressed..
- **Set Condition:**
  The PCM detects an open or short to voltage in the Speed Control Vent Control circuit for more than 0.325 of a second. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (V35) S/C VENT SOL CONTROL CIRCUIT OPEN |
| (V35) S/C VENT SOL CONTROL CIRCUIT SHORTED TO GROUND |
| SPEED CONTROL VENT SOLENOID |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING) .**

## Diagnostic Test

### 1. SPEED CONTROL VENT CONTROL

**NOTE: If this code is setting on a vehicle that doesn't have a S/C Servo, flash the correct code into the PCM or the wrong PCM may have previously been installed.**

Ignition on, engine not running.

With the scan tool, actuate the Speed Control Vent Solenoid and note operation.

**Does the Speed Control Vent Solenoid actuate properly?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 2

### 2. SPEED CONTROL VENT SOLENOID

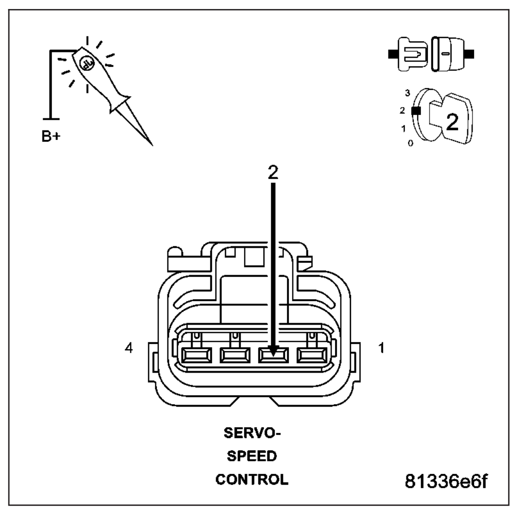
Turn the ignition off.

Disconnect the Speed Control Servo harness connector.

Ignition on, engine not running.

With the scan tool, actuate the Speed Control Vent Solenoid.

Using a 12-volt test light connected to ground, probe the (V35) S/C Vent Solenoid Control circuit in the Speed Control Servo harness connector.



**Does the test light illuminate brightly and flash?**

**Yes** >> Replace the Speed Control Servo.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

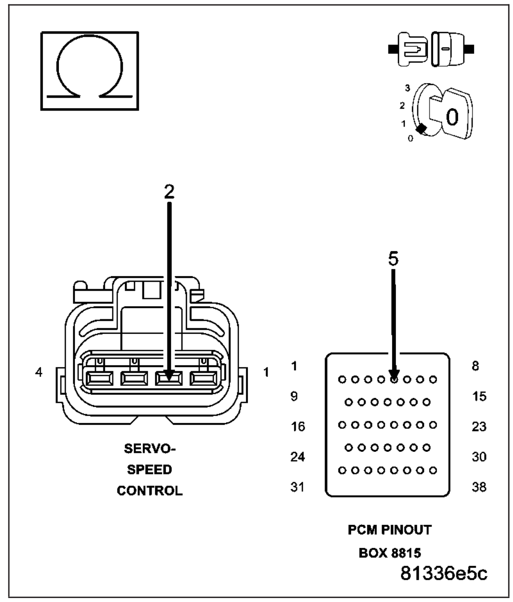
## 3. (V35) VENT CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the C3 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (V35) S/C Vent Control circuit from the Speed Control Servo harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

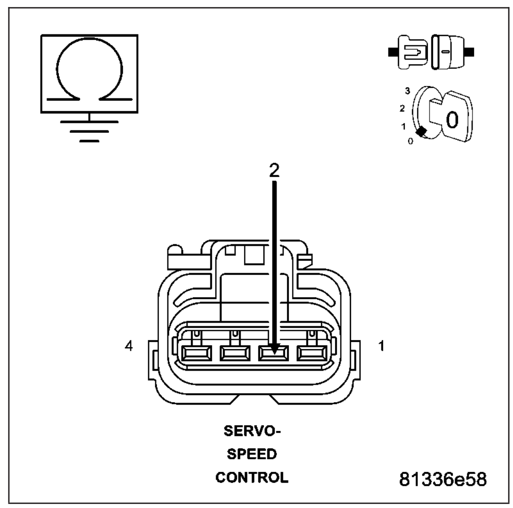
**Yes** >> Go To 4

**No** >> Repair the excessive resistance in the (V35) S/C Vent Sol Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. (V35) VENT SOL CONTROL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (V35) S/C Vent Solenoid Control circuit in the Speed Control Servo harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (V35) S/C Vent Sol Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

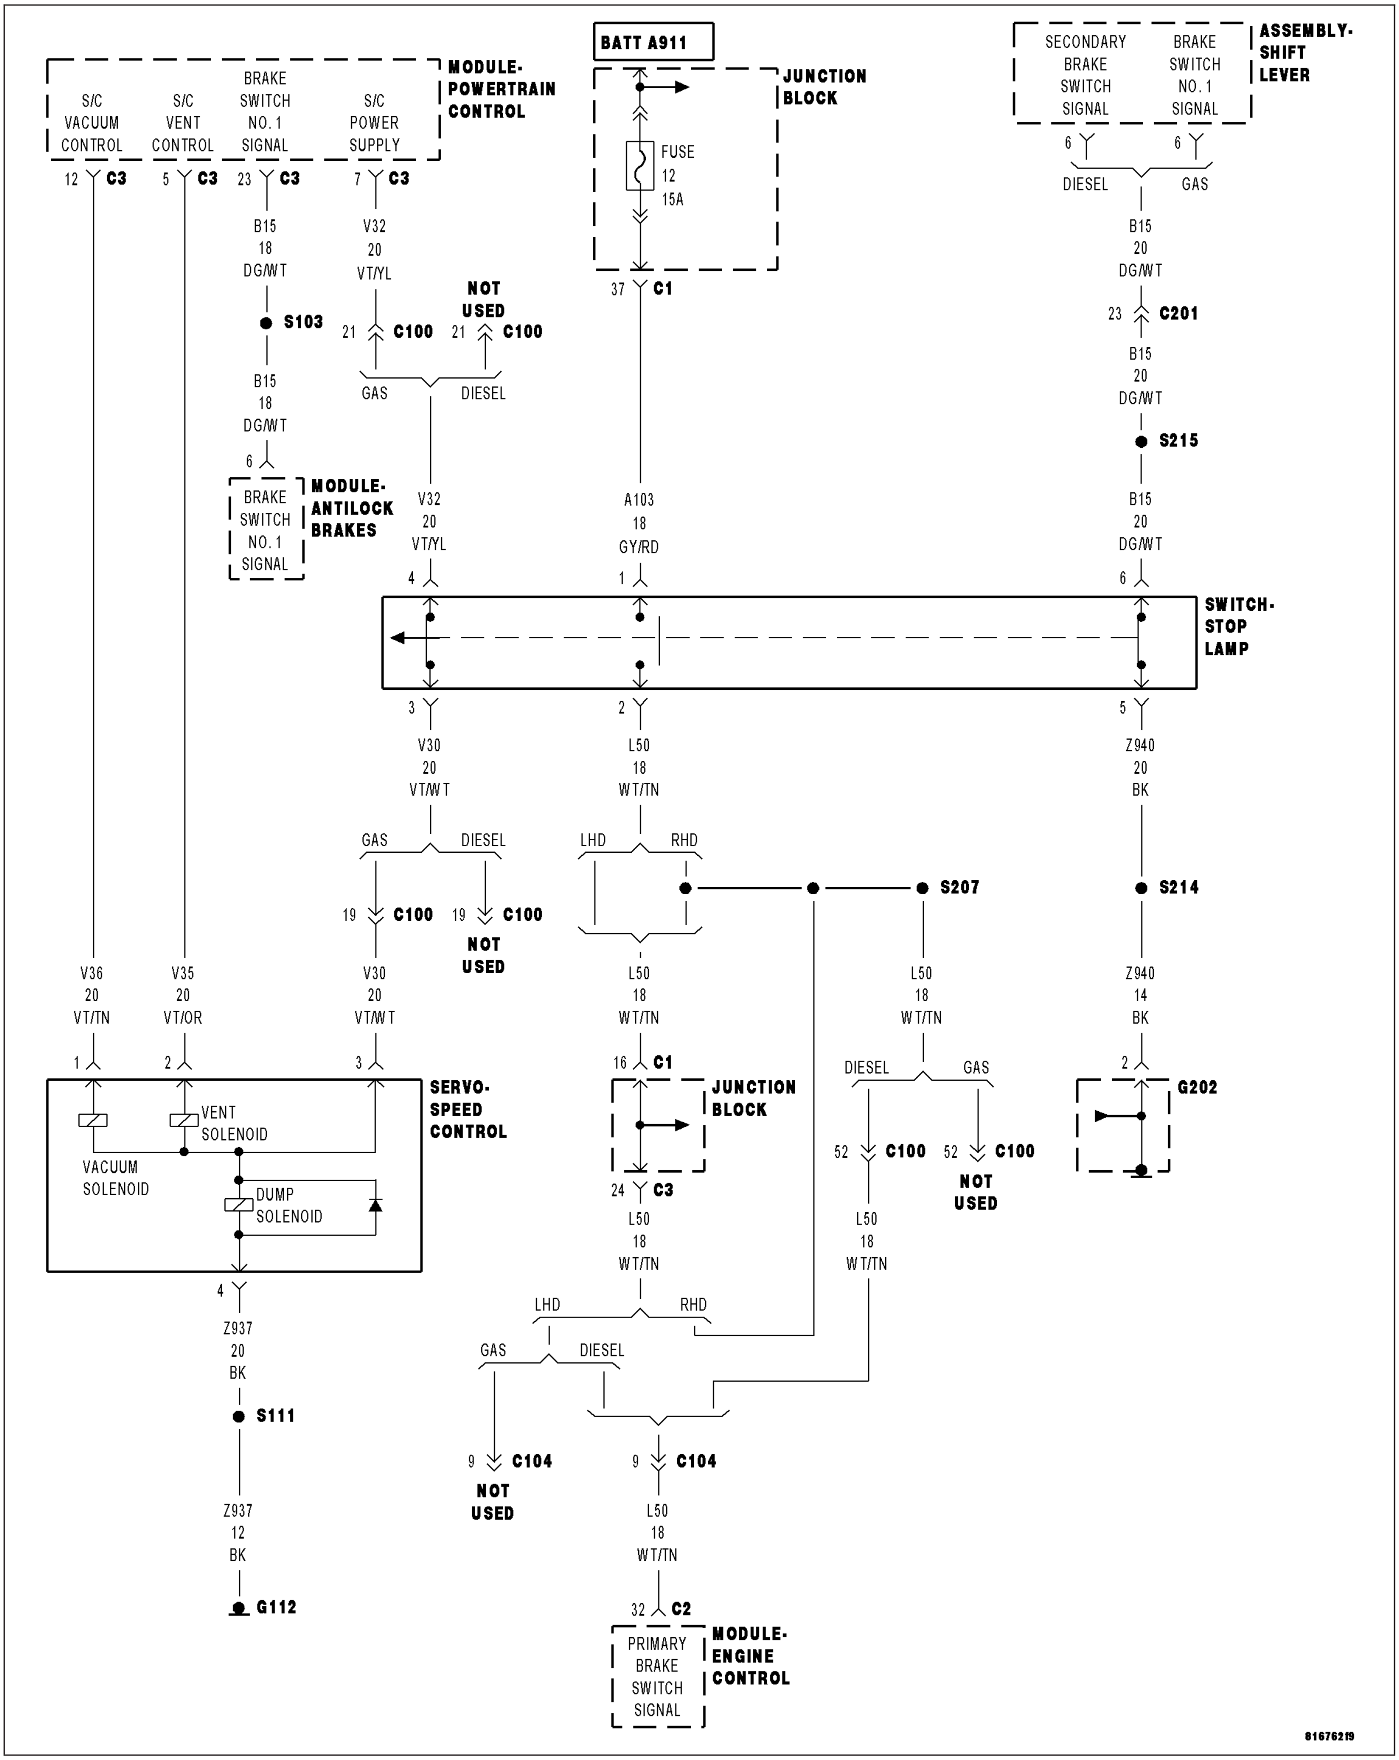
**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

# P0594-SPEED CONTROL SERVO POWER RELAY CIRCUIT



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the ignition key on. The speed control switched on and the brake pedal is not pressed.
- **Set Condition:**
  The speed control power supply circuit is either open or shorted to ground for more than 2.6 seconds. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (V32) S/C SUPPLY CIRCUIT OPEN |
| (V32) S/C SUPPLY CIRCUIT SHORTED TO GROUND |
| (V30) S/C BRAKE SWITCH OUTPUT CIRCUIT OPEN |
| (V30) S/C BRAKE SWITCH OUTPUT CIRCUIT SHORTED TO GROUND |
| STOP LAMP SWITCH |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: If this code is setting on a vehicle that doesn't have a S/C Servo, flash the correct code into the PCM or the wrong PCM may have previously been installed.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (V32) S/C SUPPLY CIRCUIT

Turn the ignition off.

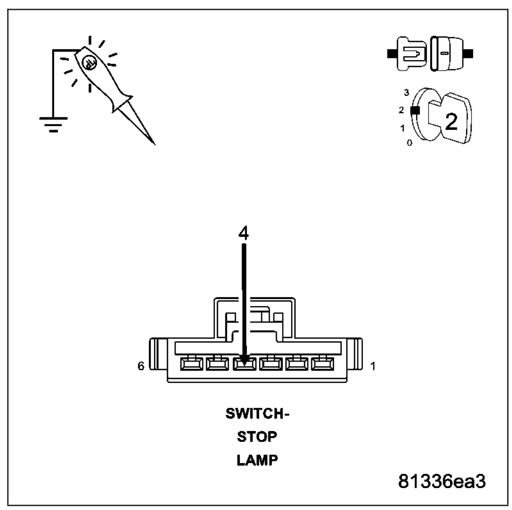
Disconnect the Stop Lamp Switch harness connector.

Using a 12-volt test light connected to ground, probe the (V32) S/C Supply circuit in the Switch harness connector while holding the Cruise Switch in the ON position.

**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Go To 7



## 3. STOP LAMP SWITCH

Disconnect and remove the Stop Lamp Switch.

Measure the resistance across the (V32) S/C Supply circuit terminal and the (V30) S/C Brake Switch Output circuit terminal in the Stop Lamp Switch.

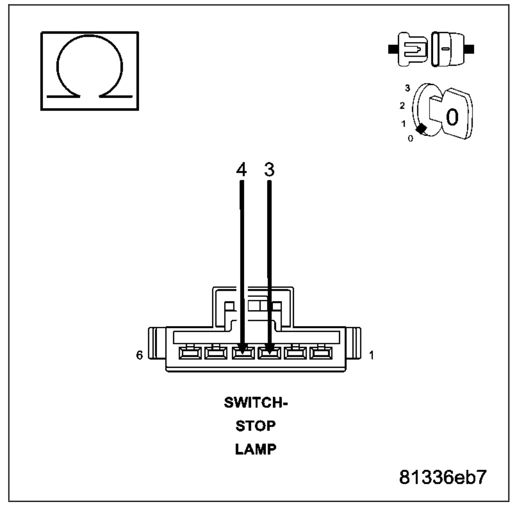
Push the Plunger of the Switch in and let it out.

**Does the resistance change from below 5.0 ohms to an open circuit?**

**Yes** >> Go To 4

**No** >> Replace the Stop Lamp Switch.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)



## 4. (V30) S/C BRAKE SWITCH OUTPUT

Turn the ignition off.

Connect the Stop Lamp Switch harness connector and install the Switch.

Disconnect the Speed Control Servo harness connector.

Ignition on, engine not running.

**NOTE: It is necessary to PRESS and HOLD the Speed Control Switch in the ON position while checking for voltage.**

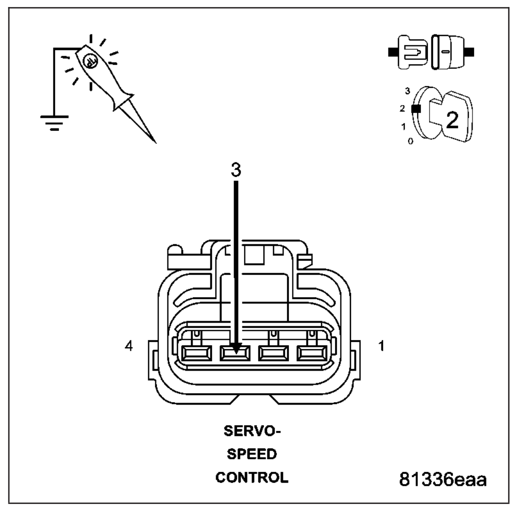
Using a 12-volt test light connected to ground, probe the (V30) S/C Brake Switch Output circuit in the Servo Harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Replace the S/C Servo.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5



## 5. (V30) S/C BRAKE SWITCH OUTPUT CIRCUIT OPEN

Turn the ignition off.

Disconnect the Brake Lamp Switch harness connector.

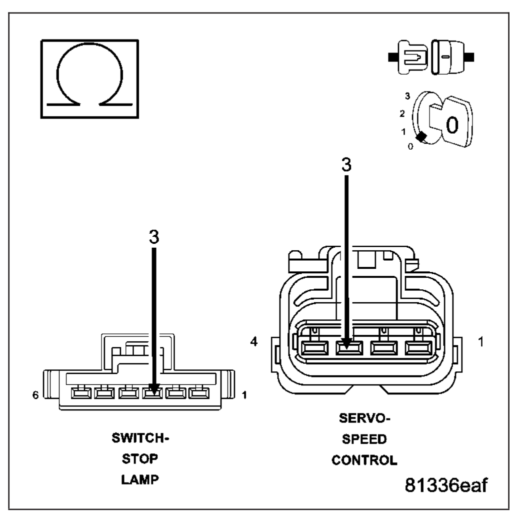
Measure the resistance of the (V30) S/C Brake Switch Output circuit from the Stop Lamp Switch harness connector to the S/C Servo harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the excessive resistance in the (V30) S/C Brake Switch Output circuit.

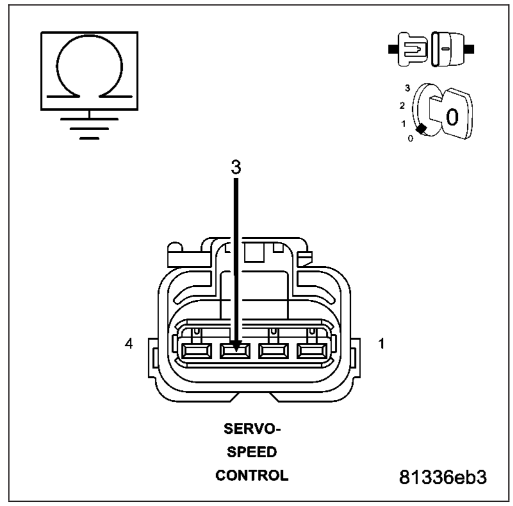
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6



## 6. (V30) S/C BRAKE SWITCH OUTPUT CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (V30) S/C Brake Switch Output circuit in the Speed Control Servo harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (V30) S/C Brake Switch Output circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 9

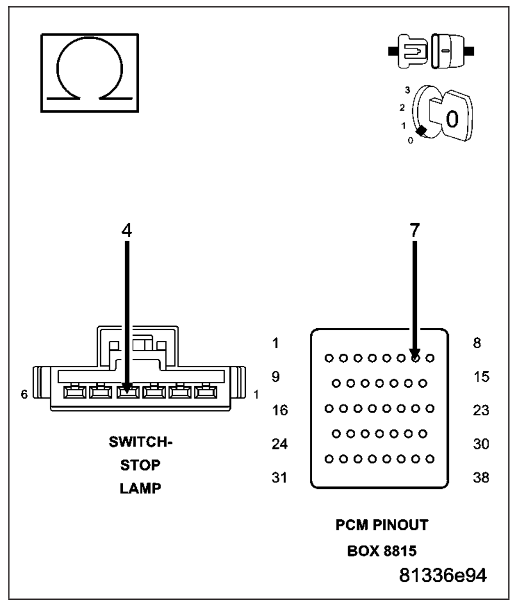
## 7. (V32) S/C SUPPLY CIRCUIT OPEN

Turn the ignition off.

Disconnect the C3 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (V32) S/C Supply circuit from the Stop Lamp Switch harness connector to the appropriate terminal of special tool #8815.



**Is the resistance above 5.0 ohms?**

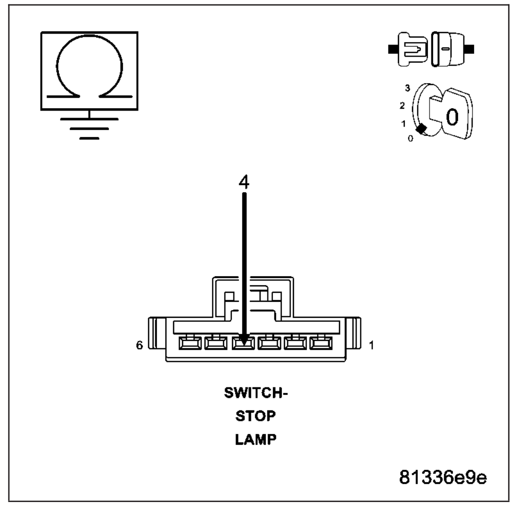
**Yes** >> Repair the open in the (V32) S/C Supply circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

## 8. (V32) S/C SUPPLY CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (V32) S/C Supply circuit in the Stop Lamp Switch harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (V32) S/C Supply circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 9

## 9. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0600-SERIAL COMMUNICATION LINK

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  Internal Bus communication failure between processors. One Trip Fault. Three Global Good Trips to Clear.

| Possible Causes |
|---|
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. PCM

**NOTE: Diagnose any CMP or CKP Sensor faults before continuing. Check for intermittent loose CMP or CKP connections.**

**The Powertrain Control Module is reporting internal errors, view repair to continue.**

**Repair**

Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0601-INTERNAL MEMORY CHECKSUM INVALID

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  Internal checksum for software failed, does not match calculated value. One Trip Fault, Three Good Trips to clear.

| Possible Causes |
|---|
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. PCM

**NOTE: Diagnose any CMP or CKP Sensor faults before continuing. Check for intermittent loose CMP or CKP connections.**

**The Powertrain Control Module is reporting internal errors, view repair to continue.**

**Repair**

Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0606-INTERNAL ECM PROCESSOR

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine running.
- **Set Condition:**
  When the PCM recognizes an internal failure to communicate with the ECM or the CMP and CKP Sensor count periods are too short. One trip fault. ETC light is flashing.

| Possible Causes |
|---|
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. PCM

**NOTE: Diagnose any CMP or CKP Sensor faults before continuing. Check for intermittent loose CMP or CKP connections.**

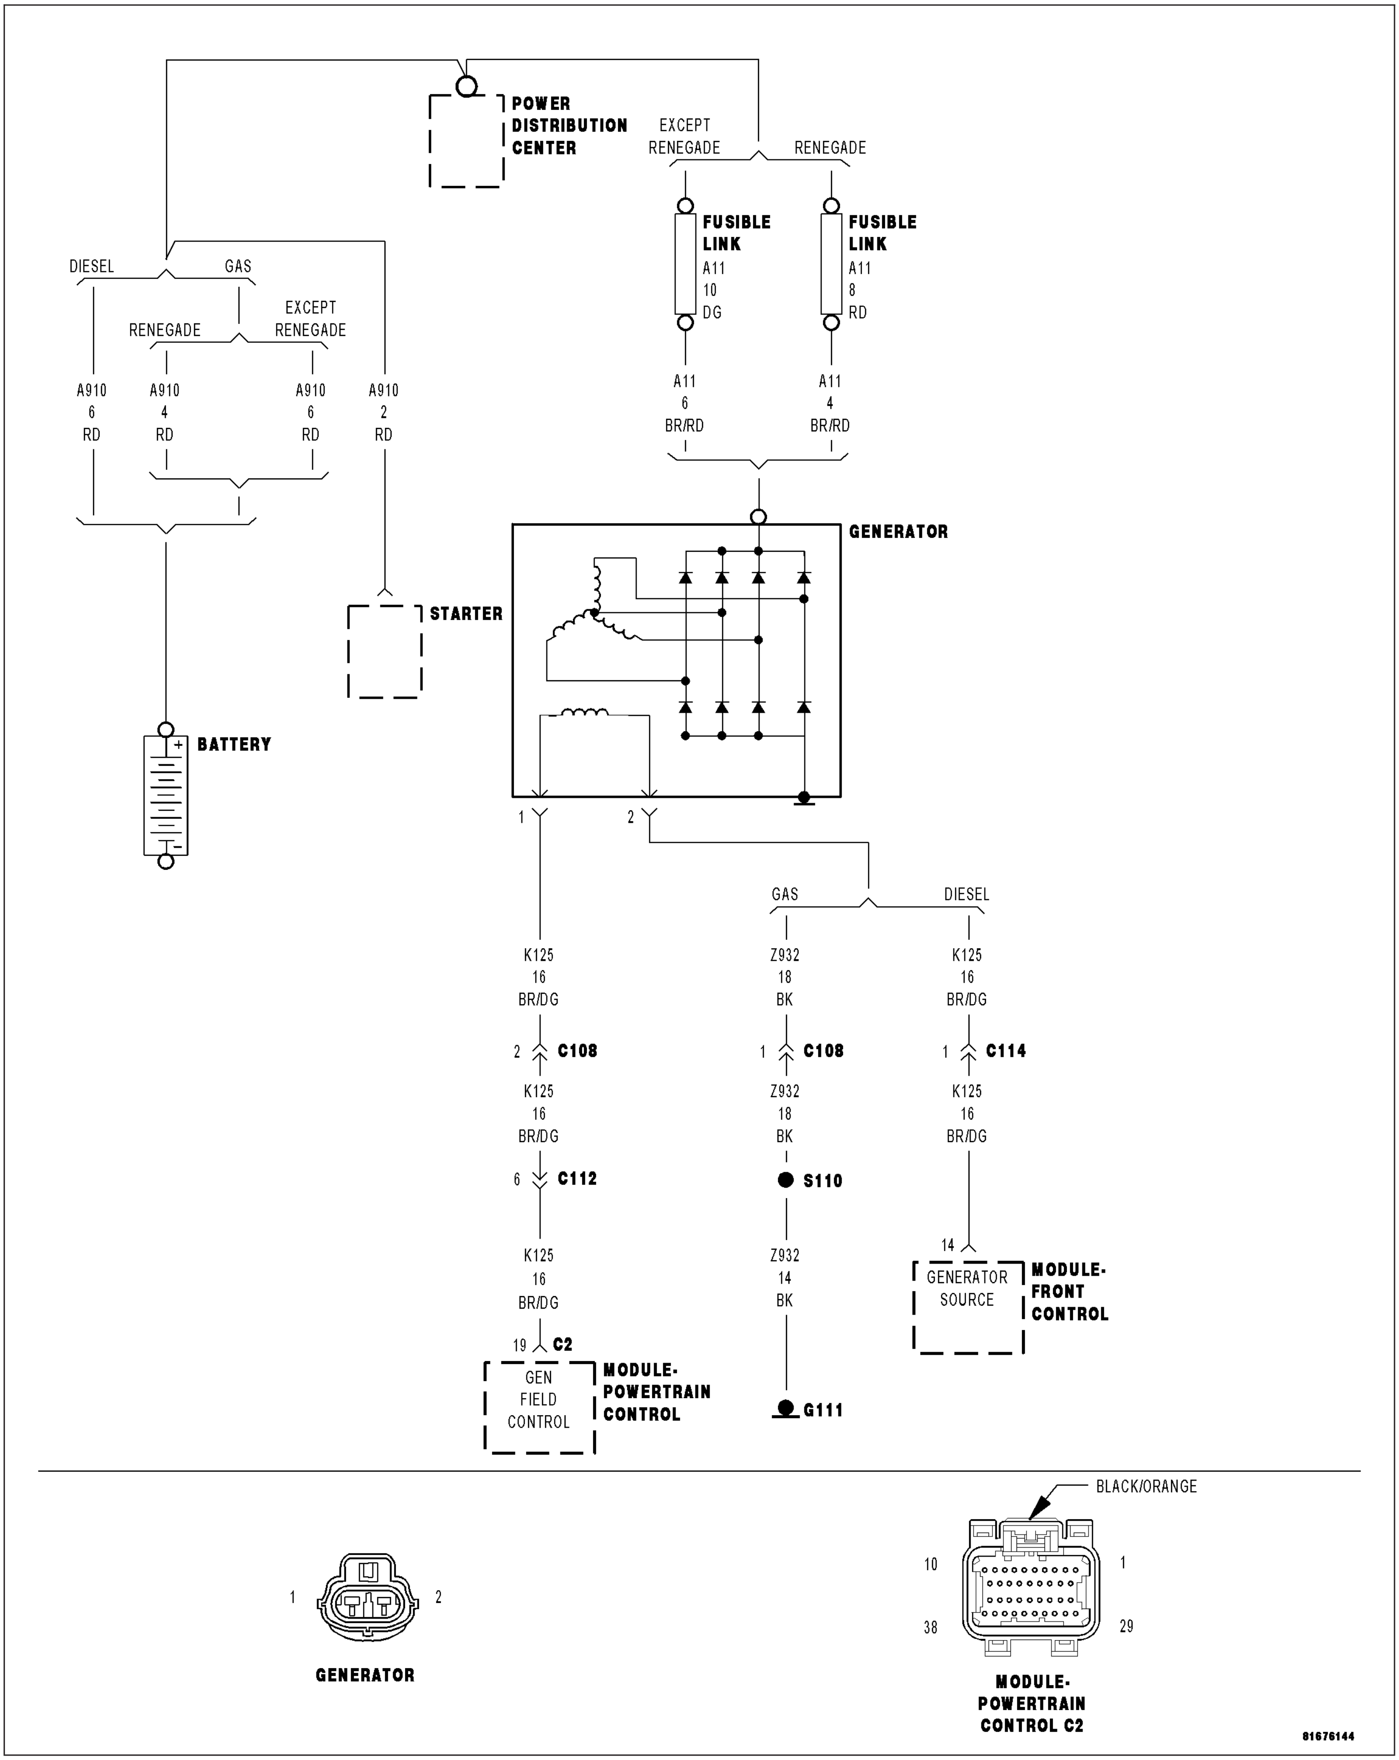
**The Powertrain Control Module is reporting internal errors, view repair to continue.**

**Repair**

Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0622-GENERATOR FIELD CONTROL CIRCUIT



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the ignition on. Engine running.
- **Set Condition:**
  When the PCM tries to regulate the generator field with no result during monitoring for more than 2.7 seconds. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
| --- |
| (K125) GEN FIELD CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K125) GEN FIELD CONTROL CIRCUIT OPEN |
| (K125) GEN FIELD CONTROL CIRCUIT SHORTED TO GROUND |
| (Z932) GROUND CIRCUIT OPEN |
| GENERATOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. GENERATOR OPERATION

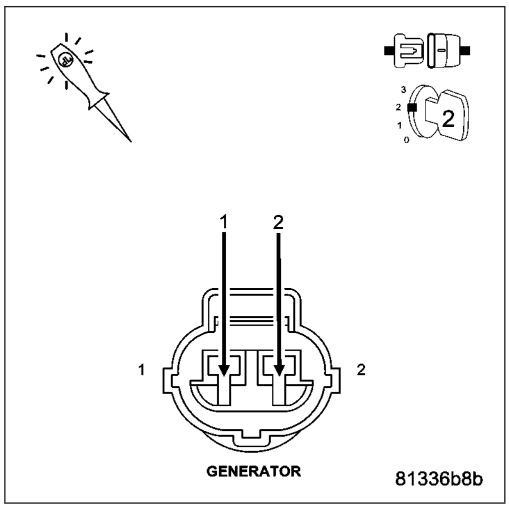
Turn the ignition off.

Disconnect the Generator Field harness connector.

Using a 12-volt test light, jump it across the Generator Field harness connector.

Ignition on, engine not running.

With the scan tool, actuate the Generator Field Control circuit.



**Does the test light illuminate brightly and flash on and off?**

**Yes** >> Replace the Generator.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

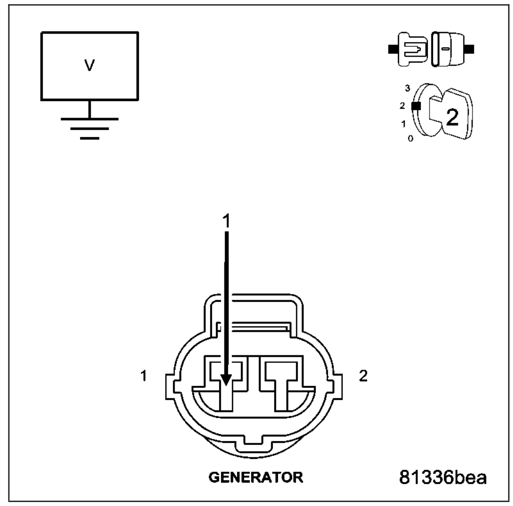
## 3. (K125) GEN FIELD CIRCUIT SHORTED BATTERY VOLTAGE

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (K125) Gen Field Control circuit in the Generator Field harness connector.



**Is the voltage above 1.0 volt?**

**Yes** >> Repair the short to battery voltage in the (K125) Gen Field Control circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

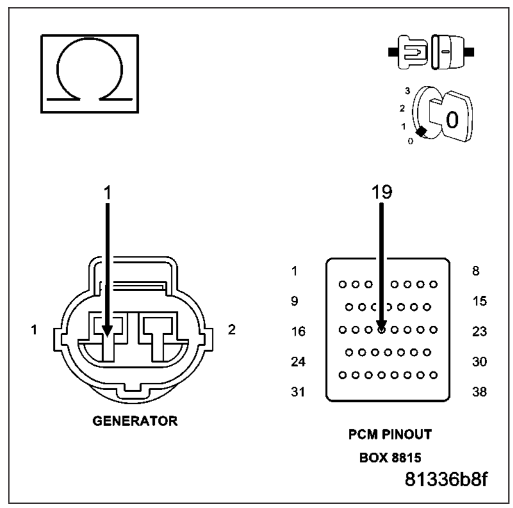
**No** >> Go To 4

## 4. (K125) GEN FIELD CIRCUIT OPEN

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K125) Gen Field Control circuit from the Generator Field harness connector to appropriate terminal of the special tool #8815.



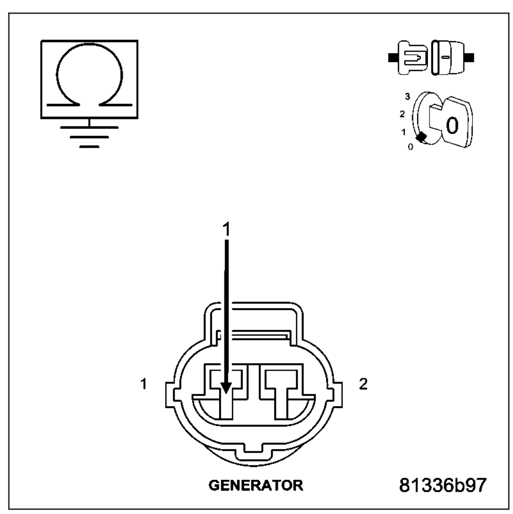
**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K125) Gen Field Control circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. (K125) GEN FIELD CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K125) Gen Field Control circuit in the Generator Field harness connector.



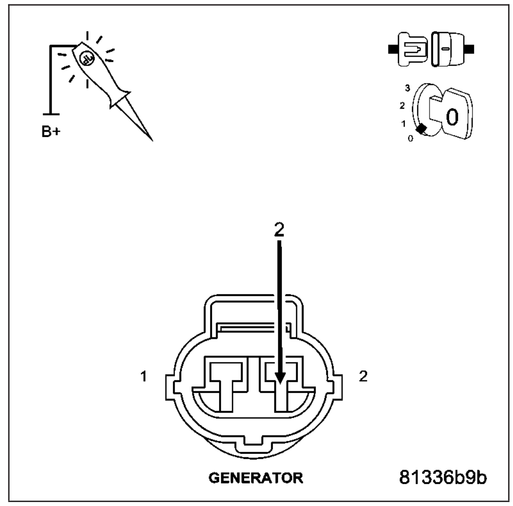
**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K125) Gen Field Control circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. (Z932) GROUND CIRCUIT OPEN

Using a 12-volt test light connected to battery voltage, probe the (Z932) Ground circuit in the Gen Field harness connector.



**Does the test light illuminate brightly?**

**Yes** >> Go To 7

**No** >> Repair the open in the (Z932) Ground circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

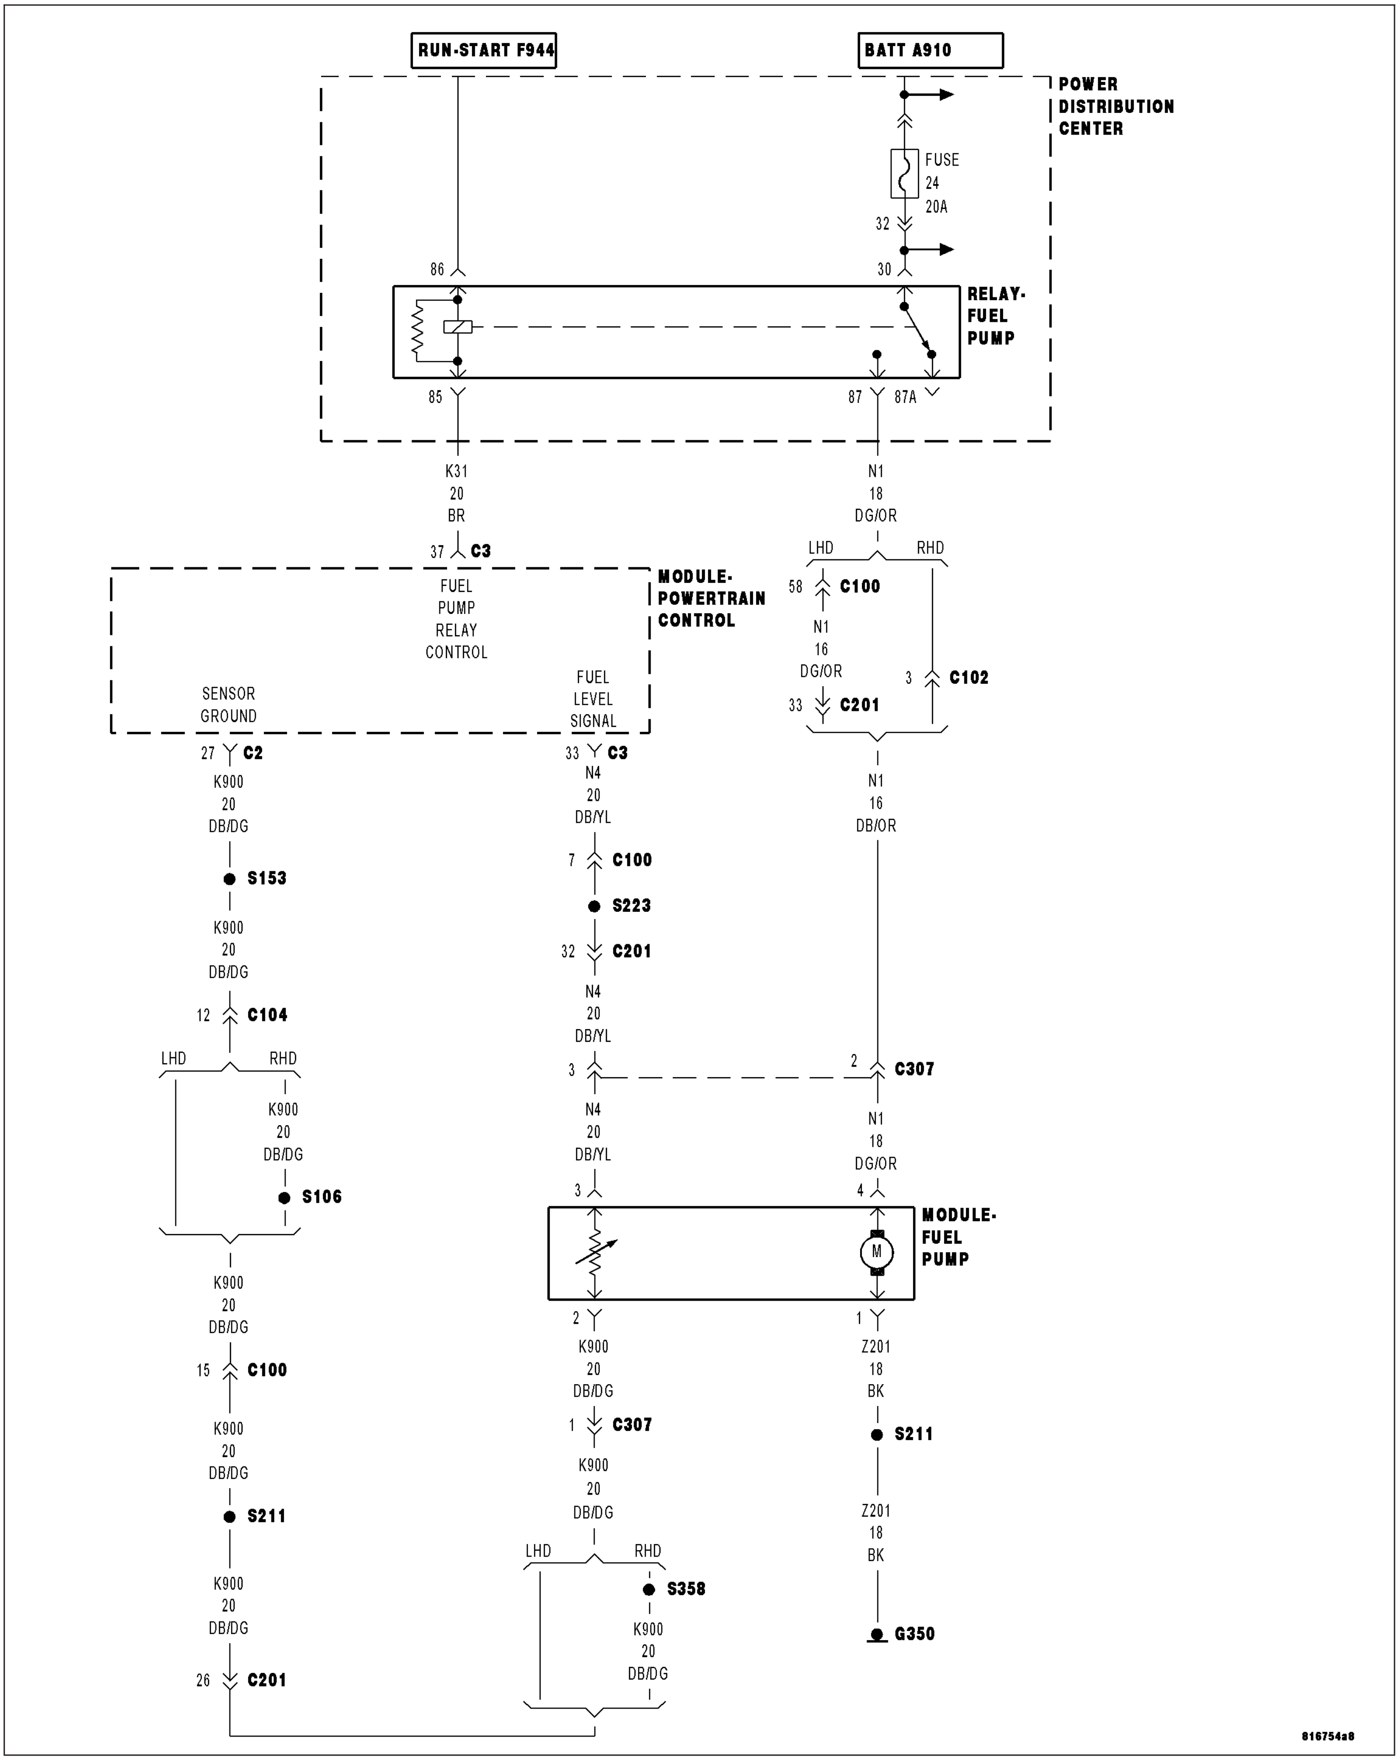
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0627-FUEL PUMP CONTROL CIRCUIT



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the ignition on. Battery voltage greater than 10.4 volts and the ASD sense switch is on.
- **Set Condition:**
  Actual Fuel Pump Relay state is not equal to desired state. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (F1) FUSED IGNITION SWITCH OUTPUT CIRCUIT |
| INTERNAL FUSED B+ CIRCUIT |
| (K31) FUEL PUMP RELAY CONTROL CIRCUIT |
| (K31) FUEL PUMP RELAY CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL PUMP RELAY |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. FUEL PUMP RELAY OPERATION

Ignition on, engine not running.
With a scan tool, actuate the Fuel Pump Relay.

**Is the Fuel Pump Relay operating?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 2

### 2. FUEL PUMP RELAY

Turn the ignition off.
Remove the Fuel Pump Relay from the IPM.
Measure the resistance of the Fuel Pump Relay Coil.

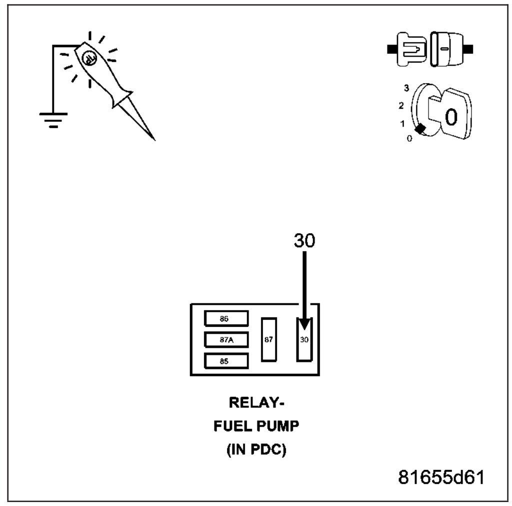
**Is the resistance between 70 to 90 ohms?**

**Yes** >> Go To 3

**No** >> Replace the Fuel Pump Relay.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. FUSED B+ CIRCUIT

Using a 12-volt test light connected to ground, probe the Fused B+ circuit.



**Does the test light illuminate brightly?**

**Yes** >> Go To 4

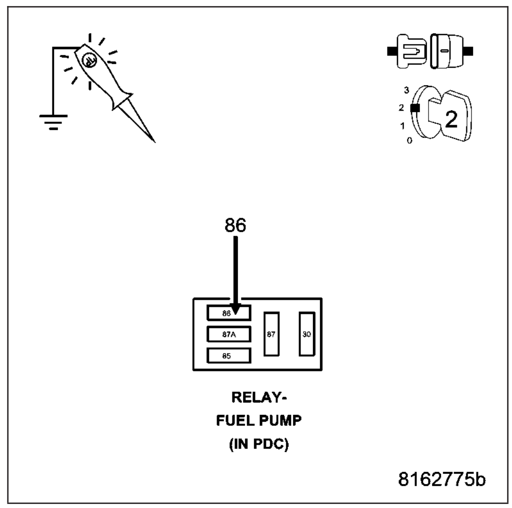
**No** >> Repair the open or short to ground in the Fused B+ circuit. Inspect the related fuse and repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. (F1) FUSED IGNITION SWITCH OUTPUT CIRCUIT

Ignition on, engine not running.

Using a 12-volt test light connected to ground, probe the (F1) Fused Ignition Switch Output circuit.



**Does the test light illuminate brightly?**

**Yes** >> Go To 5

**No** >> Repair the open or short to ground in the (F1) Fused Ignition Switch Output circuit. Inspect the related fuse and repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

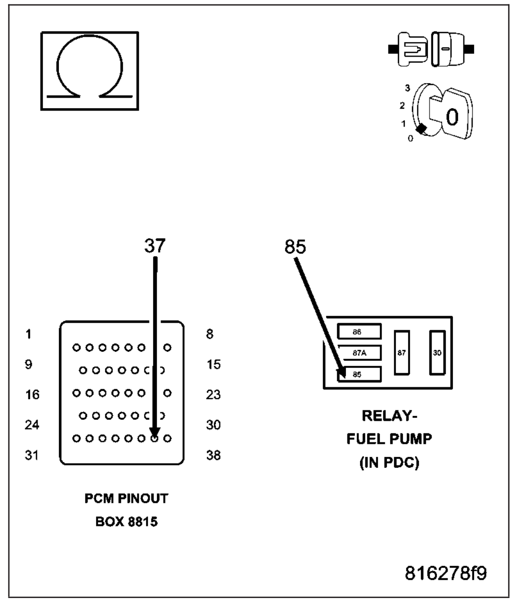
## 5. (K31) FUEL PUMP CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the C3 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K31) Fuel Pump Relay Control circuit from the PDC to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

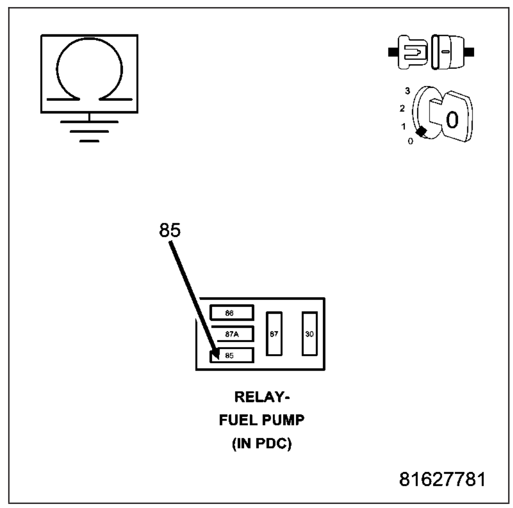
**Yes** >> Go To 6

**No** >> Repair the open in the (K31) Fuel Pump Relay Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. (K31) FUEL PUMP CONTROL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K31) Fuel Pump Relay Control circuit in the PDC.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K31) Fuel Pump Relay Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0630-VIN NOT PROGRAMMED IN PCM

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  At initialization.
- **Set Condition:**
  The VIN has not been programmed into the PCM. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| PROGRAMMING VIN INTO PCM |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. PROGRAMMING VIN INTO THE PCM

Ignition on, engine not running.

Using the scan tool, program VIN into the PCM.

Start the engine.

**NOTE: If the engine will not start, crank the engine over for 15 seconds. Crank at least 2 times with the ignition switch returning to the off position each time.**

Allow the engine to reach normal operating temperature.

With the scan tool, read DTCs.

**Does the DTC reset?**

**Yes** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> The VIN has been successfully programmed into the PCM. Test is complete.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

# P0632-ODOMETER NOT PROGRAMMED IN PCM

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on.
- **Set Condition:**
  Odometer is not programed into the PCM. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| PROGRAMMING MILEAGE INTO THE PCM |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. PROGRAMMING MILEAGE INTO THE PCM

Ignition on, engine not running.
With the scan tool, erase DTCs.
Using a scan tool, program the mileage into the PCM.
Start the engine.
Allow the engine to reach normal operating temperature.
With a scan tool, read DTCs.

**Does the DTC reset?**

**Yes** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> The mileage has been successfully programmed into the PCM. Test is complete.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0633-SKIM KEY NOT PROGRAMMED IN PCM

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on.
- **Set Condition:**
  The SKIM Key information has not been programmed into the PCM. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| PROGRAMMING SKIM KEY INTO THE PCM |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. PROGRAMMING SKIM KEY INTO THE PCM

Ignition on, engine not running.

With a scan tool, erase DTCs.

Using the scan tool, program the SKIM Key information into the PCM.

Start the engine.

**NOTE: If the engine will not start, crank the engine over for 15 seconds. Crank at least 2 times with the ignition switch returning to the off position each time.**

Allow the engine to reach normal operating temperature.

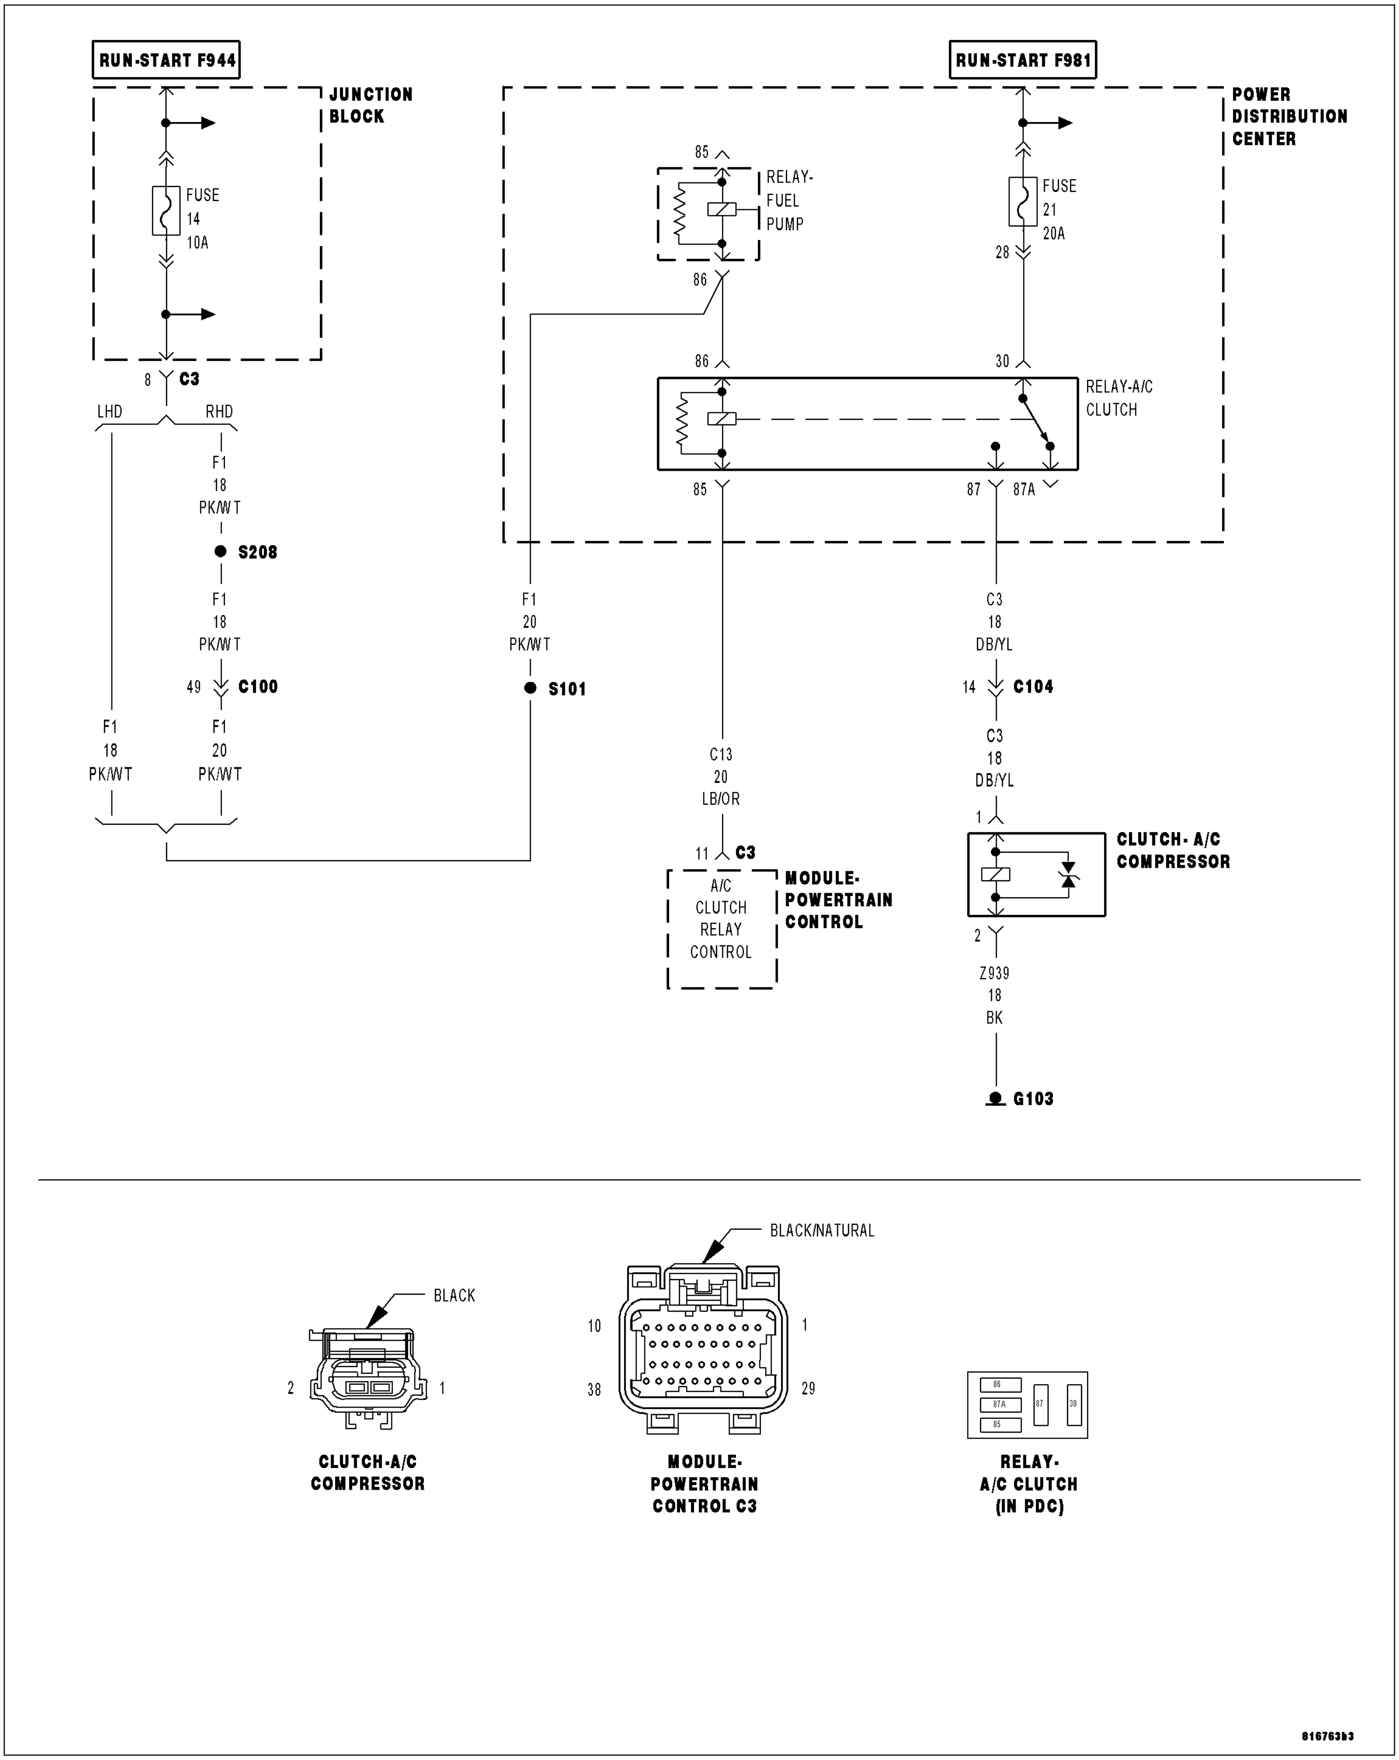
With the scan tool, read DTCs.

**Does the DTC reset?**

**Yes** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> The SKIM KEY information has been successfully programmed into the PCM. Test is complete.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

# P0645-A/C CLUTCH CONTROL CIRCUIT



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the ignition on. Battery voltage greater than 10 volts. A/C Switch on.
- **Set Condition:**
  An open or shorted condition is detected in the A/C clutch control circuit. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
| --- |
| (F1) FUSED IGNITION SWITCH OUTPUT CIRCUIT |
| FUSED B+ CIRCUIT |
| (C13) A/C CLUTCH RELAY CONTROL CIRCUIT OPEN |
| (C13) A/C CLUTCH RELAY CONTROL CIRCUIT SHORTED TO GROUND |
| A/C CLUTCH RELAY |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. A/C CLUTCH RELAY OPERATION

Ignition on, engine not running.

With a scan tool, actuate the A/C Clutch Relay.

**Is the A/C Clutch Relay operating?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 2

### 2. A/C CLUTCH RELAY RESISTANCE

Turn the ignition off.

Remove the A/C Clutch Relay from the PDC.

Measure the resistance of the A/C Clutch Relay Coil.

**Is the resistance between 60 to 80 ohms?**

**Yes** >> Go To 3

**No** >> Replace the A/C Clutch Relay.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. FUSED B+ CIRCUIT

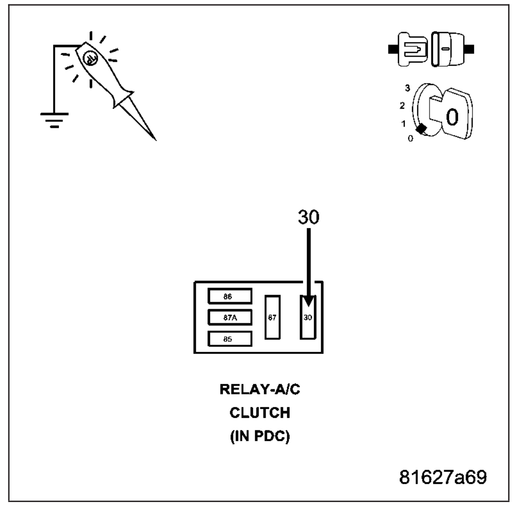
Using a 12-volt test light connected to ground, probe the Fused B+ circuit in the connection.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the open or short to ground in the Fused B+ circuit. Check and replace any open fuses.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)



## 4. (F1) FUSED IGNITION SWITCH OUTPUT CIRCUIT

Ignition on, engine not running.

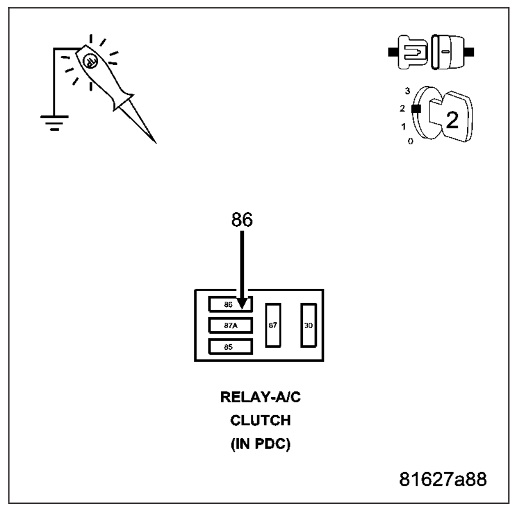
Using a 12-volt test light connected to ground, probe the (F1) Fused Ignition Switch Output circuit in the connection.

**Does the test light illuminate brightly?**

**Yes** >> Go To 5

**No** >> Repair the open or short to ground in the (F1) Fused Ignition Switch Output circuit. Check and replace any open fuses.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)



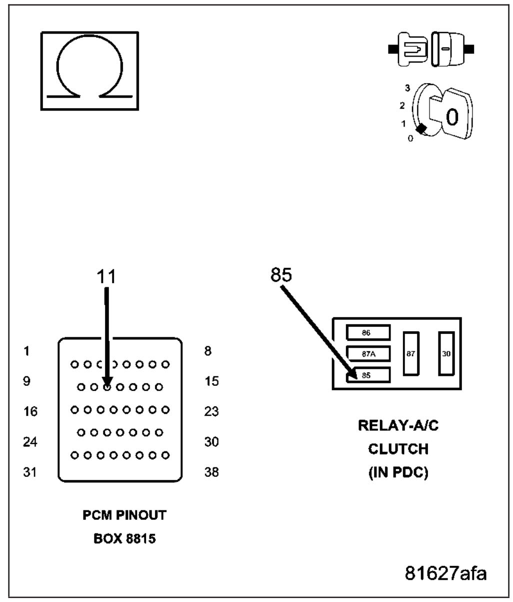
## 5. (C13) A/C CLUTCH RELAY CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the C3 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (C13) A/C Clutch Relay Control circuit from the relay connection to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

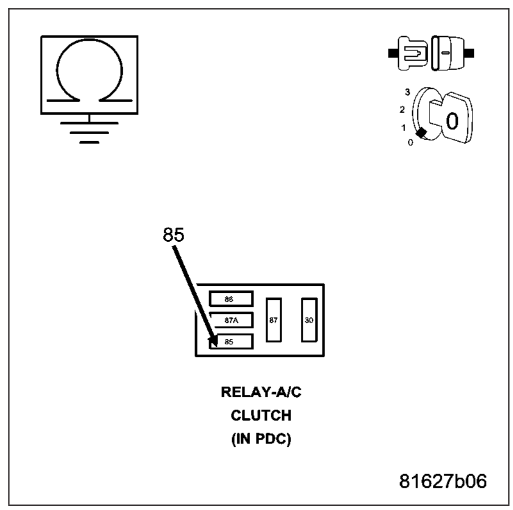
**Yes** >> Go To 6

**No** >> Repair the open in the (C13) A/C Clutch Relay Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. (C13) A/C CLUTCH RELAY CONTROL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (C13) A/C Clutch Relay Control circuit at the PDC.



**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short to ground in the (C13) A/C Relay Clutch Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

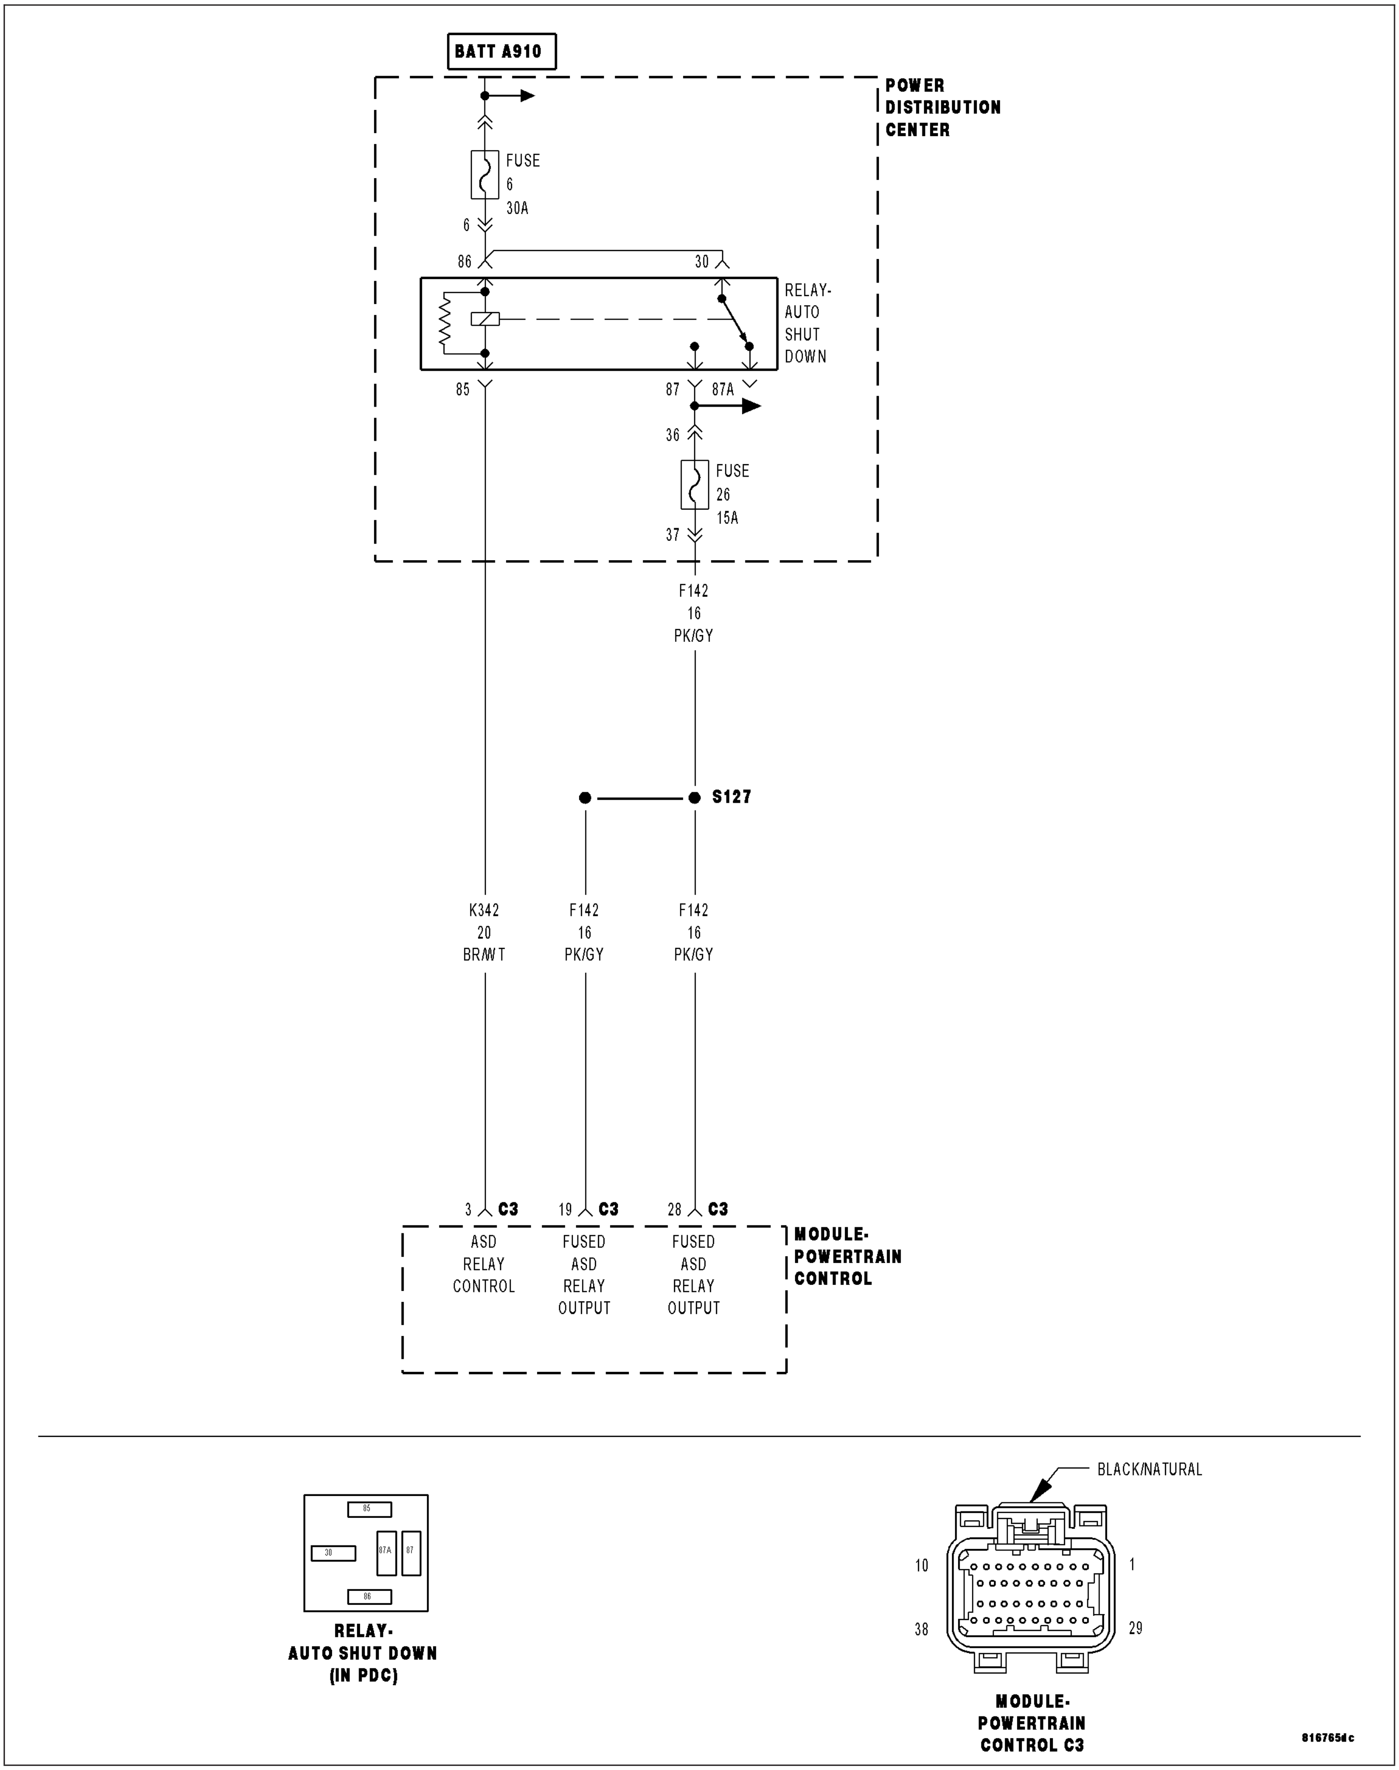
**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0685-AUTO SHUTDOWN CONTROL CIRCUIT



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With ignition on. Battery voltage above 10 volts.
- **Set Condition:**
  The actual ASD state is not equal to the desired ASD state. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| INTERNAL FUSED B+ CIRCUITS |
| (K342) ASD RELAY CONTROL CIRCUIT OPEN |
| (K342) ASD RELAY CONTROL CIRCUIT SHORTED TO GROUND |
| ASD RELAY |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ASD RELAY OPERATION

Ignition on, engine not running.

With a scan tool, actuate the ASD Relay.

**Is the ASD Relay operating?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 2

### 2. INTERNAL FUSED B+ CIRCUITS

Turn the ignition off.

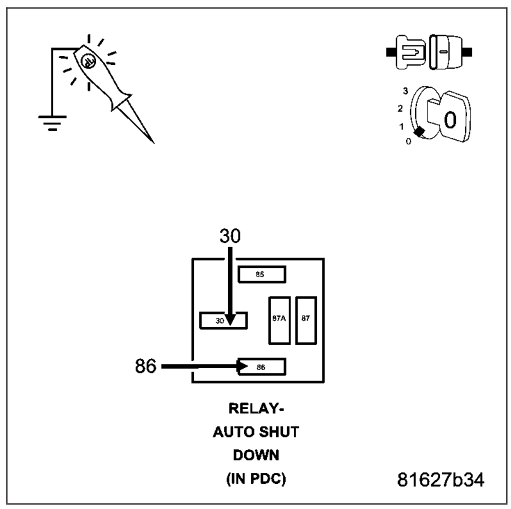
Remove the ASD Relay from the PDC.

Using a 12-volt test light connected to ground, probe the Internal Fused B+ circuits in the IPM.

**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the open or short to ground in the Internal Fused B+ circuits. Inspect and replace any open fuses.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)



### 3. ASD RELAY

Measure the resistance of the ASD Relay Coil.

**Is the resistance between 60 to 80 ohms?**

**Yes** >> Go To 4

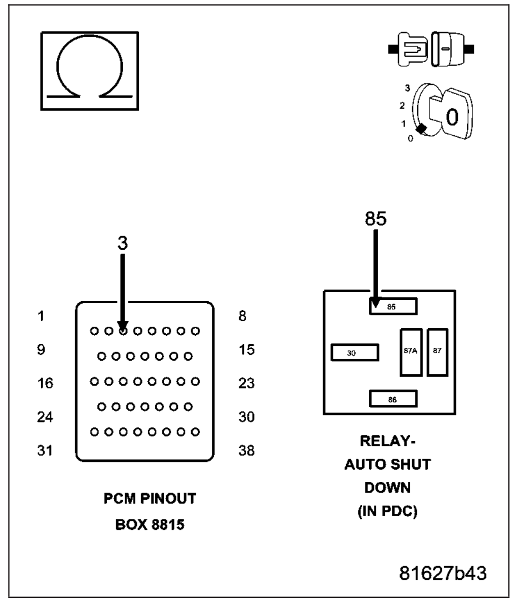
**No** >> Replace the ASD Relay.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. (K342) ASD RELAY CONTROL CIRCUIT OPEN

Disconnect the C3 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K342) ASD Relay Control circuit from the PDC to the appropriate terminals of special tool #8815.



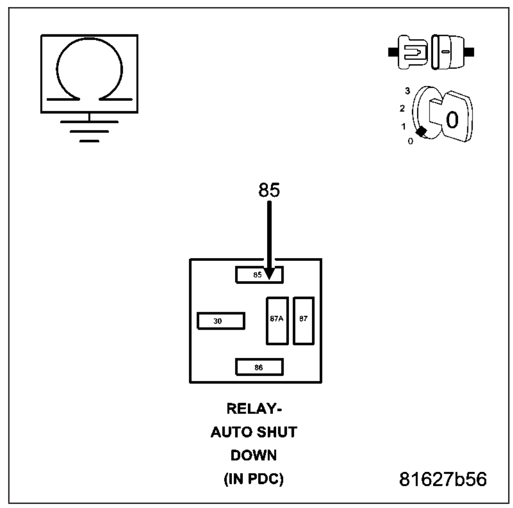
**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the open in the (K342) ASD Relay Control circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. (K342) ASD RELAY CONTROL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K342) ASD Relay Control circuit in the PDC.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K342) ASD Relay Control circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6

## 6. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

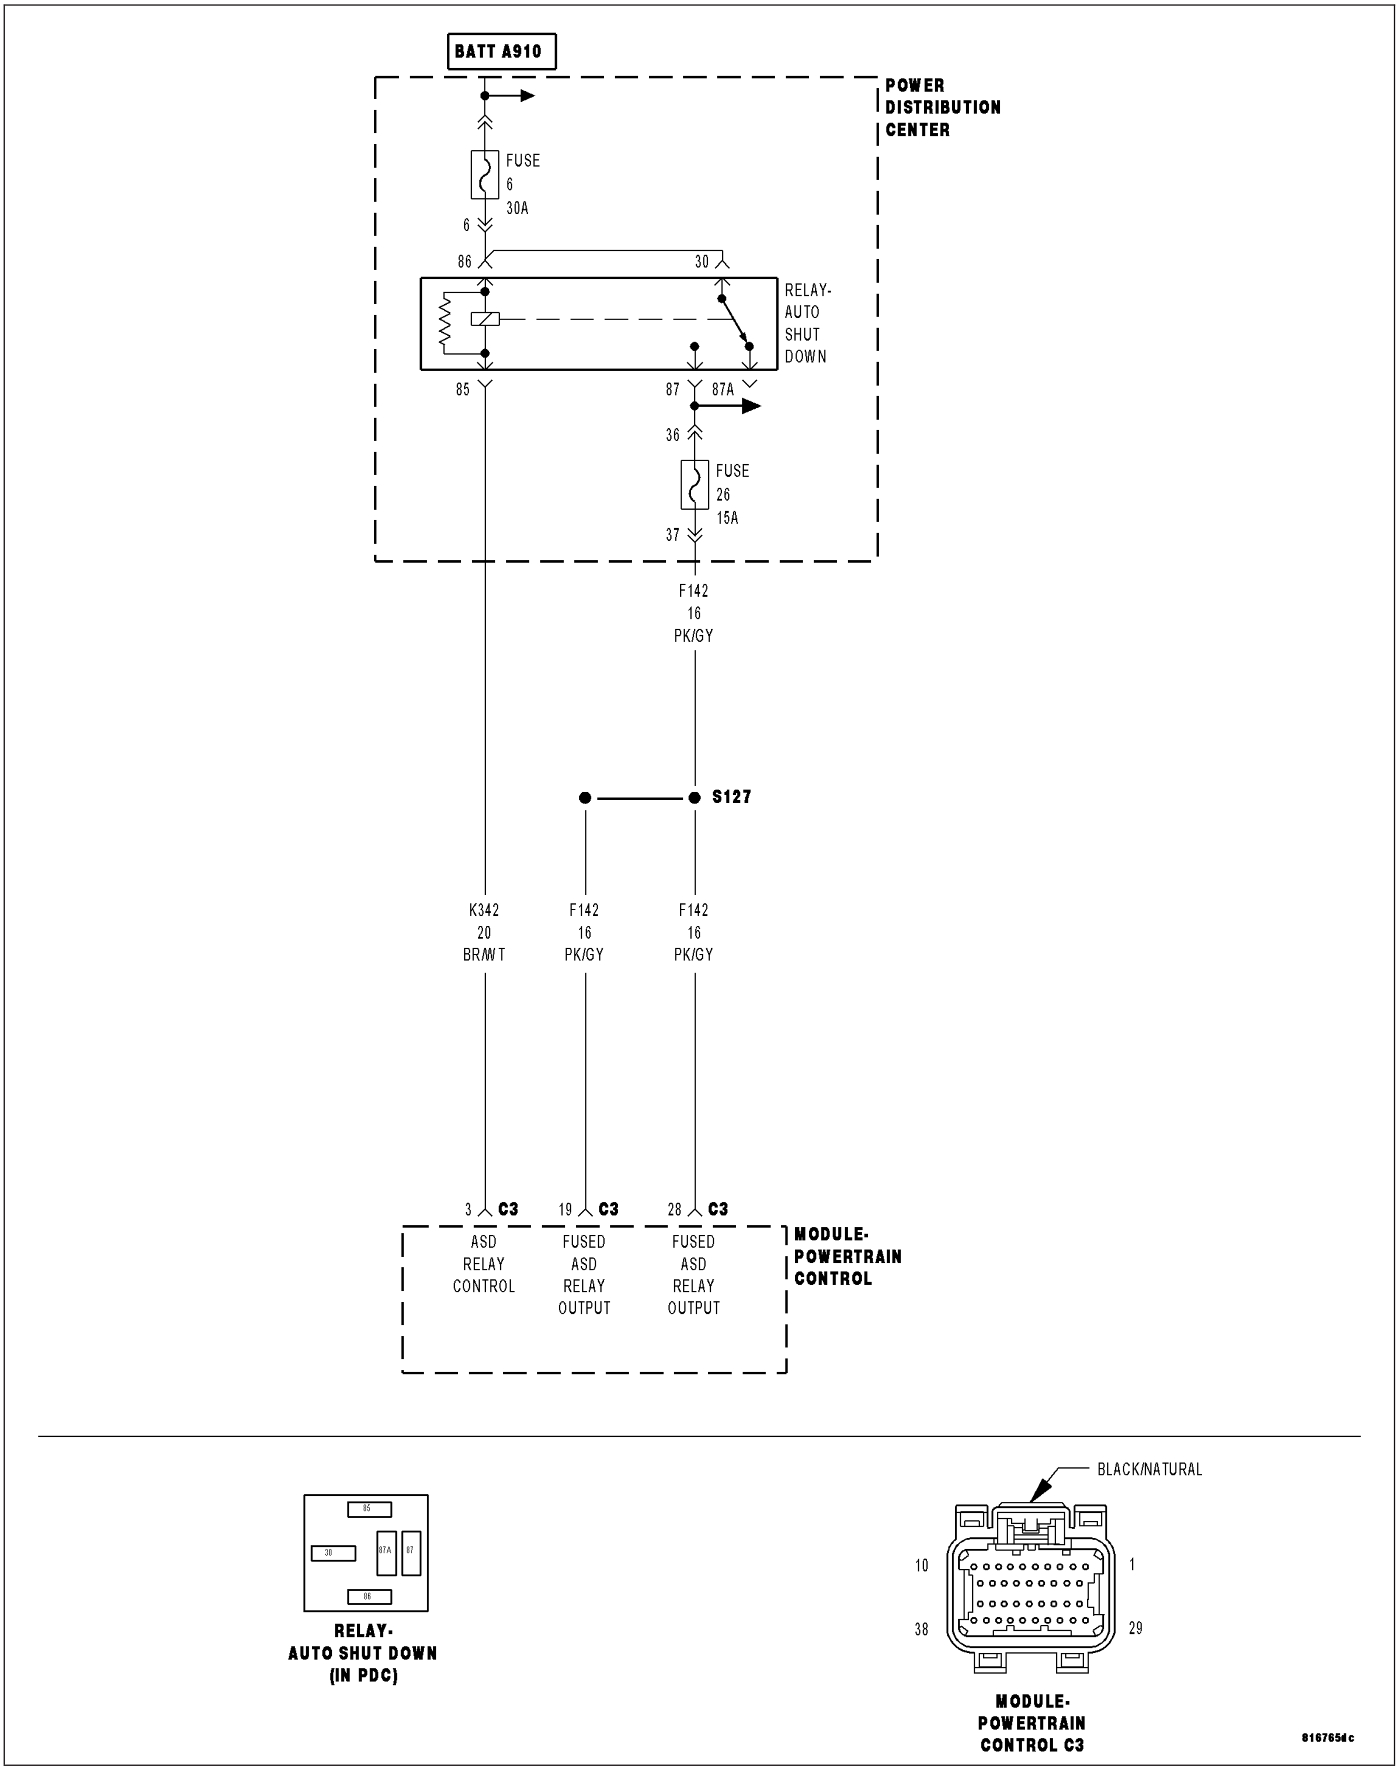
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0688-AUTO SHUTDOWN SENSE CIRCUIT LOW



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With ignition key on. Battery voltage greater than 10 volts.
- **Set Condition:**
  No voltage sensed at the PCM when the ASD relay is energized. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
| --- |
| INTERNAL FUSED B+ CIRCUITS |
| (F142) ASD RELAY OUTPUT CIRCUIT OPEN |
| ASD RELAY |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. VERIFY ASD DTC

**NOTE: Diagnose P0685 - Auto Shutdown Relay Control Circuit first if it set along with this DTC.**
With a scan tool, erase the DTC.

Attempt to start the engine. If the engine will not start, crank the engine for at least 15 seconds. It may be necessary to repeat several times.

**Does the DTC reset?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. ENGINE OPERATION

Attempt to start the engine.

**Does the engine start?**

**Yes** >> Go To 3

**No** >> Go To 4

## 3. (F142) ASD RELAY OUTPUT CIRCUIT OPEN

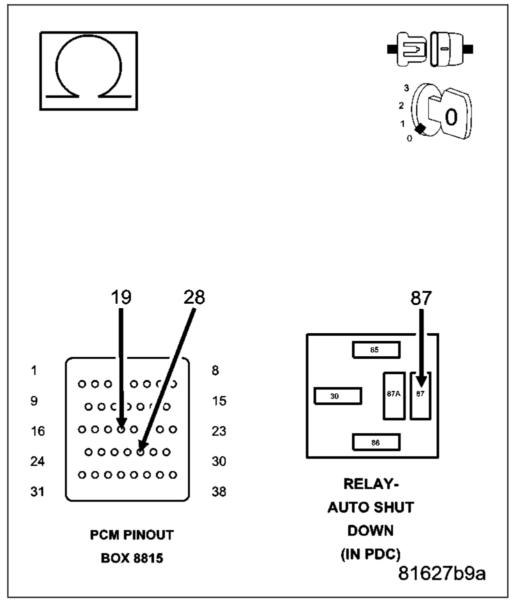
Turn the ignition off.

Remove the ASD Relay.

Disconnect the C3 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F142) ASD Relay Output circuit from the Relay connection to the appropriate terminals of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (F142) ASD Relay Output circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. ASD RELAY

Turn the ignition off.

Install a substitute relay in place of the ASD Relay.

Ignition on, engine not running.

With a scan tool, erase DTCs.

Attempt to start the engine.

With a scan tool, read DTCs.

**Does the DTC reset?**

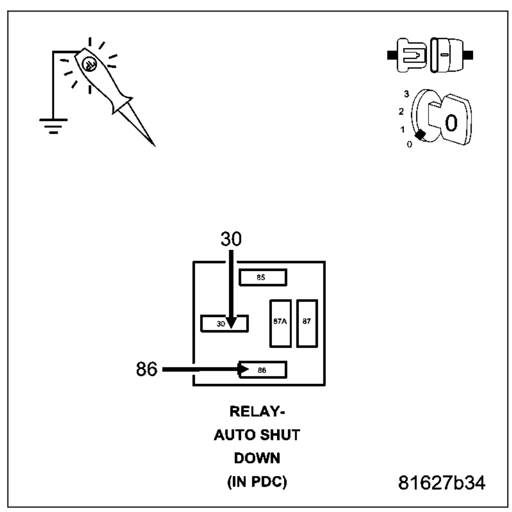
**Yes** >> Go To 5

**No** >> Replace the ASD Relay.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. INTERNAL FUSED B+ CIRCUITS

Turn the ignition off.

Using a 12-volt test light connected to ground, probe the Internal Fused B+ circuits at the Relay connection.



**Does the test light illuminate brightly?**

**Yes** >> Go To 6

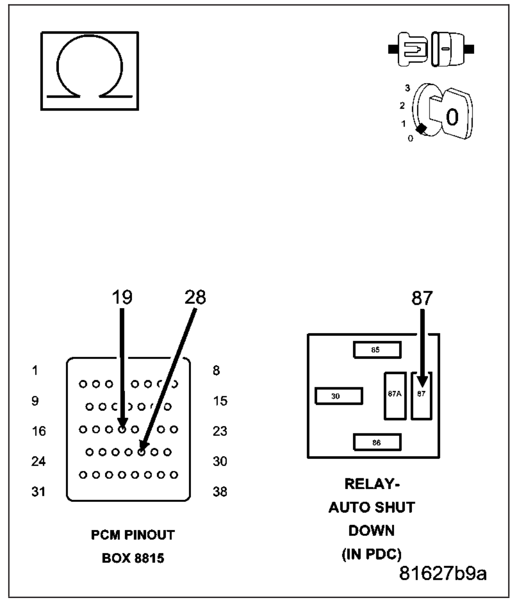
**No** >> Repair the open or short to ground in the Internal Fused B+ circuits. Inspect the related fuse and repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. (F142) ASD RELAY OUTPUT CIRCUIT OPEN

Disconnect the C3 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F142) ASD Relay Output circuit from the Relay connection to the appropriate terminals of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (F142) ASD Relay Output circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P0700-TRANSMISSION CONTROL SYSTEM (MIL REQUEST)

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on and battery voltage greater than 10 volts.
- **Set Condition:**
  An active DTC is stored in the TCM. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| DTC PRESENT IN THE TRANSMISSION CONTROL MODULE |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. DTC PRESENT IN EATX CONTROLLER

This is an informational DTC letting you know that a DTC(s) is stored in the Transmission Control Module.

Erase this DTC from the PCM after all Transmission DTC(s) have been repaired.

Using a scan tool, read the Transmission Controller DTC and refer to the Transmission Category and perform the appropriate symptom.

**PCM Diagnostic Information complete.**

**Continue**

Test Complete.

# P0850-PARK/NEUTRAL SWITCH PERFORMANCE

For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The Park Neutral switch rationality test is enabled only for vehicles equipped with a 4/5 speed automatic transmission. This diagnostic checks if the park/neutral switch is incorrectly stuck in the neutral position during driving conditions by comparing Vehicle Speed, Engine Speed, Throttle Position, and Pressure Ratio to the fail thresholds and by looking at the state of the Park/Neutral Switch. The stuck in drive condition is not explicitly checked as the starter relay does not energize and therefore render the vehicle inoperable.

- **When Monitored:**
  Continuously with the transmission in Park, Neutral, or Drive and NOT in Limp-in mode.
- **Set Condition:**
  This code will set if the PCM detects an incorrect Park/Neutral switch state for a given mode of vehicle operation. One trip fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| TRS (T41) SENSE (P/N SENSE) CIRCUIT OPEN |
| TRS (T41) SENSE (P/N SENSE) CIRCUIT SHORTED TO GROUND |
| TRANSMISSION RANGE SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. P/N & D/R NOT IN CORRECT POSITION

**NOTE: Check the TCM for DTCs, if P0706 is set in the TCM diagnose the TCM code before continuing.**
Ignition on, engine not running.

With the scan tool, read the Park/Neutral Position Switch input state.

While moving the gear selector through all gear positions (Park to 1 and back to Park), monitor the scan tool display.

**Did the scan tool display show P/N and D/R in the correct gear positions?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 2

### 2. TRS (T41) SENSE (P/N SENSE) CIRCUIT OPEN

Turn the ignition off.

Disconnect the C3 PCM harness connector.

Disconnect the Transmission Range Sensor harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**
Measure the resistance of the TRS (T41) Sense (P/N Sense) circuit from the TRS harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 3

**No** >> Repair the open in the TRS (T41) Sense (P/N Sense) circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. TRS (T41) SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the TRS (T41) Sense (P/N Sense) circuit at the TRS harness connector.

**Is the resistance above 100k ohms?**

**Yes** >> Go To 4

**No** >> Repair the short to ground in the TRS (T41) Sense (P/N Sense) circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. TRANSMISSION RANGE SENSOR

Measure the resistance between ground and the (T41) TRS Sense (P/N Sense) circuit while moving the gear selector through each gear in the TRS connector.

**NOTE: The circuit is grounded in Park and Neutral and open in the other positions.**

**Did the resistance change from above 100 kohms (open) to below 10.0 ohms (grounded)?**

**Yes** >> Go To 5

**No** >> Replace the Transmission Range Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

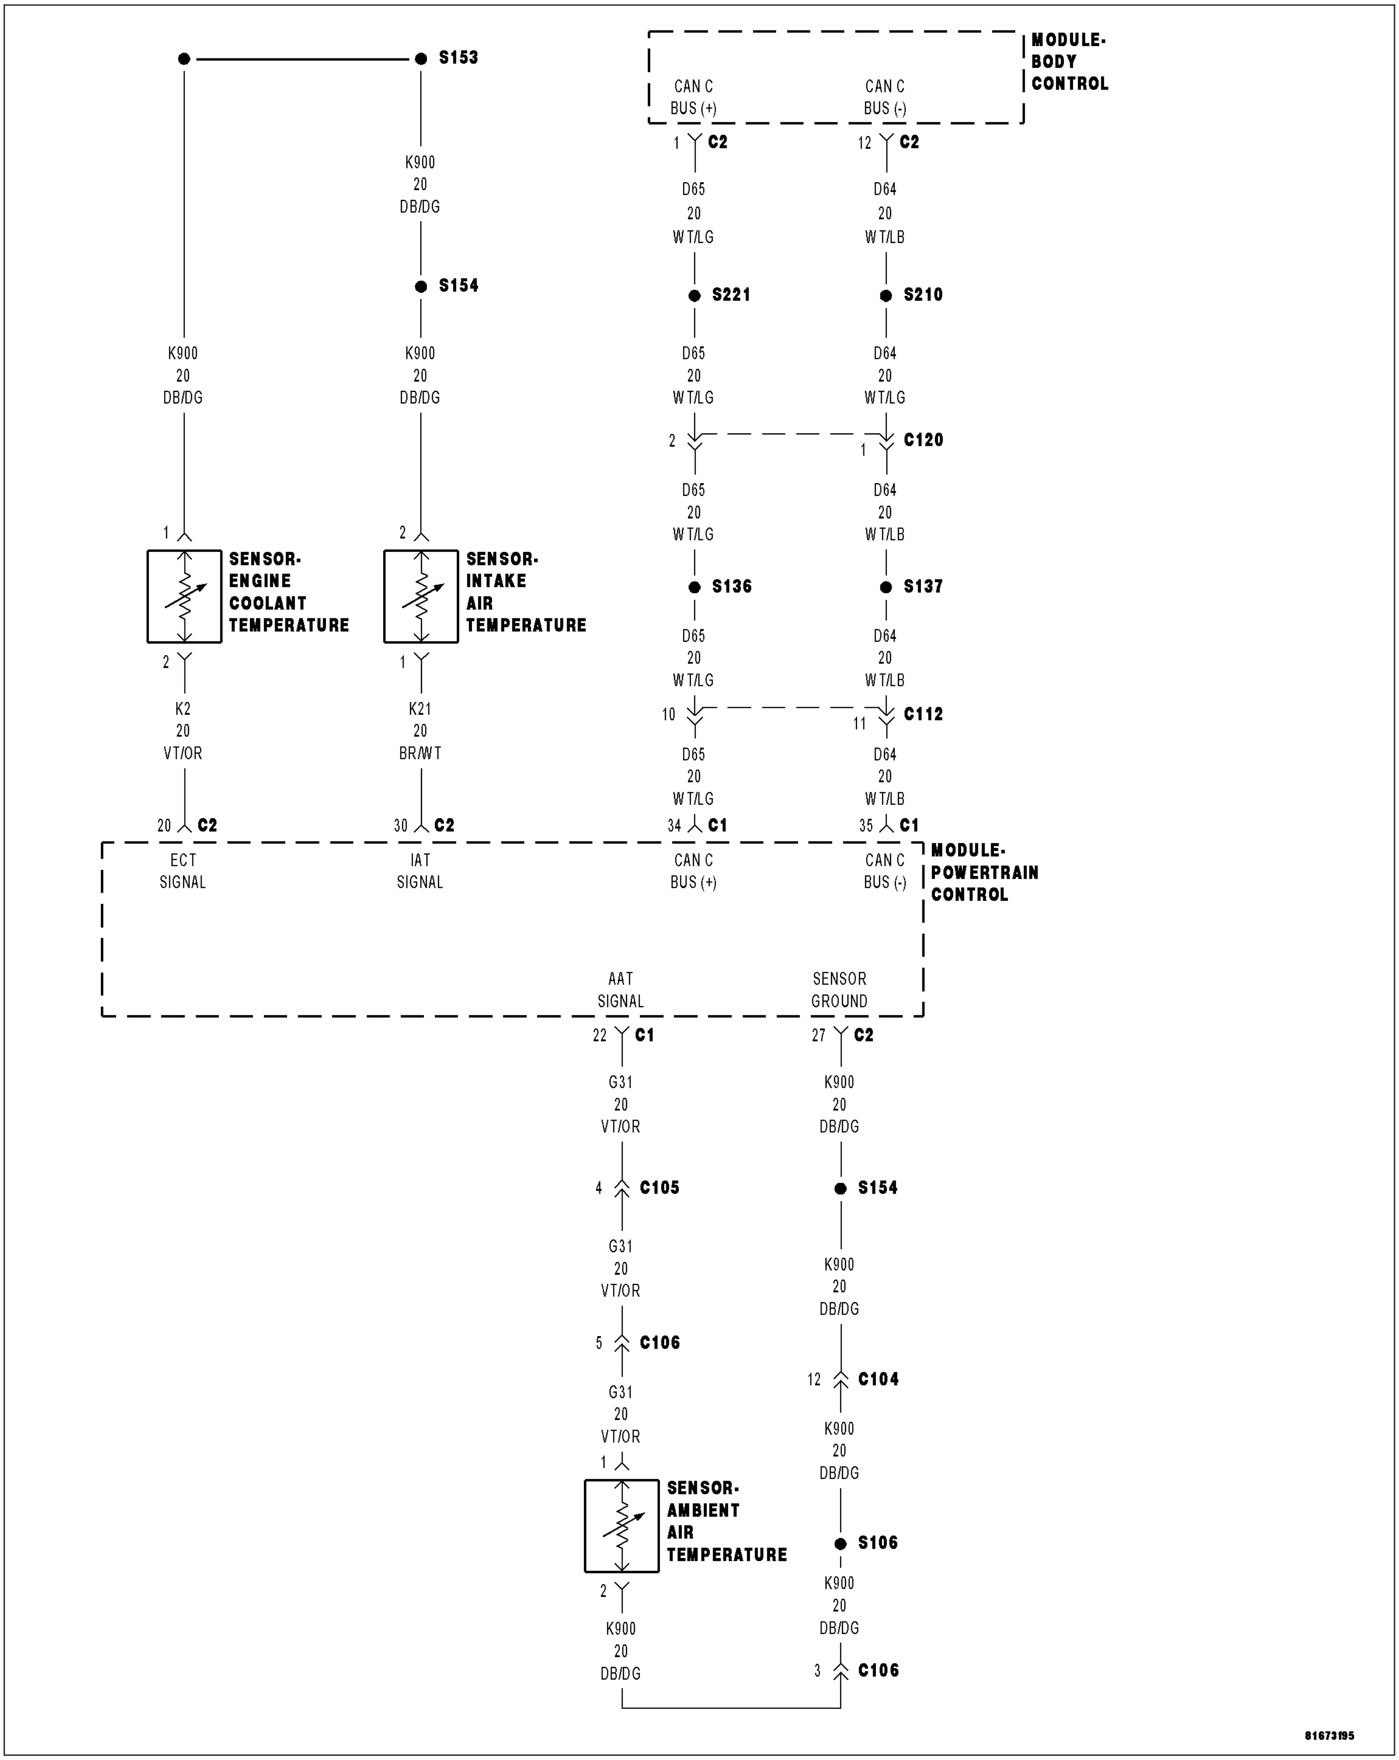
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P1115-GENERAL TEMPERATURE RATIONALITY



For a complete wiring diagram **Refer to Section 8W**.

## Theory of Operation

The General Temperature Rationality looks at the outputs of the three temperature sensors and compare them under cold start conditions. Following a start to run delay time, the outputs of the ambient, engine coolant, and intake air temperature sensors will be compared. If two sensors agree but not the third, the third sensor is declared as irrational. If all three sensors are irrational the General Temperature Sensor Rationality is failed.

- **When Monitored:**
  Ignition on and battery voltage greater than 10 volts.
- **Set Condition:**
  Ambient Air, Engine Coolant, and Intake Air Temp sensor inputs are compared under cold start conditions. After start up the temp readings are monitored. If two of the three readings agree and the third doesn't, a DTC is stored. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| EXCESSIVE RESISTANCE IN THE SENSOR SIGNAL CIRCUIT |
| EXCESSIVE RESISTANCE IN THE SENSOR GROUND CIRCUIT |
| TEMPERATURE SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: Diagnose all CAN C Bus Communication DTCs before continuing**

Ignition on, engine not running.

With a scan tool, read the DTCs.

**NOTE: All ECT, Intake Air, and Ambient Air Temperature Sensor codes must be diagnosed and repaired before continuing.**

**NOTE: In cold weather, this DTC could be set by a high powered block heater and no repair would be required.**

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. TEMPERATURE SENSOR CIRCUIT

With a scan tool, read the ECT, Ambient Air Temp, and Intake Air Temp Sensor temp values.

Start the engine.

Allow the engine to reach normal operating temperature while monitoring the three Sensor temperature values.

**Is the temperature for each of the Sensors increasing properly?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. TEMPERATURE SENSOR

Ignition on, engine not running.

Disconnect the suspected faulty sensor.

Connect a jumper wire between the Sensor Signal circuit and the Sensor ground circuit.

With the scan tool, read the voltage of the suspected Sensor.

**Did the voltage reading start at 4.8 to 5.0 volts and decrease to 0 volts when the jumper wire was installed?**

**Yes** >> Replace the faulty Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

**NOTE: Remove the jumper wire before continuing.**

## 4. EXCESSIVE RESISTANCE IN THE TEMPERATURE SENSOR SIGNAL CIRCUIT

**NOTE: If the vehicle is equipped with ESP the AAT Sensor Signal circuit is a direct feed to the C2 BCM circuit. The PCM receives AAT Sensor Signal input over the CAN C Bus circuit. If the vehicle is not equipped with ESP, the AAT Sensor is a direct feed to the PCM.**

Turn the ignition off.

Disconnect the C1 and C2 PCM harness connectors.

Disconnect the C2 BCM harness connector for ESP equipped vehicles.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the Sensor Signal circuit from the Sensor harness connector to the appropriate terminal of special tool #8815 or the C2 BCM harness connector.

**Is the resistance above 5.0 ohms.**

**Yes** >> Repair the excessive resistance in the Temperature Sensor Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. EXCESSIVE RESISTANCE IN THE SENSOR GROUND CIRCUIT

**NOTE: On ESP equipped vehicles the AAT Sensor ground circuit is at the C2 BCM harness connector.**

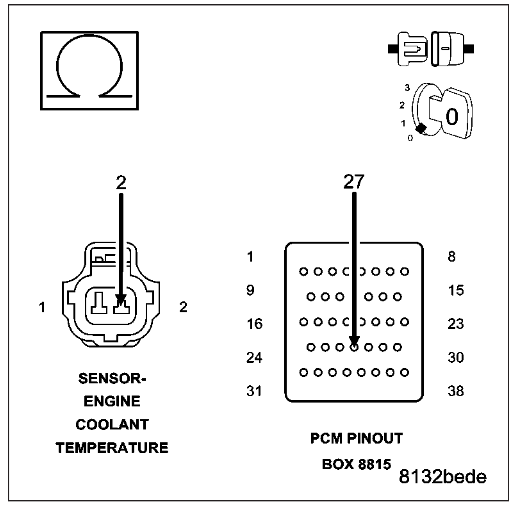
Measure the resistance of the Sensor ground circuit from the Sensor harness connector to the appropriate terminal of special tool #8815 or the C2 BCM harness connector on ESP vehicles.

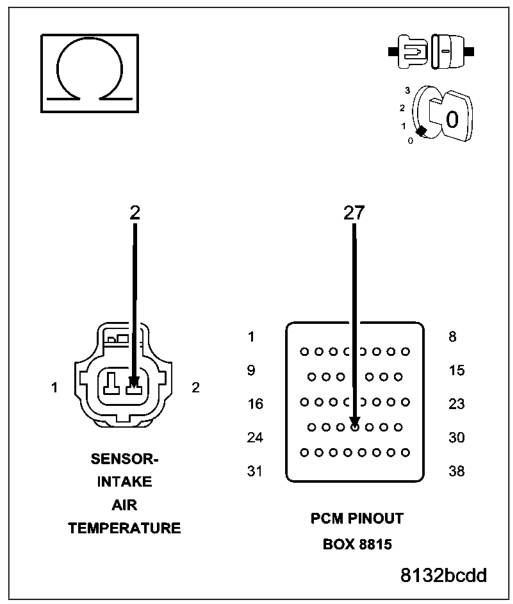
**Is the resistance above 5.0 ohms.**

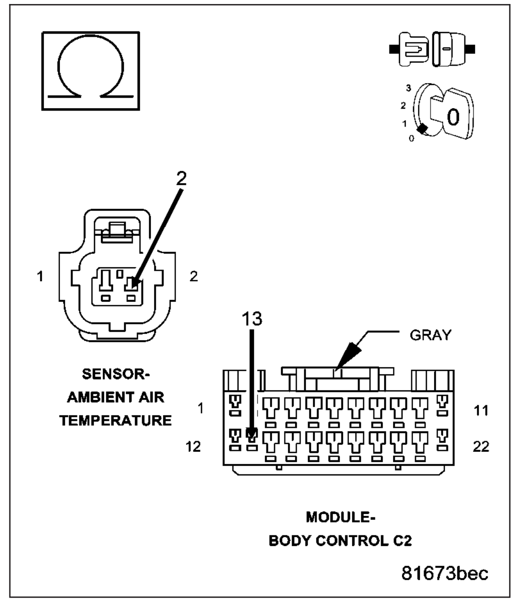
**Yes** >> Repair the excessive resistance in the Sensor ground circuit.

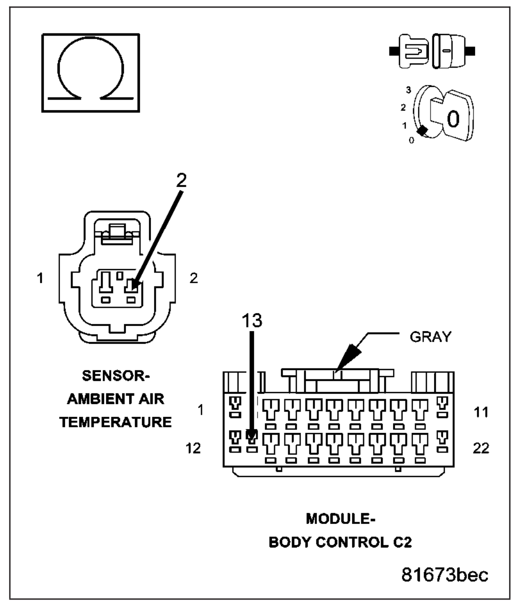
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 6









## 6. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

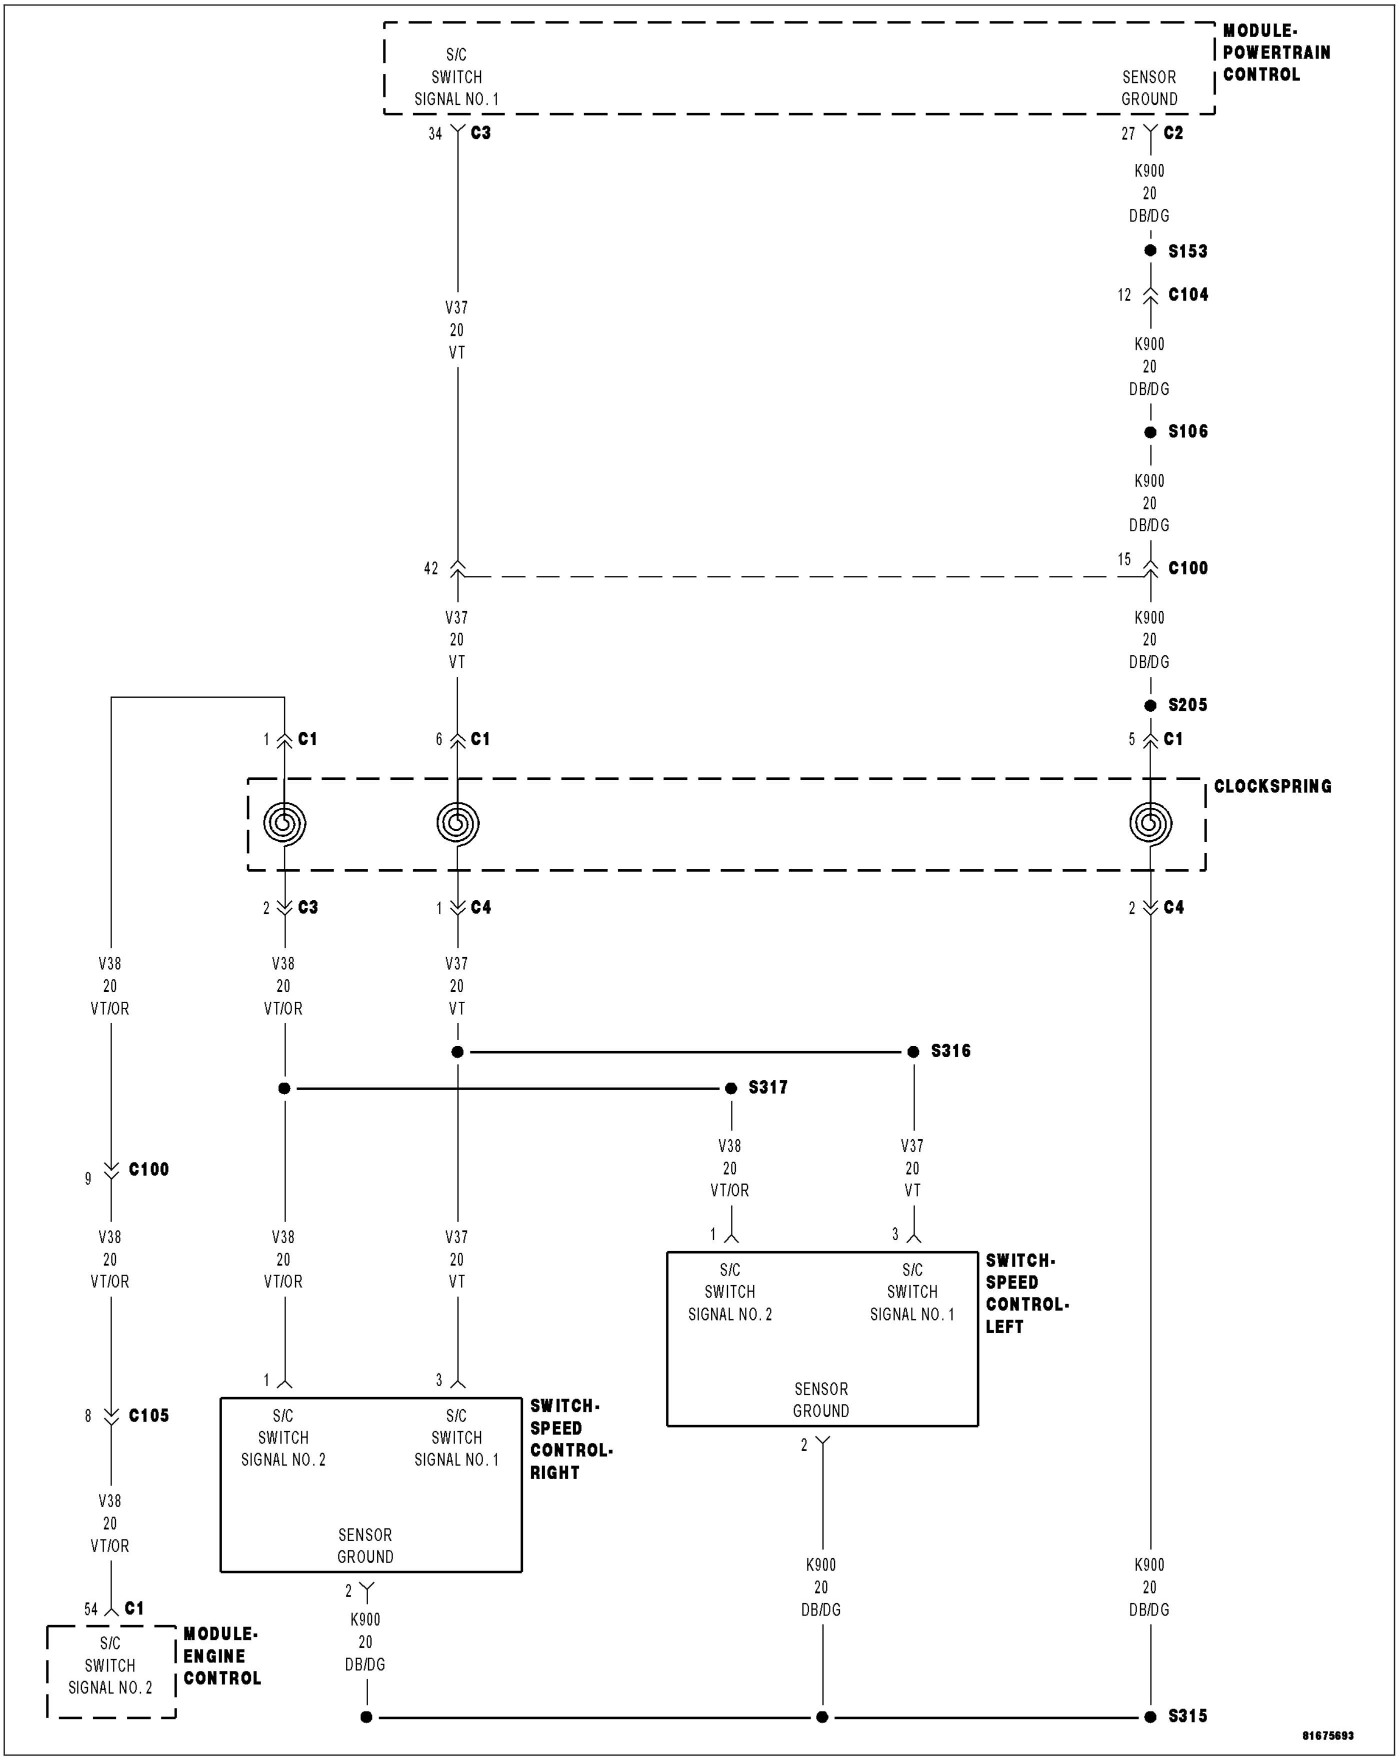
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P1593-SPEED CONTROL SWITCH 1 STUCK



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on.
- **Set Condition:**
  S/C Switch No.1 is mechanically stuck in the On/Off, Resume/Accel, or Set position for too long. One trip fault.

| **Possible Causes** |
|---|
| (V37) S/C SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (V37) S/C SIGNAL CIRCUIT OPEN |
| (K900) SENSOR GROUND OPEN |
| (V37) S/C SIGNAL CIRCUIT SHORTED TO GROUND |
| (V37) S/C SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND |
| SPEED CONTROL SWITCH |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. SPEED CONTROL SWITCH STATUS

Start the engine.
With a scan tool, monitor each which function for the Speed Control Switches.
Press and release each Speed Control Button.
- Resume/Accel
- Cancel
- Decel (Coast)
- On/Off
- Set

**Does each switch function change status when pressing each switch?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 2

### 2. SPEED CONTROL SWITCHES

Turn the ignition off.
Disconnect and remove the Speed Control Switches from the steering wheel per Service Information.
Measure the resistance across each Speed Control Switch.
Monitor the ohmmeter while pressing each function button on each switch.
Resume/Accel - 15.4 kohms
Cancel - 1.24 kohms
Coast - 2.94 kohms
On/Off -0.47 kohms
Set - 5.49 kohms

**Does the function on the Speed Control Switches have the correct resistance value?**

**Yes** >> Go To 3

**No** >> Replace the Speed Control Switch that had the incorrect resistance value.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. (V37) S/C SWITCH NO.1 SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the C3 PCM harness connector.

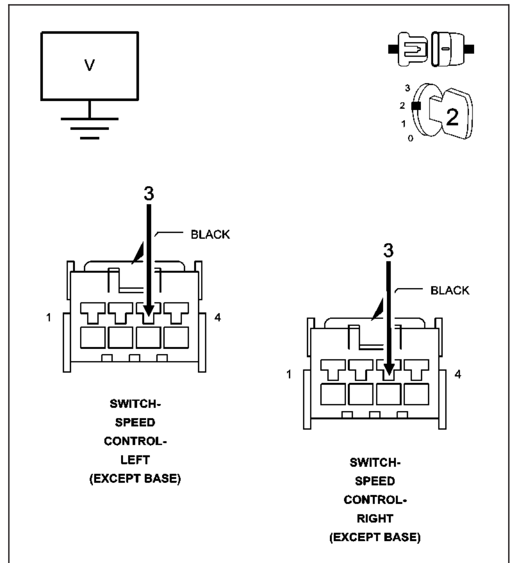
Measure the voltage of the (V37) S/C Switch No.1 Signal circuit in the Speed Control harness connector.

**Is the voltage above 5.0 volts?**

**Yes** >> Repair the short to battery voltage in the (V37) S/C Signal No.1 circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4



81675d1b

## 4. (V37) S/C SWITCH NO.1 SIGNAL CIRCUIT OPEN

**NOTE: The measurement must be taken from both Speed Control Switch harness connectors.**

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

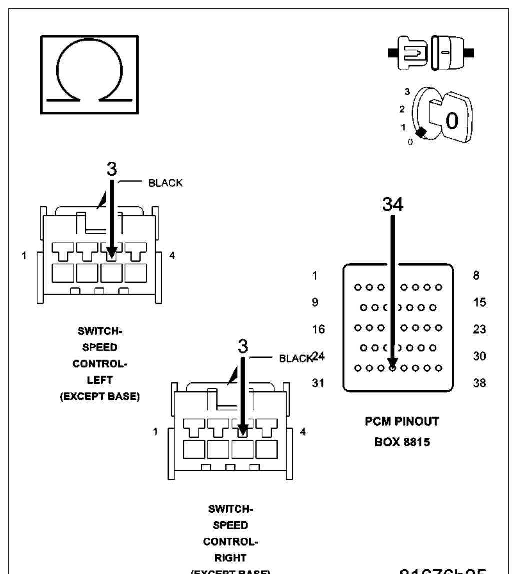
Measure the resistance of the (V37) S/C Switch No.1 Signal circuit from the Speed Control harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms for both measurements?**

**Yes** >> Go To 5

**No** >> Repair the open in the (V37) S/C Switch No.1 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)



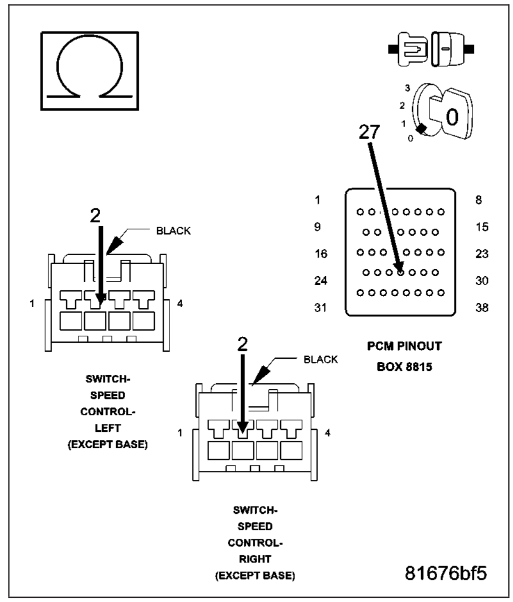
81676b25

## 5. (K900) SENSOR GROUND CIRCUIT OPEN

**NOTE: The measurement must be taken from both Speed Control Switch harness connectors.**

Disconnect the C2 PCM harness connector.

Measure the resistance of the (K900) Sensor ground circuit from the Speed Control harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms for both measurements?**

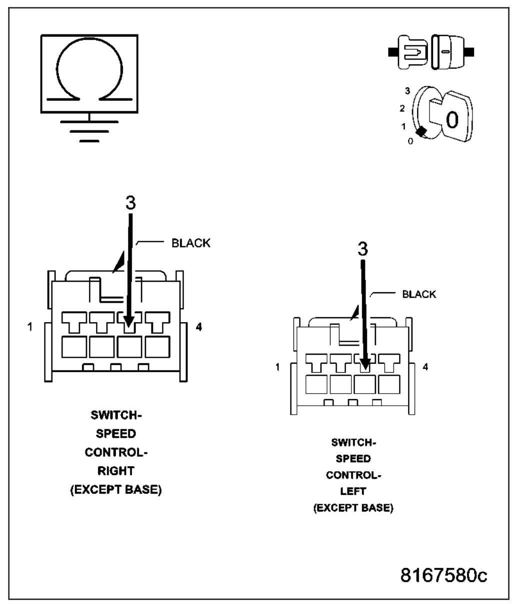
**Yes** >> Go To 6

**No** >> Repair the open in the (K900) Sensor ground circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. (V37) S/C SWITCH NO.1 SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (V37) S/C Switch No.1 Signal circuit in the Speed Control harness connector.



**Is the resistance below 100 ohms?**

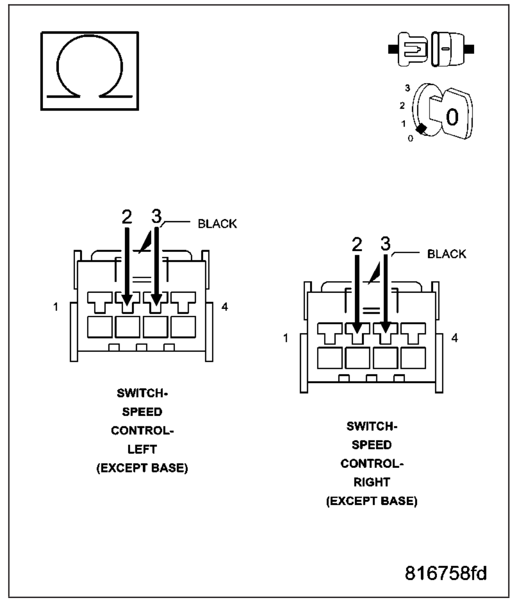
**Yes** >> Repair the short to ground in the (V37) S/C Switch No.1 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 7. (V37) S/C SWITCH NO.1 SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT

Measure the resistance between the (V37) S/C Switch No.1 Signal circuit and the (K900) Sensor ground circuit in the Speed Control harness connector.



**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (V37) S/C Switch No.1 Signal circuit and the (K900) Sensor ground circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

## 8. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P1602–PCM NOT PROGRAMMED

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on and battery voltage greater than 10 volts.
- **Set Condition:**
  The PCM has not been programmed.

| Possible Causes |
|---|
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. PCM PROGRAMMED

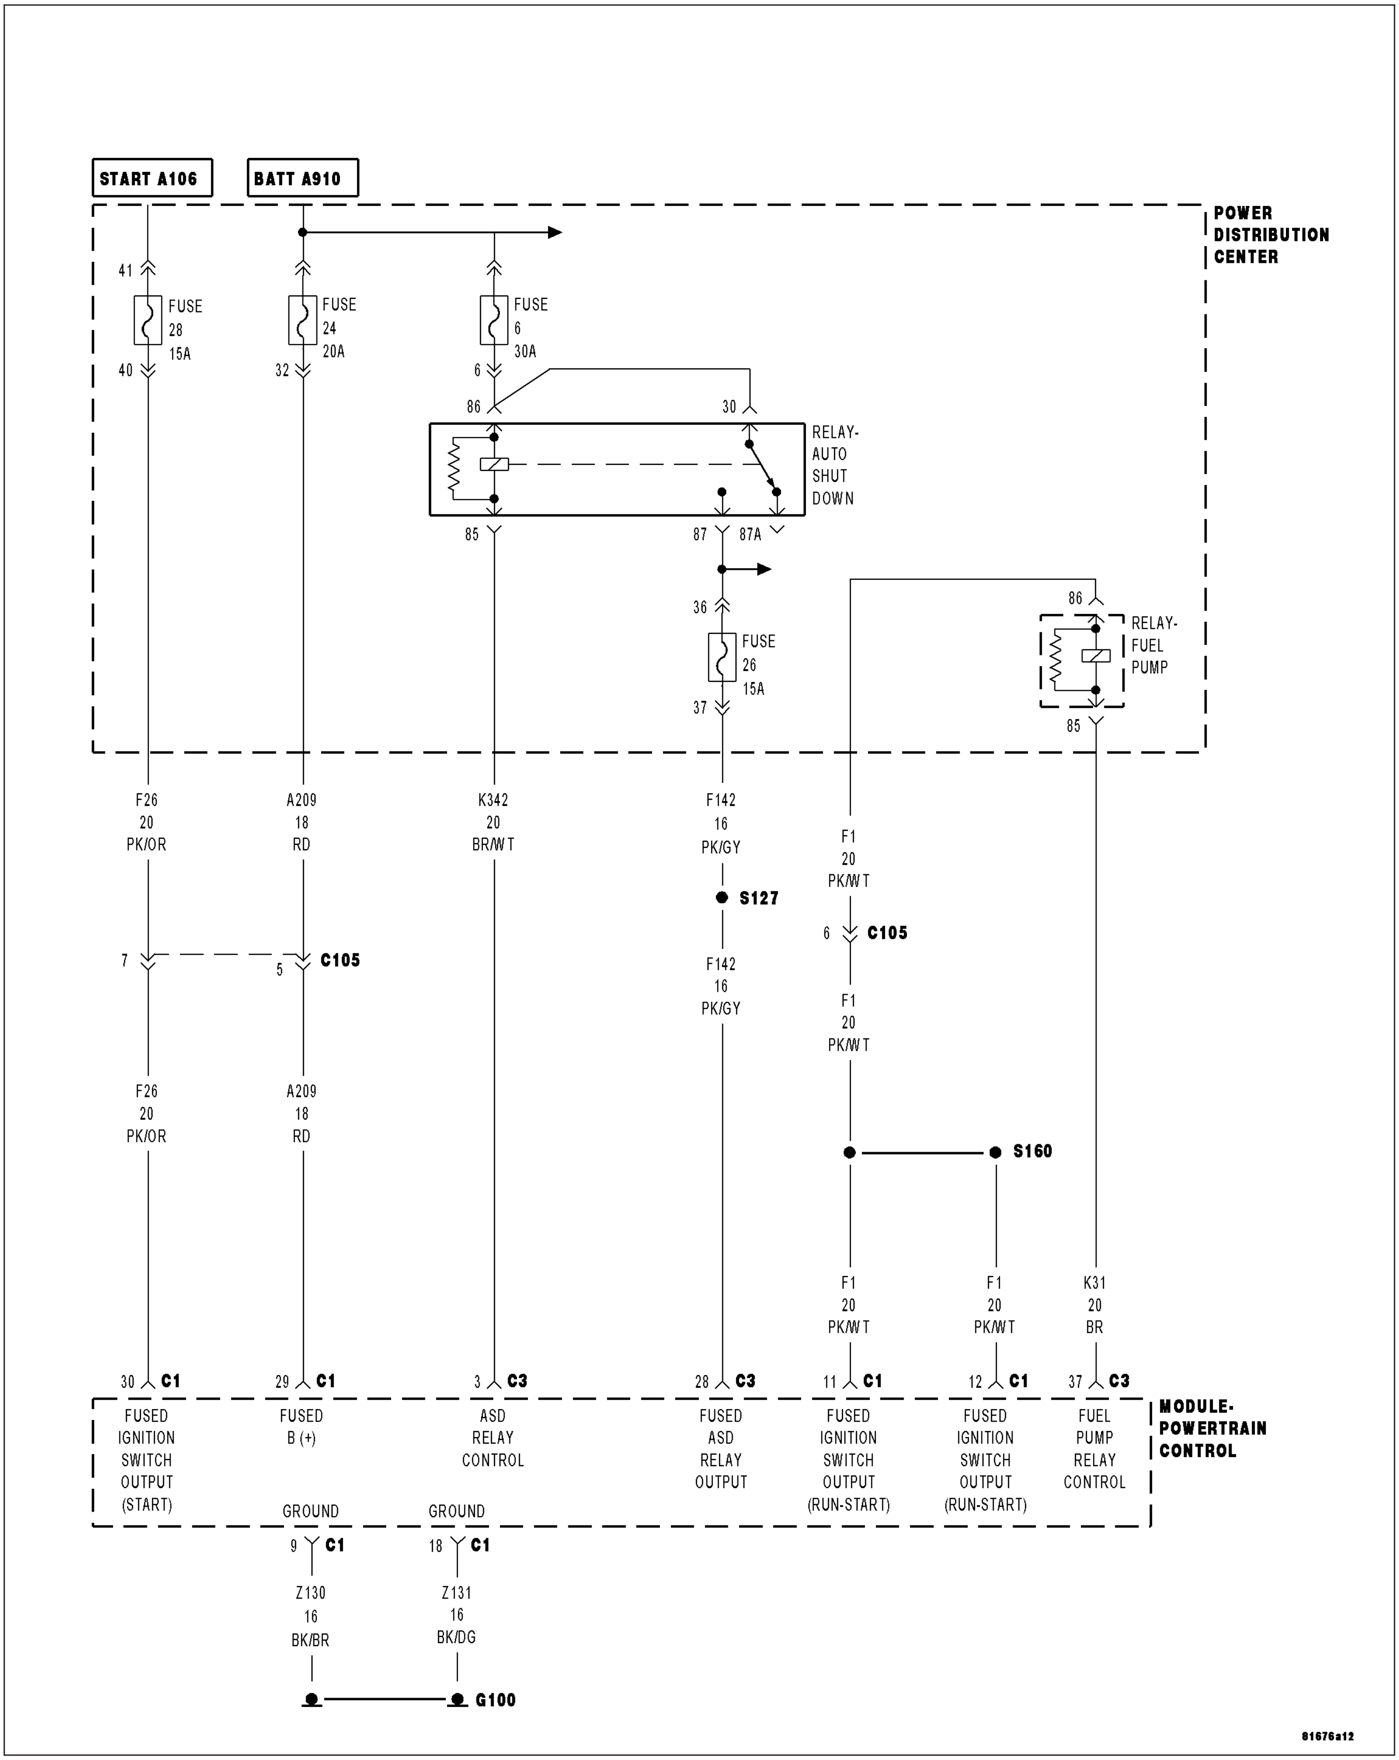
Ignition on, engine not running.
With a scan tool, erase DTCs.
With a scan tool program the PCM.
Start the engine.
Allow the engine to reach normal operating temperature.
With a scan tool, read DTCs.

**Does the DTC reset?**

**Yes** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> The PCM has been successfully programmed. Test is complete.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P1603-PCM INTERNAL DUAL-PORT RAM COMMUNICATION FAILURE



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on and battery voltage greater than 10 volts.
- **Set Condition:**
  Internal PCM failure detected. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (F1) AND (F26) PCM FUSED IGNITION SWITCH CIRCUIT |
| PCM INTERNAL |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. PCM IGNITION CIRCUITS

Turn the ignition off.

Disconnect the C1 PCM harness connector.

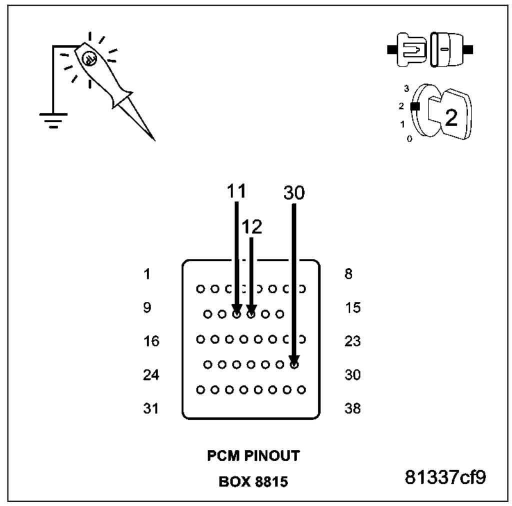
Ignition on, engine not running.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

With a 12-volt test light connected to ground and with special tool #8815 installed, probe the (F1) and (F26) Fused Ignition Switch circuits.

Perform the above check with the Ignition key in the off lock position, Ignition on, engine not running position, and during cranking.

Wiggle the related wire harness while probing the special tool with the test light to try to interrupt the circuit.



**Does the test light illuminate brightly?**

**Yes** >> Go To 2

**No** >> Repair the open or excessive resistance in the (F1) and (F26) Fused Ignition Switch (Off, Run, Start) circuits. Inspect the related fuse, if the fuse is open check the circuits for a short to ground.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. PCM

The Powertrain Control Module is reporting internal errors.

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

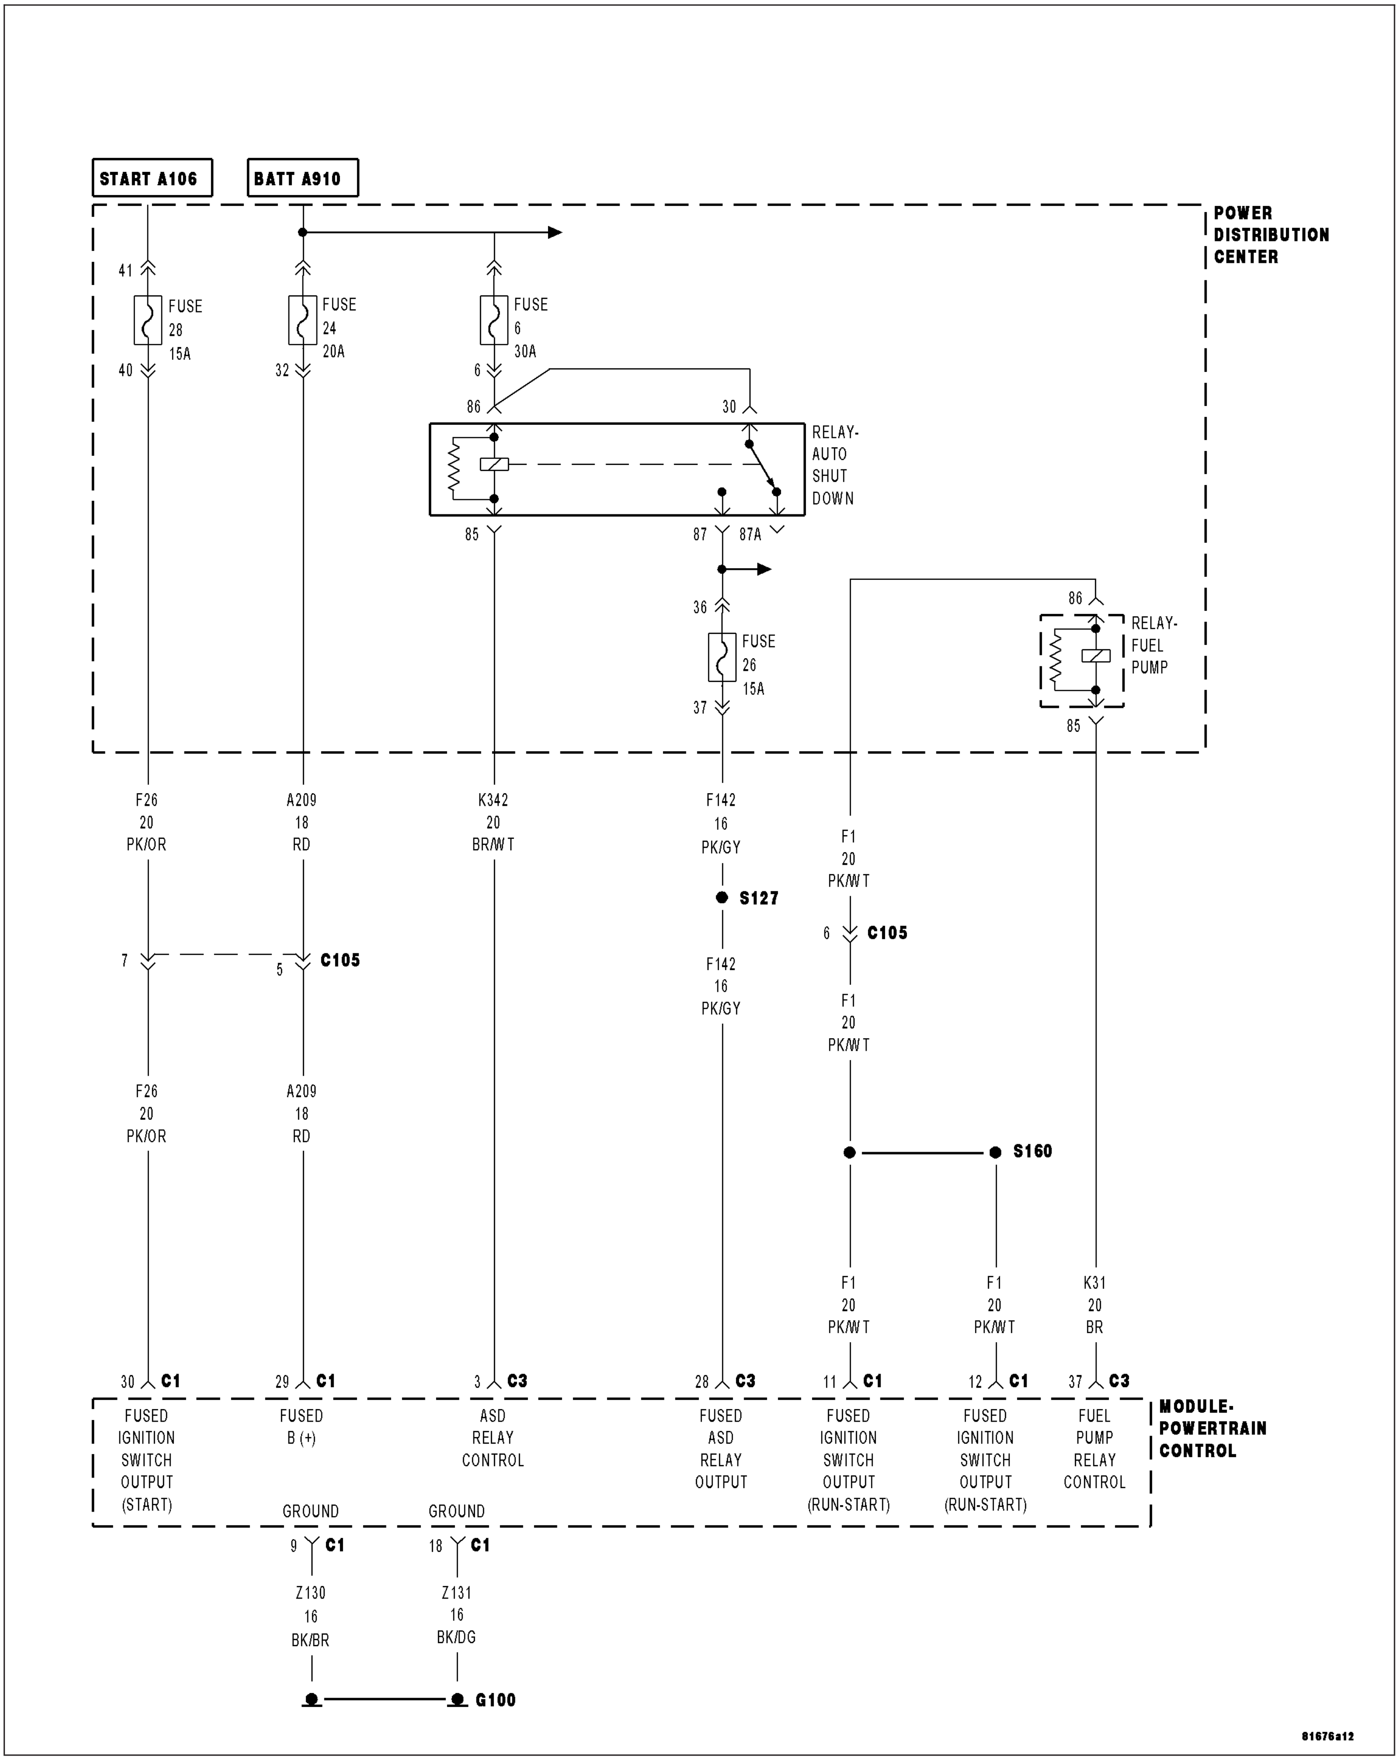
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

# P1604-PCM INTERNAL DUAL-PORT RAM READ/WRITE INTEGRITY FAILURE



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on and battery voltage greater than 10 volts.
- **Set Condition:**
  Internal PCM failure detected. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (F1) AND (F26) PCM FUSED IGNITION SWITCH CIRCUIT |
| PCM INTERNAL |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. PCM IGNITION CIRCUITS

Turn the ignition off.

Disconnect the C1 PCM harness connector.

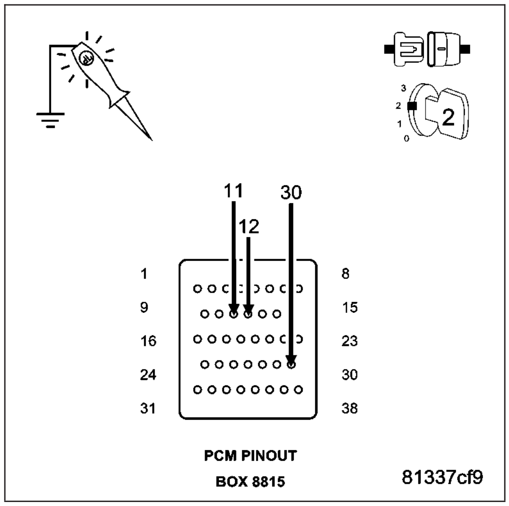
Ignition on, engine not running.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

With a 12-volt test light connected to ground and with special tool #8815 installed, probe the (F1) and (F26) Fused Ignition Switch circuits.

Perform the above check with the Ignition key in the off lock position, Ignition on, engine not running position, and during cranking.

Wiggle the related wire harness while probing the special tool with the test light to try to interrupt the circuit.



**Does the test light illuminate brightly?**

**Yes** >> Go To 2

**No** >> Repair the open or excessive resistance in the (F1) and (F26) Fused Ignition Switch (Off, Run, Start) circuits. Inspect the related fuse, if the fuse is open check the circuits for a short to ground.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. PCM

The Powertrain Control Module is reporting internal errors.

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

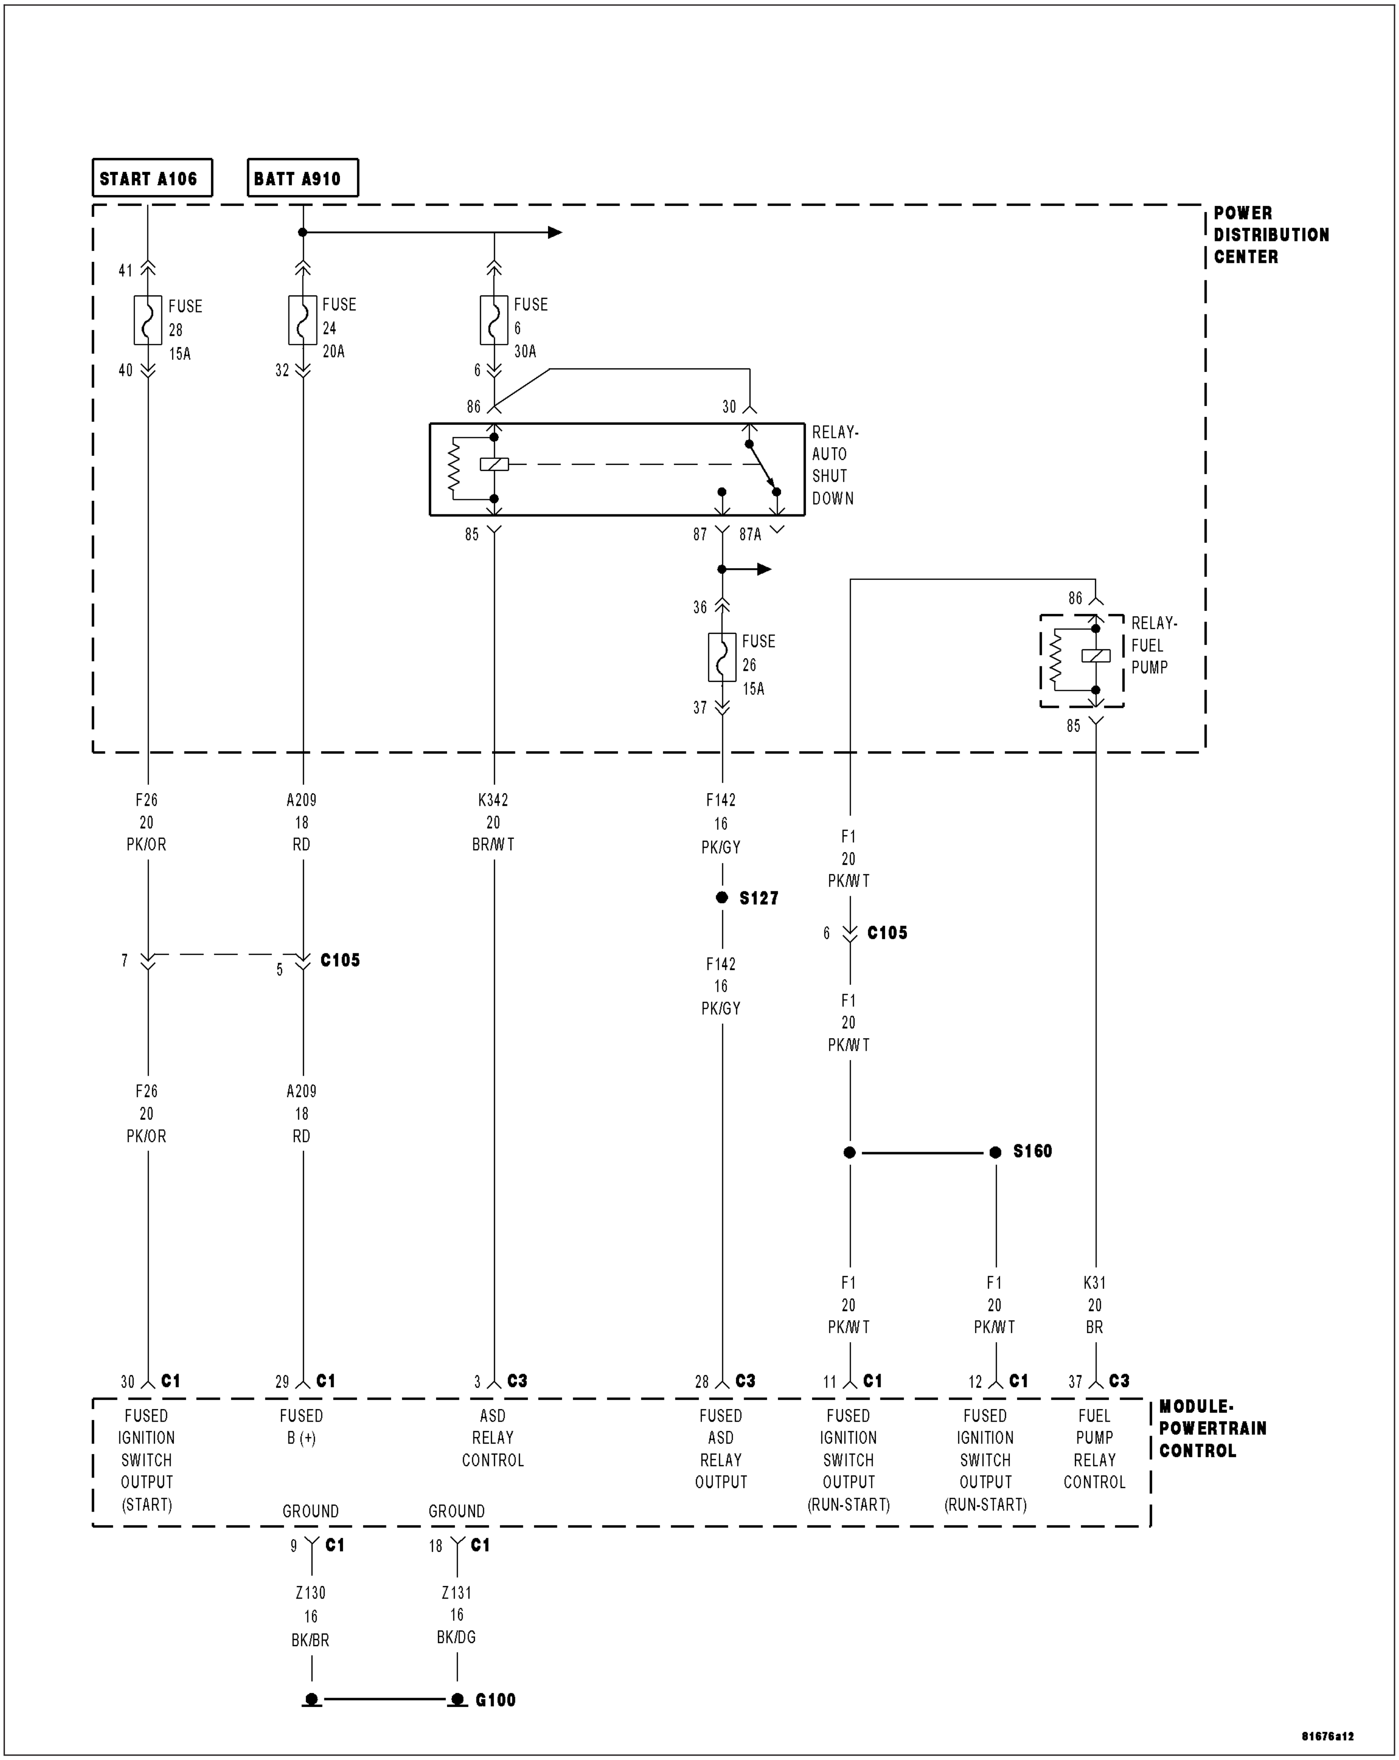
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

# P1607-PCM INTERNAL SHUTDOWN TIMER RATIONALITY



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on and battery voltage greater than 10 volts.
- **Set Condition:**
  Internal PCM failure detected. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (F1) AND (F26) PCM FUSED IGNITION SWITCH CIRCUIT |
| PCM INTERNAL |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. PCM IGNITION CIRCUITS

Turn the ignition off.

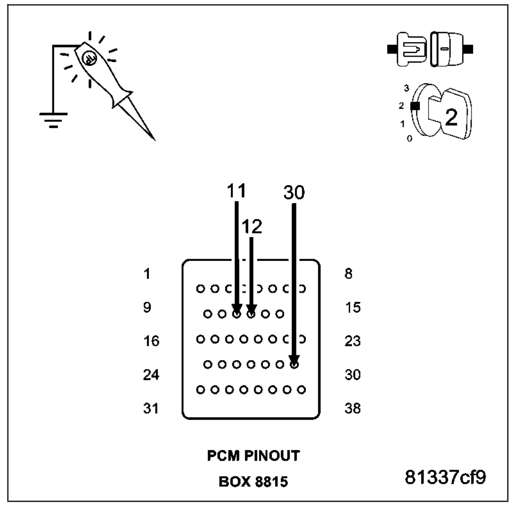
Disconnect the C1 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

With a 12-volt test light connected to ground and with special tool #8815 installed, probe the (F1) and (F26) Fused Ignition Switch circuits.

Perform the above check with the Ignition key in the off lock position, Ignition on, engine not running position, and during cranking.

Wiggle the related wire harness while probing the special tool with the test light to try to interrupt the circuit.



**Does the test light illuminate brightly?**

**Yes** >> Go To 2

**No** >> Repair the open or excessive resistance in the (F1) and (F26) Fused Ignition Switch (Off, Run, Start) circuits. Inspect the related fuse, if the fuse is open check the circuits for a short to ground.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. PCM

The Powertrain Control Module is reporting internal errors.

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P1696-EEPROM MEMORY WRITE DENIED/INVALID

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Continuously with the ignition on.
- **Set Condition:**
  An attempt to program/write to the internal EEPROM failed, Also checks at powerdown. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. SCAN TOOL DISPLAYS A WRITE FAILURE

With a scan tool, perform the SRI Memory Test.

**Does scan tool display Write Failure?**

**Yes** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 2

### 2. SCAN TOOL DISPLAYS A WRITE REFUSED

With the a scan tool, perform the SRI Memory Test.

**Does the scan tool display Write Refused?**

**Yes** >> Go To 3

**No** >> Go To 4

### 3. PCM REFUSED 2ND TEST

With a scan tool, perform the SRI Memory Test a third time.

**NOTE: Retest the SRI Memory two more times.**

**Does the scan tool display Write Refused again?**

**Yes** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Test Complete.

### 4. SCAN TOOL DISPLAYS SRI MILEAGE INVALID

With a scan tool, perform the SRI Memory Test.

**Does the scan tool display SRI Mileage Invalid?**

**Yes** >> Update the mileage and retest the SRI Memory.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. COMPARE SRI MILEAGE WITH ODOMETER

Compare the SRI Mileage stored with the Instrument Panel Odometer.

**Is the mileage within the specified range displayed on the scan tool?**

**Yes** >> Test Complete.

**No** >> Update the mileage and retest the SRI Memory.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P1697-EMR (SRI) MILEAGE NOT STORED

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Continuously with the ignition on.
- **Set Condition:**
  An attempt to program/write to the internal EEPROM failed, Also checks at powerdown. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. SCAN TOOL DISPLAYS A WRITE FAILURE

With a scan tool, perform the SRI Memory Test.

**Does scan tool display Write Failure?**

**Yes** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 2

### 2. SCAN TOOL DISPLAYS A WRITE REFUSED

With the a scan tool, perform the SRI Memory Test.

**Does the scan tool display Write Refused?**

**Yes** >> Go To 3

**No** >> Go To 4

### 3. PCM REFUSED 2ND TEST

With a scan tool, perform the SRI Memory Test a third time.

**NOTE: Retest the SRI Memory two more times.**

**Does the scan tool display Write Refused again?**

**Yes** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Test Complete.

### 4. SCAN TOOL DISPLAYS SRI MILEAGE INVALID

With a scan tool, perform the SRI Memory Test.

**Does the scan tool display SRI Mileage Invalid?**

**Yes** >> Update the mileage and retest the SRI Memory.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. COMPARE SRI MILEAGE WITH ODOMETER

Compare the SRI Mileage stored with the Instrument Panel Odometer.

**Is the mileage within the specified range displayed on the scan tool?**

**Yes** >> Test Complete.

**No** >> Update the mileage and retest the SRI Memory.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

# P2074-MANIFOLD PRESSURE/THROTTLE POSITION CORRELATION

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  During all drive modes
- **Set Condition:**
  If vacuum drops below 1.5″Hg with engine RPM greater than 2000 RPM and closed throttle. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| VACUUM LEAK |
| RESISTANCE IN THE (F856) 5-VOLT SUPPLY CIRCUIT |
| (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| RESISTANCE IN THE (K1) MAP SIGNAL CIRCUIT |
| (K1) MAP SIGNAL CIRCUIT SHORTED TO GROUND |
| RESISTANCE IN THE (F855) 5-VOLT SUPPLY CIRCUIT |
| (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| RESISTANCE IN THE (K22) TP SENSOR NO.1 SIGNAL CIRCUIT |
| (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO GROUND |
| RESISTANCE IN THE (K900) SENSOR GROUND CIRCUIT |
| MAP SENSOR |
| THROTTLE POSITION SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: Diagnose any TP Sensor or MAP Sensor component DTCs before continuing.**

**NOTE: If the P0501 - No Vehicle Speed Signal is set long with this DTC, refer to the P0501 diagnostics before continuing.**

**NOTE: The throttle plate and linkage should be free from binding and carbon build up.**

**NOTE: Make sure the throttle plate is at the idle position.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 2. VACUUM LEAK

**NOTE: This code is enabled on engines with a plastic intake manifold and is intended to shut down the engine if a large crack occurs.**

**NOTE: A large vacuum leak is most likely the cause of this DTC.**

Inspect the Intake Manifold for leaks and cracks.

Inspect the Power Brake Booster for any vacuum leaks.

Inspect the PCV system for proper operation and vacuum leaks.

Inspect the throttle plate to see if it is bent and will close entirely, if it is bent it may need to be replaced.

Inspect the MAP Sensor for proper installation.

Verify the engine is free from any mechanical failures.

**Were any vacuum leaks found?**

**Yes** >> Repair the vacuum leak as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. MAP SENSOR OPERATION

Start the engine.

With a scan tool, monitor the MAP Sensor voltage.

Snap the throttle.

**Does the MAP Sensor voltage vary from below 2.0 volts at idle to above 3.5 volts at wide open throttle?**

**Yes** >> Go To 4

**No** >> Go To 11

## 4. TP SENSOR OPERATION

Ignition on, engine not running.

With a scan tool, monitor the TP Sensor voltage while slowly pressing the throttle pedal from closed to wide open throttle.

**Does voltage start at approximately 0.8 of a volt and go above 3.5 volts with a smooth transition?**

**Yes** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. EXCESSIVE RESISTANCE IN THE (F855) 5-VOLT SUPPLY CIRCUIT

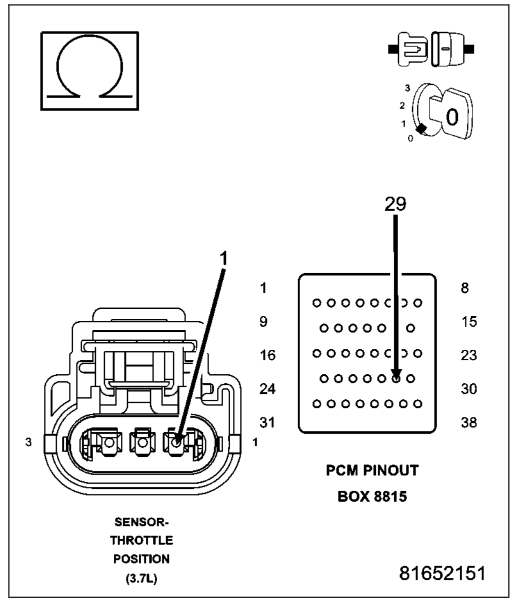
Turn the ignition off.

Disconnect the TP Sensor harness connector.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F855) 5-volt Supply circuit from the TP Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

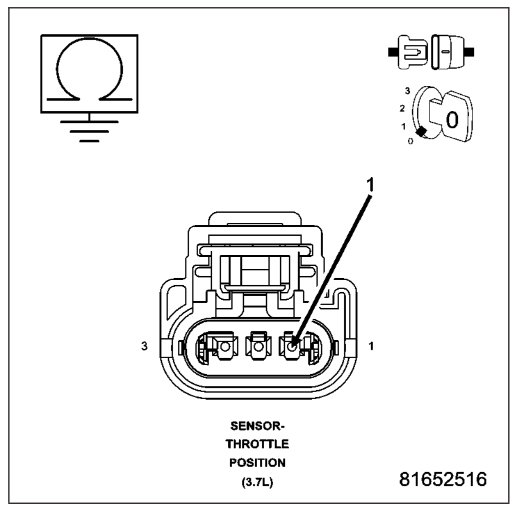
**Yes** >> Go To 6

**No** >> Repair the excessive resistance in the (F855) 5-volt Supply circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and (F855) 5-volt Supply circuit in the TP Sensor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F855) 5-volt Supply circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

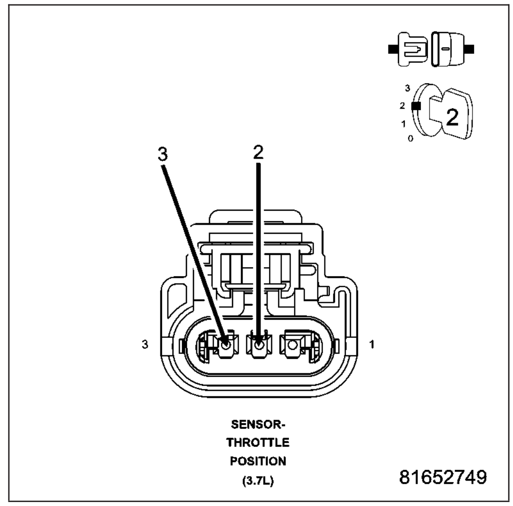
## 7. THROTTLE POSITION SENSOR

Connect the C2 PCM harness connector.

Ignition on, engine not running.

With a scan tool, monitor the TP Sensor voltage.

Connect a jumper wire between the (K22) TP Sensor No.1 Signal circuit and the (K900) Sensor ground circuit in the Sensor harness connector.



**Does the TP Sensor voltage change from approximately 4.9 volts to below 0.5 of a volt with the jumper wire installed?**

**Yes** >> Replace the Throttle Position Sensor.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

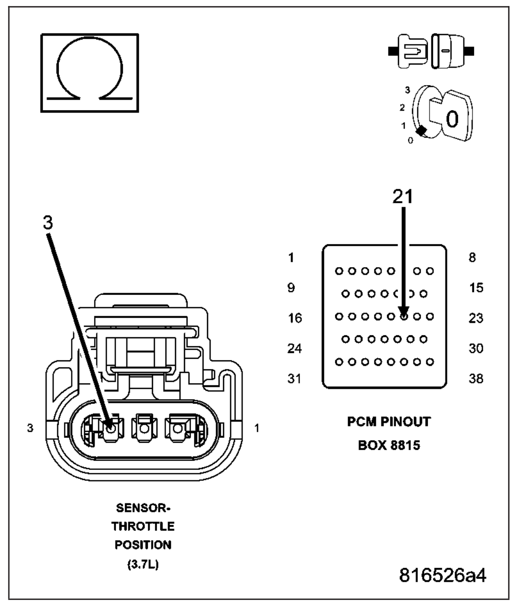
**No** >> Go To 8

**NOTE: Remove the jumper wire before continuing.**

## 8. EXCESSIVE RESISTANCE IN THE (K22) TP NO.1 SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the C2 PCM harness connector.



**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K22) TP Sensor No.1 Signal circuit from the TP Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

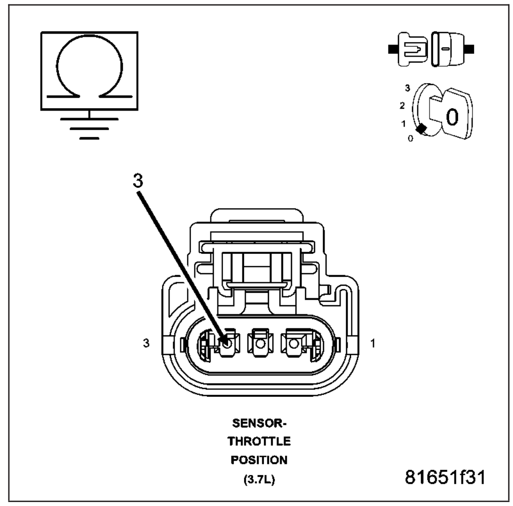
**Yes** >> Go To 9

**No** >> Repair the excessive resistance in the (K22) TP Sensor No.1 Signal circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 9. (K22) TP SENSOR NO.1 SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K22) TP Sensor No.1 Signal circuit in the TP Sensor harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K22) TP Sensor No.1 Signal circuit.

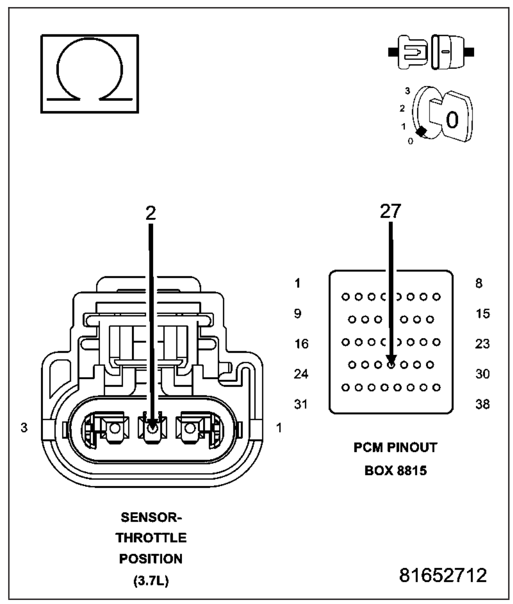
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 10

## 10. EXCESSIVE RESISTANCE IN THE (K900) SENSOR GROUND CIRCUIT

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K900) Sensor ground circuit from the TP Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 17

**No** >> Repair the excessive resistance in the (K900) Sensor ground circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 11. EXCESSIVE RESISTANCE IN THE (F856) 5-VOLT SUPPLY CIRCUIT

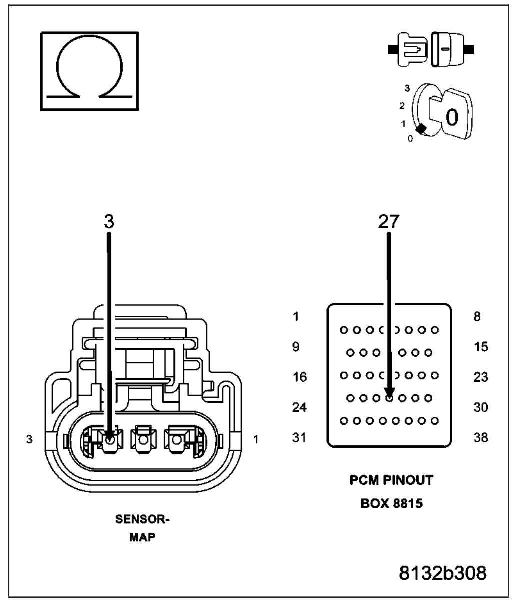
Turn the ignition off.

Disconnect the MAP Sensor harness connector.

Disconnect the C1 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (F856) 5-volt Supply circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

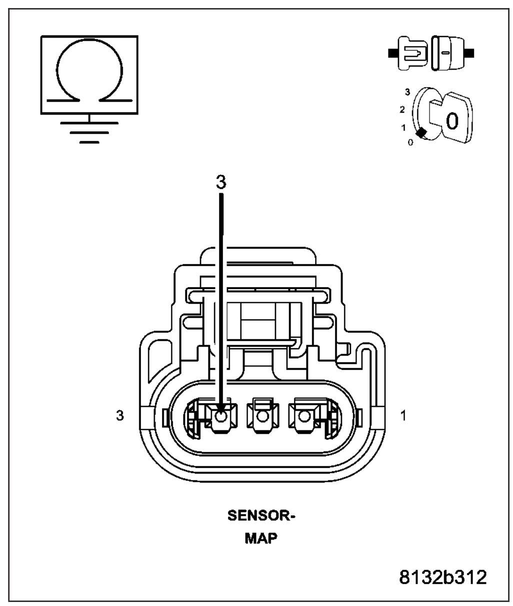
**Yes** >> Go To 12

**No** >> Repair the excessive resistance in the (F856) 5-volt Supply circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 12. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (F856) 5-volt Supply circuit in the MAP Sensor harness connector.



**Is the resistance above 100k ohms?**

**Yes** >> Go To 13

**No** >> Repair the short to ground in the (F856) 5-volt Supply circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 13. MAP SENSOR

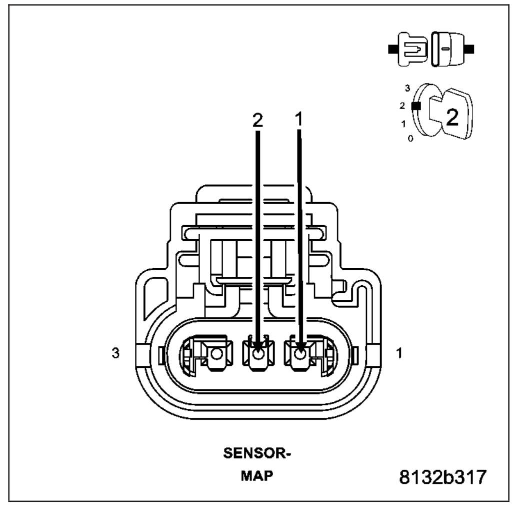
Turn the ignition off.

Connect the C1 PCM harness connector.

Ignition on, engine not running.

With a scan tool, monitor the MAP Sensor voltage.

Connect a jumper wire between the (K1) MAP Signal circuit and the (K900) Sensor ground circuit.



**Does the scan tool display MAP voltage from approximately 4.9 volts to below 0.5 of a volt with the jumper wire installed?**

**Yes** >> Replace the MAP Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

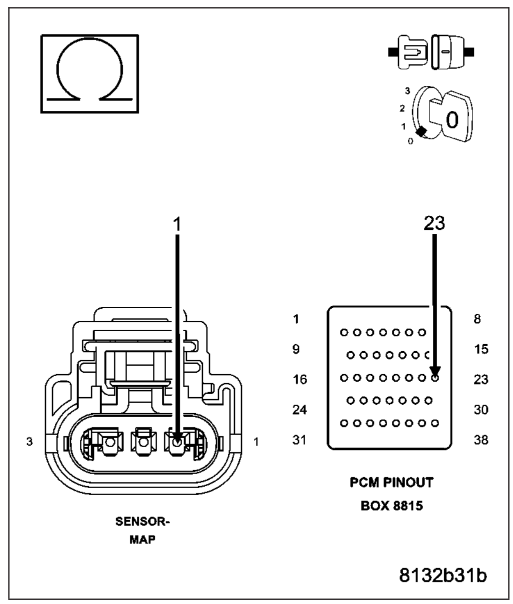
**No** >> Go To 14

**NOTE: Remove the jumper wire before continuing.**

## 14. EXCESSIVE RESISTANCE IN THE (K1) MAP SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the C2 PCM harness connector.



**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K1) MAP Signal circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.

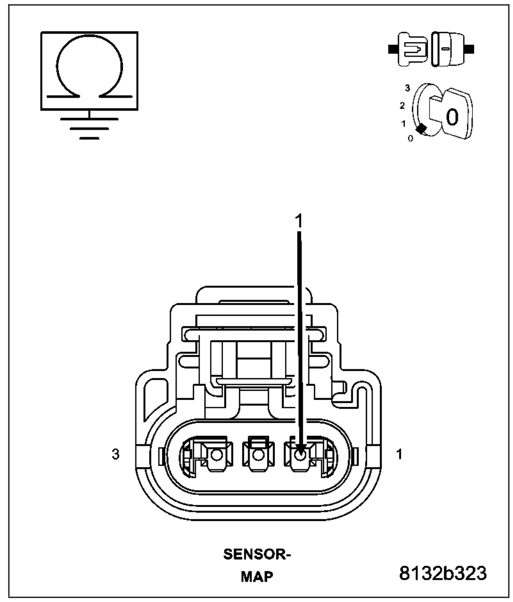
**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 15

**No** >> Repair the excessive resistance in the (K1) MAP Signal circuit
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 15. (K1) MAP SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K1) MAP Signal circuit in the MAP Sensor harness connector.



**Is the resistance below 100 ohms?**

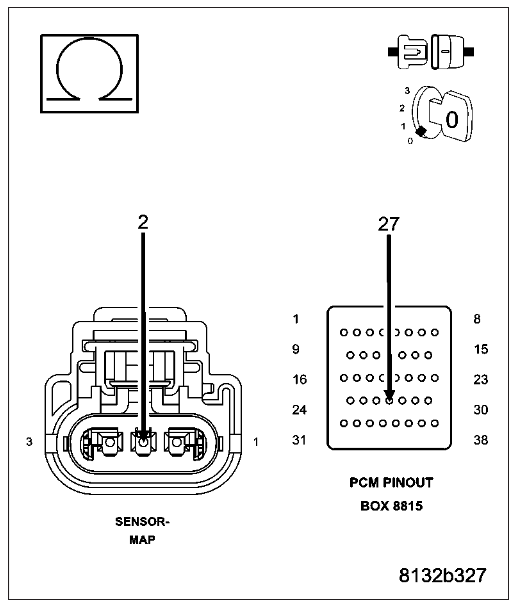
**Yes** >> Repair the short to ground in the (K1) MAP Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 16

## 16. EXCESSIVE RESISTANCE IN THE (K900) SENSOR GROUND CIRCUIT

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K900) Sensor ground circuit from the MAP Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 17

**No** >> Repair the excessive resistance in the (K900) Sensor ground circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 17. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

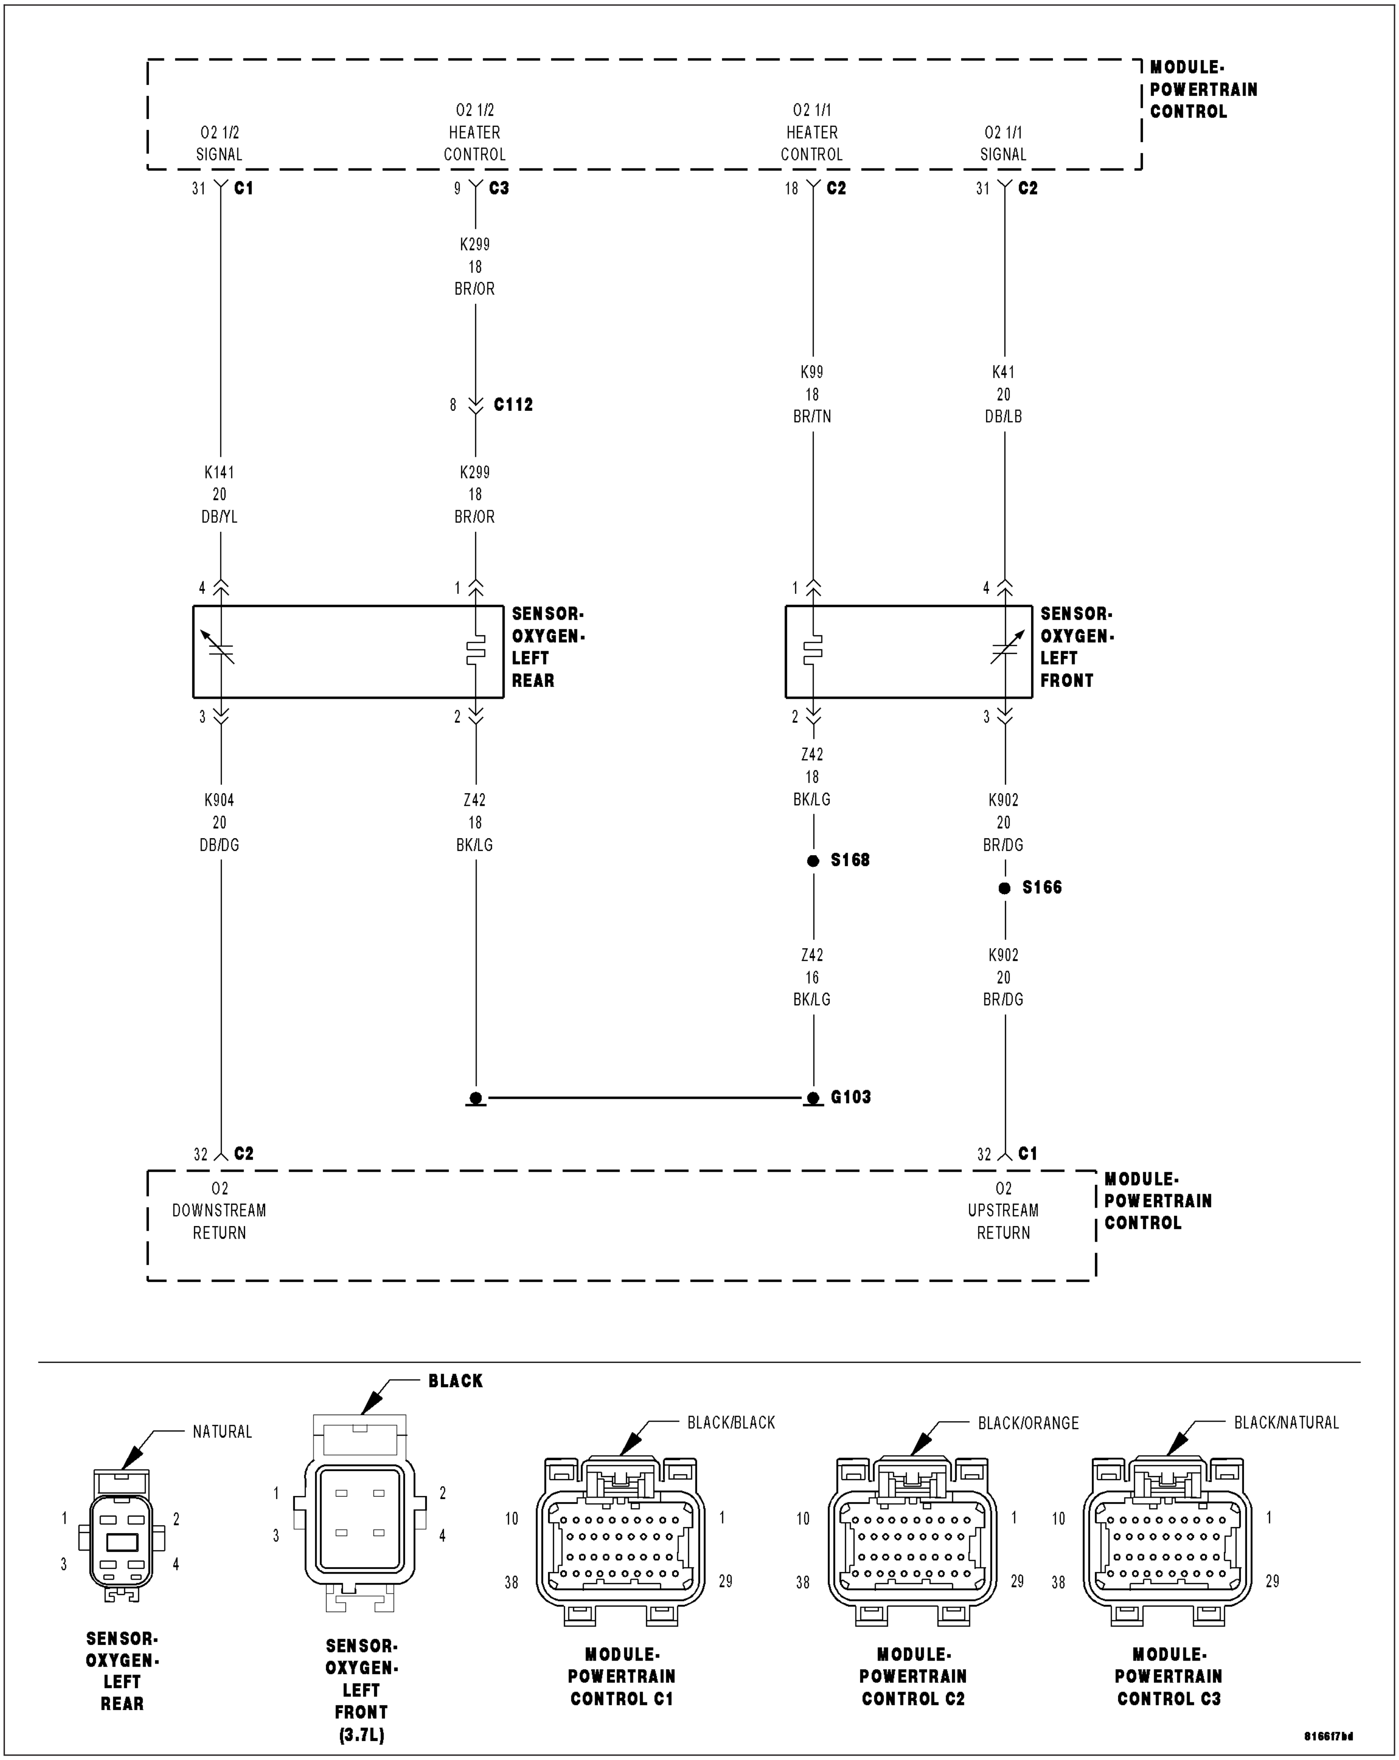
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P2096-DOWNSTREAM FUEL TRIM SYSTEM 1 LEAN



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the engine running in closed loop mode, the ambient/battery temperature above (-7°C) 20°F, altitude below 8500 ft.
- **Set Condition:**
  If the PCM multiplies short term compensation by long term adaptive as well as a purge fuel multiplier and the result is below a certain value for 30 seconds over two trips, a freeze frame is stored, the MIL illuminates and a trouble code is stored. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| EXHAUST LEAK |
| ENGINE MECHANICAL PROBLEM |
| 1/2 O2 SENSOR |
| (K141) O2 SENSOR 1/2 SIGNAL CIRCUIT |
| (K299) O2 1/2 HEATER CONTROL CIRCUIT |
| (K904) O2 DOWNSTREAM RETURN CIRCUIT |
| FUEL CONTAMINATION |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: Check the vehicle repair history. If the 1/2 O2 has been replace make sure that the O2 sensor was properly installed and meets OEM specification.**

**NOTE: Check for contaminants that may have damaged the O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. EXHAUST LEAK

Turn the ignition off.

**WARNING: To avoid personal injury from the exhaust system being hot, allow the exhaust to cool down to a safe temperature before performing a physical inspection. Failure to follow these instructions can result in personal injury or death.**

Visually and Physically inspect the for holes, cracks, and blockage in the exhaust system.

**Is the exhaust system is good condition?**

**Yes** >> Go To 3

**No** >> Repair or Replace as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. ENGINE MECHANICAL PROBLEM

Check for any of the following conditions/mechanical problems.

AIR INDUCTION SYSTEM - must be free from leaks

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

FUEL INJECTOR - plugged or restricted injector; control wire not connected to correct injector

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. O2 SENSOR

Ignition on, engine not running.

Disconnect the 1/2 O2 Sensor harness connector.

With the scan tool, monitor the 1/2 O2 Sensor voltage.

The O2 Sensor voltage should read 5.0 volts on the scan tool with the connector disconnected.

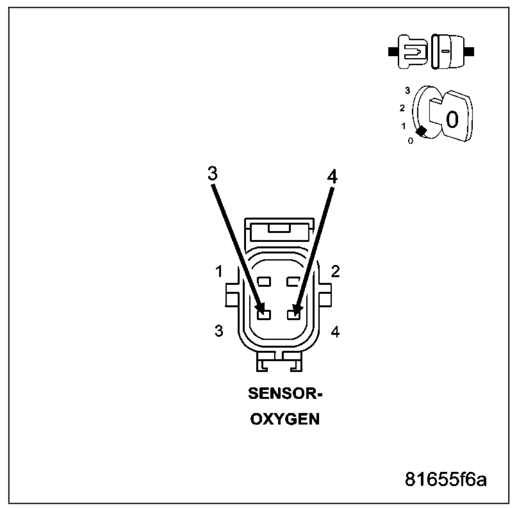
Using a jumper wire, jump the (K141) O2 Sensor 1/2 Signal circuit to the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**NOTE: The voltage should drop from 5.0 volts to 2.5 volts with the jumper wire in place.**

**Did the O2 Sensor volts change from 5.0 volts to 2.5 volts?**

**Yes** >> Replace the O2 Sensor
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5



## 5. (K141) O2 SENSOR 1/2 SIGNAL CIRCUIT

Remove the jump wire.

Ignition on, engine not running.

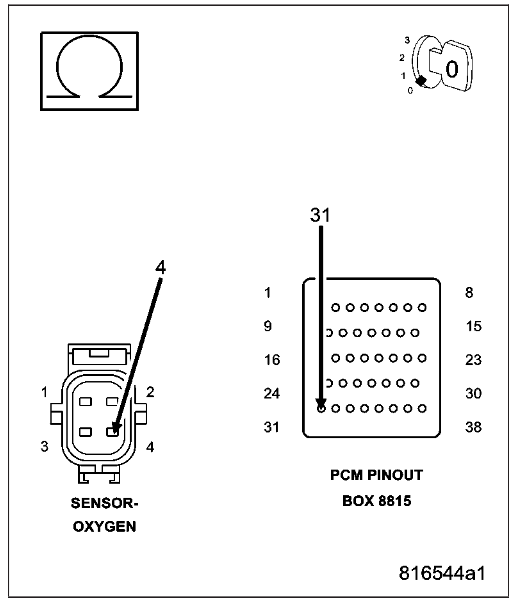
With the scan tool, monitor the 1/2 O2 Sensor voltage.

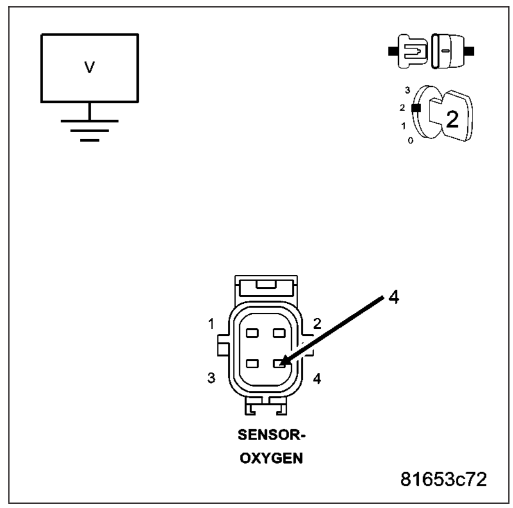
**Is the voltage above 4.8 volts?**

**Yes** >> Go To 6

**No** >> Check the (K141) O2 Sensor 1/2 Signal circuit for an open or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)





## 6. (K299) O2 SENSOR 1/2 HEATER CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

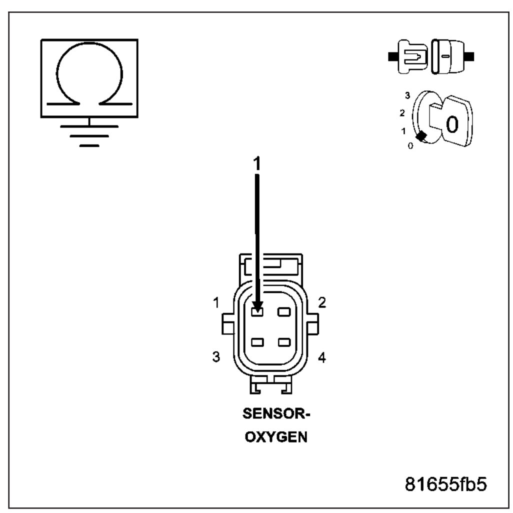
Measure the resistance between ground and the (K299) O2 Sensor 1/2 Heater Control circuit from the O2 Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short to ground in the (K299) O2 Sensor 1/2 Heater Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7



## 7. (K904) O2 DOWNSTREAM RETURN CIRCUIT

Measure the voltage on the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

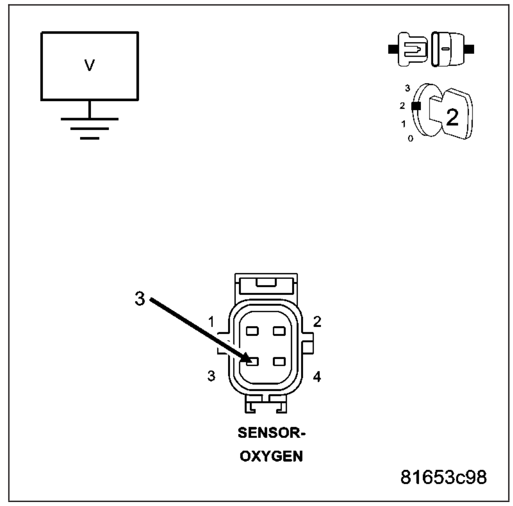
**Is the voltage at 2.5 volts?**

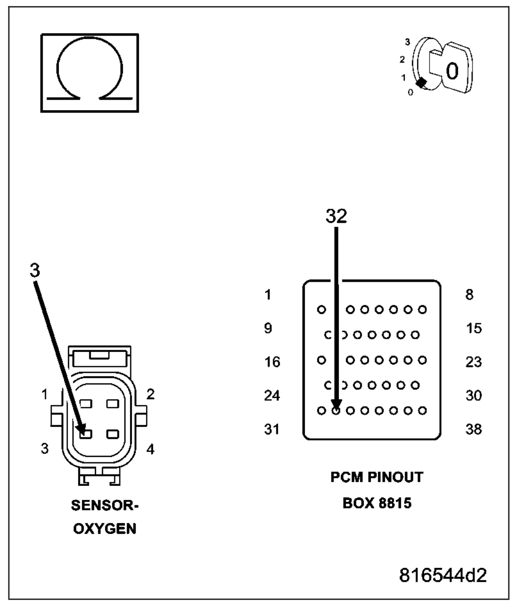
**Yes** >> Check the fuel system for contaminants.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

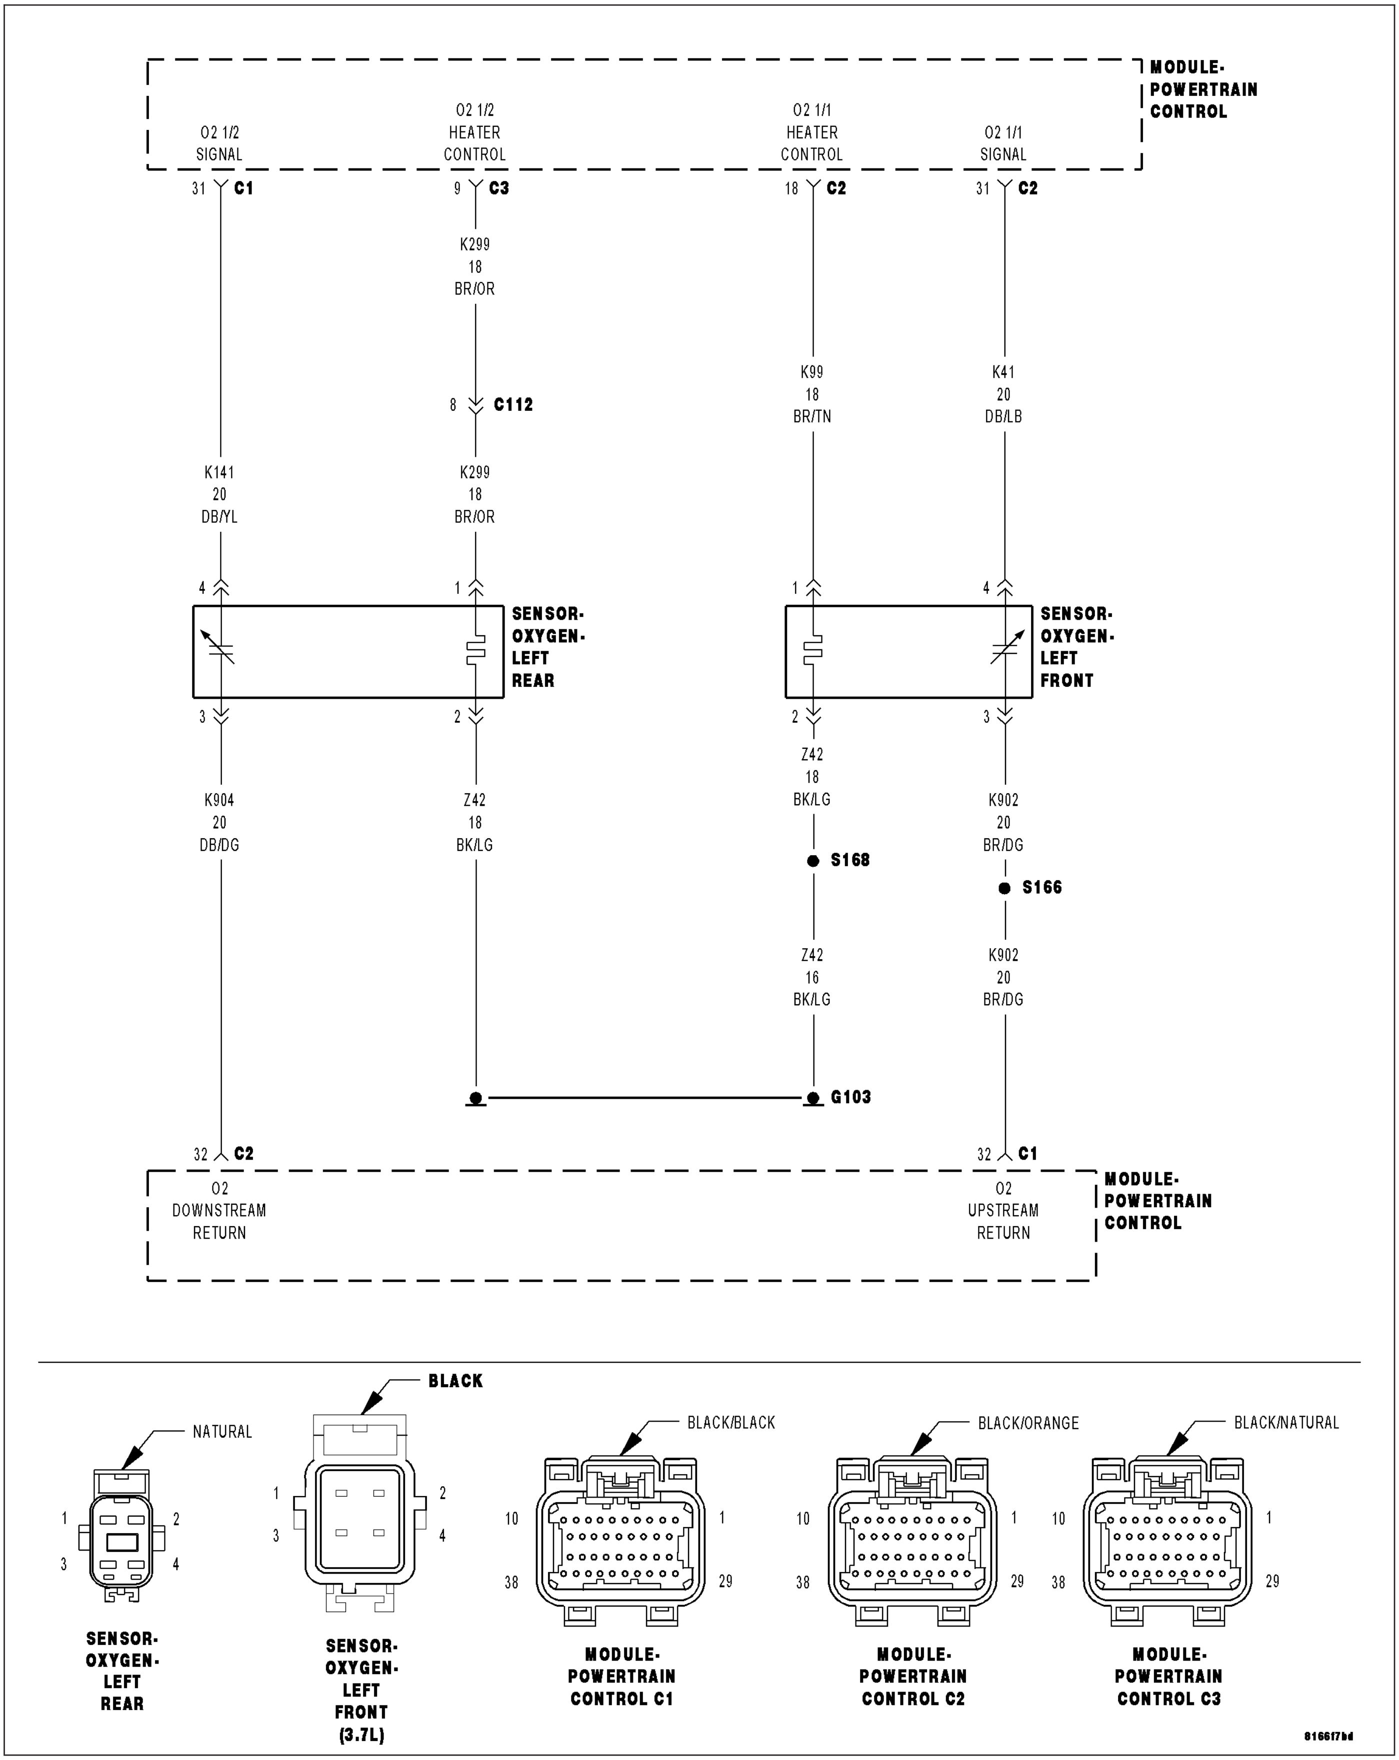
**No** >> Check the (K904) O2 Downstream Return circuit for a short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)





## P2097-DOWNSTREAM FUEL TRIM SYSTEM 1 RICH



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the engine running in closed loop mode, the ambient/battery temperature above (-7°C) 20°F, altitude below 8500 ft.
- **Set Condition:**
  If the PCM multiplies short term compensation by long term adaptive as well as a purge fuel multiplier and the result is below a certain value for 30 seconds over two trips, a freeze frame is stored, the MIL illuminates, and a trouble code is stored. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| EXHAUST LEAK |
| ENGINE MECHANICAL PROBLEM |
| 1/2 O2 SENSOR |
| (K141) O2 SENSOR 1/2 SIGNAL CIRCUIT |
| (K299) O2 HEATER 1/2 CONTROL CIRCUIT |
| (K904) O2 DOWNSTREAM RETURN CIRCUIT |
| FUEL CONTAMINATION |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: Check the vehicle repair history. If the 1/2 O2 has been replace make sure that the O2 sensor was properly installed and meets OEM specification.**

**NOTE: Check for contaminants that may have damaged the O2 Sensor: contaminated fuel, unapproved silicone, oil, and coolant.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. EXHAUST LEAK

Turn the ignition off.

**WARNING: To avoid personal injury from the exhaust system being hot, allow the exhaust to cool down to a safe temperature before performing a physical inspection. Failure to follow these instructions can result in personal injury or death.**

Visually and Physically inspect the for holes, cracks, and blockage in the exhaust system.

**Is the exhaust system is good condition?**

**Yes** >> Go To 3

**No** >> Repair or Replace as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. ENGINE MECHANICAL PROBLEM

Check for any of the following conditions/mechanical problems

AIR INDUCTION SYSTEM - must be free from leaks.

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

FUEL INJECTOR - plugged or restricted injector; control wire not connected to correct injector

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. O2 SENSOR

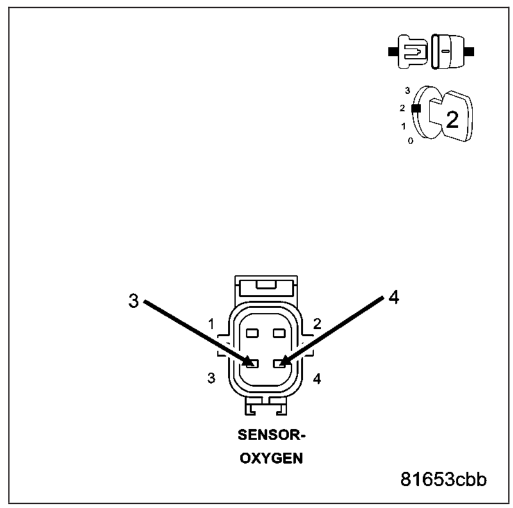
Ignition on, engine not running.

Disconnect the 1/2 O2 Sensor harness connector.

With the scan tool, monitor the 1/2 O2 Sensor voltage.

The O2 Sensor voltage should read 5.0 volts on the scan tool with the connector disconnected.

Using a jumper wire, jump the (K141) O2 Sensor 1/2 Signal circuit to the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.



**NOTE: The voltage should drop from 5.0 volts to 2.5 volts with the jumper wire in place.**

**Did the O2 Sensor volts change from 5.0 volts to 2.5 volts?**

**Yes** >> Replace the O2 Sensor
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. (K141) O2 SENSOR 1/2 SIGNAL CIRCUIT

Remove the jump wire.

Ignition on, engine not running.

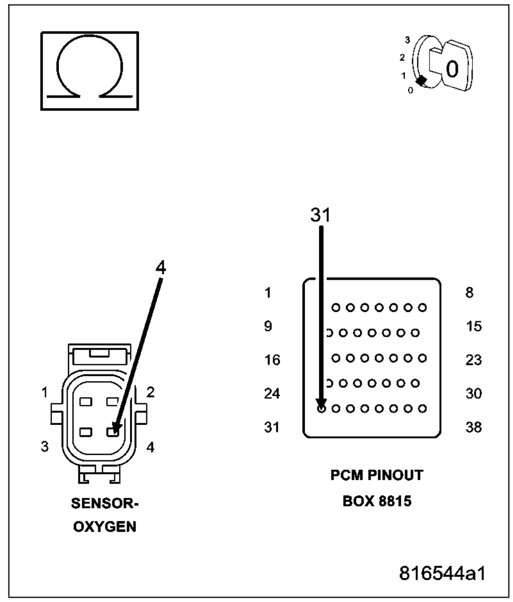
With the scan tool, monitor the 1/2 O2 Sensor voltage.

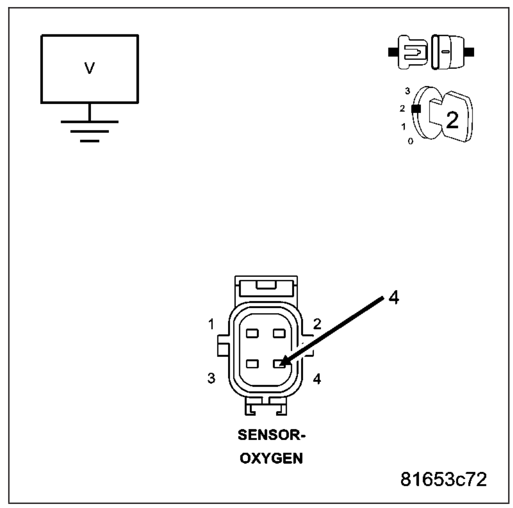
**Is the voltage above 4.8 volts?**

**Yes** >> Go To 6

**No** >> Check the (K141) O2 Sensor 1/2 Signal circuit for an open or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

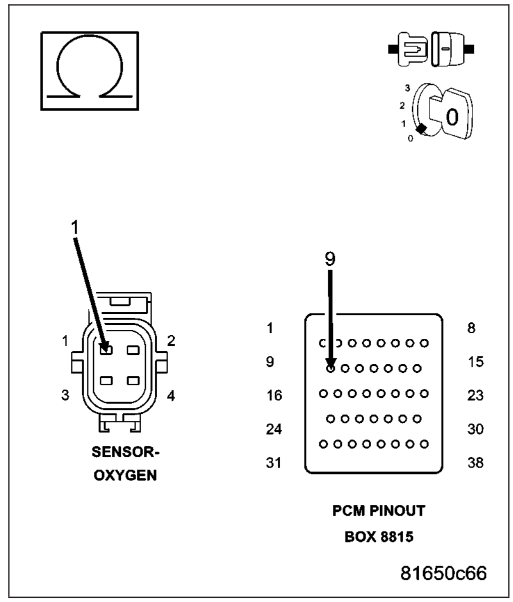




## 6. (K299) O2 SENSOR 1/2 HEATER CONTROL CIRCUIT OPEN

Turn the ignition off.

Measure the resistance of the (K299) O2 Sensor 1/2 Heater Control circuit from the O2 Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

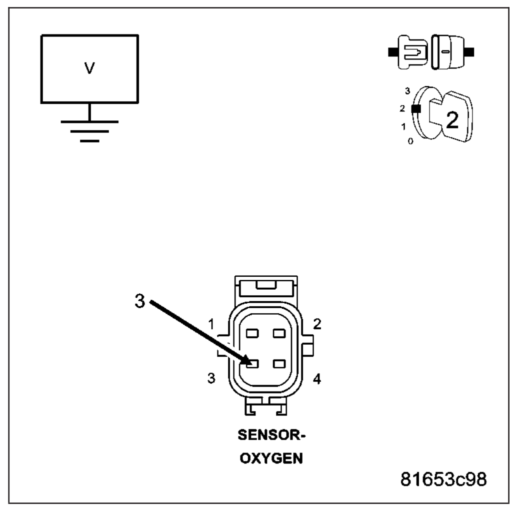
**Yes** >> Go To 7

**No** >> Repair the open in the (K299) O2 Sensor 1/2 Heater Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. (K904) O2 DOWN STREAM RETURN CIRCUIT

Measure the voltage on the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.



**Is the voltage at 2.5 volts?**

**Yes** >> Check the fuel system for contaminants.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Check the (K904) O2 Downstream Return circuit for a short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

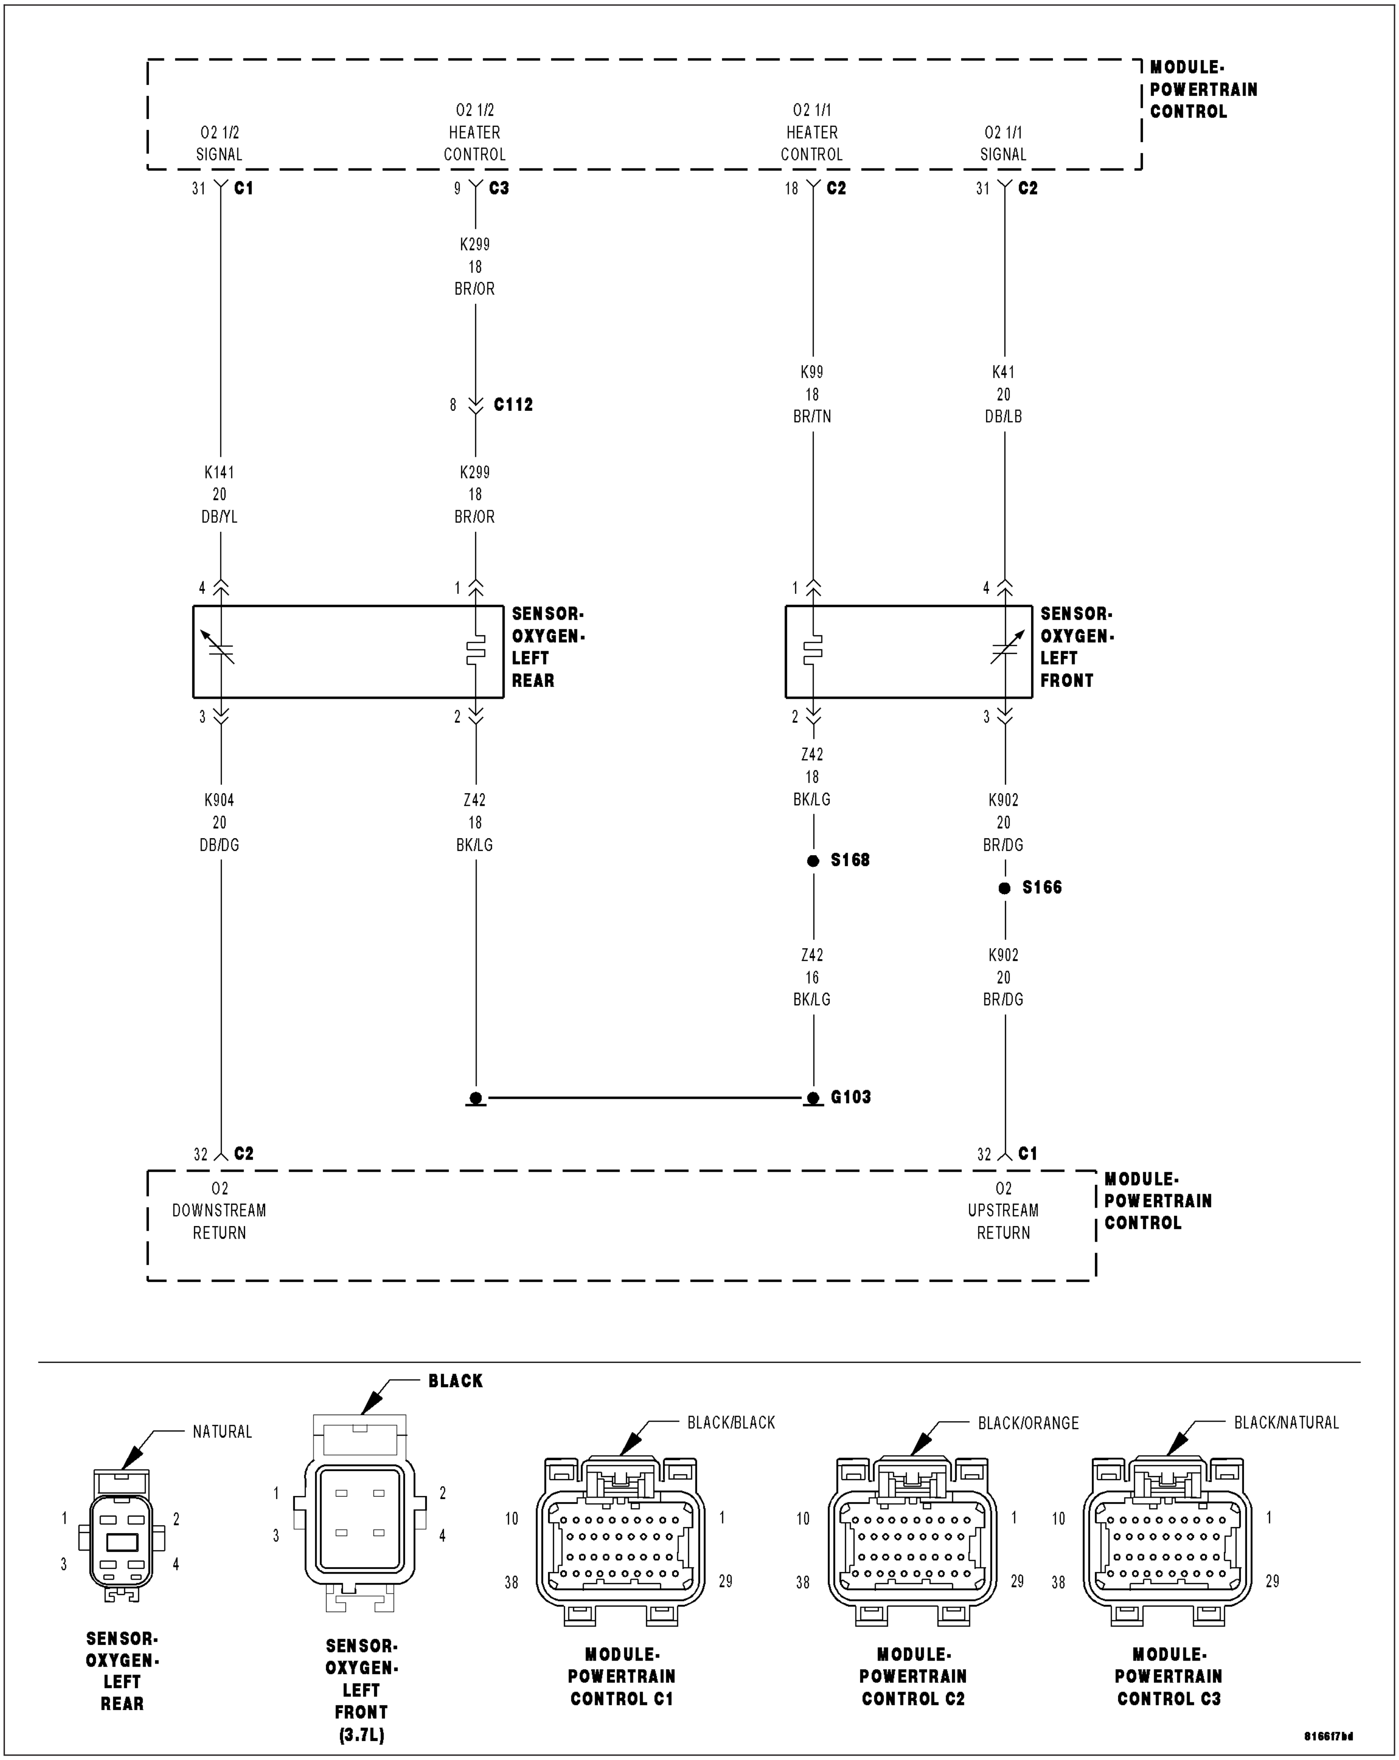
## P2098-DOWNSTREAM FUEL TRIM SYSTEM 2 LEAN



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the engine running in closed loop mode, the ambient/battery temperature above (-7°C) 20°F, altitude below 8500 ft and fuel level greater than 15%.
- **Set Condition:**
  If the PCM multiplies short term compensation by long term adaptive and a certain percentage is exceeded for two trips, a freeze frame is stored, the MIL illuminates, and a trouble code is stored. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| EXHAUST LEAK |
| ENGINE MECHANICAL PROBLEM |
| 2/2 O2 SENSOR |
| (K243) O2 2/2 SIGNAL CIRCUIT |
| (K399) O2 HEATER 2/2 CONTROL CIRCUIT |
| (K904) O2 DOWNSTREAM RETURN CIRCUIT |
| FUEL CONTAMINATION |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: Check the vehicle repair history. If the 2/2 O2 has been replace make sure that the O2 sensor was properly installed and meets OEM specification.**

**NOTE: Check for contaminants that may have damaged the O2 Sensor: contaminated fuel, unapproved silicone, oil, and coolant.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. EXHAUST LEAK

Turn the ignition off.

**WARNING: To avoid personal injury from the exhaust system being hot, allow the exhaust to cool down to a safe temperature before performing a physical inspection. Failure to follow these instructions can result in personal injury or death.**

Visually and Physically inspect the for holes, cracks, and blockage in the exhaust system.

**Is the exhaust system is good condition?**

**Yes** >> Go To 3

**No** >> Repair or Replace as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. ENGINE MECHANICAL PROBLEM

Check for any of the following conditions/mechanical problems.

AIR INDUCTION SYSTEM - must be free from leaks

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

FUEL INJECTOR - plugged or restricted injector; control wire not connected to correct injector

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. O2 SENSOR

Ignition on, engine not running.

Disconnect the 2/2 O2 Sensor harness connector.

With the scan tool, monitor the 2/2 O2 Sensor voltage.

The O2 Sensor voltage should read 5.0 volts on the scan tool with the connector disconnected.

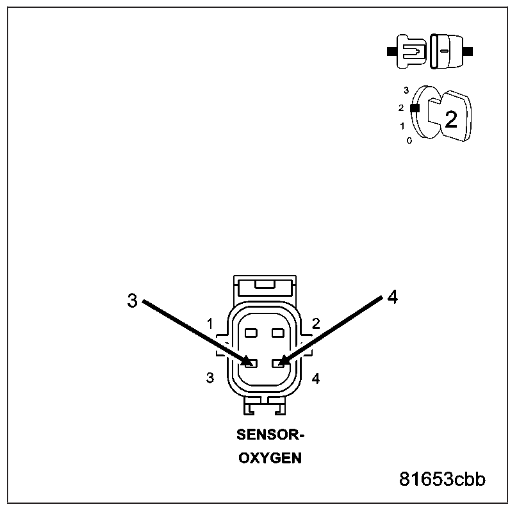
Using a jumper wire, jump the (K243) O2 Sensor 2/2 Signal circuit to the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**NOTE: The voltage should drop from 5.0 volts to 2.5 volts with the jumper wire in place.**

**Did the O2 Sensor volts change from 5.0 volts to 2.5 volts?**

**Yes** >> Replace the O2 Sensor
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

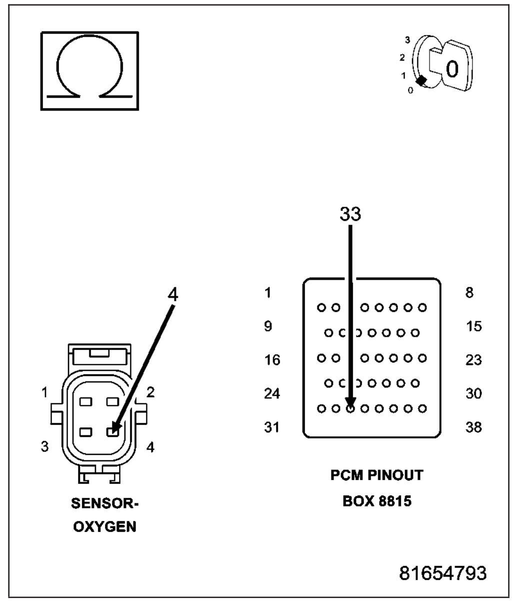


## 5. (K243) O2 SENSOR 2/2 SIGNAL CIRCUIT

Remove the jump wire.

Ignition on, engine not running.

With the scan tool, monitor the O2 Sensor voltage.

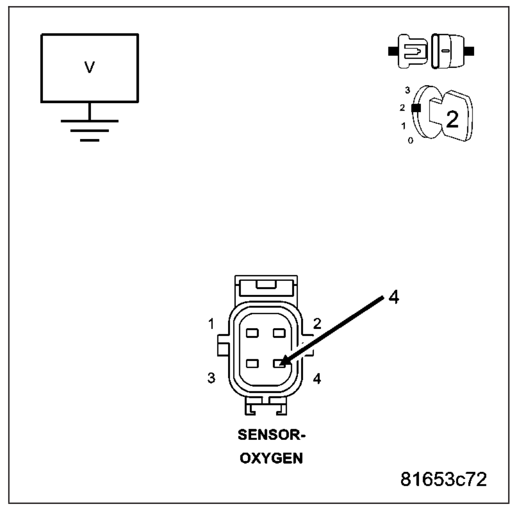


**Is the voltage above 4.8 volts?**

**Yes** >> Go To 6

**No** >> Check the (K243) O2 Sensor 2/2 Signal circuit for a open or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

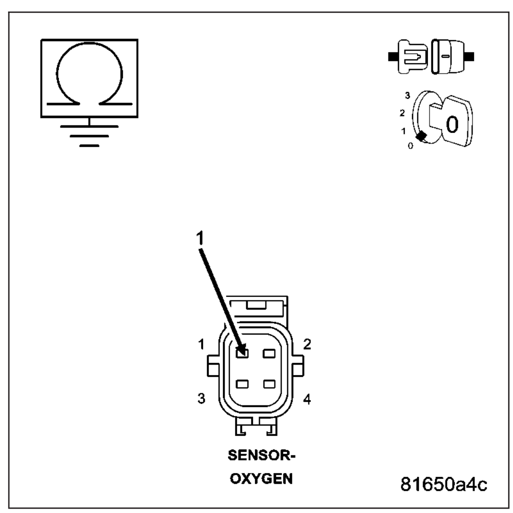
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)



## 6. (K399) O2 SENSOR 2/2 HEATER CONTROL CIRCUIT SHORT TO GROUND

Turn the ignition off.

Measure the resistance between ground and the (K399) O2 Sensor 2/2 Heater Control circuit in the O2 Sensor harness connector.



**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short to ground in the (K399) O2 Sensor 2/2 Heater Control circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. (K904) O2 DOWNSTREAM RETURN CIRCUIT

Measure the voltage on the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

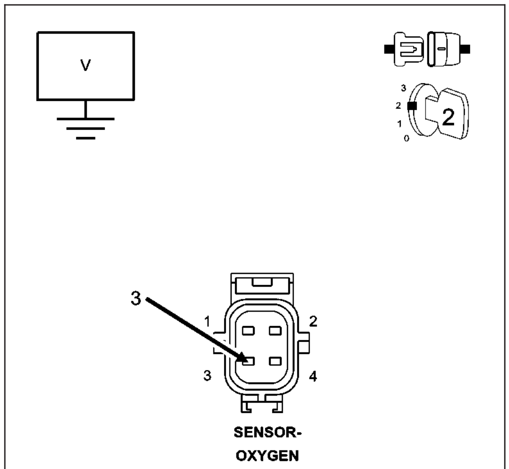
**Is the voltage at 2.5 volts?**

**Yes** >> Check the fuel system for contaminants.

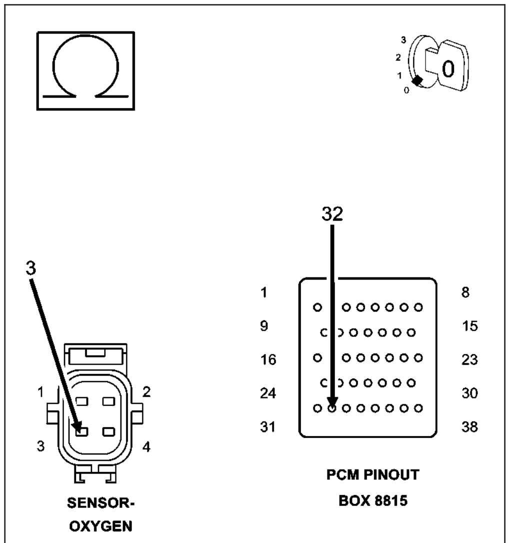
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Check the (K904) O2 Downstream Return circuit for a short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

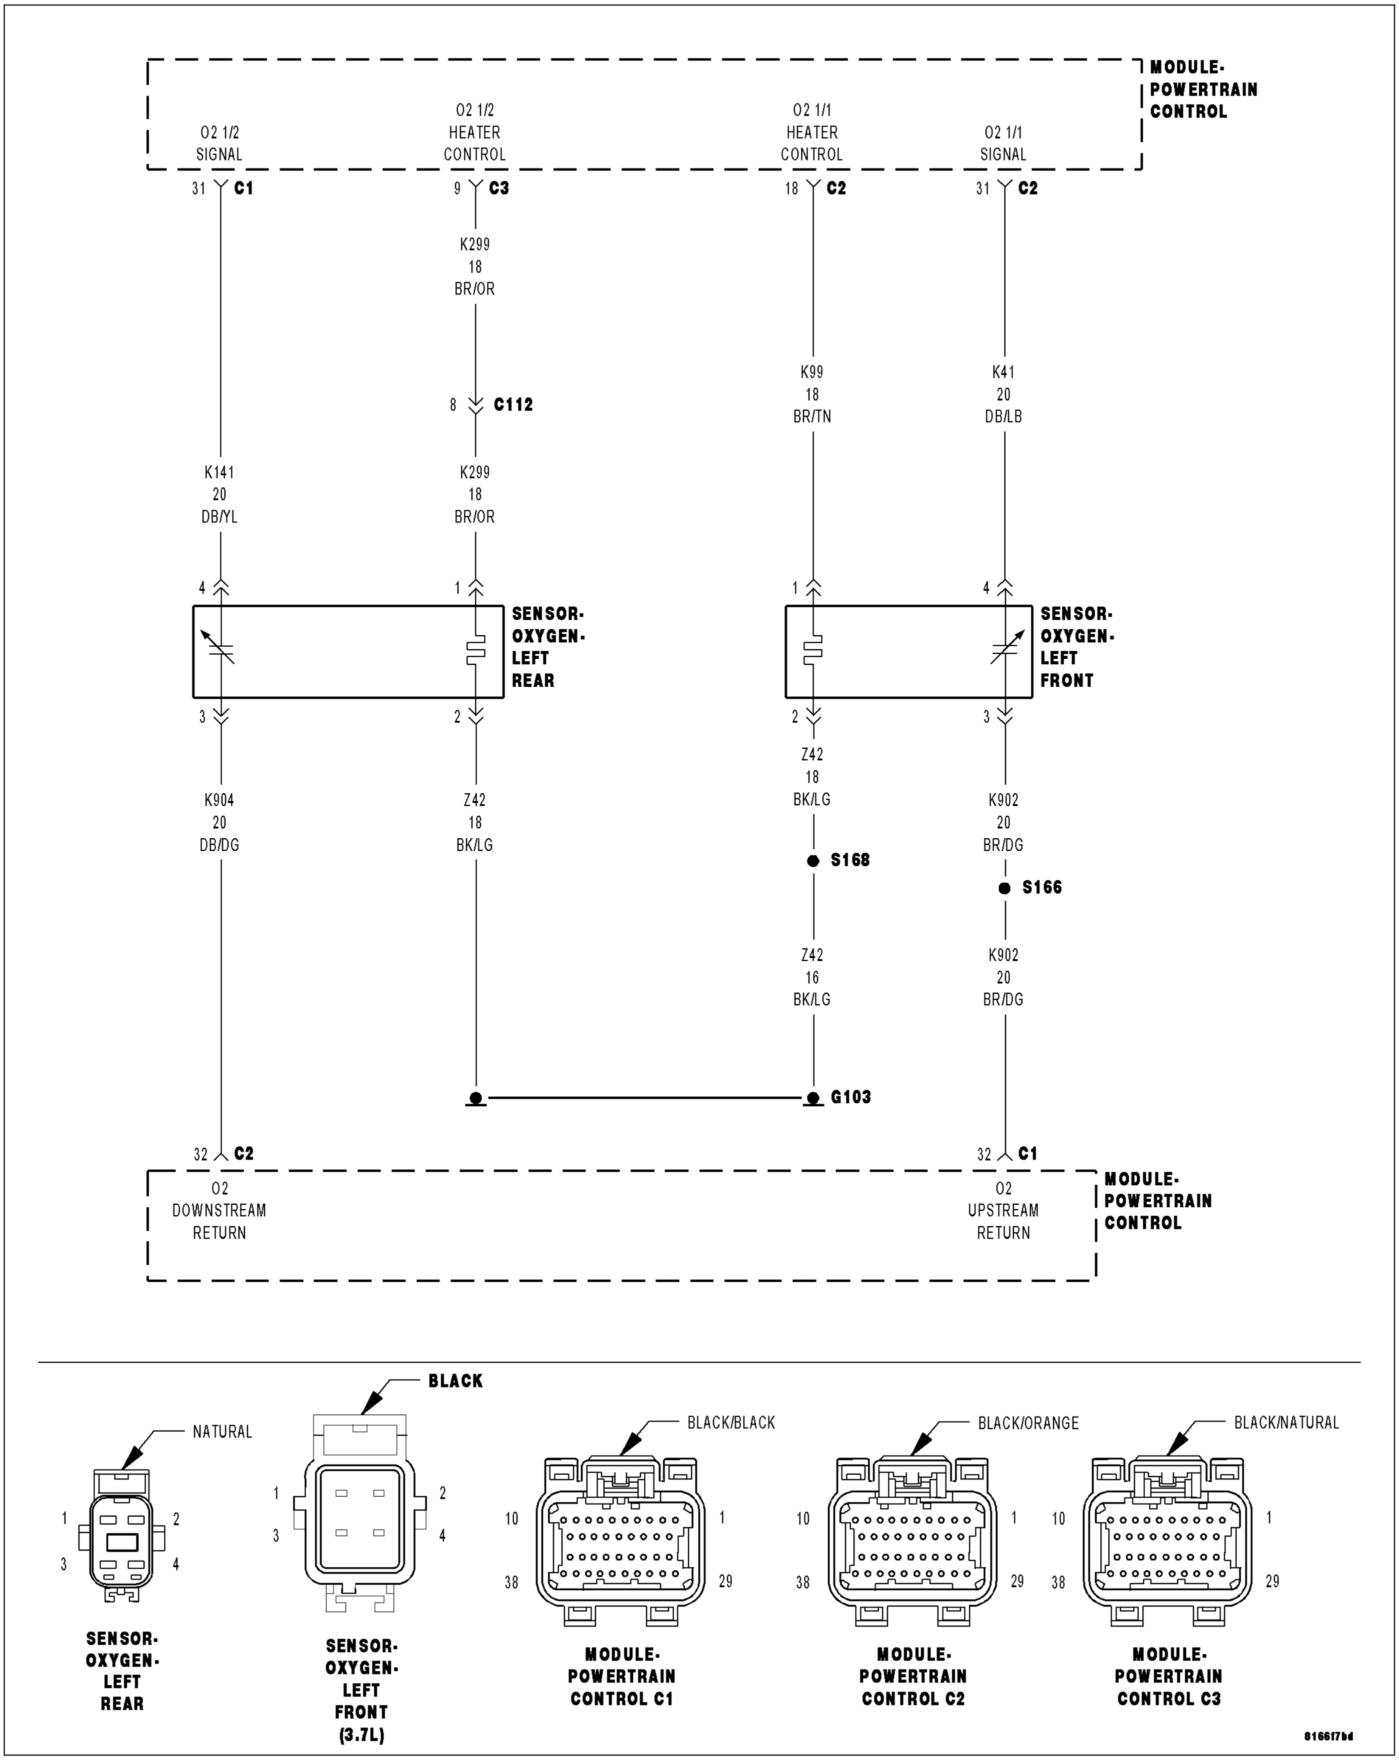


81653c98



816544d2

## P2099-DOWNSTREAM FUEL TRIM SYSTEM 2 RICH



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the engine running in closed loop mode, the ambient/battery temperature above (-7°C) 20°F, altitude below 8500 ft.
- **Set Condition:**
  If the PCM multiplies short term compensation by long term adaptive as well as a purge fuel multiplier and the result is below a certain value for 30 seconds over two trips, a freeze frame is stored, the MIL illuminates and a trouble code is stored. Two Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
| --- |
| EXHAUST LEAK |
| ENGINE MECHANICAL PROBLEM |
| 2/2 O2 SENSOR |
| (K342) O2 SENSOR 2/2 SIGNAL CIRCUIT |
| (K399) O2 SENSOR 2/2 HEATER CONTROL CIRCUIT |
| (K904) O2 DOWNSTREAM RETURN CIRCUIT |
| FUEL CONTAMINATION |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: Check the vehicle repair history. If the 2/2 O2 has been replace make sure that the O2 sensor was properly installed and meets OEM specification.**

**NOTE: Check for contaminants that may have damaged the O2 Sensor: contaminated fuel, unapproved silicone, oil and coolant.**

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. EXHAUST LEAK

Turn the ignition off.

**WARNING: To avoid personal injury from the exhaust system being hot, allow the exhaust to cool down to a safe temperature before performing a physical inspection. Failure to follow these instructions can result in personal injury or death.**

Visually and Physically inspect the for holes, cracks and blockage in the exhaust system.

**Is the exhaust system is good condition?**

**Yes** >> Go To 3

**No** >> Repair or Replace as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. ENGINE MECHANICAL PROBLEM

Check for any of the following conditions/mechanical problems.

AIR INDUCTION SYSTEM - must be free from leaks

ENGINE VACUUM - must be at least 13 inches in neutral

ENGINE VALVE TIMING - must be within specifications

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks

ENGINE PCV SYSTEM - must flow freely

TORQUE CONVERTER STALL SPEED - must be within specifications

POWER BRAKE BOOSTER - no internal vacuum leaks

FUEL - must be free of contamination

FUEL INJECTOR - plugged or restricted injector; control wire not connected to correct injector

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. O2 SENSOR

Ignition on, engine not running.

Disconnect the 2/2 O2 Sensor harness connector.

With the scan tool, monitor the 2/2 O2 Sensor voltage.

The O2 Sensor voltage should read 5.0 volts on the scan tool with the connector disconnected.

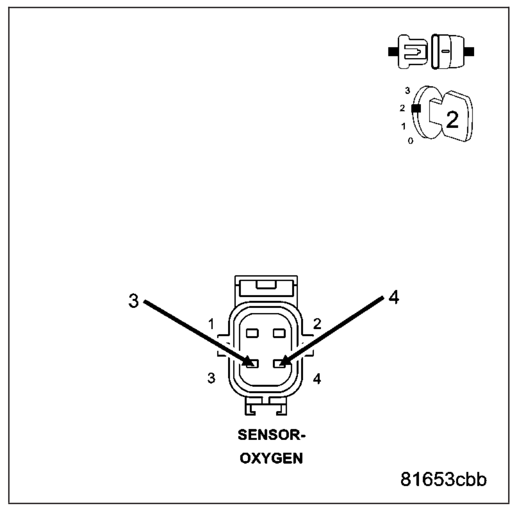
Using a jumper wire, jump the (K243) O2 Signal 2/2 circuit to the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**NOTE: The voltage should drop from 5.0 volts to 2.5 volts with the jumper wire in place.**

**Did the O2 Sensor volts change from 5.0 volts to 2.5 volts?**

**Yes** >> Replace the O2 Sensor
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5



## 5. (K243) O2 SENSOR 2/2 SIGNAL CIRCUIT

Remove the jump wire.

Ignition on, engine not running.

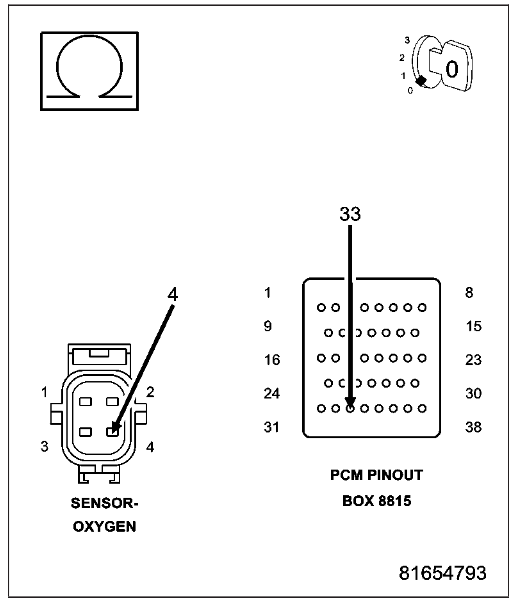
With the scan tool, monitor the 2/2 O2 Sensor voltage.

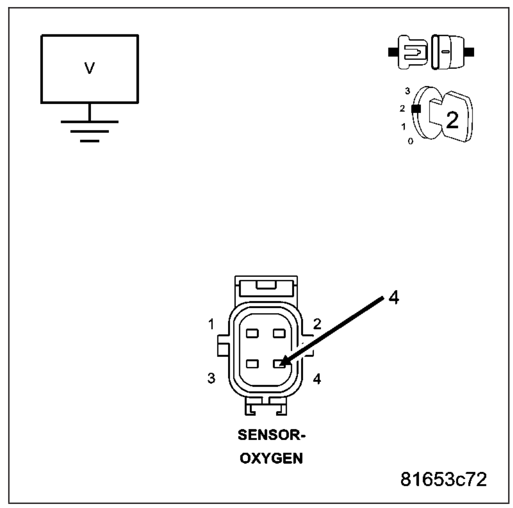
**Is the voltage above 4.8 volts?**

**Yes** >> Check the (K243) O2 Sensor 2/2 Signal circuit for an open or short to battery voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

**No** >> Go To 6

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)





## 6. (K399) O2 SENSOR 2/2 HEATER CONTROL CIRCUIT OPEN

Turn the ignition off.

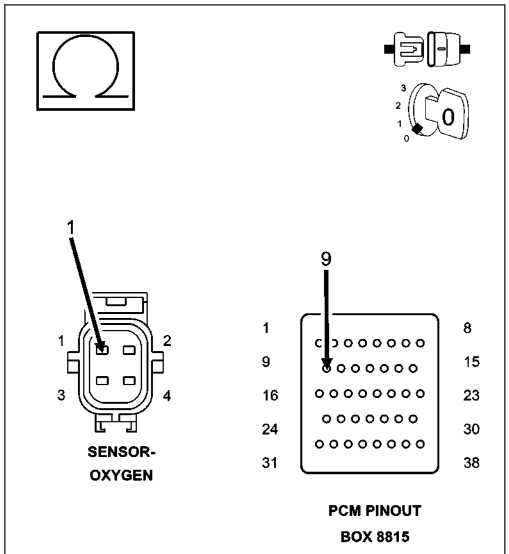
Measure the resistance of the (K399) O2 Sensor 2/2 Heater Control circuit from the O2 Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Repair the open in the (K399) O2 Sensor 2/2 Heater Control circuit.



81650c82

## 7. (K904) O2 DOWNSTREAM RETURN CIRCUIT

Measure the voltage on the (K904) O2 Downstream Return circuit in the O2 Sensor harness connector.

**Is the voltage at 2.5 volts?**

**Yes** >> Check the fuel system for contaminants.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Check the (K904) O2 Downstream Return circuit for a short to ground, open, or short to voltage. Inspect the O2 Sensor connector and the PCM harness connector. If OK, replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P2181-COOLING SYSTEM PERFORMANCE

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on, Engine running, and no ECT DTCs present.
- **Set Condition:**
  PCM recognizes that the ECT has failed its self coherence test. The coolant temp should only change at a certain rate, if this rate is too slow or too fast this fault will set. Two trip fault. Three good trips to clear MIL.

| Possible Causes |
|---|
| LOW COOLANT LEVEL |
| (K2) ECT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE |
| (K2) ECT SIGNAL CIRCUIT OPEN |
| (K900) SENSOR GROUND CIRCUIT OPEN |
| (K2) ECT SIGNAL CIRCUIT SHORTED TO GROUND |
| (K2) ECT SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT |
| THERMOSTAT |
| ECT SENSOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

### Diagnostic Test

#### 1. ACTIVE DTC

Ignition on, engine not running.

**NOTE: If this code sets during extreme ambient temperatures, improper installation of a block heater could be the cause of this DTC.**

With a scan tool, read DTCs.

Diagnose all other ECT and Cooling System codes before continuing.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

#### 2. LOW COOLANT LEVEL

**NOTE: If a Engine Coolant Temperature (ECT) DTC is set along with this code, diagnose the ECT DTC first.**

**NOTE: Inspect the ECT terminals and related PCM terminals. Ensure the terminals are free from corrosion and damage.**

**NOTE: The best way to diagnose this DTC is to allow the vehicle to sit overnight outside in order to have a totally cold soaked engine.**

**NOTE: Extremely cold outside ambient temperatures may have caused this DTC to set.**

**NOTE: Need to make sure that that no Cooling System DTCs are set or changes that would make the warm up much slower or much faster: broken water pump can set this, addition of aftermarket auxiliary cooler can set this DTC.**

**WARNING: Never open the cooling system when the engine is hot. The system is under pressure. Failure to follow these instructions can result in personal injury or death. Allow the engine to cool before opening the cooling system.**

Inspect the coolant system for proper level and condition.

**Is the coolant level and condition OK?**

**Yes** >> Go To 3

**No** >> Inspect the vehicle for a coolant leak and add the necessary amount of coolant.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. THERMOSTAT

**NOTE: This test works best if performed on a cold engine (cold soak).**

Ignition on, engine not running.

With a scan tool, read the Eng Coolant Tmp Deg value. If the engine was allowed to sit overnight (cold soak), the temperature value should be a sensible value that is somewhere close to the ambient temperature.

**NOTE: If engine coolant temperature is above 82°C (180°F), allow the engine to cool until 65°C (150°F) is reached.**

Start the Engine.

During engine warm-up monitor the Eng Coolant Tmp Deg value. The temp deg value change should be a smooth transition from start up to normal operating temp 82°C (180°F). Also monitor the actual coolant temperature with a thermometer.

**NOTE: As the engine warms up to operating temperature, the actual coolant temperature (thermometer reading) and the Eng Coolant Tmp Deg on the scan tool should stay relatively close to each other.**

Using the appropriate service information, determine the proper opening temperature of the thermostat.

**Did the thermostat open at the proper temperature?**

**Yes** >> Go To 4

**No** >> Replace the thermostat.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. ECT SENSOR

Connect a jumper between the (K2) ECT Signal circuit and the (K900) Sensor ground circuit in the ECT Sensor harness connector.

Turn the ignition off.

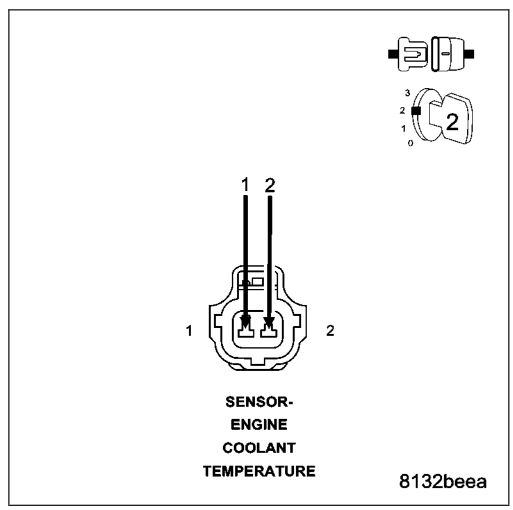
Disconnect the ECT Sensor harness connector.

With a scan tool, read the ECT voltage.

**Is the voltage below 1.0 volt?**

**Yes** >> Replace the ECT Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5



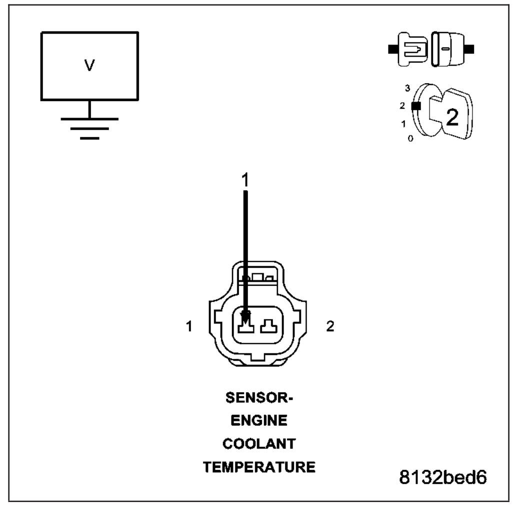
## 5. (K2) ECT SIGNAL CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (K2) ECT Signal circuit in the ECT Sensor harness connector.



**Is the voltage above 5.2 volts?**

**Yes** >> Repair the short to battery voltage in the (K2) ECT Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

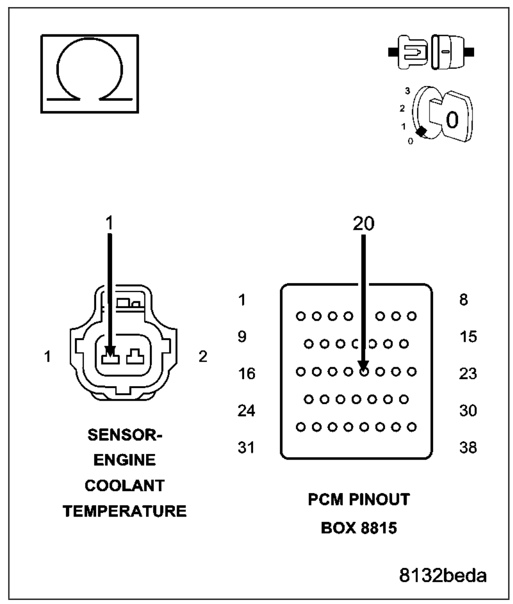
**No** >> Go To 6

## 6. (K2) ECT SIGNAL CIRCUIT OPEN

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K2) ECT Signal circuit from the ECT Sensor harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K2) ECT Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

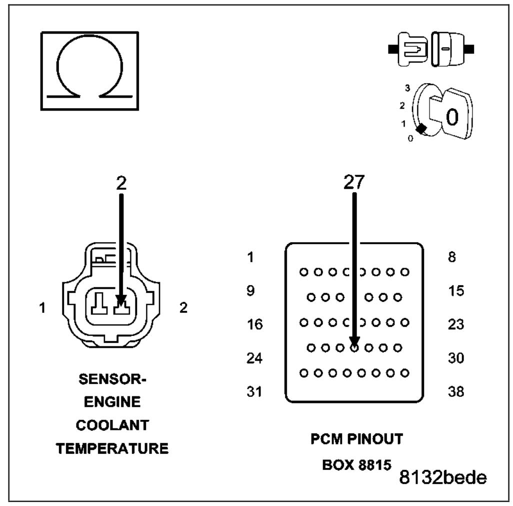
## 7. (K900) SENSOR GROUND CIRCUIT OPEN

Measure the resistance of the (K900) Sensor ground circuit from the ECT Sensor harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 8

**No** >> Repair the open in the (K900) Sensor ground circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)



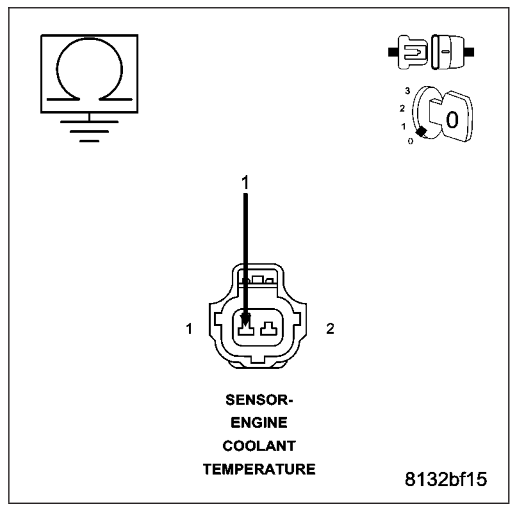
## 8. (K2) ECT SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K2) ECT Signal circuit in the ECT Sensor harness connector.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K2) ECT Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 9



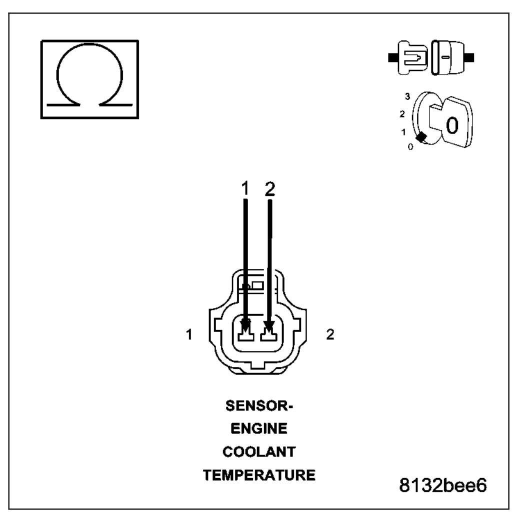
## 9. (K2) ECT SIGNAL CIRCUIT SHORTED TO THE (K900) SENSOR GROUND CIRCUIT

Measure the resistance between the (K2) ECT Signal circuit and the (K900) Sensor ground circuit in the ECT Sensor harness connector.

**Is the resistance below 5.0 ohms?**

**Yes** >> Repair the short between the (K900) Sensor ground and the (K2) ECT Signal circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 10



## 10. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

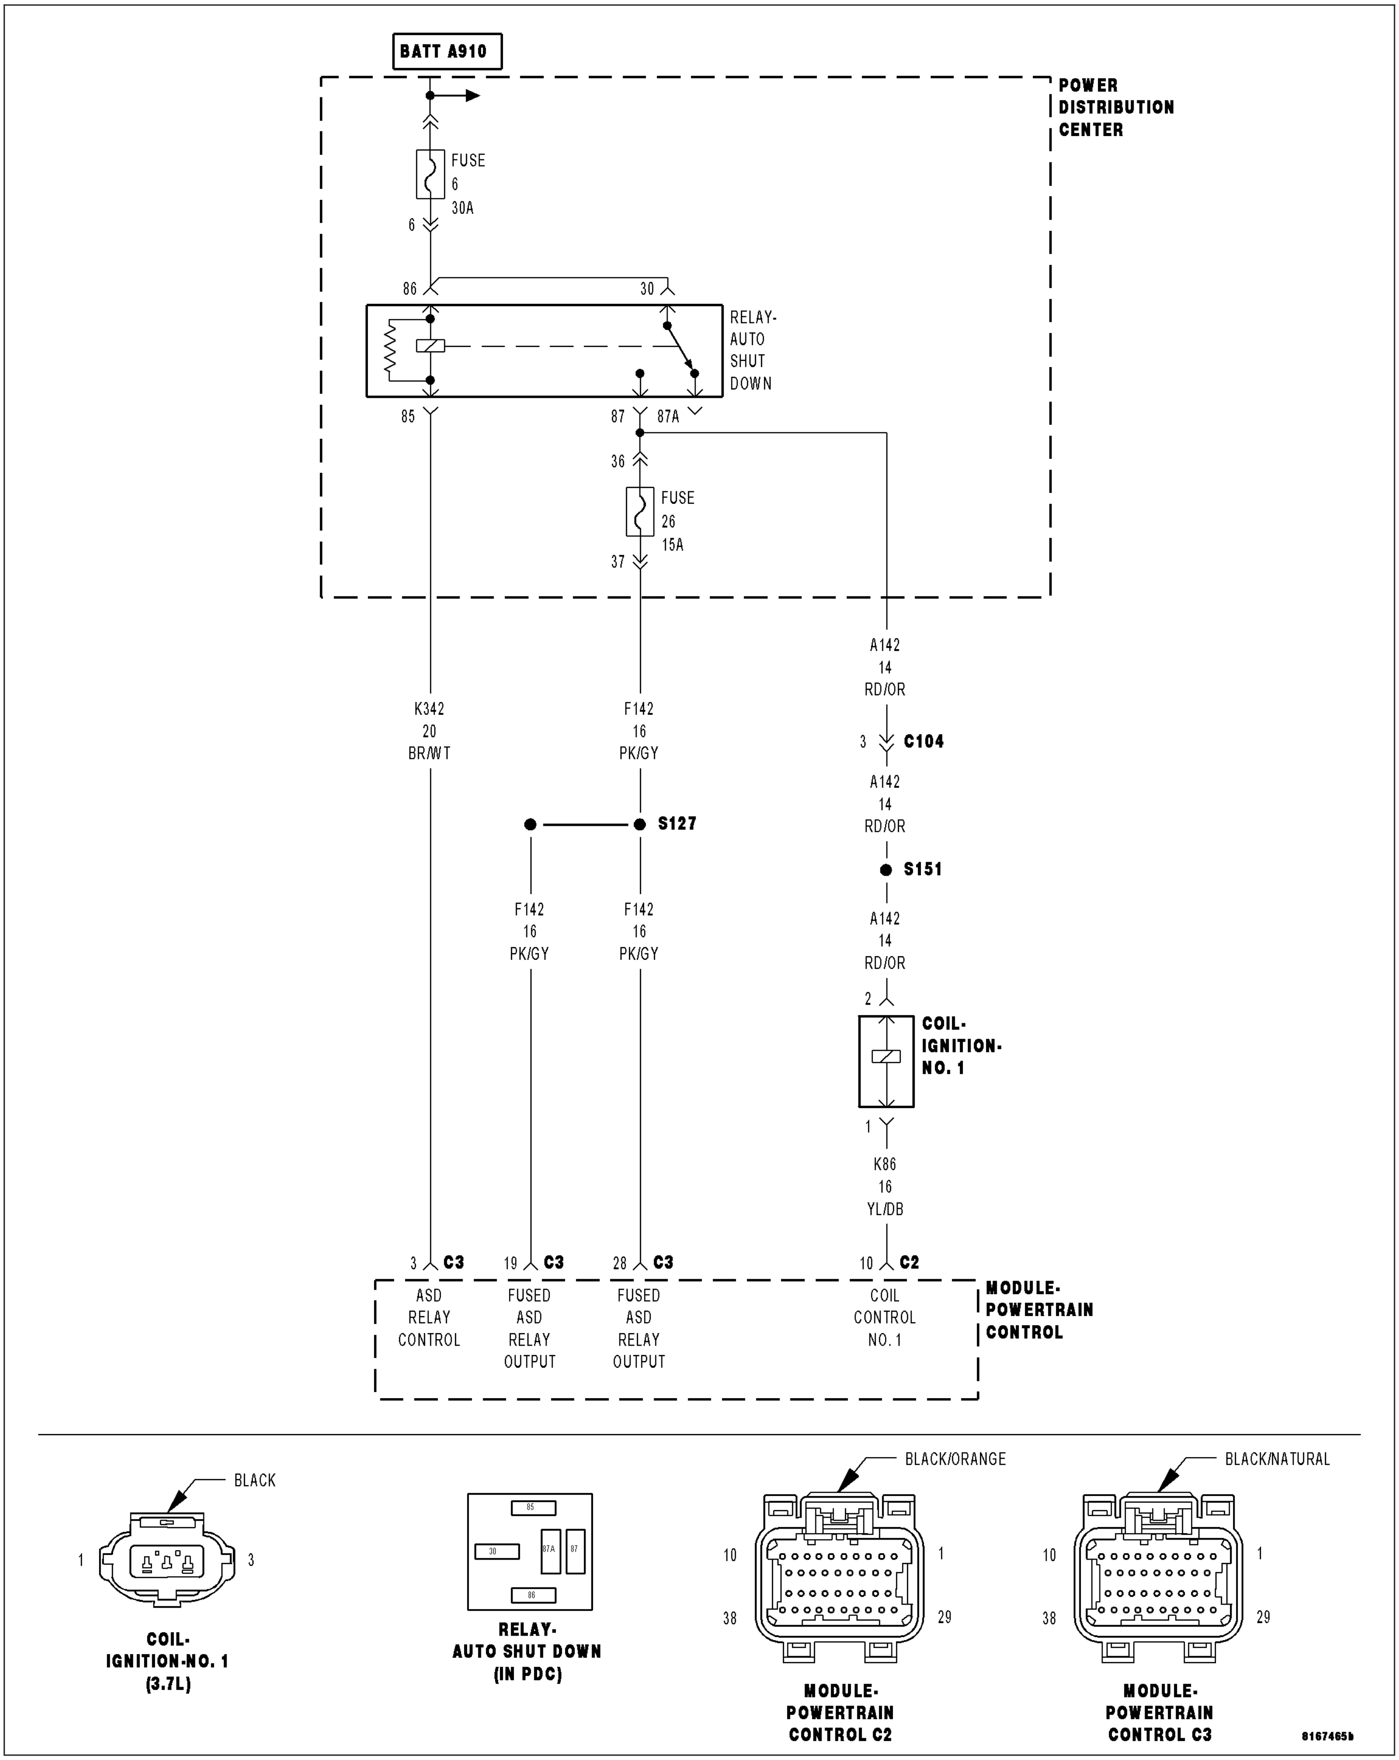
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P2302-IGNITION COIL 1 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine running and battery voltage greater than 10 volts.
- **Set Condition:**
  If PCM detects that the secondary ignition burn time is incorrect, to short, or not present, an error is detected. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (A142) ASD RELAY OUTPUT CIRCUIT |
| (K86) COIL CONTROL NO.1 CIRCUIT OPEN |
| (K86) COIL CONTROL NO.1 CIRCUIT SHORTED TO GROUND |
| COIL ON PLUG |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (A142) ASD RELAY OUTPUT CIRCUIT

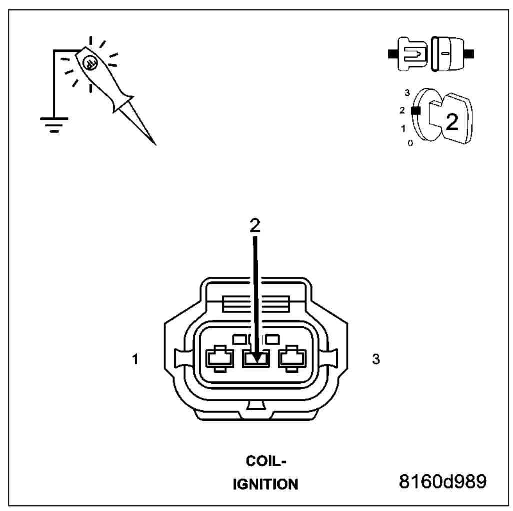
Turn the ignition off.

Disconnect the Coil on Plug harness connector.

Ignition on, engine not running.

With a scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (A142) ASD Relay Output circuit in the Coil on Plug harness connector.



**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the open or short to ground in the (A142) ASD Relay Output circuit between the PDC and Coil harness connector.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**NOTE: Stop All Actuations.**

## 3. COIL ON PLUG RESISTANCE

Turn the ignition off.

**NOTE: The following resistance measurement should be taken at 70°-80° F.**

Measure the resistance of the Coil on Plug.

3.7L Primary Ignition Coil resistance is 0.6 to 0.9 of an ohm at 77°F (25°C).

**Is the resistance within the given specification for the Ignition Coil being tested?**

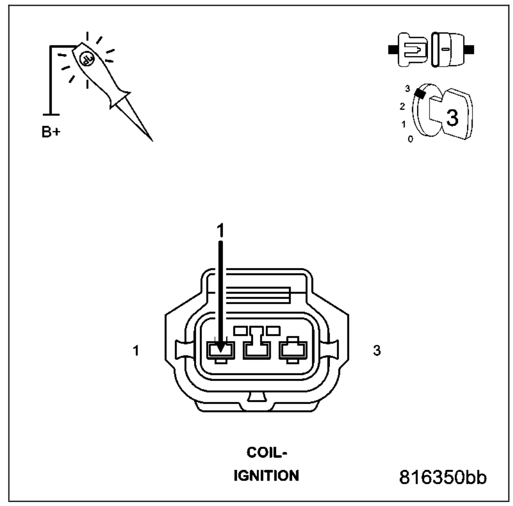
**Yes** >> Go To 4

**No** >> Replace the Coil on plug.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. IGNITION COIL

Using a 12-volt test light connected to a 12-volt source, probe the (K86) Coil Control No.1 circuit.

Crank the engine for 5 seconds while observing the test light.



**What is the condition of the test light while cranking the engine?**

**Brightly blinking.**
Replace the Coil on plug.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**ON constantly.**
Go To 5

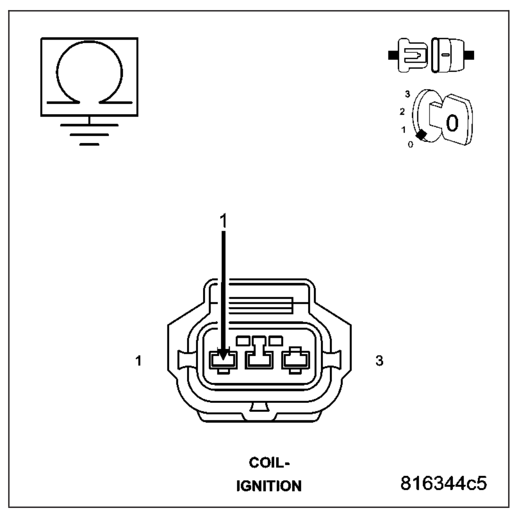
**OFF constantly.**
Go To 6

## 5. (K86) COIL CONTROL NO.1 CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K86) Coil Control No.1 circuit in the Coil on Plug harness connector.

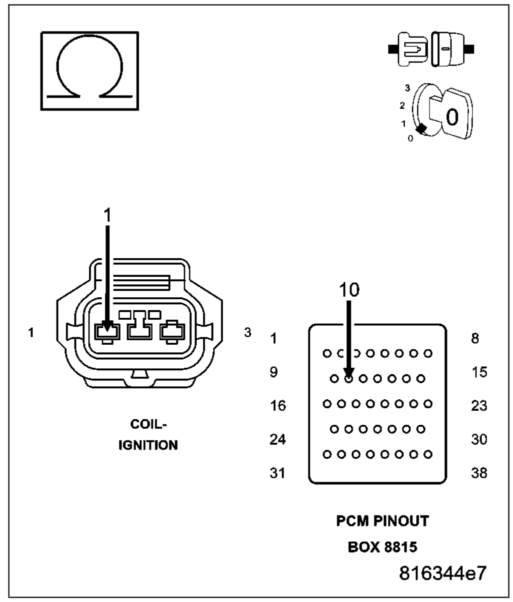


**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K86) Coil Control No.1 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 6. (K86) COIL CONTROL NO.1 CIRCUIT OPEN



Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K86) Coil Control No.1 circuit from the Coil on Plug harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K86) Coil Control No.1 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

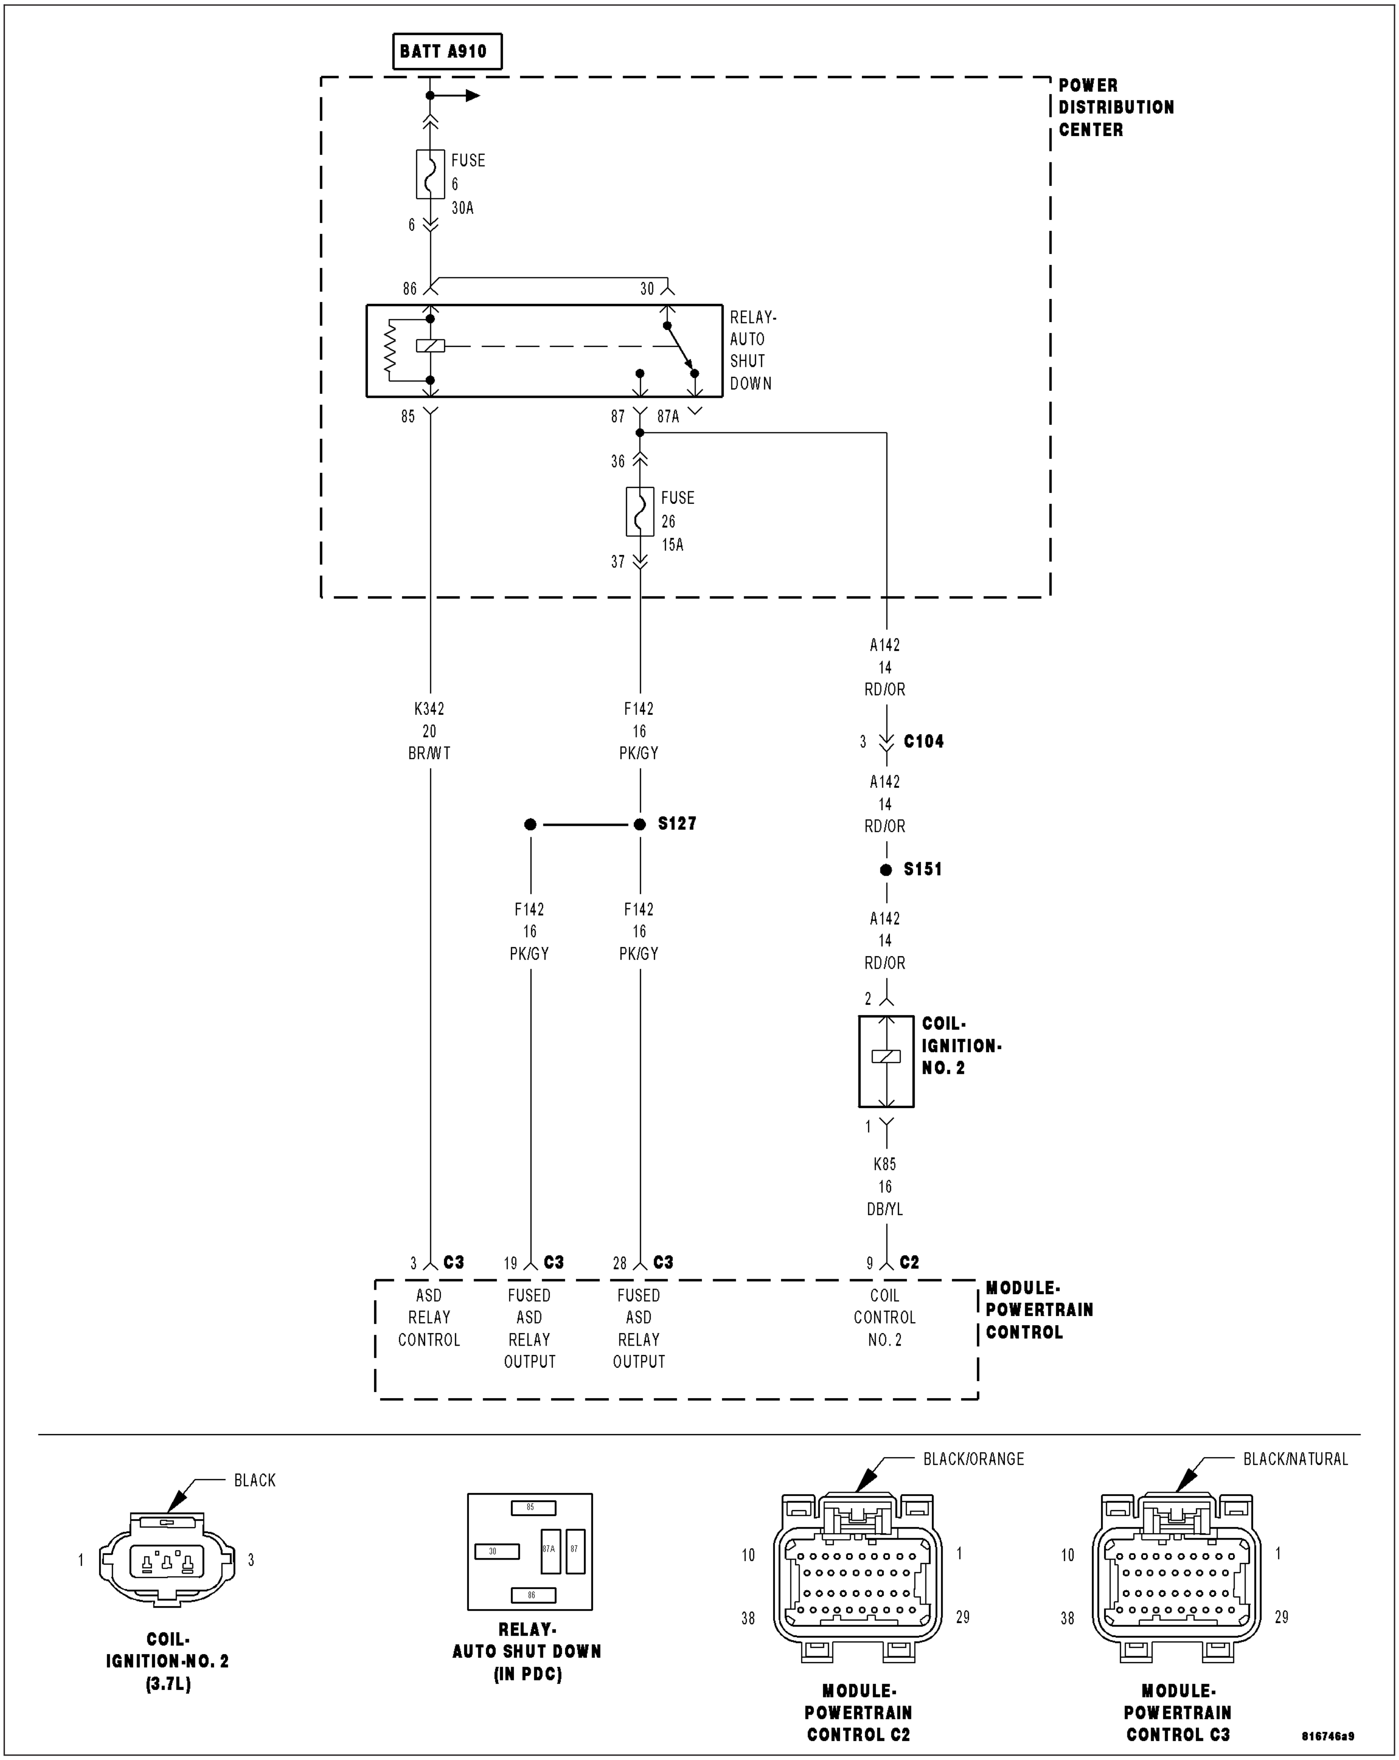
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P2305-IGNITION COIL 2 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine running and battery voltage greater than 10 volts.
- **Set Condition:**
  If PCM detects that the secondary ignition burn time is incorrect, to short, or not present, an error is detected. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (A142) ASD RELAY OUTPUT CIRCUIT |
| (K85) COIL CONTROL NO.2 CIRCUIT OPEN |
| (K85) COIL CONTROL NO.2 CIRCUIT SHORTED TO GROUND |
| COIL ON PLUG |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (A142) ASD RELAY OUTPUT CIRCUIT

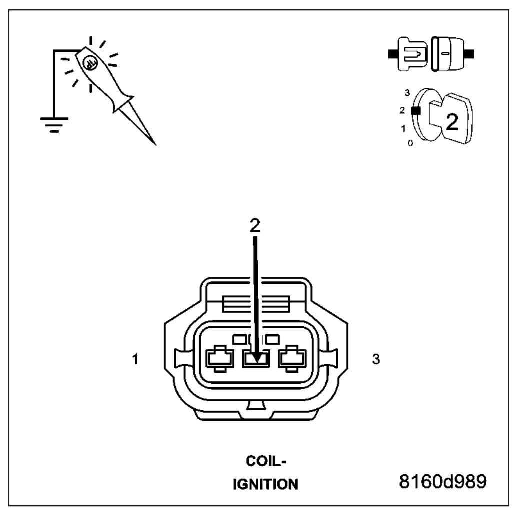
Turn the ignition off.

Disconnect the Coil on Plug harness connector.

Ignition on, engine not running.

With a scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (A142) ASD Relay Output circuit in the Coil on Plug harness connector.



**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the open or short to ground in the (A142) ASD Relay Output circuit between the PDC and Coil harness connector.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**NOTE: Stop All Actuations.**

## 3. COIL ON PLUG RESISTANCE

Turn the ignition off.

**NOTE: The following resistance measurement should be taken at 70°-80° F.**

Measure the resistance of the Coil on Plug.

3.7L Primary Ignition Coil resistance is 0.6 to 0.9 of an ohm at 77°F (25°C).

**Is the resistance within the given specification for the Ignition Coil being tested?**

**Yes** >> Go To 4

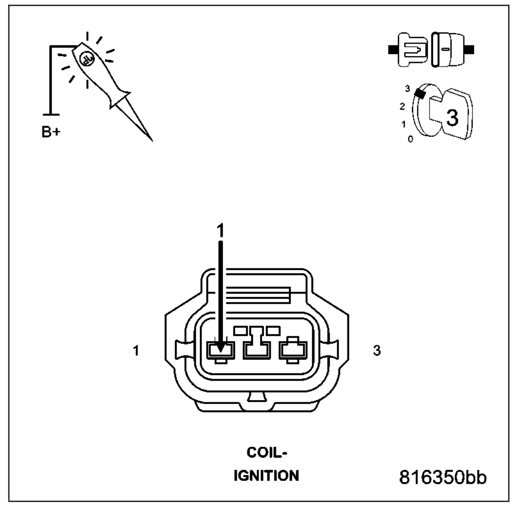
**No** >> Replace the Coil on plug.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. IGNITION COIL

Using a 12-volt test light connected to a 12-volt source, probe the (K85) Coil Control No.2 circuit.

Crank the engine for 5 seconds while observing the test light.



**What is the state of the test light while cranking the engine?**

**Brightly blinking.**

Replace the Coil on plug.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**ON constantly.**

Go To 5

**OFF constantly.**

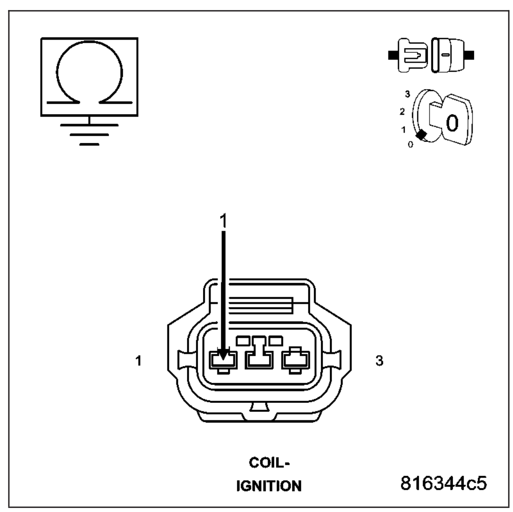
Go To 6

## 5. (K85) COIL CONTROL NO.2 CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K85) Coil Control No.2 circuit in the Coil on Plug harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K85) Coil Control No.2 circuit.

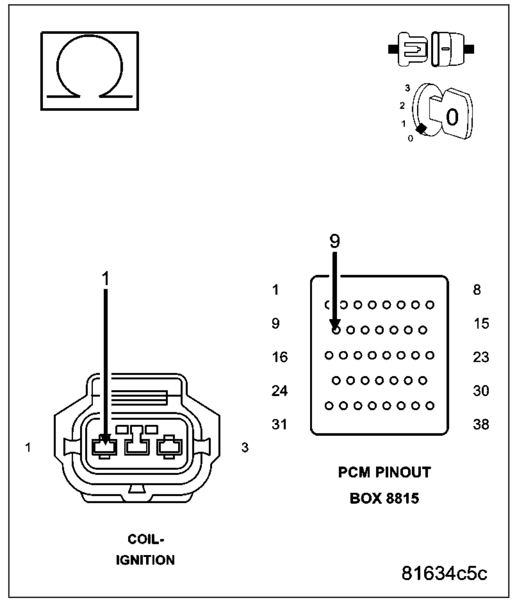
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 6. (K85) COIL CONTROL NO.2 CIRCUIT OPEN

Turn the ignition off.

Disconnect the C2 PCM harness connector.



**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K85) Coil Control No.2 circuit from the Coil on Plug harness connector to the appropriate terminal of special tool #8815.

**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K85) Coil Control No.2 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

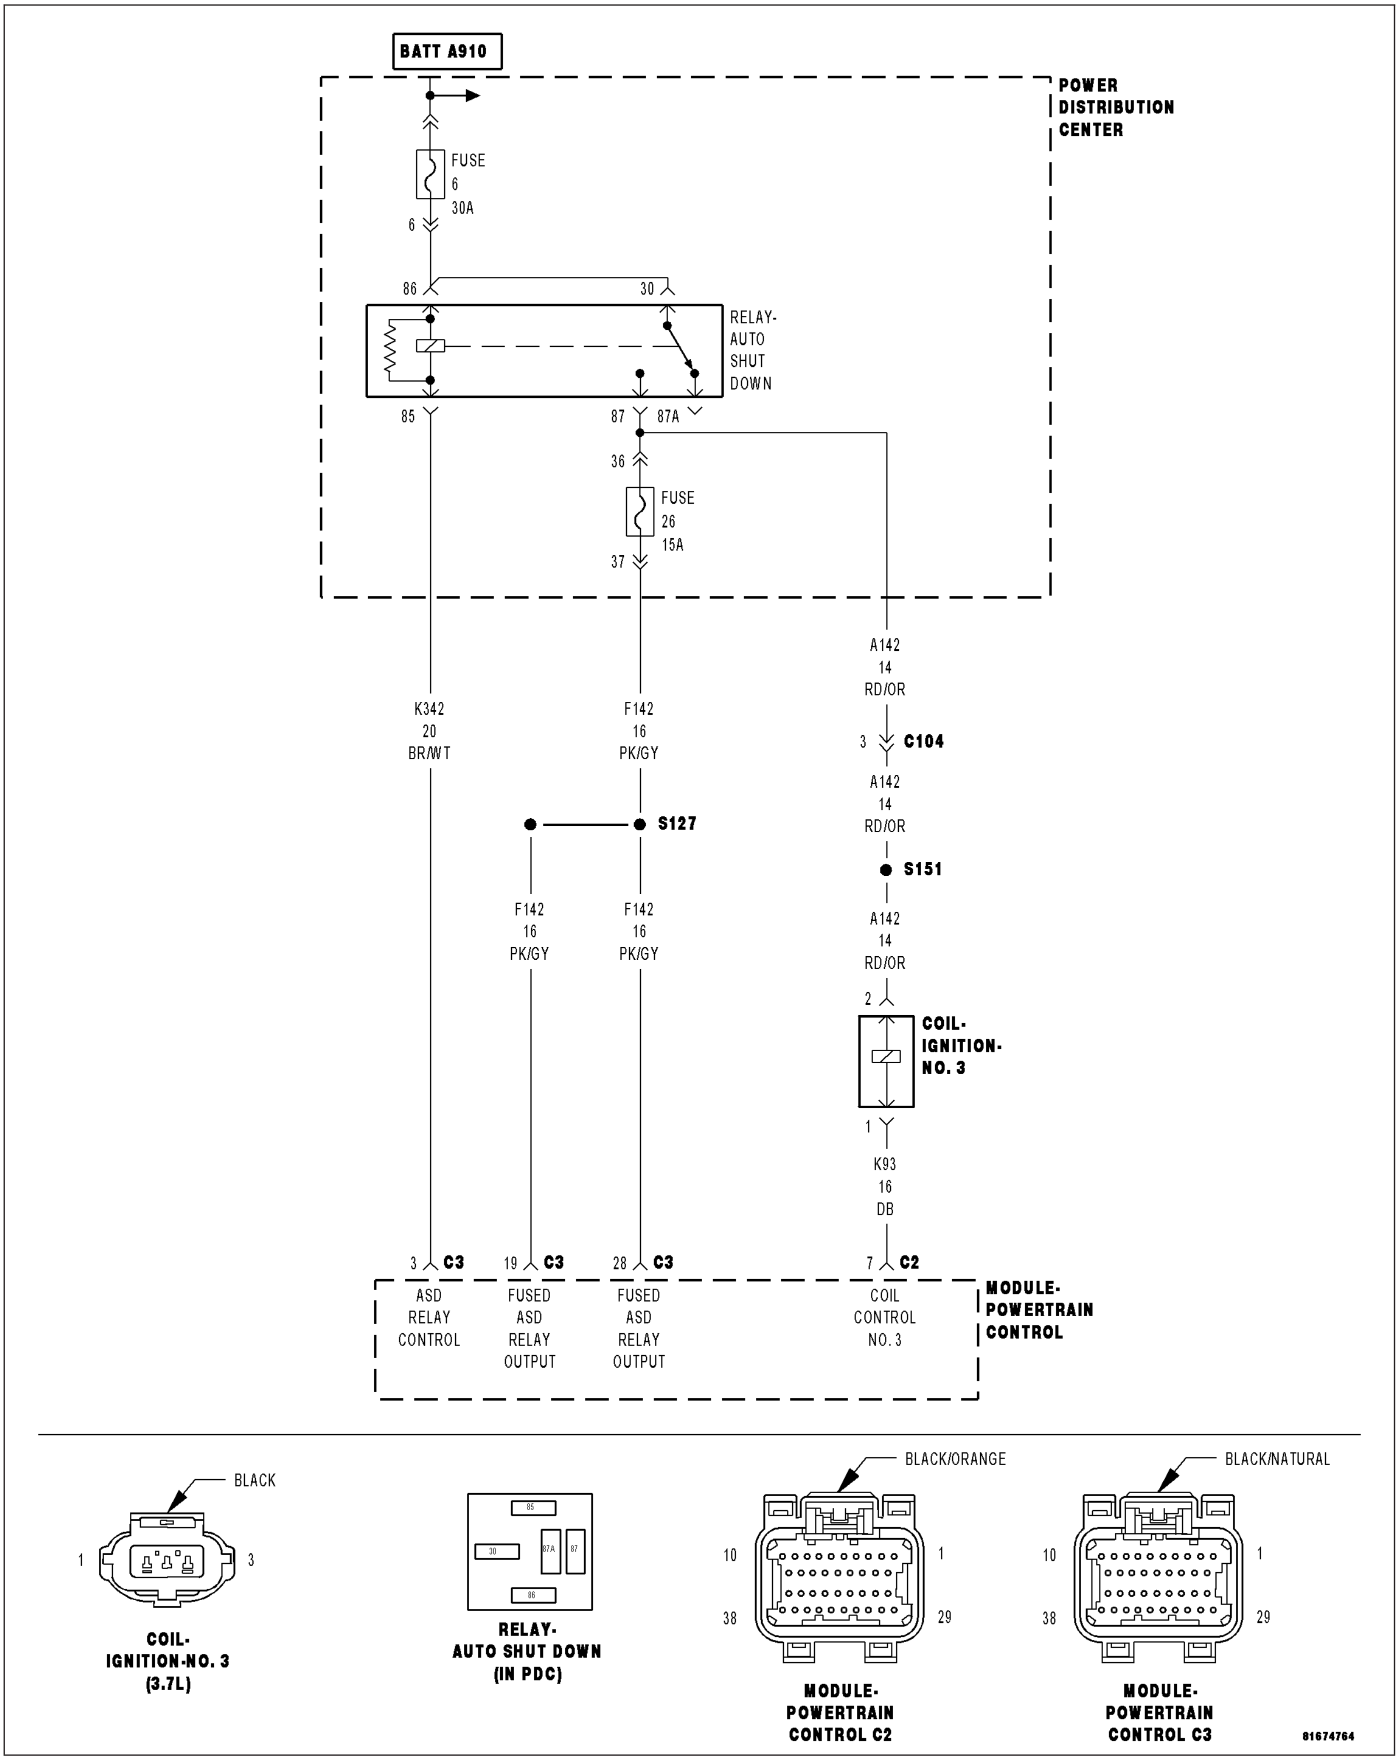
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P2308-IGNITION COIL 3 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine running and battery voltage greater than 10 volts.
- **Set Condition:**
  If PCM detects that the secondary ignition burn time is incorrect, to short, or not present, an error is detected. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (A142) ASD RELAY OUTPUT CIRCUIT |
| (K93) COIL CONTROL NO.3 CIRCUIT OPEN |
| (K93) COIL CONTROL NO.3 CIRCUIT SHORTED TO GROUND |
| COIL ON PLUG |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (A142) ASD RELAY OUTPUT CIRCUIT

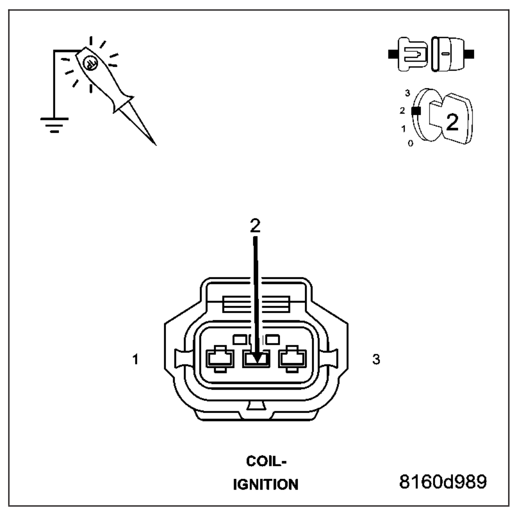
Turn the ignition off.

Disconnect the Coil on Plug harness connector.

Ignition on, engine not running.

With a scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (A142) ASD Relay Output circuit in the Coil on Plug harness connector.



**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the open or short to ground in the (A142) ASD Relay Output circuit between the PDC and Coil harness connector.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**NOTE: Stop All Actuations.**

## 3. COIL ON PLUG RESISTANCE

Turn the ignition off.

**NOTE: The following resistance measurement should be taken at 70°-80° F.**

Measure the resistance of the Coil on Plug.

3.7L Primary Ignition Coil resistance is 0.6 to 0.9 of an ohm at 77°F (25°C).

**Is the resistance within the given specification for the Ignition Coil being tested?**

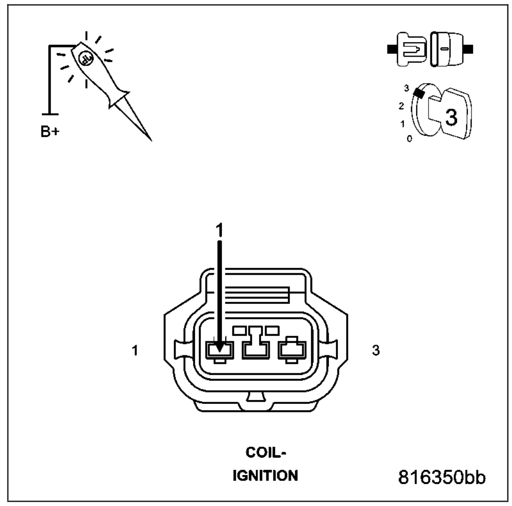
**Yes** >> Go To 4

**No** >> Replace the Coil on plug.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. IGNITION COIL

Using a 12-volt test light connected to a 12-volt source, probe the (K93) Coil Control No.3 circuit.

Crank the engine for 5 seconds while observing the test light.



**What is the state of the test light while cranking the engine?**

**Brightly blinking.**
Replace the Coil on plug.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**ON constantly.**
Go To 5

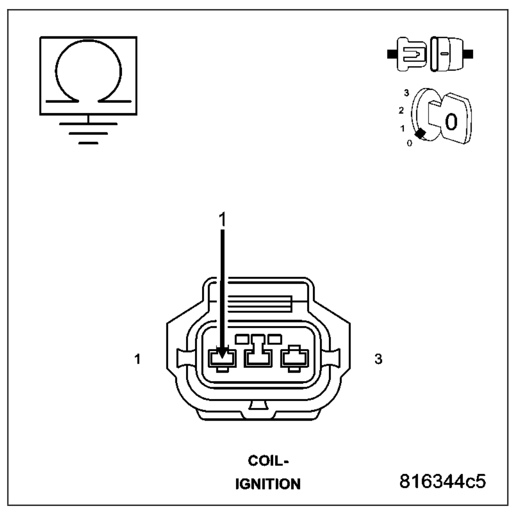
**OFF constantly.**
Go To 6

## 5. (K93) COIL CONTROL NO.3 CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K93) Coil Control No.3 circuit in the Coil on Plug harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K93) Coil Control No.3 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

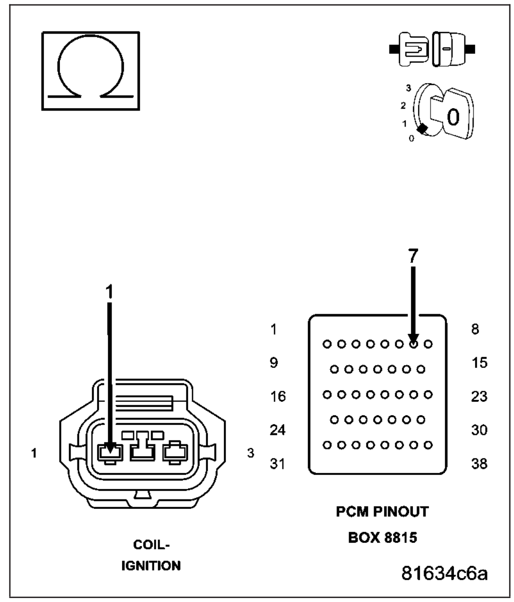
## 6. (K93) COIL CONTROL NO.3 CIRCUIT OPEN

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K93) Coil Control No.3 circuit from the Coil on Plug harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K93) Coil Control No.3 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

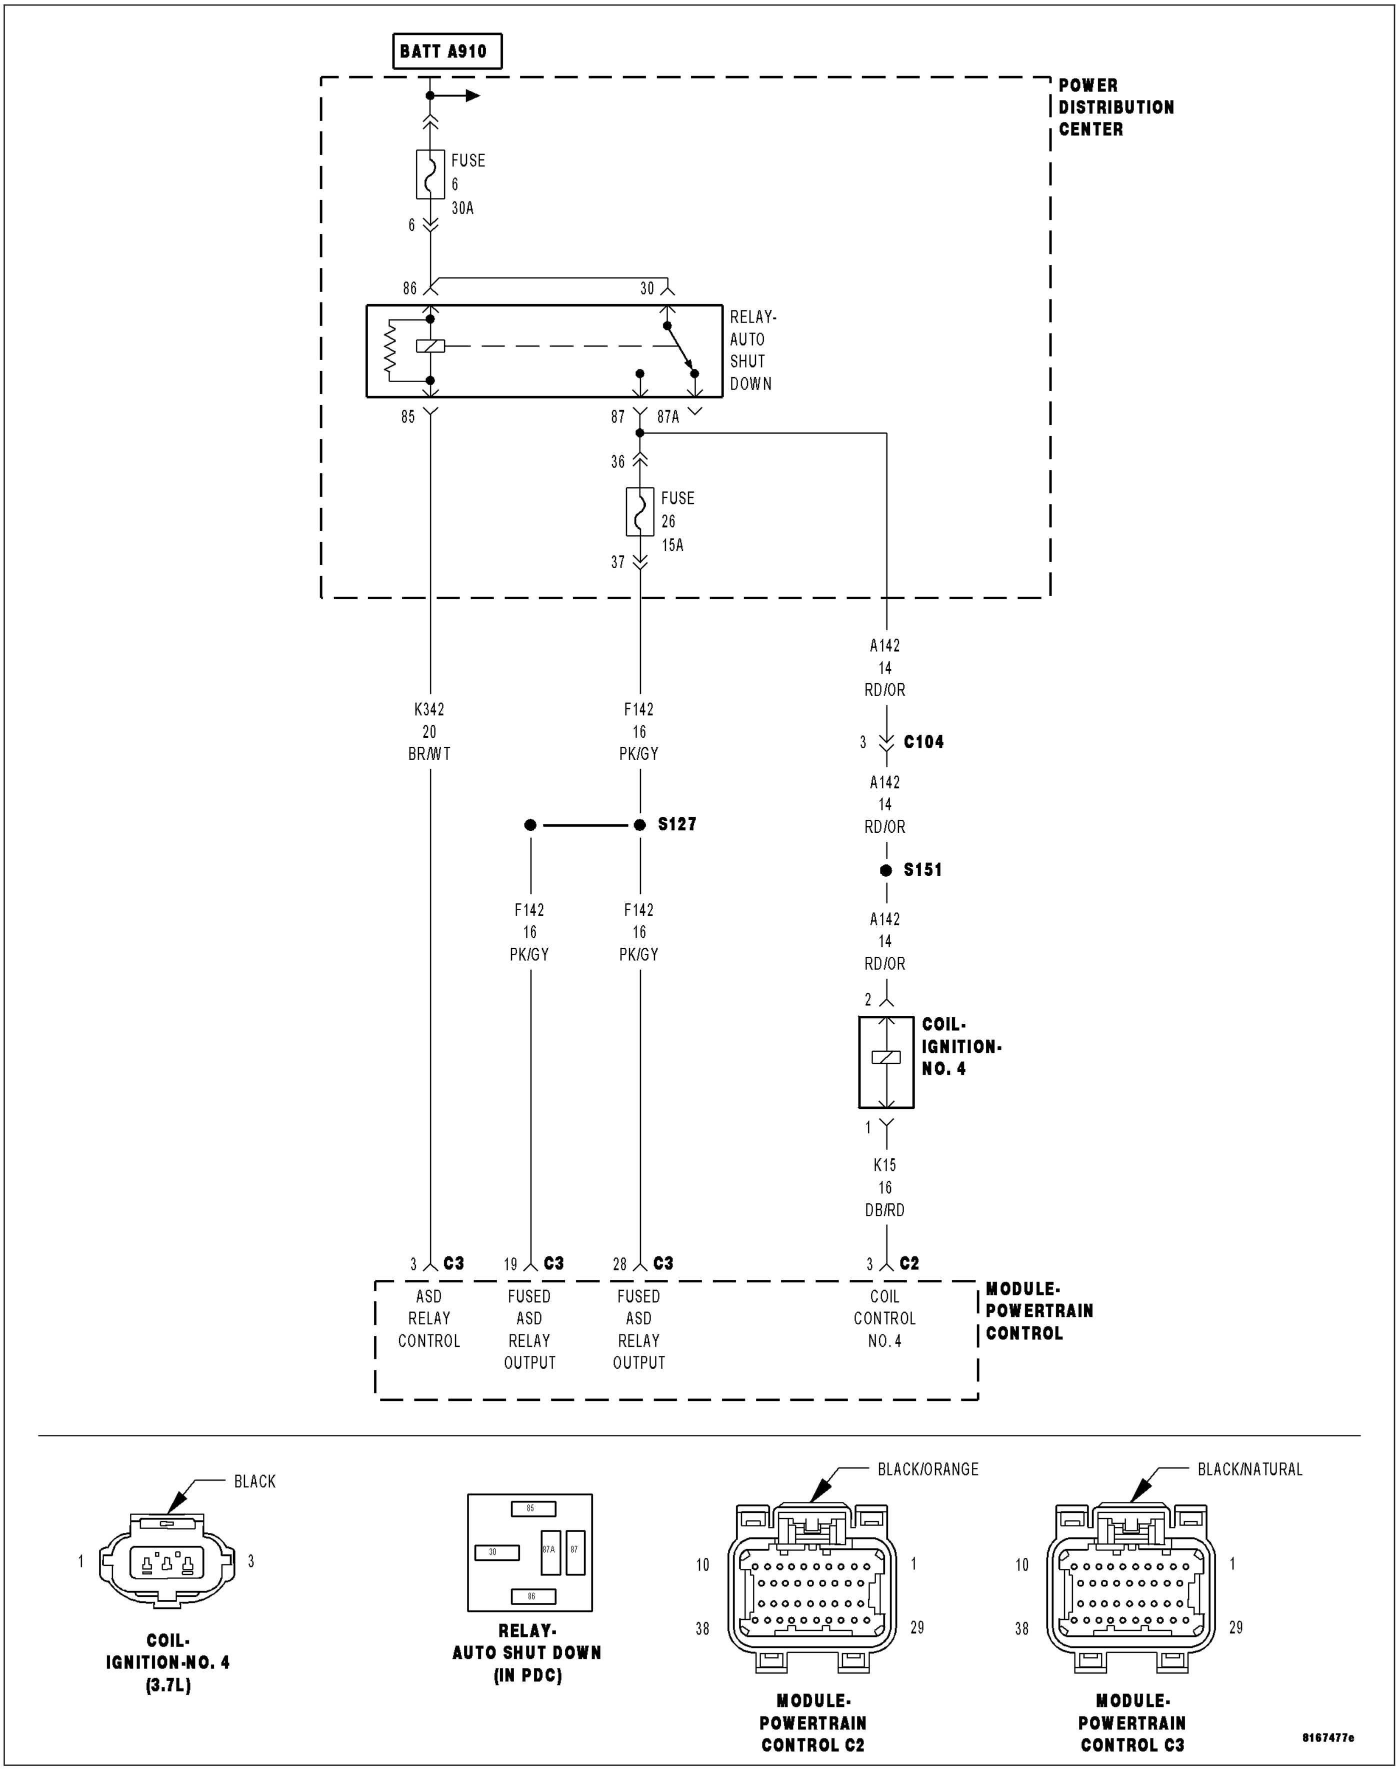
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P2311-IGNITION COIL 4 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine running and battery voltage greater than 10 volts.
- **Set Condition:**
  If PCM detects that the secondary ignition burn time is incorrect, to short, or not present, an error is detected. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (A142) ASD RELAY OUTPUT CIRCUIT |
| (K15) COIL CONTROL NO.4 CIRCUIT OPEN |
| (K15) COIL CONTROL NO.4 CIRCUIT SHORTED TO GROUND |
| COIL ON PLUG |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (A142) ASD RELAY OUTPUT CIRCUIT

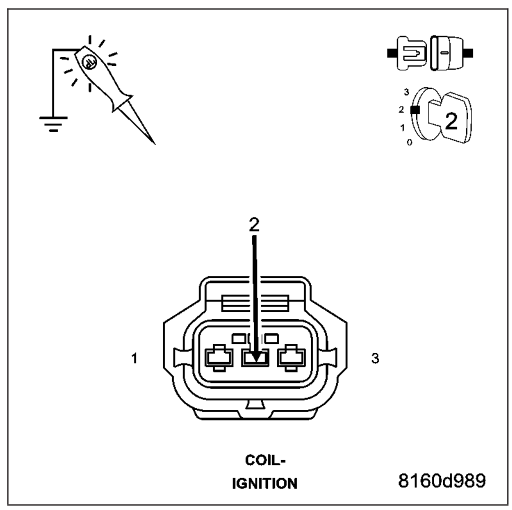
Turn the ignition off.

Disconnect the Coil on Plug harness connector.

Ignition on, engine not running.

With a scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (A142) ASD Relay Output circuit in the Coil on Plug harness connector.



**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the open or short to ground in the (A142) ASD Relay Output circuit between the PDC and Coil harness connector.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**NOTE: Stop All Actuations.**

## 3. COIL ON PLUG RESISTANCE

Turn the ignition off.

**NOTE: The following resistance measurement should be taken at 70°-80° F.**

Measure the resistance of the Coil on Plug.

3.7L Primary Ignition Coil resistance is 0.6 to 0.9 of an ohm at 77°F (25°C).

**Is the resistance within the given specification for the Ignition Coil being tested?**

**Yes** >> Go To 4

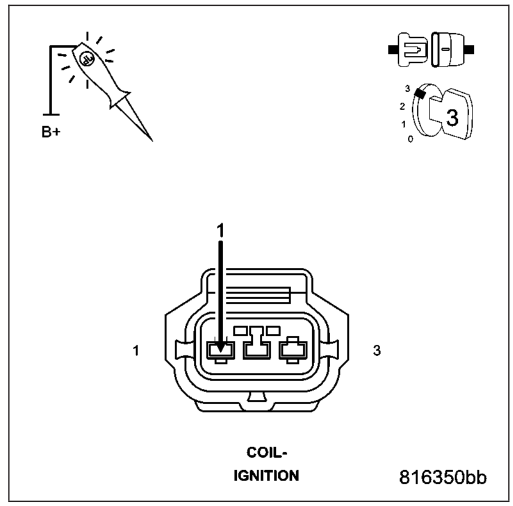
**No** >> Replace the Coil on plug.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. IGNITION COIL

Using a 12-volt test light connected to a 12-volt source, probe the (K15) Coil Control No.4 circuit.

Crank the engine for 5 seconds while observing the test light.



**What is the state of the test light while cranking the engine?**

**Brightly blinking.**

Replace the Coil on plug.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**ON constantly.**

Go To 5

**OFF constantly.**

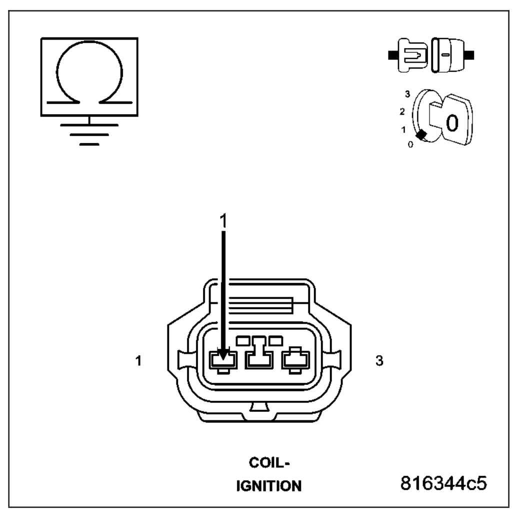
Go To 6

## 5. (K15) COIL CONTROL NO.4 CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K15) Coil Control No.4 circuit in the Coil on Plug harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K15) Coil Control No.4 circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

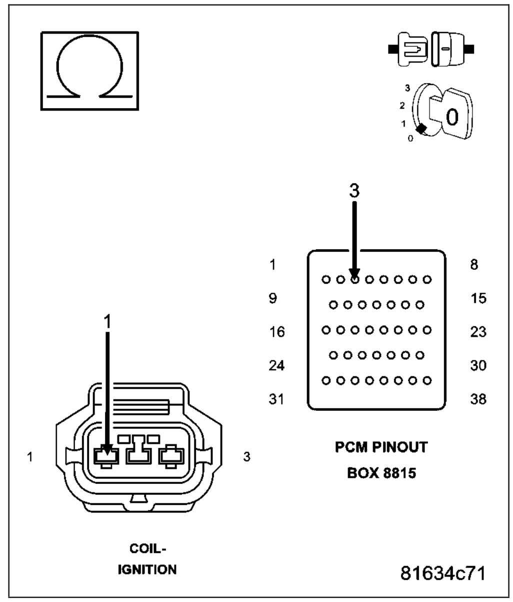
## 6. (K15) COIL CONTROL NO.4 CIRCUIT OPEN

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K15) Coil Control No.4 circuit from the Coil on Plug harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K15) Coil Control No.4 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

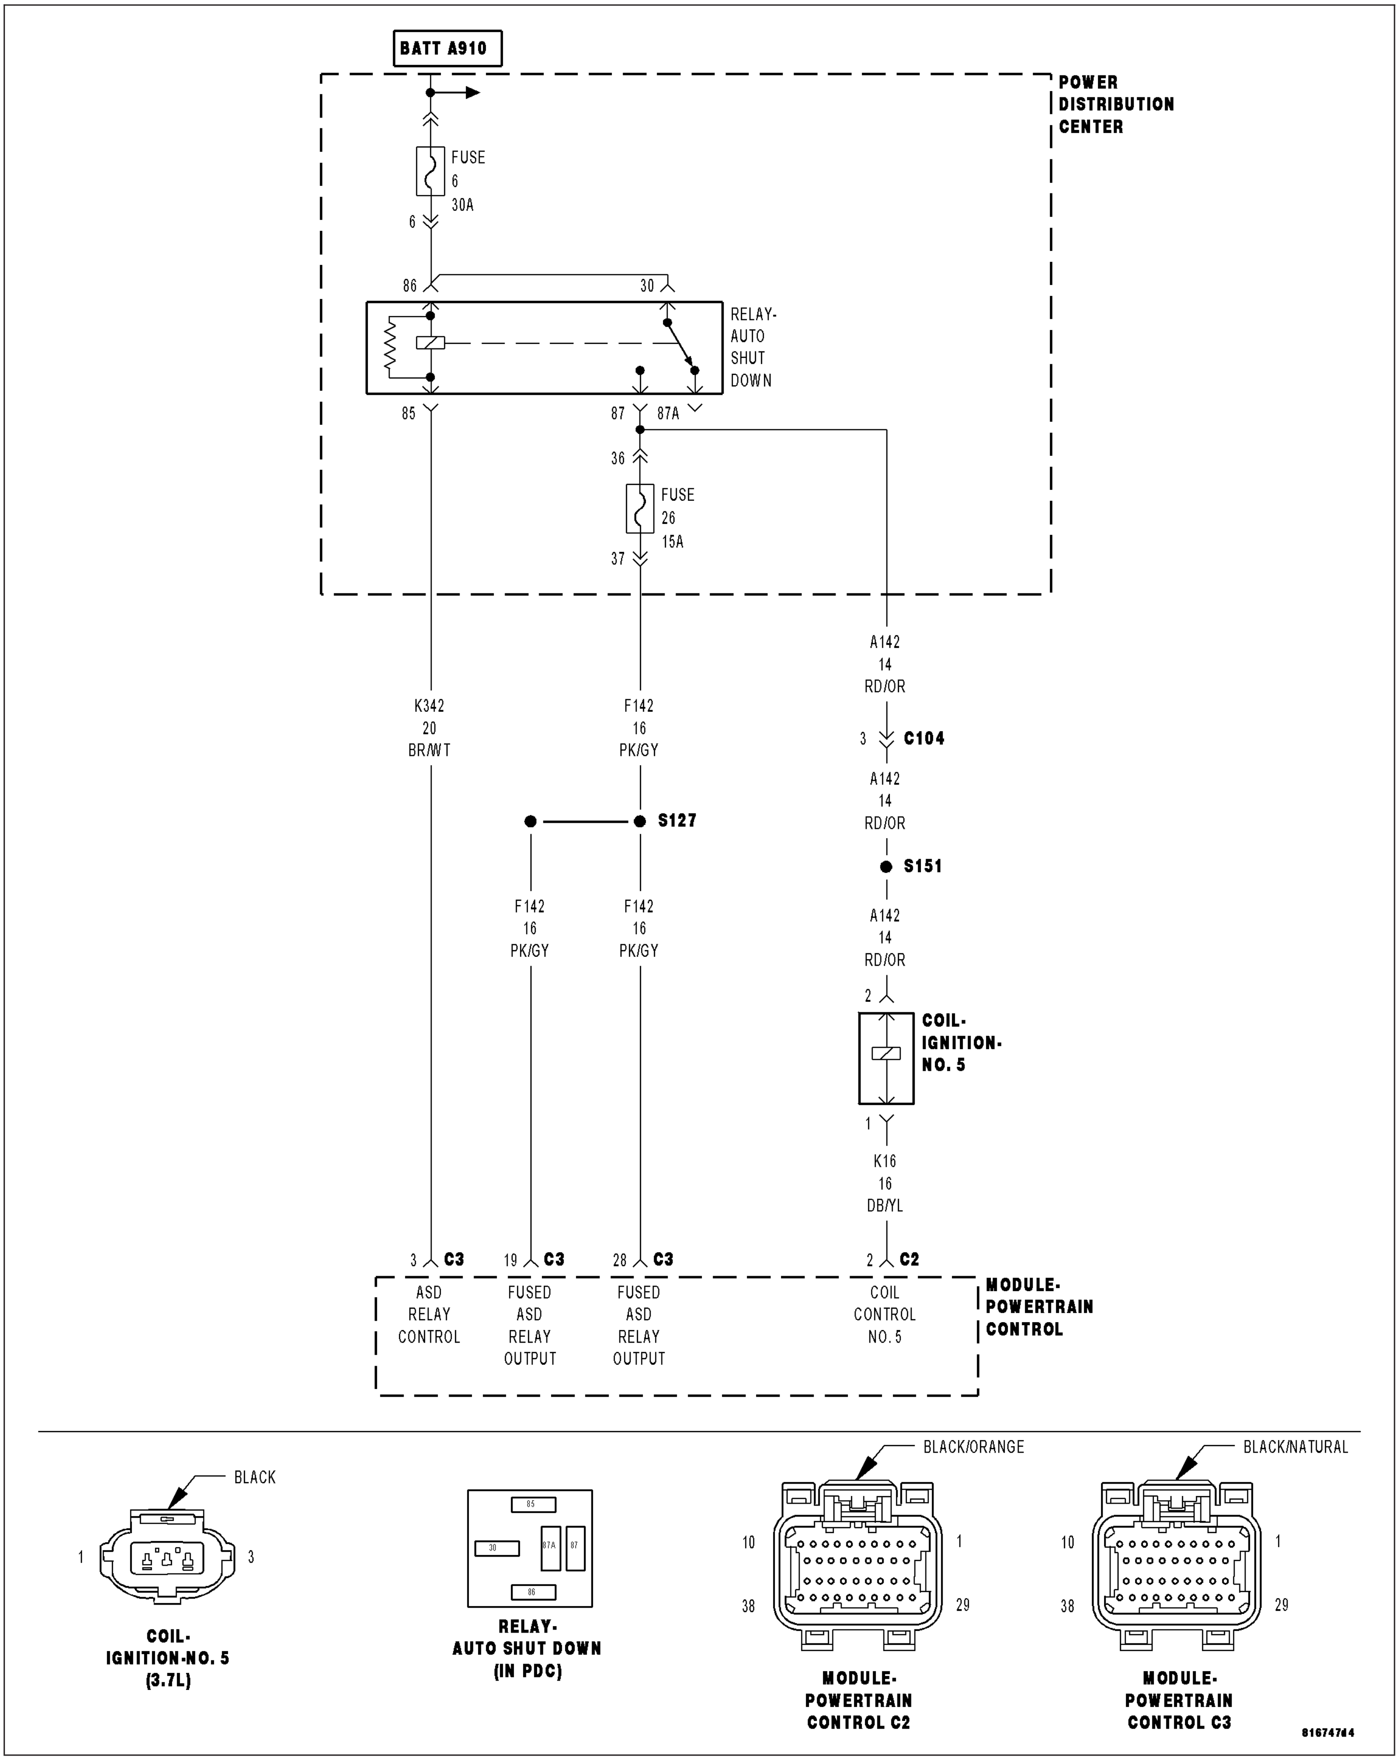
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P2314-IGNITION COIL 5 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine running and battery voltage greater than 10 volts.
- **Set Condition:**
  If PCM detects that the secondary ignition burn time is incorrect, to short, or not present, an error is detected. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (A142) ASD RELAY OUTPUT CIRCUIT |
| (K16) COIL CONTROL NO.5 CIRCUIT OPEN |
| (K16) COIL CONTROL NO.5 CIRCUIT SHORTED TO GROUND |
| COIL ON PLUG |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (A142) ASD RELAY OUTPUT CIRCUIT

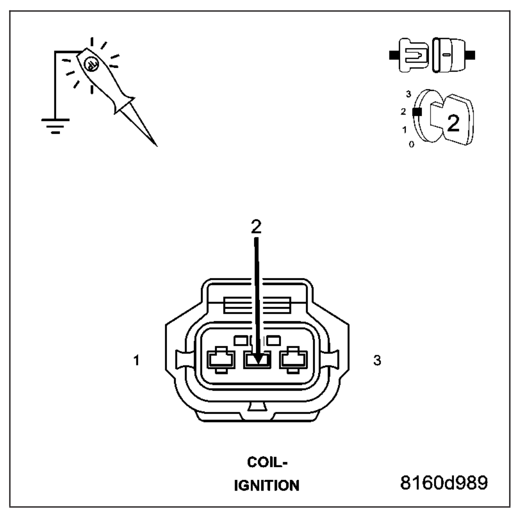
Turn the ignition off.

Disconnect the Coil on Plug harness connector.

Ignition on, engine not running.

With a scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (A142) ASD Relay Output circuit in the Coil on Plug harness connector.



**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the open or short to ground in the (A142) ASD Relay Output circuit between the PDC and Coil harness connector.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**NOTE: Stop All Actuations.**

## 3. COIL ON PLUG RESISTANCE

Turn the ignition off.

**NOTE: The following resistance measurement should be taken at 70°-80° F.**

Measure the resistance of the Coil on Plug.

3.7L Primary Ignition Coil resistance is 0.6 to 0.9 of an ohm at 77°F (25°C).

**Is the resistance within the given specification for the Ignition Coil being tested?**

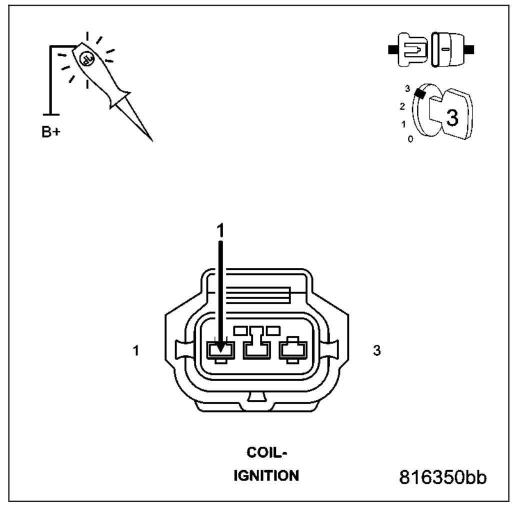
**Yes** >> Go To 4

**No** >> Replace the Coil on plug.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. IGNITION COIL

Using a 12-volt test light connected to a 12-volt source, probe the (K16) Coil Control No.5 circuit.

Crank the engine for 5 seconds while observing the test light.



**What is the state of the test light while cranking the engine?**

**Brightly blinking.**
Replace the Coil on plug.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**ON constantly.**
Go To 5

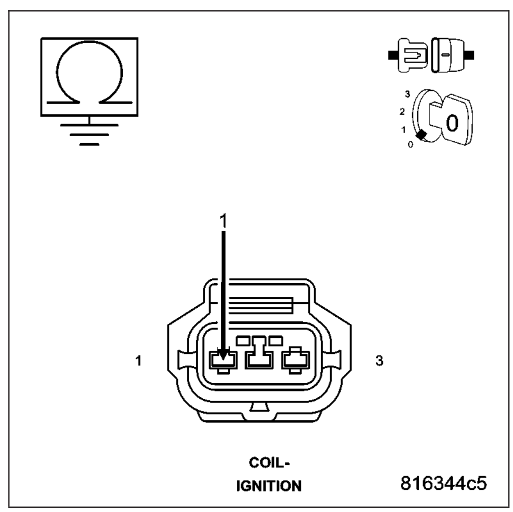
**OFF constantly.**
Go To 6

## 5. (K16) COIL CONTROL NO.5 CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K16) Coil Control No.5 circuit in the Coil on Plug harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K16) Coil Control No.5 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

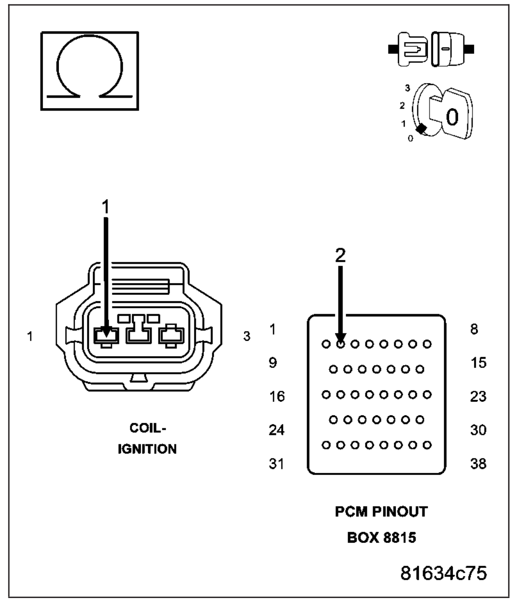
## 6. (K16) COIL CONTROL NO.5 CIRCUIT OPEN

Turn the ignition off.

Disconnect the C2 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K16) Coil Control No.5 circuit from the Coil on Plug harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K16) Coil Control No.5 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

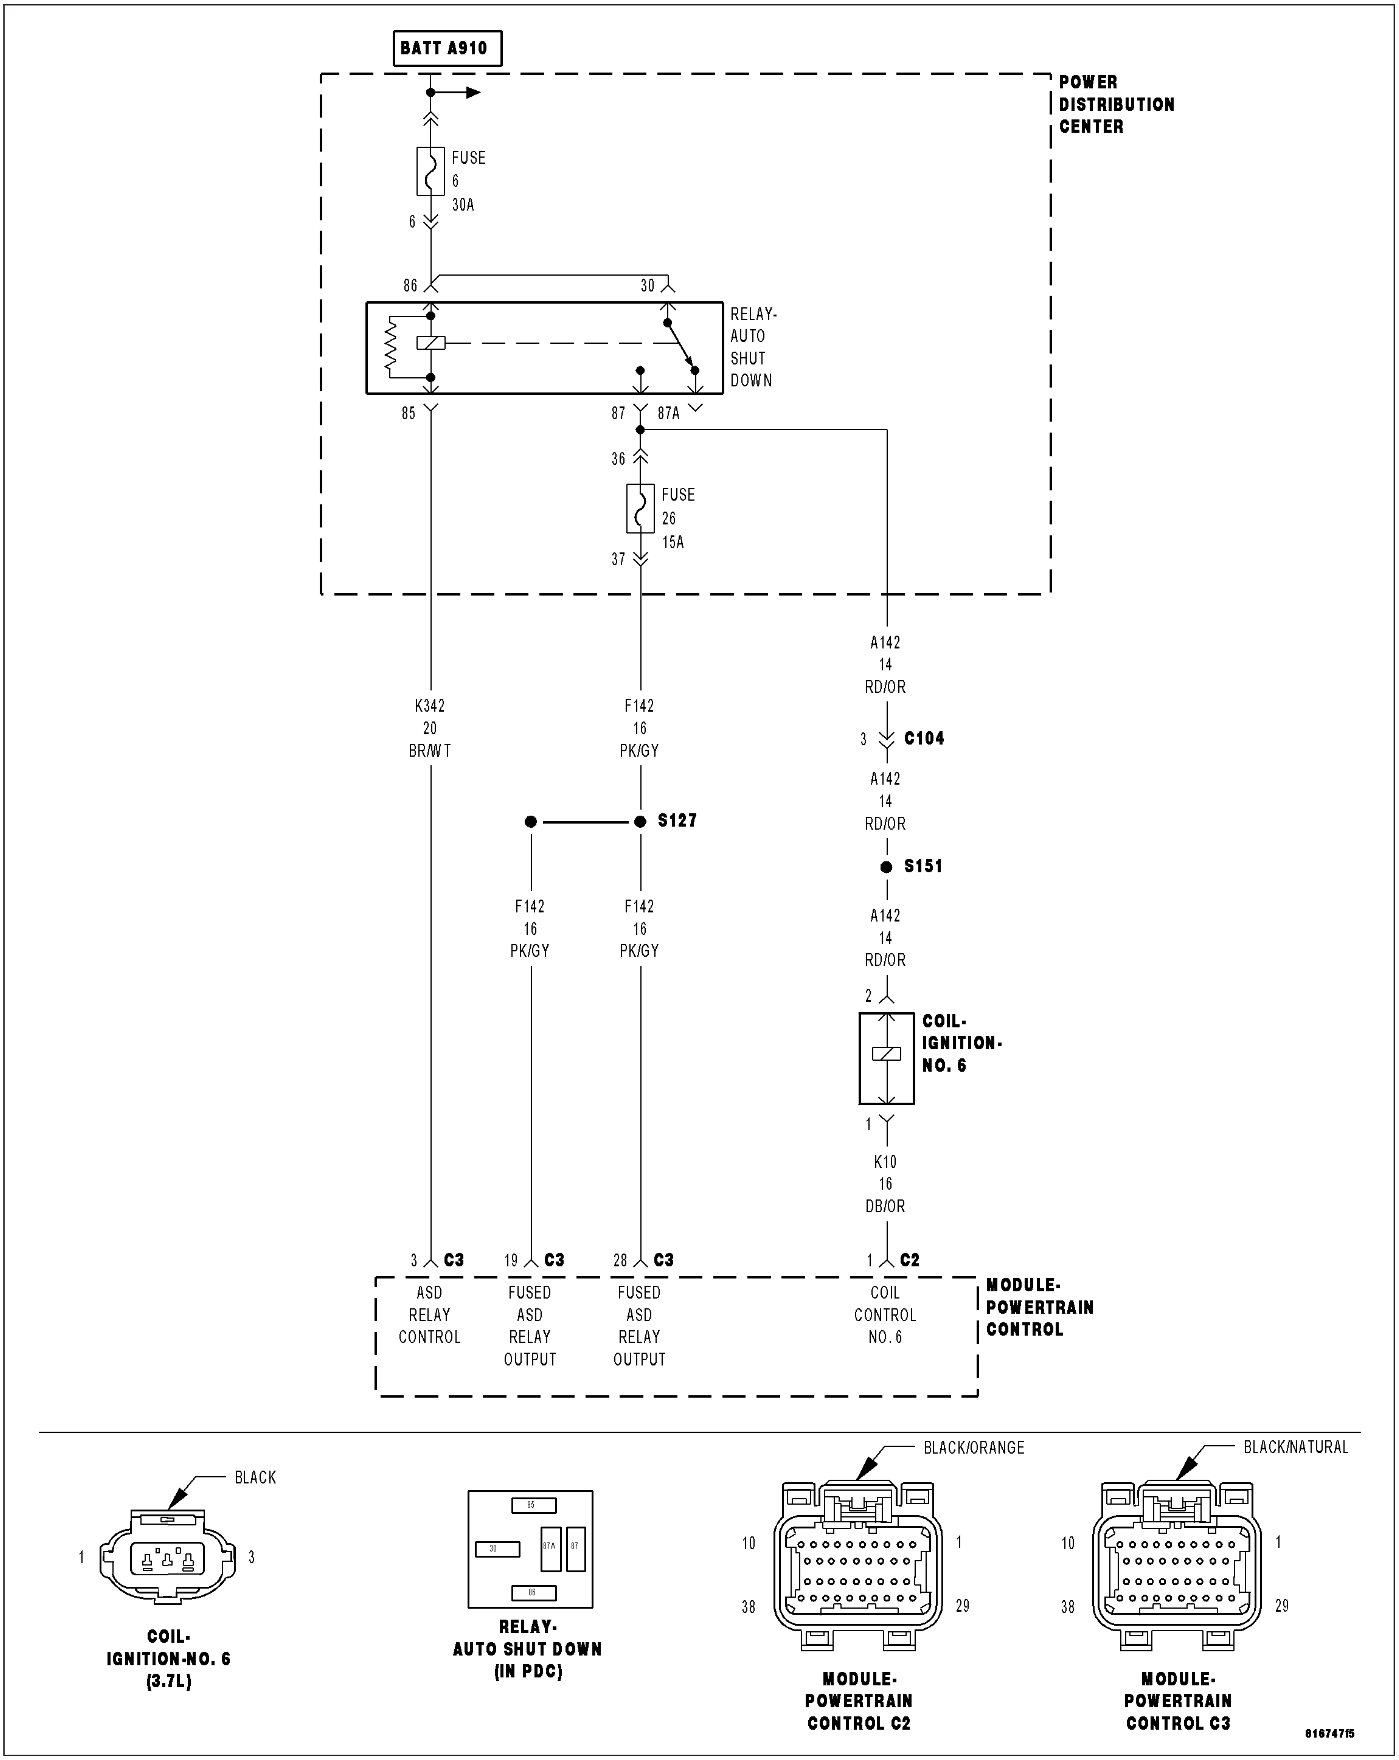
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P2317-IGNITION COIL 6 SECONDARY CIRCUIT- INSUFFICIENT IONIZATION



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Engine running and battery voltage greater than 10 volts.
- **Set Condition:**
  If PCM detects that the secondary ignition burn time is incorrect, to short, or not present, an error is detected. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| (A142) ASD RELAY OUTPUT CIRCUIT |
| (K10) COIL CONTROL NO.6 CIRCUIT OPEN |
| (K10) COIL CONTROL NO.6 CIRCUIT SHORTED TO GROUND |
| COIL ON PLUG |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (A142) ASD RELAY OUTPUT CIRCUIT

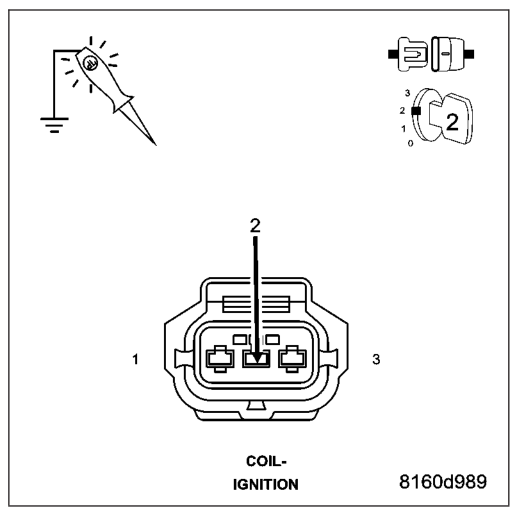
Turn the ignition off.

Disconnect the Coil on Plug harness connector.

Ignition on, engine not running.

With a scan tool, actuate the ASD Relay.

Using a 12-volt test light connected to ground, probe the (A142) ASD Relay Output circuit in the Coil on Plug harness connector.



**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the open or short to ground in the (A142) ASD Relay Output circuit between the PDC and Coil harness connector.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**NOTE: Stop All Actuations.**

## 3. COIL ON PLUG RESISTANCE

Turn the ignition off.

**NOTE: The following resistance measurement should be taken at 70°-80° F.**

Measure the resistance of the Coil on Plug.

3.7L Primary Ignition Coil resistance is 0.6 to 0.9 of an ohm at 77°F (25°C).

**Is the resistance within the given specification for the Ignition Coil being tested?**

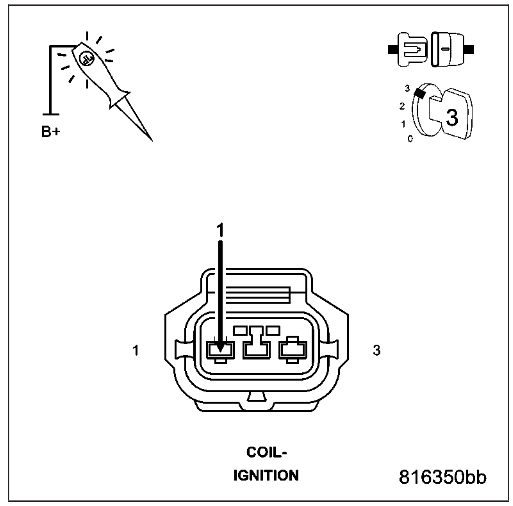
**Yes** >> Go To 4

**No** >> Replace the Coil on plug.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. IGNITION COIL

Using a 12-volt test light connected to a 12-volt source, probe the (K10) Coil Control No.6 circuit.

Crank the engine for 5 seconds while observing the test light.



**What is the state of the test light while cranking the engine?**

**Brightly blinking.**
Replace the Coil on plug.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**ON constantly.**
Go To 5

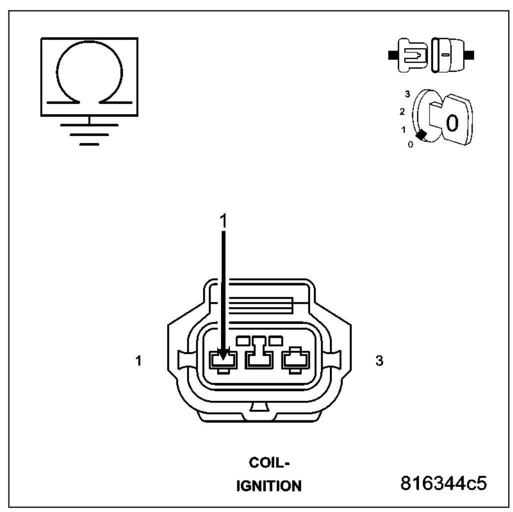
**OFF constantly.**
Go To 6

## 5. (K10) COIL CONTROL NO.6 CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Measure the resistance between ground and the (K10) Coil Control No.6 circuit in the Coil on Plug harness connector.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K10) Coil Control No.6 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

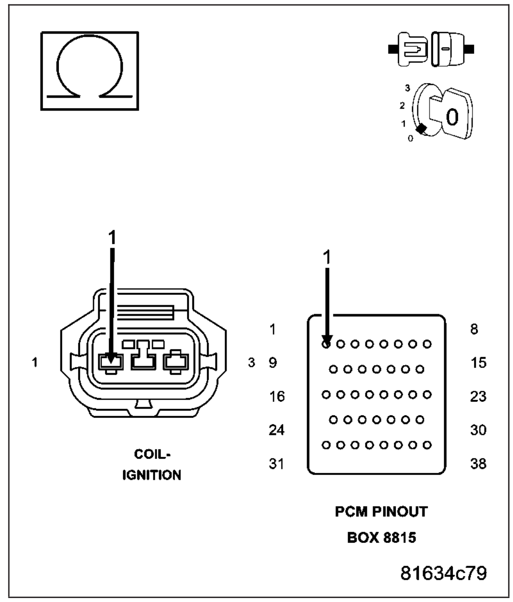
## 6. (K10) COIL CONTROL NO.6 CIRCUIT OPEN

Turn the ignition off.

Disconnect the C2 PCM harness connectors.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K10) Coil Control No.6 circuit from the Coil on Plug harness connector to the appropriate terminal of special tool #8815.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K10) Coil Control No.6 circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

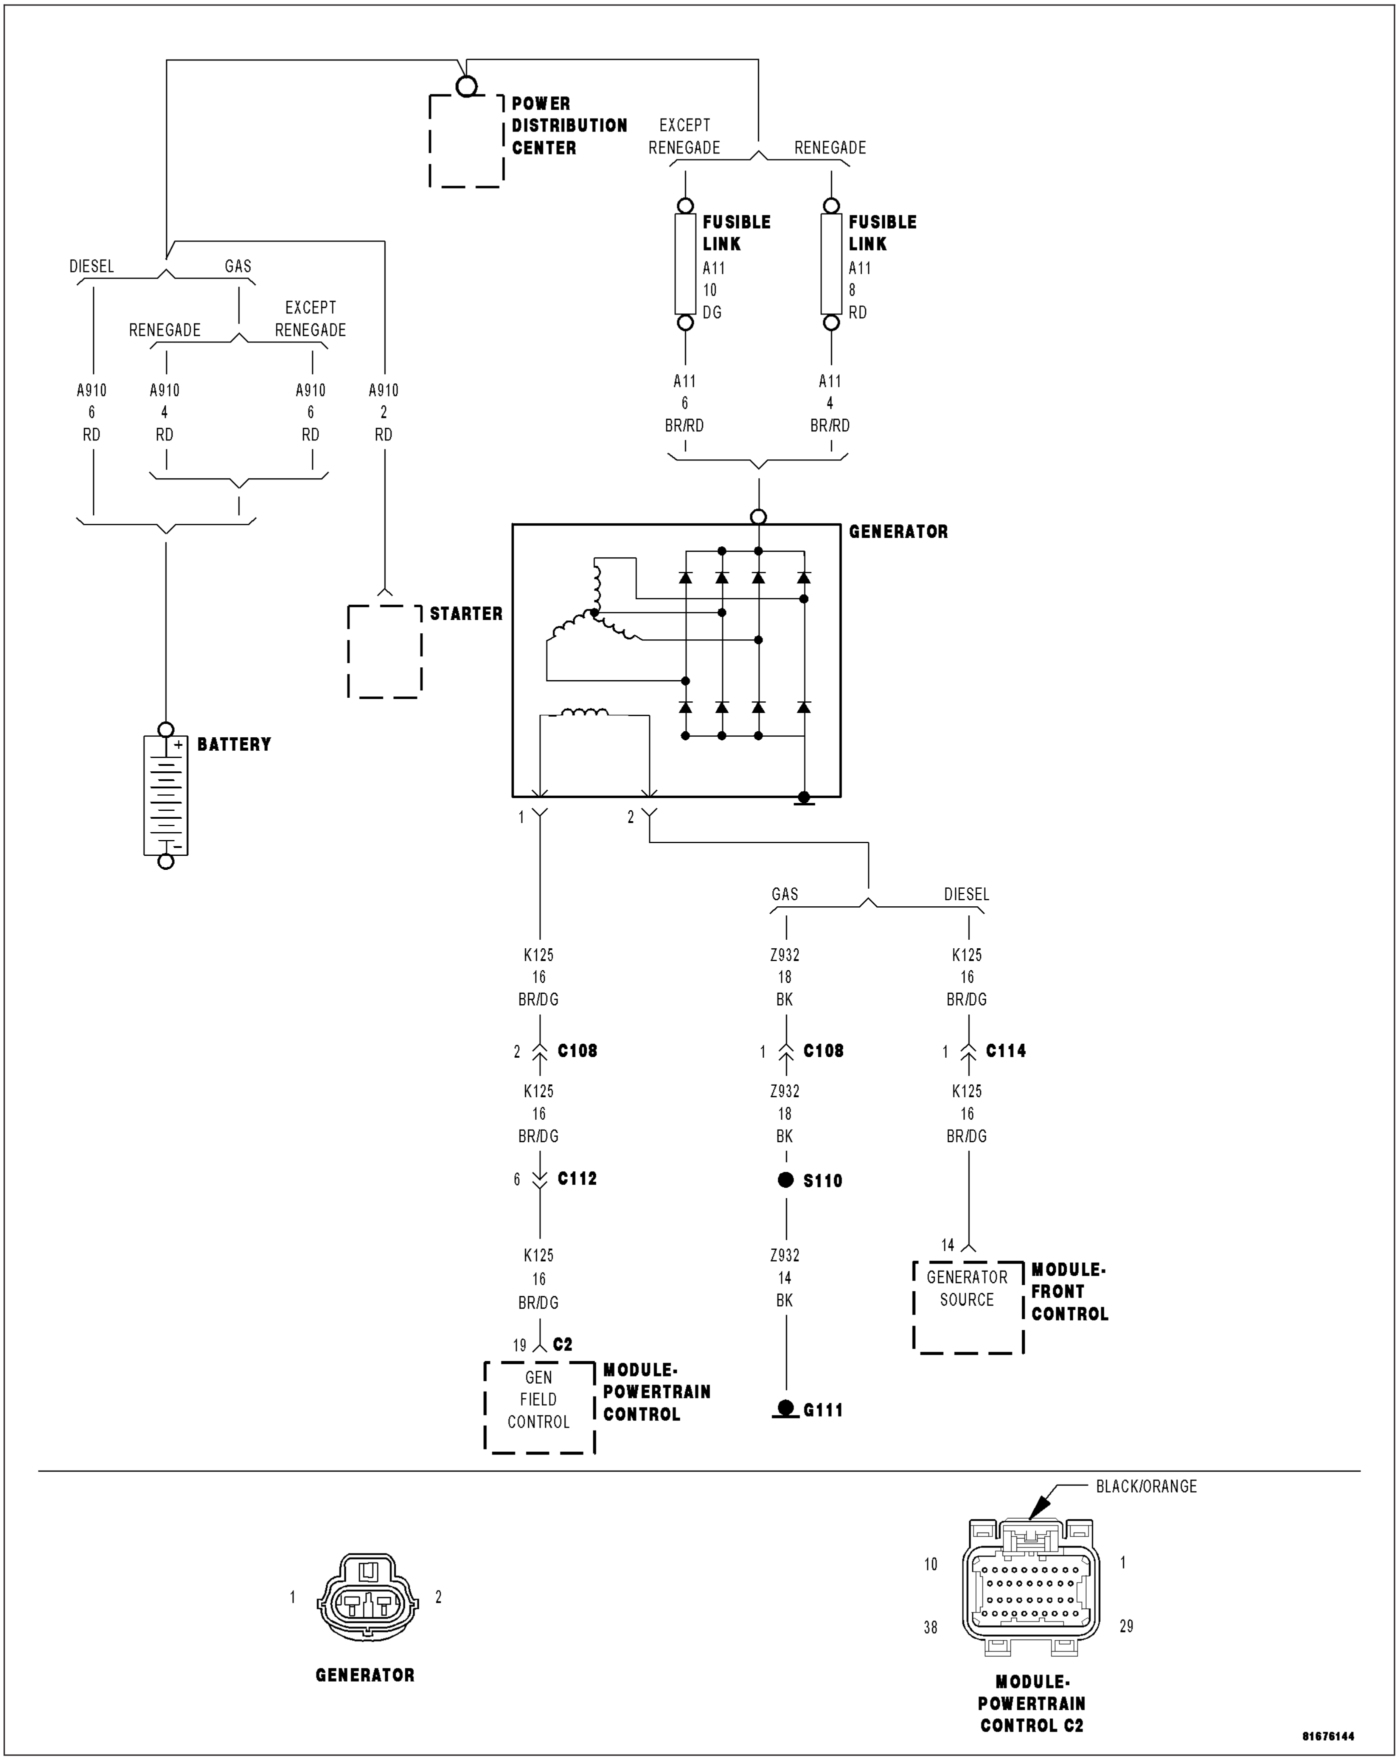
Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## P2503-CHARGING SYSTEM OUTPUT LOW



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  The engine running. The engine speed greater than 1157 RPM.
- **Set Condition:**
  The battery sensed voltage is 1 volt below the charging goal for 13.47 seconds. The PCM senses the battery voltage turns off the field driver and senses the battery voltage again. If the voltages are the same, the code is set. One Trip Fault. Three good trips to turn off the MIL.

| Possible Causes |
|---|
| EXCESSIVE RESISTANCE IN THE BATTERY POSITIVE CIRCUIT |
| EXCESSIVE RESISTANCE IN THE CASE GROUND |
| (K125) GEN FIELD CONTROL CIRCUIT SHORTED TO VOLTAGE |
| (K125) GEN FIELD CONTROL CIRCUIT OPEN |
| (K125) GEN FIELD CONTROL CIRCUIT SHORTED TO GROUND |
| (Z932) GEN GROUND CIRCUIT OPEN |
| GENERATOR |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Diagnostic Test

### 1. ACTIVE DTC

**NOTE: Inspect the vehicle for aftermarket accessories that may exceed the Generator System output.**
Ignition on, engine not running.

**NOTE: The battery must be fully charged.**

**NOTE: The Generator belt tension and condition must be checked before continuing.**
With a scan tool, read DTCs.
Start the engine.
Allow the idle to stabilize.
Ignition on, engine not running.
With the scan tool, read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 2. FUSED B+ CIRCUIT HIGH RESISTANCE

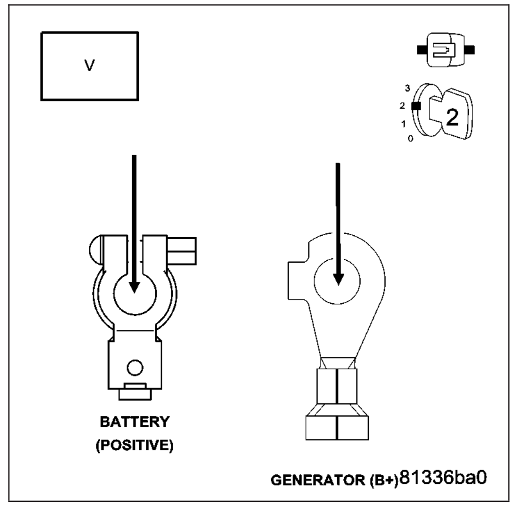
**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

Ignition on, engine not running.

**NOTE: Make sure all wires are clear of the engine's moving parts.**

Measure the voltage between the Generator B+ Output Terminal and the Battery+ Post.

Start the engine.



**Is the voltage above 0.4 of a volt?**

**Yes** >> Repair the excessive resistance in the battery positive circuit between the Generator and Battery.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. EXCESSIVE RESISTANCE IN THE CASE GROUND

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

Start the engine.

Warm the engine to operating temperature.

**NOTE: Make sure all wires are clear of the engine's moving parts.**

Measure the voltage between the Generator Case and Battery ground post.

**Is the voltage above 0.1 of a volt?**

**Yes** >> Repair the excessive resistance in the Generator Case Ground.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. GENERATOR OPERATION

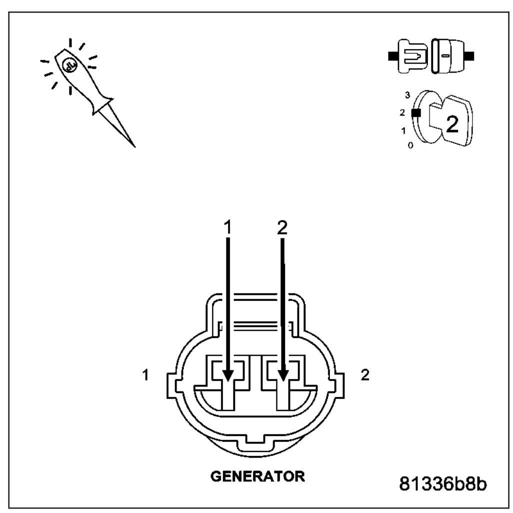
Turn the ignition off.

Disconnect the Generator Field harness connector.

Using a 12-volt test light, jump across the Generator Field harness connector.

Ignition on, engine not running.

With a scan tool, actuate the Generator Field Driver.



**Does the test light illuminate brightly and flash on and off?**

**Yes** >> Replace the Generator.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

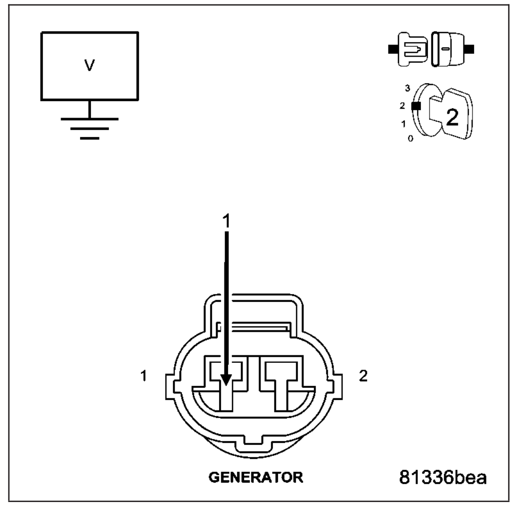
## 5. (K125) GEN FIELD CONTROL CIRCUIT SHORTED TO BATTERY VOLTAGE

Turn the ignition off.

Disconnect the C2 PCM harness connector.

Ignition on, engine not running.

Measure the voltage on the (K125) Gen Field Control circuit in the Generator Field harness connector.



**Is the voltage above 1.0 volt?**

**Yes** >> Repair the short to battery voltage in the (K125) Gen Field Control circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

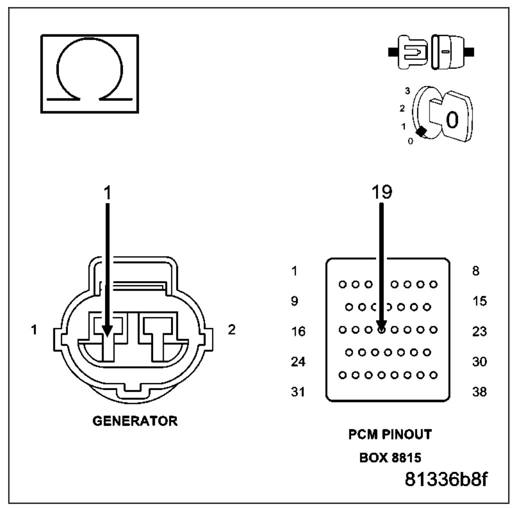
**No** >> Go To 6

## 6. (K125) FIELD CONTROL CIRCUIT OPEN

Turn the ignition off.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the (K125) Gen Field Control circuit from the Generator Field harness connector to the appropriate terminal of special tool #8815.



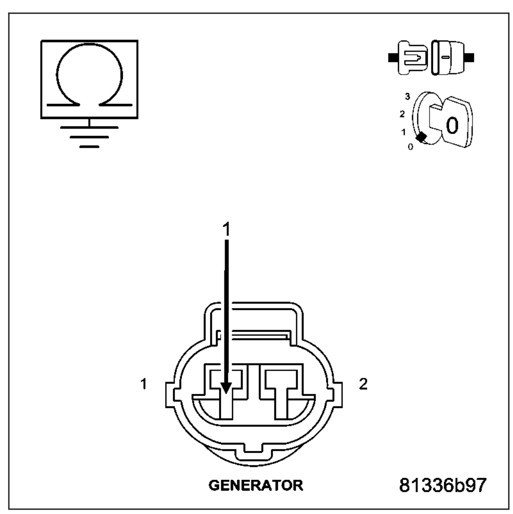
**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the open in the (K125) Gen Field Control circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. (K125) GEN FIELD CONTROL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K125) Gen Field Control circuit in the Generator Field harness connector.



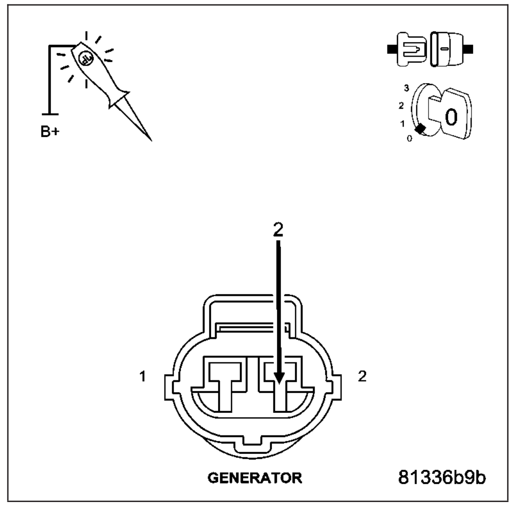
**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (K125) Gen Field Control circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 8

## 8. (Z932) GROUND CIRCUIT OPEN

Using a 12-volt test light connected to battery voltage, probe the (Z932) Ground circuit in the Generator Field harness connector.



**Does the test light illuminate brightly?**

**Yes** >> Go To 9

**No** >> Repair the open in the (Z932) Generator Ground circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 9. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## U0001–CAN C BUS

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  If the Anti-Lock Brakes Module detects a short in either CAN C Bus circuit.

Perform CAN C Bus Communication Failure diagnostic test procedure. **(Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING)**.

## U0101–LOST COMMUNICATION WITH TCM

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  - With the ignition on
  - Battery voltage between 10 and 16 volts
  - IOD fuse installed
- **Set Condition:**
  If the Anti-Lock Brakes Module fails to receive bus messages from the TCM for approximately 500 ms.

| Possible Causes |
|---|
| DTCS RELATED TO BATTERY VOLTAGE, IGNITION, OR VIN MESSAGES |
| CAN C BUS CIRCUITS OPEN OR SHORTED |
| TCM POWER AND GROUND |
| TCM |
| ANTI-LOCK BRAKES MODULE |

## Diagnostic Test

### 1. VERIFY DTC IS ACTIVE

**NOTE: Ensure the IOD fuse is installed and battery voltage is between 10 and 16 volts before proceeding.**
Turn the ignition on.

With the scan tool, read active DTCs.

**Is this DTC active?**

**Yes** >> Go To 2

**No** >> Perform the Stored Lost Communication test procedure. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING).

### 2. CHECK FOR ANY OF THE FOLLOWING ACTIVE DTCS

With the scan tool, read all active DTCs from all CAN C Bus modules.

**NOTE: Check for CAN C hardware electrical, VIN Missing/Mismatch, battery or ignition related DTCs.**

**Does the scan tool display any active DTCs to the conditions listed above?**

**Yes** >> Diagnose and repair the DTC(s). Refer to the Table of Contents in the applicable Section.

**No** >> Go To 3

### 3. VERIFY THAT THE TCM IS ACTIVE ON THE BUS

With the scan tool, select ECU View.

Verify that the TCM is active on the bus.

**Is the TCM active on the bus?**

**Yes** >> Go To 4

**No** >> (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for No Response related diagnostic procedures.

## 4. CHECK FOR ADDITIONAL COMMUNICATION RELATED DTCS

With the scan tool, select Network View and select Advanced.

**Is there more than one module with active DTCs "Logged Against" the TCM?**

**Yes** >> Replace/update the TCM in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE).

**No** >> Replace the Anti-Lock Brakes Module in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE).

## U0121-LOST COMMUNICATION WITH ANTI-LOCK BRAKE MODULE

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  - With the ignition on
  - Battery voltage between 10 and 16 volts
  - IOD fuse installed
- **Set Condition:**
  If the PCM fails to receive bus messages from the ABS M for approximately 500 ms.

| Possible Causes |
|---|
| DTCS RELATED TO BATTERY VOLTAGE, IGNITION, OR VIN MESSAGES |
| CAN C BUS CIRCUITS OPEN OR SHORTED |
| ABS POWER AND GROUND |
| ABS |
| PCM |

## Diagnostic Test

### 1. VERIFY DTC IS ACTIVE

**NOTE: Ensure the IOD fuse is installed and battery voltage is between 10 and 16 volts before proceeding.**
Turn the ignition on.

With the scan tool, read active DTCs.

**Is this DTC active?**

**Yes** >> Go To 2

**No** >> Perform the Stored Lost Communication test procedure. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING).

### 2. CHECK FOR ANY OF THE FOLLOWING ACTIVE DTCS

With the scan tool, read all active DTCs from all CAN C Bus modules.

**NOTE: Check for CAN C hardware electrical, VIN Missing/Mismatch, battery or ignition related DTCs.**

**Does the scan tool display any active DTCs to the conditions listed above?**

**Yes** >> Diagnose and repair the DTC(s). Refer to the Table of Contents in the applicable Section.

**No** >> Go To 3

### 3. VERIFY THAT THE ABS IS ACTIVE ON THE BUS

With the scan tool, select ECU View.

Verify that the ABS is active on the bus.

**Is the ABS active on the bus?**

**Yes** >> Go To 4

**No** >> (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for No Response related diagnostic procedures.

## 4. CHECK FOR ADDITIONAL COMMUNICATION RELATED DTCS

With the scan tool, select Network View and select Advanced.

**Is there more than one module with active DTCs “Logged Against” the ABS?**

**Yes** >> Replace/update the ABS in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE).

**No** >> Replace the PCM in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE).

## U0140-LOST COMMUNICATION WITH BODY CONTROL MODULE

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  - With the ignition on
  - Battery voltage between 10 and 16 volts
  - IOD fuse installed
- **Set Condition:**
  If the PCM fails to receive bus messages from the BCM for approximately 500 ms.

| Possible Causes |
|---|
| DTCS RELATED TO BATTERY VOLTAGE, IGNITION, OR VIN MESSAGES |
| CAN C BUS CIRCUITS OPEN OR SHORTED |
| BCM POWER AND GROUND |
| BCM |
| PCM |

## Diagnostic Test

### 1. VERIFY DTC IS ACTIVE

**NOTE: Ensure the IOD fuse is installed and battery voltage is between 10 and 16 volts before proceeding.**
Turn the ignition on.

With the scan tool, read active DTCs.

**Is this DTC active?**

**Yes** >> Go To 2

**No** >> Perform the Stored Lost Communication test procedure. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING).

### 2. CHECK FOR ANY OF THE FOLLOWING ACTIVE DTCS

With the scan tool, read all active DTCs from all CAN C Bus modules.

**NOTE: Check for CAN C hardware electrical, VIN Missing/Mismatch, battery or ignition related DTCs.**

**Does the scan tool display any active DTCs to the conditions listed above?**

**Yes** >> Diagnose and repair the DTC(s). Refer to the Table of Contents in the applicable Section.

**No** >> Go To 3

### 3. VERIFY THAT THE BCM IS ACTIVE ON THE BUS

With the scan tool, select ECU View.

Verify that the BCM is active on the bus.

**Is the BCM active on the bus?**

**Yes** >> Go To 4

**No** >> (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for No Response related diagnostic procedures.

## 4. CHECK FOR ADDITIONAL COMMUNICATION RELATED DTCS

With the scan tool, select Network View and select Advanced.

**Is there more than one module with active DTCs “Logged Against” the BCM?**

**Yes** >> Replace/update the BCM in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE).

**No** >> Replace the PCM in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE).

## U0155-LOST COMMUNICATION WITH CLUSTER

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  - With the ignition on
  - Battery voltage between 10 and 16 volts
  - IOD fuse installed
- **Set Condition:**
  If the PCM fails to receive bus messages from the Cluster for approximately 500 ms.

| Possible Causes |
|---|
| DTCS RELATED TO BATTERY VOLTAGE, IGNITION, OR VIN MESSAGES |
| CAN C BUS CIRCUITS OPEN OR SHORTED |
| CLUSTER POWER AND GROUND |
| CLUSTER |
| PCM |

## Diagnostic Test

### 1. VERIFY DTC IS ACTIVE

**NOTE: Ensure the IOD fuse is installed and battery voltage is between 10 and 16 volts before proceeding.**
Turn the ignition on.

With the scan tool, read active DTCs.

**Is this DTC active?**

**Yes** >> Go To 2

**No** >> Perform the Stored Lost Communication test procedure. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING).

### 2. CHECK FOR ANY OF THE FOLLOWING ACTIVE DTCS

With the scan tool, read all active DTCs from all CAN C Bus modules.

**NOTE: Check for CAN C hardware electrical, VIN Missing/Mismatch, battery or ignition related DTCs.**

**Does the scan tool display any active DTCs to the conditions listed above?**

**Yes** >> Diagnose and repair the DTC(s). Refer to the Table of Contents in the applicable Section.

**No** >> Go To 3

### 3. VERIFY THAT THE CLUSTER IS ACTIVE ON THE BUS

With the scan tool, select ECU View.

Verify that the Cluster is active on the bus.

**Is the Cluster active on the bus?**

**Yes** >> Go To 4

**No** >> (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for No Response related diagnostic procedures.

## 4. CHECK FOR ADDITIONAL COMMUNICATION RELATED DTCS

With the scan tool, select Network View and select Advanced.

**Is there more than one module with active DTCs “Logged Against” the CLUSTER?**

**Yes** >> Replace/update the Cluster in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE).

**No** >> Replace the PCM in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE).

## U0168-LOST COMMUNICATION WITH SKIM/SKREEM (WCM)

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  - With the ignition on
  - Battery voltage between 10 and 16 volts
  - IOD fuse installed
- **Set Condition:**
  If the PCM fails to receive bus messages from the SKREEM (WCM) for approximately 500 ms.

| Possible Causes |
|---|
| DTCS RELATED TO BATTERY VOLTAGE, IGNITION, OR VIN MESSAGES |
| CAN C BUS CIRCUITS OPEN OR SHORTED |
| SKREEM (WCM) POWER AND GROUND |
| SKREEM (WCM) |
| PCM |

## Diagnostic Test

### 1. VERIFY DTC IS ACTIVE

**NOTE: Ensure the IOD fuse is installed and battery voltage is between 10 and 16 volts before proceeding.**
Turn the ignition on.

With the scan tool, read active DTCs.

**Is this DTC active?**

**Yes** >> Go To 2

**No** >> Perform the Stored Lost Communication test procedure. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING).

### 2. CHECK FOR ANY OF THE FOLLOWING ACTIVE DTCS

With the scan tool, read all active DTCs from all CAN C Bus modules.

**NOTE: Check for CAN C hardware electrical, VIN Missing/Mismatch, battery or ignition related DTCs.**

**Does the scan tool display any active DTCs to the conditions listed above?**

**Yes** >> Diagnose and repair the DTC(s). Refer to the Table of Contents in the applicable Section.

**No** >> Go To 3

### 3. VERIFY THAT THE SKREEM (WCM) IS ACTIVE ON THE BUS

With the scan tool, select ECU View.

Verify that the SKREEM (WCM) is active on the bus.

**Is the SKREEM (WCM) active on the bus?**

**Yes** >> Go To 4

**No** >> (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for No Response related diagnostic procedures.

## 4. CHECK FOR ADDITIONAL COMMUNICATION RELATED DTCS

With the scan tool, select Network View and select Advanced.

**Is there more than one module with active DTCs "Logged Against" the SKREEM (WCM)?**

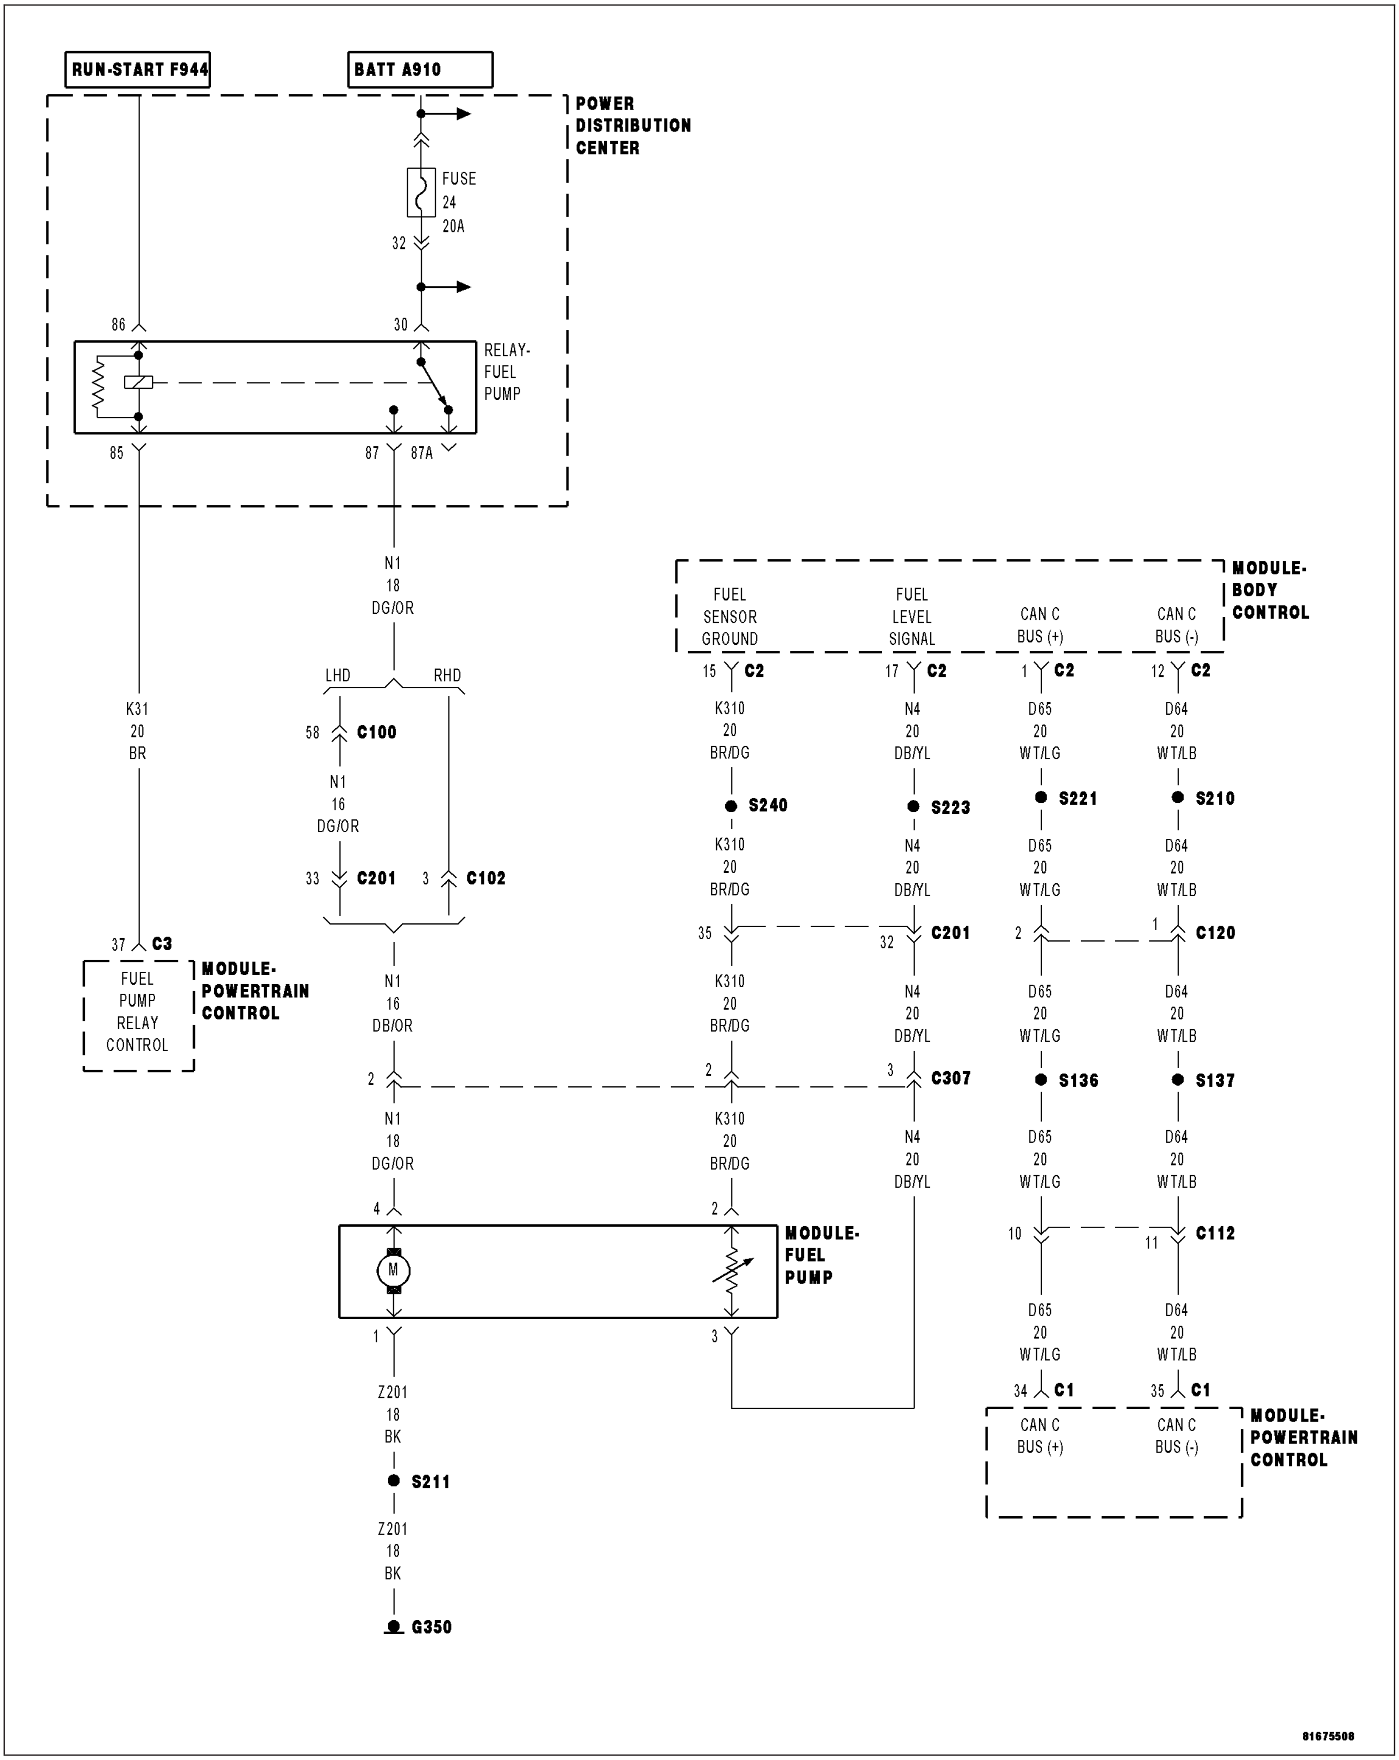
**Yes** >> Replace/update the SKREEM (WCM) in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE).

**No** >> Replace the PCM in accordance with the service information.

Perform BODY VERIFICATION TEST – VER 1. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE).

## U110C-NO FUEL LEVEL BUS MESSAGE RECEIVED



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on.
- **Set Condition:**
  When the PCM does not receive a fuel level signal from the BCM over the CAN C circuit. The circuit is constantly monitored. One Trip fault.

| Possible Causes |
|---|
| CAN C BUS CIRCUIT OPEN OR SHORTED |
| BODY CONTROL MODULE |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING) .**

## Theory of Operation

The BCM sends the fuel level signal the NGC over the CAN C bus circuit.

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.
With the scan tool read Powertrain DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. U0140-LOST COMMUNICATION WITH BODY CONTROL MODULE ALSO ACTIVE

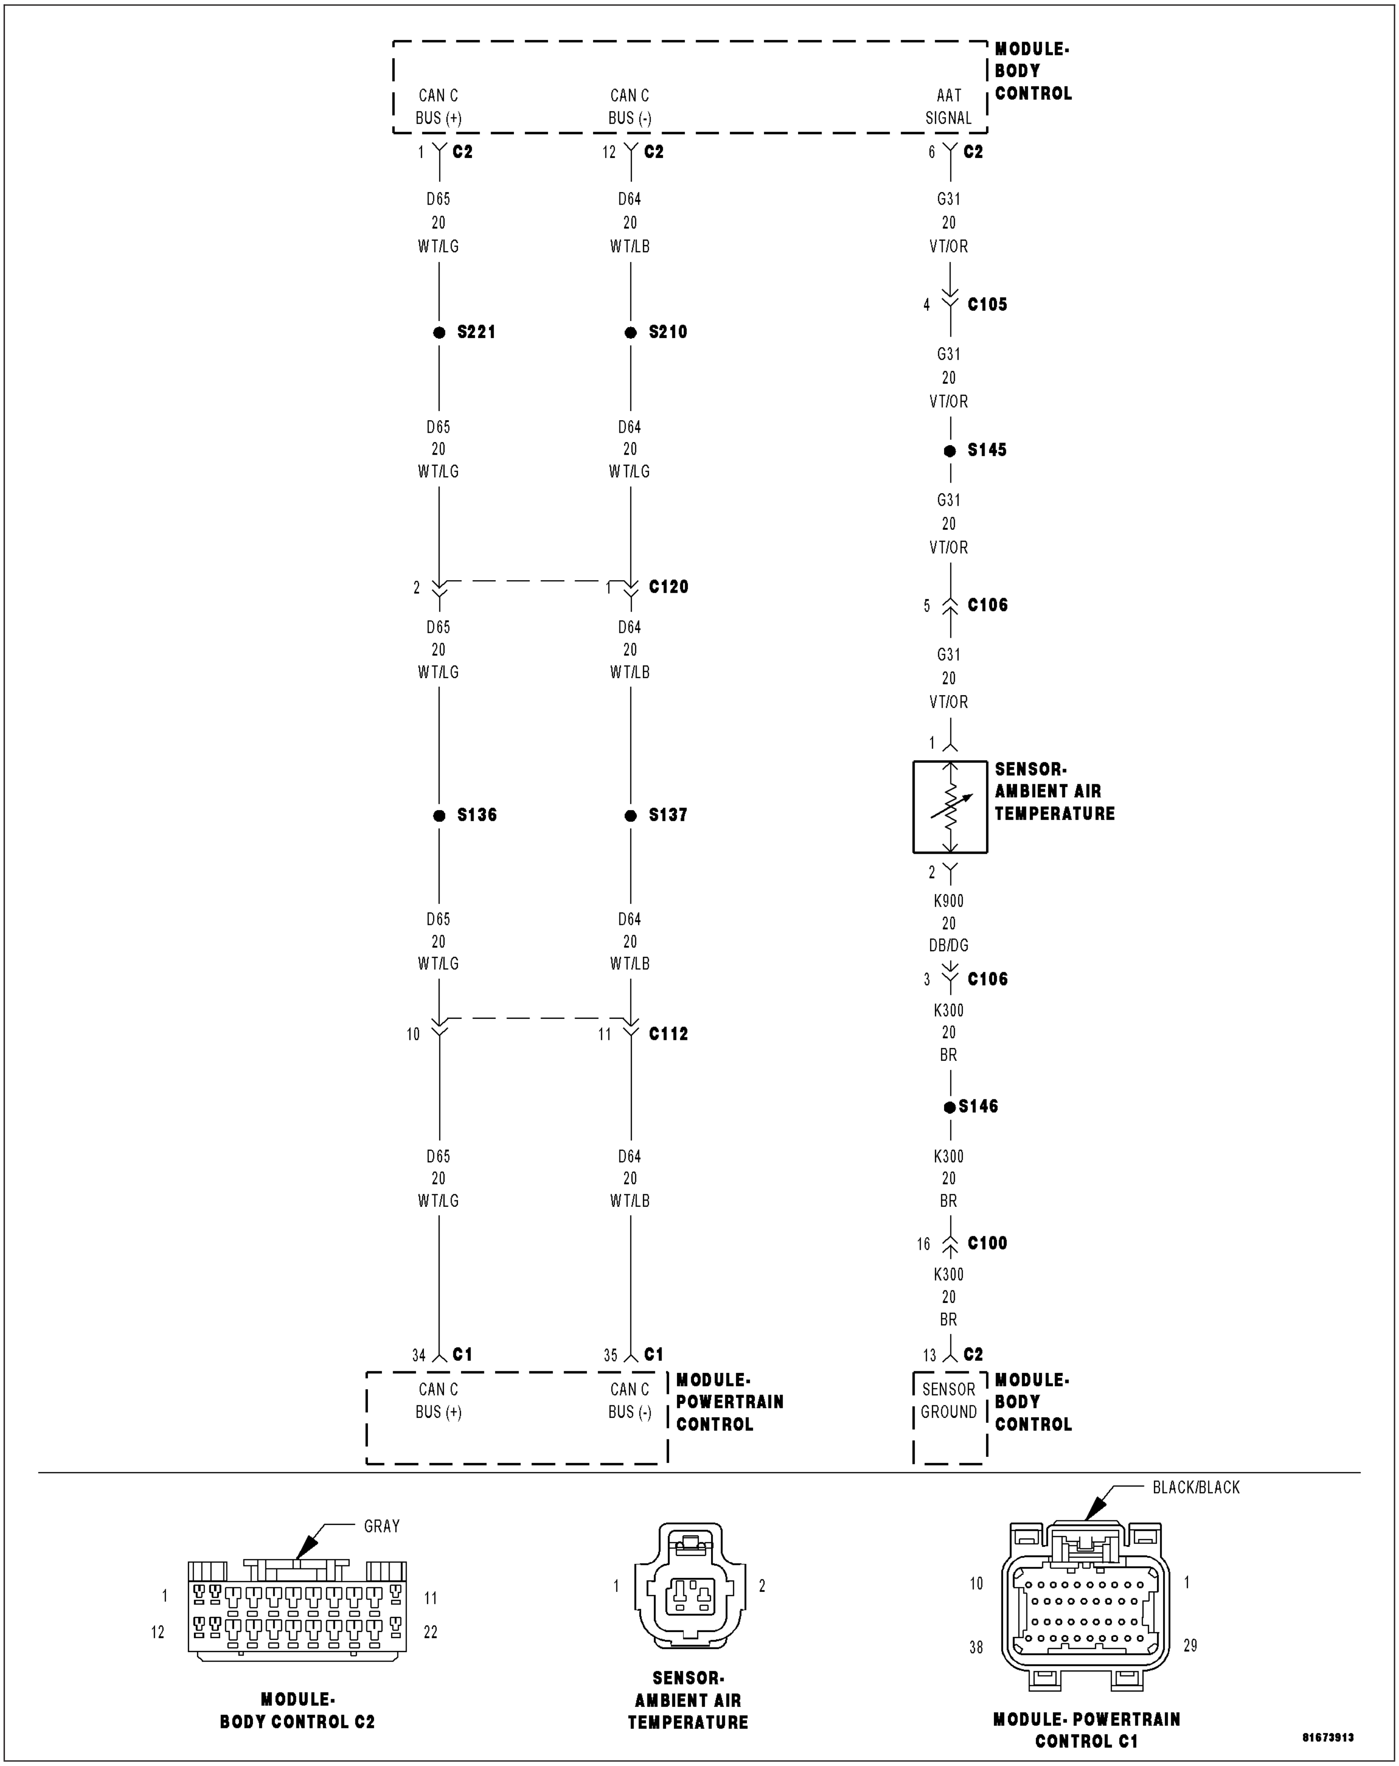
With the scan tool read DTCs.

**Is the U0140-LOST COMMUNICATION WITH BODY CONTROL MODULE also set?**

**Yes** >> Follow the diagnostics for U0140-LOST COMMUNICATION WITH BODY CONTROL MODULE
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## U110E-LOST AMBIENT TEMPERATURE MESSAGE



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on.
- **Set Condition:**
  The PCM doesn't receive the ambient temperature signal over the CAN C bus from the BCM. The circuit is continuously monitored.

| Possible Causes |
| --- |
| CAN C BUS CIRCUIT OPEN OR SHORTED |
| BODY CONTROL MODULE |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Theory of Operation

The ambient temperature sensor signal is a direct input to the BCM. The BCM sends the PCM the ambient temperature signal over the CAN C bus.

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With the scan tool read Powertrain DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. U0140-LOST COMMUNICATION WITH BODY CONTROL MODULE ALSO ACTIVE

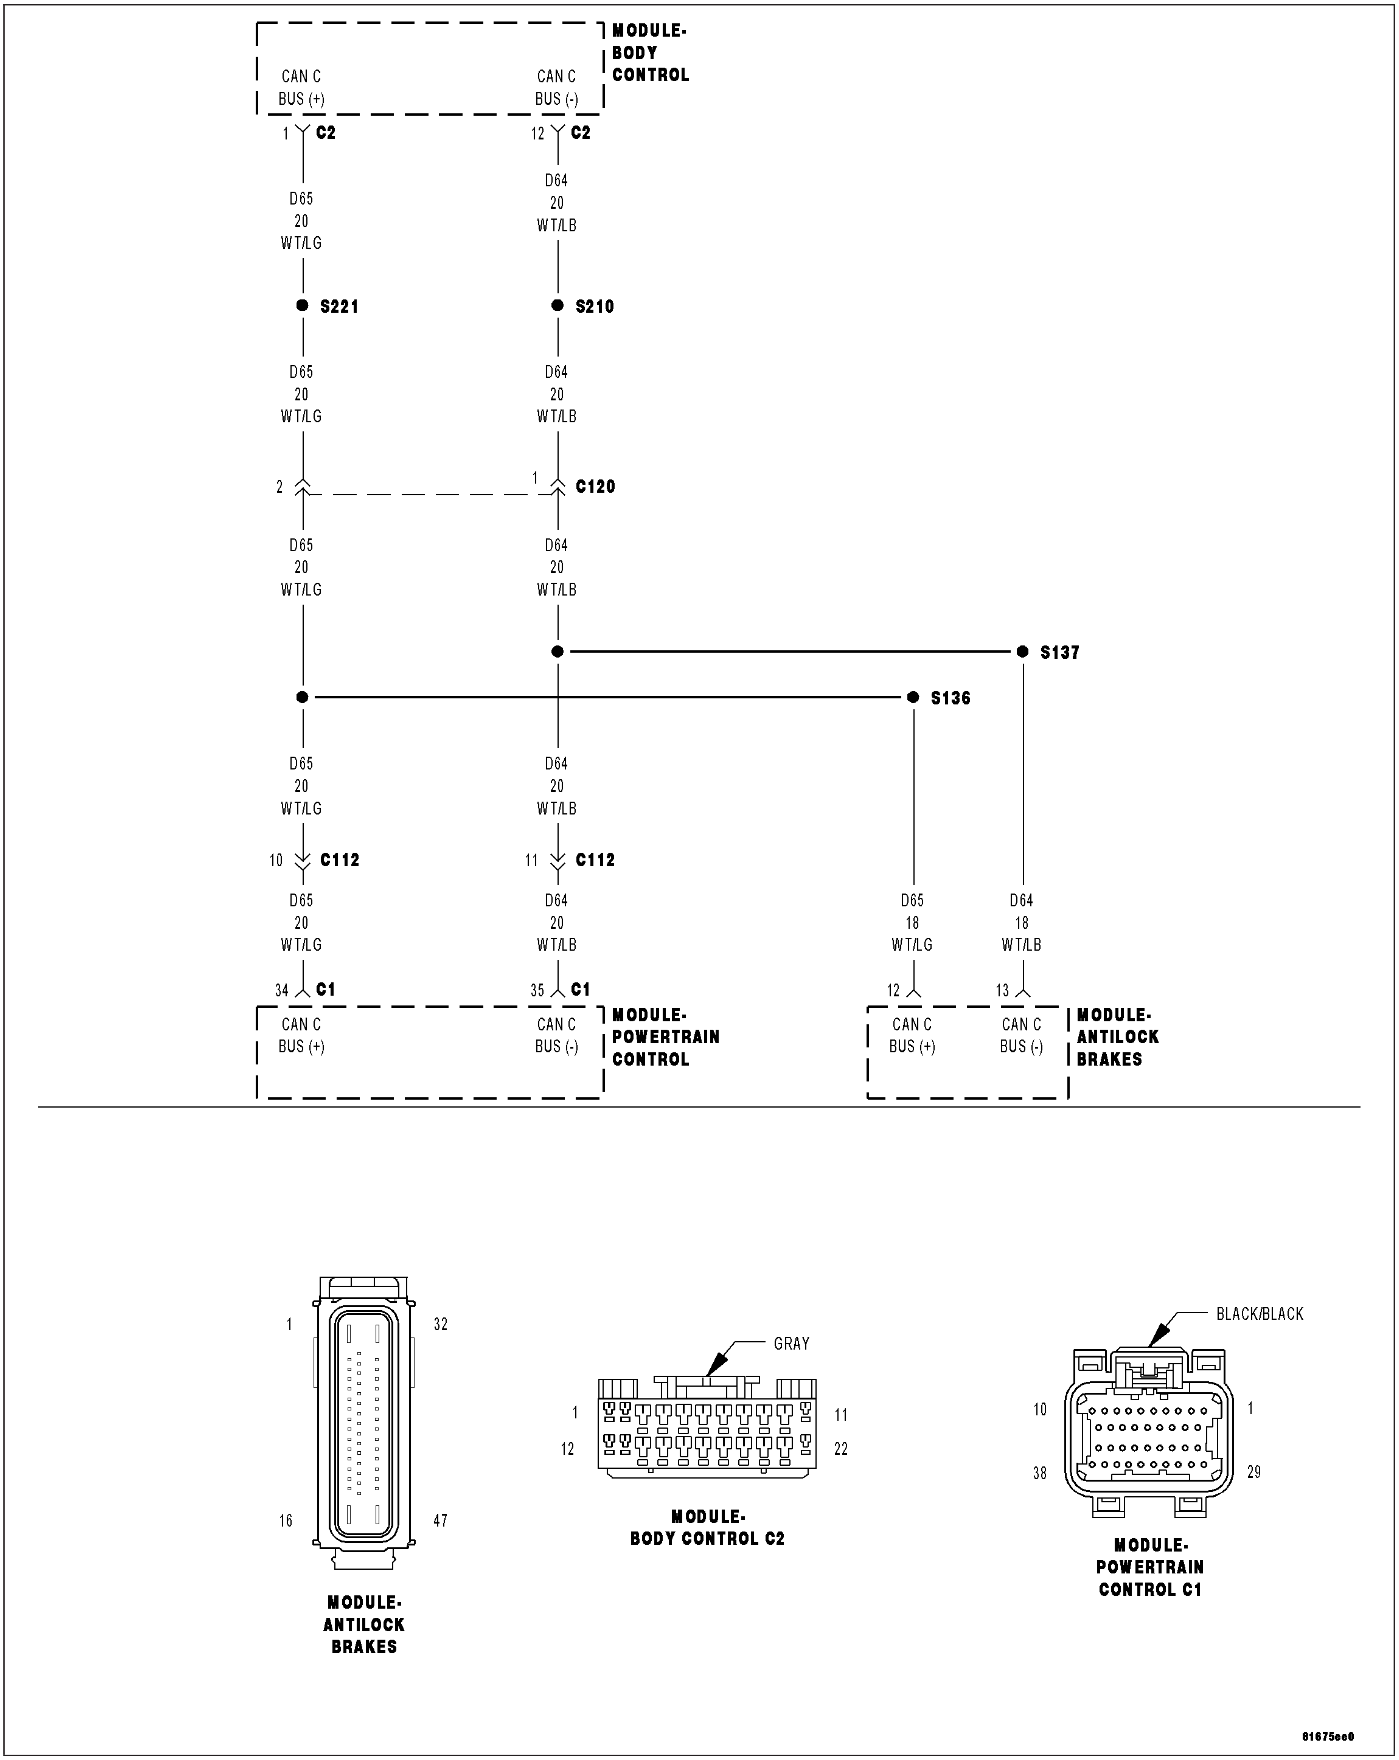
With the scan tool read DTCs.

**Is the U0140-NO BUS MESSAGE RECEIVED FROM THE BCM also set?**

**Yes** >> Follow the diagnostics for U0140-LOST COMMUNICATION WITH BODY CONTROL MODULE
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## U1110-LOST VEHICLE SPEED MESSAGE



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on.
- **Set Condition:**
  The PCM doesn’t receive a vehicle speed signal from the Anti-lock brake Module over the CAN C bus.

| Possible Causes |
|---|
| CAN C BUS CIRCUIT OPEN OR SHORTED |
| ANTI-LOCK BRAKE MODULE |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING) .**

## Theory of Operation

The PCM receives the vehicle speed signal over the CAN C bus from the Anti-lock Brake Module.

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.
With the scan tool read Powertrain DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. U0121-LOST COMMUNICATION WITH ABS MODULE ALSO SET

With the scan tool continue reading DTCs.

**Is the U0121-LOST COMMUNICATION WITH ABS MODULE also set?**

**Yes** >> Follow the diagnostics for U0121-LOST COMMUNICATION WITH ABS MODULE
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## U1113-LOST A/C PRESSURE MESSAGE

For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on.
- **Set Condition:**
  The PCM doesn't receive the a/c pressure signal over the CAN C bus from the BCM. The circuit is continuously monitored.

| Possible Causes |
|---|
| CAN C BUS CIRCUIT OPEN OR SHORTED |
| BODY CONTROL MODULE |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

### Theory of Operation

The A/C Pressure Transducer signal is a direct input to the BCM. The BCM sends the PCM the A/C Pressure Transducer signal over the CAN C bus.

### Diagnostic Test

#### 1. ACTIVE DTC

Ignition on, engine not running.

With the scan tool read Powertrain DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

#### 2. U0141-LOST COMMUNICATION WITH BODY CONTROL MODULE ALSO ACTIVE

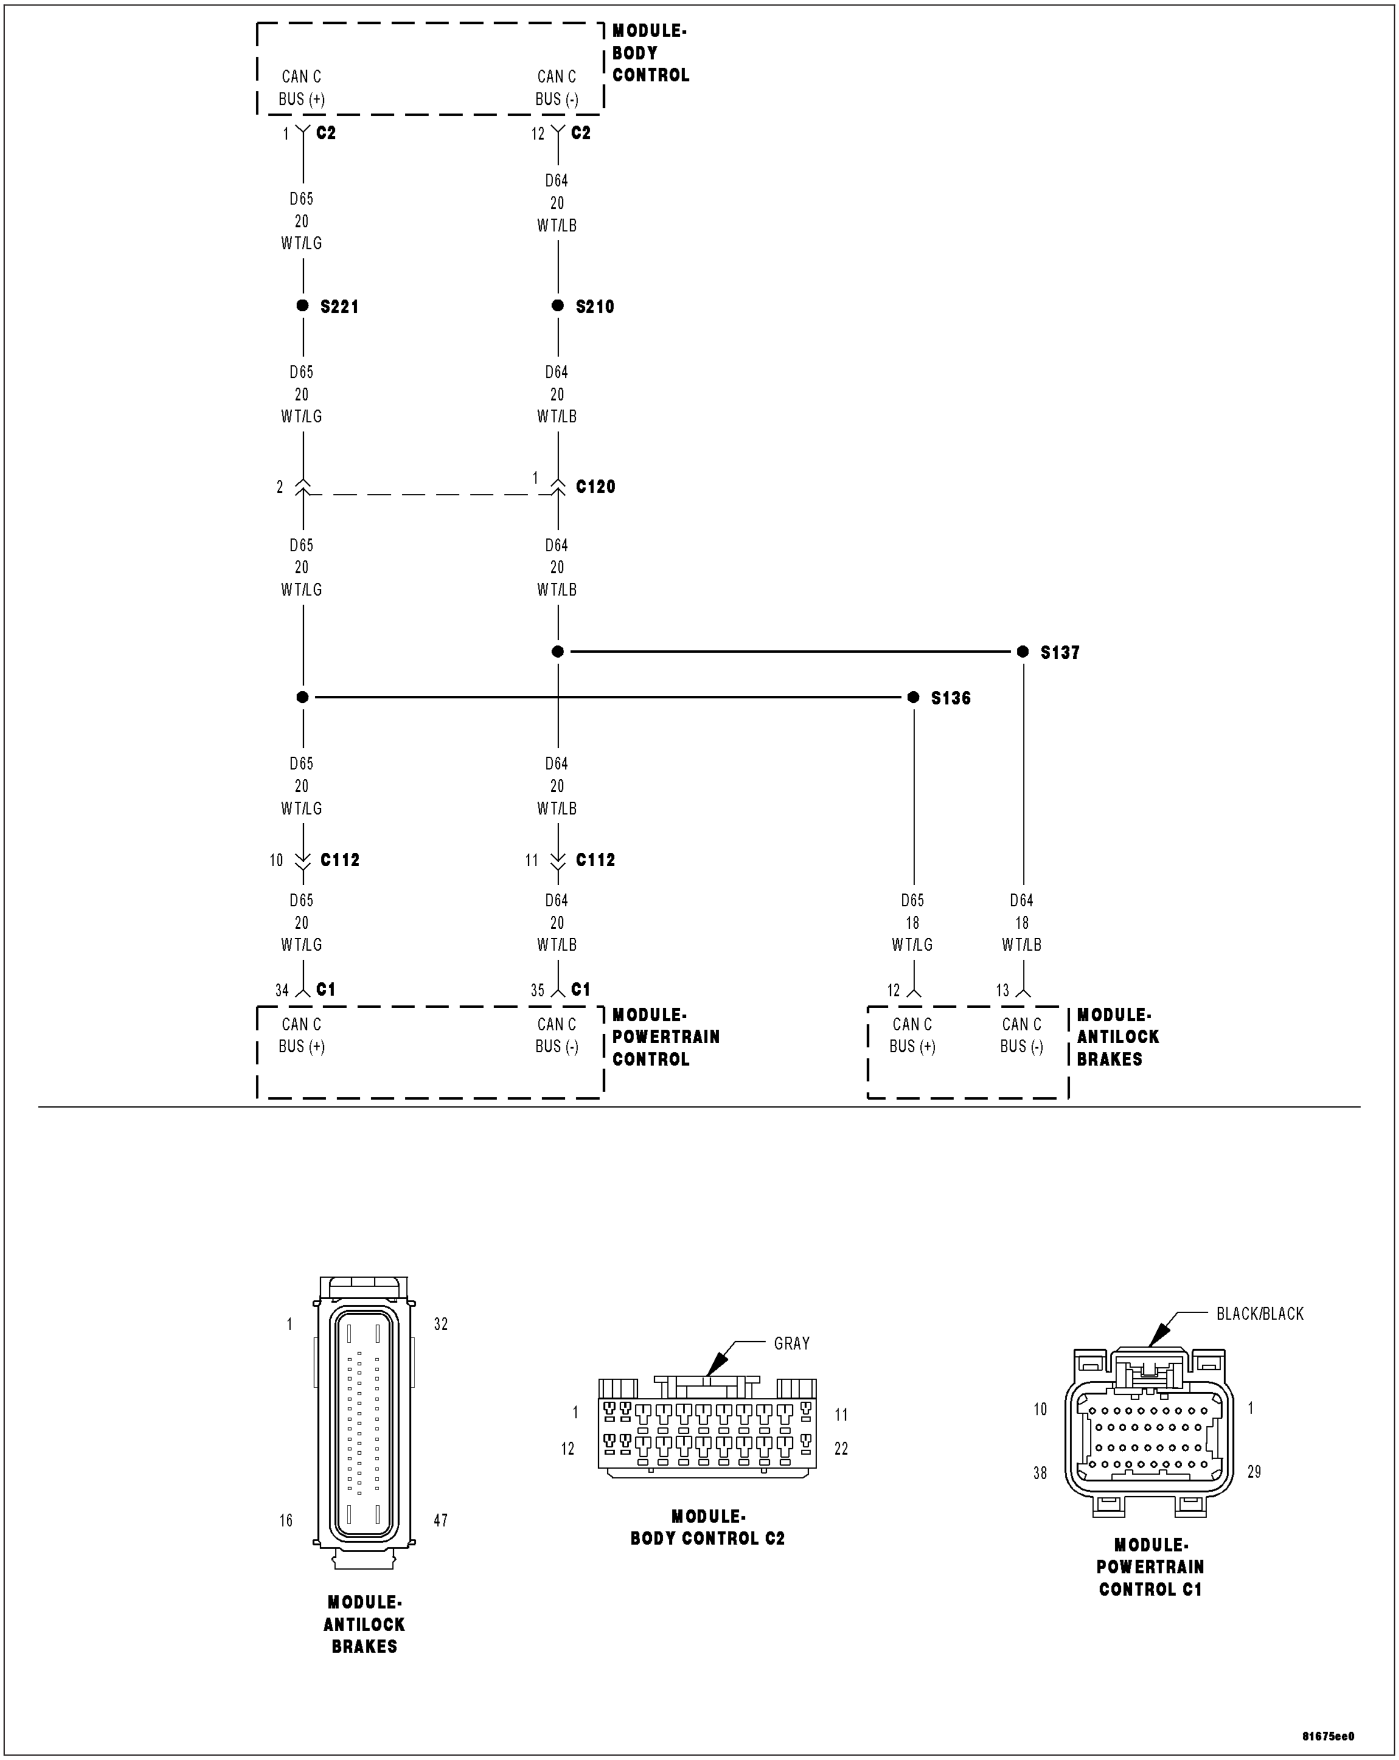
With the scan tool read DTCs.

**Is the U0141-NO BUS MESSAGE RECEIVED FROM THEBCM also set?**

**Yes** >> Follow the diagnostics for U0140-LOST COMMUNICATION WITH BODY CONTROL MODULE
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## U1120-LOST WHEEL DISTANCE MESSAGE



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on.
- **Set Condition:**
  The PCM doesn't receive a wheel distance message from the Anti-lock brake Module or BCM (NON-ABS) over the CAN C bus.

| Possible Causes |
| --- |
| CAN C BUS CIRCUIT OPEN OR SHORTED |
| ANTI-LOCK BRAKE MODULE |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Theory of Operation

The PCM receives the vehicle speed signal over the CAN C bus from the Anti-lock Brake Module or BCM (NON-ABS).

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With the scan tool read Powertrain DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. U0121-LOST COMMUNICATION WITH ABS MODULE/P0140–LOST COMMUNICATION WITH BCM ALSO SET

**NOTE: If the vehicle is not equipped with ABS the VSS signal will come from the BCM.**

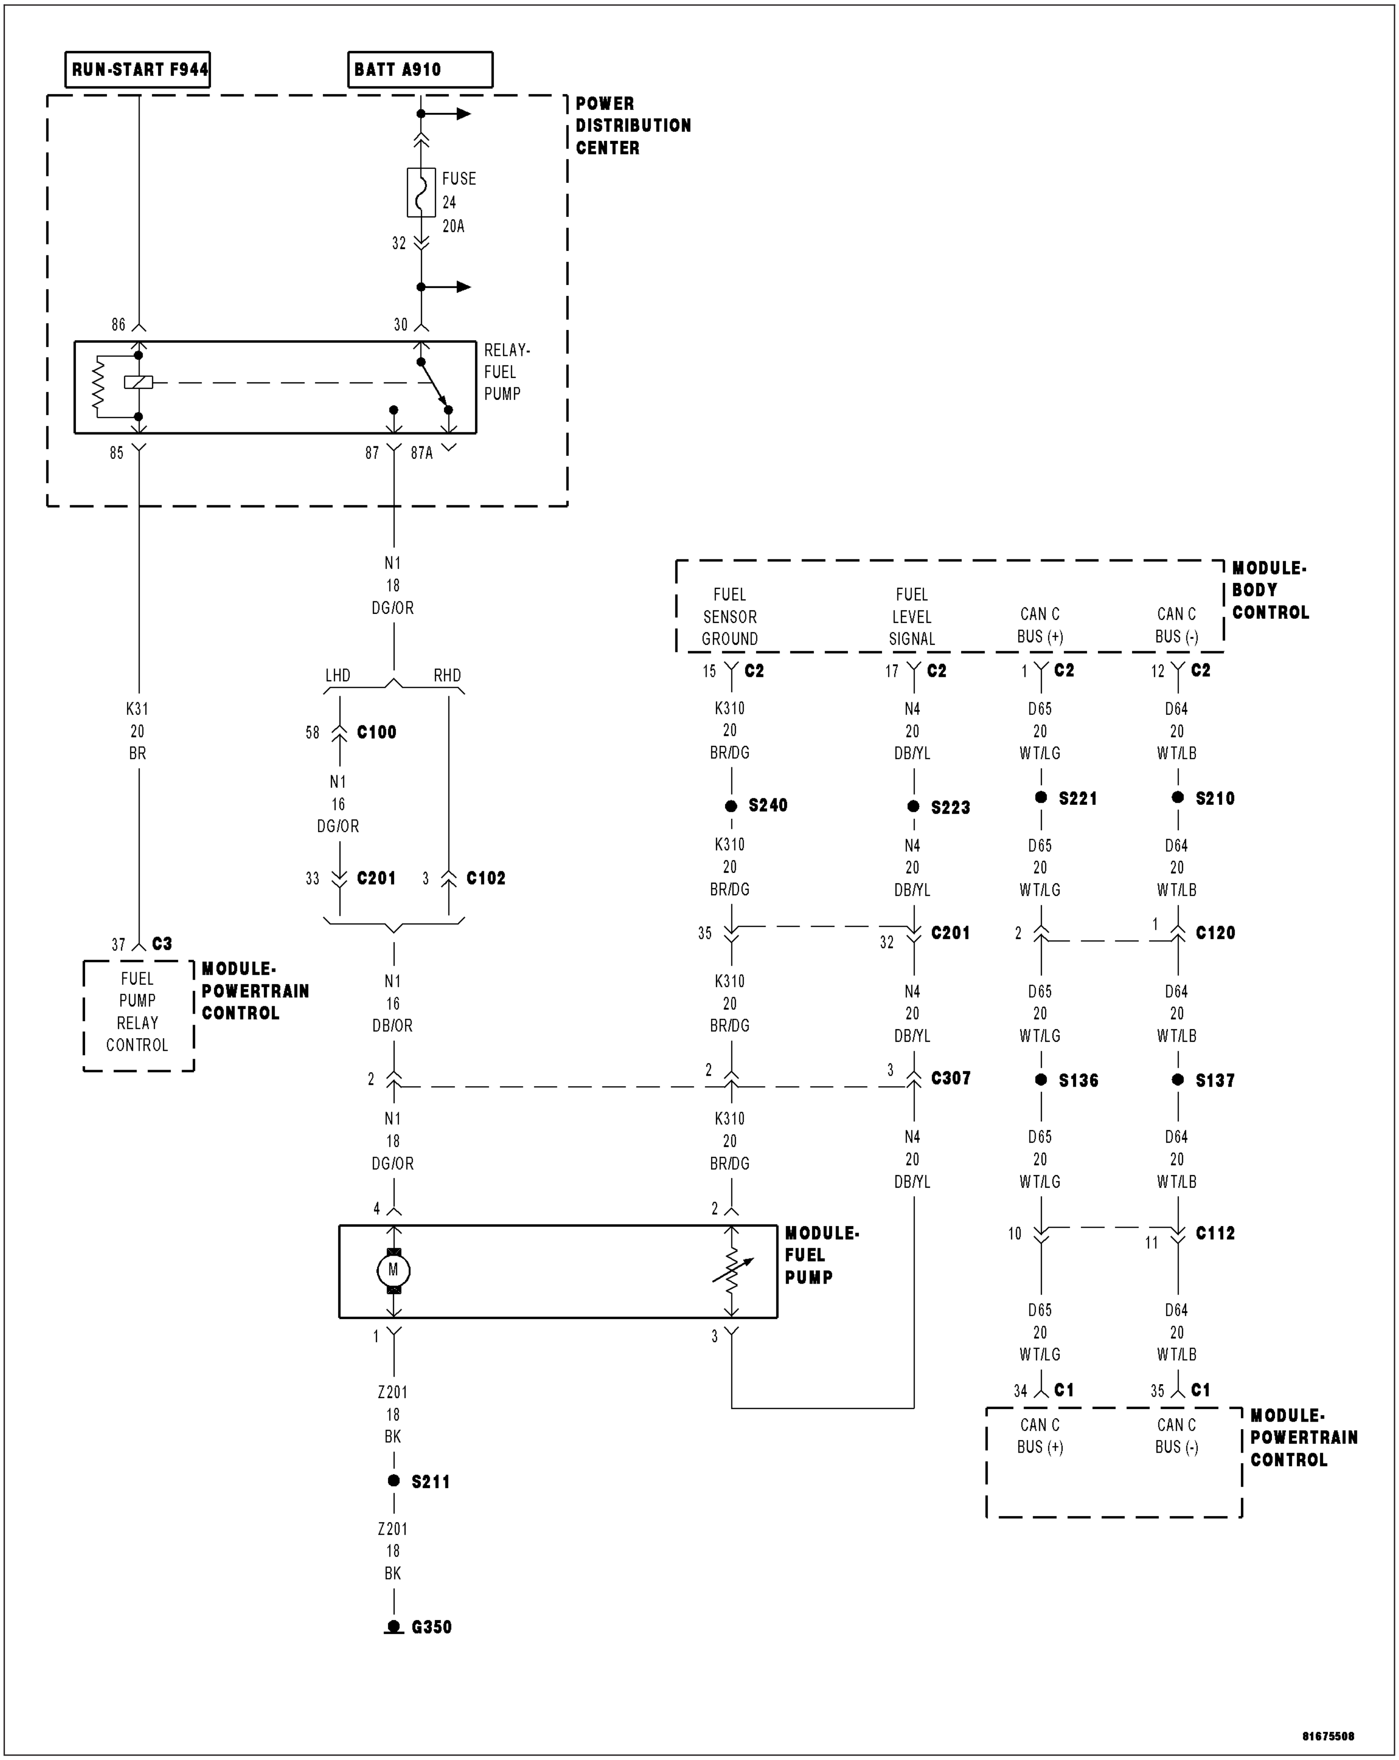
With the scan tool, read the appropriate module for DTCs.

**Is the U0121-LOST COMMUNICATION WITH ABS MODULE/P0140–Lost Communicate With BCM also set?**

**Yes** >> Perform the appropriate diagnostic test. Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## U1411-IMPLAUSIBLE FUEL VOLUME SIGNAL RECEIVED



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on.
- **Set Condition:**
  The fuel volume message the PCM is receiving is implausible. The circuit is continuously monitored.

| Possible Causes |
| --- |
| CAN C OPEN OR SHORTED |
| BODY CONTROL MODULE |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Theory of Operation

The BCM has to send the PCM a fuel volume signal over CAN C. The signal the BCM sends over CAN C is implausible.

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool read DTCs.

**Is the DTC active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. CAN C BUS DTCS ALSO ACTIVE

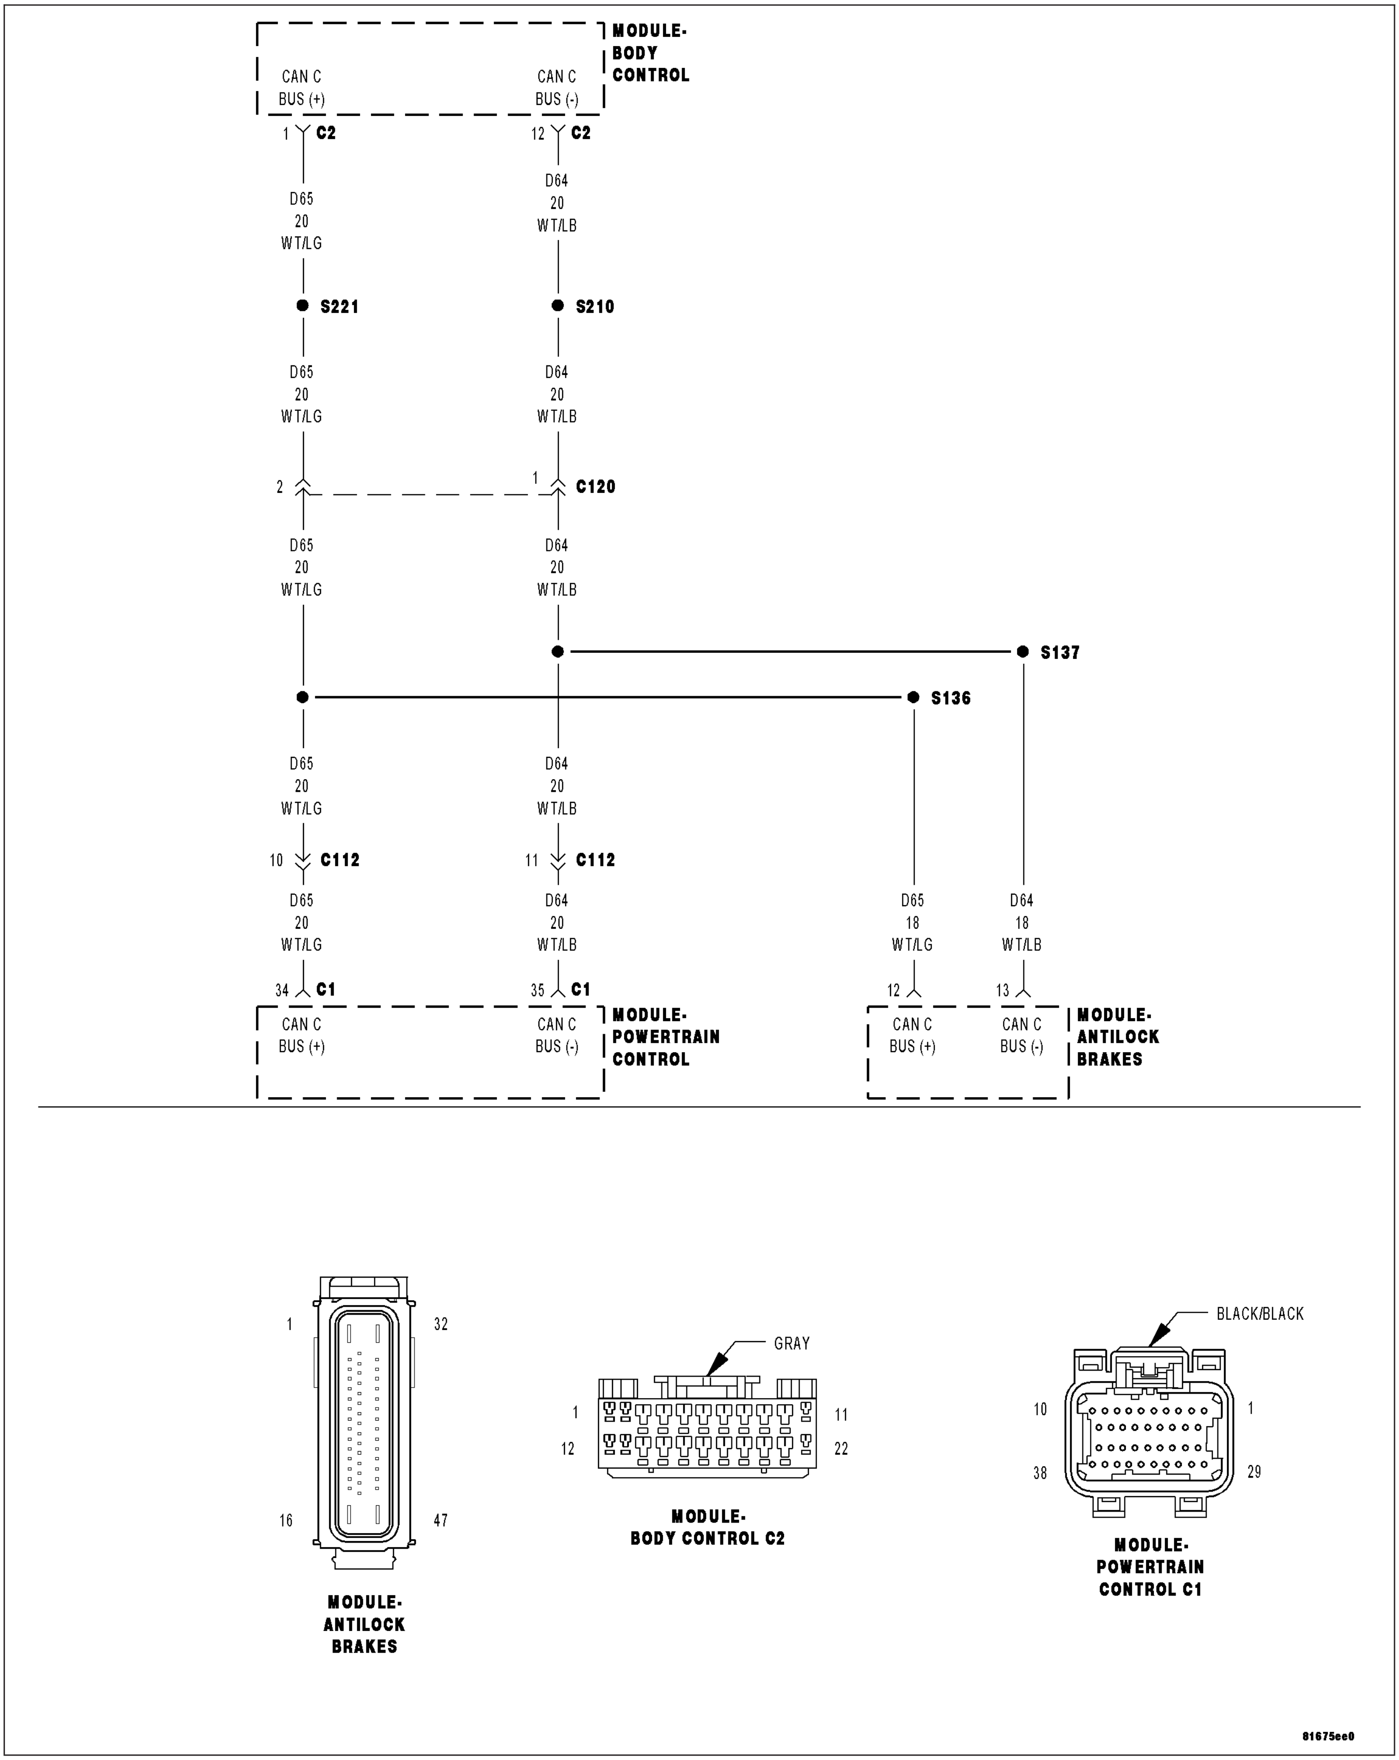
With a scan tool check for DTCs in the BCM.

**Are any CAN C related DTCs active at this time?**

**Yes** >> (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for the appropriate diagnostic procedures.
Perform BODY VERIFICATION TEST – VER 1. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## U1412-IMPLAUSIBLE VEHICLE SPEED SIGNAL RECEIVED



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on.
- **Set Condition:**
  The PCM gets an implausible signal over the CAN C circuit from the ABS Module. The circuit is continuously monitored.

| Possible Causes |
|---|
| CAN C BUS CIRCUIT SHORTED |
| CAN C BUS CIRCUIT OPEN |
| ABS MODULE |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Theory of Operation

The ABS Module sends vehicle speed information over the CAN C Bus circuit to the PCM.

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the U1412-IMPLAUSIBLE VEHICLE SPEED SIGNAL RECEIVED active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

### 2. U0001-NO COMMUNICATION ON THE CAN C BUS CIRCUIT IS ACTIVE

Continue reading DTCs.

**Is the U0001-NO COMMUNICATION ON THE CAN C BUS CIRCUIT ACTIVE at this time?**

**Yes** >> Refer to the Diagnostic Procedure for the U0001-NO COMMUNICATION ON THE CAN C BUS CIRCUIT.

**No** >> Go To 3

### 3. ABS MODULE IS ACTIVE ON THE CAN C BUS

With the scan tool, select ECU View.

Verify that the ABS Module active on the bus.

**Is the ABS Module active on the bus?**

**Yes** >> Go To 4

**No** >> (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for No Response diagnostic procedures.

Perform BODY VERIFICATION TEST – VER 1. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

## 4. ACTIVE DTCS IN THE BCM

With the scan tool, select ECU View and select BCM.

Withe the scan tool, read active DTCs.

**Is the U0001-NO COMMUNICATION ON THE CAN C BUS CIRCUIT ACTIVE in the BCM at this time?**

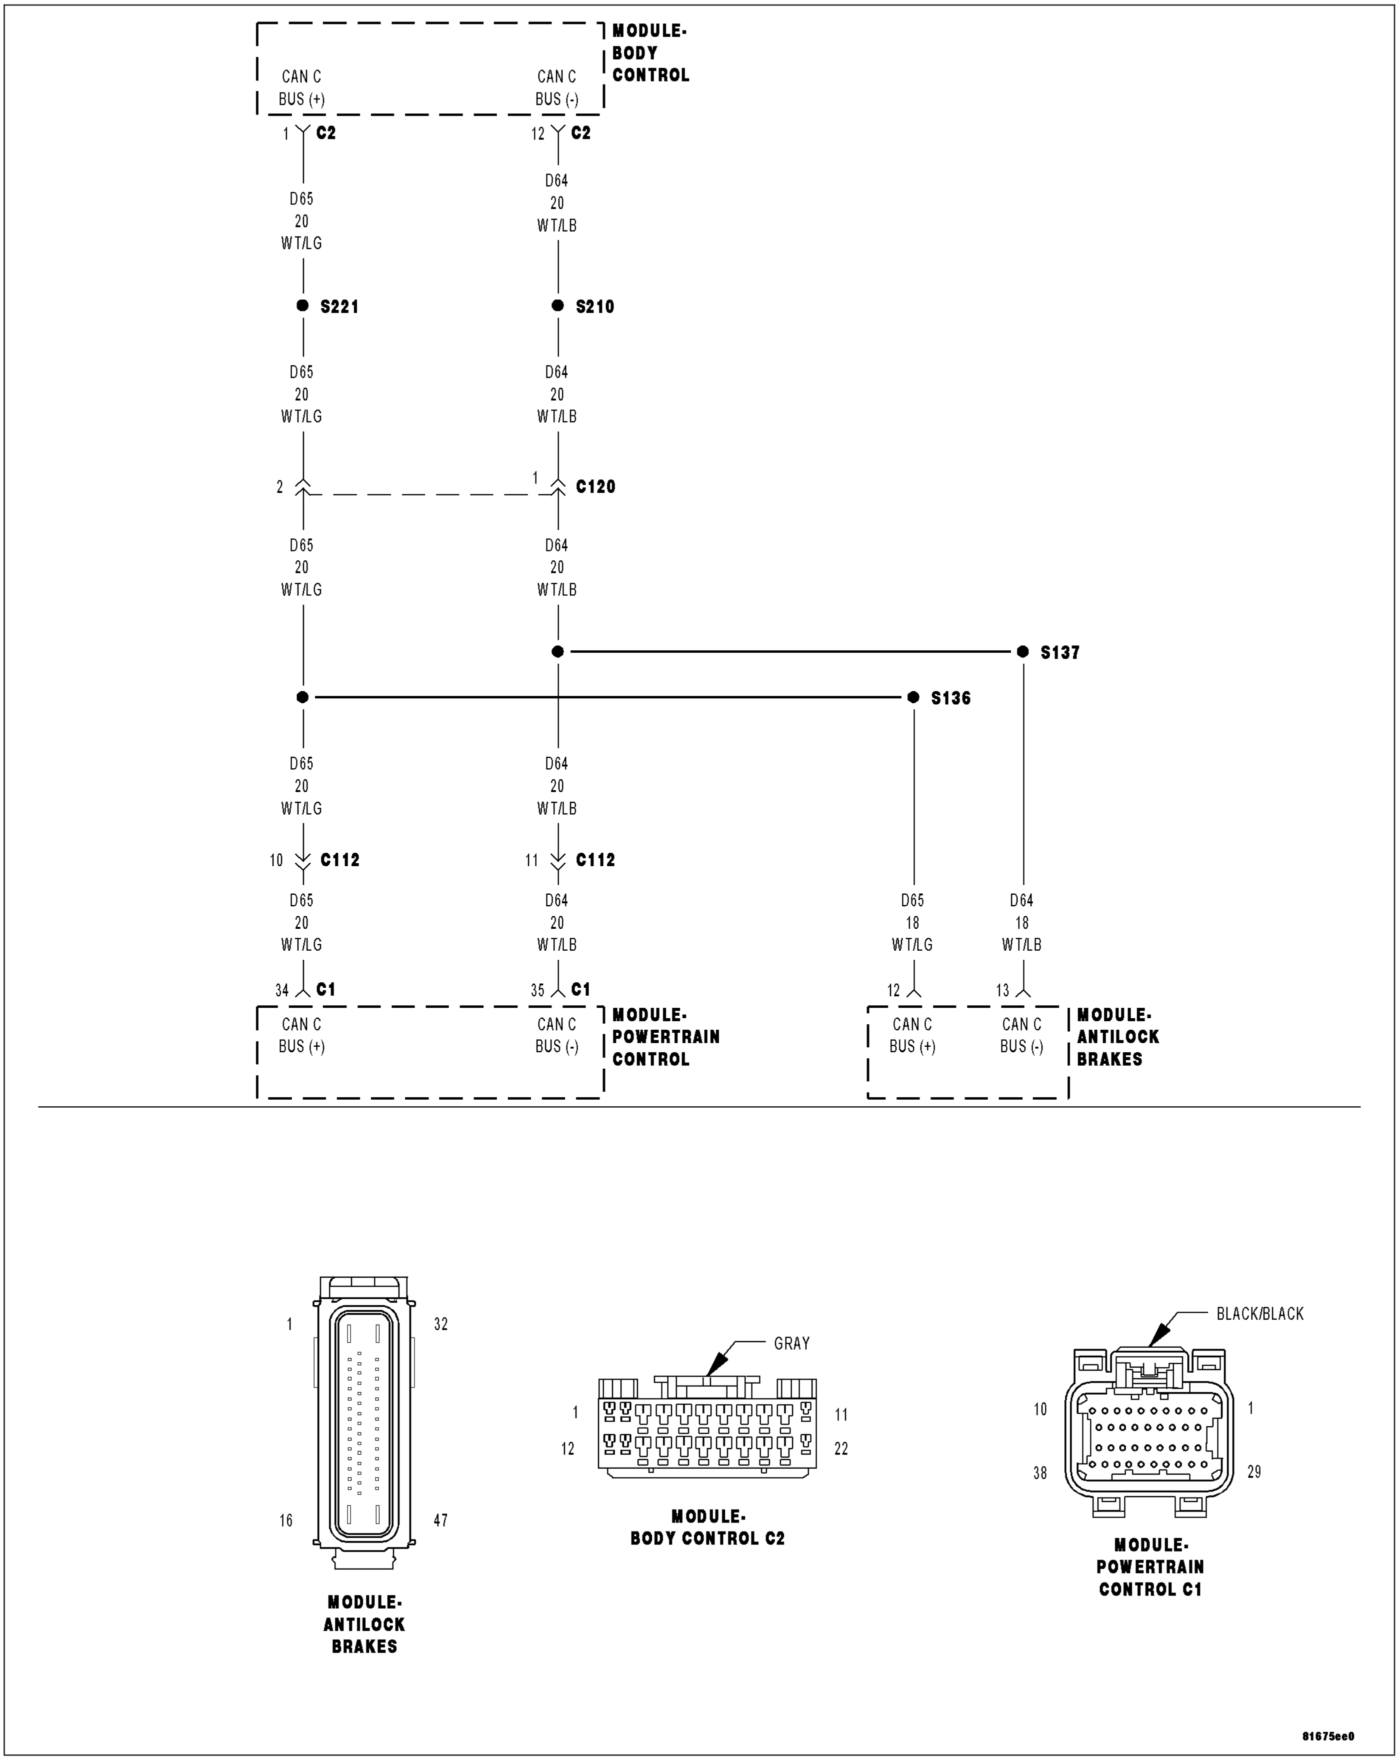
**Yes** >> Replace the ABS Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/POWERTRAIN CONTROL MODULE - DIAGNOSIS AND TESTING)

## U1417-IMPLAUSIBLE LEFT WHEEL DISTANCE SIGNAL RECEIVED



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on.
- **Set Condition:**
  The PCM gets an implausible signal over the CAN C circuit from the ABS Module. The circuit is continuously monitored.

| Possible Causes |
|---|
| VEHICLE SPEED SENSOR FAULT ACTIVE IN ANTI-LOCK BRAKE MODULE |
| CAN C BUS CIRCUIT SHORTED |
| CAN C BUS CIRCUIT OPEN |
| ABS MODULE |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Theory of Operation

The ABS Module sends an implausible distance signal over the CAN C Bus circuit to the PCM.

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.
With a scan tool, read DTCs.

**Is the U1417-IMPLAUSIBLE LEFT WHEEL DISTANCE SIGNAL RECEIVED active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. ABS MODULE IS ACTIVE ON THE CAN C BUS

With the scan tool, select ECU View.
Verify that the ABS Module active on the bus.

**Is the ABS Module active on the bus?**

**Yes** >> Go To 3

**No** >> (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for No Response diagnostic procedures.
Perform BODY VERIFICATION TEST – VER 1. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

### 3. DTCS STORED OR ACTIVE IN THE ABS MODULE

Check for DTCs in the ABS Module.

**Are any DTCs active or stored in the ABS Module?**

**Yes** >> Refer to section 5 - BRAKES - ABS ELECTRICAL DIAGNOSTICS and perform the diagnostics for the DTCs in the ABS Module.
Perform ABS VERIFICATION TEST – VER 1 (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go to 4

## 4. ACTIVE DTCS IN THE BCM

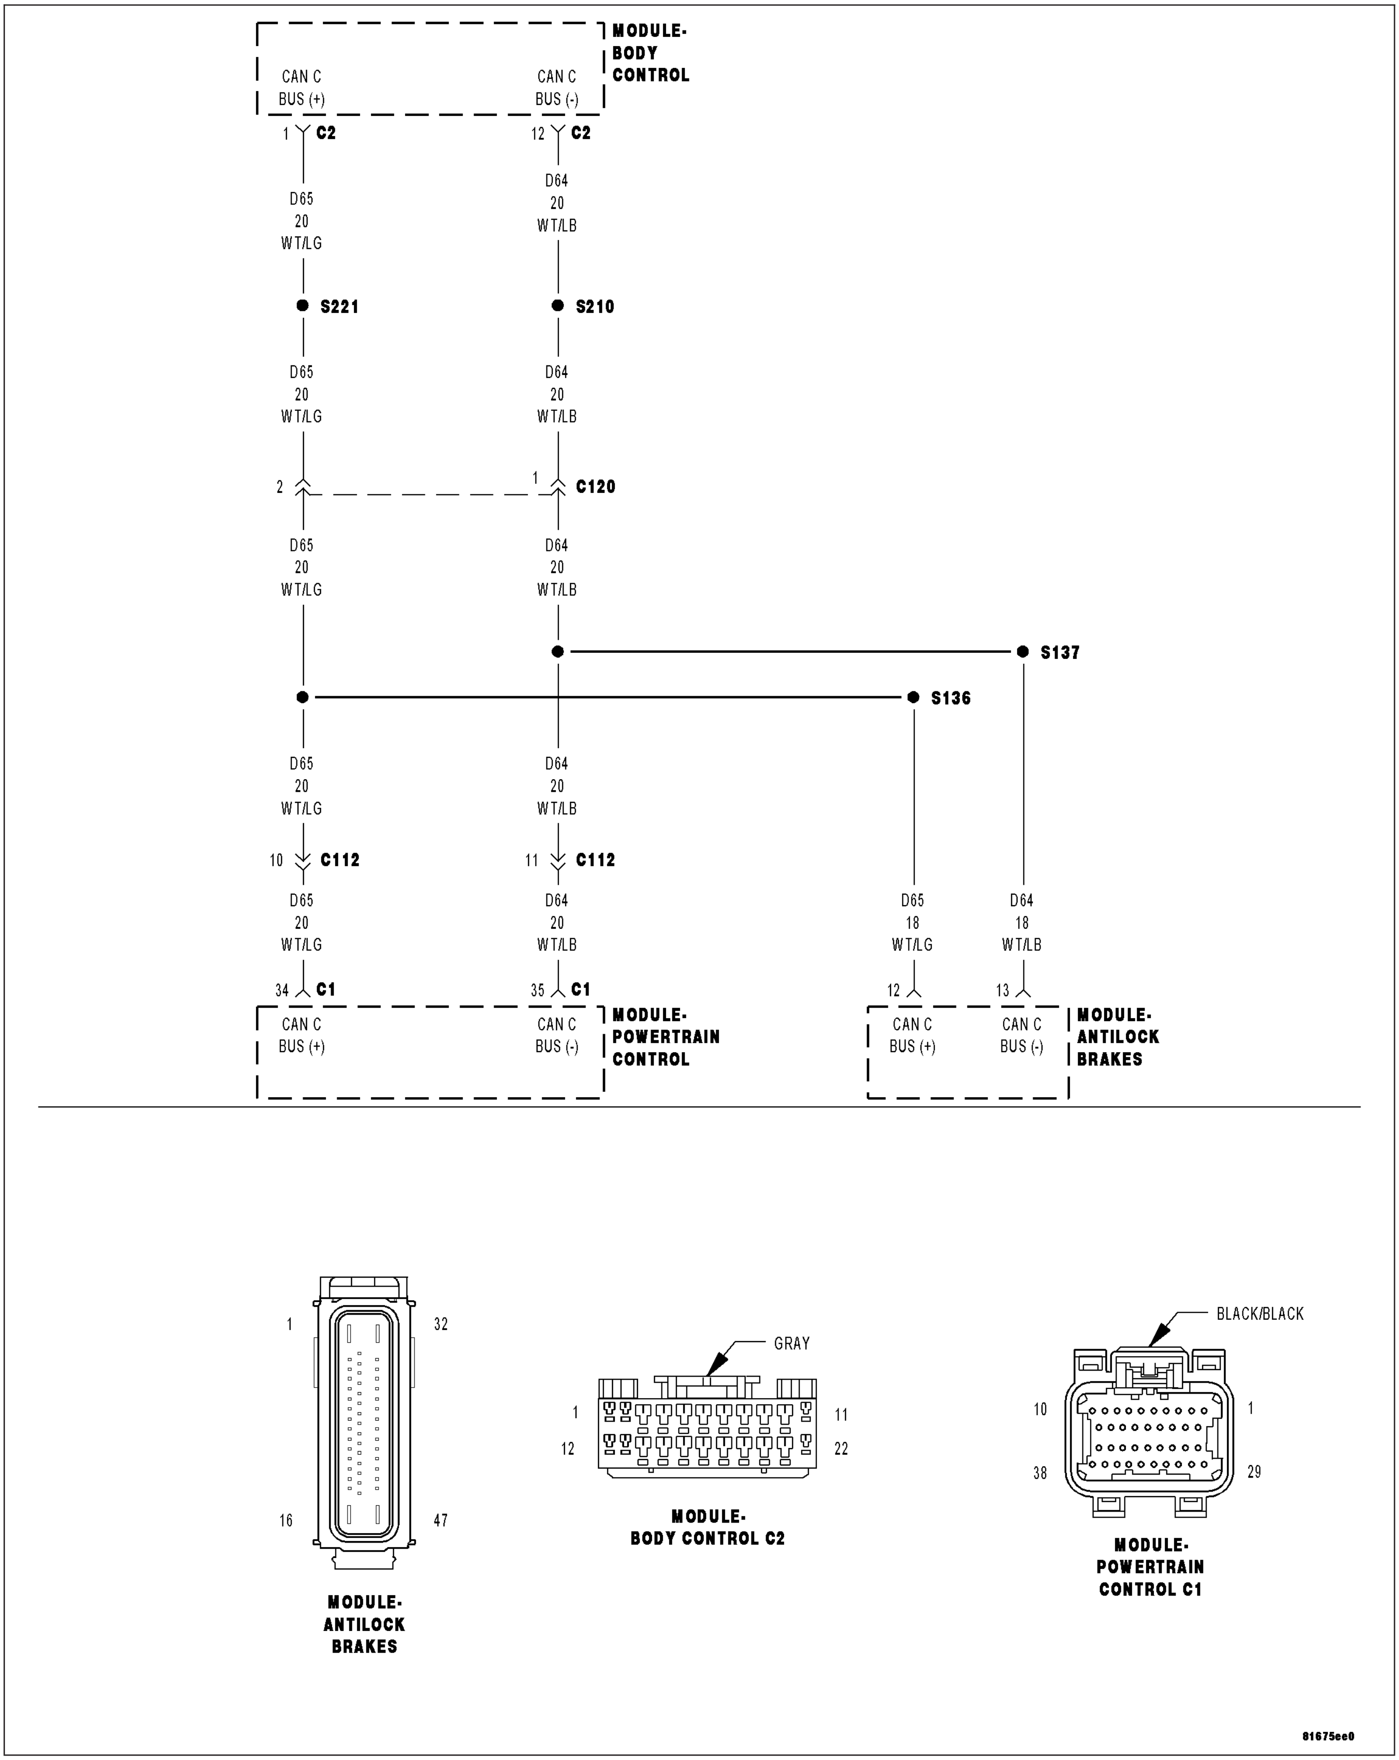
With the scan tool, select ECU View and select BCM.
Withe the scan tool, read active DTCs.

**Are any Communication DTCs active in the BCM relating to the ABS System?**

**Yes** >> Replace the ABS Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## U1418-IMPLAUSIBLE RIGHT WHEEL DISTANCE SIGNAL RECEIVED



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  Ignition on.
- **Set Condition:**
  The PCM gets an implausible signal over the CAN C circuit from the ABS Module. The circuit is continuously monitored.

| Possible Causes |
|---|
| VEHICLE SPEED SENSOR FAULT ACTIVE IN ANTI-LOCK BRAKE MODULE |
| CAN C BUS CIRCUIT SHORTED |
| CAN C BUS CIRCUIT OPEN |
| ABS MODULE |
| PCM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).**

## Theory of Operation

The ABS Module sends an implausible distance signal over the CAN C Bus circuit to the PCM.

## Diagnostic Test

### 1. ACTIVE DTC

Ignition on, engine not running.

With a scan tool, read DTCs.

**Is the U1418-IMPLAUSIBLE RIGHT WHEEL DISTANCE SIGNAL RECEIVED active at this time?**

**Yes** >> Go To 2

**No** >> Refer to the INTERMITTENT CONDITION Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. ABS MODULE IS ACTIVE ON THE CAN C BUS

With the scan tool, select ECU View.

Verify that the ABS Module active on the bus.

**Is the ABS Module active on the bus?**

**Yes** >> Go To 3

**No** >> (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for No Response diagnostic procedures.
Perform BODY VERIFICATION TEST – VER 1. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

### 3. DTCS STORED OR ACTIVE IN THE ABS MODULE

Check for DTCs in the ABS Module.

**Are any DTCs active or stored in the ABS Module?**

**Yes** >> Refer to section 5 - BRAKES - ABS ELECTRICAL DIAGNOSTICS and perform the diagnostics for the DTCs in the ABS Module.
Perform ABS VERIFICATION TEST – VER 1 (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES/FRONT CONTROL MODULE - DIAGNOSIS AND TESTING)

**No** >> Go to 4

## 4. ACTIVE DTCS IN THE BCM

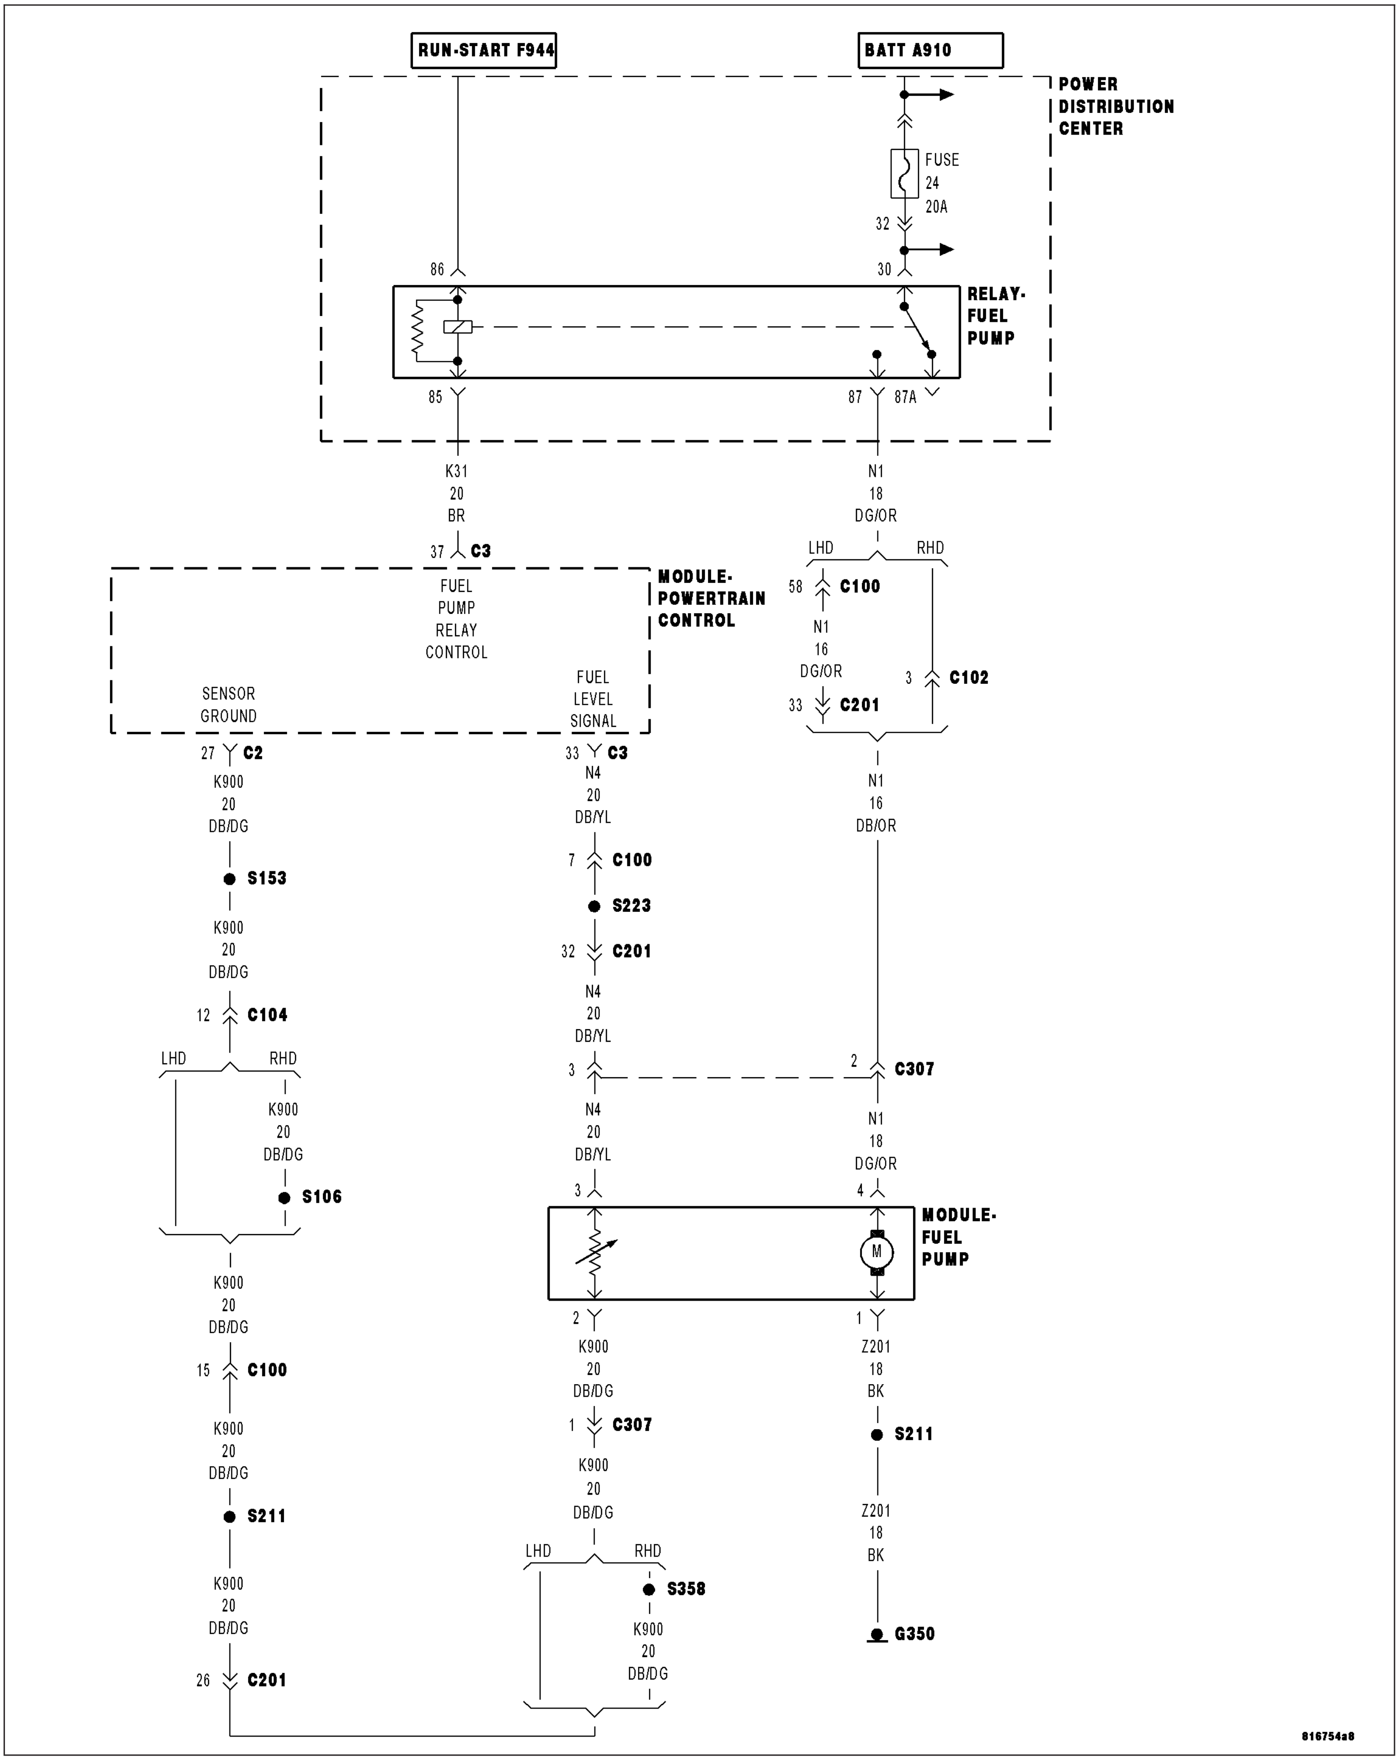
With the scan tool, select ECU View and select BCM.
Withe the scan tool, read active DTCs.

**Are any Communication DTCs active in the BCM relating to the ABS System?**

**Yes** >> Replace the ABS Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## *CHECKING THE FUEL DELIVERY SYSTEM



For a complete wiring diagram **Refer to Section 8W**.

| Possible Causes |
|---|
| RESTRICTED FUEL SUPPLY LINE |
| FUEL PUMP INLET STRAINER PLUGGED |
| (N1) FUEL PUMP RELAY OUTPUT CIRCUIT OPEN |
| FUEL PUMP RELAY |
| FUEL PUMP |

## Diagnostic Test

### 1. FUEL PUMP OPERATION

Ignition on, engine not running.

With a scan tool, actuate the Fuel System test.

**NOTE: It may be necessary to use a mechanics stethoscope in the next step.**
Listen for fuel pump operation at the fuel tank.

**Does the Fuel Pump operate?**

**Yes** >> Go To 2

**No** >> Go To 5

**CAUTION: Stop All Actuations.**

### 2. FUEL PRESSURE

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**
Install a fuel pressure gauge at the engine.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Choose a conclusion that best matches your fuel pressure reading.**

**Below Specification**
Go To 3

**Within Specification**
Test Complete.

**Above Specification**
Replace the fuel filter/fuel pressure regulator.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**CAUTION: Stop All Actuations.**

### 3. RESTRICTED FUEL SUPPLY LINE

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure even with the engine off. Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released.**
Raise vehicle on hoist, and disconnect the fuel pressure line at the fuel pump module.

Install special tool #6539 (5/16″) or #6631(3/8″) fuel line adapter and the fuel pressure gauge between the fuel supply line and the fuel pump module.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Is the fuel pressure within specification now?**

**Yes** >> Repair/replace fuel supply line as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

**CAUTION: Stop All Actuations.**

## 4. CHECKING FUEL INLET STRAINER

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

**Yes** >> Replace the Fuel Pump Inlet Strainer.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace the Fuel Pump Module.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

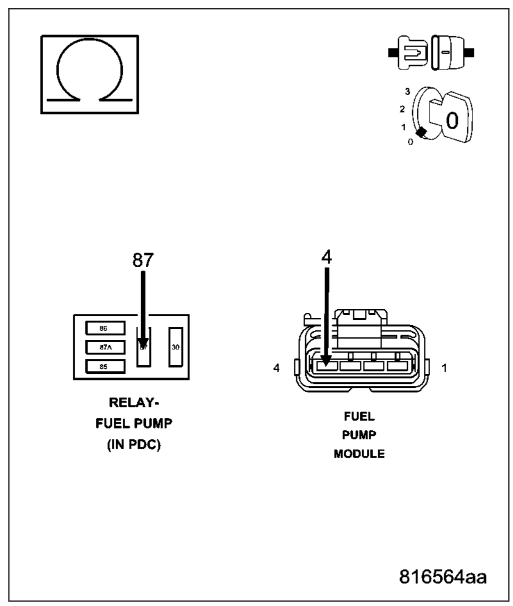
## 5. (N1) FUEL PUMP RELAY OUTPUT CIRCUIT OPEN

Turn the ignition off.

Remove the Fuel Pump Relay from the PDC.

Disconnect the Fuel Pump Module harness connector.

Measure the resistance of the (N1) Fuel Pump Relay Output circuit from the relay connector to the fuel pump module connector.



**Is the resistance below 5.0 ohms?**

**Yes** >> Replace the Fuel Pump Relay.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Repair the open in the (N1) Fuel Pump Relay Output circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

# *HARD START FUEL SYSTEM

For a complete wiring diagram **Refer to Section 8W**.

| Possible Causes |
|---|
| FUEL CONTAMINATION |
| RESTRICTED FUEL SUPPLY LINE |
| FUEL PUMP INLET STRAINER PLUGGED |
| FUEL PUMP MODULE |
| FUEL INJECTOR(S) |

## Diagnostic Test

### 1. CHECKING FUEL PRESSURE

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Install a fuel pressure gauge at the engine.

Ignition on, engine not running.

With a scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Choose a conclusion that best matches your fuel pressure reading.**

**Below Specification**
Go To 2

**Within Specification**
Go To 4

### 2. RESTRICTED FUEL SUPPLY LINE

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Raise vehicle on hoist, and disconnect the fuel supply line at the fuel pump module.

Install special tool #6539 (5/16″) #6631(3/8″) fuel line adapter and the fuel pressure gauge between the fuel supply line and the fuel pump module.

Ignition on, engine not running.

With the scan tool, actuate the ASD Fuel System test and observe the fuel pressure gauge.

**NOTE: Fuel pressure specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

**Is the fuel pressure within specification?**

**Yes** >> Visually and physically inspect the fuel supply lines between the fuel tank and the fuel rail. Repair/replace as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. CHECKING THE FUEL INLET STRAINER

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Remove the Fuel Pump Module and inspect the Fuel Inlet Strainer.

**Is the Fuel Inlet Strainer plugged?**

**Yes** >> Replace the Fuel Pump Inlet Strainer.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace the Fuel Pump Module.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. FUEL PUMP MODULE

**NOTE: Before continuing visually and physically inspect the fuel delivery system for external leaks or damage. Repair / replace as necessary.**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Install special tool #6539 (5/16″) or #6631 (3/8″) fuel line adapter.

Install the fuel pressure gauge.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**NOTE: Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and the engine.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**NOTE: The pressure should not fall below 241 KPa (35 psi)**

**Does the fuel pressure drop?**

**Yes** >> Replace Fuel Pump Module.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. FUEL INJECTOR(S)

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Remove special tool #C4390.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**NOTE: Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

Move special tool #C4390, Hose Clamp Pliers, from between the fuel pressure gauge and the engine to between the fuel pressure gauge and fuel pump module.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

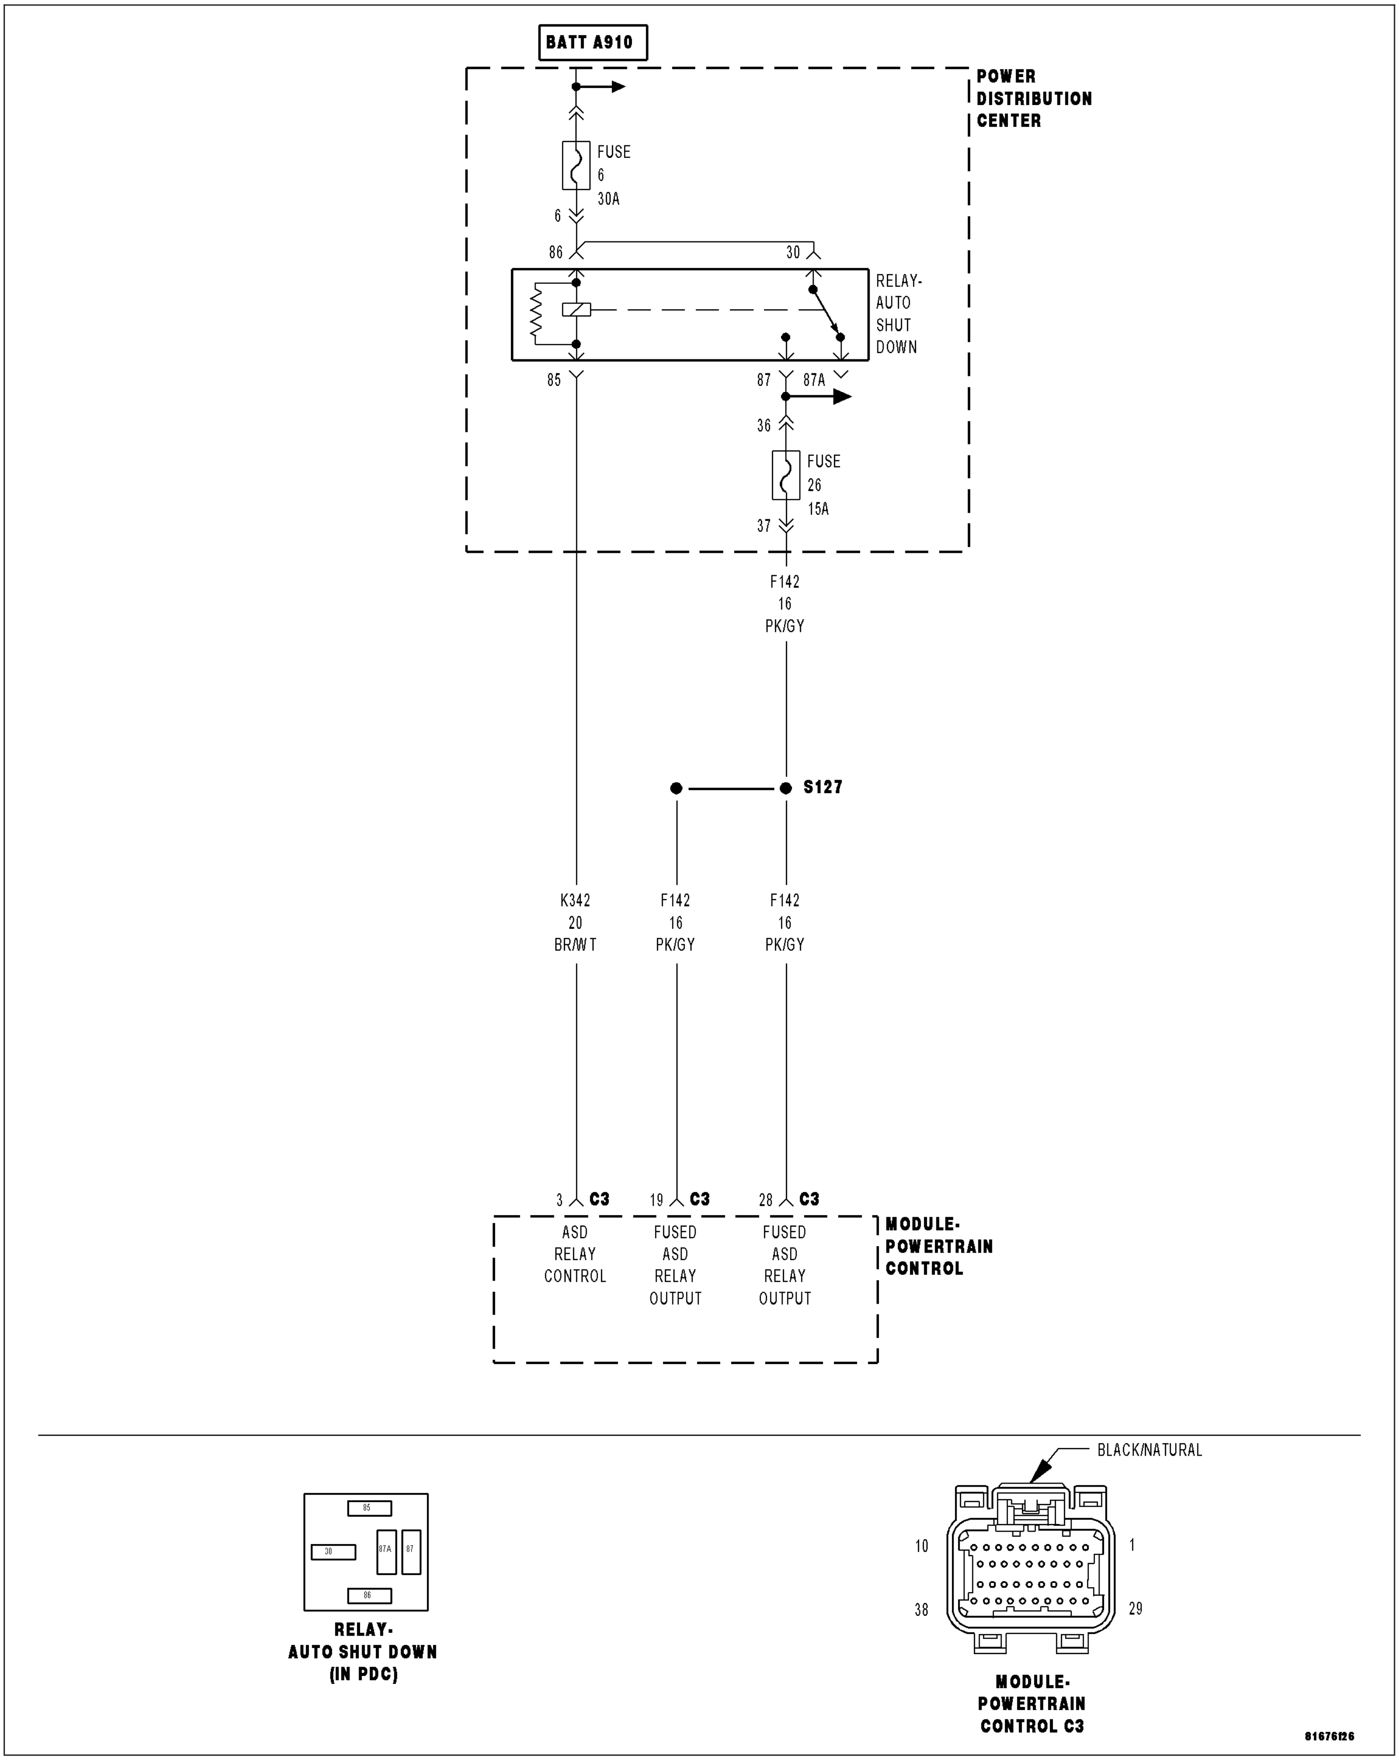
**NOTE: The pressure should not fall below 241 KPa (35 psi)**

**Does the fuel pressure drop?**

**Yes** >> Replace the leaking fuel injectors.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Check the fuel for contaminants.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

# *ENGINE CRANKS BUT DOES NOT START



For a complete wiring diagram **Refer to Section 8W**.

| Possible Causes |
|---|
| NO START PRE-TEST |
| POWERTRAIN FUSES OPEN |
| SECONDARY INDICATORS PRESENT |
| ENGINE MECHANICAL PROBLEM |
| (F142) ASD RELAY OUTPUT CIRCUIT OPEN |
| FUEL CONTAMINATION |

## Diagnostic Test

### 1. NO START PRE-TEST

**NOTE: The following list of items must be checked before continuing with any no start tests.**

The battery must be fully charged and in good condition. A low charged battery may produce invalid test results. If the battery is low, charge the battery and then attempt to start the vehicle by cranking the engine for 15 seconds, 3 consecutive times.

This will allow any DTCs to set that may have been erased due to a dead battery.

Try to communicate with PCM if not able to communicate check fuses.

Make sure the Powers and Ground to the PCM are OK.

Make sure the PCM communicates with the scan tool and that there are no DTCs stored in the PCM memory. If the PCM reports a No Response condition, refer to section 8 Electrical Electronic Control Module Electrical Diagnostics for the proper tests.

Read the PCM DTCs with the scan tool. If any DTCs are present, they must be repaired before continuing with any other No Start diagnostic tests. Refer to the Table of Contents for the related P-code that is reported by the PCM.

Make sure that the Bus is functional. Attempt to communicate with the Instrument Cluster and VTSS, If you are unable to establish communications refer to 8 Electrical Electronic Control Module Electrical Diagnostics for the proper Diagnostic procedures.

The Sentry Key Immobilizer System must be operating properly. Check for proper communication with the scan tool and check for DTCs that may be stored in the Sentry Key Immobilizer Module (SKREEM). Repair the DTC(s) before continuing.

If no DTCs are found, using the scan tool, select Clear PCM (BATT Disconnect).

Crank the engine several times. Using the scan tool, read DTCs. If a DTC is present perform the DTC diagnostics before continuing.

**Were any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 2

### 2. OPEN FUSE

Check for any open fuses in the IPM or Junction Block that may be related to the No Start condition.

**Are any of the fuses open?**

**Yes** >> Replace the open fuse and check the related circuit(s) for a short to ground.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

## 3. SECONDARY INDICATORS PRESENT

Ignition on, engine not running.

With the scan tool, under DTCs & Related Functions, read the Secondary Indicators while cranking the engine.

**Are there any Secondary Indicators present while cranking the engine?**

**Yes** >> Refer to the Engine Electrical Diagnostics group and perform the tests related to the secondary indicator that is reported by the scan tool.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. POSSIBLE MECHANICAL PROBLEMS

Check for any of the following conditions/mechanical problems.

ENGINE VALVE TIMING - must be within specifications, check for broken timing components

ENGINE COMPRESSION - must be within specifications

ENGINE EXHAUST SYSTEM - must be free of any restrictions or leaks.

**Are there any engine mechanical problems?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. (F142) ASD RELAY OUTPUT CIRCUIT OPEN

Turn the ignition off.

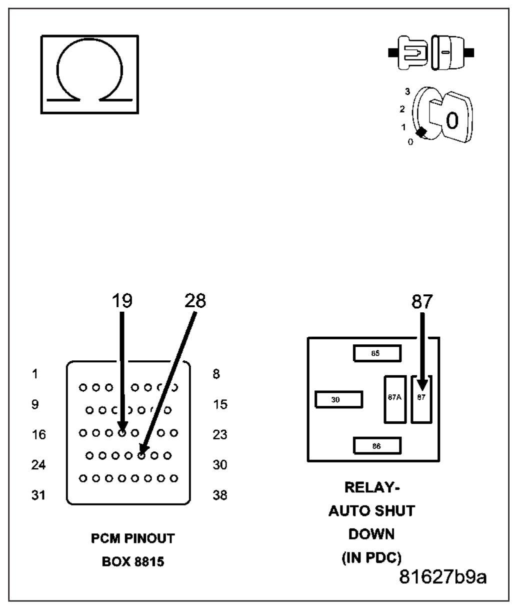
Remove the ASD relay from the PDC.

Disconnect the C3 PCM harness connector.

Verify the ASD Relay is getting voltage on the Fused B+ circuits before continuing.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Measure the resistance of the ASD Relay Output circuit from the ASD Relay connector to the appropriate terminals of special tool #8815, Ignition coil, and the fuel injectors.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the open in the (F142) ) ASD Relay Output circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. FUEL PUMP DELIVERY

Verify that the Fuel tank is not empty before continuing.

Follow the diagnostics for Checking Fuel Delivery in Section 9 Engine Electrical Diagnostic section of this manual.

**Was the No Start condition solved after following the above diagnostic test?**

**Yes** >> Test Complete.

**No** >> Check for contamination/water in the fuel. Make sure the fuel being used in this vehicle meets manufactures Fuel Requirement, refer to the service manual.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

# *FUEL PRESSURE LEAK DOWN

For a complete wiring diagram **Refer to Section 8W**.

| Possible Causes |
|---|
| FAULTY FUEL PUMP MODULE |
| FUEL INJECTOR(S) |

## Diagnostic Test

### 1. FUEL PUMP MODULE

**NOTE: Before continuing visually and physically inspect the fuel delivery system for external leaks or damage. Repair / replace as necessary.**

Turn the ignition off.

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Install special tool #6539 (5/16″) or #6631 (3/8″) fuel line adapter.

Install the fuel pressure gauge.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**NOTE: Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

Using special tool #C4390, Hose Clamp Pliers, pinch the rubber fuel line between the fuel pressure gauge and the engine.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**NOTE: The pressure should not fall below 241 KPa (35 psi)**

**Does the fuel pressure drop?**

**Yes** >> Replace Fuel Pump Module.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 2

### 2. FUEL INJECTOR(S)

**WARNING: The fuel system is under a constant pressure (even with the engine off). Before testing or servicing any fuel system hose, fitting or line, the fuel system pressure must be released. Failure to follow these instructions can result in personal injury or death.**

Remove special tool #C4390.

Start the engine and allow the fuel system to reach maximum pressure.

Turn the ignition off.

**NOTE: NOTE: Fuel specification is 407 KPa +/- 34 KPa (59 psi +/- 5 psi).**

Move special tool #C4390, Hose Clamp Pliers, from between the fuel pressure gauge and the engine to between the fuel pressure gauge and fuel pump module.

Monitor the fuel pressure gauge for a minimum of 5 minutes.

**NOTE: The pressure should not fall below 241 KPa (35 psi)**

**Does the fuel pressure drop?**

**Yes** >> Replace the leaking fuel injectors.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Test Complete.

## *NO CRANK CONDITION

For a complete wiring diagram **Refer to Section 8W**.

| Possible Causes |
|---|
| MECHANICAL CONDITION |
| BATTERY CIRCUIT RESISTANCE TOO HIGH |
| FUSED IGNITION SWITCH OUTPUT CIRCUITS |
| FUSED B+ CIRCUIT OPEN |
| (T752) STARTER RELAY CONTROL CIRCUIT OPEN |
| (T750) STARTER RELAY OUTPUT CIRCUIT OPEN |
| TRANSMISSION RANGE SENSOR |
| STARTER RELAY |
| STARTER |

### Diagnostic Test

#### 1. MECHANICAL CONDITION

**NOTE: Verify the battery is fully charged and capable of passing a load test before continuing.**

**WARNING: Make sure the battery is disconnected, then wait two minutes before proceeding. Failure to do so may result in personal injury or possible death.**

Turn the engine over by hand to make sure the engine is not seized.

**Is the engine able to turn over?**

**Yes** >> Go To 2

**No** >> Repair the mechanical condition preventing the starter motor from cranking.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

#### 2. TRANSMISSION RANGE SENSOR

Turn the ignition off.

Disconnect the TRS harness connectors.

Move the Gear selector through all gear positions, from Park to 1st and back.

While moving the gear selector through each gear, measure the resistance between ground and the TRS (T41) Sense (P/NSense) circuit at the TRS connector.

**NOTE: The circuit is grounded in Park and Neutral and open in the other positions.**

**Did the resistance change from above 100 kohms (open) to below 10.0 ohms (grounded) ?**

**Yes** >> Go To 3

**No** >> Replace the Transmission Range Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. EXCESSIVE RESISTANCE IN THE BATTERY CIRCUIT

Turn the ignition off.

Check the Battery Cables for excessive resistance using the service information procedure.

**Did either Battery Cable have a voltage drop greater than 0.2 of a volt?**

**Yes** >> Repair the excessive resistance in the Battery circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 4

## 4. STARTER RELAY

Turn ignition off.

Remove the Starter Relay from PDC.

Install a known good Relay.

**Will the Starter Motor crank with the new relay?**

**Yes** >> Replace the Starter Relay.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 5

## 5. INTERNAL FUSED IGNITION SWITCH OUTPUT CIRCUIT

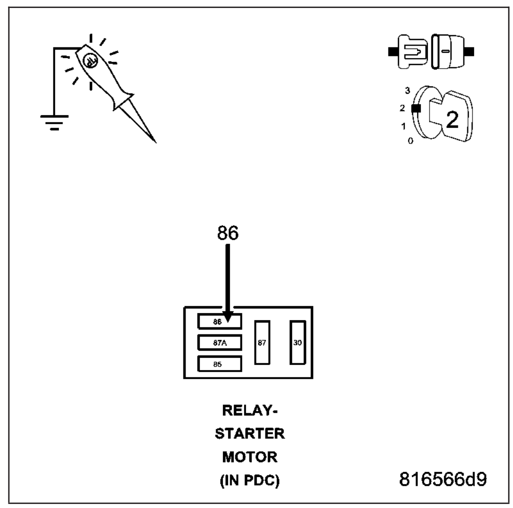
Turn the ignition off.

Remove the Starter Relay from the PDC.

Ignition on, engine not running.

Using a 12-volt test light, probe the Internal Fused Ignition Switch Output circuit in the Starter Relay connector.

While observing 12-volt test light, hold ignition key in the start position.



**Does the test light illuminate brightly?**

**Yes** >> Go To 6

**No** >> Repair the excessive resistance in the (F924) Fused Ignition Switch Output circuit. Inspect related fuses and repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

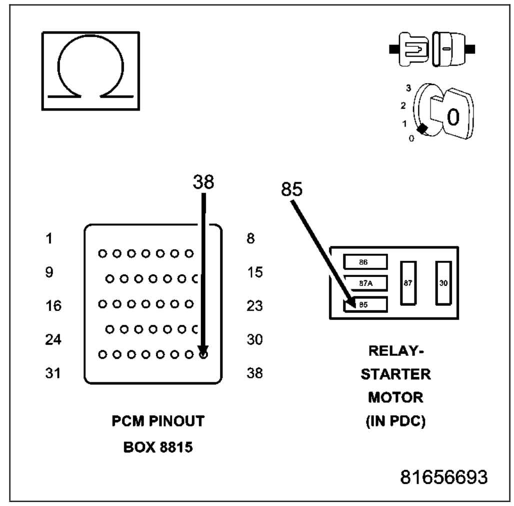
## 6. (T752) STARTER RELAY CONTROL CIRCUIT OPEN

Turn the ignition off.

Remove the Starter Relay from the PDC.

Disconnect the C3 PCM harness connector.

Measure the resistance in the (T752) Starter Relay Control circuit from the Relay terminal to the appropriate terminals of special tool #8815.



**Is the resistance below 5.0 ohms?**

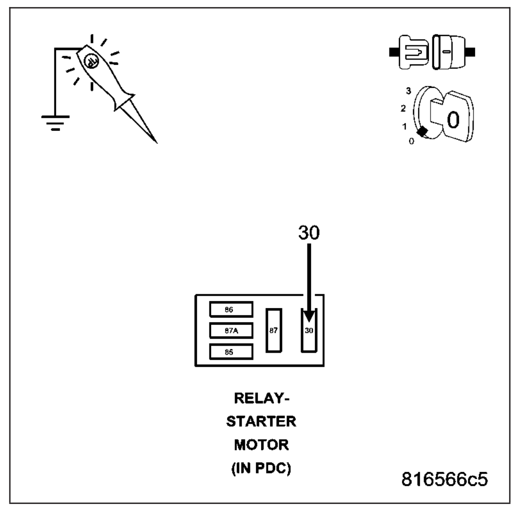
**Yes** >> Go To 7

**No** >> Repair the open in the (T752) Starter Relay Control circuit. Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 7. INTERNAL FUSED B+ CIRCUIT OPEN

Turn the ignition off.

Using a 12-volt test light connected to ground, probe the Internal Fused B+ circuit at the Starter Relay terminal.



**Does the test light illuminate brightly?**

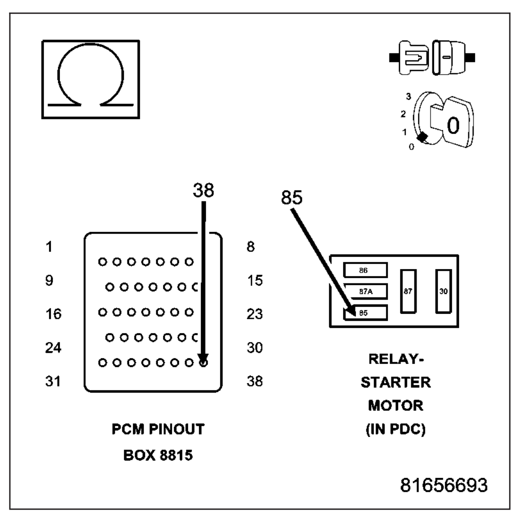
**Yes** >> Go To 8

**No** >> Repair the excessive resistance in the Internal Fused B+ circuit. Inspect related fuses and repair as necessary. Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 8. (T750) STARTER RELAY OUTPUT CIRCUIT OPEN

Disconnect the Starter Relay Output connector from the Starter Solenoid.

Measure the resistance of the (T750) Starter Relay Output circuit between the Relay and the Solenoid harness connector.



**Is the resistance below 5.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the open in the (T750) Starter Relay Output circuit. Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 9. STARTER

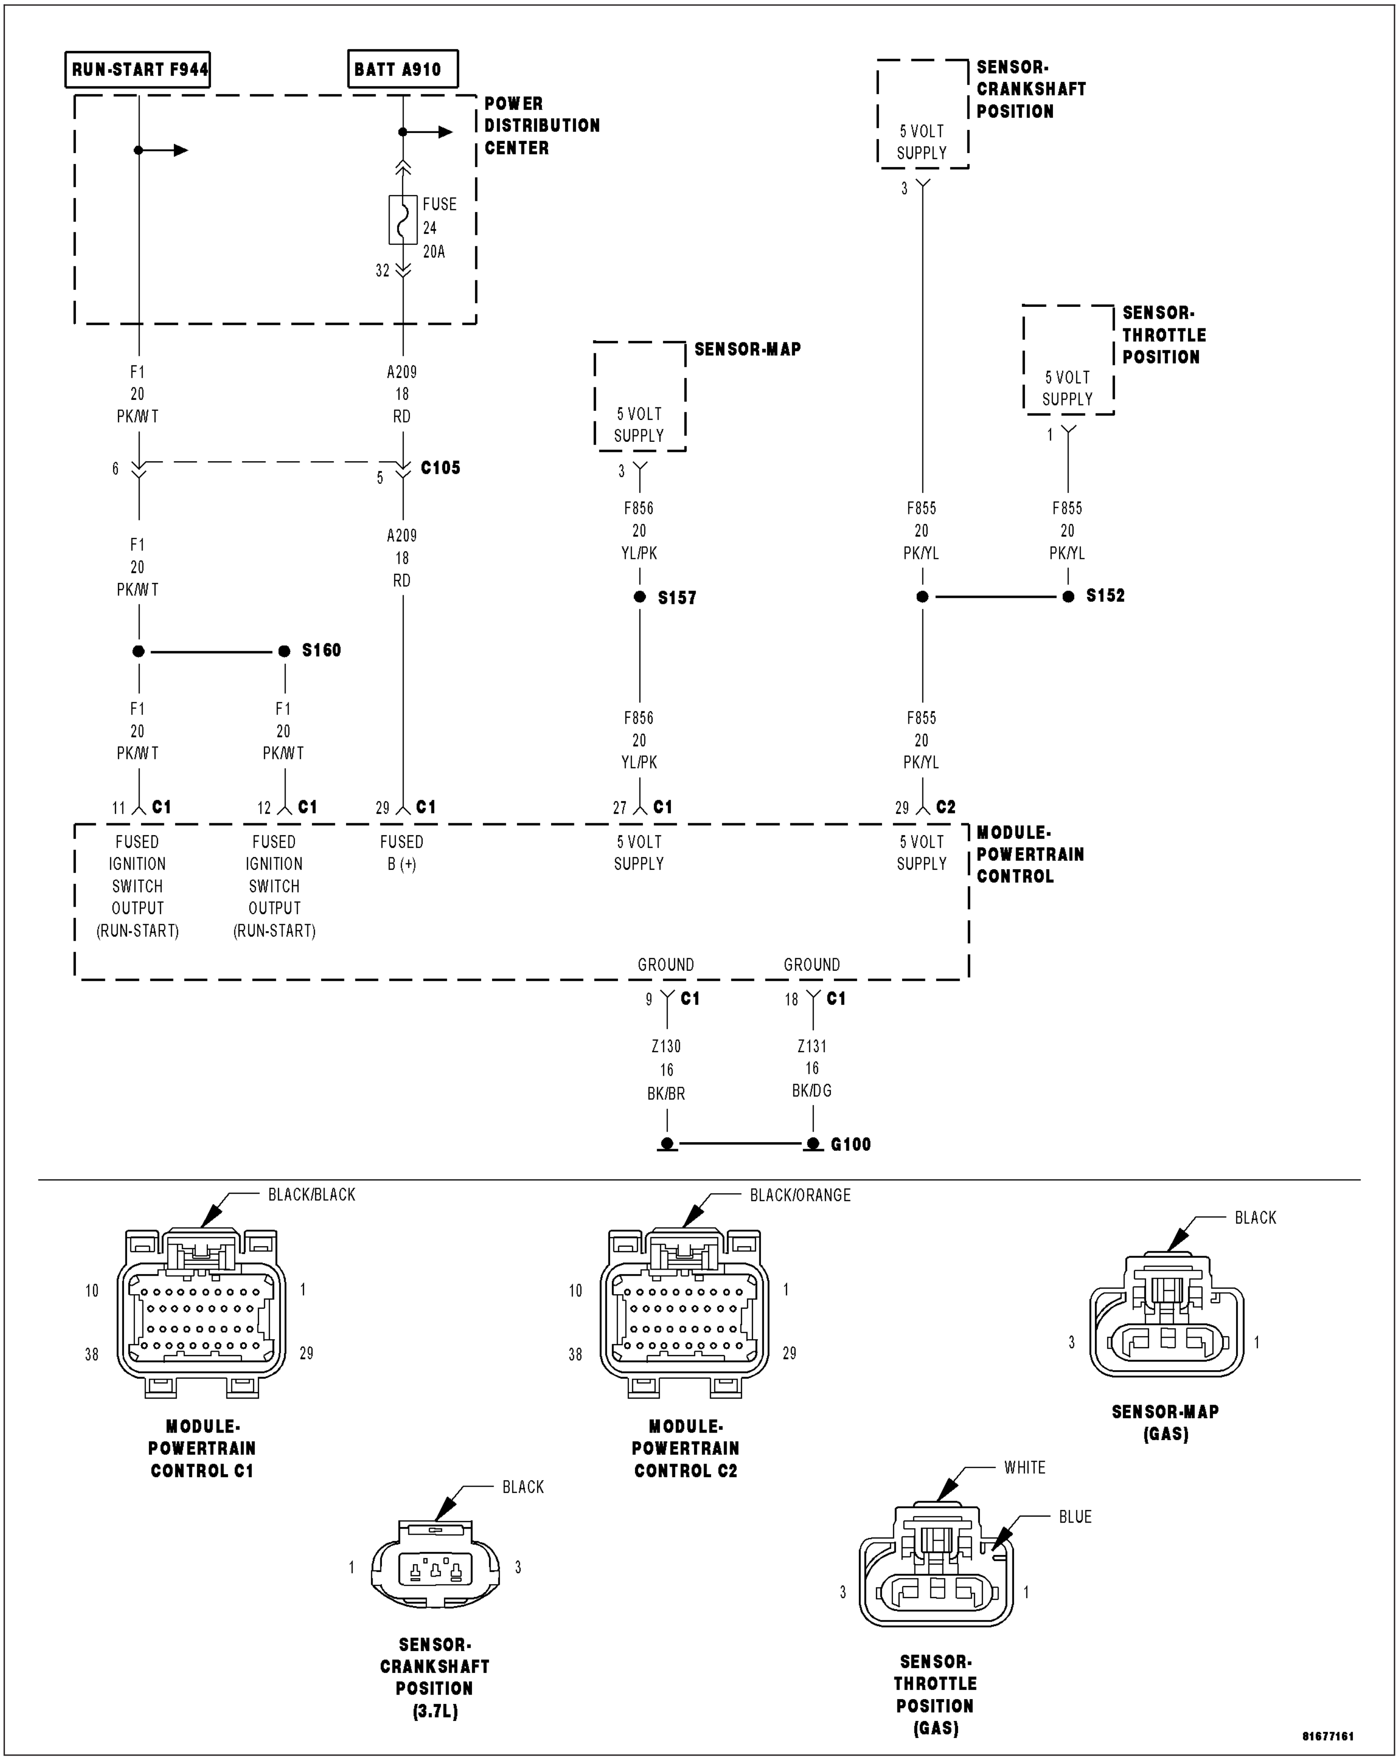
**If there are no other possible causes remaining, review repair.**

**Repair**

Replace the Starter.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## *NO RESPONSE WITH A NO START CONDITION



For a complete wiring diagram **Refer to Section 8W**.

| Possible Causes |
|---|
| (A209) PCM FUSED B+ CIRCUIT |
| PCM NO RESPONSE |
| (F1) (F26) PCM FUSED IGNITION SWITCH OUTPUT CIRCUITS |
| (Z130) (Z131) PCM GROUND CIRCUITS |
| CRANKSHAFT POSITION SENSOR |
| (F855) 5-VOLT SENSOR OPEN/SHORTED |
| (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| PCM |

## Diagnostic Test

### 1. (A209) PCM FUSED B+ CIRCUIT

**NOTE: The scan tool and cable must be operating properly for the results of this test to be valid.**

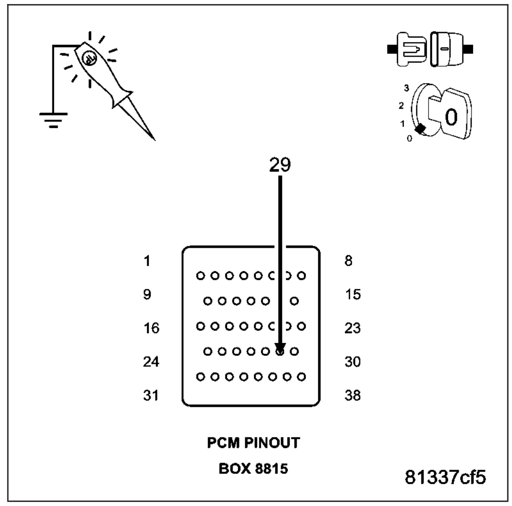
**NOTE: Make sure the ignition switch was on while trying to communicate with the PCM.**

Turn the ignition off.

Disconnect the C1 PCM harness connector.

**CAUTION: Do not probe the PCM harness connectors. Probing the PCM harness connectors will damage the PCM terminals resulting in poor terminal to pin connection. Install Miller Special Tool #8815 to perform diagnosis.**

Using a 12-volt test light connected to ground, probe the appropriate terminal of special tool #8815.



**Does the test light illuminate brightly?**

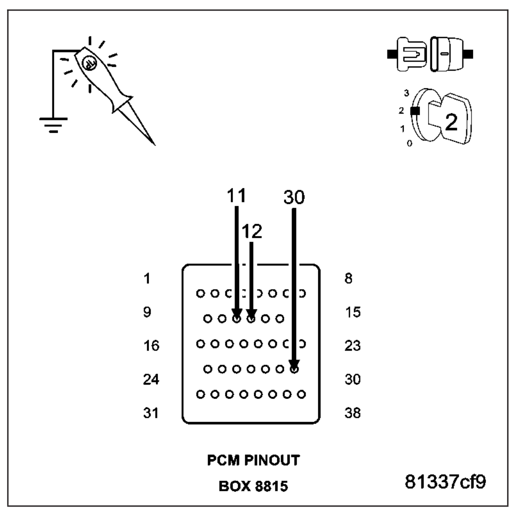
**Yes** >> Go To 2

**No** >> Repair the open or short to ground in the (A209) Fused B+ circuit. Inspect and replace fuses as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

### 2. (F1) (F26) PCM FUSED IGNITION SWITCH CIRCUITS

Using a 12-volt test light connected to ground, probe the PCM Fused Ignition Switch Output circuit in the appropriate terminals of special tool #8815.



**Does the test light illuminate brightly?**

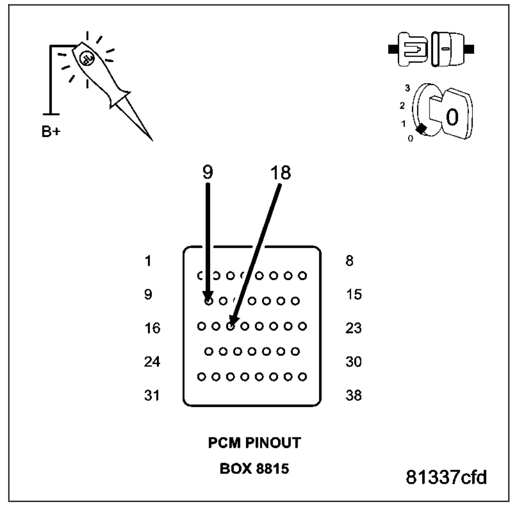
**Yes** >> Go To 3

**No** >> Repair the (F1) and (F26) Ignition Switch Output circuits. Inspect and replace fuses as necessary.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 3. (Z130) (Z131) PCM GROUND CIRCUITS

Using a 12-volt test light connected to battery voltage, probe the (Z130) and (Z131) PCM ground circuits in the appropriate terminals of special tool #8815.



**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the PCM ground circuits.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. (F855) 5-VOLT SUPPLY CIRCUIT

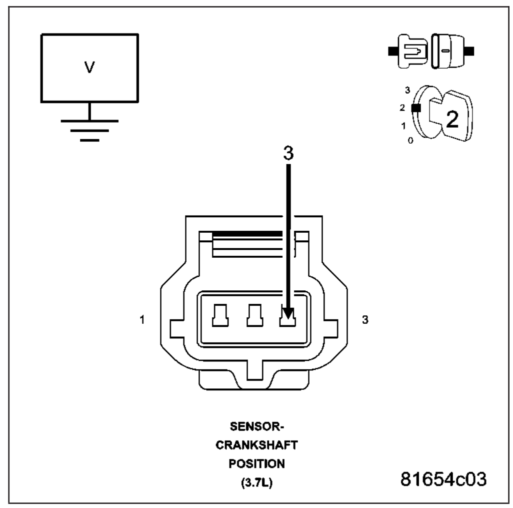
Turn the ignition off.

Connect the C1 PCM harness connector.

Disconnect the Crankshaft Position Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F855) 5-volt Supply circuit.



**Is the voltage between 4.5 and 5.2 volts?**

**Yes** >> Go To 5

**No** >> Go To 6

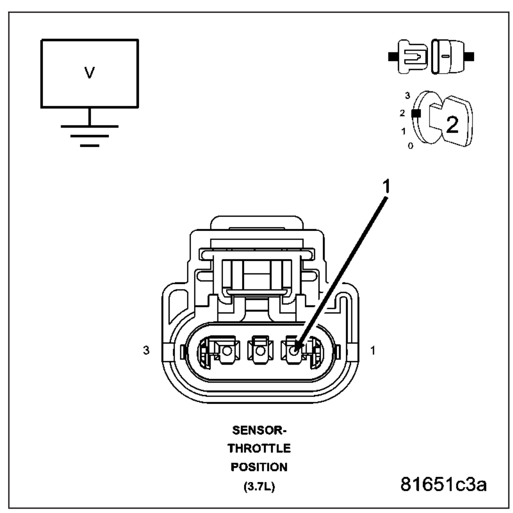
## 5. CKP SENSOR

Turn the ignition off.

Disconnect the TP Sensor harness connector.

Ignition on, engine not running.

Measure the voltage on the (F855) 5-volt Supply circuit in the TP Sensor harness connector.



**Is the voltage between 4.5 and 5.2 volts?**

**Yes** >> If communication is available with a PCM on a like vehicle, replace and program the Powertrain Control Module per Service Information.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace the Crankshaft Position Sensor.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. (F855) 5-VOLT SENSOR OPEN/SHORTED

Turn the ignition off.

Disconnect the TP Sensor/Throttle Body harness connector.

Ignition on, engine not running.

Measure the voltage on the (F855) 5-volt Supply circuit.

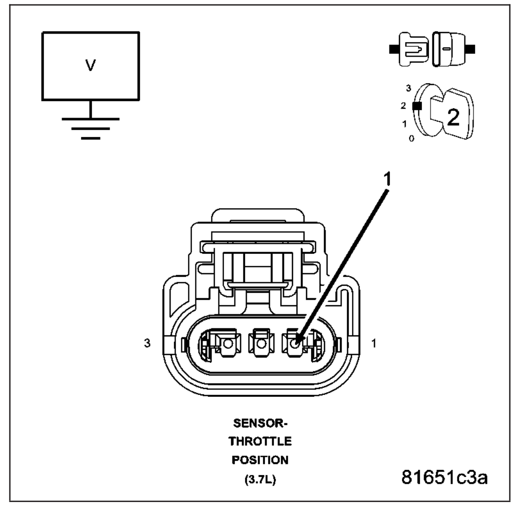
Disconnect all the sensors that use the (F855) 5-volt Supply circuit.

**Did the voltage return to 4.5 to 5.2 volts when disconnecting any of the sensors.**

**Yes** >> Replace the sensor that is pulling down the (F855) 5-volt supply.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7



## 7. (F855) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect C2 PCM harness connector.

Disconnect all the sensors that share the (F855) 5-volt Supply circuit.

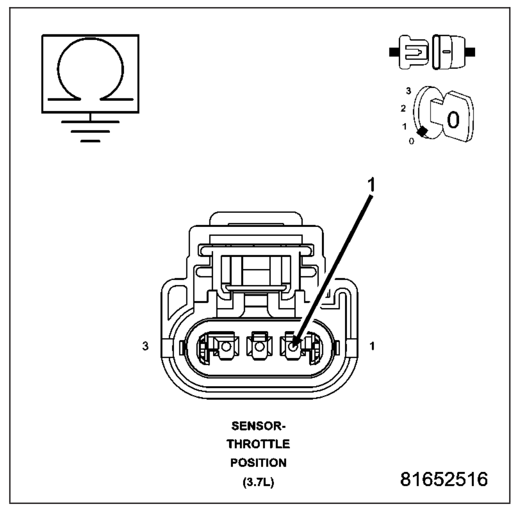
Measure the resistance between ground and the (F855) 5-volt Supply circuit at one of the sensor harness connectors.

**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F855) 5-volt Supply circuit.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

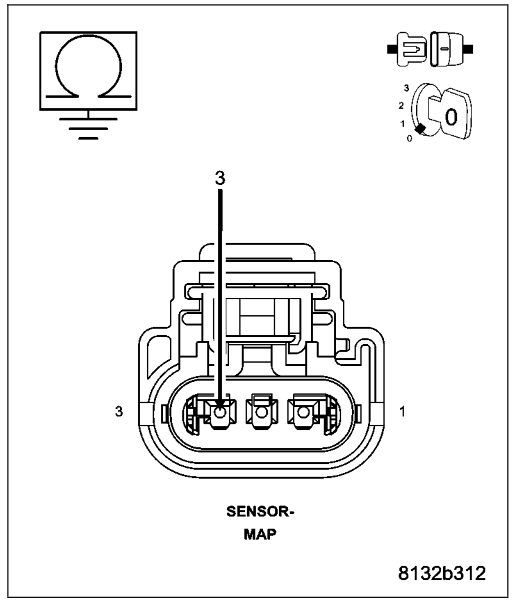
**No** >> Go To 8



## 8. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Disconnect all the sensors that share the (F856) 5-volt Supply circuit.

Measure the resistance between ground and the (F856) 5-volt Supply circuit at one of the sensor harness connectors.



**Is the resistance below 100 ohms?**

**Yes** >> Repair the short to ground in the (F856) 5-volt Supply circuit.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 9

## 9. PCM

**NOTE: Before continuing, check the PCM harness connector terminals for corrosion, damage, or terminal push out. Repair as necessary.**

Using the schematics as a guide, inspect the wire harness and connectors. Pay particular attention to all Power and Ground circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Replace and program the Powertrain Control Module per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## *START AND STALL CONDITION

For a complete wiring diagram **Refer to Section 8W**.

| Possible Causes |
|---|
| CURRENT PCM DTCS |
| CURRENT SKIM DTCS |
| THROTTLE POSITION SENSOR SWEEP |
| TP SENSOR NO.1 VOLTAGE GREATER THAN 0.92 VOLTS WITH THROTTLE CLOSED |
| ECT SENSOR |
| OTHER POSSIBLE CAUSES FOR START AND STALL CONDITON |
| FUEL CONTAMINATION |

## Diagnostic Test

### 1. CHECKING DTCS

Ignition on, engine not running.

With a scan tool, read DTCs.

**Are any DTCs present?**

**Yes** >> Refer to the appropriate Diagnostic Procedure.
Perform the POWERTRAIN VERIFICATION TEST.

**No** >> Go To 2

### 2. CHECKING SKIM DTCS

**NOTE: If you are unable to communicate with the SKIM/SKREEM, refer to the VEHICLE THEFT AND SECURITY ELECTRICAL DIAGNOSTICS in Section 8 and perform the appropriate diagnostics.**

With the scan tool, read the SKIM codes.

**Are there any SKIM DTCs?**

**Yes** >> Refer to the Sentry Key Vehicle Theft Security Electrical Diagnostics in Section 8.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 3

### 3. TP SENSOR SWEEP

Ignition on, engine not running.

With the scan tool read TP Sensor voltage.

While monitoring the scan tool, slowly open and close the Throttle.

**Was the voltage change smooth?**

**Yes** >> Go To 4

**No** >> Replace the Throttle Position Sensor per Service Information.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 4. TP SENSOR NO.1 VOLTAGE GREATER THAN 0.92 VOLTS WITH THROTTLE CLOSED

With the scan tool, read Throttle Position Sensor No.1 voltage.

Throttle must be against its stop.

**Is the voltage 0.92 or less with the Throttle closed?**

**Yes** >> Go To 5

**No** >> Check for a binding throttle condition. If OK, replace the Throttle Position Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 5. ECT SENSOR OPERATION

**NOTE: For this test to be valid, the thermostat must be operating correctly.**

**NOTE: This test works best if performed on a cold engine (cold soaked).**

**NOTE: If the vehicle was allowed to sit over night with no engine start, coolant temperature should be near ambient temperatures.**

Ignition on, engine not running.

With the scan tool, read the ECT value.

**NOTE: If engine coolant temperature is above 82° C (180° F), allow the engine to cool until 65° C (150° F) is reached.**

Start the engine.

During engine warm-up, monitor the Engine Coolant Temperature value. The temperature value change should be a smooth transition from start up to normal operating temp 82° C (180° F). The value should reach at least 82° C (180° F).

**Did the Engine Temperature value increase smoothly and did it reach at least 82° C (180° F)?**

**Yes** >> Go To 6

**No** >> Replace the Engine Coolant Temperature Sensor.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

## 6. OTHER POSSIBLE CAUSES OF START AND STALL CONDITION

The following additional items should be checked as a possible cause for a start and stall condition.

Refer to any Technical Service Bulletins (TSBs) that may apply to the symptom.

The exhaust system must be free of any restrictions.

The engine compression must be within specifications.

The engine valve timing must be within specifications.

The engine must be free from vacuum leaks.

The throttle body must be free of carbon buildup and dirt.

**Do any of the above conditions exist?**

**Yes** >> Repair as necessary.
Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

**No** >> Go To 7

## 7. FUEL PUMP DELIVERY

Verify that the Fuel tank is not empty before continuing.

Follow the diagnostics for Checking Fuel Delivery in this manual.

**Was the No Start condition solved after following the above diagnostic test?**

**Yes** >> Test Complete.

**No** >> Check for contamination/water in the fuel. Make sure the fuel being used in this vehicle meets manufactures Fuel Requirement, refer to the service manual.

Perform the POWERTRAIN VERIFICATION TEST. (Refer to 9 - ENGINE - STANDARD PROCEDURE)

# STANDARD PROCEDURE

# POWERTRAIN VERIFICATION TEST

For a complete wiring diagram **Refer to Section 8W**.

## Diagnostic Test

### 1. SELECTING THE PROPER VERIFICATION TEST

**The following verification test are for different repairs. Select the appropriate Verification test for the repair that has been completed.**

**Speed Control repair**
Go To 2

**Charging System repair**
Go To 3

**NVLD System repair**
Go To 4

**All other repairs**
Go To 5

### 2. POWERTRAIN VERIFICATION TEST 1

**NOTE: 1. If this vehicle is equipped with an Electronic Throttle Control system, and the APP Sensors, PCM, or Throttle Body Assembly have been replaced, use the scan tool to perform the ETC RELEARN function.**

**NOTE: 2. After completing the Powertrain Verification Test the Transmission Verification Test must be performed.**

**NOTE: 3. If the PCM has been replaced and the correct VIN and mileage have not been programmed, a DTC will set in the ABS Module, Airbag Module and the SKIM/SKREEM.**

**NOTE: 4. If the vehicle is equipped with a Sentry Key Remote Entry, Secret Key data must be updated. Refer to the Service Information for the PCM, SKIM/SKREEM and the Transponder (ignition key) for programming information. Using the scan tool, program the Secret Key information into the PCM using the PCM replaced function under the WCM menu.**

5. Inspect the vehicle to make sure that all engine components are properly installed and connected.
6. Connect the scan tool to the data link connector and erase all codes.
7. Turn the speed control ON (if equipped, cruise light will be on).
8. Depress and release the SET Switch when the vehicle speed is greater than 35 MPH. The speed control should engage and hold the selected speed.
9. Press and hold the RESUME/ACCEL Switch. The vehicle speed should increase by at least 2 MPH.
10. Press and hold the COAST switch. The vehicle speed should decrease.
11. Using caution, press and release the brake pedal. The speed control should disengage.
12. Bring the vehicle speed back up to 35 MPH.
13. Press the RESUME/ACCEL switch. The speed control should resume the previously set speed.
14. Hold down the SET switch. The vehicle should decelerate.
15. Make sure vehicle speed is greater than 35 mph and release the SET Switch. The vehicle should adjust and set a new vehicle speed.
16. Press and release the CANCEL switch. The speed control should disengage.
17. Bring the vehicle speed back up above 35 mph and engage speed control.
18. Turn the Speed Control Off. (Cruise light will be off). The speed control should disengage.

**NOTE: OVERSHOOT/UNDERSHOOT FOLLOWING SPEED CONTROL SET.**

19. If the vehicle operator repeatedly presses and releases the SET button with their foot off of the accelerator (referred to as ″lift foot set″), the vehicle may accelerate and exceed the desired set speed by up to 5 mph (8 km/h).
20. It may also decelerate to less than the desired set speed, before finally achieving the desired set speed.
21. The Speed Control System has an adaptive strategy that compensates for vehicle-to-vehicle variations in speed control cable lengths.
22. When the speed control is set with the vehicles operators foot off of the accelerator pedal, the speed control thinks there is excessive speed control cable slack and adapts accordingly.

23. If the ″lift foot sets″ are continually used, a speed control overshoot/undershoot condition will develop.

24. To ″unlearn″ the overshoot/undershoot condition, the vehicle operator has to press and release the set button while maintaining the desired set speed using the accelerator pedal (not decelerating or accelerating).

25. Then turn the cruise control switch to the OFF position (or press the CANCEL button if equipped) after waiting 10 seconds.

26. This procedure must be performed approximately 10-15 times to completely unlearn the overshoot/undershoot condition.

**Did the Speed Control pass the above test?**

**Yes** >> Repair is complete.

**No** >> Check for any related Technical Service Bulletins and/or refer to the appropriate Diagnostic Procedure.

## 3. POWERTRAIN VERIFICATION TEST 2

1. If this vehicle is equipped with an Electronic Throttle Control system, and the APP Sensors, PCM, or Throttle Body Assembly has been replaced use a scan tool to perform the ETC RELEARN function.

**NOTE: 2. After completing the Powertrain Verification Test the Transmission Verification Test must be performed.**

**NOTE: 3. If the PCM has been replaced and the correct VIN and mileage have not been programmed, a DTC will set in the ABS Module, Airbag Module and the SKIM/SKREEM.**

**NOTE: 4. If the vehicle is equipped with a Sentry Key Remote Entry, Secret Key data must be updated. Refer to the Service Information for the PCM, SKIM/SKREEM and the Transponder (ignition key) for programming information. Using the scan tool, program the Secret Key information into the PCM using the PCM replaced function under the WCM menu.**

5. Inspect the vehicle to make sure that all components related to the repair are properly installed and connected.

6. With the scan tool, clear DTCs.

7. Perform generator output test. Refer to the appropriate service information as necessary.

8. Start the engine and set engine speed to 2000 RPM for at least thirty seconds.

9. Cycle the ignition key off and on.

10. With the scan tool, read the DTCs.

**Are any DTCs or symptoms remaining?**

**Yes** >> Check for any Technical Service Bulletins and/or refer to the appropriate Diagnostic Procedure.

**No** >> Repair is complete.

## 4. POWERTRAIN VERIFICATION TEST 3

1. Install the Miller Tool #8404 Evaporative Emission Leak Detector (EELD) according to the instructions in the previous DTC table.

2. Set the smoke/air control switch to AIR.

3. Insert the tester's AIR supply tip (clear hose) into the appropriate calibration orifice on the tester's control panel (based on DTC leak size).

4. Press the remote smoke/air start button.

5. Position the red flag on the air flow meter so it is aligned with the indicator ball.

6. When the calibration is complete, release the remote button. The EELD flow meter is now calibrated in liters per minute to the size of leak indicated by the DTC set in the PCM.

7. Install the service port adapter #8404-14 on the vehicle's service port.

8. Connect the Air supply hose from the EELD to the vehicle.

9. Press the remote button to activate AIR flow.

**NOTE: 10. Larger volume fuel tanks, lower fuel levels or if the vehicle is equipped with a Flow Management Valve may indicate high flow and will require 4 to 5 minutes to fill.**

11. Compare the flow meter indicator ball reading to the red flag.

12. ABOVE the red flag indicates a leak present.

13. BELOW the red flag indicates a sealed system.

**NOTE: If this vehicle is equipped with an Electronic Throttle Control system, and the APP Sensors, PCM, or Throttle Body Assembly have been replaced, use the scan tool to perform the ETC RELEARN function.**

14. If the indicator ball shows a leak present, perform the smoke test indicated in the previous test and identify the leak and repair. Perform this verification test when the repair is complete.

**Did the indicator ball indicate the a leak is present?**

**Yes** >> Repeat the DTC test to identify the leak and repair.

**No** >> Repair is complete.

## 5. POWERTRAIN VERIFICATION TEST 4

**NOTE: 1. After completing the Powertrain Verification Test the Transmission Verification Test must be performed.**

**NOTE: 2. If the PCM has been replaced and the correct VIN and mileage have not been programmed, a DTC will set in the ABS Module, Airbag Module and the SKIM/SKREEM.**

**NOTE: 3. If the vehicle is equipped with a Sentry Key Remote Entry, Secret Key data must be updated. Refer to the Service Information for the PCM, SKIM/SKREEM and the Transponder (ignition key) for programming information. Using the scan tool, program the Secret Key information into the PCM using the PCM replaced function under the WCM menu.**

**NOTE: 4. If this vehicle is equipped with an Electronic Throttle Control system, and the APP Sensors, PCM, or Throttle Body Assembly have been replaced, use the scan tool to perform the ETC RELEARN function.**

**NOTE: 5. When replacing an O2 Sensor, the PCM RAM memory must be cleared, either by disconnecting the PCM C1 connector or momentarily disconnecting the Battery negative terminal.**

6. The NGC learns the characteristics of each O2 heater element and these old values should be cleared when installing a new O2 sensor. The customer may experience driveability issues if this is not performed.

7. Inspect the vehicle to make sure that all engine components are properly installed and connected. Reassemble and reconnect components as necessary.

8. Connect the scan tool to the data link connector.

9. Make sure the fuel tank has at least a quarter tank of fuel. Turn off all accessories.

10. If the Catalyst was replaced, with the scan tool go to the Miscellaneous Menu Option ″Catalyst Replaced″ and press enter.

11. If a Comprehensive Component DTC was repaired, perform steps 12 - 14. If a Major OBDII Monitor DTC was repaired skip those steps and continue verification.

12. After the ignition has been off for at least 10 seconds, restart the vehicle and run 2 minutes.

13. With the scan tool, monitor the appropriate pre-test enabling conditions until all conditions have been met. Once the conditions have been met, switch screen to the appropriate OBDII monitor, (Audible beeps when the monitor is running).

14. If the repaired OBDII trouble code has reset or was seen in the monitor while on the road test, the repair is not complete. Check for any related technical service bulletins or flash updates and return to Engine Electrical Diagnostic List.

15. If the conditions cannot be duplicated, erase all DTCs with the Scan tool.

16. If another DTC has set, return to the Engine Electrical Diagnostic List and follow the path specified for that DTC.

**Did the OBDII Monitor run successfully and has the Good Trip Counter changed to one or more?**

**Yes** >> Repair is complete.

**No** >> Check for any related Technical Service Bulletins and/or refer to the appropriate Diagnostic Procedure.

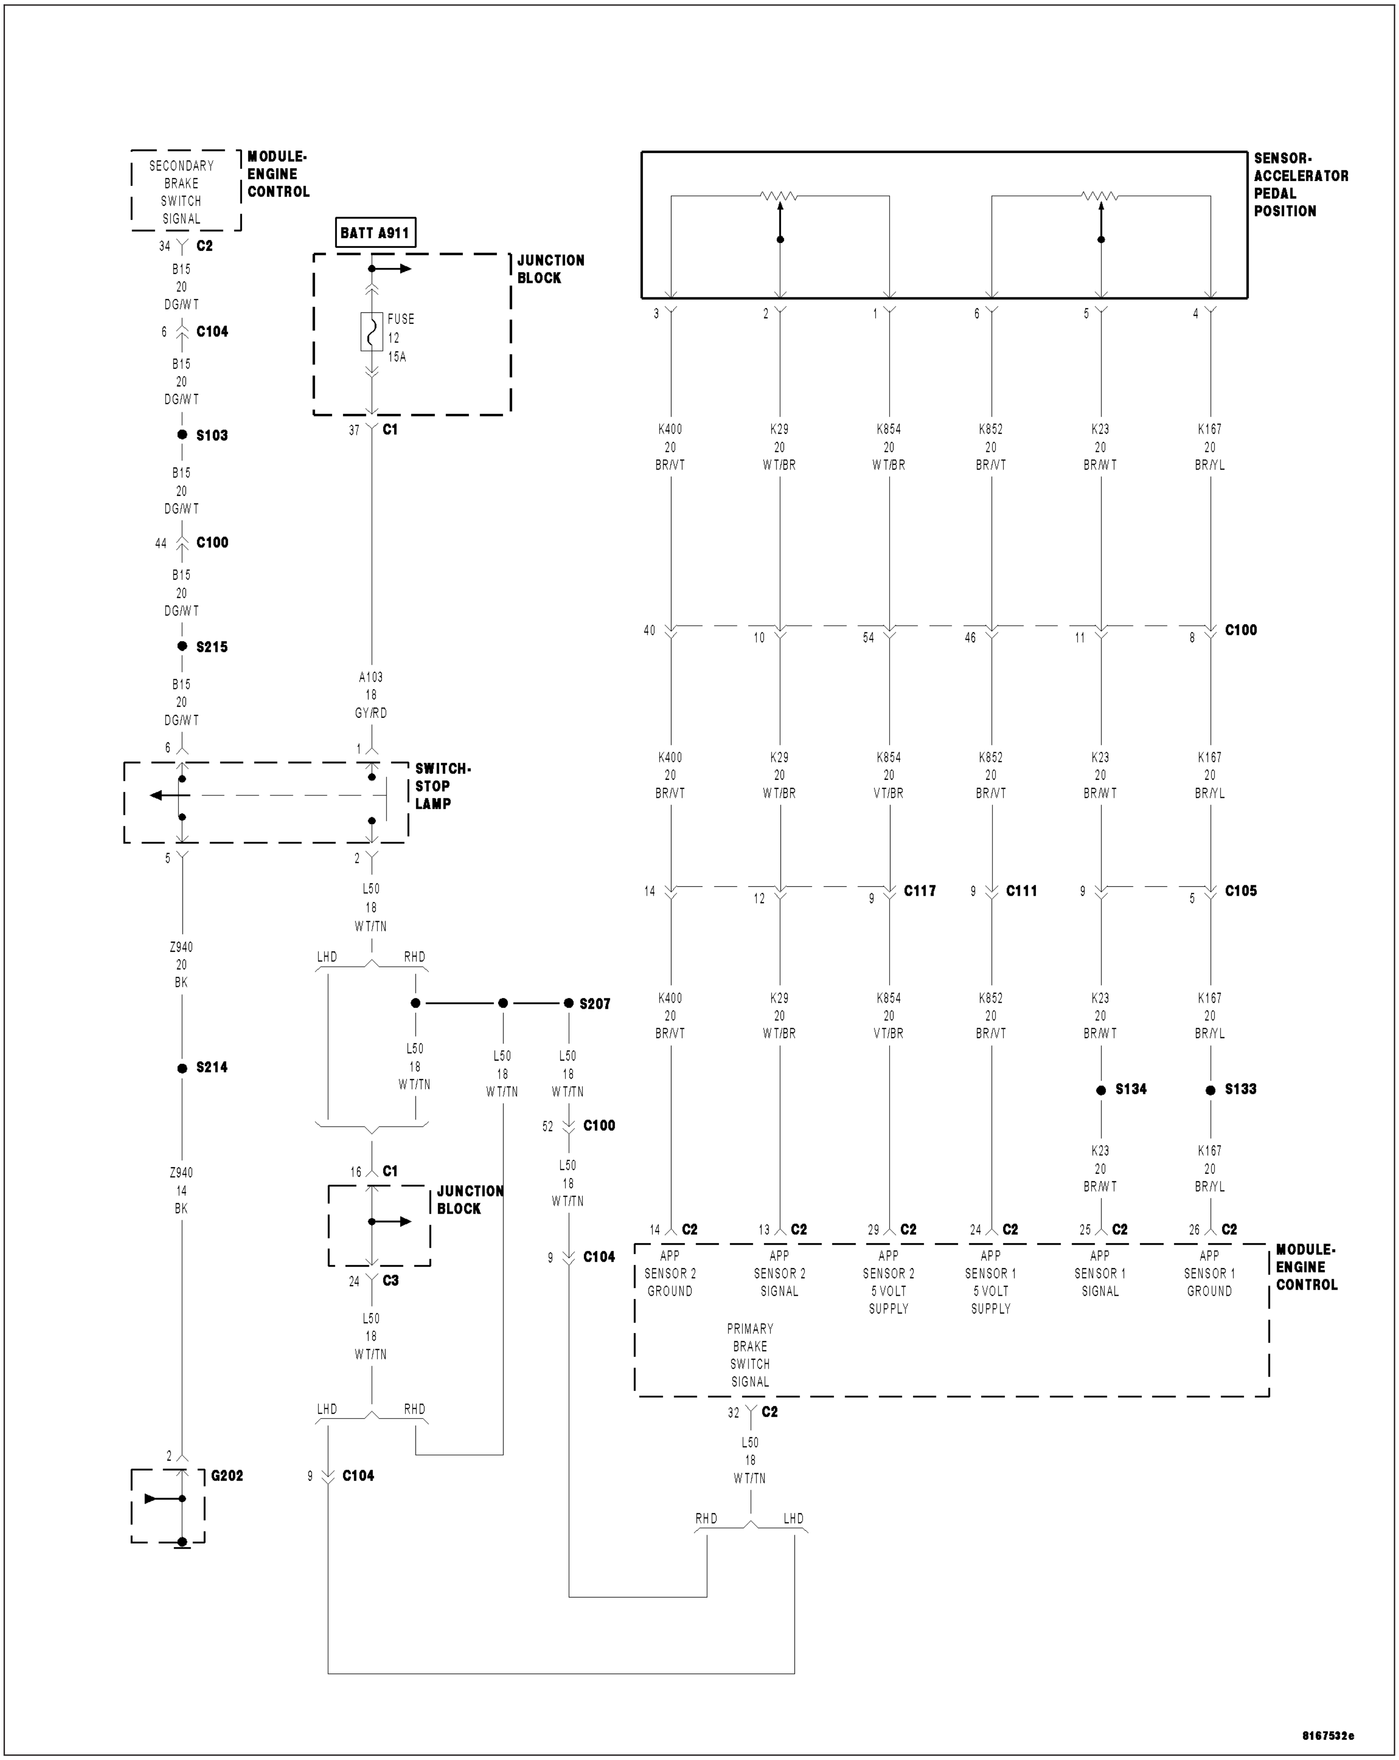
# ENGINE DIESEL DIAG

## TABLE OF CONTENTS

# ENGINE DIESEL DIAG

## DIAGNOSIS AND TESTING

# *CHECKING THE ACCELERATOR PEDAL POSITION SENSOR CALIBRATION



For a complete wiring diagram **Refer to Section 8W**

## Theory of Operation

The Accelerator Pedal Position Sensor (APP) is a device that contains 2 separate potentiometer type sensors. Each sensor has its own 5-volt supply circuit, sensor ground circuit and signal circuit.

The APP Sensor 2 signal should always be approximately 1/2 the voltage of the APP Sensor 1 signal.

| Possible Causes |
|---|
| APP SENSOR OPERATION |
| APP SENSOR CIRCUIT 1 HIGH RESISTANCE |
| APP SENSOR CIRCUIT 2 HIGH RESISTANCE |

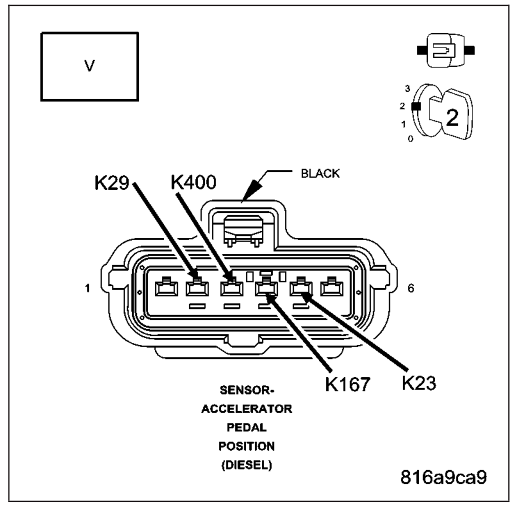
## Diagnostic Test

### 1. APP SENSOR IDLE VOLTAGE

Inspect the Accelerator Pedal Position Sensor for proper travel from the rest position to the fully depressed position.

Turn the ignition on.

With the accelerator pedal in the rest position, use a voltmeter to back-probe the (K23) Accelerator Pedal Position Sensor 1 and the (K29) Accelerator Pedal Position Sensor 2 Signal circuits at the Accelerator Pedal Position Sensor harness connector with the accelerator pedal in the at rest position.



**Is the voltage between 0.42 and 0.51 volt for sensor 1 and 0.19 and 0.28 volt for sensor 2?**

**Yes** >> Go To 2

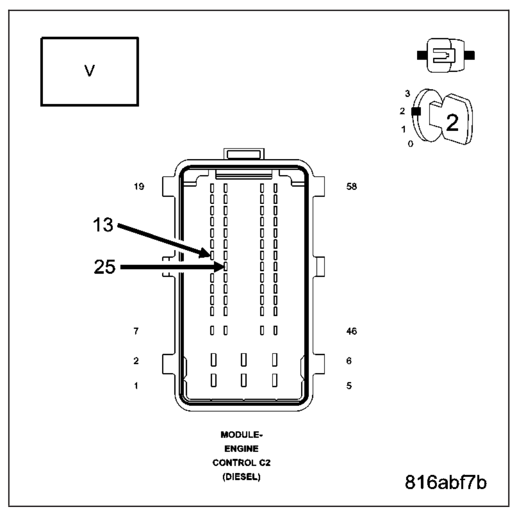
**No** >> Check the wiring and connectors related to the Accelerator Pedal Position Sensor. If OK, replace the Accelerator Pedal Position Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

### 2. APP SENSOR

While back probing, measure the voltage of the (K23) Accelerator Pedal Position Sensor Signal 1 and (K29) Accelerator Pedal Position Sensor Signal 2 circuits at the ECM.

Monitor the voltmeter while slowly pressing the accelerator pedal completely down.



**Did the voltage for both sensors increase smoothly with pedal travel?**

**Yes** >> Go To 3

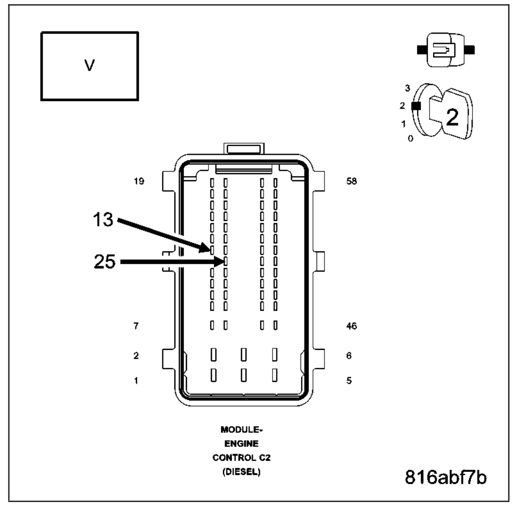
**No** >> Replace the Accelerator Pedal Position Sensor in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. APP SENSOR WIDE OPEN THROTTLE VOLTAGE

Using a voltmeter backprobe the Accelerator Pedal Position Sensor harness connector and read the voltage for (K23) Accelerator Pedal Position Sensor 1 and (K29) Accelerator Pedal Position Sensor 2 Signal circuits.

Fully depress the accelerator pedal.



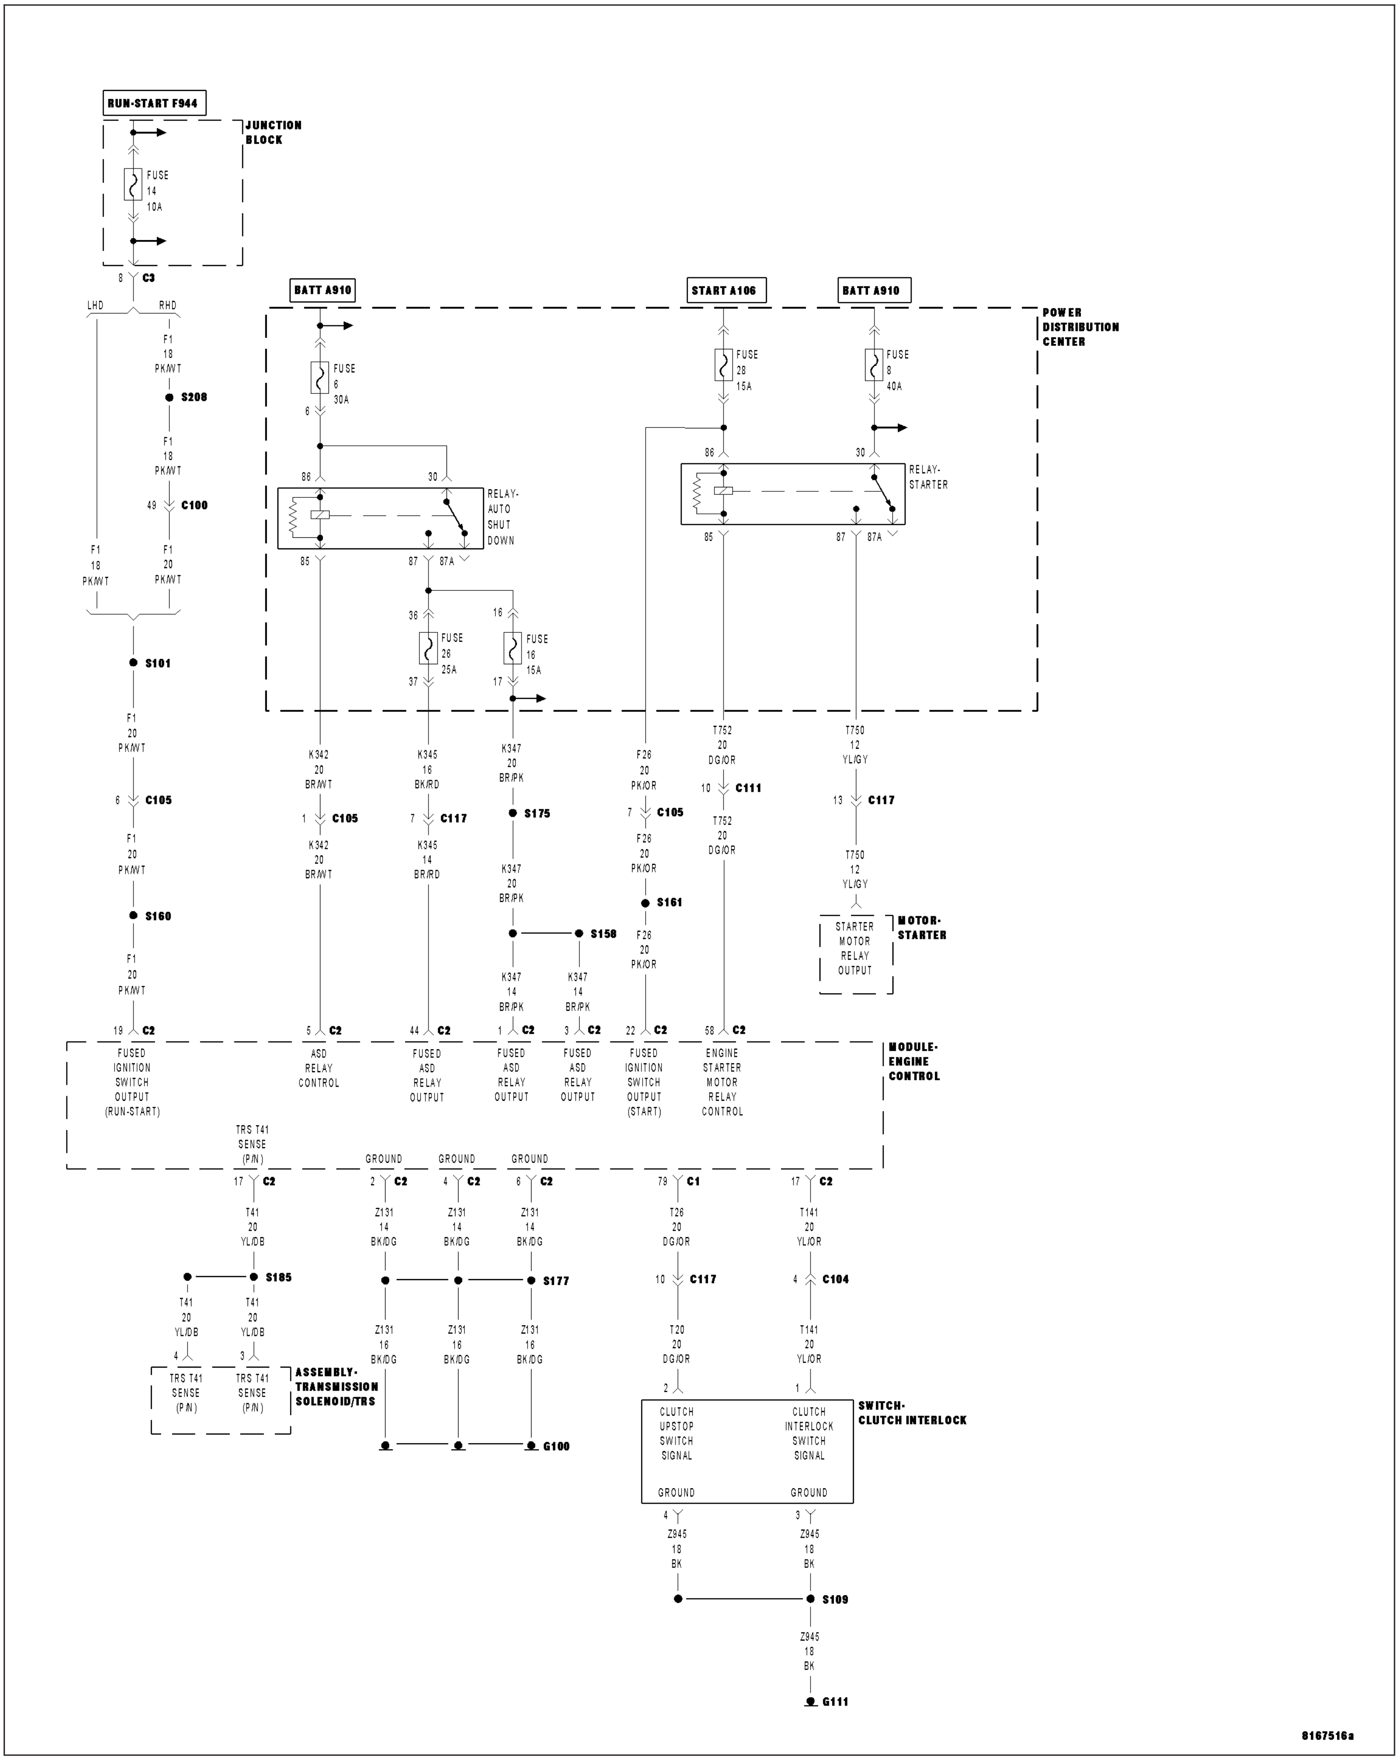
**Is the voltage between 4.45 and 4.75 volts for #1 and 2.15 and 2.45 volts for #2?**

**Yes** >> Test Complete.

**No** >> Check the wiring and connectors related to the APP Sensor. If OK, replace the Accelerator Pedal Position Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# *CHECKING THE ECM POWER AND GROUND CIRCUITS



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| (K342) ASD RELAY CONTROL CIRCUIT OPEN |
| (K347) ASD RELAY OUTPUT CIRCUIT(S) OPEN |
| (Z131) ECM GROUND CIRCUIT(S) OPEN |
| FUSED ASD RELAY BATTERY SUPPLY CIRCUIT OPEN |
| (F26)<br>FUSED IGNITION SWITCH (START) OUTPUT CIRCUIT OPEN |
| (F1) FUSED IGNITION SWITCH (START/RUN) OUTPUT CIRCUIT OPEN |
| SUBSTITUTE ASD RELAY |
| (K342) ASD RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE |

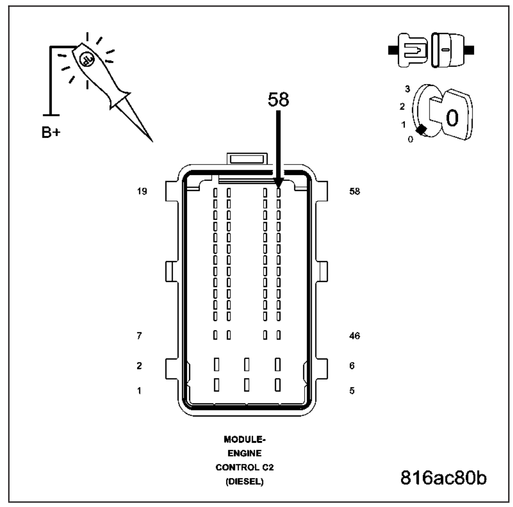
## Diagnostic Test

### 1. ECM GROUND CIRCUIT(S) OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Using a 12-volt test light connected to 12-volts, check each of the ECM ground circuits in ECM harness connector C2 cavities 2, 4 and 6.



**Did the test light illuminate for each cavity?**

**Yes** >> Go To 2

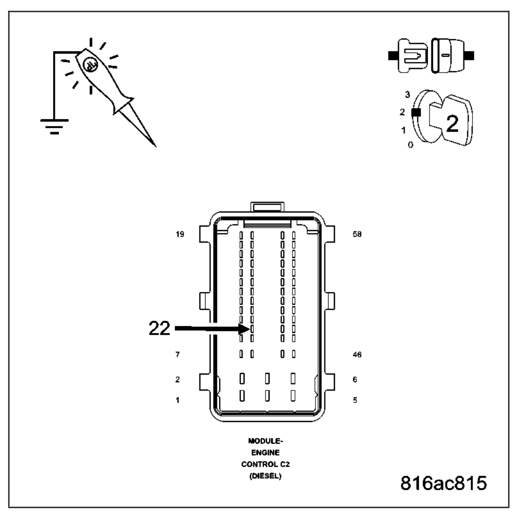
**No** >> Repair the ECM Ground circuit(s) for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

### 2. FUSED IGNITION SWITCH START OUTPUT CIRCUIT OPEN

Turn the ignition to the Start position.

Using a 12-volt test light connected to ground, check the Fused Ignition Switch (Start) Output circuit in ECM harness connector C2 cavity 22.



**Is the test light on?**

**Yes** >> Go To 3

**No** >> Repair the Fused Ignition Switch (Start) Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. FUSED IGNITION SWITCH START/RUN OUTPUT CIRCUIT OPEN

Using a 12-volt test light connected to ground, check the Fused Ignition Switch (Start Run Output circuit in ECM harness connector C2 cavity 19.

Turn the ignition to the Run position.

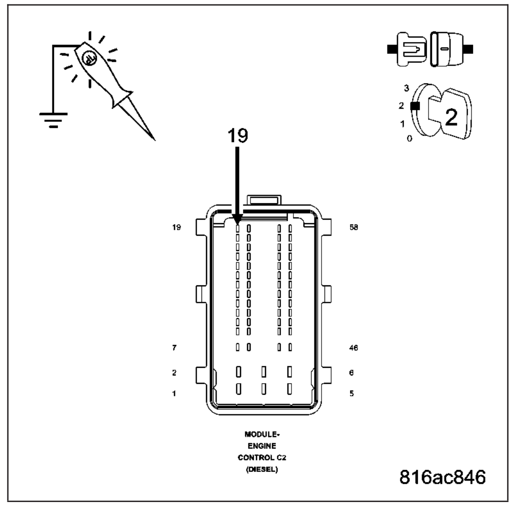
Using a 12-volt test light connected to ground, check the Fused Ignition Switch (Start/Run) Output circuit in ECM harness connector C2 cavity 19.

**Is the test light on for both ignition switch positions?**

**Yes** >> Go To 4

**No** >> Repair the Fused Ignition Switch (Start/Run) Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 4. CHECKING THE ASD RELAY SYSTEM

Turn the ignition off.

Connect a jumper wire between ground and the ASD Relay Control circuit in ECM C2 harness connector cavity 44.

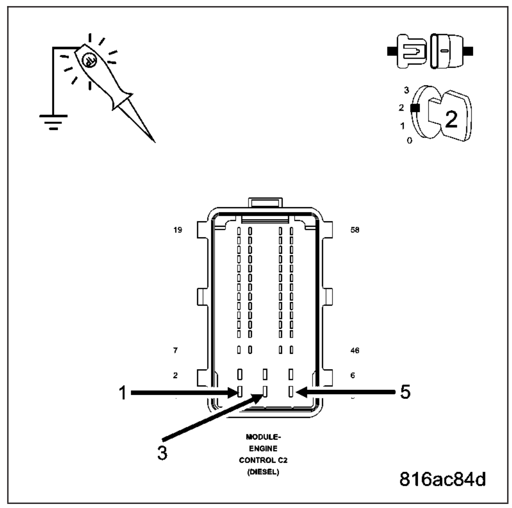
Turn the ignition on.

Using a 12-volt test light connected to ground, check the Fused ASD Relay Output circuits at the ECM C2 harness connector cavities 1, 3 and 5.

**Does the test light illuminate brightly for each circuit?**

**Yes** >> Test Complete.

**No** >> Go To 5



## 5. FUSED ASD RELAY BATTERY SUPPLY CIRCUIT OPEN

Turn the ignition off.

Remove the ASD Relay from the PDC.

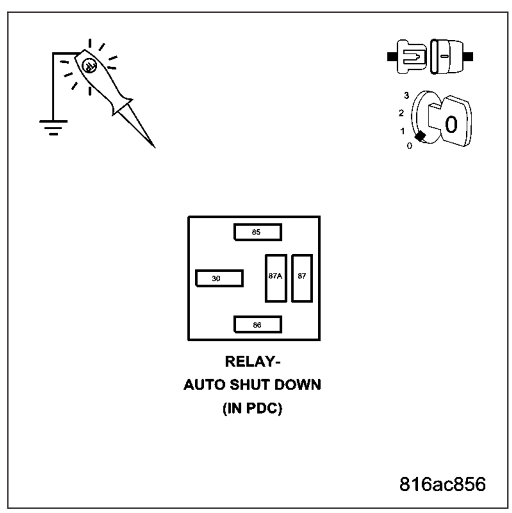
Using a 12-volt test light connected to ground, check both Fused ASD Relay Battery Supply circuits in ASD Relay connector.

**Is the test light on?**

**Yes** >> Go To 6

**No** >> Repair the Fused ASD Relay Battery Supply circuit(s) for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 6. ASD RELAY OUTPUT CIRCUIT OPEN

Connect a jumper wire between cavity 30 and cavity 87 in the ASD Relay connector.

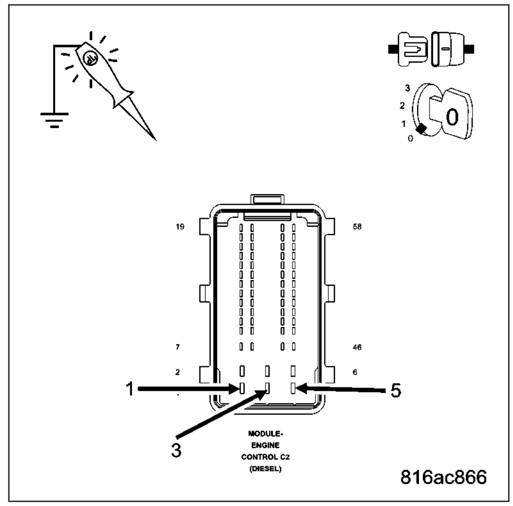
Using a 12-volt test light connected to ground, check the ASD Relay Output circuit in ECM harness connector C2 cavities 1, 3 and 5.

**Did the test light illuminate for each circuit?**

**Yes** >> Go To 7

**No** >> Repair the ASD Relay Output circuit(s) for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 7. ASD RELAY

Install a substitute relay in place of the ASD Relay.

Connect a jumper wire between ground and the ASD Relay Control circuit in ECM C2 harness connector cavity 44.

Turn the ignition on.

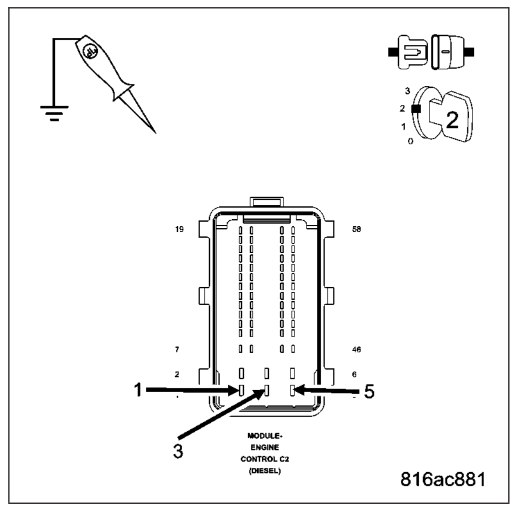
Using a 12-volt test light connected to ground, check the Fused ASD Relay Output circuits at the ECM C2 harness connector cavities 1, 3 and 5.

**Did the test light illuminate brightly for each circuit?**

**Yes** >> Replace the ASD Relay.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 8



## 8. ASD RELAY CONTROL CIRCUIT OPEN

Turn the ignition off.

Remove the ASD Relay from the PDC.

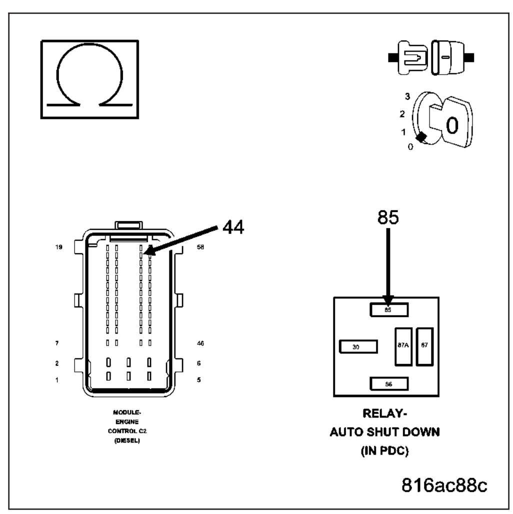
Measure the resistance of the ASD Relay Control circuit between the PDC connector and the ECM harness connector.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the ASD Relay Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 9. ASD RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector in the PDC.

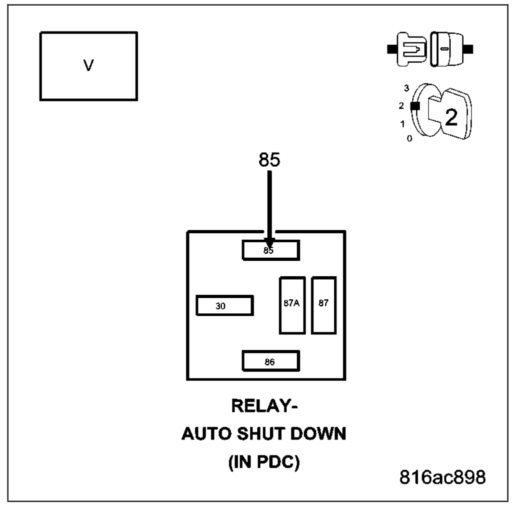
Turn the ignition on.

Measure the voltage on the ASD Relay Control circuit.

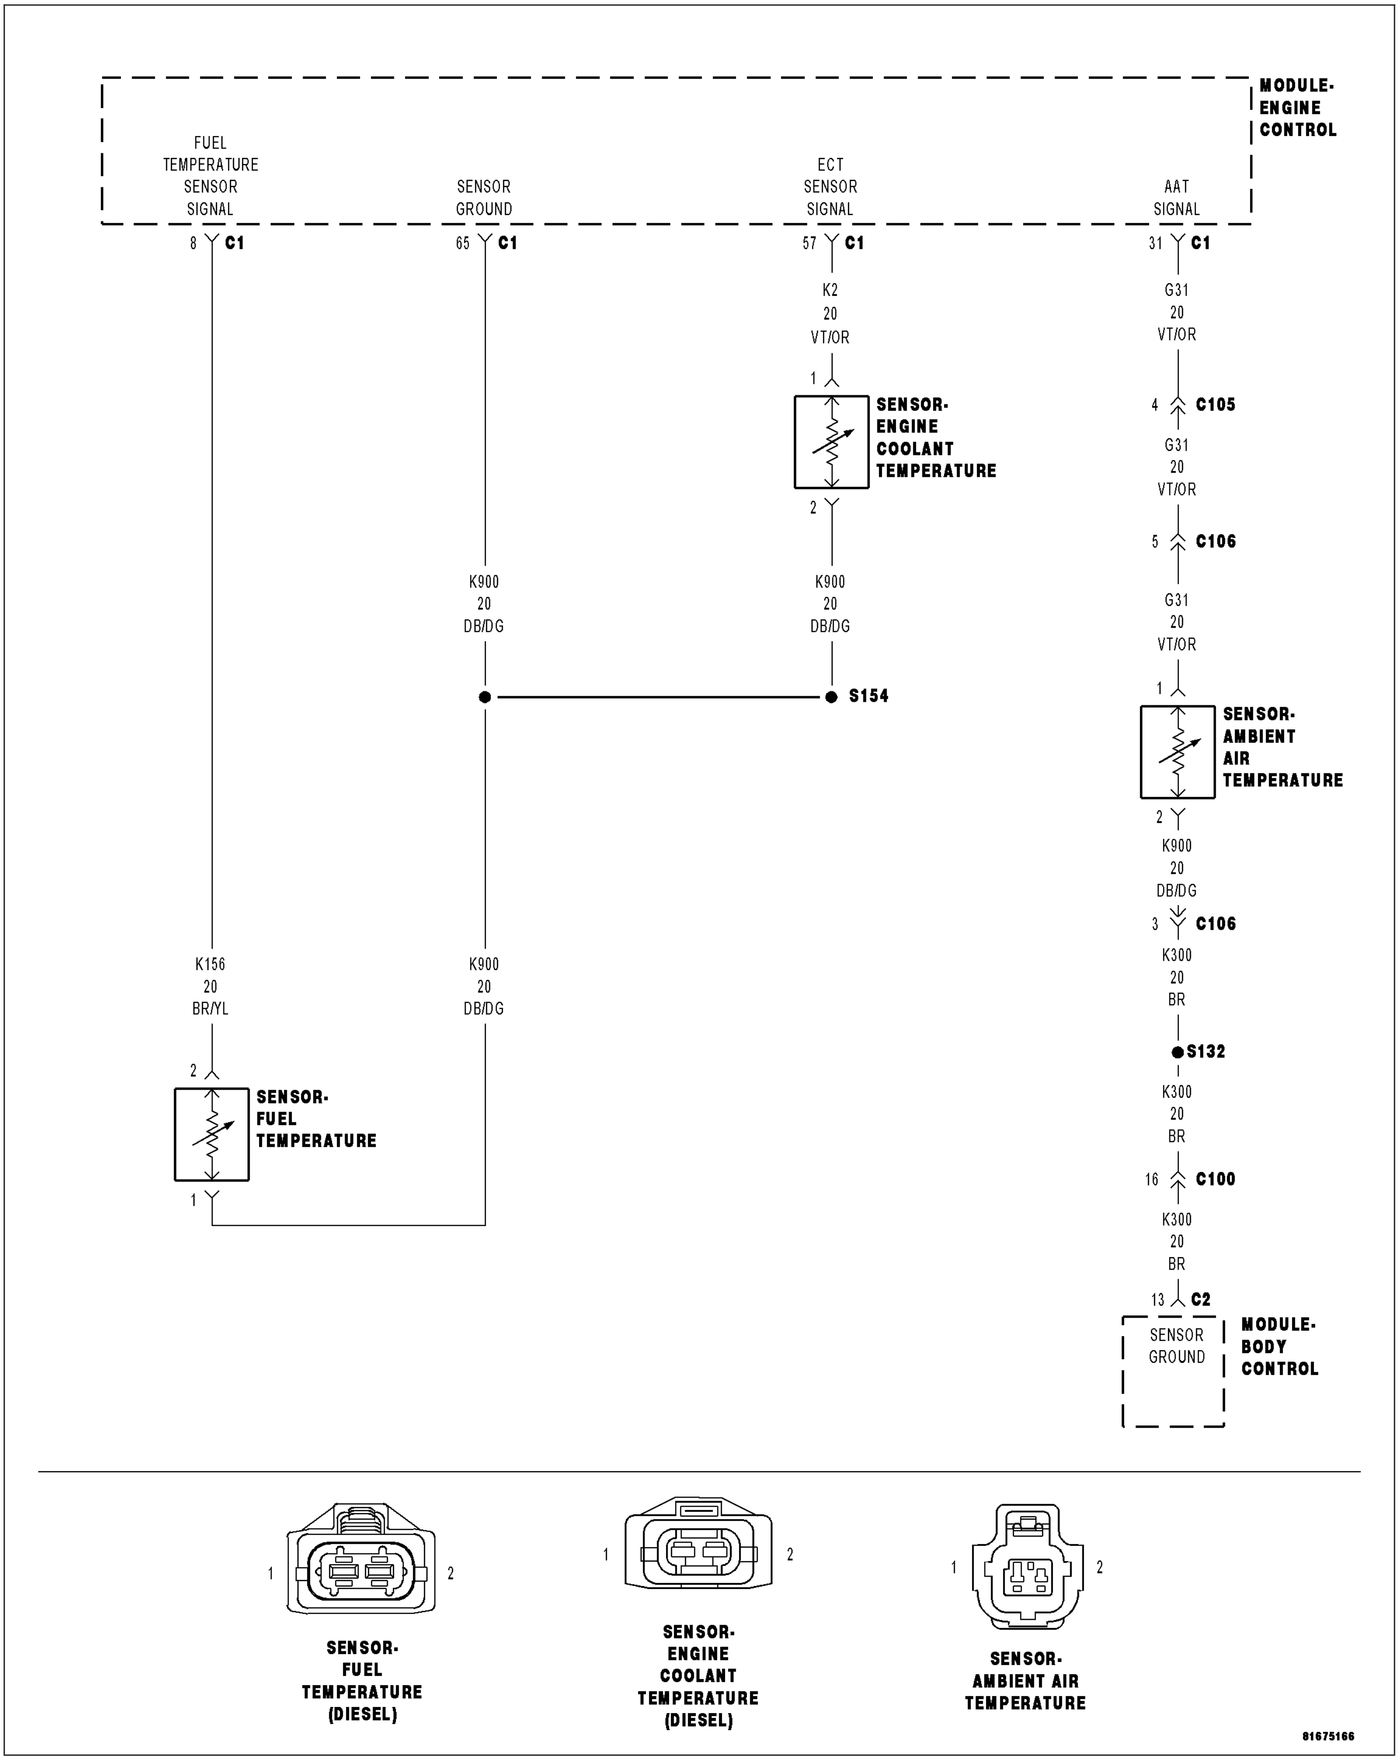
**Is the voltage above 1.0 volt?**

**Yes** >> Repair the ASD Relay Control circuit for a short to voltage. Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.



## *CHECKING THE ENGINE COOLANT TEMPERATURE SENSOR CALIBRATION



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
| --- |
| ECT SENSOR - COLD |
| ECT SENSOR - HOT |

## Diagnostic Test

### 1. ECT SENSOR - COLD

**NOTE: The thermostat must be operating correctly for this test to be valid.**

Using the scan tool read and note the engine coolant temperature.

Using a temperature probe, measure the engine block temperature near the ECT Sensor.

**NOTE: The engine temperature should be below 50°C (120°F).**

**Are the readings within 7°C (13°F) of each other?**

**Yes** >> Go To 2

**No** >> Check the wiring and connectors associated with the ECT Sensor for corrosion, damage or other problems. Repair as necessary. If wiring and connectors are o.k., replace the Engine Coolant Temperature Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

### 2. ECT SENSOR - HOT

**NOTE: The thermostat must be operating correctly for this test to be valid.**

Start the engine and bring the engine to operating temperature (thermostat open).

Turn the engine off and wait 10 minutes to allow the engine temperature to stabilize.

Using a temperature probe, measure the engine block temperature near the ECT Sensor.

Using the Scan Tool, read the engine coolant temperature.

**Are the readings within 7°C (13°F) of each other?**

**Yes** >> Test Complete.

**No** >> Check the wiring and connectors associated with the ECT Sensor for corrosion, damage or other problems. Repair as necessary. If wiring and connectors are o.k., replace the Engine Coolant Temperature Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## *CHECKING THE ENGINE MECHANICAL SYSTEMS

For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| ENGINE MECHANICAL SYSTEMS |

## Diagnostic Test

### 1. CHECKING ENGINE MECHANICAL

**NOTE: The following items should be checked as a possible cause of a Driveability or No-Start problem.**

**WARNING: Do not attempt to remove or separate high pressure fuel line. Attempting to do so could result in severe bodily injury or death.**

Engine Valve Timing - must be within specification

Engine Compression - must be within specifications

Camshaft Lobes - check for abnormal wear

Camshaft Position Sensor - check the camshaft position sensor tooth for debris and deterioration

Crankshaft Position Sensor - check the crankshaft tone wheel for debris and deterioration

Engine Exhaust System - must be free of any restriction

Engine Drive Sprocket - must be properly positioned

Vacuum System - must operate properly and be free of any vacuum leaks

Fuel - must have adequate supply and must be free of contamination (ie. debris, water and gasoline)

Fuel Injectors - must not be plugged or restricted

Fuel Lift Pump - must operate properly (where applicable)

Fuel Injection Pump - must be producing the correct output volume and pressure

Inspect the Fuel Lines, Fuel Filter and Fuel Pressure Relief Valve for signs of restriction and leaks

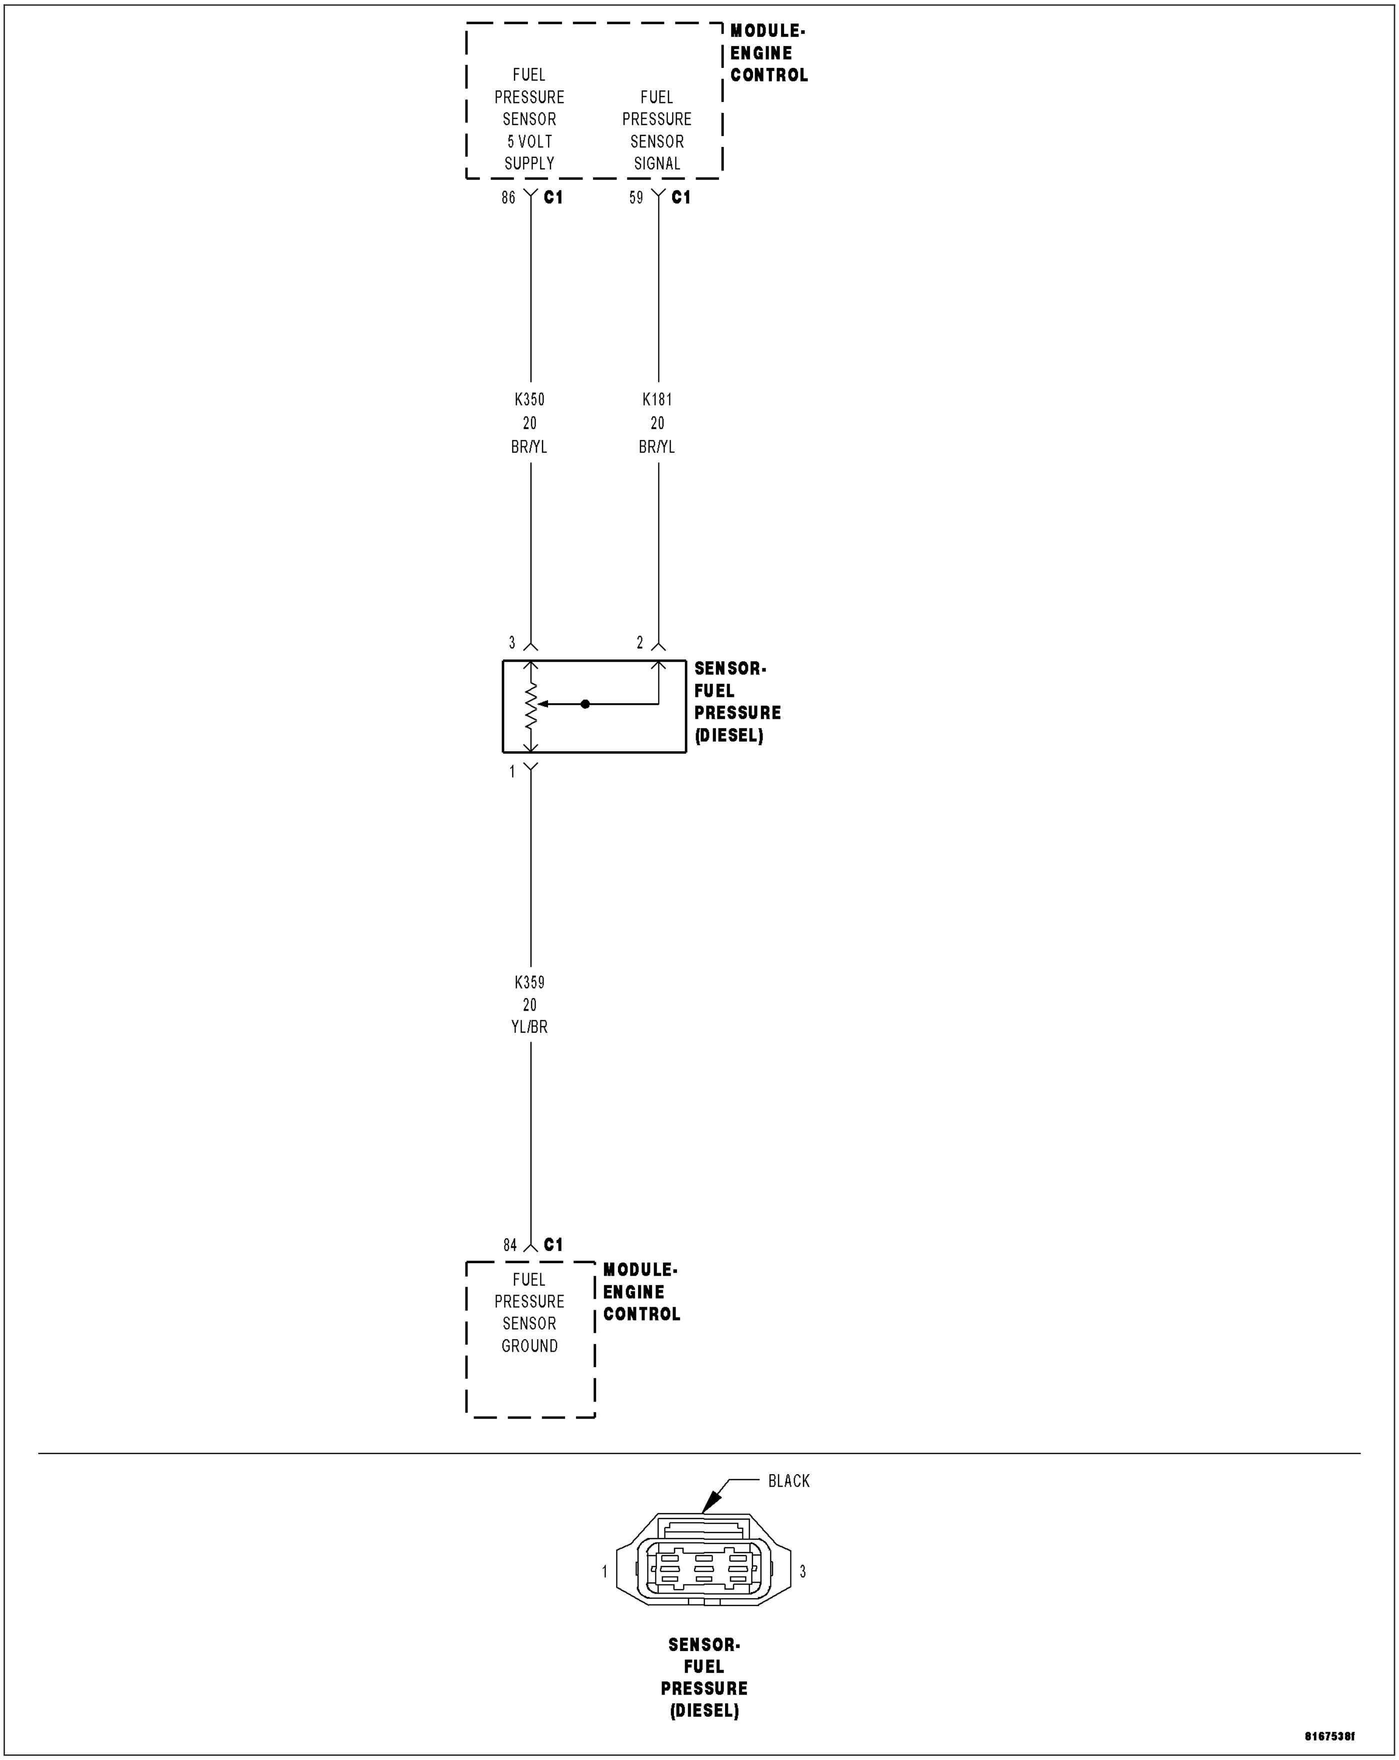
**NOTE: Check for any Technical Service Bulletins that may relate to the problem.**

**Are there any problems evident?**

**Yes** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## *CHECKING THE FUEL PRESSURE SENSOR CIRCUITS



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
| --- |
| OPEN CIRCUITS |

## Diagnostic Test

### 1. OPEN CIRCUITS

Turn the ignition off.

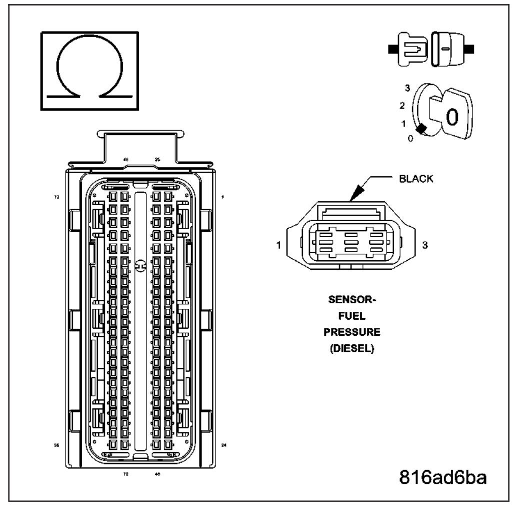
Disconnect the Fuel Pressure Sensor harness connector.

Disconnect the ECM harness connectors.

Visually inspect the related wiring harness. Look for any chafed, pierced, pinched, or partially broken wires. Repair as necessary.

Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals. Repair as necessary.

Measure the resistance of each of the three Fuel Pressure Sensor circuits between the ECM harness connector and the Fuel Pressure Sensor harness connector.



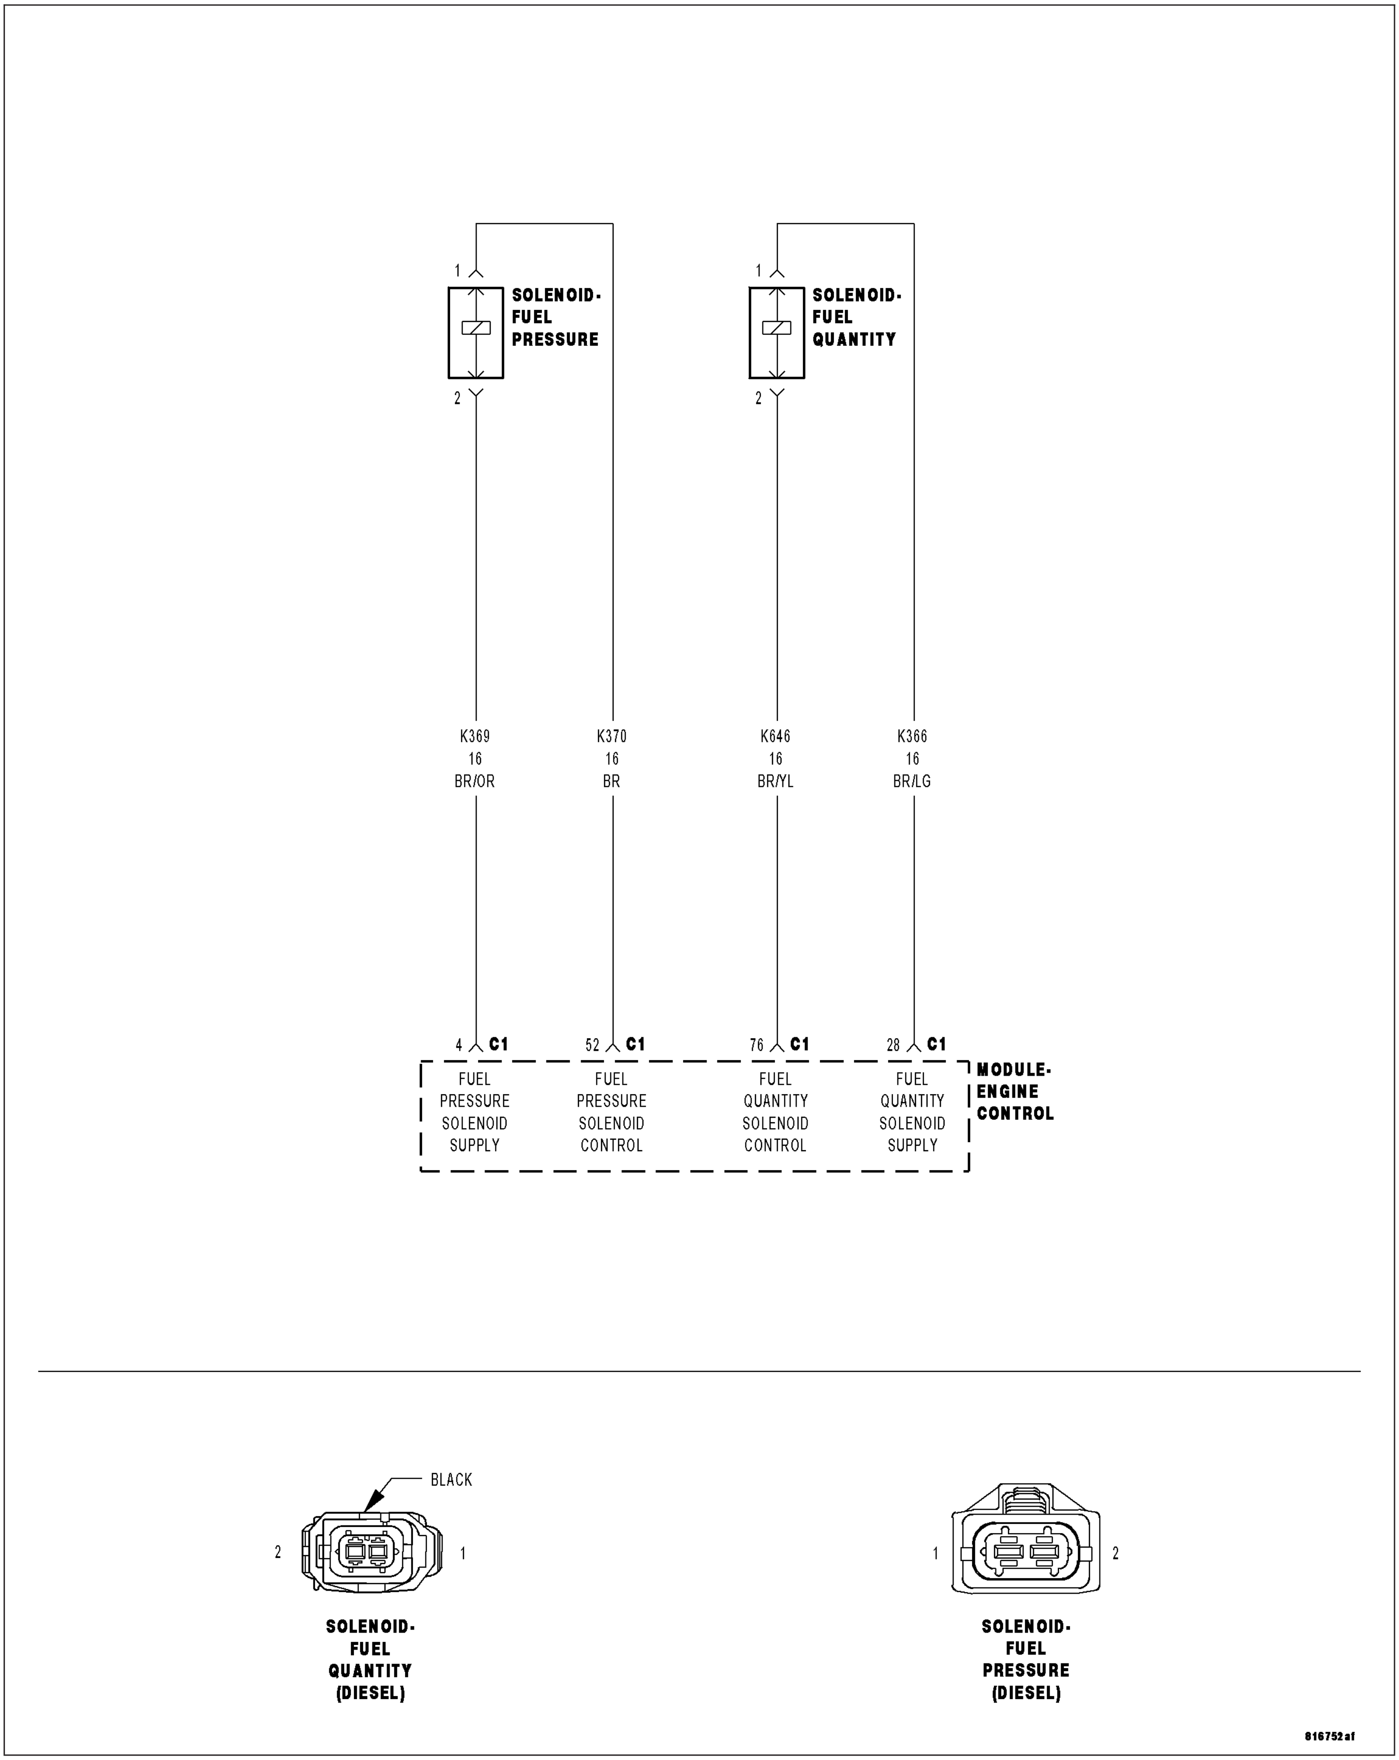
**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Test Complete.

**No** >> Repair open circuit(s) as necessary.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## *CHECKING THE FUEL PRESSURE SOLENOID CIRCUITS



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| FUEL PRESSURE SOLENOID RESISTANCE |
| OPEN CIRCUITS |

## Diagnostic Test

### 1. OPEN CIRCUITS

Turn the ignition off.

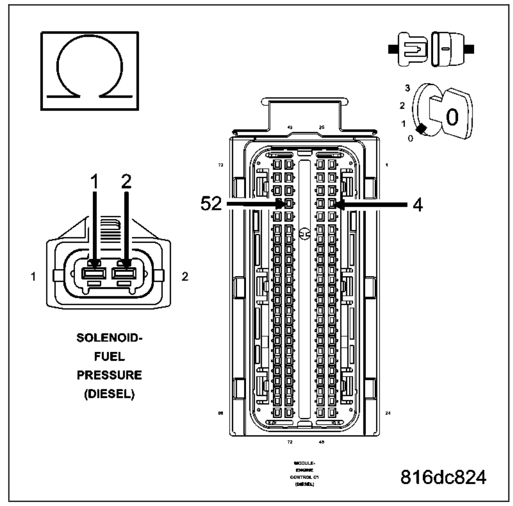
Disconnect the Fuel Pressure Solenoid harness connector.

Disconnect the ECM harness connectors.

Visually inspect the related wiring harness. Look for any chafed, pierced, pinched, or partially broken wires. Repair as necessary.

Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals. Repair as necessary.

Measure the resistance of both Fuel Pressure Solenoid circuits between the ECM harness connector and the Fuel Pressure Solenoid harness connector.



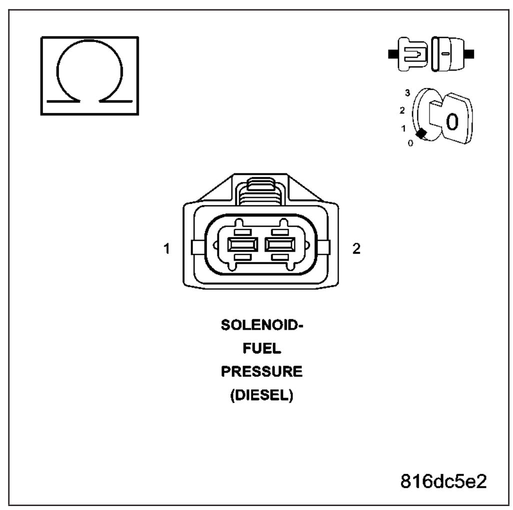
**Is the resistance below 10.0 ohms for both measurements?**

**Yes** >> Go To 2

**No** >> Repair open circuit(s) as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

### 2. FUEL PRESSURE SOLENOID RESISTANCE

Measure the resistance of the Fuel Pressure Solenoid.

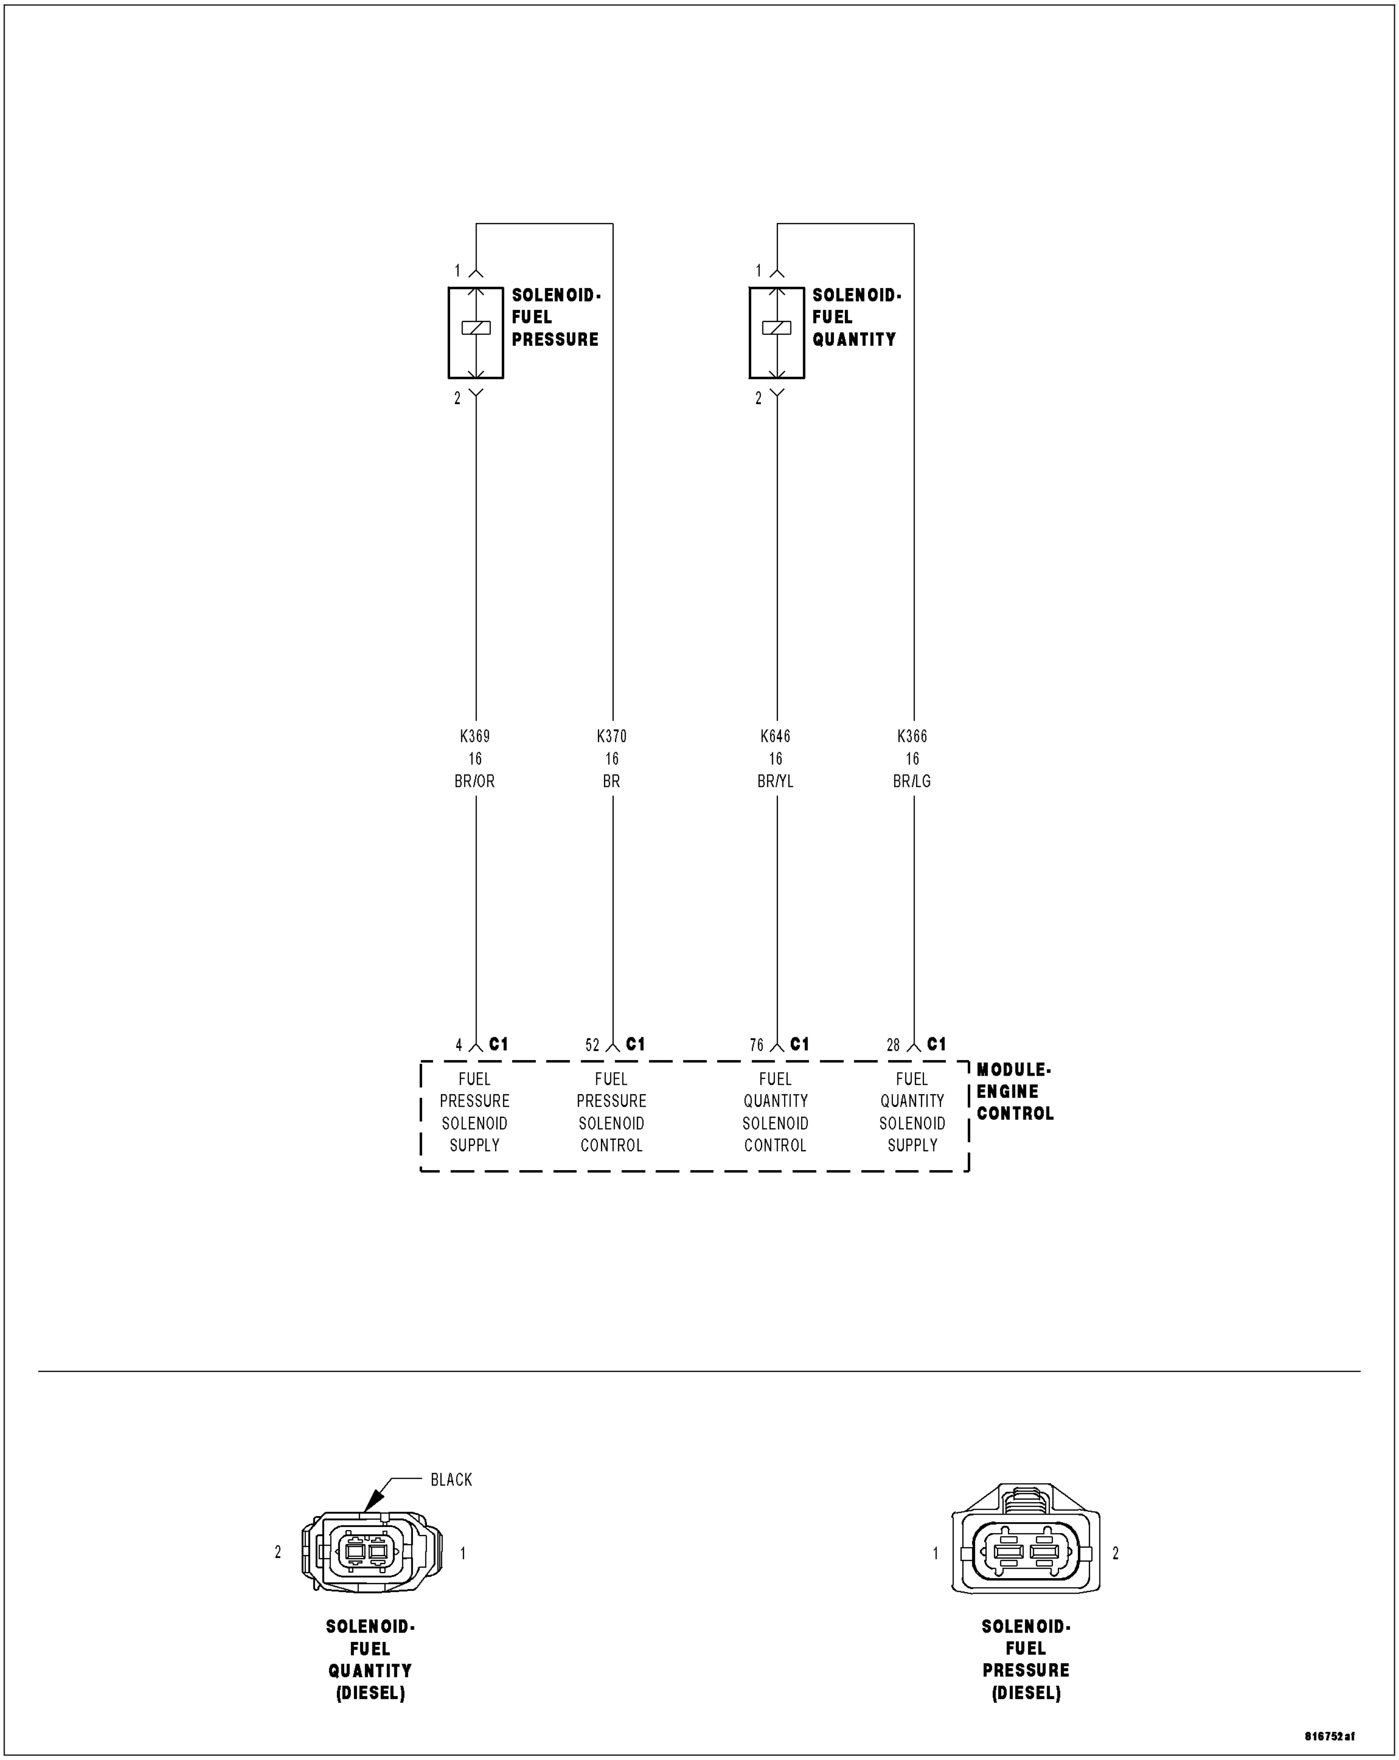


**Is the resistance between 3.5 and 5.5 ohms?**

**Yes** >> Test Complete.

**No** >> Replace the Fuel Pressure Solenoid.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# *CHECKING THE FUEL QUANTITY SOLENOID CIRCUITS



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| OPEN CIRCUITS |

## Diagnostic Test

### 1. OPEN CIRCUITS

Turn the ignition off.

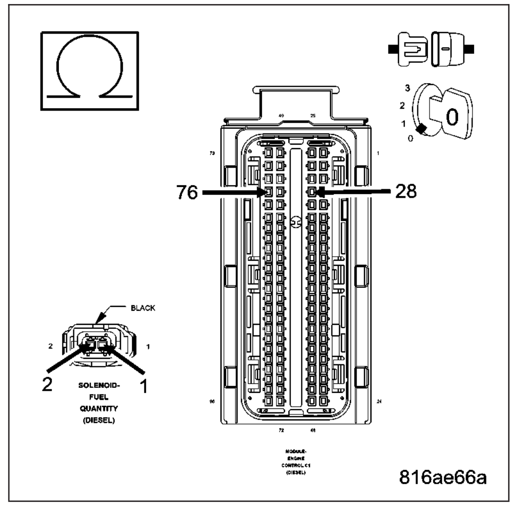
Disconnect the Fuel Quantity Solenoid harness connector.

Disconnect the ECM harness connectors.

Visually inspect the related wiring harness. Look for any chafed, pierced, pinched, or partially broken wires. Repair as necessary.

Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals. Repair as necessary.

Measure the resistance of both Fuel Quantity Solenoid circuits between the ECM harness connector and the Fuel Quantity Solenoid harness connector.



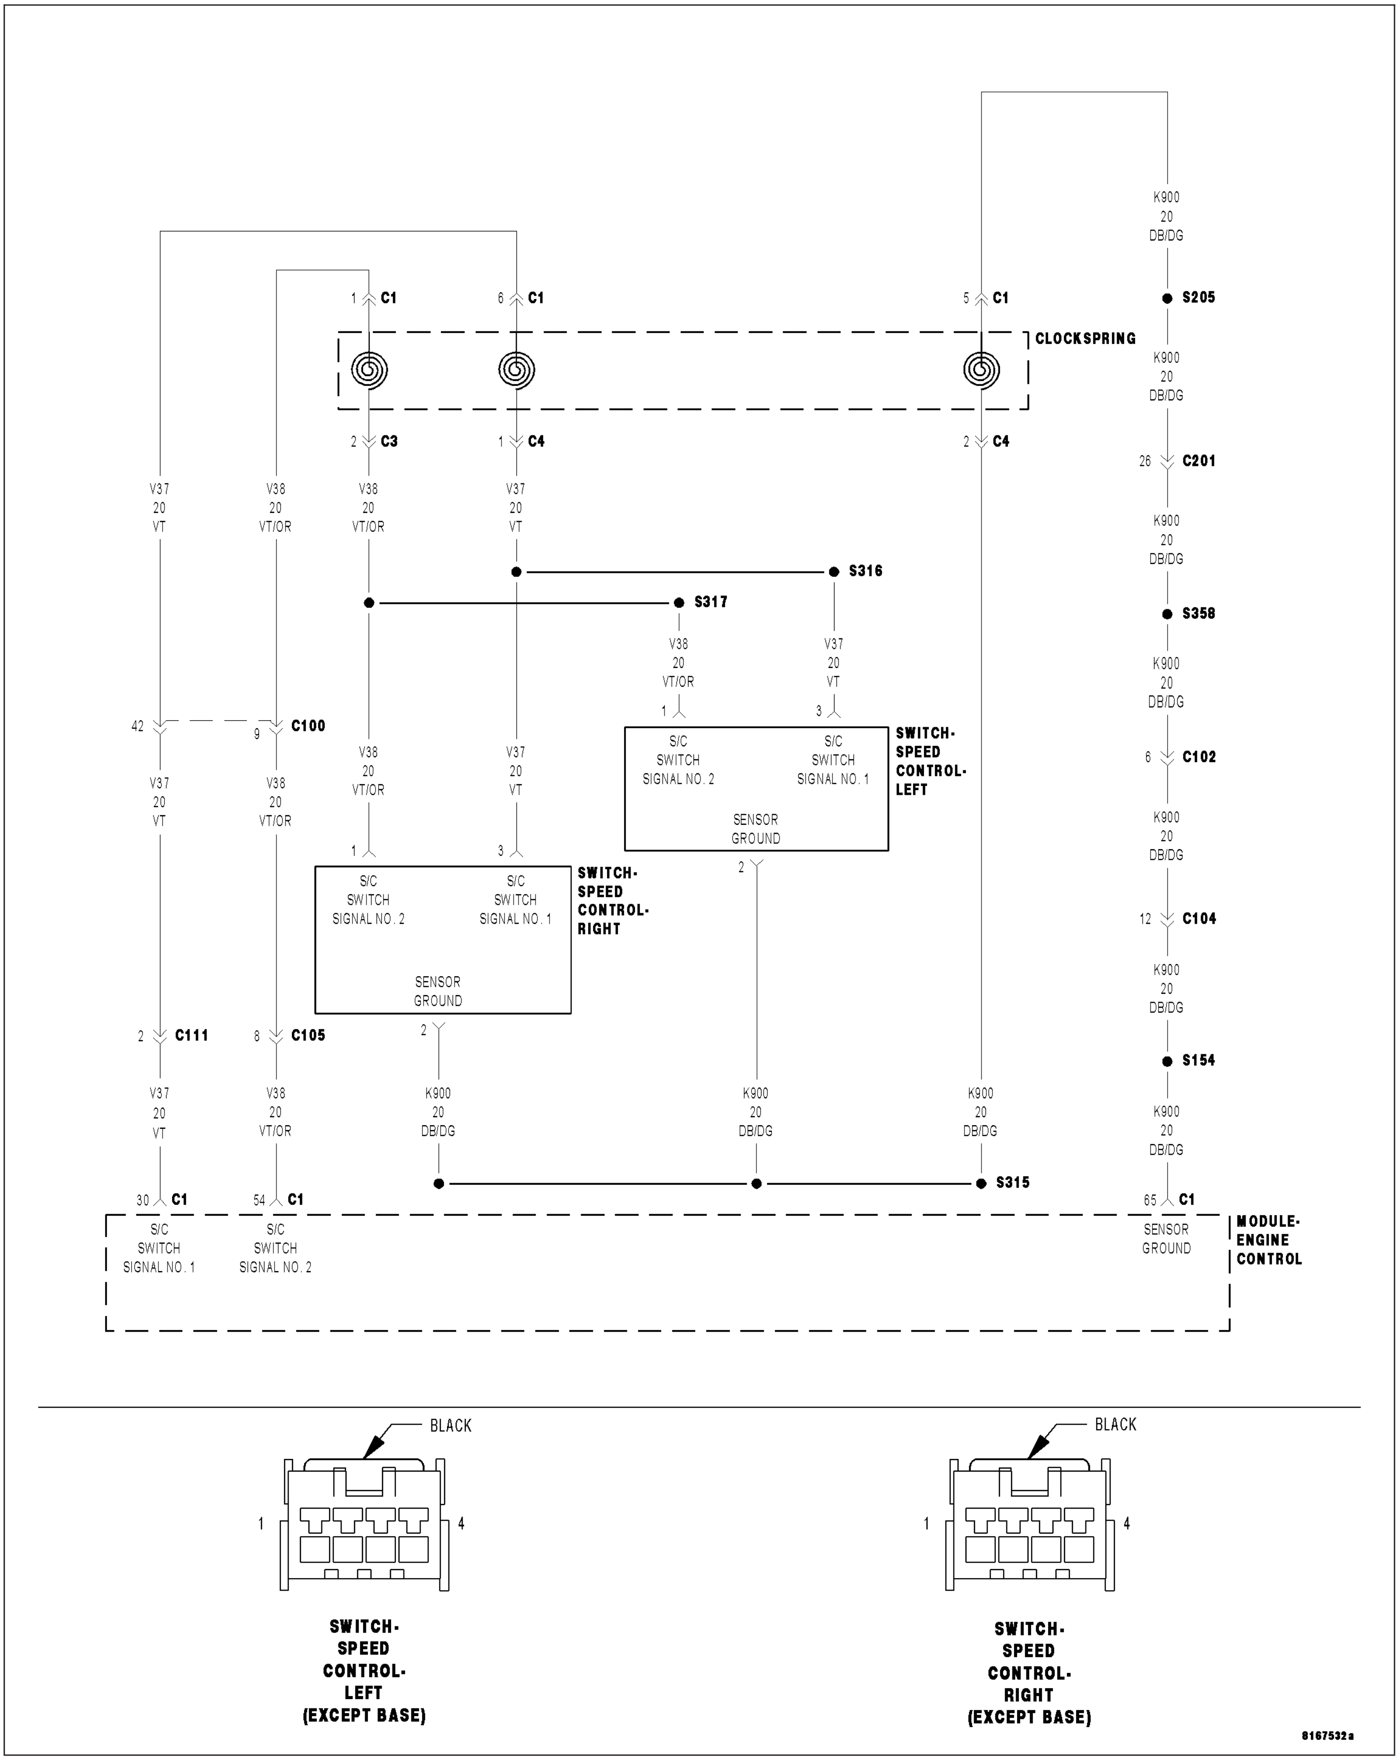
**Is the resistance below 10.0 ohms for both measurements?**

**Yes** >> Test Complete.

**No** >> Repair open circuit(s) as necessary.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# *CHECKING THE SPEED CONTROL OPERATION



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
| --- |
| BRAKE SWITCH SIGNAL |
| CHECKING CRUISE SWITCHES |
| CHECKING THE ECM FOR DTC'S |
| ENGINE CONTROL MODULE |
| VSS SIGNAL |

## Diagnostic Test

### 1. CHECKING THE ECM FOR DTC'S

Turn the ignition on.

With the scan tool, read the ECM DTCs.

**Are there any ECM DTCs present?**

**Yes** >> Refer to symptom list for problems related to the ECM DTC.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

### 2. CHECKING CRUISE SWITCHES

Start the engine.

With the scan tool, read the S/C Switch #1 volts.

Observe the cruise switch volts on the scan tool while pressing and holding each cruise button separately.

**NOTE: Pressing each cruise button should result in the following voltages: ON/OFF 0.78v - 0.98, SET 3.26 - 3.46v, RESUME/ACCEL 3.93 - 4.13v, CANCEL 1.67 - 1.87v, COAST 2.64 - 2.84v, No Button Pressed 4.44 - 4.64v**

With the scan tool, read the S/C Switch #2 volts.

Observe the cruise switch volts on the scan tool while pressing and holding each cruise button separately.

**NOTE: Pressing each cruise button should result in the following voltages: ON/OFF 3.62 - 3.82v, SET 1.25 - 1.45v, RESUME/ACCEL 2.13 - 2.33v, CANCEL 2.93 - 3.13v, COAST 0.78 - 0.98v, No Button Pressed 4.44 - 4.64v**

**Does each switch provide the correct voltage?**

**Yes** >> Go To 3

**No** >> Check S/C Switch signal and Ground circuits. If o.k., replace the S/C Switches.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

### 3. VERIFY S/C OPERATION

**NOTE: Prior to testing the speed control operation, ensure the Learn Speed Control feature has been performed on the ECM.**

Test drive the vehicle above 60 km/h (35 MPH).

Attempt to Set the Speed Control.

**Does the Speed Control function properly?**

**Yes** >> Test Complete.

**No** >> Go To 4

## 4. VSS SIGNAL

With the scan tool, read Vehicle Speed.

Have an assistant drive the vehicle while you are observing the Vehicle Speed on the scan tool.

While observing vehicle speed on the scan tool, note any rapid changes (signal dropouts) in the reading that do not correspond with actual vehicle speed.

**Is the scan tool displaying an accurate vehicle speed?**

**Yes** >> Go To 5

**No** >> Refer to symptom list for problems related to the Vehicle Speed Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. BRAKE SWITCH SIGNAL

With the scan tool in Inputs/Outputs, read the Primary and Secondary brake switch states while pressing and releasing the Brake Pedal several times.

**Did the scan tool indicate the correct brake pedal state when pressing and releasing the Brake Pedal?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Refer to symptom list for problems related to Brake Switch Signal.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## CHECKING THE HIGH-SIDE FUEL SYSTEM

For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| AIR IN FUEL SYSTEM |
| SCAN TOOL TESTS |
| FUEL PRESSURE SOLENOID |
| FUEL PRESSURE SOLENOID RETURN VOLUME TEST |
| FUEL PUMP |
| FUEL SYSTEM LEAK |
| INJECTOR RETURN VOLUME TEST |

### Diagnostic Test

#### 1. CHECKING FUEL PRESSURE

**NOTE: The Low/Supply Side Fuel System must be working properly for this test to be valid. Refer to the Service Information and Perform the Low/Supply Side Fuel System Test before continuing.**
Turn the ignition on.

**NOTE: This test requires two people. One person to test drive the vehicle while a technician observes the scan tool readings**
With the scan tool, read and compare the Fuel Pressure (PSI) with the Fuel Pressure Desired/Setpoint (PSI) while test driving the vehicle under various load conditions such as idle, hard acceleration, cruise and deceleration.

**NOTE: The Fuel Pressure reading should follow (trail) closely to the Fuel Pressure Desired/Setpoint reading.**

**Does the Fuel Pressure reading follow closely to the Fuel Pressure Desired/Setpoint reading?**

**Yes** >> Test Complete.

**No** >> Go To 2

#### 2. FUEL SYSTEM LEAK

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**
Inspect the entire fuel system for leakage.

**Is there any evidence of leakage?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. CHECKING FOR AIR IN FUEL SYSTEM

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: If there is air in the fuel system, the Actual Fuel Pressure will oscillate more than 100 spi above and/or below the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint?**

**Yes** >> Refer to the Service Information to purge air from the fuel system.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL PRESSURE SOLENOID

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: A sticking Fuel Pressure Solenoid is indicated by Actual Fuel Pressure gradually dropping below the Fuel Pressure Setpoint then suddenly increasing (spiking) above the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure gradually decrease then suddenly increase (spike) above the Fuel Pressure**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. SCAN TOOL TESTS

Turn the engine off.

Turn the ignition on.

With the scan tool, select Engine, System Tests and perform the following tests:

- Injector Fuel Correction Test.
- Cylinder Balance test.
- Compression Test.

**Were any problems found?**

**Yes** >> Diagnose and/or repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. INJECTOR RETURN VOLUME TEST

Refer the Service Information and perform the Injector Return Volume Test.

**Did the Injectors pass the Return Volume Test?**

**Yes** >> Go To 7

**No** >> Refer to the Service Information and replace injector(s) as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. FUEL PRESSURE SOLENOID RETURN VOLUME TEST

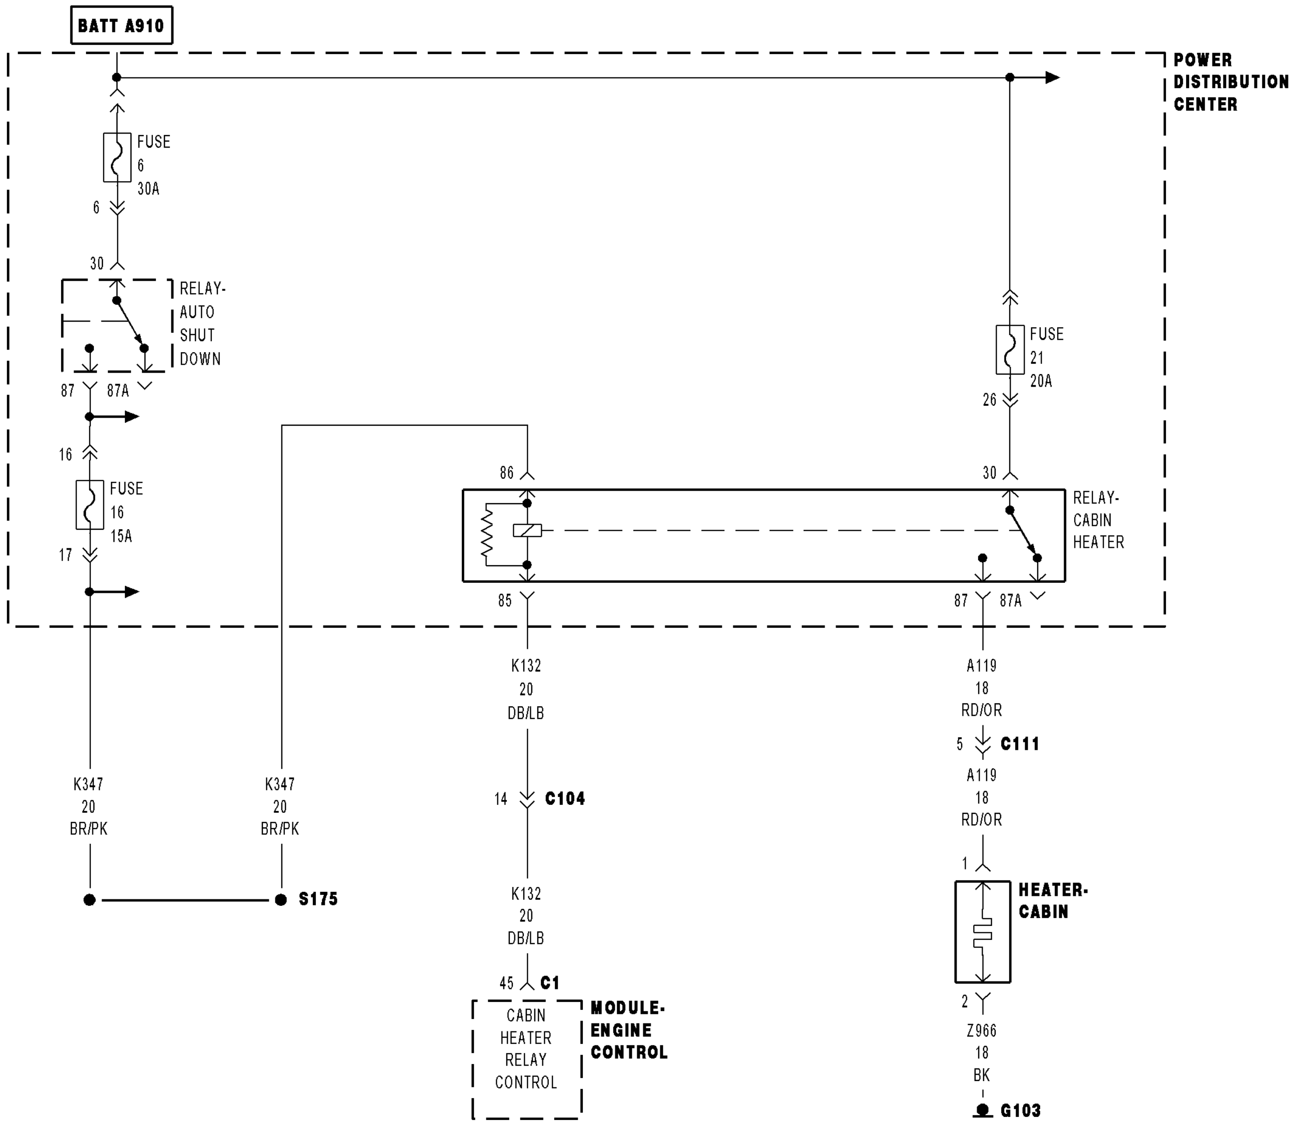
Refer the Service Information and perform the Fuel Pressure Solenoid Return Volume Test.

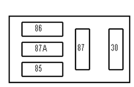
**Did the Fuel Pressure Solenoid pass the Return Volume Test?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Refer to the Service Information and replace the Fuel Pressure Solenoid.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## *CHECKING THE VISCOUS/CABIN HEATER RELAY





RELAY-CABIN HEATER (DIESEL) (IN PDC)

816b02a3

For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| FUSED B+ CIRCUIT OPEN |
| (K132) CABIN HEATER RELAY OUTPUT CIRCUIT SHORTED TO VOLTAGE |
| (K347) CABIN HEATER RELAY OUTPUT CIRCUIT SHORTED TO GROUND |
| (A119) CABIN HEATER RELAY OUTPUT CIRCUIT OPEN |
| CABIN HEATER RELAY |

## Diagnostic Test

### 1. VISCOUS/CABIN HEATER RELAY ACTUATOR TEST

Turn the ignition on.

With the scan tool, actuate the Viscous/Cabin Heater Relay.

**Is the Cabin Heater Relay clicking during the actuator test?**

**Yes** >> Test Complete.

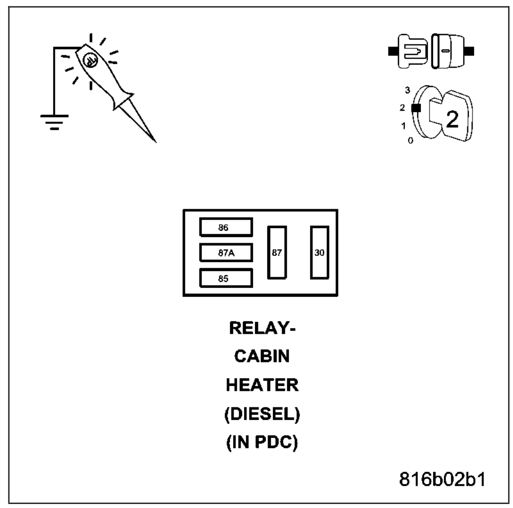
**No** >> Go To 2

### 2. FUSED B+ CIRCUIT OPEN

**NOTE: If the Cabin Heater Relay fuse or fuselink is open, refer to the system schematics for all circuits that are powered by the Cabin Heater Relay fuse or fuselink to determine the cause of the blown fuse/fuselink.**

Remove the Cabin Heater Relay.

Using a 12-volt test light connected to ground, probe the Fused B+ circuit in the (cavity 30) Cabin Heater Relay connector.



**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the Fused B+ (Fuse/Fuselink) circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

### 3. CABIN HEATER RELAY OUTPUT CIRCUIT SHORTED TO VOLTAGE

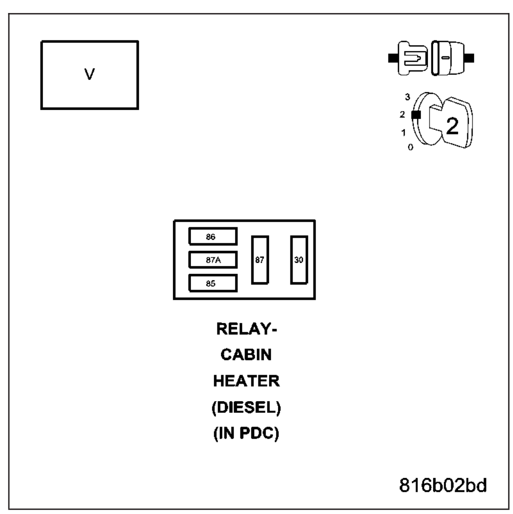
Turn the ignition off.

Disconnect the Cabin Heater harness connector.

Remove the Cabin Heater Relay.

Turn the ignition on.

Measure the voltage on the (cavity 87) Cabin Heater Relay Output circuit.



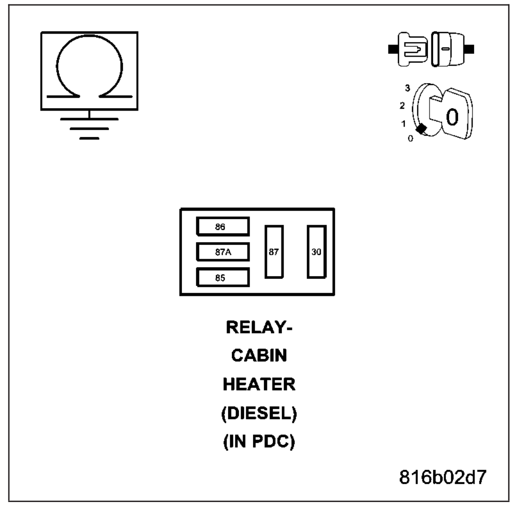
**Is the voltage above 1.0 volt?**

**Yes** >> Repair the (A119) Cabin Heater Relay Output circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. CABIN HEATER RELAY OUTPUT CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (cavity 87) Cabin Heater Relay Output circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 5

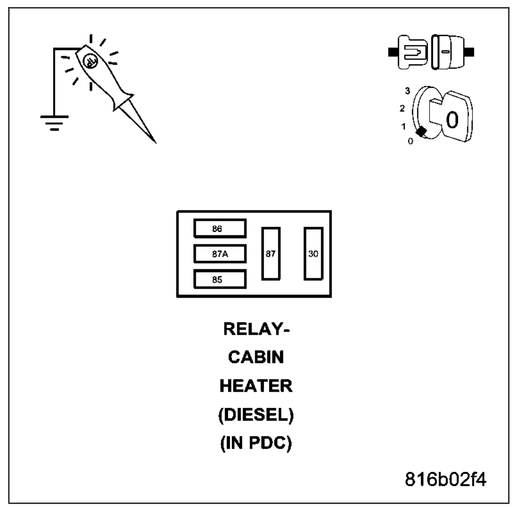
**No** >> Repair the (K132) Cabin Heater Relay Output circuit for a short to ground. Inspect the fuse or fuselink and replace as necessary.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. CABIN HEATER RELAY OUTPUT CIRCUIT OPEN

Connect a jumper wire across Cabin Heater Relay connector (cavities 30 and 87).

Using a 12-volt test light connected to ground, check the (A119) Cabin Heater Relay Output circuit in the Cabin Heater harness connector.



**Does the test light illuminate brightly?**

**Yes** >> Go To 6

**No** >> Repair the (A119) Cabin Heater Relay Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. CABIN HEATER RELAY

**If there are no possible causes remaining, view repair.**

**Repair**

Replace the Cabin Heater Relay.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## *ENGINE CRANKS BUT WILL NOT START

For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| CAMSHAFT POSITION SENSOR SIGNAL PROBLEM |
| CRANKSHAFT POSITION SENSOR SIGNAL PROBLEM |
| ECM CODES PRESENT |
| ECT SENSOR |
| ENGINE CONTROL MODULE |
| ENGINE DRIVE BELT/CHAIN |
| FUEL PRESSURE - CRANKING |
| FUEL SUPPLY CONTAMINATION |
| FUEL SYSTEM RESTRICTION |
| GLOW PLUGS |
| SKIM CODES PRESENT |

## Diagnostic Test

### 1. ECM CODES PRESENT

**NOTE: The ECM must have proper power and ground connections for the following tests to be valid. Refer to Checking the ECM Power and Grounds in the symptom list.**

Turn the ignition on.

With the scan tool, read the ECM DTCs.

**Does the scan tool display any ECM DTCs?**

**Yes** >> Refer to symptom list for problems related to ECM DTC.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

### 2. SKIM CODES PRESENT

Turn the ignition on.

With the scan tool, read the SKIM DTCs.

**Does the scan tool display any SKIM DTCs?**

**Yes** >> Refer to symptom list for problems related to SKIM DTC.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

### 3. ECT SENSOR

Using a temperature probe, check the vehicle temperature near the ECT Sensor.

Turn the ignition on.

With the scan tool in Sensors, read the ECT Sensor temperature.

Compare the temperature probe reading with the scan tool reading.

**Are the two readings within 10°C of each other?**

**Yes** >> Go To 4

**No** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. GLOW PLUGS

**NOTE: Prior to performing this test, be sure to check the Glow Plug Relay operation. Refer to CHECKING GLOW PLUG OPERATION for the related symptom(s).**

Refer to the Service Information and check the Glow Plugs for proper operation.

**Are the Glow Plugs operating properly?**

**Yes** >> Go To 5

**No** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. FUEL SYSTEM RESTRICTION

Inspect the fuel system lines for restrictions, leaks or other problems.

**NOTE: Refer to the Service Information to ensure that the fuel system is properly primed. An unprimed system or excessive air in the supply system will cause a no-start condition.**

**Is there any evidence of problems?**

**Yes** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. CAMSHAFT POSITION SENSOR SIGNAL PROBLEM

Turn the ignition off.

Attempt to start the engine, if the engine will not start, crank the engine for several seconds while monitoring the scan tool.

With the scan tool, read the Cam Position Sensor RPM.

**Does the scan tool display a steady CMP Sensor RPM approximately one half the speed of Engine RPM?**

**Yes** >> Go To 7

**No** >> Using the Service Information, check the wiring and connectors related to the CMP Sensor. If o.k., replace the CMP Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CRANKSHAFT POSITION SENSOR SIGNAL PROBLEM

Turn the ignition off.

Attempt to start the engine, if the engine will not start, crank the engine for several seconds while monitoring the scan tool.

With the scan tool in Sensors, read the Engine RPM.

**Does the scan tool display a steady CKP Sensor RPM approximately double the speed of the CMP RPM?**

**Yes** >> Go To 8

**No** >> Using the Service Information, check the wiring and connectors related to the CKP Sensor. If o.k., replace the CKP Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 8. FUEL PRESSURE - CRANKING

Turn the ignition on.

With the scan tool, read the Fuel Pressure Sensor signal while cranking the engine for 15 seconds.

**NOTE: Fuel pressure should increase above 3400 psi (240 bar) after only a few seconds of cranking.**

**Does the fuel pressure increase above 3500 psi (240 bar) after a few seconds of cranking?**

**Yes** >> Go To 9

**No** >> refer to Symptom CHECKING THE HIGH-SIDE PRESSURE.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 9. FUEL CONTAMINATION

Refer to the Service Information and inspect the fuel supply for contamination.

**Is the fuel contaminated?**

**Yes** >> Refer to the Service Information to remove and replace fuel throughout the fuel system.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 10

## 10. ENGINE DRIVE BELT/CHAIN

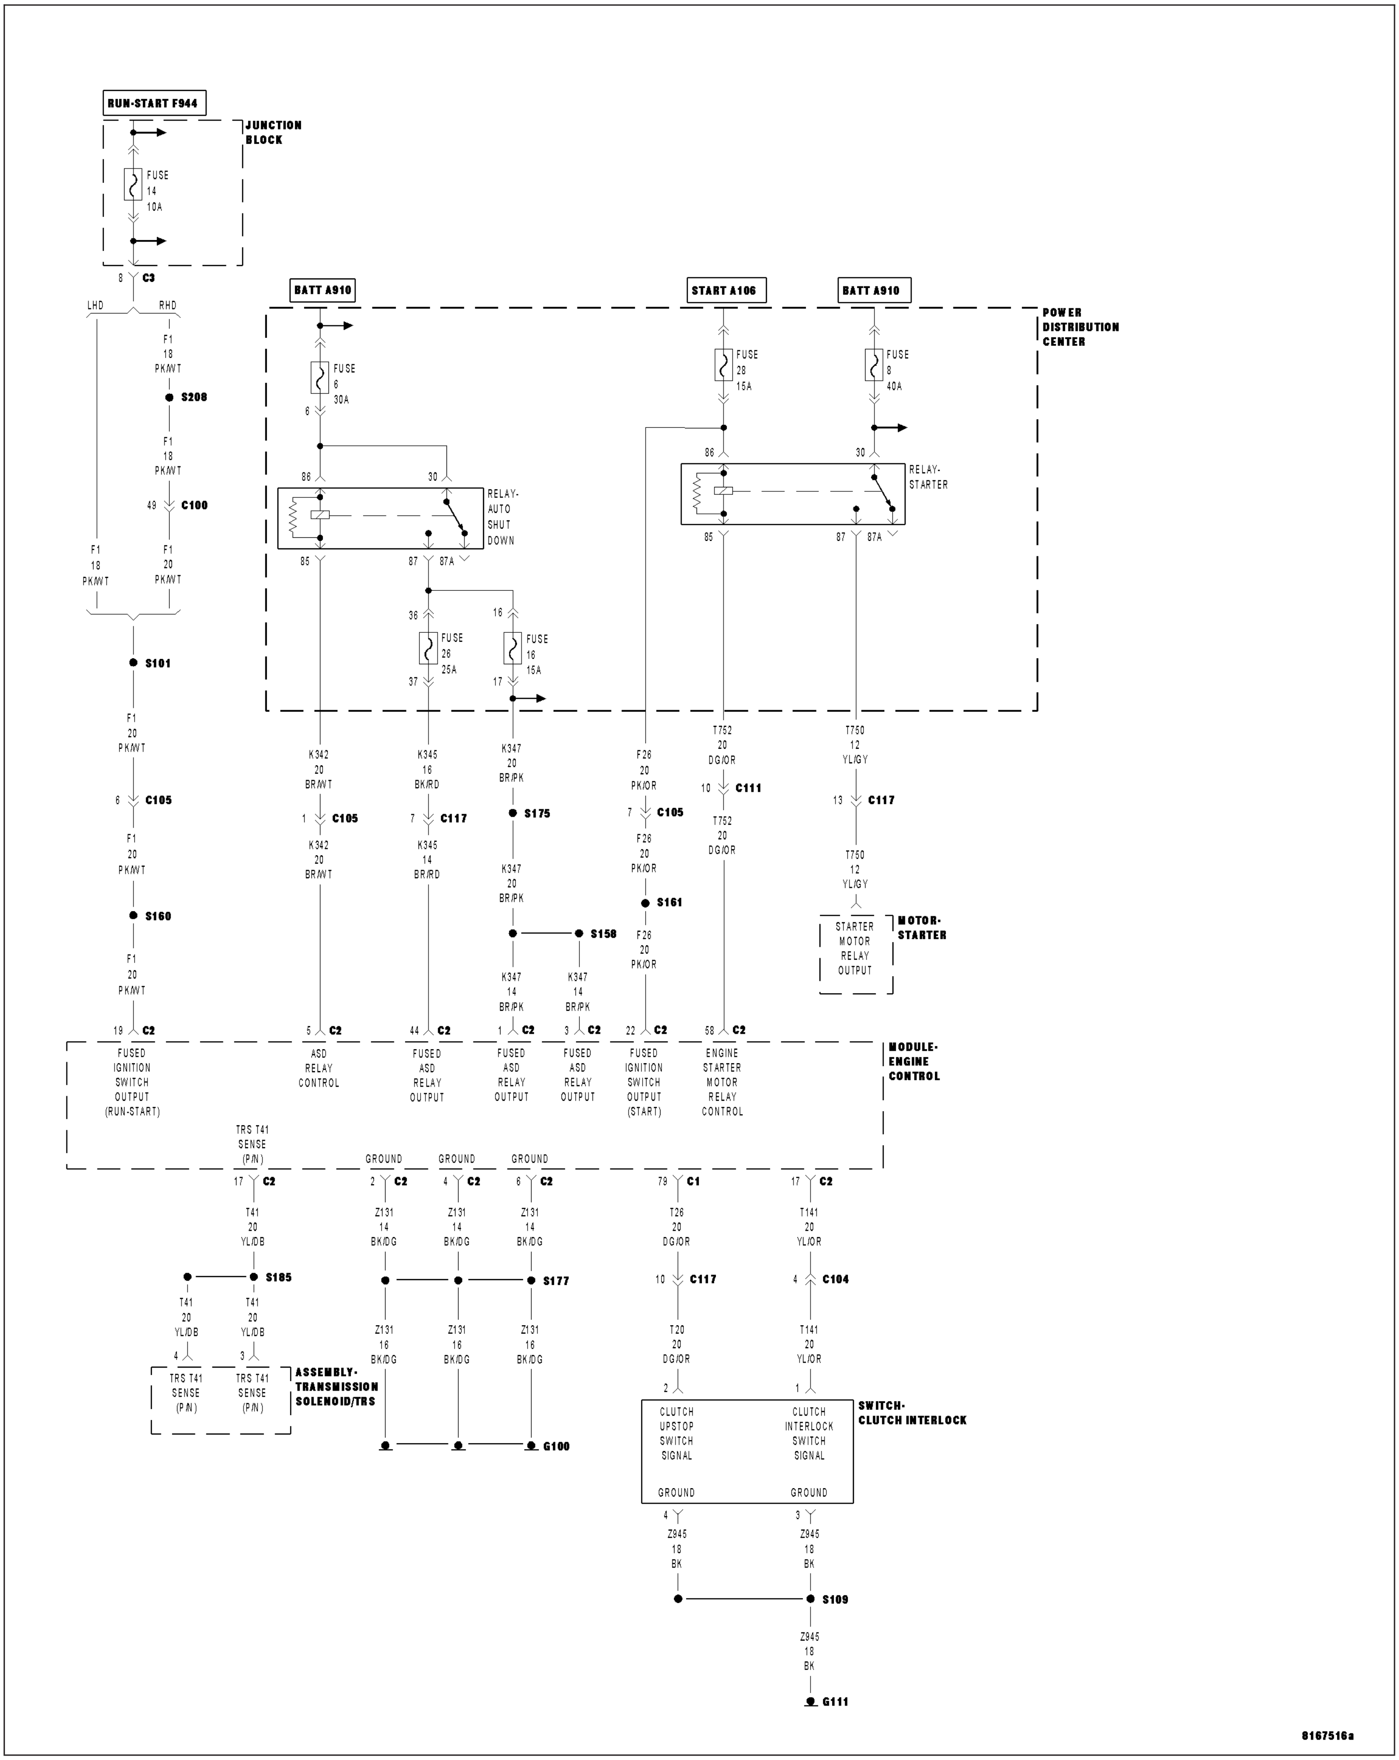
Refer to the Service Information to ensure the Engine Drive Belt/Chain is installed correctly and the camshaft and crankshaft gears are timed correctly.

**Were any problems found?**

**Yes** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# *ENGINE WILL NOT CRANK



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| BATTERY CABLE HIGH RESISTANCE |
| BATTERY CABLES |
| CLUTCH INTERLOCK SWITCH |
| CLUTCH INTERLOCK SWITCH OUTPUT CIRCUIT |
| IGNITION SWITCH START OUTPUT CIRCUIT OPEN |
| MECHANICAL PROBLEM |
| OPEN FUSED BATTERY (+) CIRCUIT |
| OPEN IGNITION SWITCH START OUTPUT |
| P/N SWITCH |
| P/N SWITCH CIRCUIT OPEN |
| P/N SWITCH GROUND CIRCUIT OPEN |
| SKIM CODES PRESENT |
| STARTER MOTOR |
| STARTER RELAY |
| STARTER RELAY |
| STARTER RELAY GROUND CIRCUIT OPEN |
| STARTER RELAY OUTPUT CIRCUIT OPEN |

## Diagnostic Test

### 1. BATTERY CABLES

Turn the ignition off.

**NOTE: The battery must be fully charged before diagnosing a no crank condition.**
Inspect the battery cables for corrosion, looseness or other problems.

**Is there evidence of problems?**

**Yes** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

### 2. SKIM CODES PRESENT

Turn the ignition on.
With the scan tool, read the SKIM DTCs.

**Does the scan tool display any SKIM DTCs?**

**Yes** >> Refer to symptom list for problems related to SKIM.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. AUTOMATIC OR MANUAL TRANSMISSION

**Is the vehicle equipped with an automatic transmission?**

**Yes** >> Go To 4

**No** >> Go To 9

## 4. CHECKING STARTER OPERATION

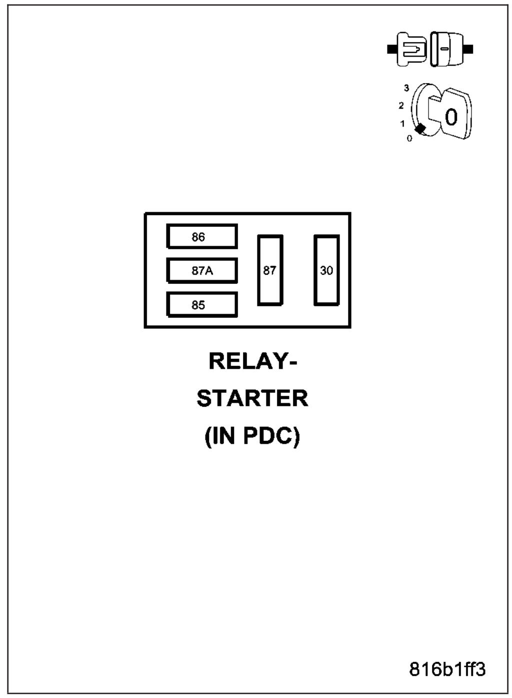
Turn the ignition off.

Remove the Starter Relay from the PDC.

**WARNING: THE TRANSMISSION MUST BE IN PARK/NEUTRAL AND THE PARK BRAKE MUST BE SET FOR THIS TEST.**

**WARNING: THE ENGINE MAY CRANK IN THE NEXT STEP. WHEN THE ENGINE IS CRANKING, DO NOT STAND IN A DIRECT LINE WITH THE FAN. DO NOT PUT YOUR HANDS NEAR THE PULLEYS, BELTS OR FAN. DO NOT WEAR LOOSE CLOTHING.**

Momentarily jumper Starter Relay connector cavities 30 and 87 in the PDC connector.



**Did the engine crank?**

**Yes** >> Go To 5

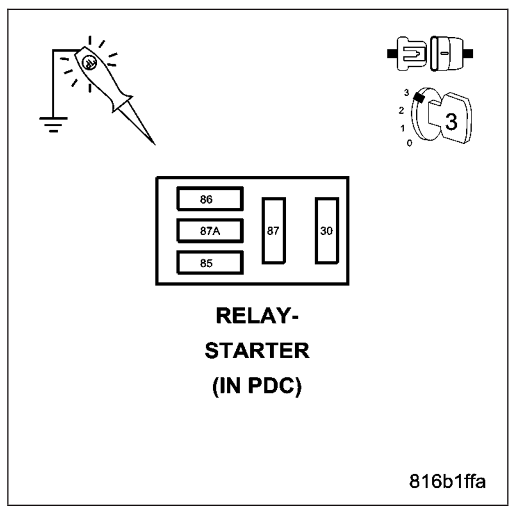
**No** >> Go To 14

## 5. OPEN IGNITION SW START CIRCUIT

Place the transmission in Park or Neutral.

Remove the Starter Relay from the PDC.

Using a 12-volt test light connected to ground, check the Ignition Switch Start Output circuit while turning the ignition switch to the START position.



**Does the test light illuminate with the ignition switch in the START position?**

**Yes** >> Go To 6

**No** >> Repair the Ignition Switch Start Output circuit between the Starter Relay and the ECM for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

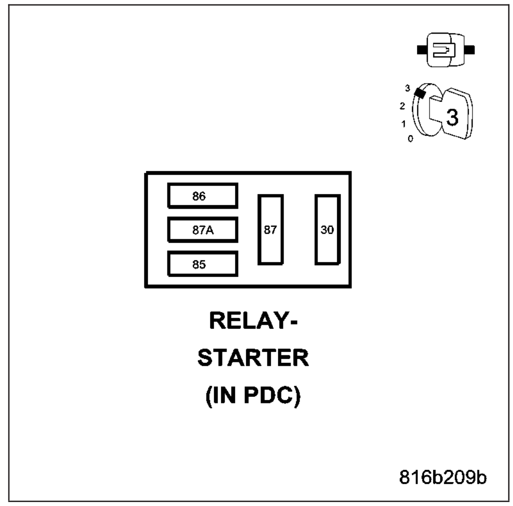
## 6. STARTER RELAY

Turn the ignition off.
Remove the Starter Relay from the PDC.
Install a substitute relay in place of the Starter Relay.
Attempt to start the engine.

**Does the engine crank?**

**Yes** >> Replace the Starter Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 7



## 7. TRS SWITCH

Use the scan tool to monitor the status of the Transmission Range Switch (TRS).
Shift the vehicle from park to neutral.

**Does the TRS status change?**

**Yes** >> Go To 8

**No** >> Replace the TRS in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

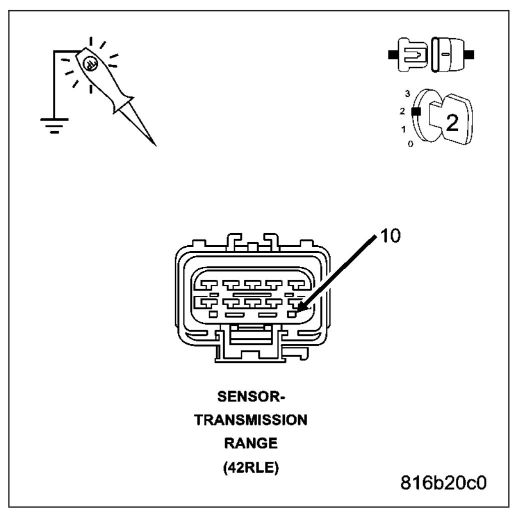
## 8. TRS CIRCUIT OPEN/SHORT

Turn the ignition off.
Disconnect the TRS harness connector.
Turn the ignition on.
Using a 12-volt test light connected to ground, check the (T41) TRS sense circuit.

**Does the test light illuminate brightly?**

**Yes** >> Repair the (T41) Switch Sense circuit between the (T41) TRS Switch and the (cavity B17) ECM.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the P/N Switch Ground circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 9. CHECKING STARTER OPERATION

Turn the ignition off.

Remove the Starter Relay from the PDC.

**WARNING: THE TRANSMISSION MUST BE IN NEUTRAL AND THE PARK BRAKE MUST BE SET FOR THIS TEST.**

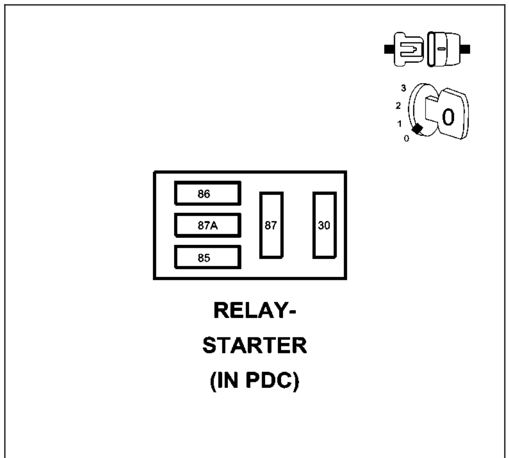
**WARNING: THE ENGINE MAY CRANK IN THE NEXT STEP. WHEN THE ENGINE IS CRANKING, DO NOT STAND IN A DIRECT LINE WITH THE FAN. DO NOT PUT YOUR HANDS NEAR THE PULLEYS, BELTS OR FAN. DO NOT WEAR LOOSE CLOTHING.**

Momentarily jumper Starter Relay connector cavities 30 and 87 in the PDC connector.

**Did the engine crank?**

**Yes** >> Go To 10

**No** >> Go To 14



816b20da

## 10. OPEN IGNITION SW START CIRCUIT

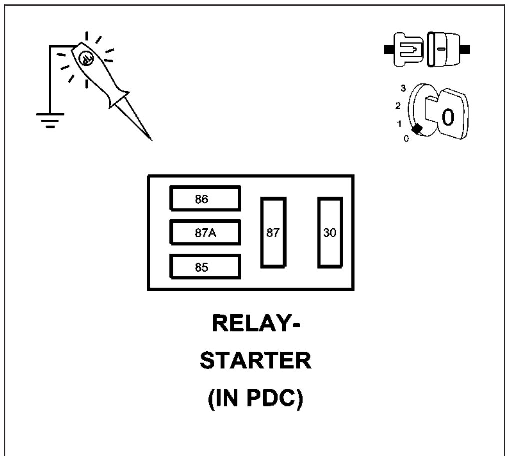
Remove the Starter Relay from the PDC.

Using a 12-volt test light connected to ground, check the (Cavity 86) Ignition Switch Start Output circuit while fully depressing the clutch pedal and turning the ignition switch to the START position.

**Does the test light illuminate with the ignition switch in the START position?**

**Yes** >> Go To 11

**No** >> Go To 12



816b21e1

## 11. STARTER RELAY

Turn the ignition off.

Remove the Starter Relay from the PDC.

Install a substitute relay in place of the Starter Relay.

Attempt to start the engine.

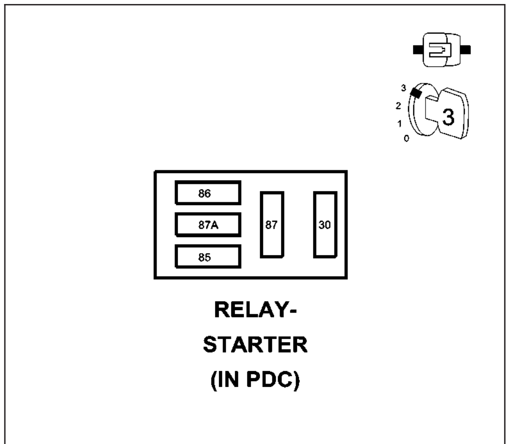
**Does the engine crank?**

**Yes** >> Replace the Starter Relay.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Starter Relay Ground Circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



816b21e9

## 12. CLUTCH INTERLOCK SWITCH

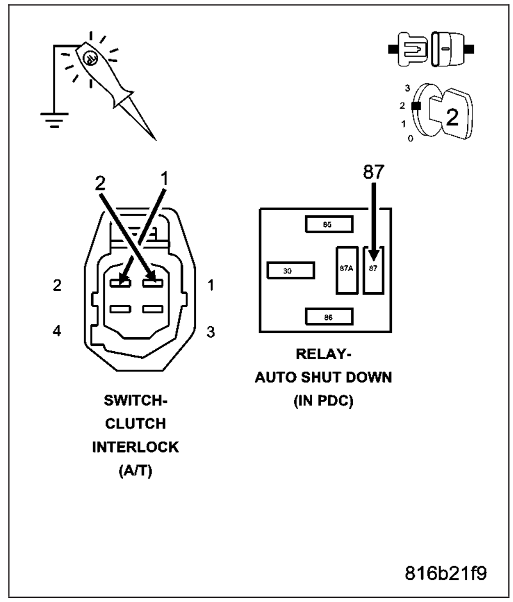
Turn the ignition off.

Remove the Starter Relay from the PDC.

Disconnect the Clutch Interlock Switch harness connector.

Connect a jumper wire across the Clutch Interlock Switch harness connector.

Using a 12-volt test light connected to ground, check the Ignition Switch Start Output circuit at the Starter Relay connector in the PDC and turning the ignition switch to the Start position.



**Does the test light illuminate with the ignition switch in the Start position?**

**Yes** >> Replace the Clutch Interlock Switch.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 13

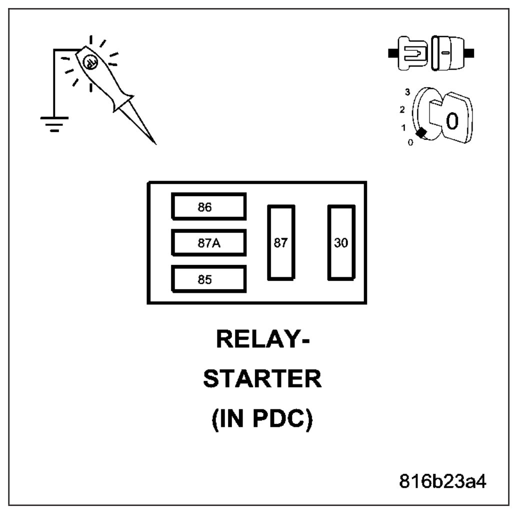
## 13. CLUTCH INTERLOCK SWITCH OUTPUT CIRCUIT OPEN

Turn the ignition off.

Disconnect the Clutch Interlock Switch harness connector.

Remove the Starter Relay from the PDC.

Measure the resistance of the Clutch Interlock Switch Output circuit between the PDC and the Clutch Interlock Switch harness connector.



**Is the resistance below 10.0 ohms?**

**Yes** >> Repair the Ignition Switch Start Output circuit to the Clutch Interlock Switch.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

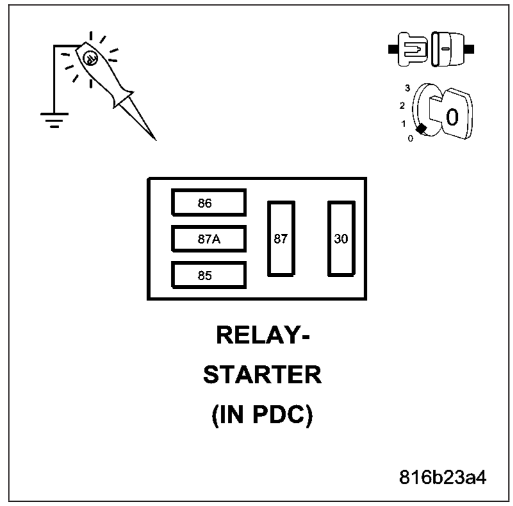
**No** >> Repair the Clutch Interlock Switch Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 14. OPEN FUSED BATTERY (+) CIRCUIT

Remove the Starter Relay from the PDC.

Using a 12-volt test light connected to ground, check the (cavity 30) Fused B+ circuit in the Starter Relay connector in the PDC.



**Is the test light on?**

**Yes** >> Go To 15

**No** >> Repair the Fused B(+) circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 15. STARTER RELAY OUTPUT CIRCUIT OPEN

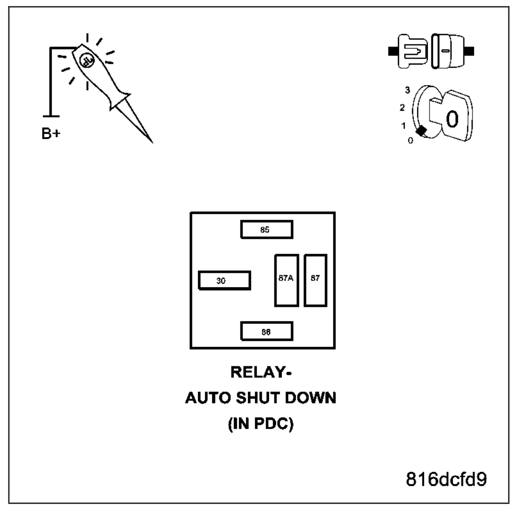
Turn the ignition off.

Remove the Starter Relay from the PDC.

Disconnect the Starter Relay Output wire from the Starter Solenoid.

Connect the Starter Relay Output wire (at the Starter) to ground.

Using a 12-volt test light connected to 12-volts, check the Starter Relay Output circuit at the Starter Relay connector in the PDC.



**Does the test light illuminate brightly?**

**Yes** >> Go To 16

**No** >> Repair the Starter Relay Output circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 16. BATTERY CABLE HIGH RESISTANCE

Using the Service Information, check the battery cables for high resistance.

**Did either battery cable have a voltage drop greater than 0.2 volts?**

**Yes** >> Replace the battery cable(s).
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 17

## 17. MECHANICAL PROBLEM

Turn the ignition off.

Attempt to manually rotate the crankshaft 360°.

**Is the crankshaft able to rotate 360°?**

**Yes** >> Replace the Starter Motor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the engine mechanical problem.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## *LACK OF ENGINE POWER

For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| AIR IN FUEL SYSTEM |
| BOOST CONTROL VACUUM SUPPLY |
| CHECK FOR ECM DTCS |
| CHECKING ECM POWER AND GROUNDS |
| CHECKING FOR AIR LEAKS |
| CHECKING THE FUEL DELIVERY SYSTEM |
| SCAN TOOL TESTS |
| ENGINE DRIVE BELT/CHAIN |
| FUEL INJECTOR(S) |
| FUEL PRESSURE SOLENOID |
| FUEL PRESSURE SOLENOID |
| FUEL PUMP |
| FUEL SYSTEM CONTAMINATION |
| FUEL SYSTEM LEAK |
| TURBOCHARGER |

### Diagnostic Test

#### 1. CHECKING FOR ECM DTCS

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the scan tool, read the ECM DTCs.

**Are there any DTCs present?**

**Yes** >> Refer to symptom list for problems related to this DTC.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

#### 2. CHECKING BOOST PRESSURE

**NOTE: This test requires two people. One person to test drive the vehicle while a technician observes the scan tool readings**

With the scan tool, read and compare the Boost Pressure (PSI) with the Boost Pressure Desired/Setpoint (PSI) while test driving the vehicle under various load conditions such as idle, hard acceleration, cruise and deceleration.

**NOTE: The Boost Pressure reading should directionally follow (trail) the Boost Pressure Desired/Setpoint reading.**

**Does the Boost Pressure reading follow the Boost Pressure Desired/Setpoint reading?**

**Yes** >> Go To 3

**No** >> Go To 15

## 3. CHECK POWER AND GROUNDS

Refer to the symptom list and perform the Checking the ECM Power and Ground test.

**Were any problem found with the ECM powers and grounds?**

**Yes** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. CHECKING FUEL PRESSURE

**NOTE: This test requires two people. One person to test drive the vehicle while a technician observes the scan tool readings**

With the scan tool, read and compare the Fuel Pressure (PSI) with the Fuel Pressure Desired/Setpoint (PSI) while test driving the vehicle under various load conditions such as idle, hard acceleration, cruise and deceleration.

**NOTE: The Fuel Pressure reading should follow (trail) closely to the Fuel Pressure Desired/Setpoint reading.**

**Does the Fuel Pressure reading follow closely to the Fuel Pressure Desired/Setpoint reading?**

**Yes** >> Go To 5

**No** >> Go To 7

## 5. SCAN TOOL TESTS

With the scan tool, select Engine, System Tests and perform the following tests:

- Injector Fuel Correction Test.
- Cylinder Balance test.
- Compression Test.

**Were any problems found?**

**Yes** >> Diagnose and/or repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL SYSTEM CONTAMINATION

**NOTE: Mixing any other fuels such as gasoline or kerosine can cause this symptom to occur.**

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Inspect the fuel system for contamination.

**Is the fuel contaminated?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## 7. FUEL SYSTEM LEAK

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Inspect the entire fuel system for leakage.

**Is there any evidence of leakage?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 8

## 8. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 9

## 9. CHECKING FOR AIR IN FUEL SYSTEM

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: If there is air in the fuel system, the Actual Fuel Pressure will oscillate more than 100 spi above and/or below the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint?**

**Yes** >> Refer to the Service Information to purge air from the fuel system.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 10

## 10. FUEL PRESSURE SOLENOID

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: A sticking Fuel Pressure Solenoid is indicated by Actual Fuel Pressure gradually dropping below the Fuel Pressure Setpoint then suddenly increasing (spiking) above the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure gradually decrease then suddenly increase (spike) above the Fuel Pressure**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 11

## 11. FUEL INJECTOR(S)

**NOTE: An injector that sticks open can cause this symptom. A sticking injector will cause the engine to miss fire and emit excessive black smoke from the exhaust system.**

Start and idle the engine.

**Does the engine exhibit the symptoms described in the above note?**

**Yes** >> Using the Service Information, remove and inspect the Fuel Injectors for signs of damage or debris that may cause the injector to stick. Sticking injectors may cause the combustion chamber to become black and oil soaked. Replace Injector(s) as necessary.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 12

## 12. ENGINE DRIVE BELT/CHAIN

Refer to the Service Information to ensure the Engine Drive Belt/Chain is installed correctly and the camshaft and crankshaft gears are timed correctly.

**Were any problems found?**

**Yes** >> Repair as necessary.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 13

## 13. FUEL PRESSURE SOLENOID

Turn the ignition off.

Replace the Fuel Pressure Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Go To 14

**No** >> Test Complete.

## 14. FUEL QUANTITY SOLENOID

Turn the ignition off.

Replace the Fuel Quantity Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## 15. CHECKING FOR AIR LEAKS

**NOTE: Inspect all air intake and turbocharger related tubes for damage, restriction or poor connection. Any of these conditions can cause a poor performance/lack of power symptom.**

Turn the ignition off.

Remove the Inlet Pressure Sensor.

Connect smoke machine 84-04 to the Inlet Pressure Sensor port in the intake duct and begin injecting smoke into the intake system.

Observe all intake system components for evidence of smoke leakage.

**Is there evidence of smoke leakage?**

**Yes** >> Repair or replace as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 16

## 16. BOOST CONTROL VACUUM SUPPLY

Refer to symptom Checking The Boost Control Vacuum Supply in the Driveability category.

**Is the boost control vacuum supply system o.k.?**

**Yes** >> Using the Service Information, replace the Turbocharger assembly.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair boost system vacuum supply as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## B10B3-VISCOUS/CABIN HEATER RELAY CONTROL OPEN CIRCUIT

For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| VISCOUS/CABIN HEATER RLY |
| VISCOUS/CABIN HEATER RELAY CONTROL CIRCUIT SHORTED TO GROUND |
| VISCOUS/CABIN HEATER RELAY CONTROL CIRCUIT OPEN |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, actuate the Viscous/Cabin Heater Relay.

**Does the relay cycle on and off during the actuation?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. ASD RELAY OUTPUT CIRCUIT OPEN

Turn the ignition off.

Remove the Viscous/Cabin Heater Relay from the PDC.

Turn the ignition on.

Using a 12-volt test light connected to ground, check the ASD Relay Output circuit.

**Did the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the ASD Relay Output circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

### 3. VISCOUS/CABIN HEATER RELAY

Turn the ignition off.

Install a substitute relay in place of the Viscous/Cabin Heater Relay

Turn the ignition on.

With the scan tool, actuate the Viscous/Cabin Heater Relay.

**Does the relay cycle on and off during the actuation?**

**Yes** >> Replace the Viscous/Cabin Heater Relay Fan Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. VISCOUS/CABIN HEATER RELAY CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.
Remove the Viscous/Cabin Heater Relay from the PDC.
Disconnect the ECM harness connectors.
Measure the resistance between ground and the Viscous/Cabin Heater Relay Control circuit.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 5

**No** >> Repair the Viscous/Cabin Heater Relay Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. VISCOUS/CABIN HEATER RELAY CONTROL CIRCUIT OPEN

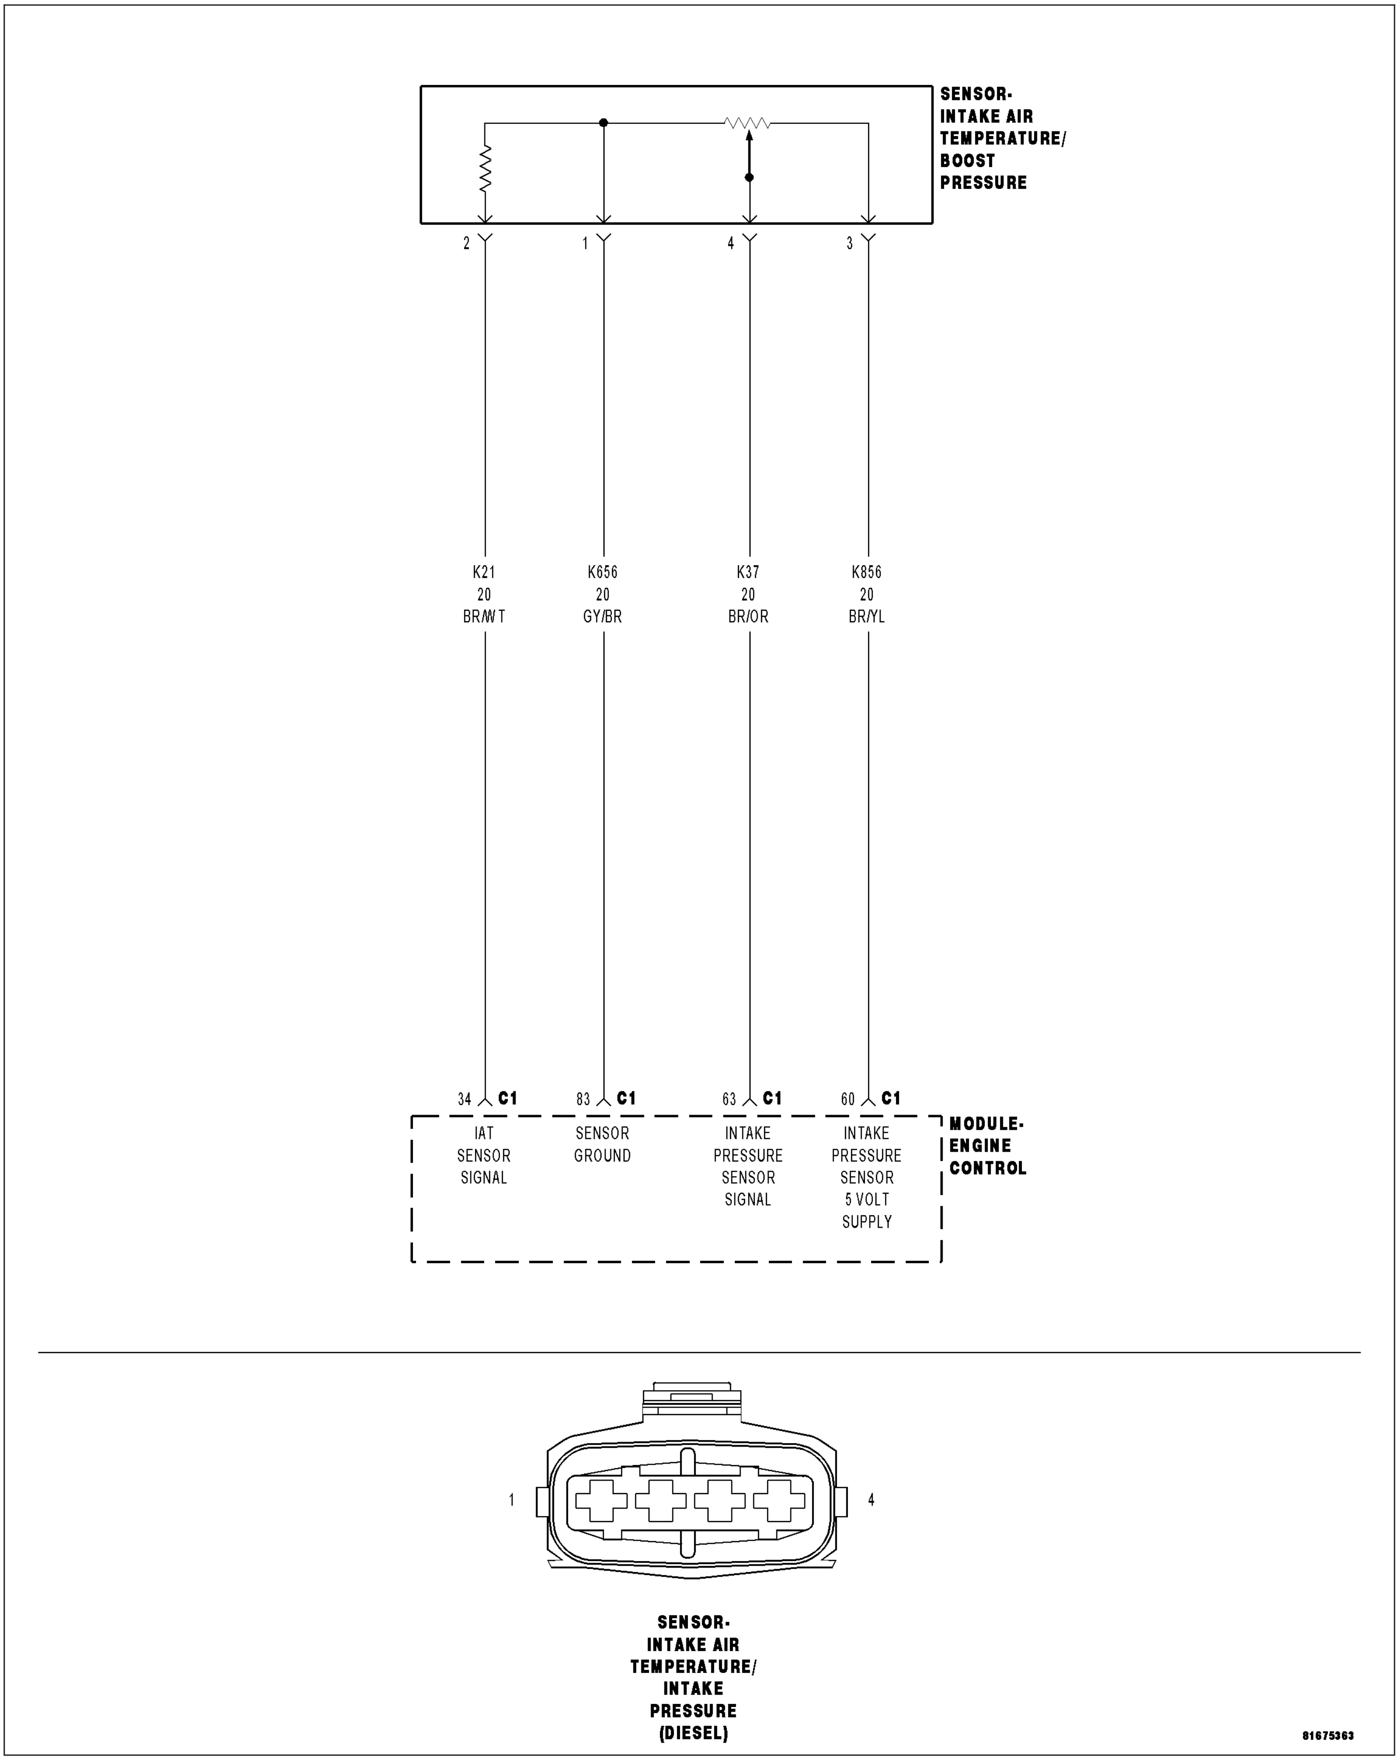
Turn the ignition off.
Remove the Viscous/Cabin Heater Relay from the PDC.
Disconnect the ECM harness connectors.
Measure the resistance of the Viscous/Cabin Heater Relay Control circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Viscous/Cabin Heater Relay Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P009A-INTAKE AIR TEMP/ AMBIENT AIR TEMP PLAUSIBILITY



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
| --- |
| AAT SENSOR - COLD |
| AAT SENSOR - HOT |
| CHECKING CONNECTORS |
| IAT SENSOR - COLD |
| IAT SENSOR - HOT |
| INTERMITTENT CONDITION |

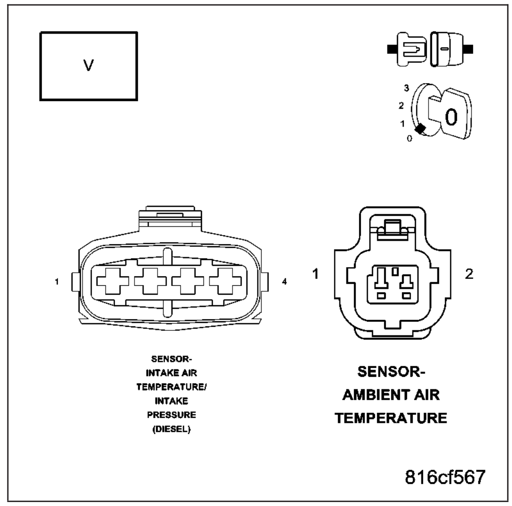
## Diagnostic Test

### 1. CHECKING CONNECTORS

Turn the ignition off.

Disconnect the IAT and AAT Sensor harness connectors.

Inspect both connectors for poor terminal contact, corrosion, damage or other problems.



**Is there any evidence of connector problems?**

**Yes** >> Repair or replace as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

### 2. IAT SENSOR - COLD

**NOTE: Allow the engine to completely cool to ambient temperature.**

With the scan tool, read and note the engine coolant temperature.

With the scan tool, read the Intake Air Temperature and compare it to the engine coolant temperature reading.

**Are the readings within 7°C (13°F) of each other?**

**Yes** >> Go To 3

**No** >> Check the wiring and connectors associated with the IAT Sensor for corrosion, damage or other problems. Repair as necessary. If wiring and connectors are o.k., replace the Intake Air Temperature Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

### 3. AAT SENSOR - COLD

**NOTE: Allow the engine to completely cool to ambient temperature.**

With the scan tool, read and note the engine coolant temperature.

With the scan tool, read the Ambient Air Temperature and compare it to the engine coolant temperature reading.

**Are the readings within 7°C (13°F) of each other?**

**Yes** >> Go To 4

**No** >> Check the wiring and connectors associated with the AAT Sensor for corrosion, damage or other problems. Repair as necessary. If wiring and connectors are o.k., replace the Ambient Air Temperature Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. IAT SENSOR - HOT

Start the engine and bring the engine to operating temperature (thermostat open).

Turn the engine off and wait 10 minutes to allow the engine temperature to stabilize.

With the scan tool, read and note the engine coolant temperature.

With the scan tool, read the Intake Air Temperature.

**Are the readings within 7°C (13°F) of each other?**

**Yes** >> Go To 5

**No** >> Check the wiring and connectors associated with the IAT Sensor for corrosion, damage or other problems. Repair as necessary. If wiring and connectors are o.k., replace the Intake Air Temperature Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. AAT SENSOR - HOT

Start the engine and bring the engine to operating temperature (thermostat open).

With the scan tool, read the Ambient Air Temperature.

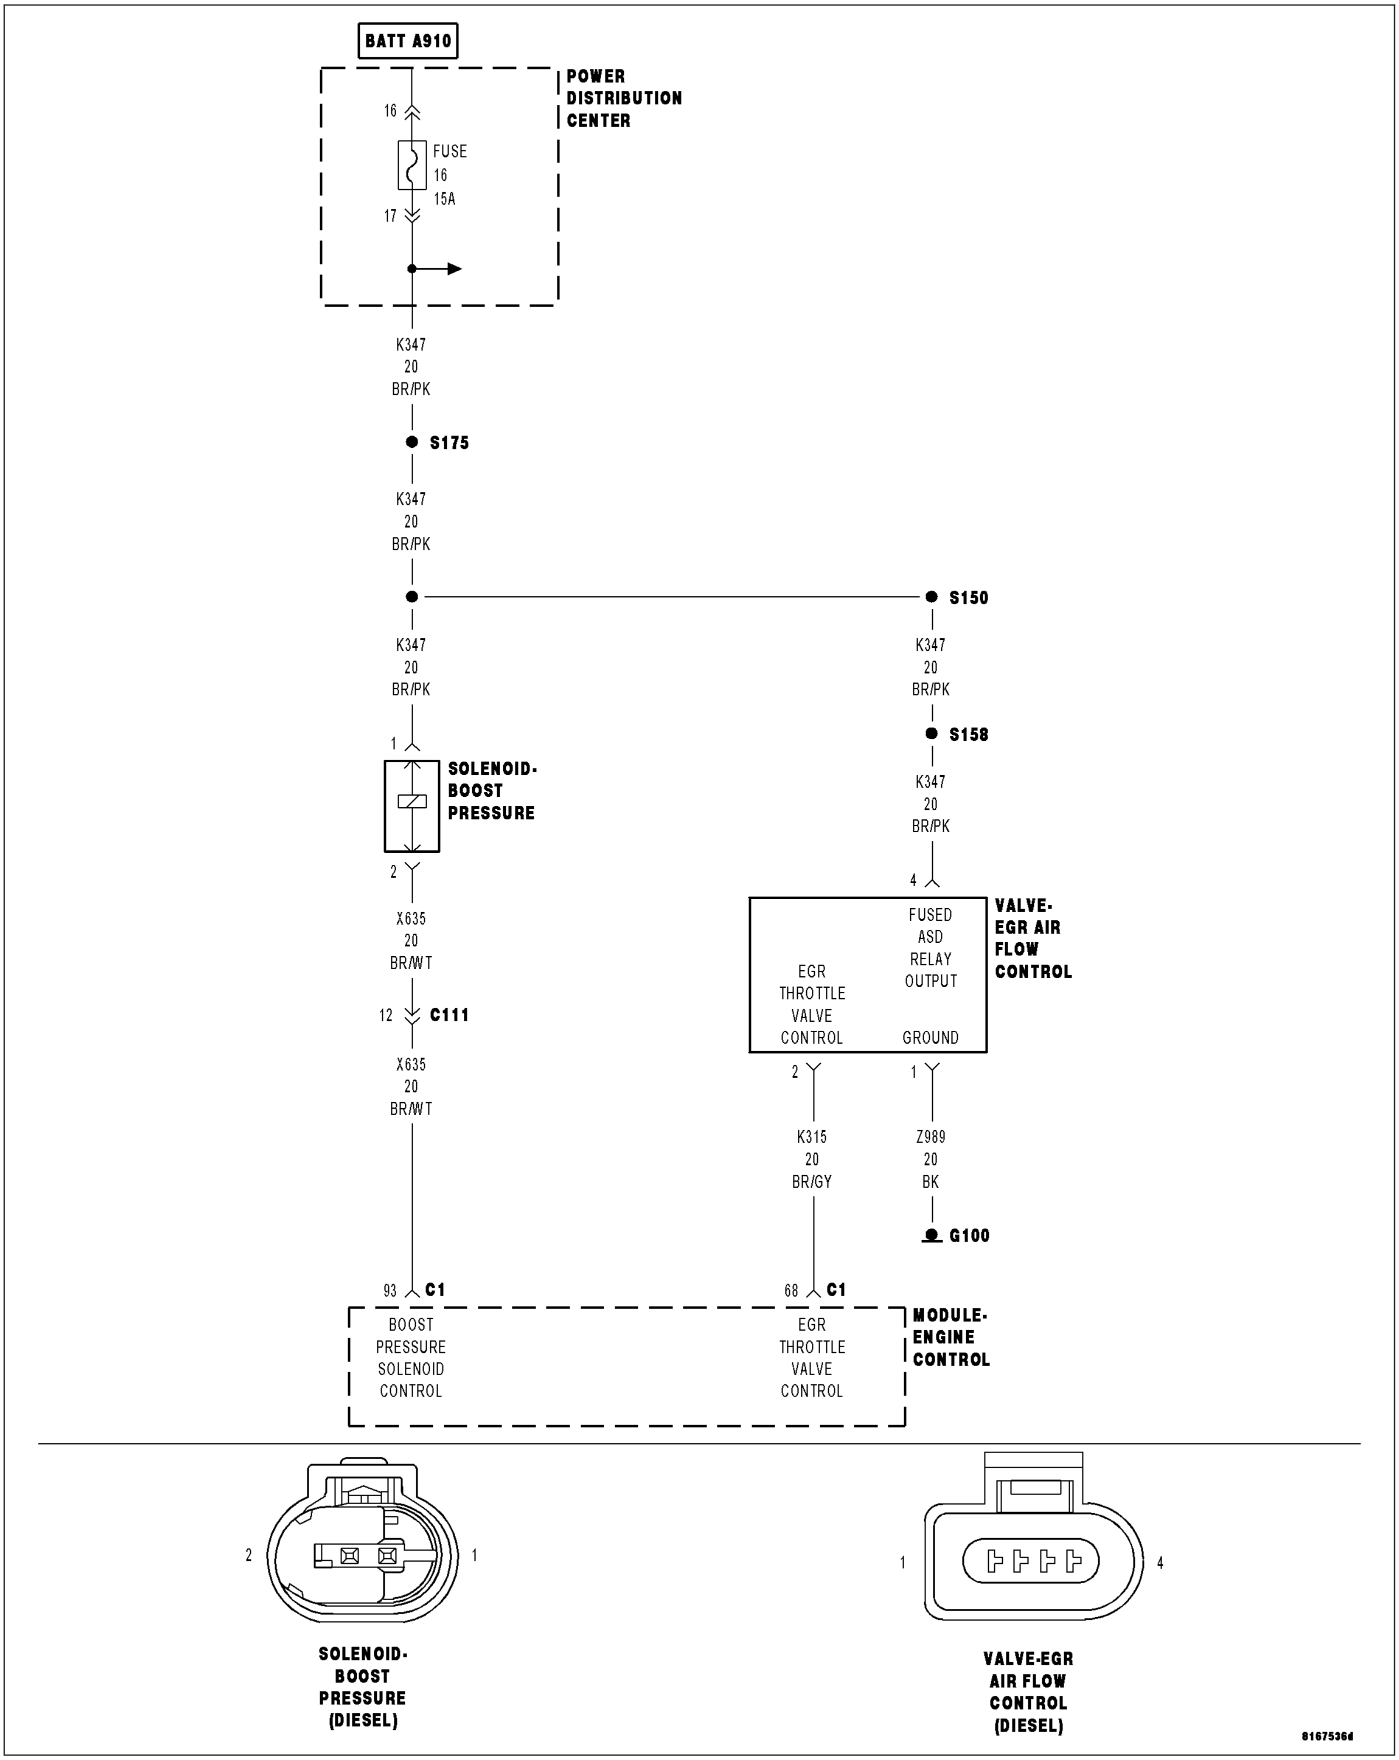
**Is the Ambient Temperature Sensor reading correct outside temperature?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Check the wiring and connectors associated with the AAT Sensor for corrosion, damage or other problems. Repair as necessary. If wiring and connectors are o.k., replace the Ambient Air Temperature Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0045-BOOST PRESSURE SOLENOID OPEN CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Boost Pressure Solenoid command off.
- **Set Condition:**
  The ECM does not detect voltage on the Boost Pressure Solenoid Control circuit.

| **Possible Causes** |
| --- |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| BP SOLENOID CONTROL CIRCUIT SHORTED TO GROUND |
| BP SOLENOID CONTROL CIRCUIT OPEN |
| BOOST PRESSURE SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Test drive the vehicle.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**Are the ECM power and ground circuits are functioning properly?.**

**Yes** >> Go To 3

**No** >> Repair the ECM power and ground circuits. Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

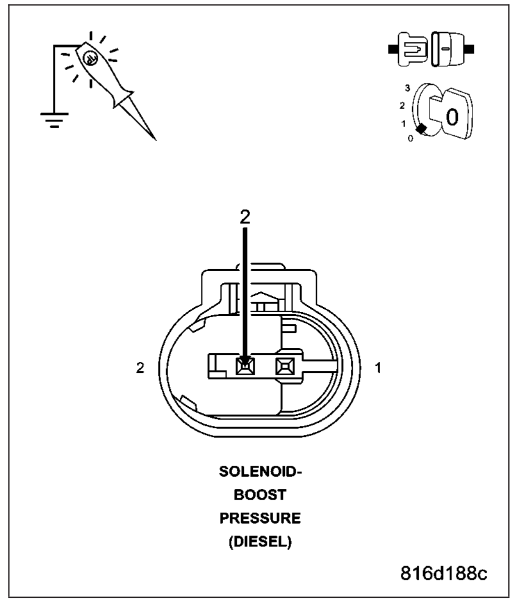
## 3. ASD OUTPUT CKT OPEN

Turn the ignition off.

Disconnect the BP Solenoid harness connector.

Turn the ignition on.

Using a 12-volt test light connected to ground, check the ASD Relay Output circuit at the BP Solenoid harness connector.



**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the ASD Relay Output circuit for an open.

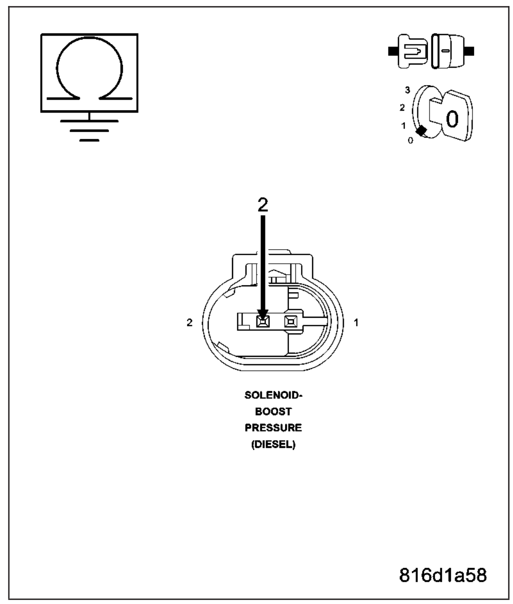
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. BP SOLENOID CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the BP Solenoid Control circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 5

**No** >> Repair the BP Solenoid Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

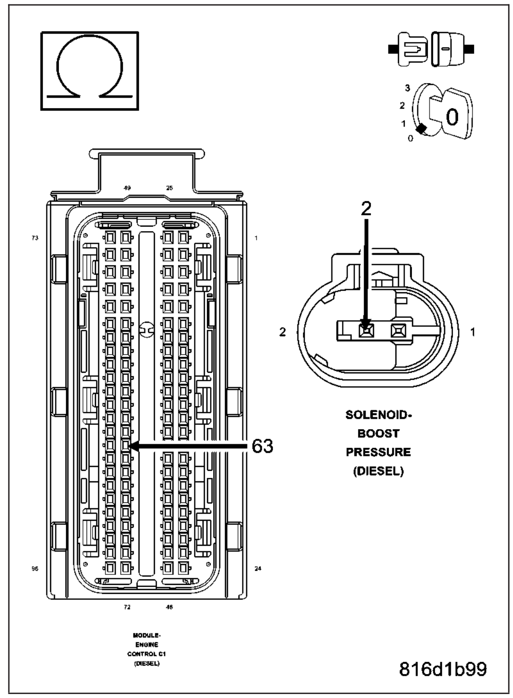
## 5. BP SOLENOID CONTROL CIRCUIT OPEN

Measure the resistance of the BP Solenoid Control circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the BP Solenoid Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 6. BOOST PRESSURE SOLENOID

Turn the ignition off.

Install a substitute BP Solenoid in place of the vehicle's BP Solenoid.

**NOTE: Ensure the ECM and BP Solenoid harness connectors are connected.**

Turn the ignition on.

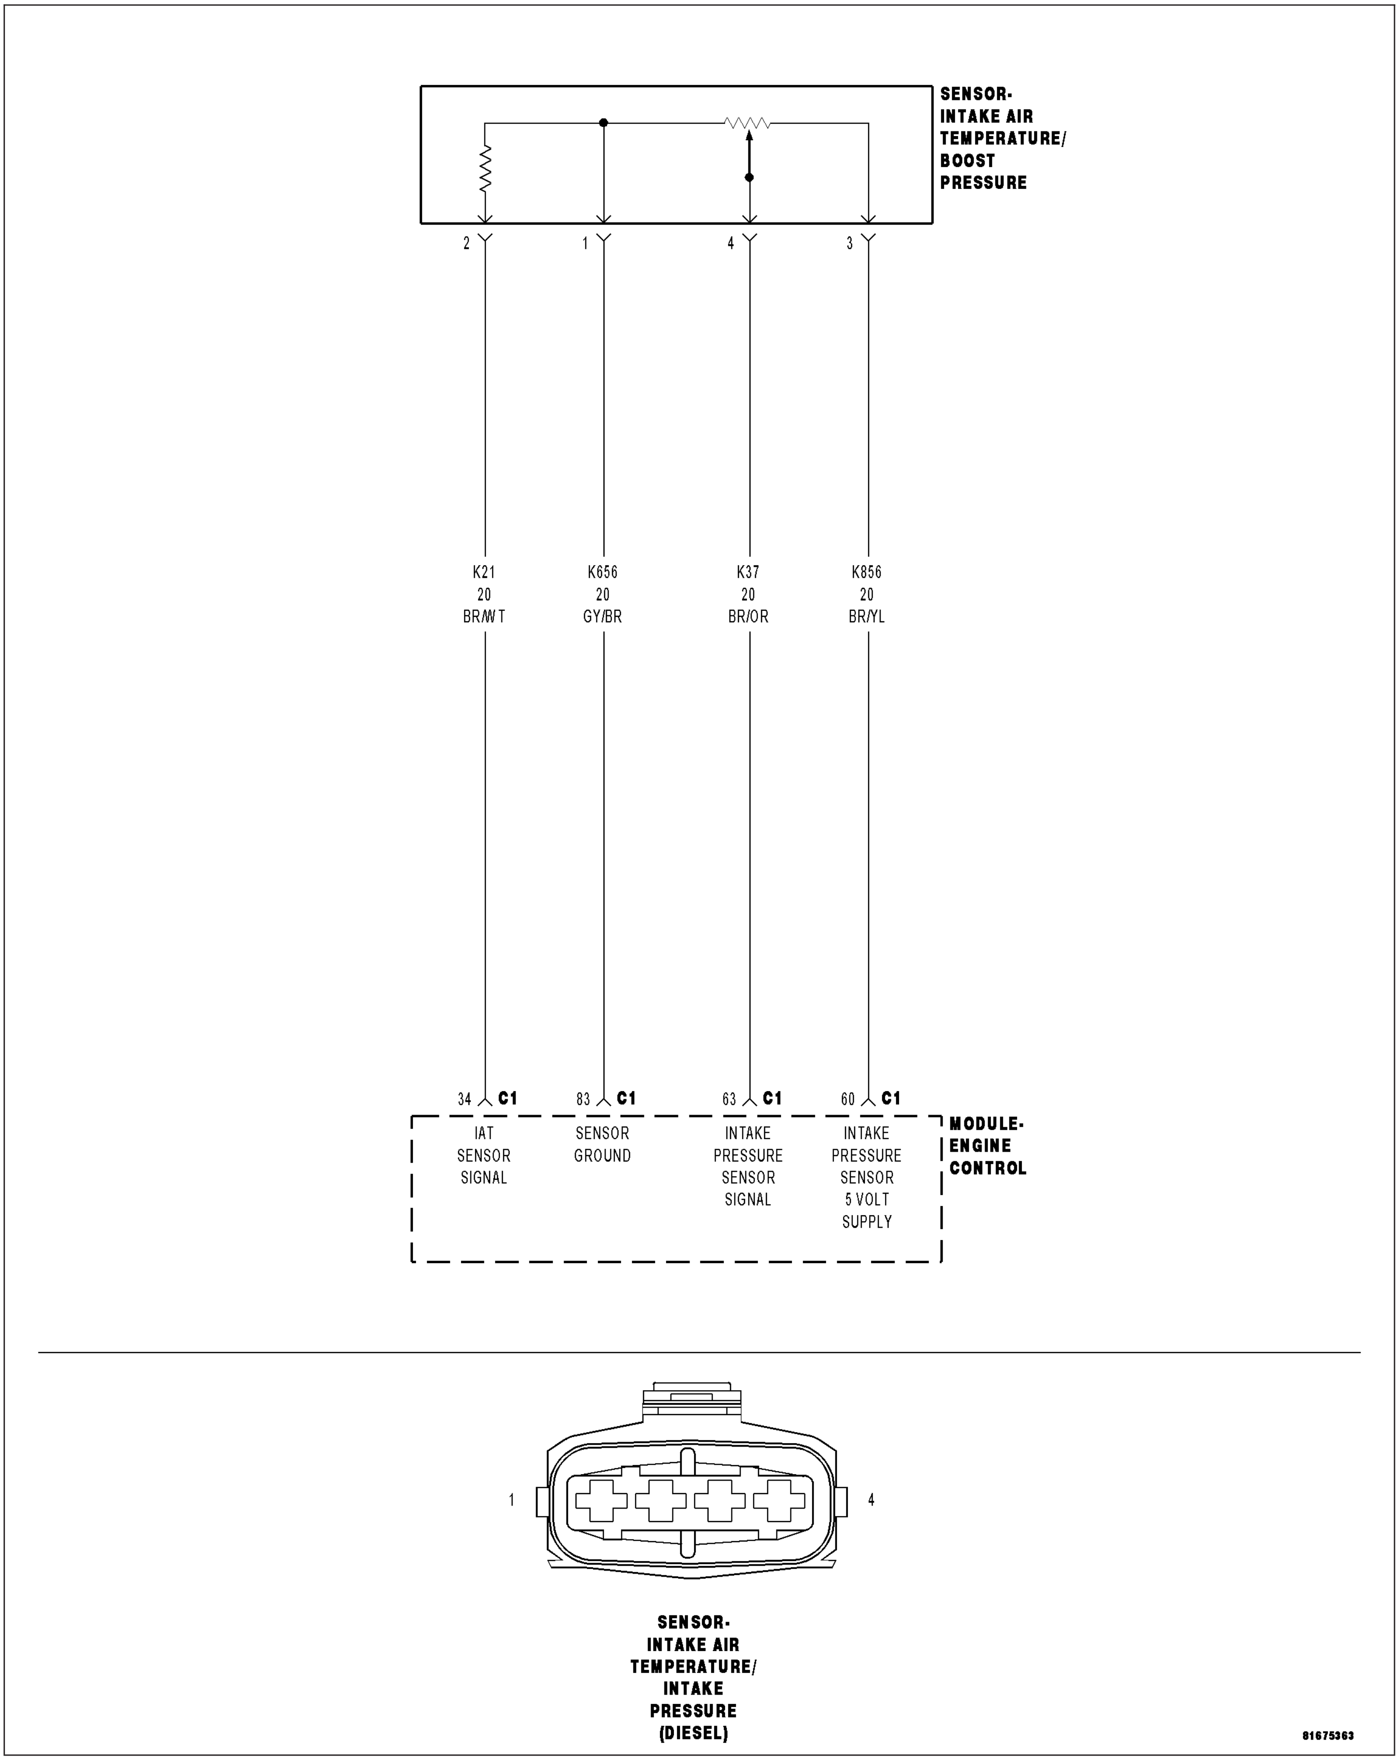
With the scan tool, check for this DTC to set again.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Boost Pressure Solenoid.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0045-BOOST PRESSURE SOLENOID EXCESSIVE CURRENT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Boost Pressure Solenoid command on.
- **Set Condition:**
  The ECM detects excessive current on the Boost Pressure Solenoid Control circuit.

| Possible Causes |
| --- |
| BOOST PRESSURE SOLENOID |
| BP SOLENOID CONTROL SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE - INTERNAL SHORT TO VOLTAGE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Test drive the vehicle.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. BP SOLENOID CONTROL SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the BP Solenoid harness connector.

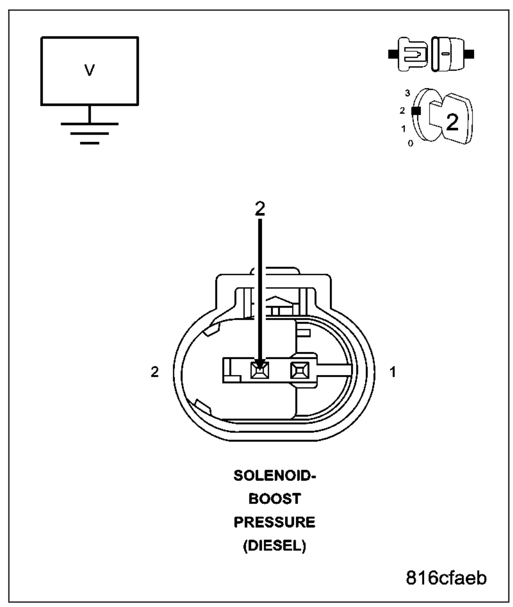
Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the BP Solenoid Control circuit.



**Is the voltage below 1.0 volt?**

**Yes** >> Go To 3

**No** >> Repair the BP Solenoid Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. BOOST PRESSURE SOLENOID

Turn the ignition off.

Disconnect the BP Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

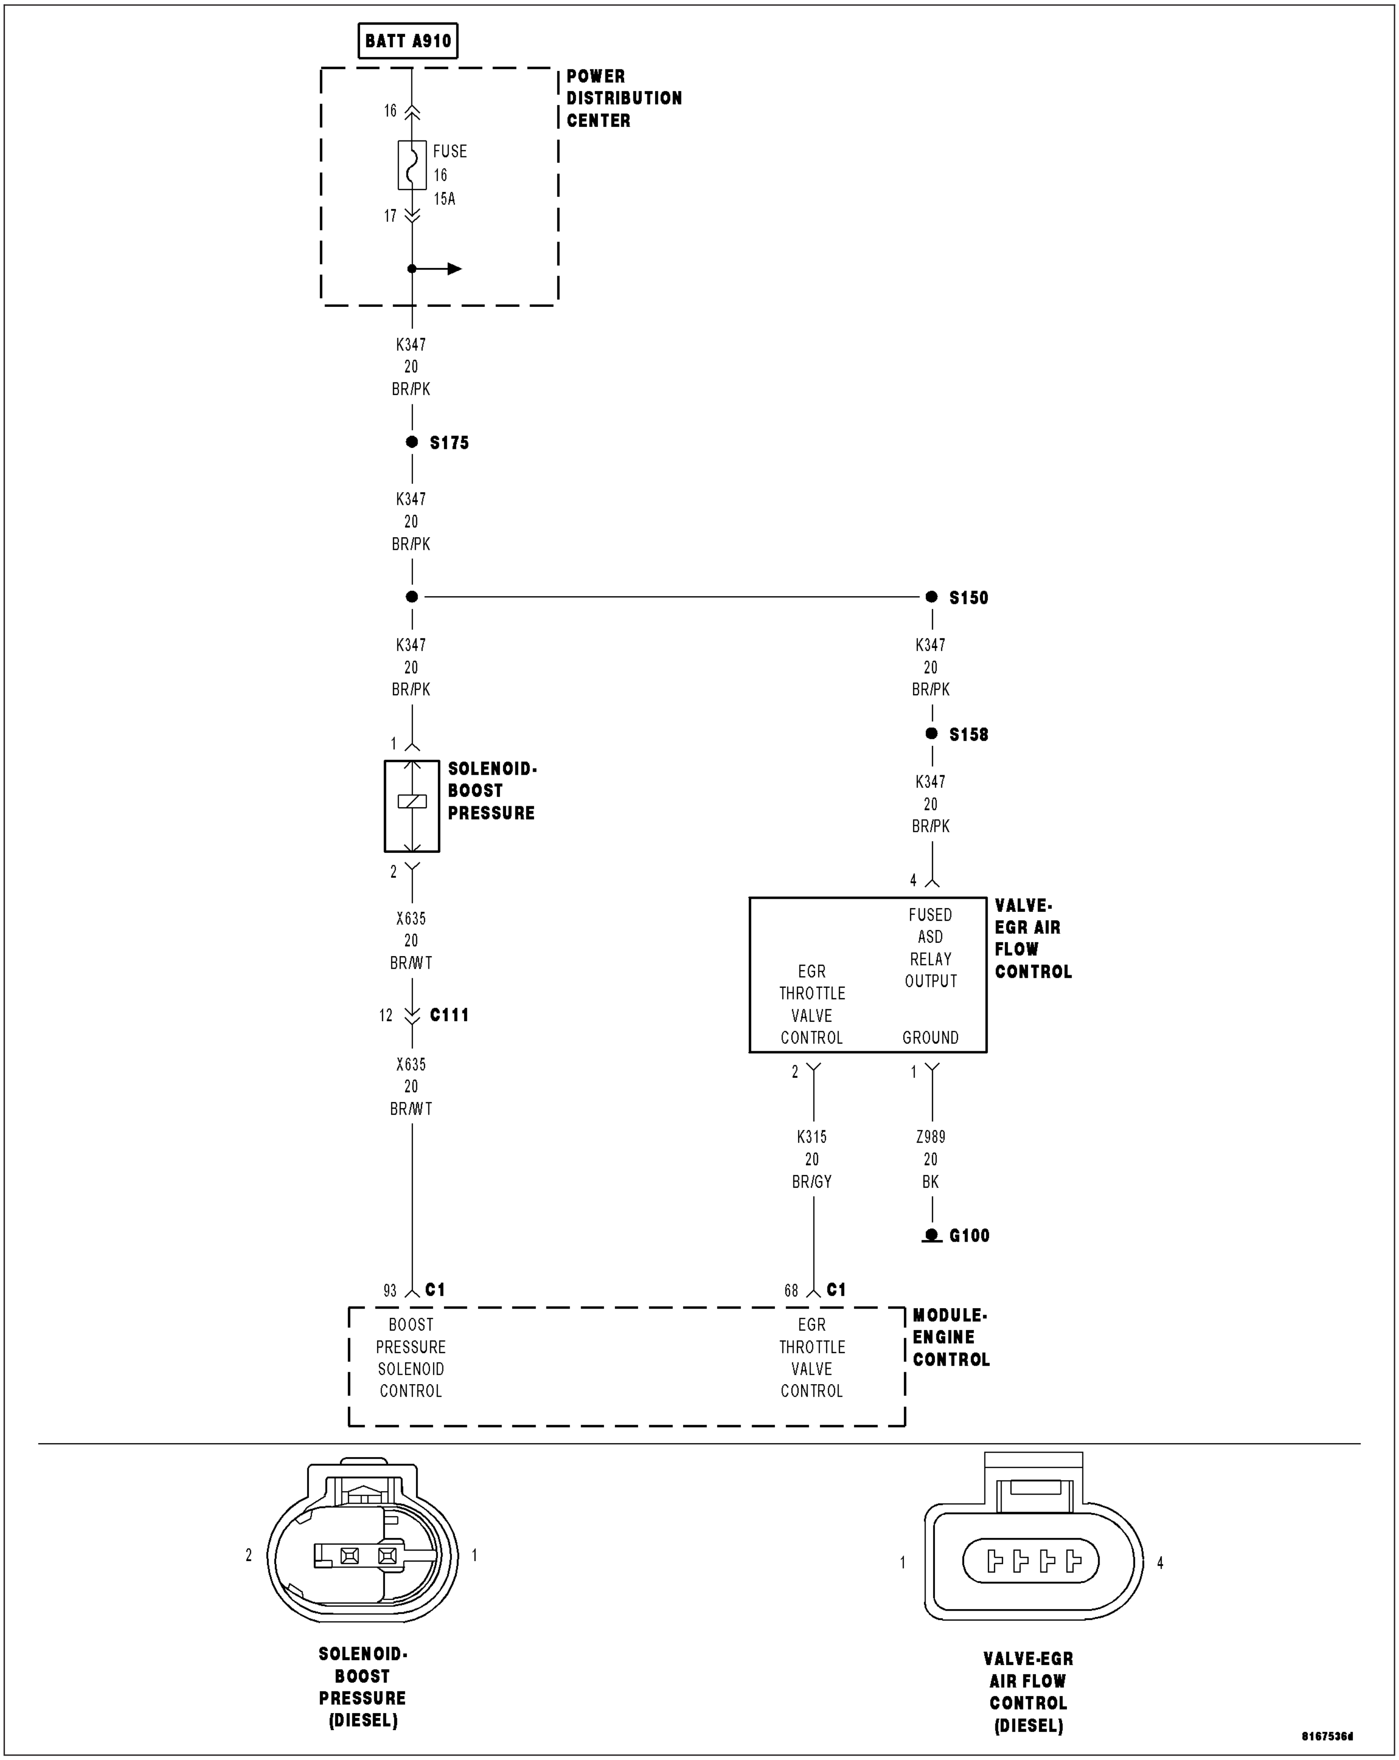
Monitor the scan tool for ECM DTCs.

**Does the scan tool display P0045 BOOST PRESSURE SOLENOID OPEN CIRCUIT?**

**Yes** >> Replace the Boost Pressure Solenoid.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0047-TURBOCHARGER BOOST PRESSURE SOLENOID SHORT TO GROUND



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the Boost Pressure Solenoid command off.
- **Set Condition:**
  The Engine Control Module (ECM) detects that the (X653) Boost Pressure Solenoid Control circuit is shorted to ground for 5.3 seconds.

| Possible Causes |
|---|
| (X653) BOOST PRESSURE SOLENOID CONTROL CIRCUIT SHORTED TO GROUND |
| (X653) BOOST PRESSURE SOLENOID CONTROL CIRCUIT OPEN OR HIGH RESISTANCE |
| BOOST PRESSURE SOLENOID |
| ENGINE CONTROL MODULE (ECM) |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)**

## Diagnostic Test

### 1. DTC IS ACTIVE

Ignition on, engine not running.

With the scan tool, Clear DTCs in the Engine Control Module (ECM).

With the scan tool, actuate the Boost Pressure Solenoid.

Monitor the scan tool for at least two minutes.

With the scan tool, select View DTCs.

**Is the status Active for this DTC?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

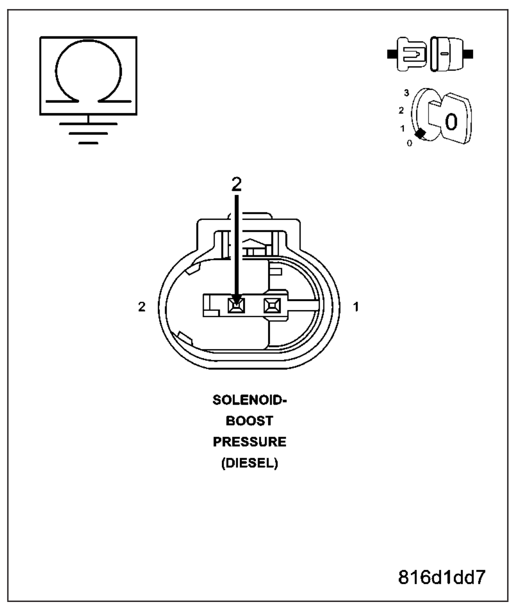
### 2. (X653) BOOST PRESSURE SOLENOID CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the Boost Pressure Solenoid connector.

Disconnect the Engine Control Module (ECM) connector.

Measure the resistance between ground and the (X653) Boost Pressure Solenoid Control circuit in the Boost Pressure Solenoid harness connector.



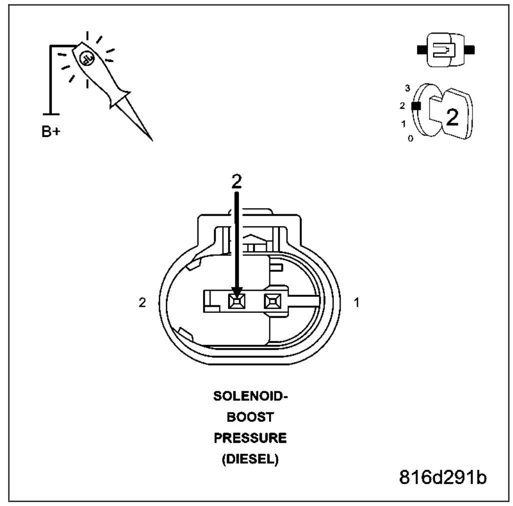
**Is the resistance below 1000 ohms?**

**Yes** >> Repair the (X653) Boost Pressure Solenoid Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go to 3

## 3. BOOST PRESSURE SOLENOID



Connect the Engine Control Module (ECM) connector.

Turn the ignition on.

With the scan tool, Clear DTCs.

With the scan tool, actuate the Boost Pressure Solenoid to 100%.

Using a 12 volt test light connected to 12 volts, check the (X653) Boost Pressure Solenoid Control circuit in the Boost Pressure Solenoid harness connector.

**NOTE: The test light should be illuminated and bright. Compare the brightness to that of a direct connection to the battery.**

**NOTE: The circuit will remain actuated by the controller for 30 seconds. Be certain the actuation is active when checking the circuit.**

With the scan tool, actuate the Boost Pressure Solenoid to 0%.

Using a 12 volt test light connected to 12 volts, check the (X653) Boost Pressure Solenoid Control circuit in the Boost Pressure Solenoid harness connector.

**NOTE: The test light should not be illuminated.**

**NOTE: The circuit will remain actuated by the controller for 30 seconds. Be certain the actuation is active when checking the circuit.**

**Is the test light illuminated and bright with the actuation at 100% and not illuminated with the actuation at 0%?**

**Yes** >> Replace the Boost Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go to 4

## 4. ENGINE CONTROL MODULE (ECM)

Using the wiring diagram/schematic as a guide, inspect the wiring and connectors between the Boost Pressure Solenoid and the Engine Control Module (ECM).

Look for any chafed, pierced, pinched, or partially broken wires.

Look for broken, bent, pushed out or corroded terminals.

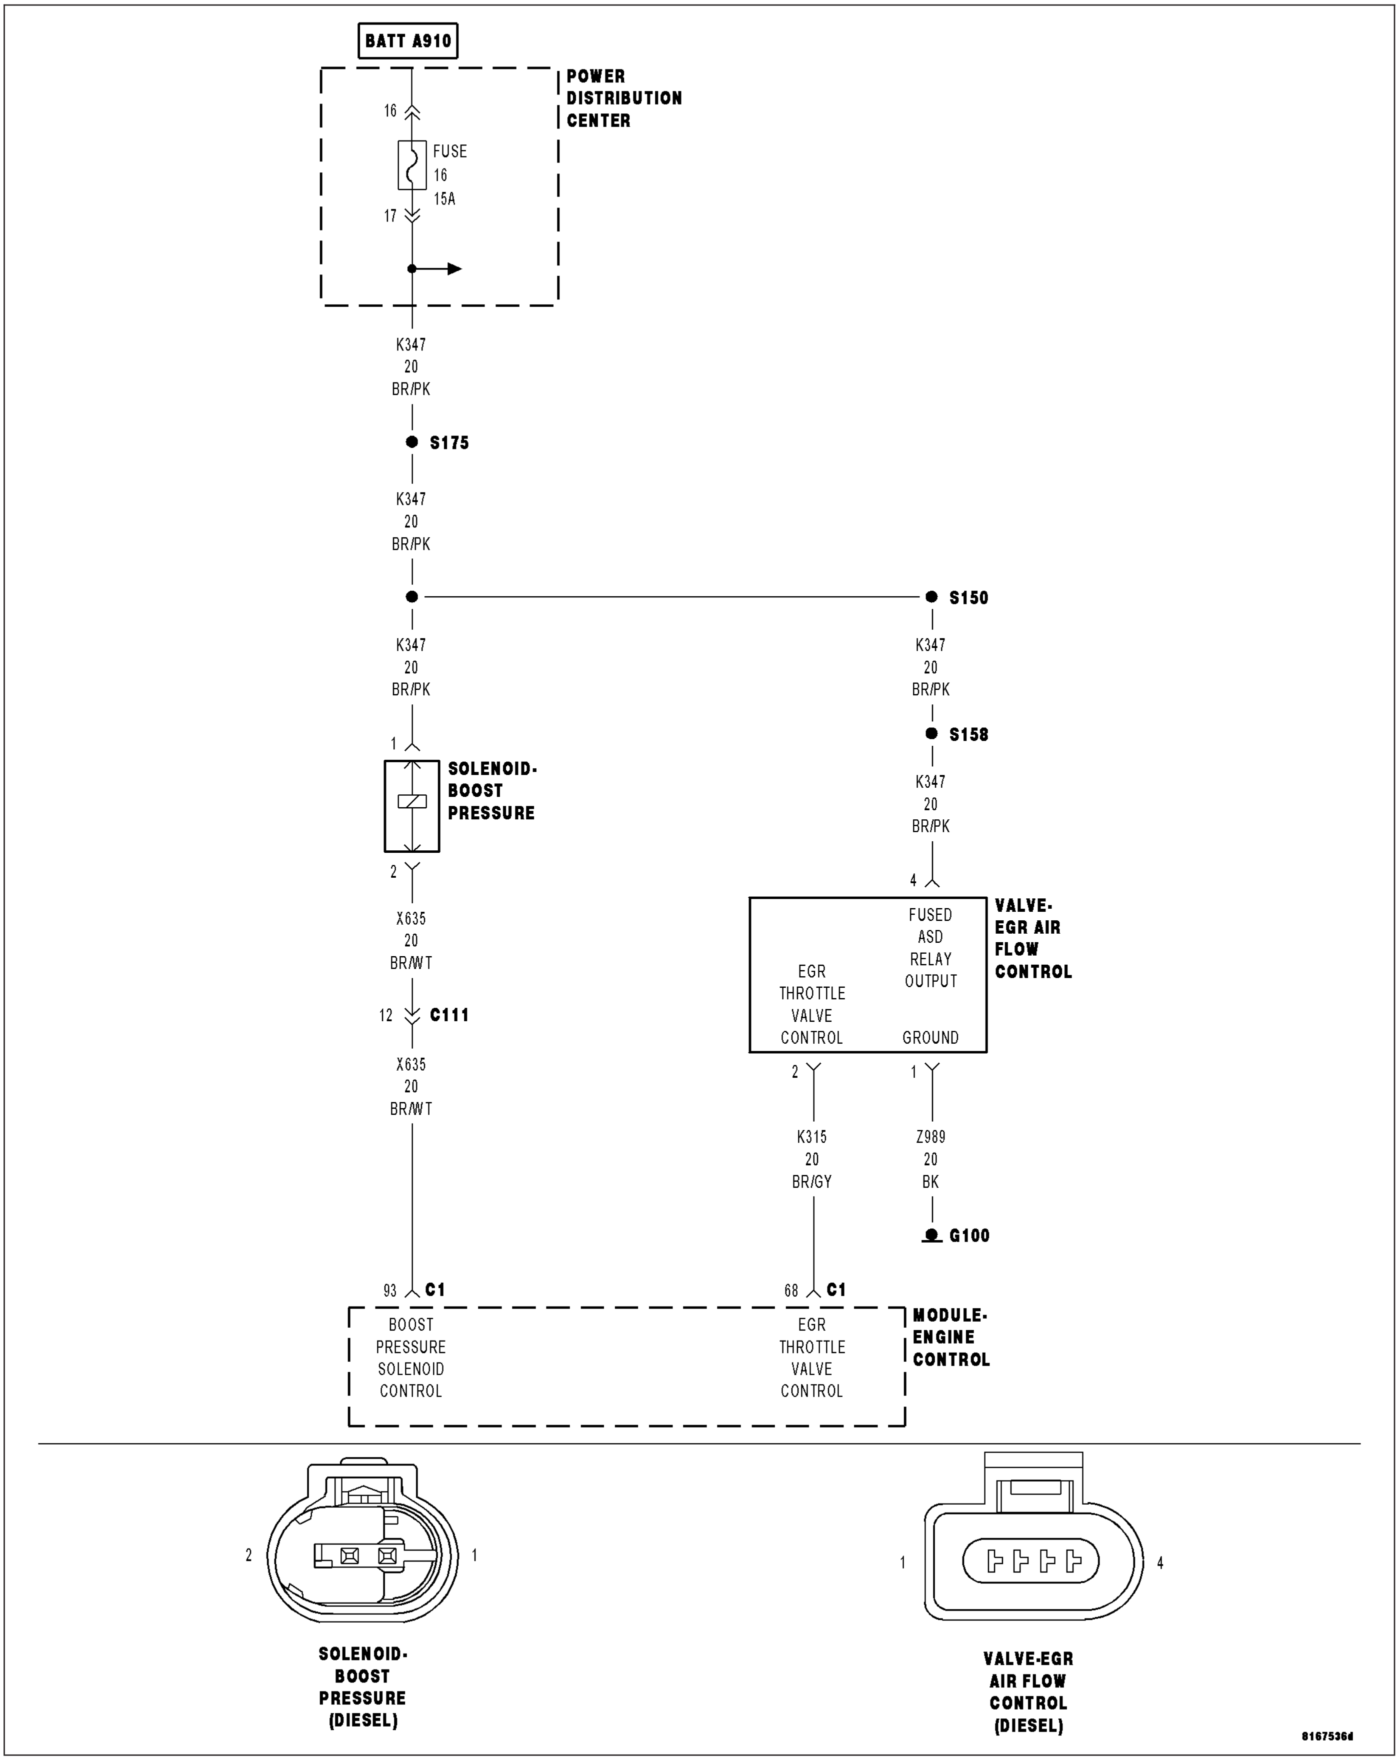
Refer to any Technical Service Bulletins that may apply.

**Were any problems found?**

**Yes** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Engine Control Module (ECM) in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0048-TURBOCHARGER BOOST CONTROL CIRCUIT SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the Boost Pressure Servo Motor command on.
- **Set Condition:**
  The Engine Control Module (ECM) detects that the (X653) Boost Pressure Servo Motor Control circuit is shorted to voltage for 2.0 seconds.

| Possible Causes |
| --- |
| (X635) BOOST PRESSURE SOLENOID CONTROL CIRCUIT SHORTED TO VOLTAGE |
| (X635) BOOST PRESSURE SOLENOID CONTROL CIRCUIT SHORTED TO THE (K347) FUSED ASD RELAY OUTPUT CIRCUIT |
| BOOST PRESSURE SOLENOID |
| ENGINE CONTROL MODULE (ECM) |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)**

## Diagnostic Test

### 1. DTC IS ACTIVE

Ignition on, engine not running.

With the scan tool, Clear DTCs in the Engine Control Module (ECM).

With the scan tool, actuate the Boost Pressure Solenoid.

Monitor the scan tool for at least two minutes.

With the scan tool, select View DTCs.

**Is the status Active for this DTC?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. (X635) BOOST PRESSURE SOLENOID CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the Boost Pressure Solenoid connector.

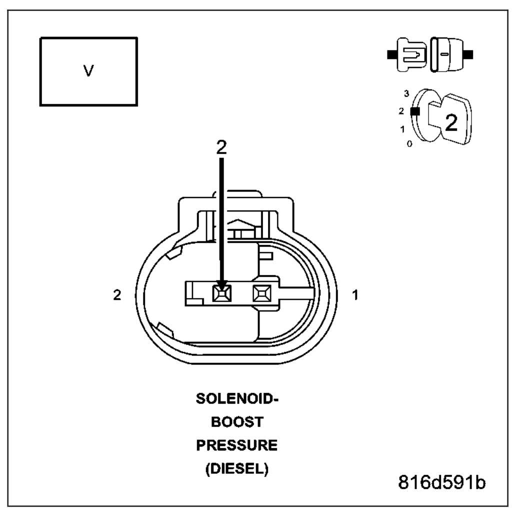
Disconnect the Engine Control Module (ECM) connector.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay Connector.

Turn the ignition on.

Measure the voltage of the (X635) Boost Pressure Solenoid Control circuit in the Boost Pressure Solenoid harness connector.



**Is there any voltage present?**

**Yes** >> Repair the (X635) Boost Pressure Solenoid Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go to 3

## 3. (X653) BOOST PRESSURE SOLENOID CONTROL CIRCUIT SHORTED TO THE (K343) FUSED ASD RELAY OUTPUT CIRCUIT

Turn the ignition off.

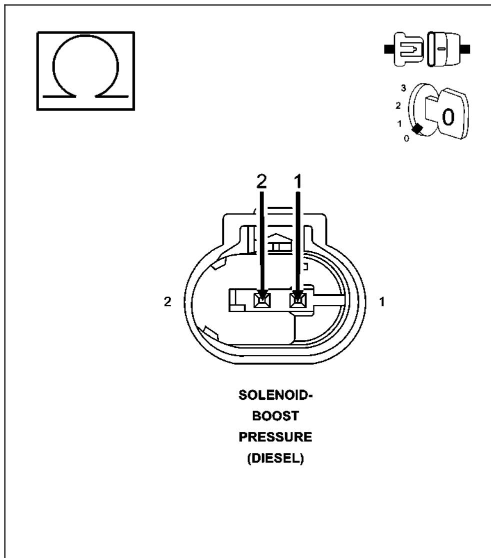
Measure the resistance between the (X635) Boost Pressure Solenoid Control circuit and the (K347) Fused ASD Relay Output circuit in the Boost Pressure Solenoid harness connector.

**Is the resistance above 1000 ohms?**

**Yes** >> Go to 4

**No** >> Repair the (X635) Boost Pressure Solenoid Control circuit for a short to the (K347) Fused ASD Relay Output circuit.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



816d592a

## 4. BOOST PRESSURE SOLENOID

Connect the Engine Control Module (ECM) connector.

Turn the ignition on.

With the scan tool, Clear DTCs.

With the scan tool, actuate the Boost Pressure Solenoid to 100%.

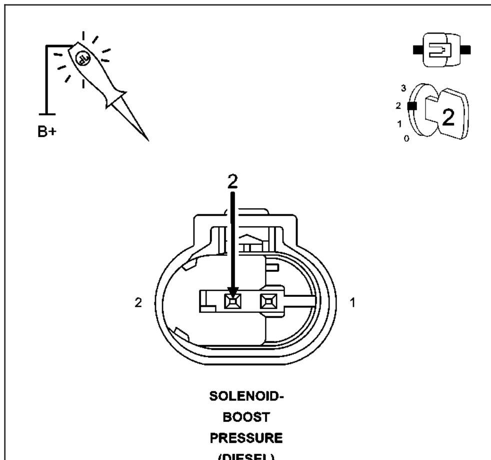
Using a 12 volt test light connected to 12 volts, check the (X635) Boost Pressure Solenoid Control circuit in the Boost Pressure Solenoid harness connector.

**NOTE: The test light should be illuminated and bright. Compare the brightness to that of a direct connection to the battery.**

**NOTE: The circuit will remain actuated by the controller for 30 seconds. Be certain the actuation is active when checking the circuit.**

With the scan tool, actuate the Boost Pressure Solenoid to 0%.

Using a 12 volt test light connected to 12 volts, check the (X653) Boost Pressure Solenoid Control circuit in the Boost Pressure Solenoid harness connector.



816d291b

**NOTE: The test light should not be illuminated.**

**NOTE: The circuit will remain actuated by the controller for 30 seconds. Be certain the actuation is active when checking the circuit.**

**Is the test light illuminated and bright with the actuation at 100% and not illuminated with the actuation at 0%?**

**Yes** >> Replace the Boost Pressure Solenoid in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go to 5

## 5. ENGINE CONTROL MODULE (ECM)

Using the wiring diagram/schematic as a guide, inspect the wiring and connectors between the Boost Pressure Solenoid and the Engine Control Module (ECM).

Look for any chafed, pierced, pinched, or partially broken wires.

Look for broken, bent, pushed out or corroded terminals.

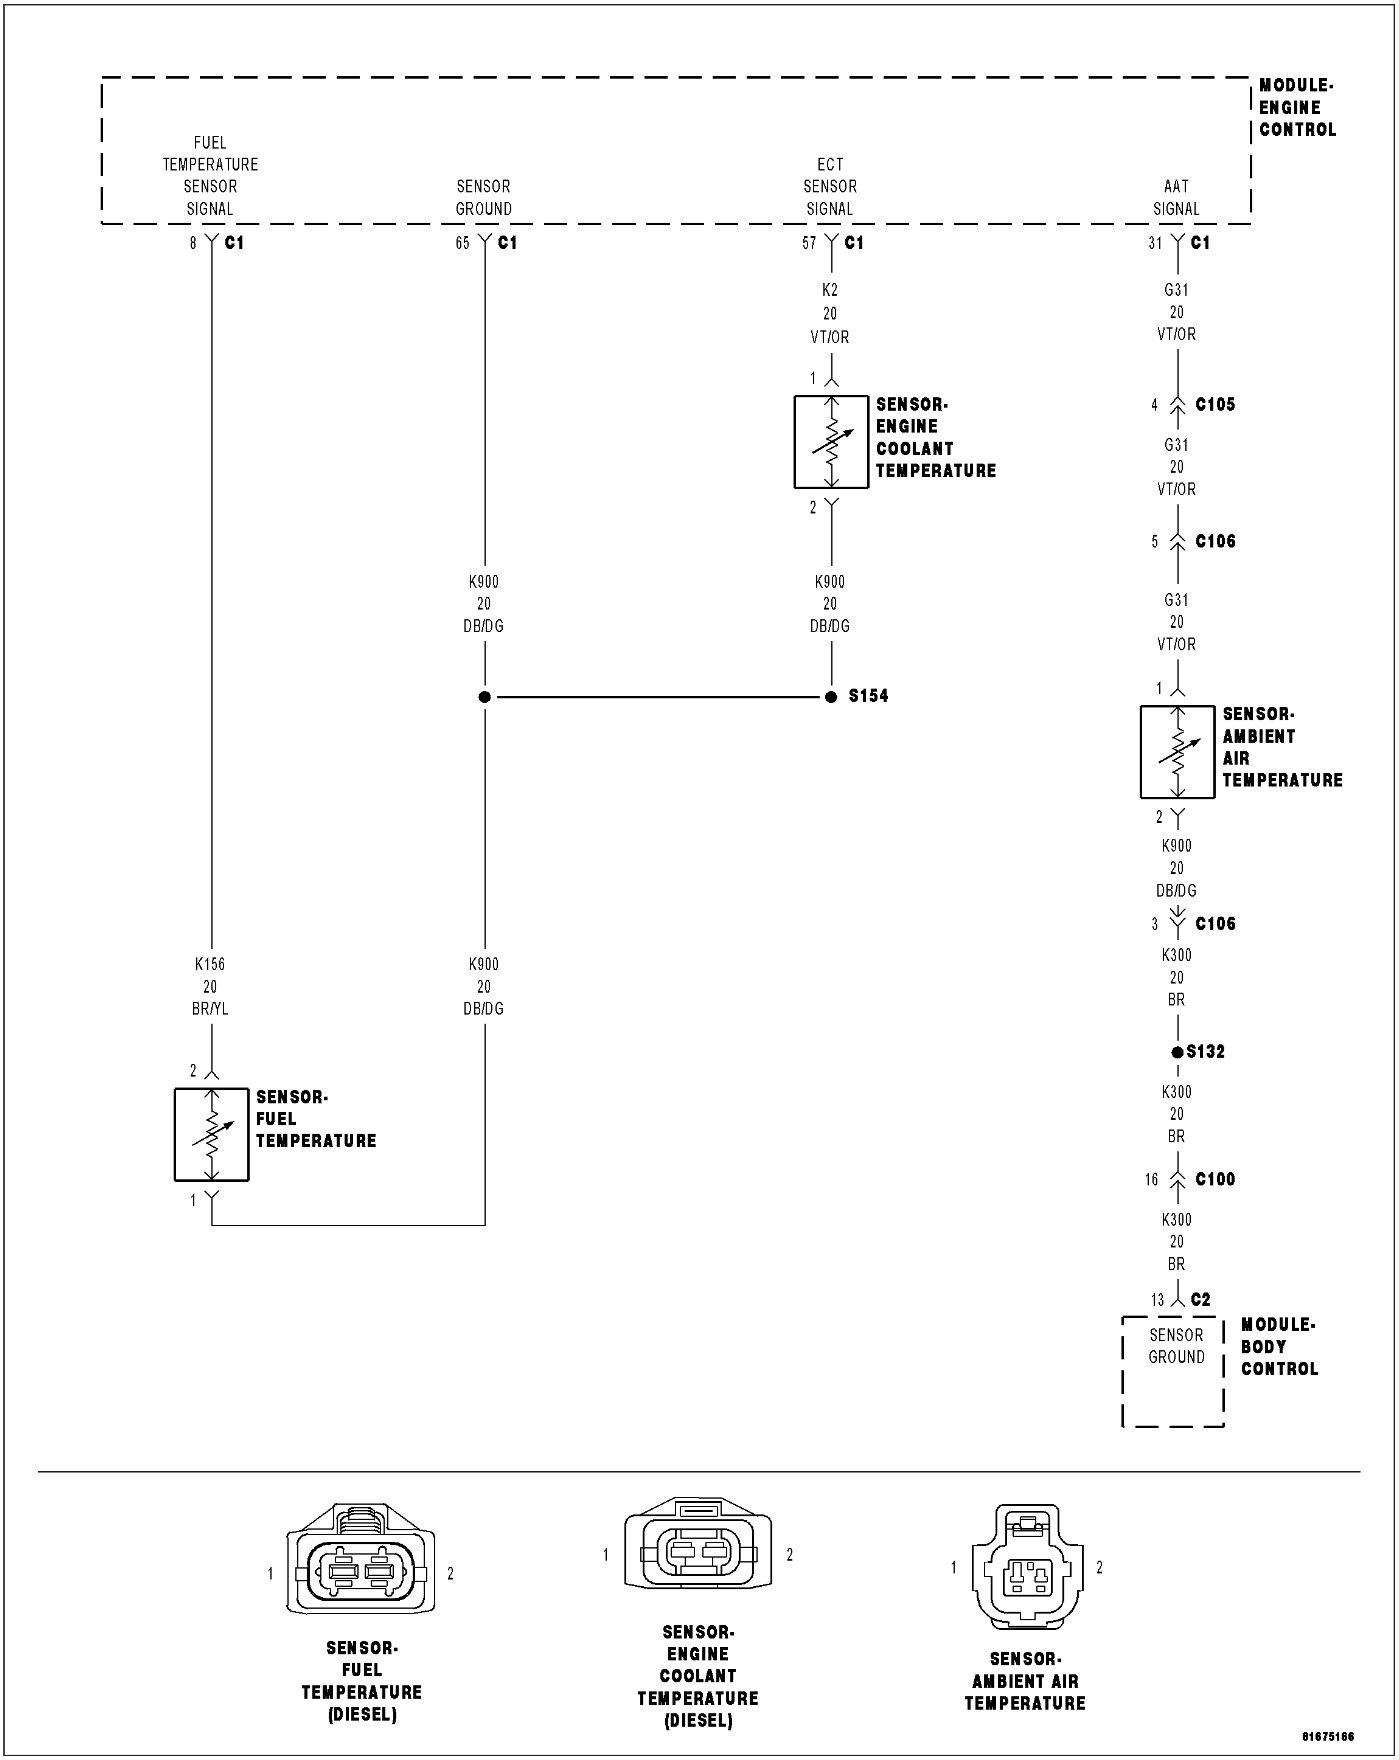
Refer to any Technical Service Bulletins that may apply.

**Were any problems found?**

**Yes** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Engine Control Module (ECM) in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0070-AMBIENT AIR TEMPERATURE SIGNAL VOLTAGE TOO HIGH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The Ambient Air Temperature Sensor signal is above 4.82 volts for 0.5 second.

| Possible Causes |
|---|
| AMBIENT AIR TEMP SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| AMBIENT AIR TEMP SENSOR GROUND CIRCUIT OPEN |
| AMBIENT AIR TEMP SENSOR SIGNAL CIRCUIT OPEN |
| AMBIENT TEMPERATURE SENSOR |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Turn the ignition off for 10 seconds.

Turn the ignition on.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. AMBIENT AIR TEMP SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the Ambient Air Temperature Sensor harness connector.

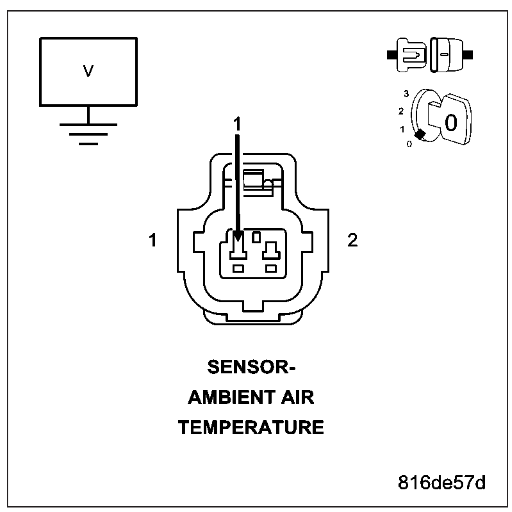
Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage on the Ambient Air Temperature Sensor Signal circuit.



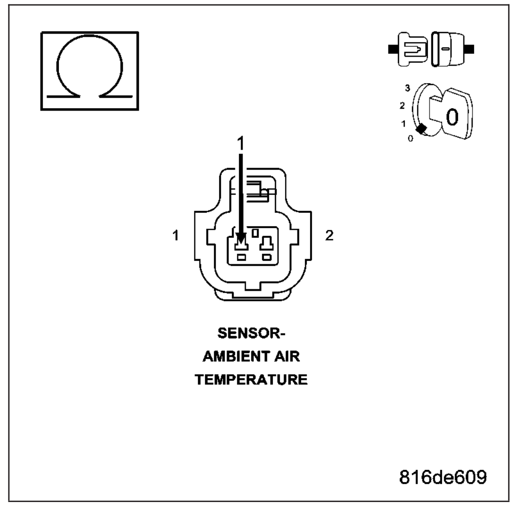
**NOTE: Remove the jumper wire.**

**Is the voltage below 1.0 volt?**

**Yes** >> Go To 3

**No** >> Repair the Ambient Air Temperature Sensor Signal circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. AMBIENT AIR TEMP SENSOR SIGNAL CIRCUIT OPEN



Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Ambient Air Temperature Sensor harness connector.

Measure the resistance of the Ambient Air Temperature Sensor Signal circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Ambient Air Temperature Sensor Signal circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. AMBIENT TEMPERATURE SENSOR

Turn the ignition off.

Disconnect the Ambient Temperature Sensor harness connector.

Connect a jumper wire between the Ambient Temperature Sensor Signal and Sensor Ground circuits in the Ambient Temperature Sensor harness connector.

Turn the ignition on.

Monitor the scan tool for ECM DTCs.

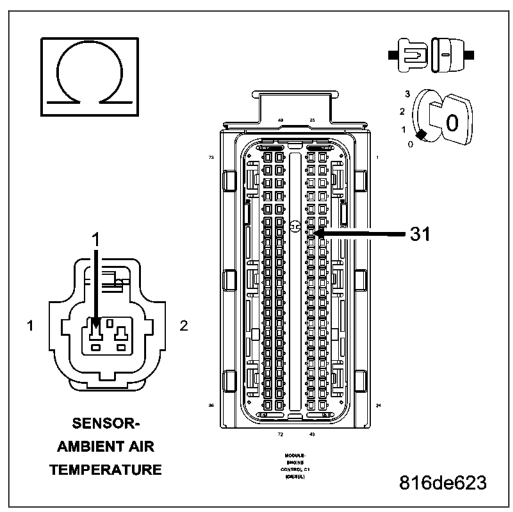
**Does the scan tool display P0070 AMB TEMP. SENSOR CIRCUIT SIGNAL VOLTAGE TOO LOW?**

**Yes** >> Replace the Ambient Temperature Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. AMBIENT TEMP SENSOR GROUND CIRCUIT OPEN



Turn the ignition off.

Disconnect the Ambient temperature Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Sensor Ground circuit between the ECM harness connector and the Ambient Temperature Sensor harness connector.

**Is the resistance below 10.0 ohms?**

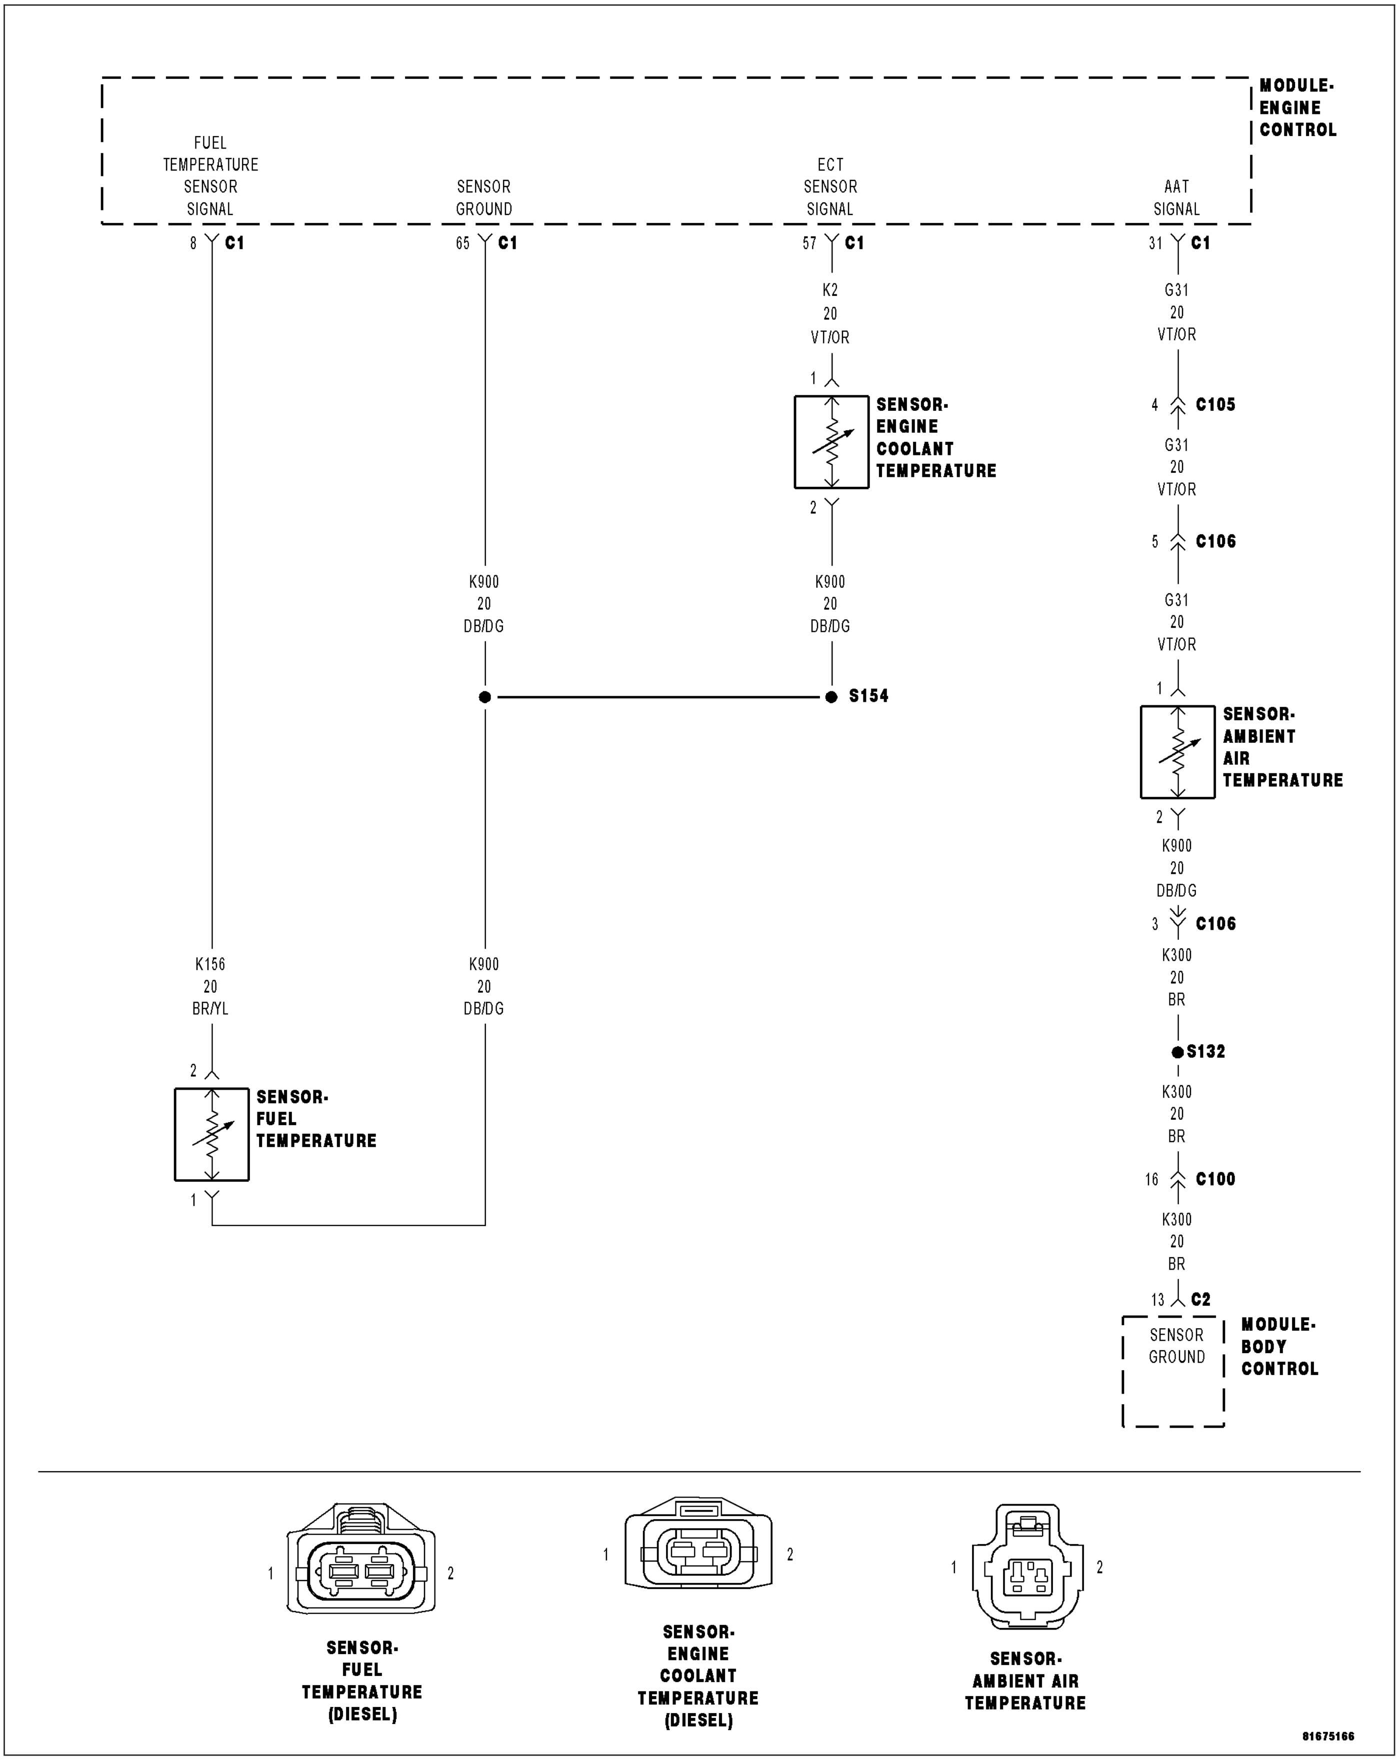
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Ambient Air Temperature Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0070-AMBIENT AIR TEMPERATURE SIGNAL VOLTAGE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The Ambient Air Temperature Sensor signal is below 0.068 volt.

| Possible Causes |
|---|
| AMBIENT AIR TEMP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| AMBIENT AIR TEMP SENSOR SIGNAL CIRCUIT SHORTED TO SENSOR GROUND |
| AMBINET TEMPERATURE SENSOR |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs for at least 2 minutes.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. AMBIENT TEMPERATURE SENSOR

Turn the ignition off.

Disconnect the Ambient Temperature Sensor harness connector.

Turn the ignition on.

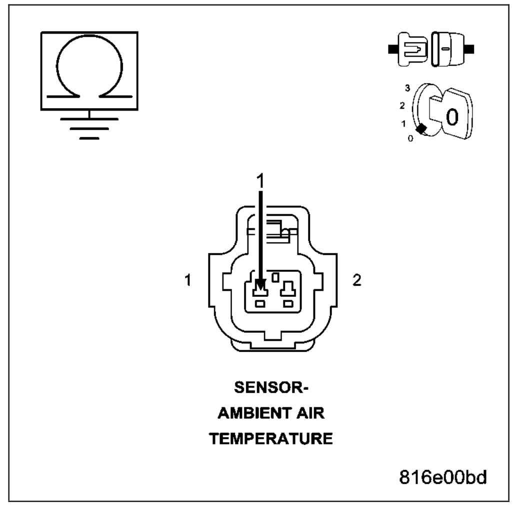
Monitor the scan tool for ECM DTCs for at least 2 minutes.

**Does the scan tool display P0070 AMB TEMP SENSOR SIGNAL VOLTAGE TOO HIGH?**

**Yes** >> Replace the Ambient Temperature Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. AMBIENT AIR TEMP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND



Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Ambient Air Temperature Sensor harness connector.

Measure the resistance between ground and the Ambient Air Temperature Sensor Signal circuit.

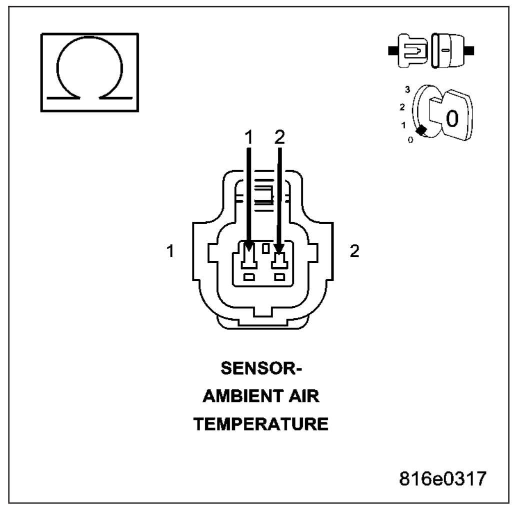
**Is the resistance above 1000 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Ambient Air Temperature Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. AMBIENT AIR TEMP SENSOR SIGNAL CIRCUIT SHORTED TO SENSOR GROUND



Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Ambient Air temperature Sensor harness connector.

Measure the resistance between the Ambient Air Temperature Sensor Signal circuit and the Sensor Ground circuit.

**Is the resistance above 1000 ohms?**

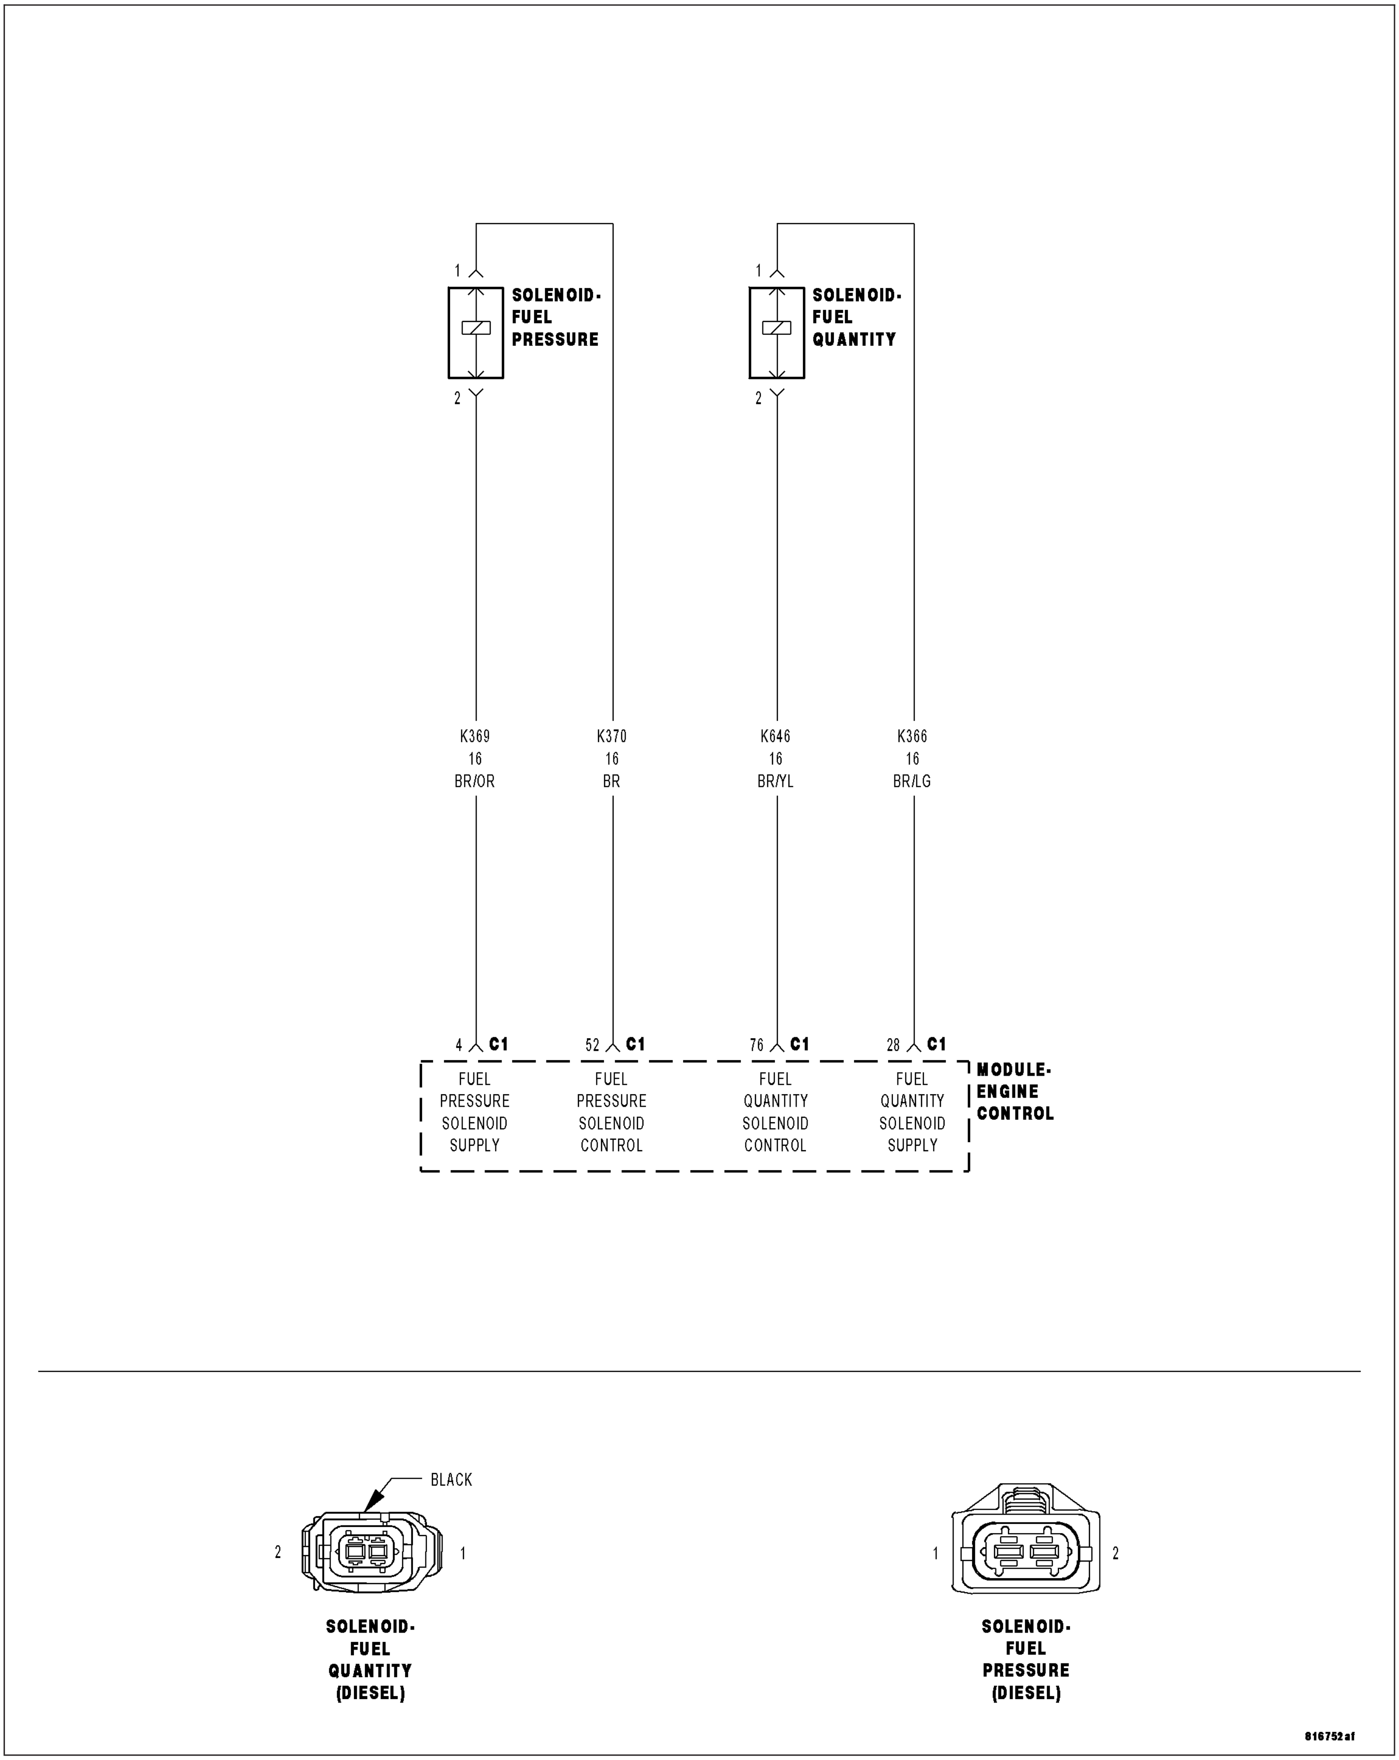
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Ambient Air Temperature Sensor Signal circuit for a short to the Sensor Ground circuit.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0087-FUEL RAIL PRESSURE MALFUNCTION PRESSURE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM determines that the fuel rail pressure is too low for a given engine speed.

| Possible Causes |
|---|
| AIR IN FUEL SYSTEM |
| FUEL DELIVERY SYSTEM CONCERNS |
| FUEL INJECTOR(S) |
| FUEL PRESSURE SOLENOID |
| FUEL PUMP |
| FUEL SYSTEM CONTAMINATION |
| FUEL SYSTEM LEAK |

## Diagnostic Test

### 1. CHECKING FOR OTHER ECM DTCS

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the scan tool, read the ECM DTCs.

**Are there any other DTCs present?**

**Yes** >> Refer to symptom list for problems related to the DTC other than this DTC.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

### 2. CURRENT DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: Refer to the Service Information and perform the Air Bleed Procedure before continuing diagnosis.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

**NOTE: Driving the vehicle up and down steep hills or rapid cornering with a low fuel level can cause this DTC to set. Verify with customer if Low Fuel Light was illuminated when fault occurred.**

Test drive the vehicle under various load and speed conditions to attempt to duplicate the fault.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 3. FUEL SYSTEM LEAK

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Inspect the entire fuel system for leakage.

**Is there any evidence of leakage?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL SYSTEM CONTAMINATION

**NOTE: Mixing any other fuels such as gasoline or kerosine can cause this DTC to set.**

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Refer to the Service Information and inspect the fuel system for contamination.

**Is the fuel contaminated?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. ATTEMPT TO START ENGINE

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine.

**Does the engine start and idle?**

**Yes** >> Go To 6

**No** >> Go To 11

## 6. CHECKING FOR AIR IN FUEL SYSTEM

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: If there is air in the fuel system, the Actual Fuel Pressure will oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint?**

**Yes** >> Refer to the Service Information to purge air from the fuel system.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 7

## 7. FUEL PRESSURE SOLENOID

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: A sticking Fuel Pressure Solenoid is indicated by Actual Fuel Pressure gradually dropping below the Fuel Pressure Setpoint then suddenly increasing (spiking) above the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure gradually decrease then suddenly increase (spike) above the Fuel Pressure**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 8

## 8. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 9

## 9. FUEL INJECTOR(S)

**NOTE: An injector that sticks open can cause this DTC. A sticking injector will cause the engine to misfire and emit excessive black smoke from the exhaust system.**

Start and idle the engine.

**Does the engine exhibit the symptoms described in the above note?**

**Yes** >> Using the Service Information, remove and inspect the Fuel Injectors for signs of damage or debris that may cause the injector to stick. Sticking injectors may cause the combustion chamber to become black and oil soaked. Replace Injector(s) as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 10

## 10. FUEL PRESSURE SOLENOID

Turn the ignition off.

Replace the Fuel Pressure Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## 11. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 12

## 12. FUEL PRESSURE SOLENOID

Turn the ignition off.

Replace the Fuel Pressure Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Go To 13

**No** >> Test Complete.

## 13. FUEL QUANTITY SOLENOID

Turn the ignition off.

Replace the Fuel Quantity Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

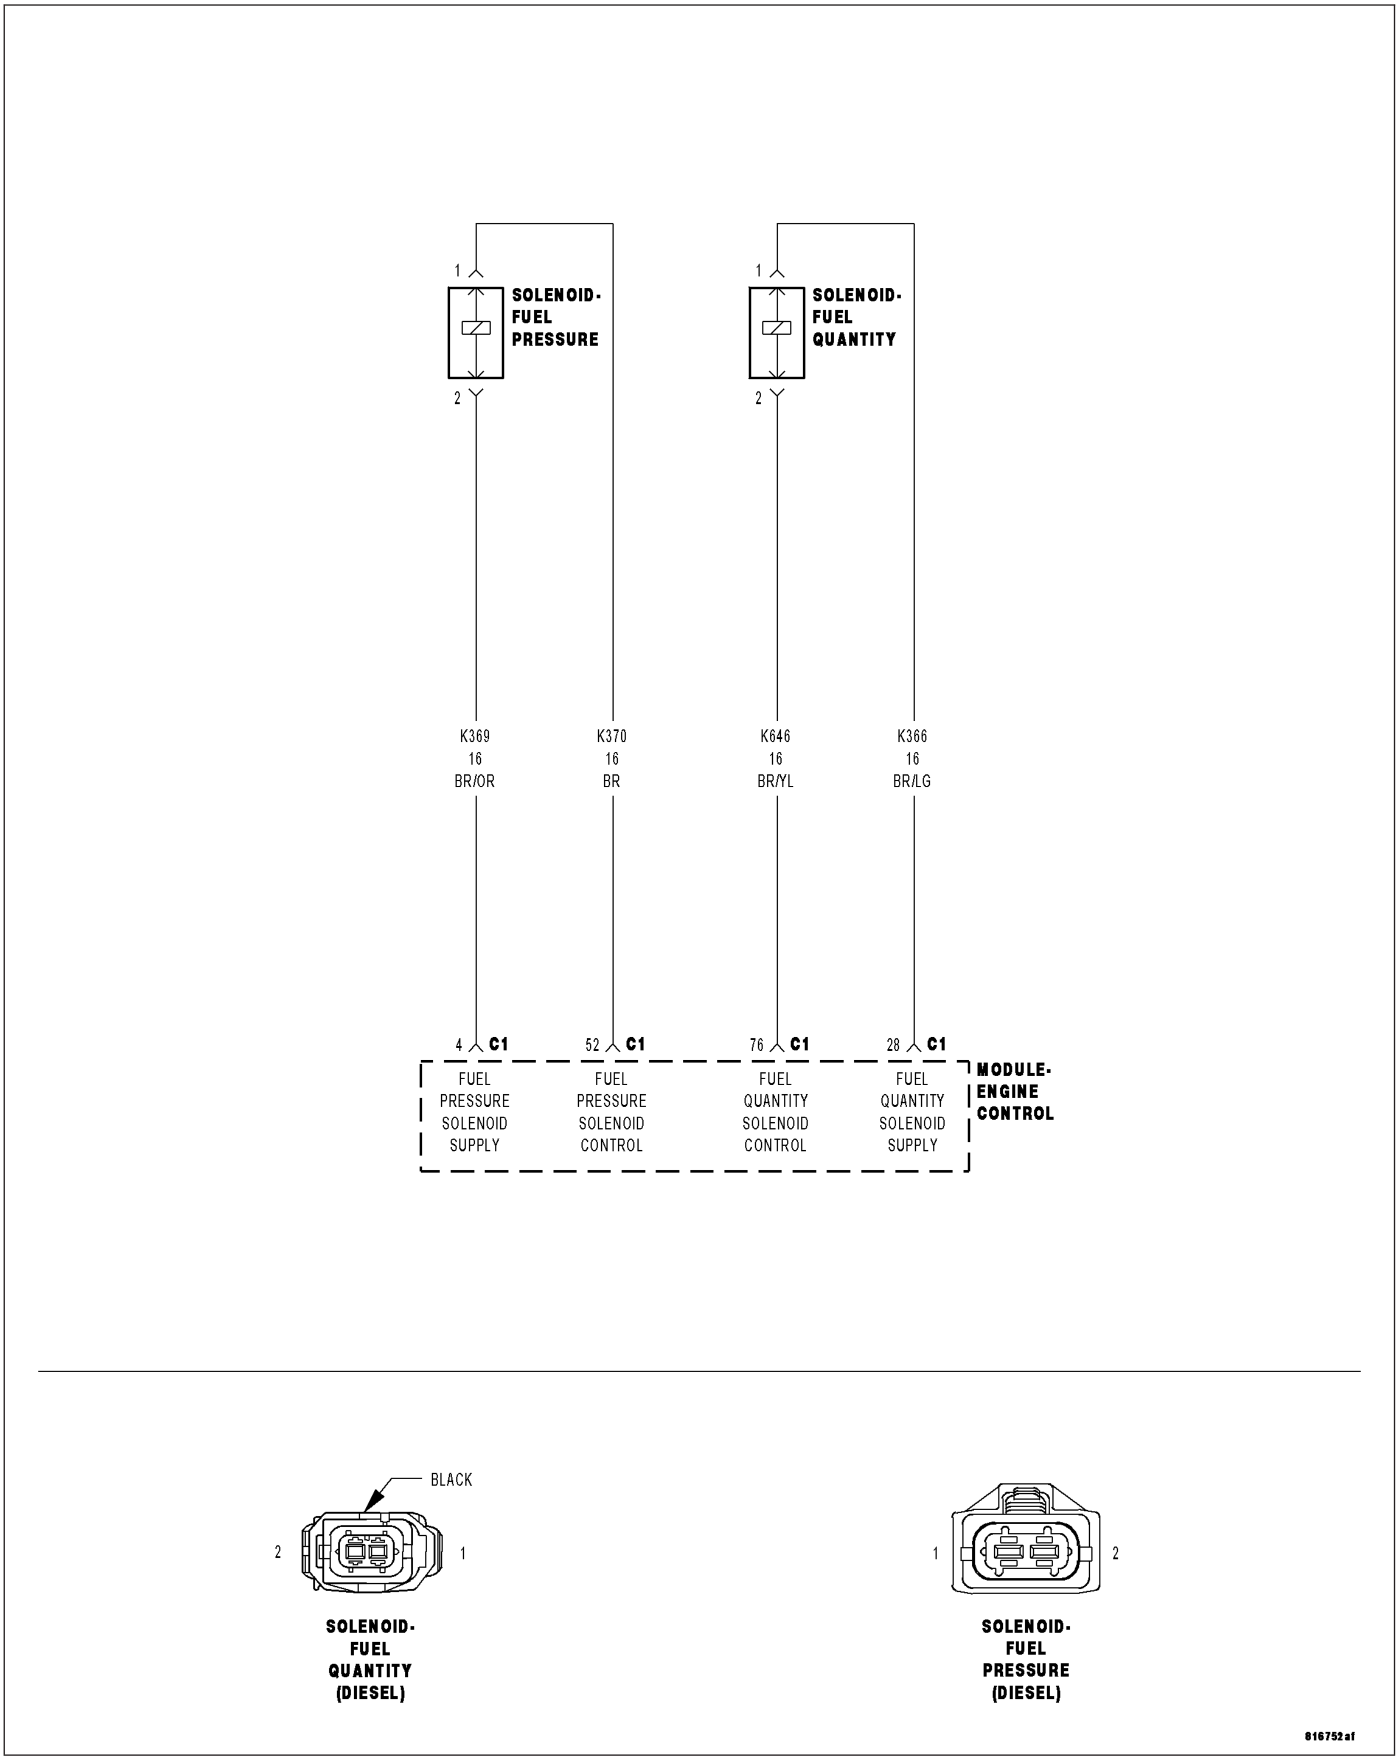
With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P0088-FUEL RAIL PRESSURE TOO HIGH



For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM determines that the fuel rail pressure is too high for a given engine speed and load.

| Possible Causes |
|---|
| AIR IN FUEL SYSTEM |
| FUEL DELIVERY SYSTEM |
| FUEL INJECTOR(S) |
| FUEL PRESSURE SOLENOID |
| FUEL PUMP |
| FUEL SYSTEM CONTAMINATION |
| FUEL SYSTEM LEAK |
| INTERMITTENT DTC |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)**

## Diagnostic Test

### 1. CHECKING FOR OTHER ECM DTCS

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the scan tool, read the ECM DTCs.

**Are there any other DTCs present?**

**Yes** >> Refer to symptom list for problems related to the DTC other than this DTC.
Perform the ECM VERIFICATION TEST.

**No** >> Go To 2

### 2. CURRENT DTC

**NOTE: Refer to the Service Information and perform the Air Bleed Procedure before continuing diagnosis.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

**NOTE: Driving the vehicle up and down steep hills or rapid cornering with a low fuel level can cause this DTC to set. Verify with customer if Low Fuel Light was illuminated when fault occurred.**

Test drive the vehicle under various load and speed conditions to attempt to duplicate the fault.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 3. FUEL SYSTEM LEAK

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Inspect the entire fuel system for leakage.

**Is there any evidence of leakage?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

## 4. FUEL SYSTEM CONTAMINATION

**NOTE: Mixing any other fuels such as gasoline or kerosine can cause this DTC to set.**

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Inspect the fuel system for contamination.

**Is the fuel contaminated?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

## 5. FUEL PRESSURE SENSOR CALIBRATION

Turn the ignition on.

With the scan tool, read the Fuel Pressure Sensor volts.

**Does the scan tool display between 0.45 and 0.55 volts for the Fuel Pressure Sensor?**

**Yes** >> Go To 6

**No** >> Check the Fuel Pressure Sensor wiring and connectors for corrosion or poor terminal contact that could cause high resistance. repair as necessary. If wiring and connectors are o.k., replace the Fuel Pressure Sensor.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 6. ATTEMPT TO START ENGINE

With the scan tool, erase the ECM DTCs.

Attempt to start the engine.

**Does the engine start and idle?**

**Yes** >> Go To 7

**No** >> Go To 12

## 7. CHECKING FOR AIR IN FUEL SYSTEM

With the scan tool in Sensors, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: If there is air in the fuel system, the Actual Fuel Pressure will oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint?**

**Yes** >> Refer to the Service Information to purge air from the fuel system.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 8

## 8. FUEL PRESSURE SOLENOID

With the scan tool, compare the Fuel Pressure Setpoint with the actual Fuel Pressure.

**NOTE: A sticking Fuel Pressure Solenoid is indicated by the actual Fuel Pressure gradually dropping below the Fuel Pressure Setpoint then suddenly increasing (spiking) above the Fuel Pressure Setpoint.**

**Does the actual Fuel Pressure gradually decrease then suddenly increase (spike) above the Fuel Pressure Setpoint?**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 9

## 9. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 10

## 10. FUEL INJECTOR(S)

**NOTE: An injector that sticks open can cause this DTC. A sticking injector will cause the engine to misfire and emit excessive black smoke from the exhaust system.**

**Does the engine exhibit the symptoms described in the above note?**

**Yes** >> Using the Service Information, remove and inspect the Fuel Injectors for signs of damage or debris that may cause the injector to stick. Sticking injectors may cause the combustion chamber to become black and oil soaked. Replace Injector(s) as necessary.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 11

## 11. FUEL PRESSURE SOLENOID

Turn the ignition off.
Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase the ECM DTCs.
Attempt to start and test drive the vehicle.
With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Test Complete.

## 12. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 13

## 13. FUEL PRESSURE SOLENOID

Turn the ignition off.
Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase the ECM DTCs.
Attempt to start and test drive the vehicle.
With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Go To 14

**No** >> Test Complete.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 14. FUEL QUANTITY SOLENOID

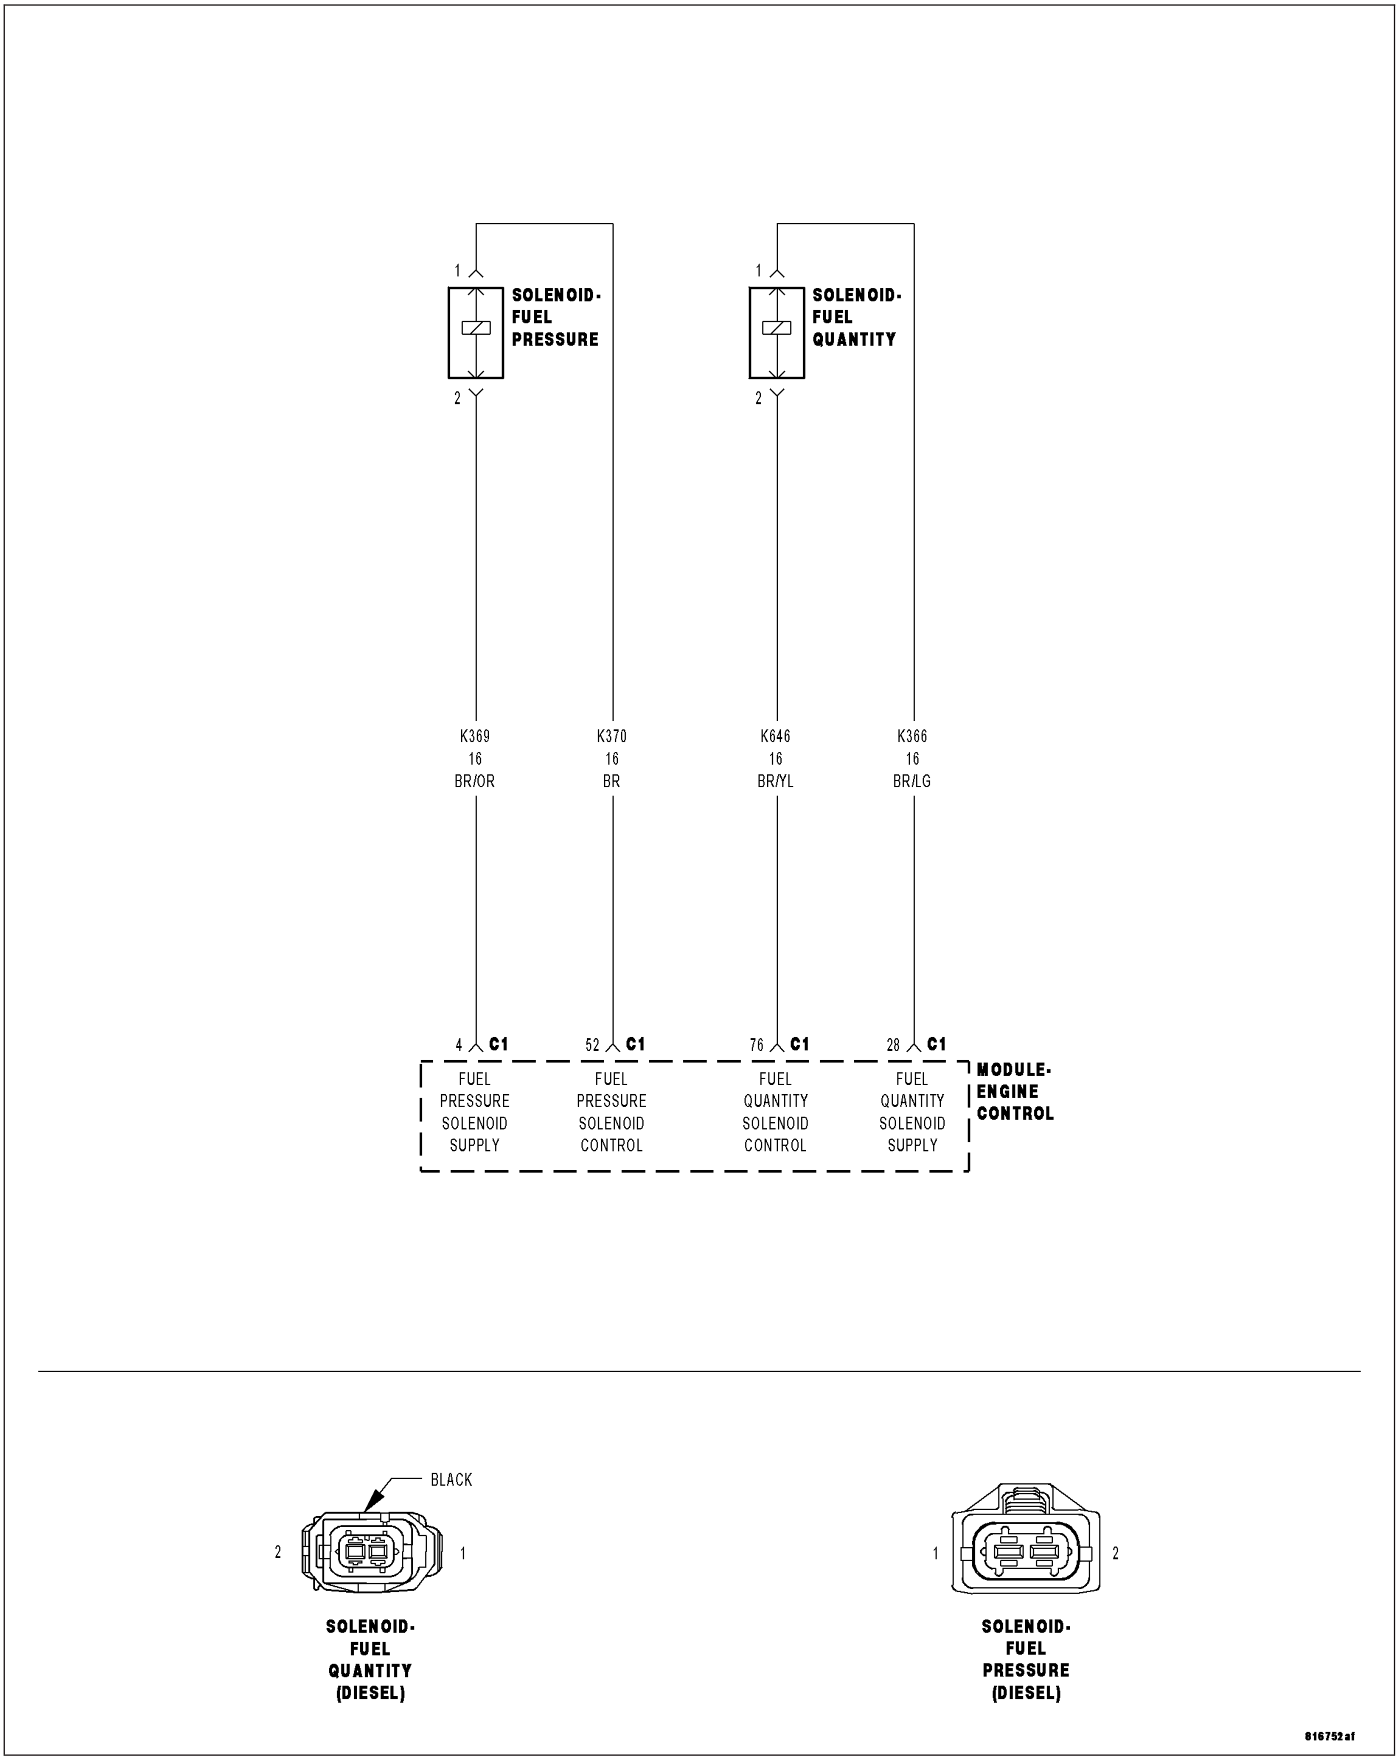
Turn the ignition off.
Replace the Fuel Quantity Solenoid in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase the ECM DTCs.
Attempt to start and test drive the vehicle.
With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Test Complete.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## P0089-FUEL PRESSURE 1 CONTROL PERFORMANCE



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the Fuel Pressure Solenoid command on.
- **Set Condition:**
  The Engine Control Module (ECM) detects that the (K370) Fuel Pressure Solenoid Control circuit voltage is implausible for 0.28 seconds.

| **Possible Causes** |
|---|
| (K369) FUEL PRESSURE SOLENOID SUPPLY CIRCUIT OPEN OR HIGH RESISTANCE |
| (K370) FUEL PRESSURE SOLENOID CONTROL CIRCUIT SHORTED TO VOLTAGE |
| (K370) FUEL PRESSURE SOLENOID CONTROL CIRCUIT SHORTED TO GROUND |
| (K370) FUEL PRESSURE SOLENOID CONTROL CIRCUIT OPEN OR HIGH RESISTANCE |
| FUEL PRESSURE SOLENOID |
| ENGINE CONTROL MODULE (ECM) |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)**

## Diagnostic Test

### 1. DTC IS ACTIVE

Ignition on, engine not running.

With the scan tool, Clear DTCs in the Engine Control Module (ECM).

With the scan tool, actuate the Fuel Pressure Solenoid.

Monitor the scan tool for at least two minutes.

With the scan tool, select View DTCs.

**Is the status Active for this DTC?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. (K369) FUEL PRESSURE SOLENOID SUPPLY CIRCUIT OPEN OR HIGH RESISTANCE

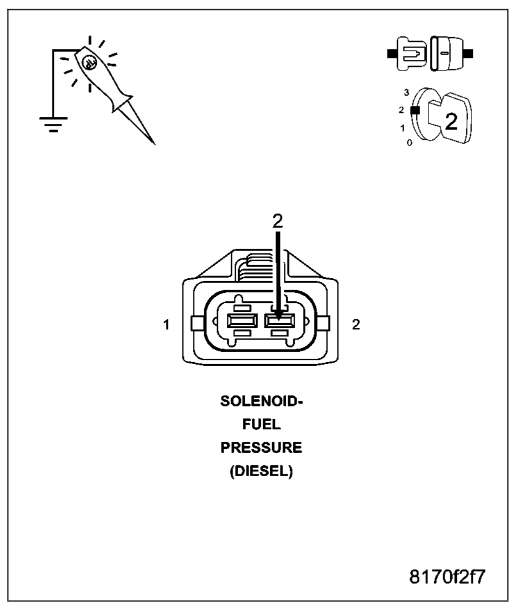
Turn the ignition off.

Disconnect the Fuel Pressure Solenoid connector.

Turn the ignition on.

With the scan tool, actuate the Fuel Pressure Solenoid.

Using a 12 volt test light connected to ground, check the (K369) Fuel Pressure Solenoid Supply circuit in the Fuel Pressure Solenoid harness connector.



**NOTE: The test light should be illuminated and bright. Compare the brightness to that of a direct connection to the battery.**

**Is the test light illuminated and bright?**

**Yes** >> Go to 3

**No** >> Repair the (K369) Fuel Pressure Solenoid Supply circuit for an open circuit or high resistance.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. (K370) FUEL PRESSURE SOLENOID CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

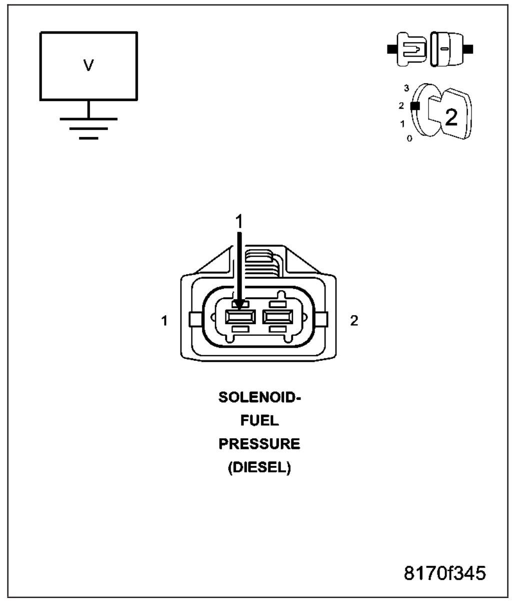
Disconnect the Engine Control Module (ECM) connector.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay Connector.

Turn the ignition on.

Measure the voltage of the (K370) Fuel Pressure Solenoid Control circuit in the Fuel Pressure Solenoid harness connector.



**Is there any voltage present?**

**Yes** >> Repair the (K370) Fuel Pressure Solenoid Control circuit for a short to voltage.

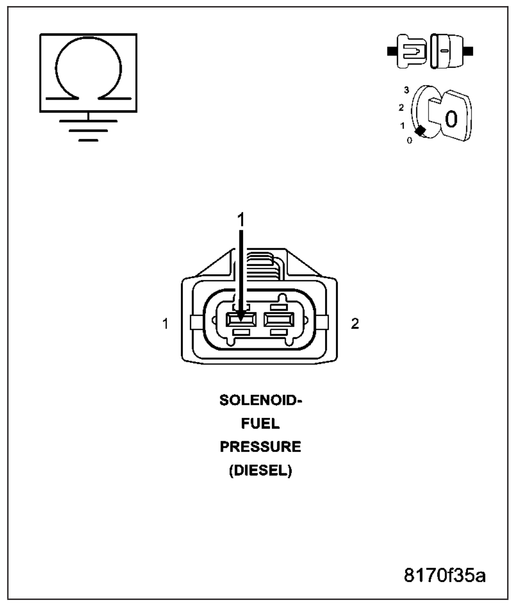
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go to 4

## 4. (K370) FUEL PRESSURE SOLENOID CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Measure the resistance between ground and the (K370) Fuel Pressure Solenoid Control circuit in the Fuel Pressure Solenoid harness connector.



**Is the resistance below 1000 ohms?**

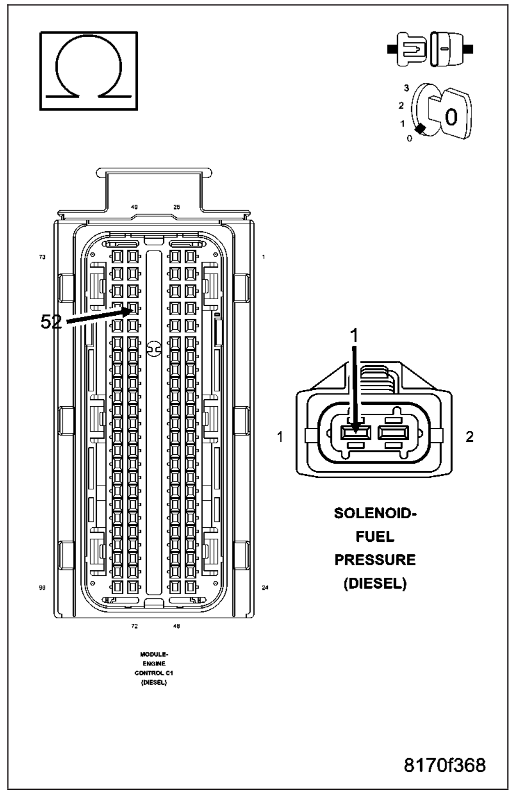
**Yes** >> Repair the (K370) Fuel Pressure Solenoid Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go to 5

## 5. (K370) FUEL PRESSURE SOLENOID CONTROL CIRCUIT OPEN OR HIGH RESISTANCE

Measure the resistance of the (K370) Fuel Pressure Solenoid Control circuit between the Fuel Pressure Solenoid harness connector and the Engine Control Module (ECM) harness connector.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go to 6

**No** >> Repair the (K370) Fuel Pressure Solenoid Control circuit for an open circuit or high resistance.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. FUEL PRESSURE SOLENOID

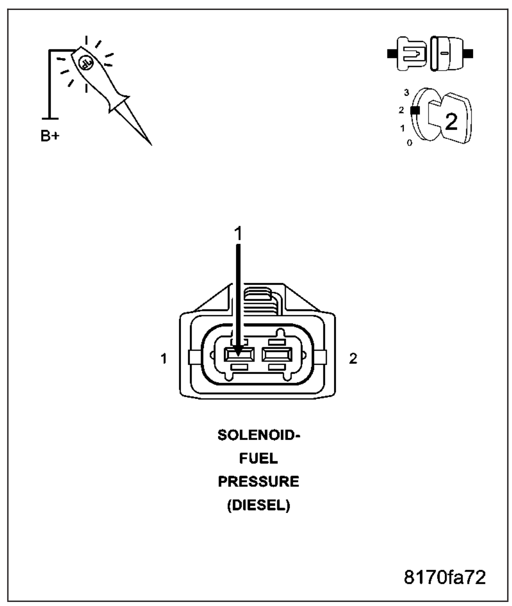
Connect the Engine Control Module (ECM) connector.

Remove the jumper wire and install the ASD Relay.

Turn the ignition on.

With the scan tool, actuate the Fuel Pressure Solenoid to 100%.

Using a 12 volt test light connected to 12 volts, check the (K370) Fuel Pressure Solenoid Control circuit in the Fuel Pressure Solenoid harness connector.



**NOTE: The test light should be illuminated and bright. Compare the brightness to that of a direct connection to the battery.**

**NOTE: The circuit will remain actuated by the controller for 30 seconds. Be certain the actuation is active when checking the circuit.**

With the scan tool, actuate the Fuel Pressure Solenoid to 0%.

Using a 12 volt test light connected to 12 volts, check the (K370) Fuel Pressure Solenoid Control circuit in the Fuel Pressure Solenoid harness connector.

**NOTE: The test light should not be illuminated.**

**NOTE: The circuit will remain actuated by the controller for 30 seconds. Be certain the actuation is active when checking the circuit.**

**Is the test light illuminated and bright with the actuation at 100% and not illuminated with the actuation at 0%?**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go to 7

## 7. ENGINE CONTROL MODULE (ECM)

Using the wiring diagram/schematic as a guide, inspect the wiring and connectors between the Fuel Pressure Solenoid and the Engine Control Module (ECM).

Look for any chafed, pierced, pinched, or partially broken wires.

Look for broken, bent, pushed out or corroded terminals.

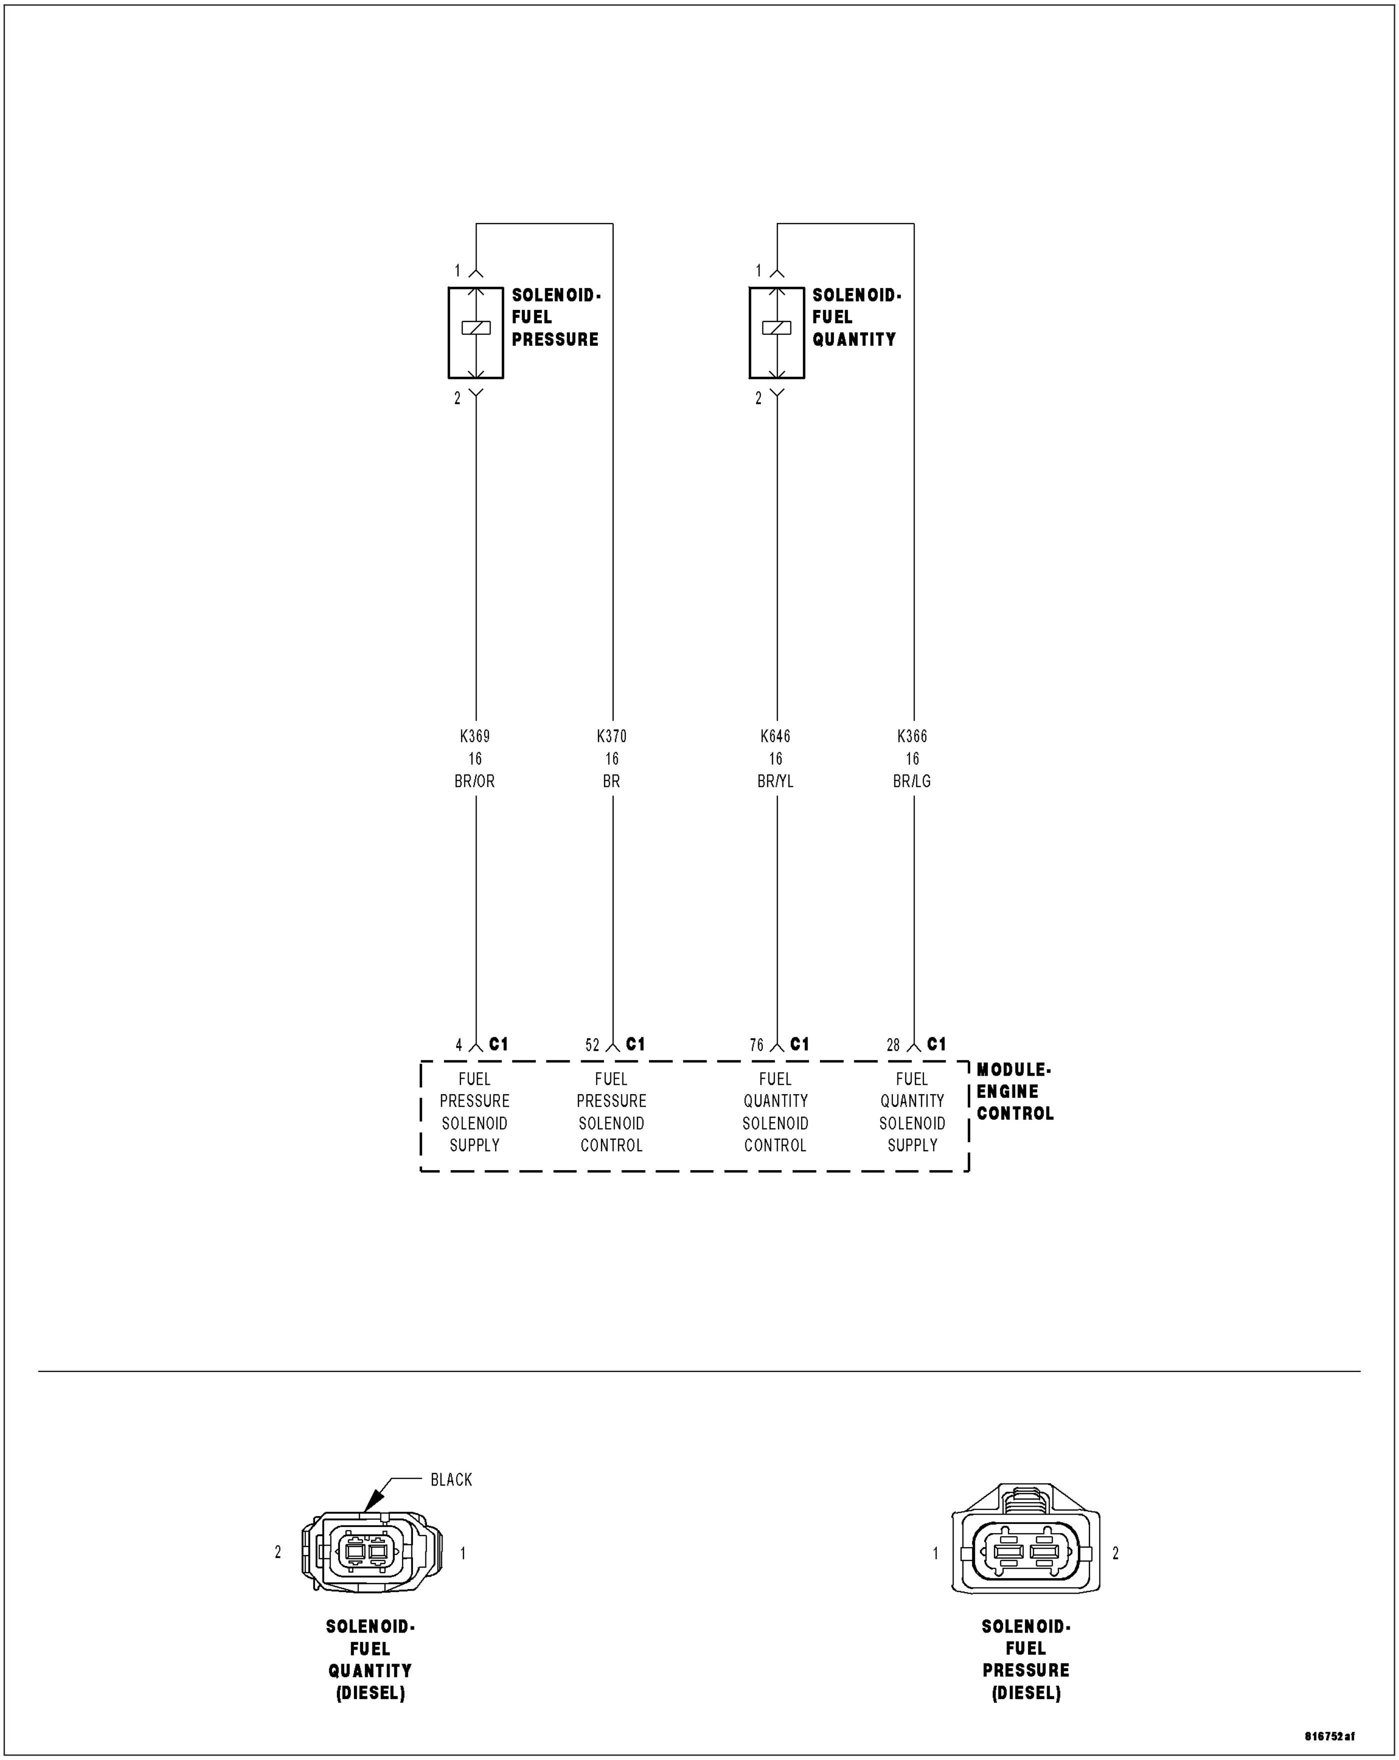
Refer to any Technical Service Bulletins that may apply.

**Were any problems found?**

**Yes** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Engine Control Module (ECM) in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0090-FUEL QUANTITY SOLENOID OPEN CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Fuel Quantity Solenoid command off.
- **Set Condition:**
  The ECM detects an open in the Fuel Quantity Solenoid circuit.

| Possible Causes |
|---|
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO GROUND |
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE |
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TOGETHER |
| FUEL QUANTITY SOLENOID OPEN CIRCUIT(S) |
| FUEL QUANTITY SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. VERIFY CURRENT DTC

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

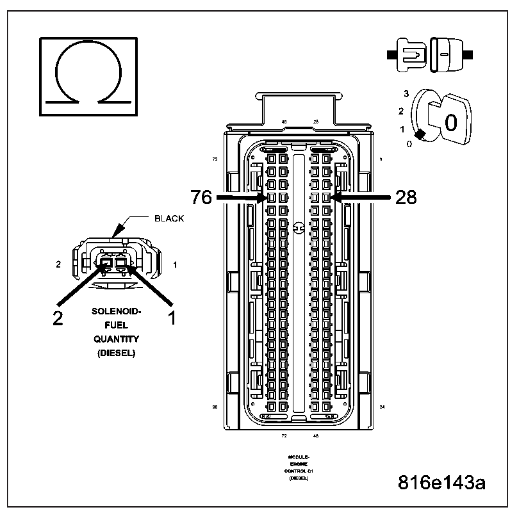
### 3. FUEL QUANTITY SOLENOID CIRCUIT(S) OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Quantity Solenoid harness connector.

Measure the resistance of each of the Fuel Quantity Solenoid circuits between the ECM harness connector and the Fuel Quantity Solenoid harness connector.



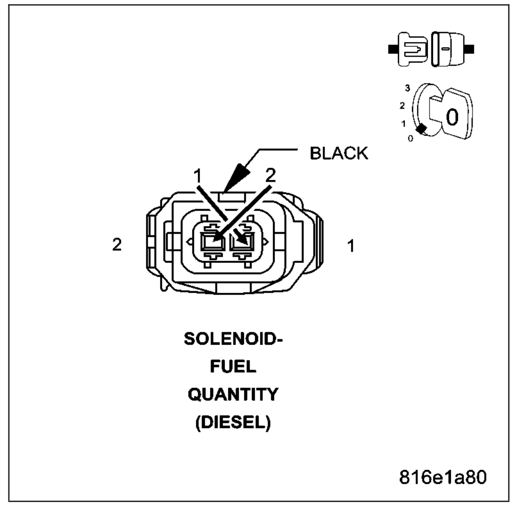
**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 4

**No** >> Repair the circuit(s) that measured above 10.0 ohms for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. FUEL QUANTITY SOLENOID



Turn the ignition off.

Disconnect the Fuel Quantity Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P0090-FUEL QUANTITY SOLENOID OPEN CIRCUIT.**

Turn the ignition off.

Connect a jumper wire between cavity 1 and cavity 2 of the Fuel Quantity Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

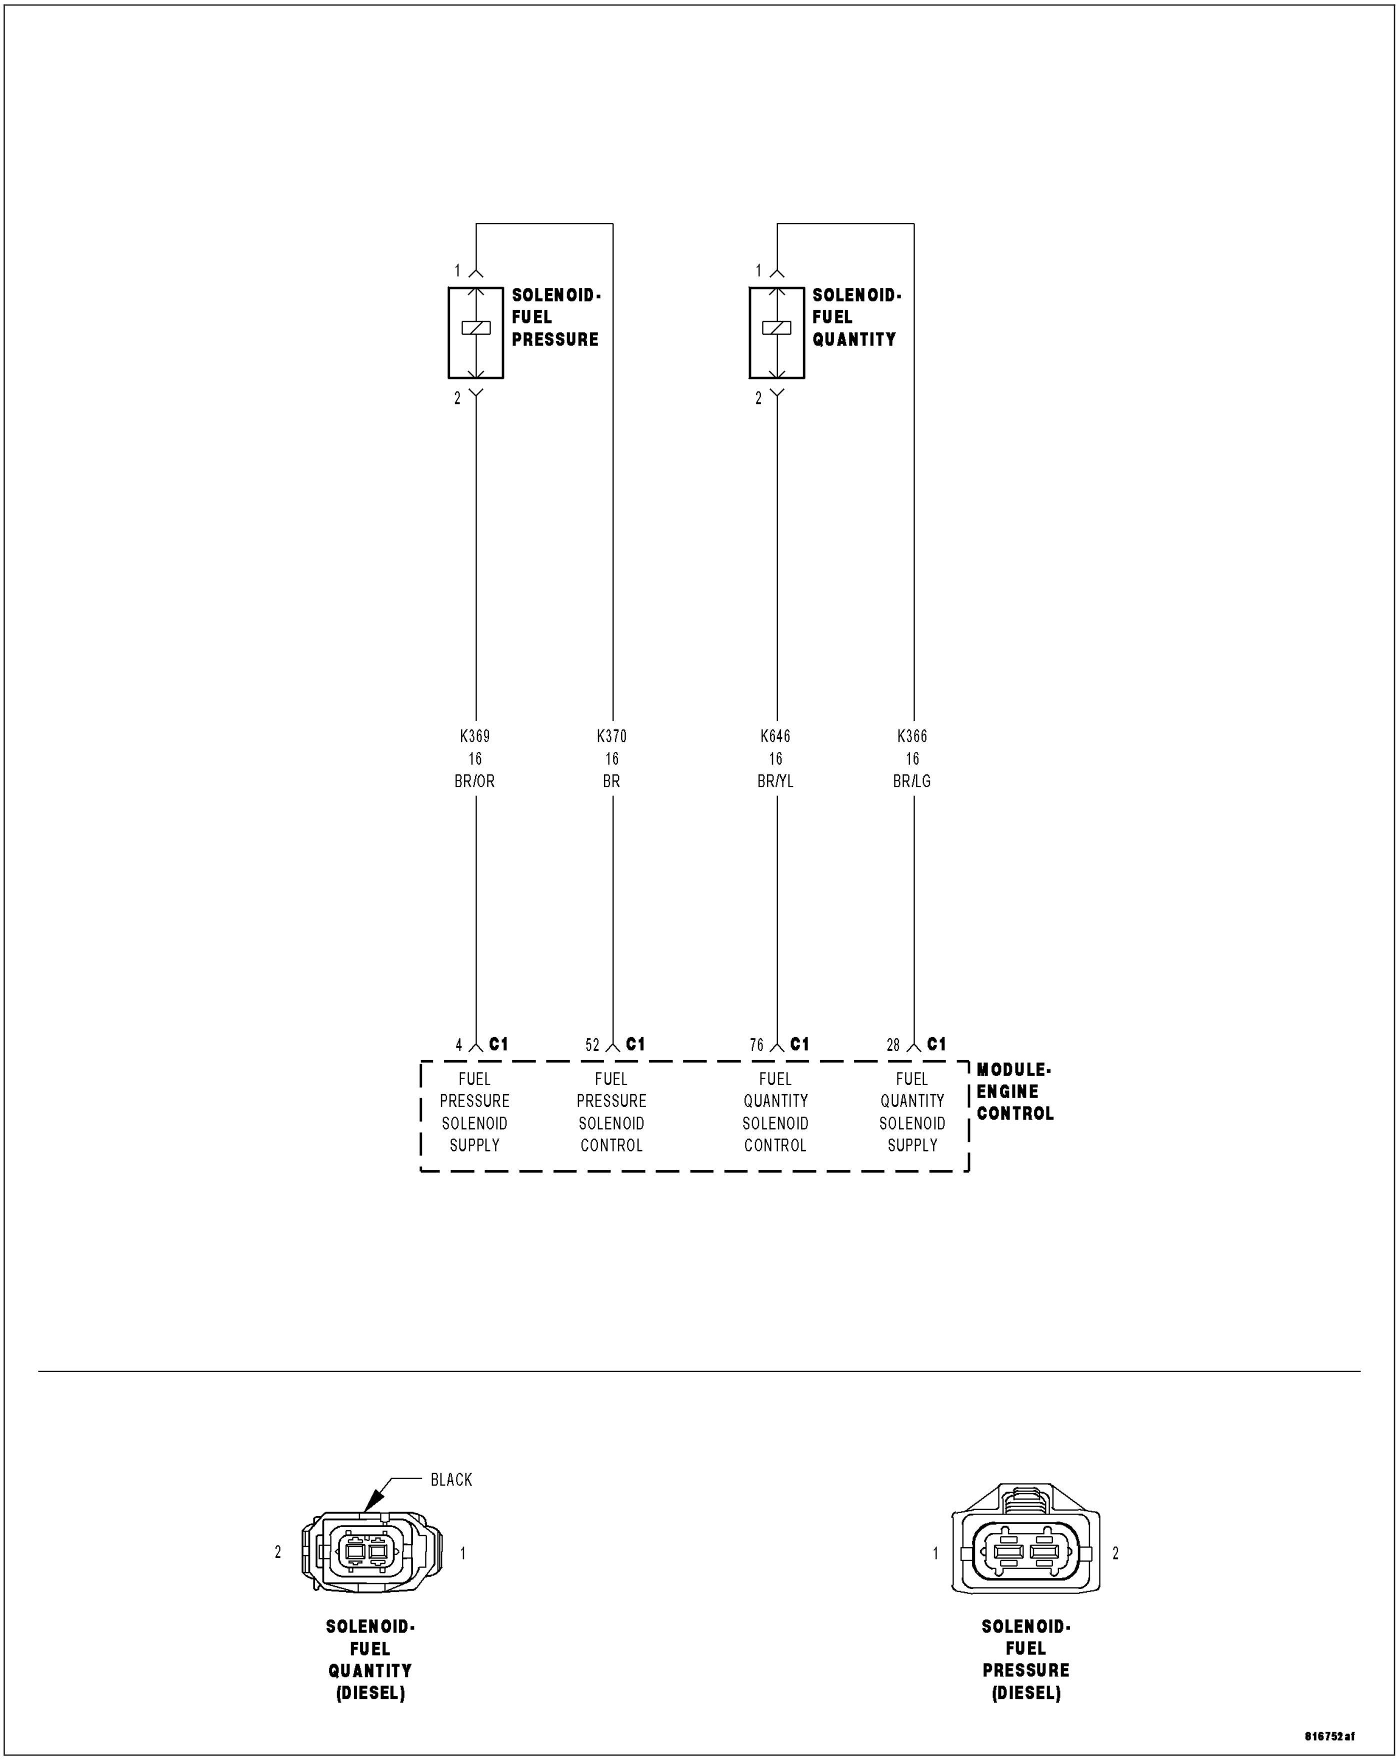
**NOTE: The scan tool should display P0092-FUEL QUANTITY SOLENOID SHORT CIRCUIT.**

**Does the scan tool display the appropriate DTC for each condition?**

**Yes** >> Replace the Fuel Quantity Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0091-FUEL QUANTITY SOLENOID SHORT TO GROUND



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Fuel Quantity Solenoid command off.
- **Set Condition:**
  The ECM detects an open in the Fuel Quantity Solenoid circuit.

| Possible Causes |
|---|
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO GROUND |
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE |
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TOGETHER |
| FUEL QUANTITY SOLENOID OPEN CIRCUIT(S) |
| FUEL QUANTITY SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. VERIFY CURRENT DTC

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL QUANTITY SOLENOID CIRCUIT(S) OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Quantity Solenoid harness connector.

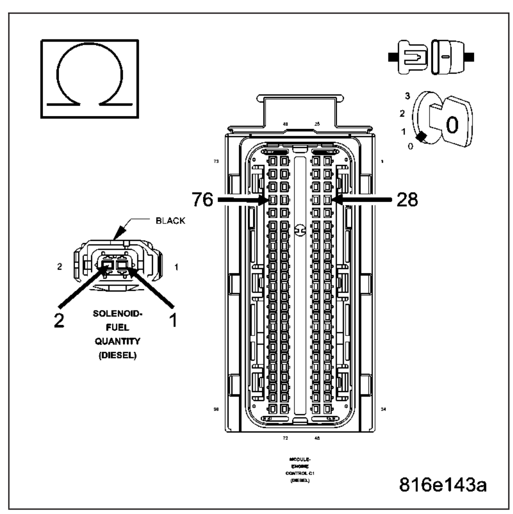
Measure the resistance of each of the Fuel Quantity Solenoid circuits between the ECM harness connector and the Fuel Quantity Solenoid harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 4

**No** >> Repair the circuit(s) that measured above 10.0 ohms for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 4. FUEL QUANTITY SOLENOID

Turn the ignition off.

Disconnect the Fuel Quantity Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P0090-FUEL QUANTITY SOLENOID OPEN CIRCUIT.**

Turn the ignition off.

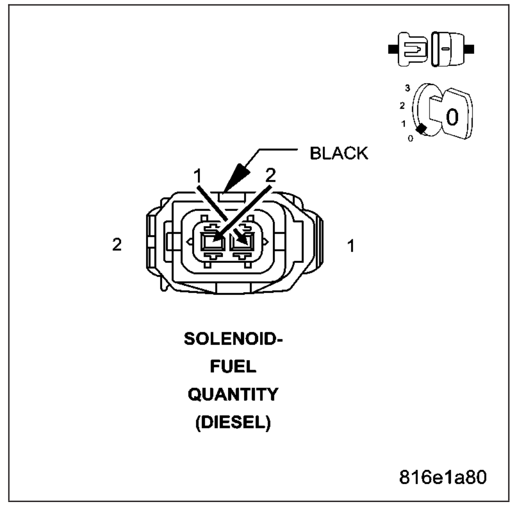
Connect a jumper wire between cavity 1 and cavity 2 of the Fuel Quantity Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P0092-FUEL QUANTITY SOLENOID SHORT CIRCUIT.**

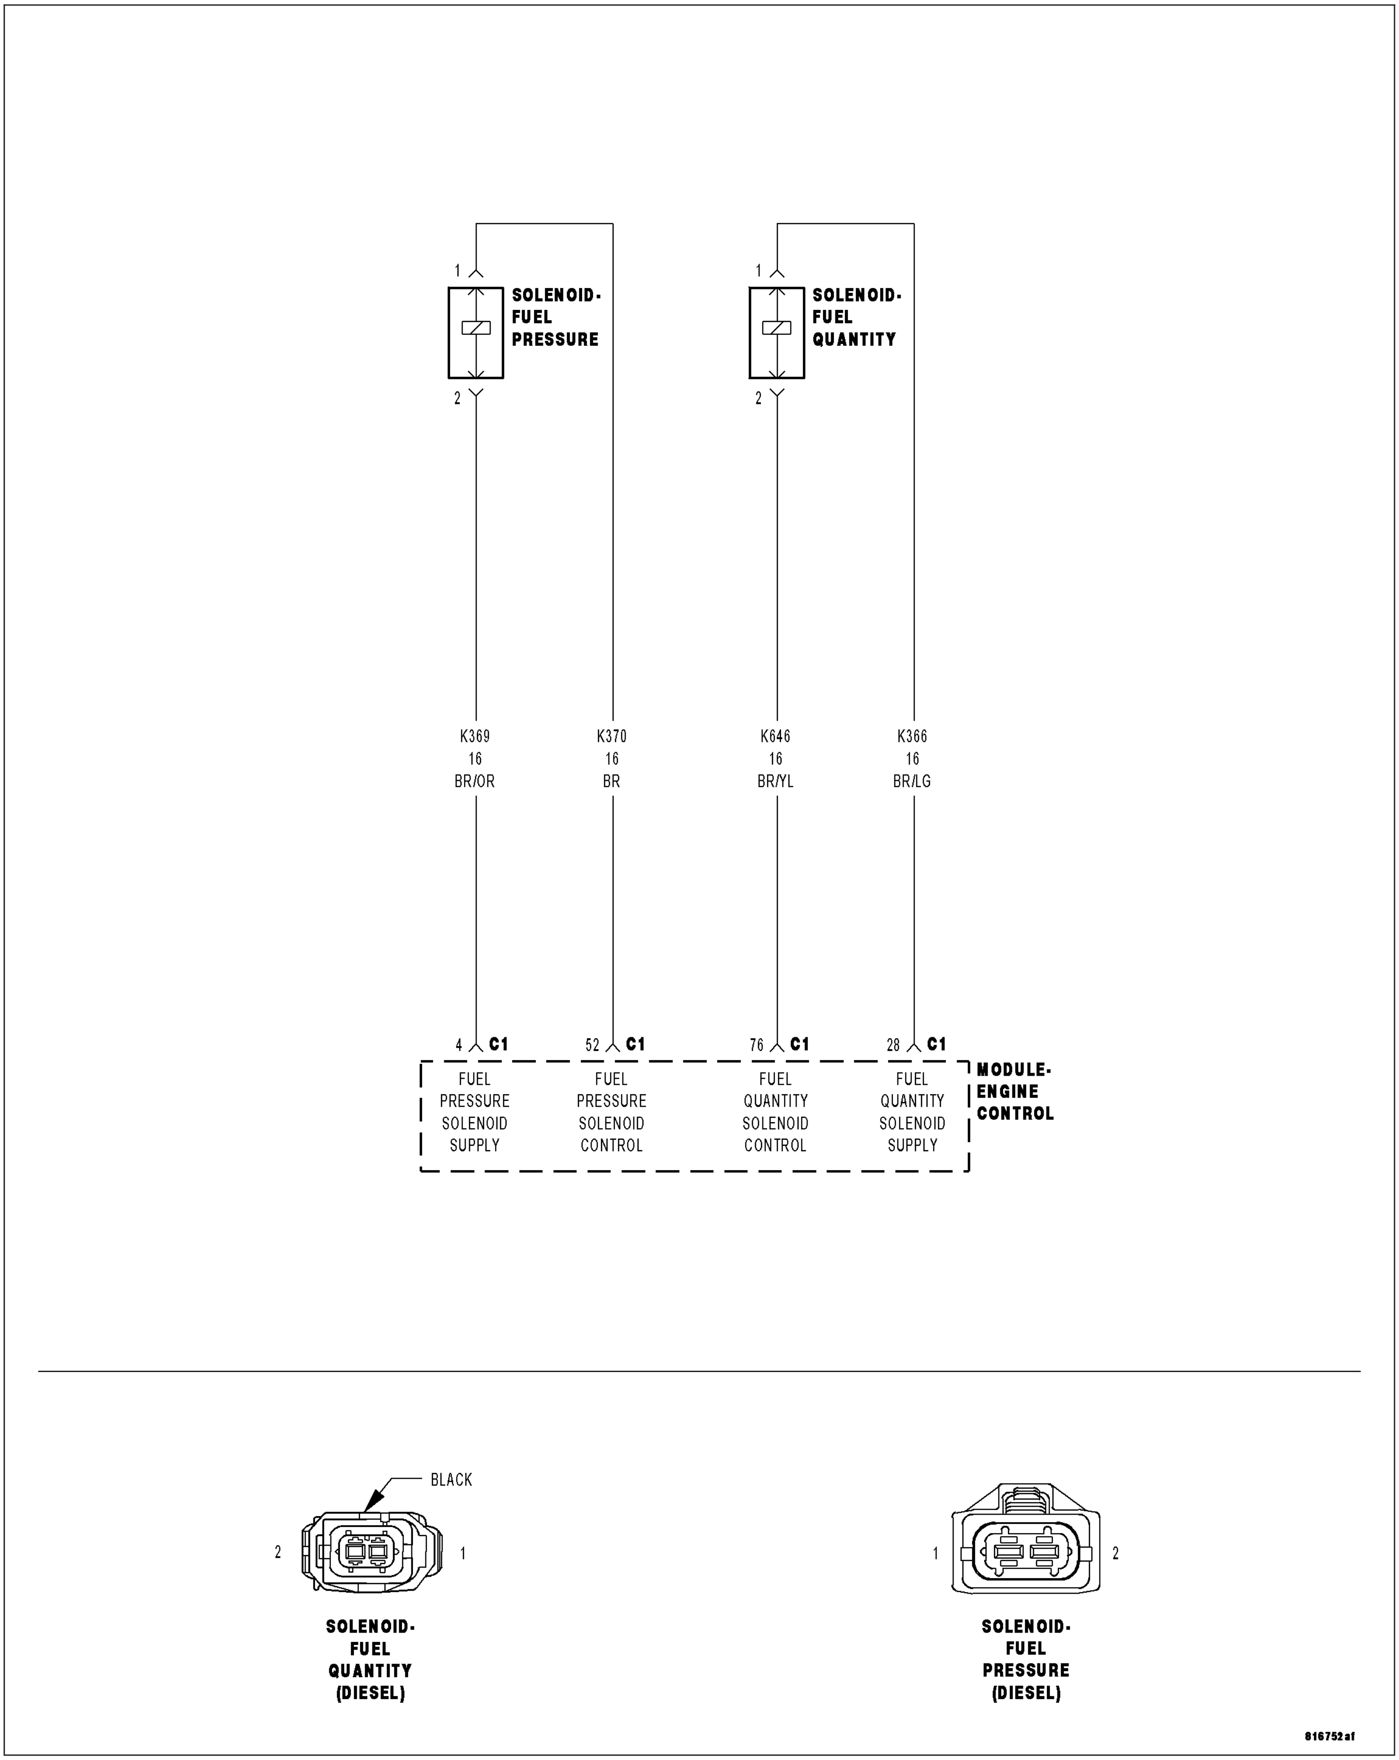


**Does the scan tool display the appropriate DTC for each condition?**

**Yes** >> Replace the Fuel Quantity Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0092-FUEL QUANTITY SOLENOID SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Fuel Quantity Solenoid command on.
- **Set Condition:**
  The ECM detects excessive current in the Fuel Quantity Solenoid circuit.

| Possible Causes |
|---|
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO GROUND |
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE |
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TOGETHER |
| FUEL QUANTITY SOLENOID OPEN CIRCUIT(S) |
| FUEL QUANTITY SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. VERIFY CURRENT DTC

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

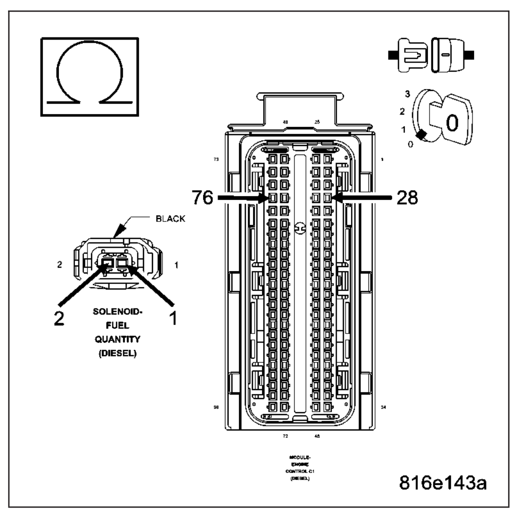
### 3. FUEL QUANTITY SOLENOID CIRCUIT(S) OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Quantity Solenoid harness connector.

Measure the resistance of each of the Fuel Quantity Solenoid circuits between the ECM harness connector and the Fuel Quantity Solenoid harness connector.



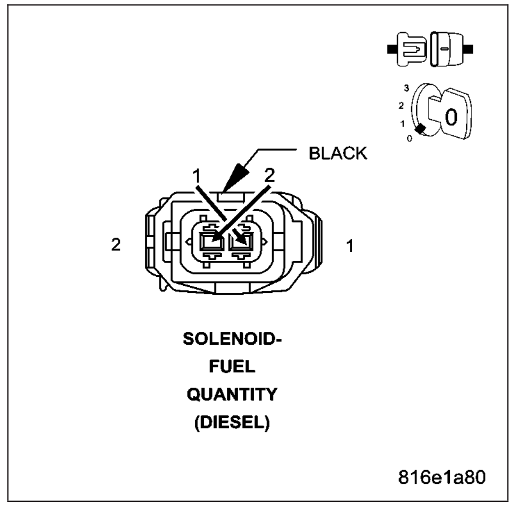
**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 4

**No** >> Repair the circuit(s) that measured above 10.0 ohms for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. FUEL QUANTITY SOLENOID



Turn the ignition off.

Disconnect the Fuel Quantity Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P0090 FUEL QUANTITY SOLENOID OPEN CIRCUIT.**

Turn the ignition off.

Connect a jumper wire between cavity 1 and cavity 2 of the Fuel Quantity Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

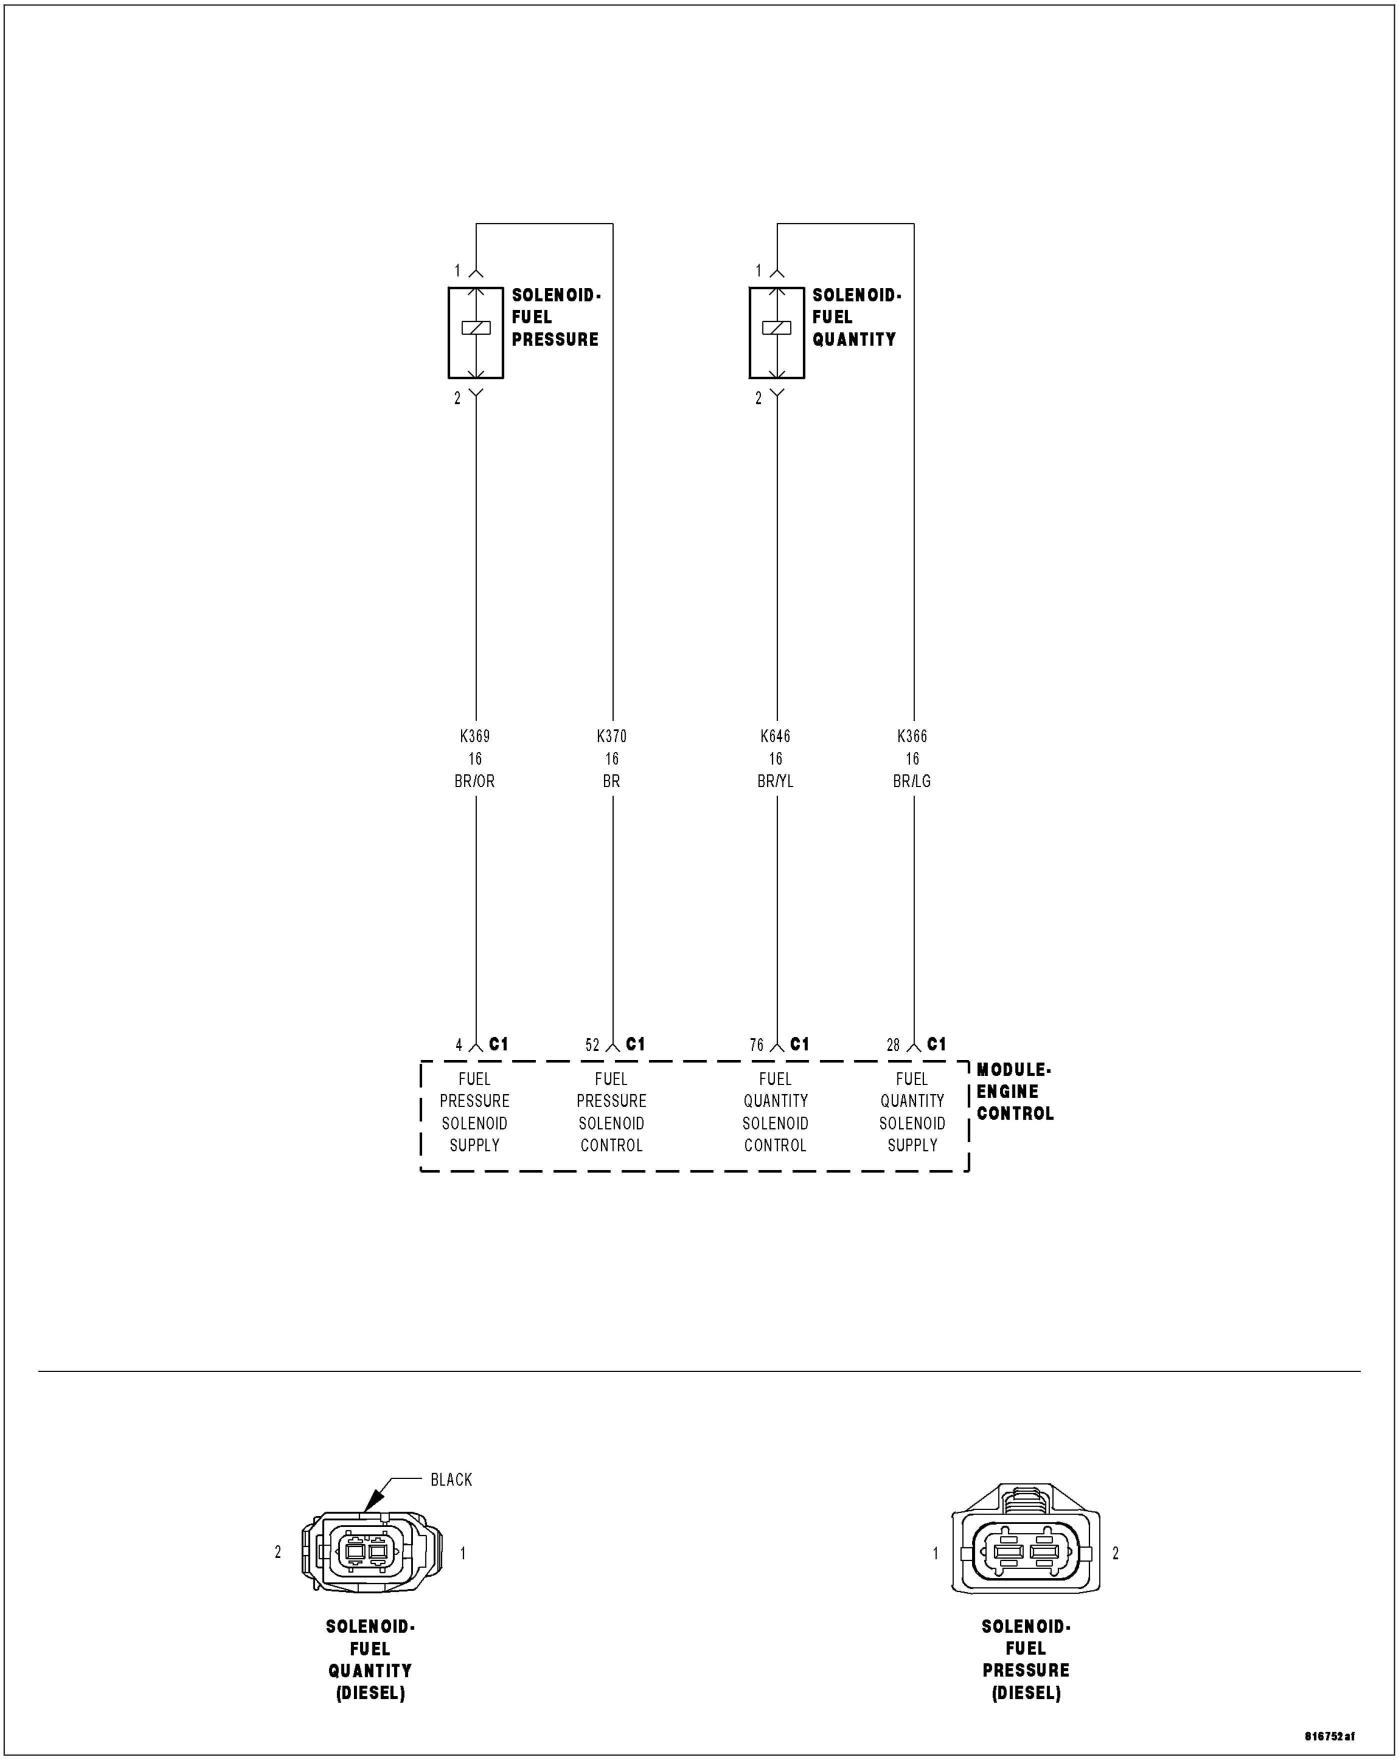
**NOTE: The scan tool should display P0092-FUEL QUANTITY SOLENOID SHORT CIRCUIT.**

**Does the scan tool display the appropriate DTC for each condition?**

**Yes** >> Replace the Fuel Quantity Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0093 - FUEL RAIL PRESSURE MALFUNCTION POSITIVE PRESSURE DEVIATION



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  When the engine is running.
- **Set Condition:**
  The signal from the fuel pressure sensor indicates the actual fuel pressure is above the fuel pressure setpoint.

| Possible Causes |
|---|
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO GROUND |
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE |
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TOGETHER |
| FUEL QUANTITY SOLENOID OPEN CIRCUIT(S) |
| INTERMITTENT CONDITION |
| FUEL QUANTITY SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. VERIFY CURRENT DTC

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle. With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

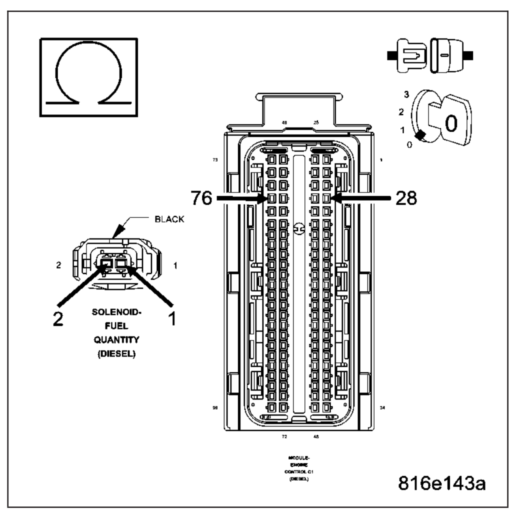
### 3. FUEL QUANTITY SOLENOID CIRCUIT(S) OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Quantity Solenoid harness connector.

Measure the resistance of each of the Fuel Quantity Solenoid circuits between the ECM harness connector and the Fuel Quantity Solenoid harness connector.



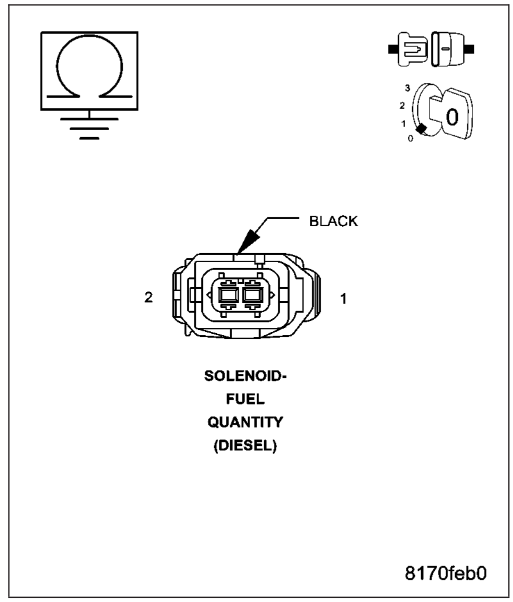
**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 4

**No** >> Repair the circuit(s) that measured above 10.0 ohms for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO GROUND



Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Quantity Solenoid harness connector.

Measure the resistance between ground and each of the Fuel Quantity Solenoid circuits.

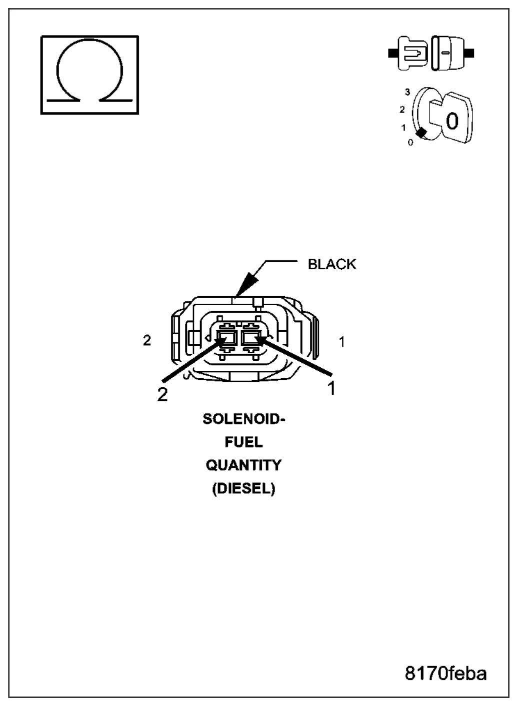
**Is the resistance above 1000 ohms for each measurement?**

**Yes** >> Go To 5

**No** >> Repair the circuit(s) that measured below 1000 ohms for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TOGETHER



Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Quantity Solenoid harness connector.

Measure the resistance between the Fuel Quantity Solenoid circuits.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Fuel Quantity Solenoid circuits for a short together.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the ECM harness connectors.

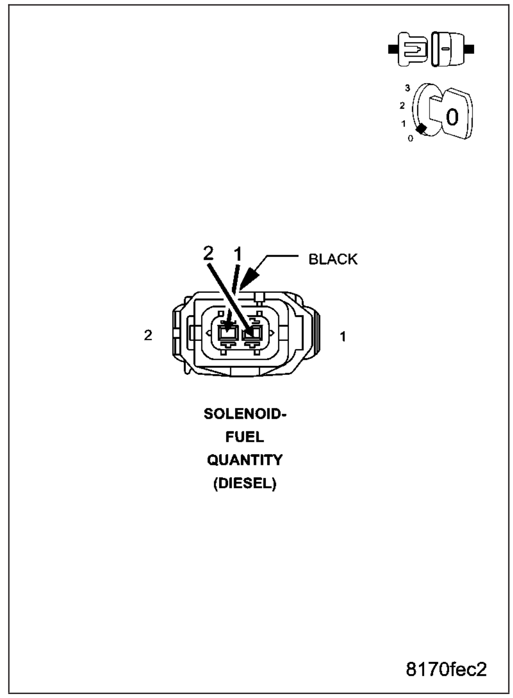
Disconnect the Fuel Quantity Solenoid harness connector.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage each of the Fuel Quantity Solenoid circuits.



**Is the voltage below 1.0 volt for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the circuit(s) that measured above 1.0 volts for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. FUEL QUANTITY SOLENOID

Turn the ignition off.

Disconnect the Fuel Quantity Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P0090-FUEL QUANTITY SOLENOID OPEN CIRCUIT.**

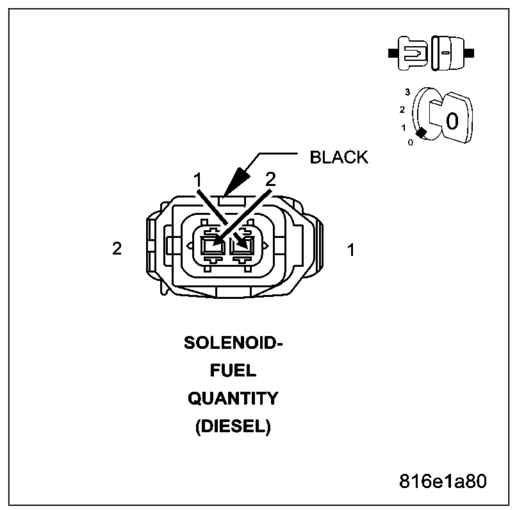
Turn the ignition off.

Connect a jumper wire between cavity 1 and cavity 2 of the Fuel Quantity Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.



**NOTE: The scan tool should display P0092-FUEL QUANTITY SOLENOID SHORT CIRCUIT.**

**Does the scan tool display the appropriate DTC for each condition?**

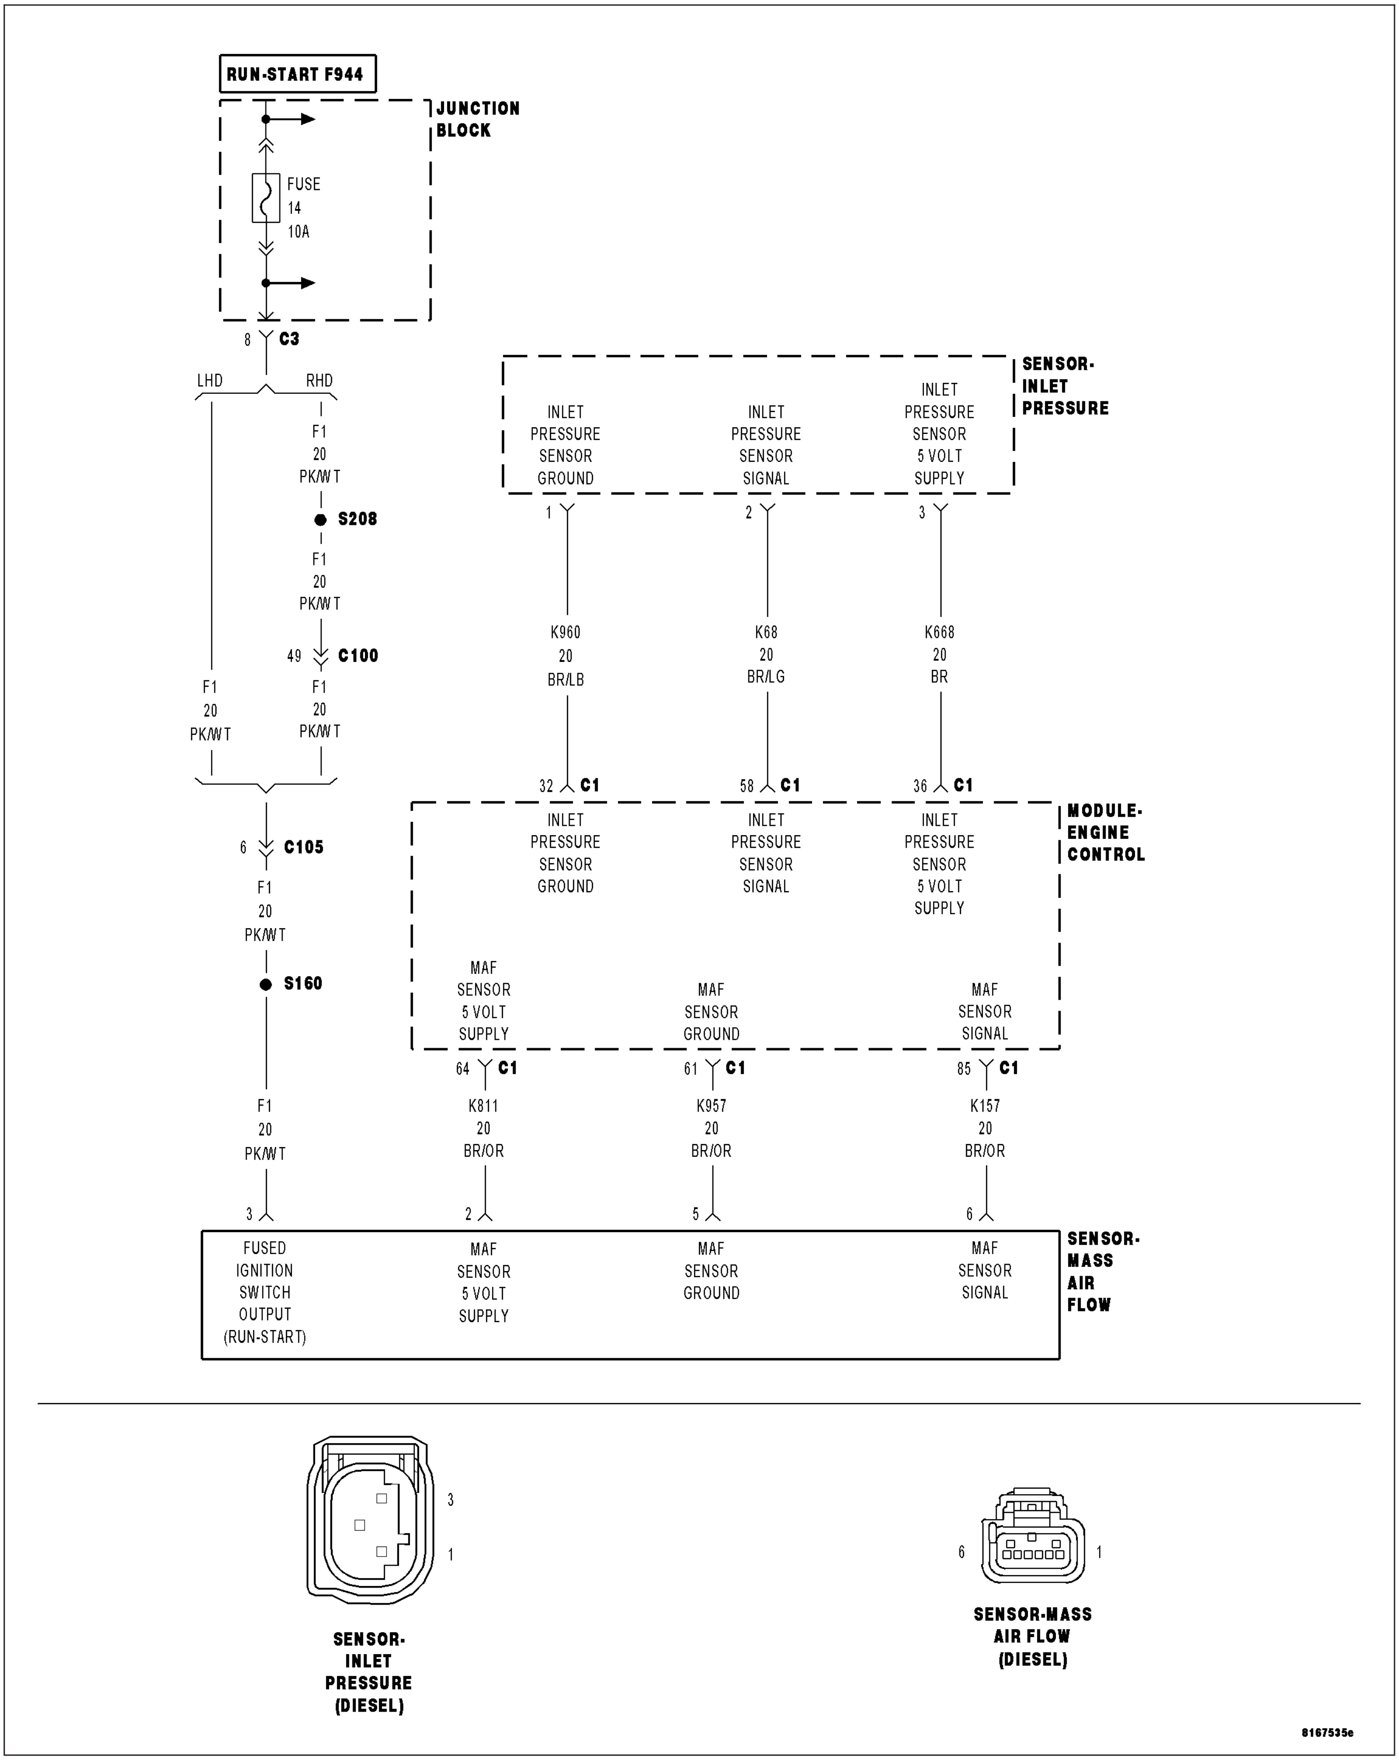
**Yes** >> Replace the Fuel Quantity Solenoid in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0100-MAF SENSOR SIGNAL VOLTAGE TOO HIGH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  Engine speed is between 500 and 5000 rpm.
- **Set Condition:**
  The Mass Air Flow Sensor signal is above 800 kg/h for 0.5 seconds.

| Possible Causes |
|---|
| ASD RELAY OUTPUT CIRCUIT OPEN |
| ECM - 5-VOLT SUPPLY CIRCUIT |
| MAF SENSOR GROUND OPEN |
| MASS AIRFLOW SENSOR |
| MAF SENSOR 5 VOLT SUPPLY CIRCUIT OPEN |
| MAF SENSOR SIGNAL CIRCUIT OPEN |
| MAF SENSOR 5 VOLT SUPPLY CIRCUIT SHORTED TO THE MAF SENSOR GROUND CIRCUIT |
| MAF SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| ECM SENSOR GROUND CIRCUIT OPEN |
| MAF SENSOR 5 VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| MAF SENSOR SIGNAL CIRCUIT SHORTED TO THE MAF SENSOR GROUND CIRCUIT |
| MAF SENSOR 5 VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE |
| MAF SENSOR CIRCUIT SHORTED TO VOLTAGE |
| ECM - MAF SENSOR SIGNAL CIRCUIT |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

**NOTE: Inspect the turbocharger inlet tube between the MAF Sensor and the turbocharger for damage, restriction or poor connection. Any of these conditions can cause a MAF Plausibility DTC.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the scan tool display a Mass Air Flow Sensor DTC?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 2. VERIFY SENSOR 5 VOLT SUPPLY

**NOTE: A malfunctioning EGR system can cause this DTC to set. Refer to symptom Checking the EGR System in the Driveability category to check EGR system operation.**

Turn the ignition off.

Disconnect the MAF Sensor harness connector.

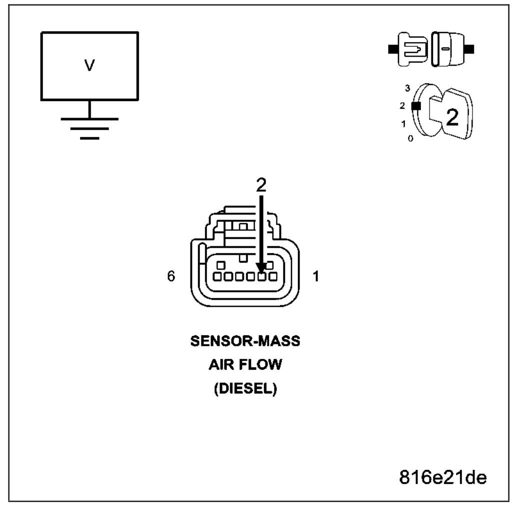
Turn the ignition on.

Measure the voltage of the MAF Sensor 5 Volt Supply circuit in MAF Sensor harness connector.

**Is the voltage between 4.8 and 5.2 volts?**

**Yes** >> Go To 3

**No** >> Go To 11



## 3. MAF SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

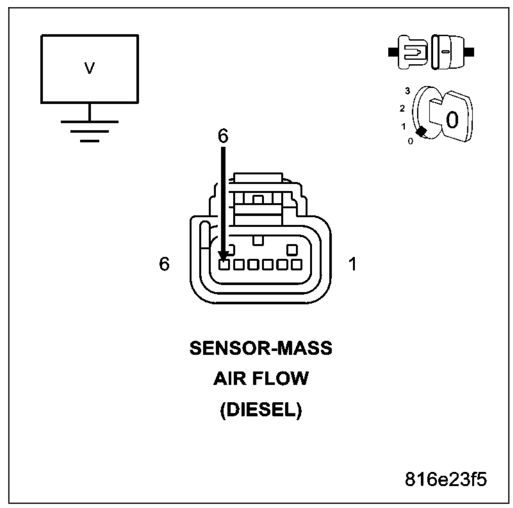
Turn the ignition on.

Measure the voltage of the MAF Sensor Signal circuit.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the MAF Sensor Signal circuit for a short to voltage. Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4



## 4. MAF SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the MAF Sensor harness connector.

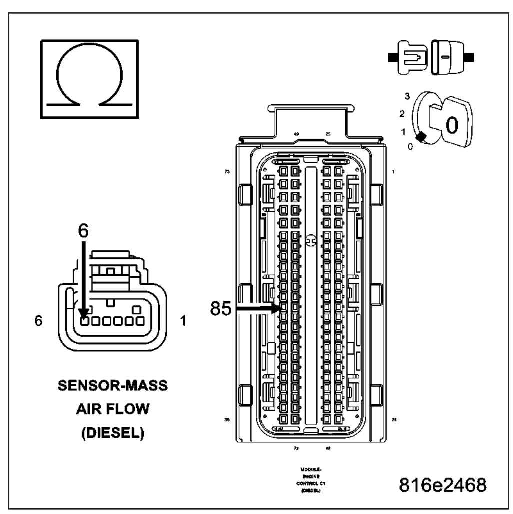
Disconnect the ECM harness connectors.

Measure the resistance of the MAF Sensor Signal circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the MAF Sensor Signal circuit for an open Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 5. MAF SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the MAF Sensor harness connector.

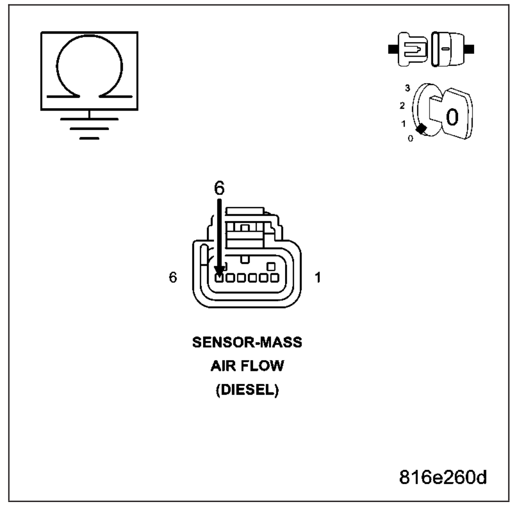
Disconnect the ECM harness connectors.

Measure the resistance between ground and the MAF Sensor Signal circuit.

**Is the resistance below 1000 ohms?**

**Yes** >> Repair the MAF Sensor Signal circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6



## 6. MAF SENSOR SIGNAL CIRCUIT SHORTED TO THE MAF SENSOR GROUND CIRCUIT

Turn the ignition off.

Disconnect the MAF Sensor harness connector.

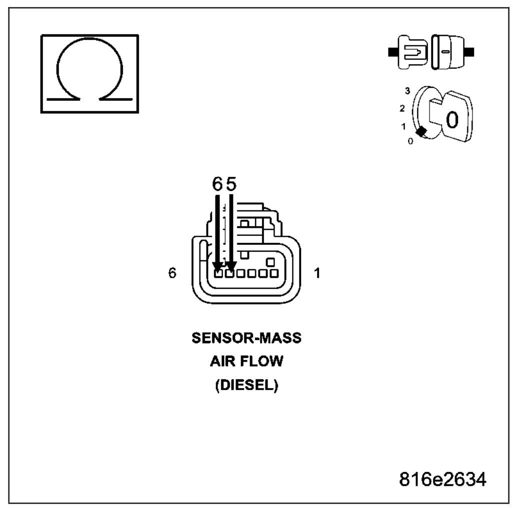
Disconnect the ECM harness connectors.

Measure the resistance between the MAF Sensor Signal circuit and the MAF Sensor Ground circuit at of the MAF Sensor harness connector.

**Is the resistance below 1000 ohms?**

**Yes** >> Repair the MAF Sensor Signal for a short to MAF Sensor Ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 7



## 7. VERIFY MAF SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Connect a jumper wire between MAF Sensor Signal circuit and the 5-volt supply circuit at the MAF Sensor harness connector.

Turn the ignition on.

With the scan tool, read the MAF VOLTS.

**Does the scan tool display between 4.0 and 5.5 volts?**

**Yes** >> Go To 8

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

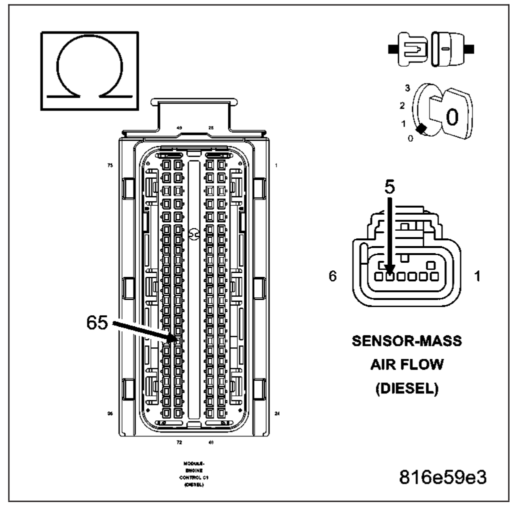
## 8. MAF SENSOR GROUND OPEN

Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the MAF Sensor Ground circuit between the MAF Sensor and the ECM.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the MAF Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

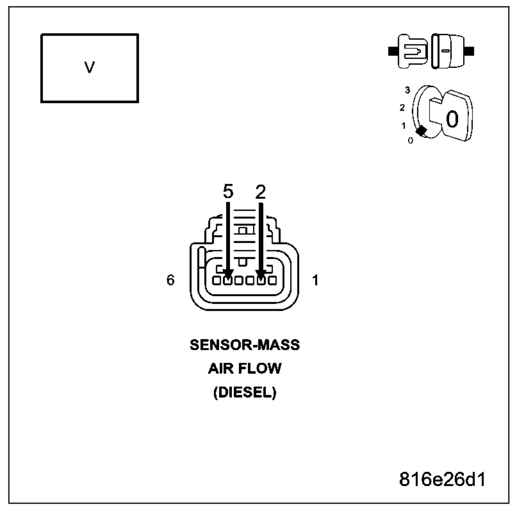
## 9. ECM - SENSOR GROUND OPEN

Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Turn the ignition on.

Measure the voltage between the 5-volt Supply circuit and the MAF Sensor Ground circuit at the MAF Sensor harness connector.



**Is the voltage above 4.5 volts?**

**Yes** >> Go To 10

**No** >> Replace and program the ECM in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 10. ASD RELAY OUTPUT CIRCUIT OPEN

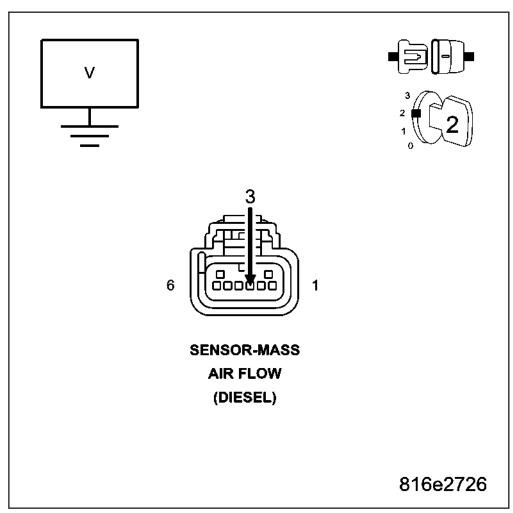
Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Turn the ignition on.

With the scan tool, actuate the ASD Relay.

Measure the voltage of the 12-volt Supply circuit at the MAF Sensor harness connector.



**Is the voltage above 10.0 volts?**

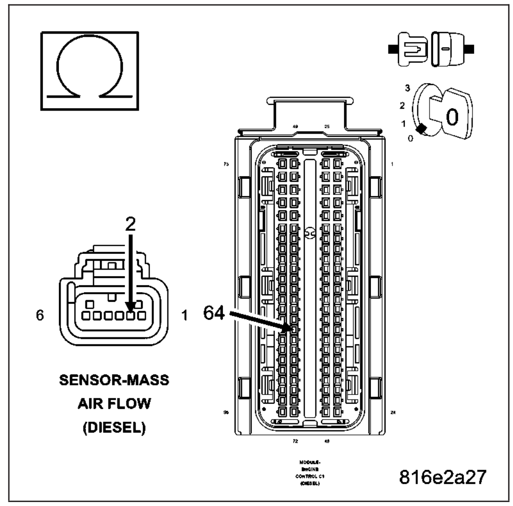
**Yes** >> Replace the MAF Sensor.

Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Repair the ASD Relay Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 11. MAF SENSOR 5 VOLT SUPPLY CIRCUIT OPEN



Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the MAF Sensor 5 Volt Supply circuit.

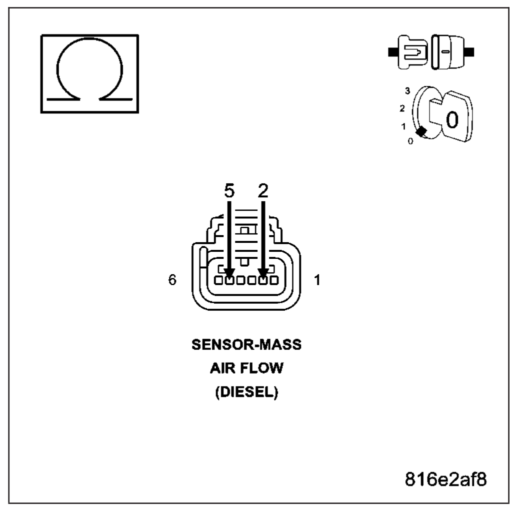
**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 12

**No** >> Repair the MAF Sensor 5 Volt Supply circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 12. MAF SENSOR 5 VOLT SUPPLY CIRCUIT SHORTED TO THE MAF SENSOR GROUND CIRCUIT



Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between the MAF Sensor 5 Volt Supply circuit and the MAF Sensor Ground circuit at the MAF Sensor harness connector.

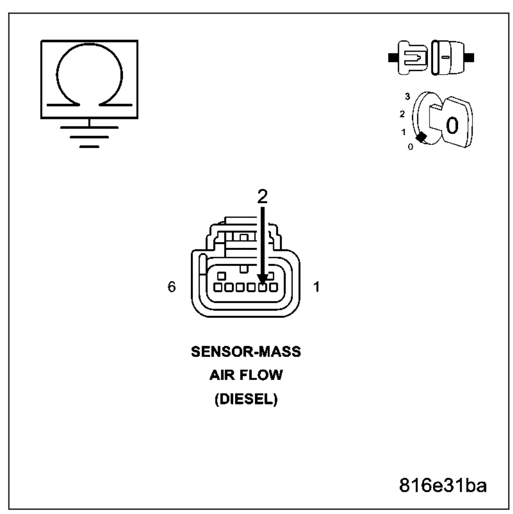
**Is the resistance above 1000 ohms?**

**Yes** >> Go To 13

**No** >> Repair the MAF Sensor 5 Volt Supply circuit for a short to the MAF Sensor Ground circuit.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 13. MAF SENSOR 5 VOLT SUPPLY CIRCUIT SHORTED TO GROUND



Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the MAF Sensor 5 Volt Supply circuit at the MAF harness connector.

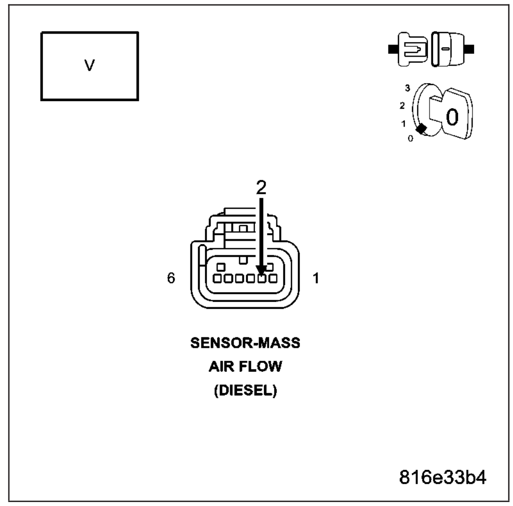
**Is the resistance below 1000 ohms?**

**Yes** >> Repair the MAF Sensor 5 Volt Supply circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 14

## 14. MAF SENSOR 5 VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the MAF Sensor 5 Volt Supply circuit in the ECM harness connector.

**Is the voltage above 1.0 volt?**

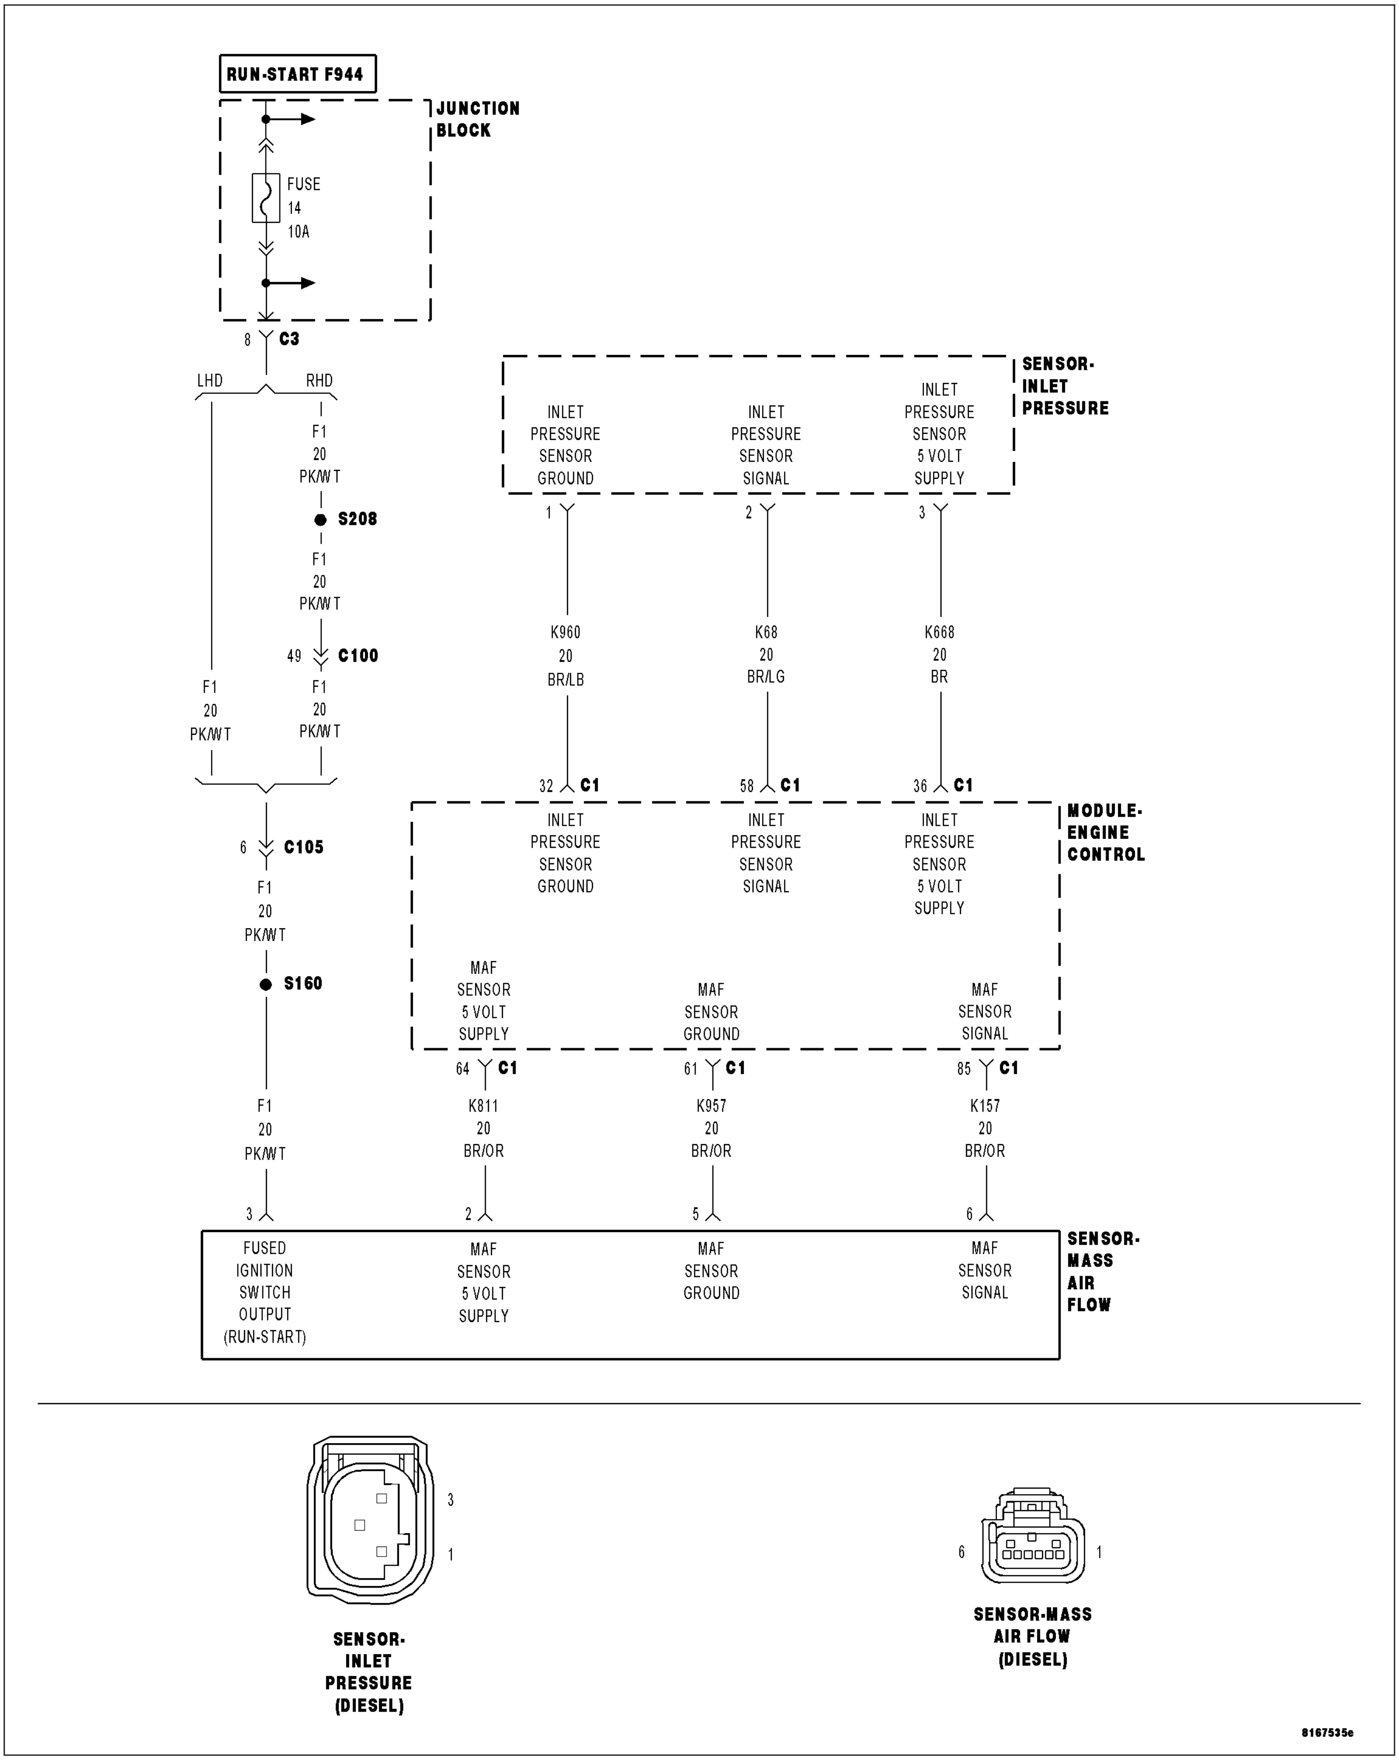
**Yes** >> Repair the MAF Sensor 5 Volt Supply circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0100-MAF SENSOR SIGNAL VOLTAGE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  Engine speed is between 500 and 5000 rpm.
- **Set Condition:**
  The Mass Air Flow Sensor signal is above 800 kg/h for 0.5 seconds.

| Possible Causes |
| --- |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| ECM - 5-VOLT SUPPLY CIRCUIT |
| MAF SENSOR GROUND OPEN |
| MASS AIRFLOW SENSOR |
| MAF SENSOR 5 VOLT SUPPLY CIRCUIT OPEN |
| MAF SENSOR SIGNAL CIRCUIT OPEN |
| MAF SENSOR 5 VOLT SUPPLY CIRCUIT SHORTED TO THE MAF SENSOR GROUND CIRCUIT |
| MAF SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| ECM SENSOR GROUND CIRCUIT OPEN |
| MAF SENSOR 5 VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| MAF SENSOR SIGNAL CIRCUIT SHORTED TO THE MAF SENSOR GROUND CIRCUIT |
| MAF SENSOR 5 VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE |
| MAF SENSOR CIRCUIT SHORTED TO VOLTAGE |
| ECM - MAF SENSOR SIGNAL CIRCUIT |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

**NOTE: Inspect the turbocharger inlet tube between the MAF Sensor and the turbocharger for damage, restriction or poor connection. Any of these conditions can cause a MAF Plausibility DTC.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the scan tool display a Mass Air Flow Sensor DTC?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 2. VERIFY SENSOR 5 VOLT SUPPLY

**NOTE: A malfunctioning EGR system can cause this DTC to set. Refer to symptom Checking the EGR System in the Driveability category to check EGR system operation.**

Turn the ignition off.

Disconnect the MAF Sensor harness connector.

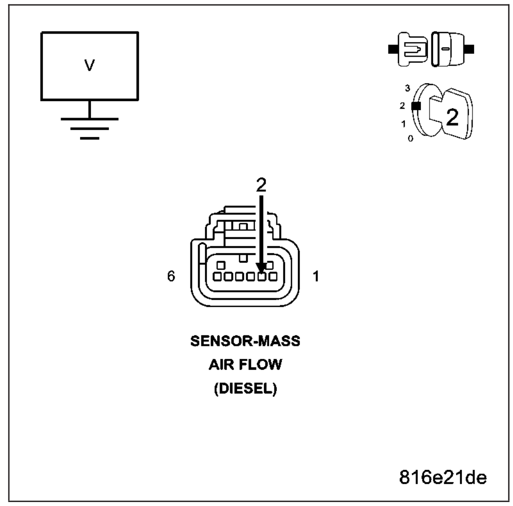
Turn the ignition on.

Measure the voltage of the MAF Sensor 5 Volt Supply circuit in MAF Sensor harness connector.

**Is the voltage between 4.8 and 5.2 volts?**

**Yes** >> Go To 3

**No** >> Go To 11



## 3. MAF SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

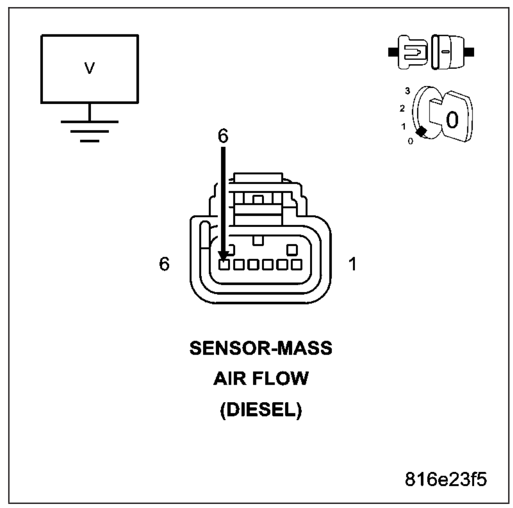
Turn the ignition on.

Measure the voltage of the MAF Sensor Signal circuit.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the MAF Sensor Signal circuit for a short to voltage. Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4



## 4. MAF SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the MAF Sensor harness connector.

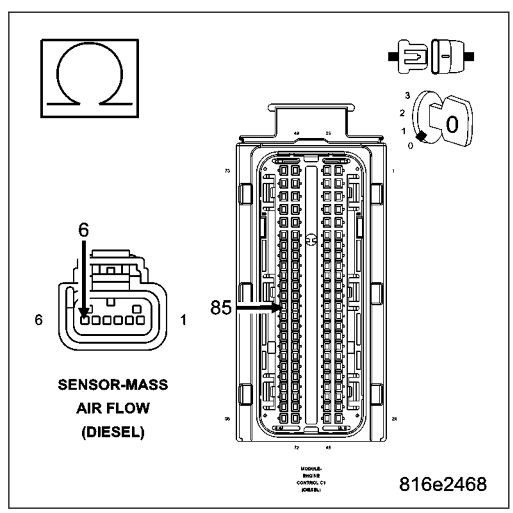
Disconnect the ECM harness connectors.

Measure the resistance of the MAF Sensor Signal circuit.

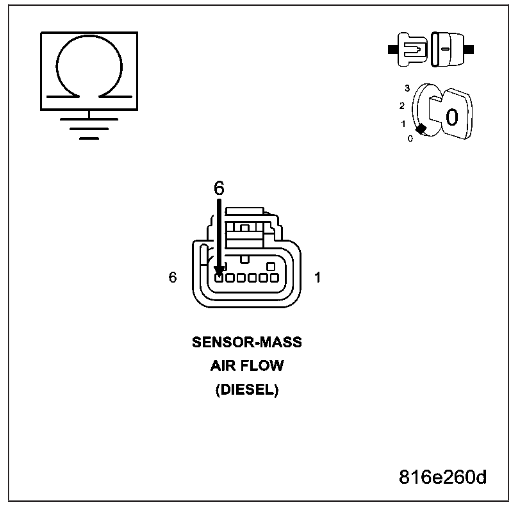
**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the MAF Sensor Signal circuit for an open Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 5. MAF SENSOR SIGNAL CIRCUIT SHORTED TO GROUND



Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Disconnect the ECM harness connectors.

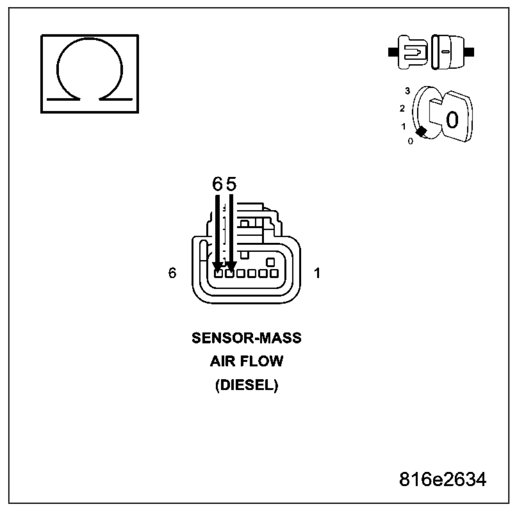
Measure the resistance between ground and the MAF Sensor Signal circuit.

**Is the resistance below 1000 ohms?**

**Yes** >> Repair the MAF Sensor Signal circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. MAF SENSOR SIGNAL CIRCUIT SHORTED TO THE MAF SENSOR GROUND CIRCUIT



Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between the MAF Sensor Signal circuit and the MAF Sensor Ground circuit at of the MAF Sensor harness connector.

**Is the resistance below 1000 ohms?**

**Yes** >> Repair the MAF Sensor Signal for a short to MAF Sensor Ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 7

## 7. VERIFY MAF SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Connect a jumper wire between MAF Sensor Signal circuit and the 5-volt supply circuit at the MAF Sensor harness connector.

Turn the ignition on.

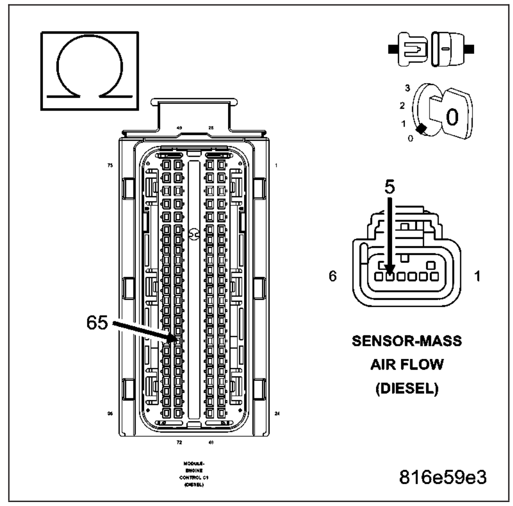
With the scan tool, read the MAF VOLTS.

**Does the scan tool display between 4.0 and 5.5 volts?**

**Yes** >> Go To 8

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 8. MAF SENSOR GROUND OPEN



Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the MAF Sensor Ground circuit between the MAF Sensor and the ECM.

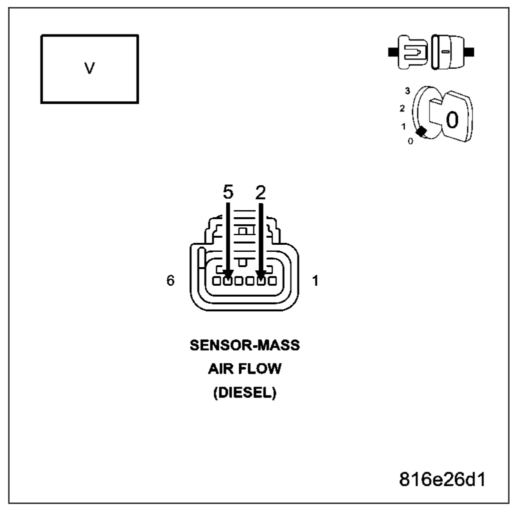
**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the MAF Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 9. ECM - SENSOR GROUND OPEN



Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Turn the ignition on.

Measure the voltage between the 5-volt Supply circuit and the MAF Sensor Ground circuit at the MAF Sensor harness connector.

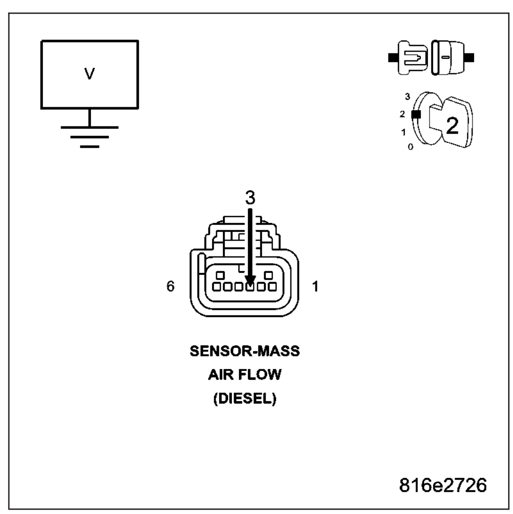
**Is the voltage above 4.5 volts?**

**Yes** >> Go To 10

**No** >> Replace and program the ECM in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 10. ASD RELAY OUTPUT CIRCUIT OPEN



Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Turn the ignition on.

With the scan tool, actuate the ASD Relay.

Measure the voltage of the 12-volt Supply circuit at the MAF Sensor harness connector.

**Is the voltage above 10.0 volts?**

**Yes** >> Replace the MAF Sensor.

Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Repair the ASD Relay Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

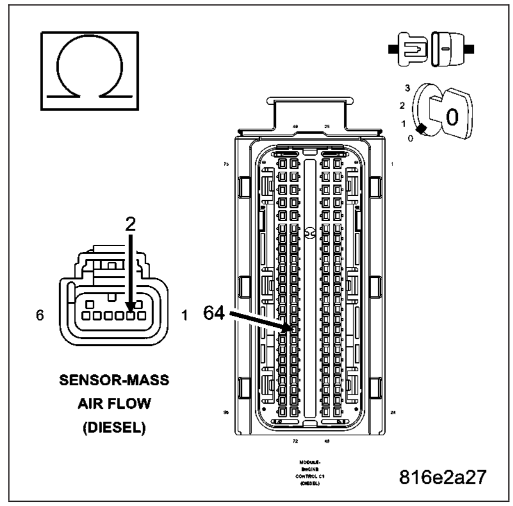
## 11. MAF SENSOR 5 VOLT SUPPLY CIRCUIT OPEN

Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the MAF Sensor 5 Volt Supply circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 12

**No** >> Repair the MAF Sensor 5 Volt Supply circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

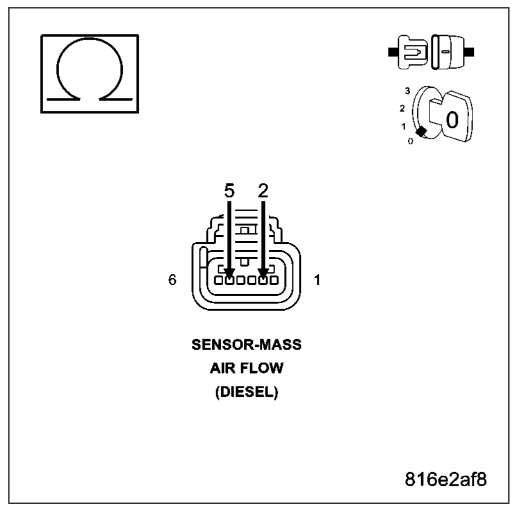
## 12. MAF SENSOR 5 VOLT SUPPLY CIRCUIT SHORTED TO THE MAF SENSOR GROUND CIRCUIT

Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between the MAF Sensor 5 Volt Supply circuit and the MAF Sensor Ground circuit at the MAF Sensor harness connector.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 13

**No** >> Repair the MAF Sensor 5 Volt Supply circuit for a short to the MAF Sensor Ground circuit.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

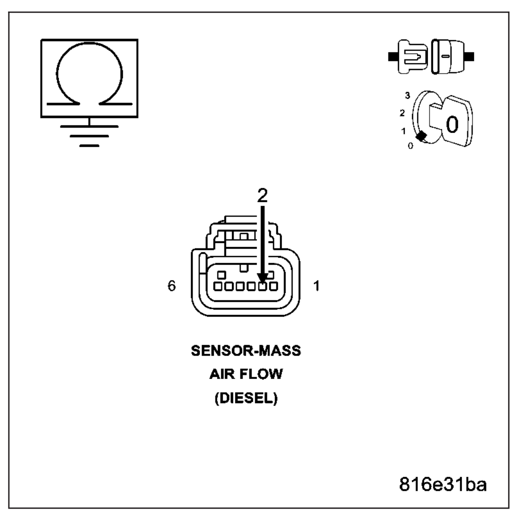
## 13. MAF SENSOR 5 VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the MAF Sensor 5 Volt Supply circuit at the MAF harness connector.

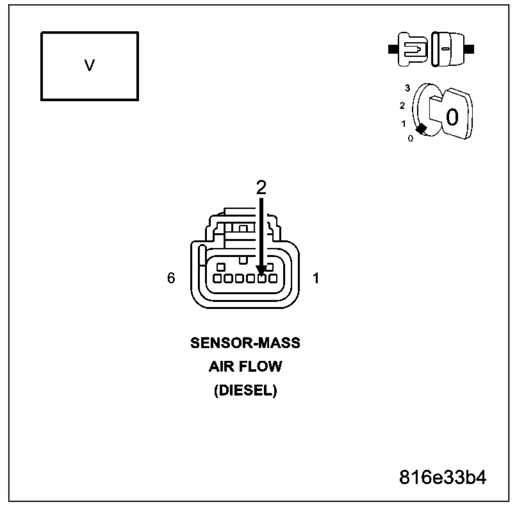


**Is the resistance below 1000 ohms?**

**Yes** >> Repair the MAF Sensor 5 Volt Supply circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 14

## 14. MAF SENSOR 5 VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the MAF Sensor 5 Volt Supply circuit.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the MAF Sensor 5 Volt Supply circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0101-MAF SENSOR SIGNAL NEGATIVE DEVIATION

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  Engine temperature between 59.9°C and 99.9°C. Intake Air Temperature reading is steady. Atmospheric pressure below 1500 hpa. Boost pressure is between 750 hpa and 2400 hpa.
- **Set Condition:**
  The MAF Sensor reading is below the calibrated map value for more than 2.0 seconds.

| Possible Causes |
|---|
| AIR FILTER |
| AIR RESTRICTION |
| CHECKING FOR AIR LEAKS |
| EGR VALVE |
| MASS AIRFLOW SENSOR |
| INTERMITTENT CONDITION |

### Diagnostic Test

#### 1. VERIFY ACTIVE DTC

**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

**NOTE: Inspect all air intake and turbocharger related tubes for damage, restriction or poor connection. Any of these conditions can cause a this DTC to set.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the scan tool display a Mass Air Flow Sensor DTC?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

#### 2. AIR FILTER

Turn the ignition off.

Remove and inspect the Air Filter for soiling or excessive dirt and debris which may cause air flow restriction.

**Were any of these problems found?**

**Yes** >> Replace the Air Filter element.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. AIR RESTRICTION

**NOTE: Inspect all air intake, crankcase vent and turbocharger related tubes for damage, restriction or poor connection. Any of these conditions can cause a this DTC to set.**

**NOTE: Inspect the exhaust system and related tubes for damage, restriction or poor connection. Any of these conditions can cause a this DTC to set.**

Turn the ignition off.

Inspect the intake system, exhaust system and related tubes and connections.

**Were any problems found?**

**Yes** >> Repair or replace as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. CHECKING FOR AIR LEAKS

Turn the ignition off.

Remove the Inlet Pressure Sensor.

Connect smoke machine 84-04 to the Inlet Pressure Sensor port in the intake duct and begin injecting smoke into the intake system.

Observe all intake system components for evidence of smoke leakage.

**Is there evidence of smoke leakage?**

**Yes** >> Repair or replace as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. EGR VALVE

Turn the ignition off.

**NOTE: An EGR Valve that is stuck partially open can cause this DTC to set. Hard starting, rough running and black smoke from the tailpipe are signs of an EGR Valve that is stuck open.**

While starting and test driving the vehicle, observe for the conditions mentioned in the note above.

**Does the vehicle exhibit these conditions?**

**Yes** >> Replace the EGR Valve.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the MAF Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0101-MAF SENSOR SIGNAL POSITIVE DEVIATION

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  Engine temperature between 59.9°C and 99.9°C. Intake Air Temperature reading is steady. Atmospheric pressure below 1500 hpa. Boost pressure is between 750 hpa and 2400 hpa.
- **Set Condition:**
  The MAF Sensor reading is above the calibrated map value for more than 2.0 seconds.

| Possible Causes |
|---|
| AIR FILTER |
| AIR RESTRICTION |
| CHECKING FOR AIR LEAKS |
| EGR VALVE |
| MASS AIRFLOW SENSOR |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

**NOTE: Inspect all air intake and turbocharger related tubes for damage, restriction or poor connection. Any of these conditions can cause a this DTC to set.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the scan tool display a Mass Air Flow Sensor DTC?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. AIR FILTER

Turn the ignition off.

Remove and inspect the Air Filter for soiling or excessive dirt and debris which may cause air flow restriction.

**Were any of these problems found?**

**Yes** >> Replace the Air Filter element.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. AIR RESTRICTION

**NOTE: Inspect all air intake, crankcase vent and turbocharger related tubes for damage, restriction or poor connection. Any of these conditions can cause a this DTC to set.**

**NOTE: Inspect the exhaust system and related tubes for damage, restriction or poor connection. Any of these conditions can cause a this DTC to set.**

Turn the ignition off.

Inspect the intake system, exhaust system and related tubes and connections.

**Were any problems found?**

**Yes** >> Repair or replace as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. CHECKING FOR AIR LEAKS

Turn the ignition off.

Remove the Inlet Pressure Sensor.

Connect smoke machine 84-04 to the Inlet Pressure Sensor port in the intake duct and begin injecting smoke into the intake system.

Observe all intake system components for evidence of smoke leakage.

**Is there evidence of smoke leakage?**

**Yes** >> Repair or replace as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. EGR VALVE

Turn the ignition off.

**NOTE: An EGR Valve that is stuck partially open can cause this DTC to set. Hard starting, rough running and black smoke from the tailpipe are signs of an EGR Valve that is stuck open.**

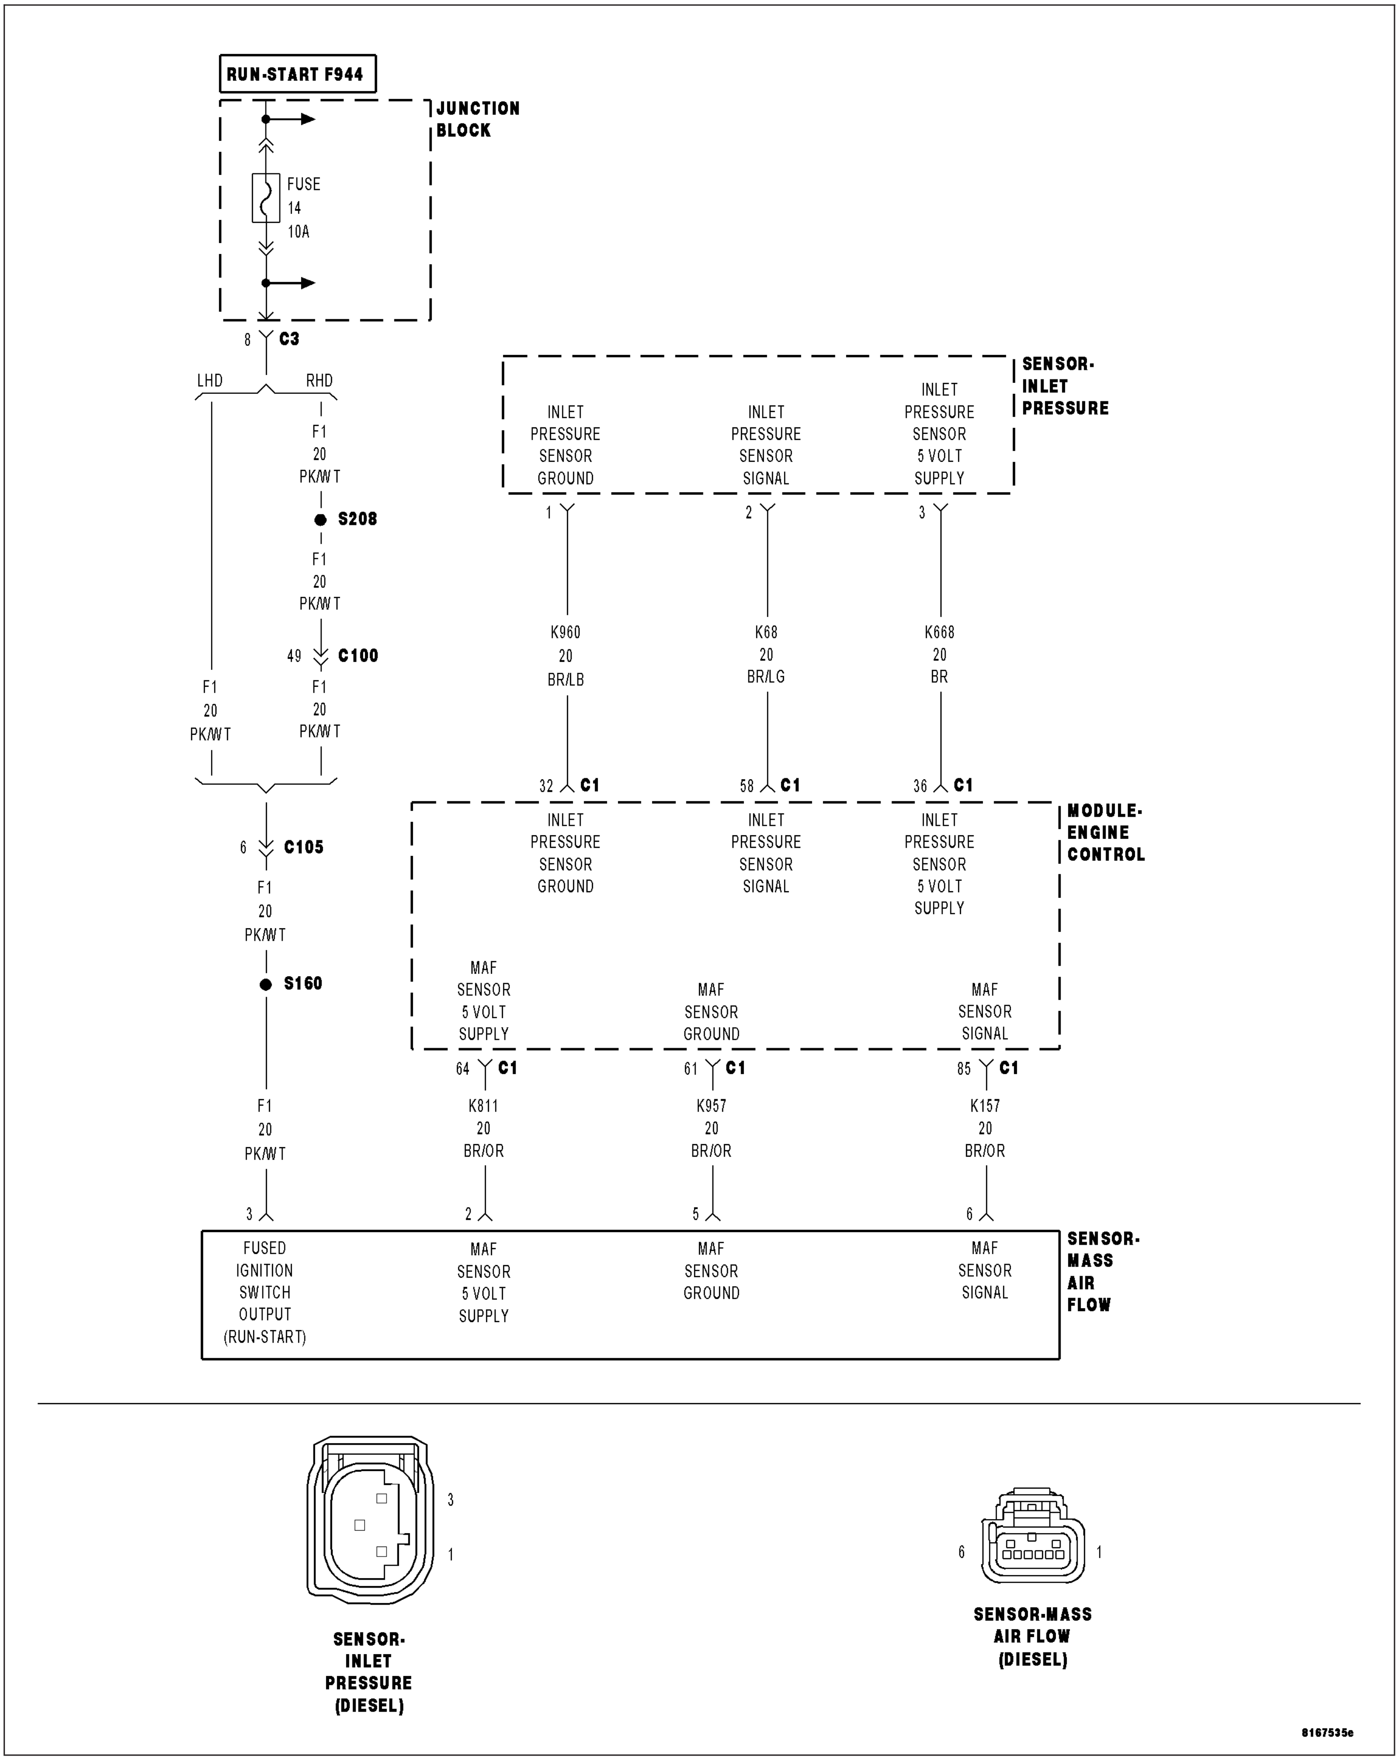
While starting and test driving the vehicle, observe for the conditions mentioned in the note above.

**Does the vehicle exhibit these conditions?**

**Yes** >> Replace the EGR Valve.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the MAF Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0105-INLET PRESSURE SENSOR SIGNAL PLAUSIBILITY



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on. No other IAT DTC's present in the ECM. Engine speed below 800 rpm.
- **Set Condition:**
  The difference between the Inlet Pressure Sensor signal and the Atmospheric Pressure Sensor signal is 3500 hpa for 5.0 seconds.

| Possible Causes |
|---|
| AIR FILTER |
| AIR RESTRICTION |
| INTERMITTENT CONDITION |
| HIGH RESISTANCE IN THE INLET PRESSURE SENSOR SIGNAL CIRCUIT |
| HIGH RESISTANCE IN THE INLET PRESSURE SENSOR GROUND CIRCUIT |
| HIGH RESISTANCE IN THE INLET PRESSURE SENSOR 5-VOLT SUPPLY CIRCUIT |
| INLET PRESSURE SENSOR |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Turn the ignition off, wait 30 seconds.

Test drive the vehicle.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. AIR FILTER

Turn the ignition off.

Remove and inspect the Air Filter for soiling or excessive dirt and debris which may cause air flow restriction.

**Were any of these problems found?**

**Yes** >> Replace the Air Filter element.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. AIR RESTRICTION

**NOTE: Inspect all air intake and turbocharger related tubes for damage, restriction or poor connection. Any of these conditions can cause a this DTC to set.**

Inspect all air intake and turbocharger related tubes and connections.

**were any problems found?**

**Yes** >> Repair or replace as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. HIGH RESISTANCE IN THE INLET PRESSURE SENSOR SIGNAL CIRCUIT

Disconnect the Inlet Pressure Sensor harness connector.

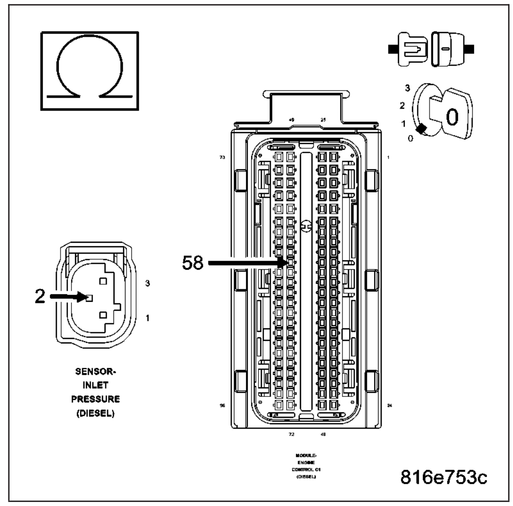
Disconnect the ECM harness connectors.

Measure the resistance of the Inlet Pressure Sensor Signal circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the Inlet Pressure Sensor Signal circuit for high resistance.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



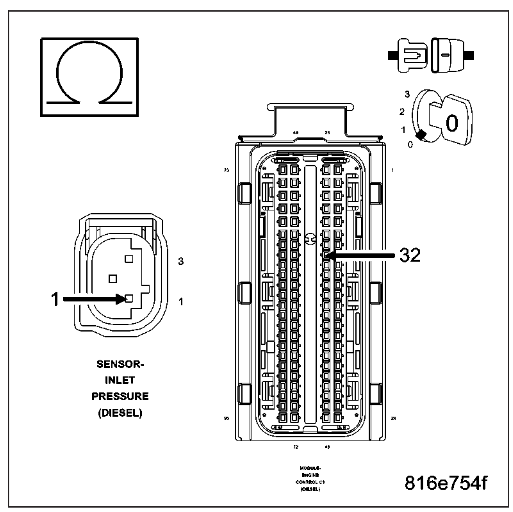
## 5. HIGH RESISTANCE IN THE INLET PRESSURE SENSOR GROUND CIRCUIT

Measure the resistance of the Inlet Pressure Sensor Ground circuit.

**Is the resistance below 10.0 ohms?**

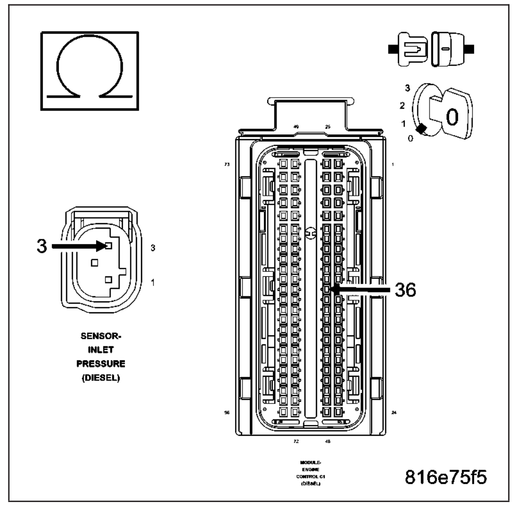
**Yes** >> Go To 6

**No** >> Repair the Inlet Pressure Sensor Ground circuit for high resistance.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 6. INLET PRESSURE SENSOR 5-VOLT SUPPLY CIRCUIT HIGH RESISTANCE

Measure the resistance of the Inlet Pressure Sensor 5-volt Supply circuit.



**Is the resistance below 10.0 ohms?**

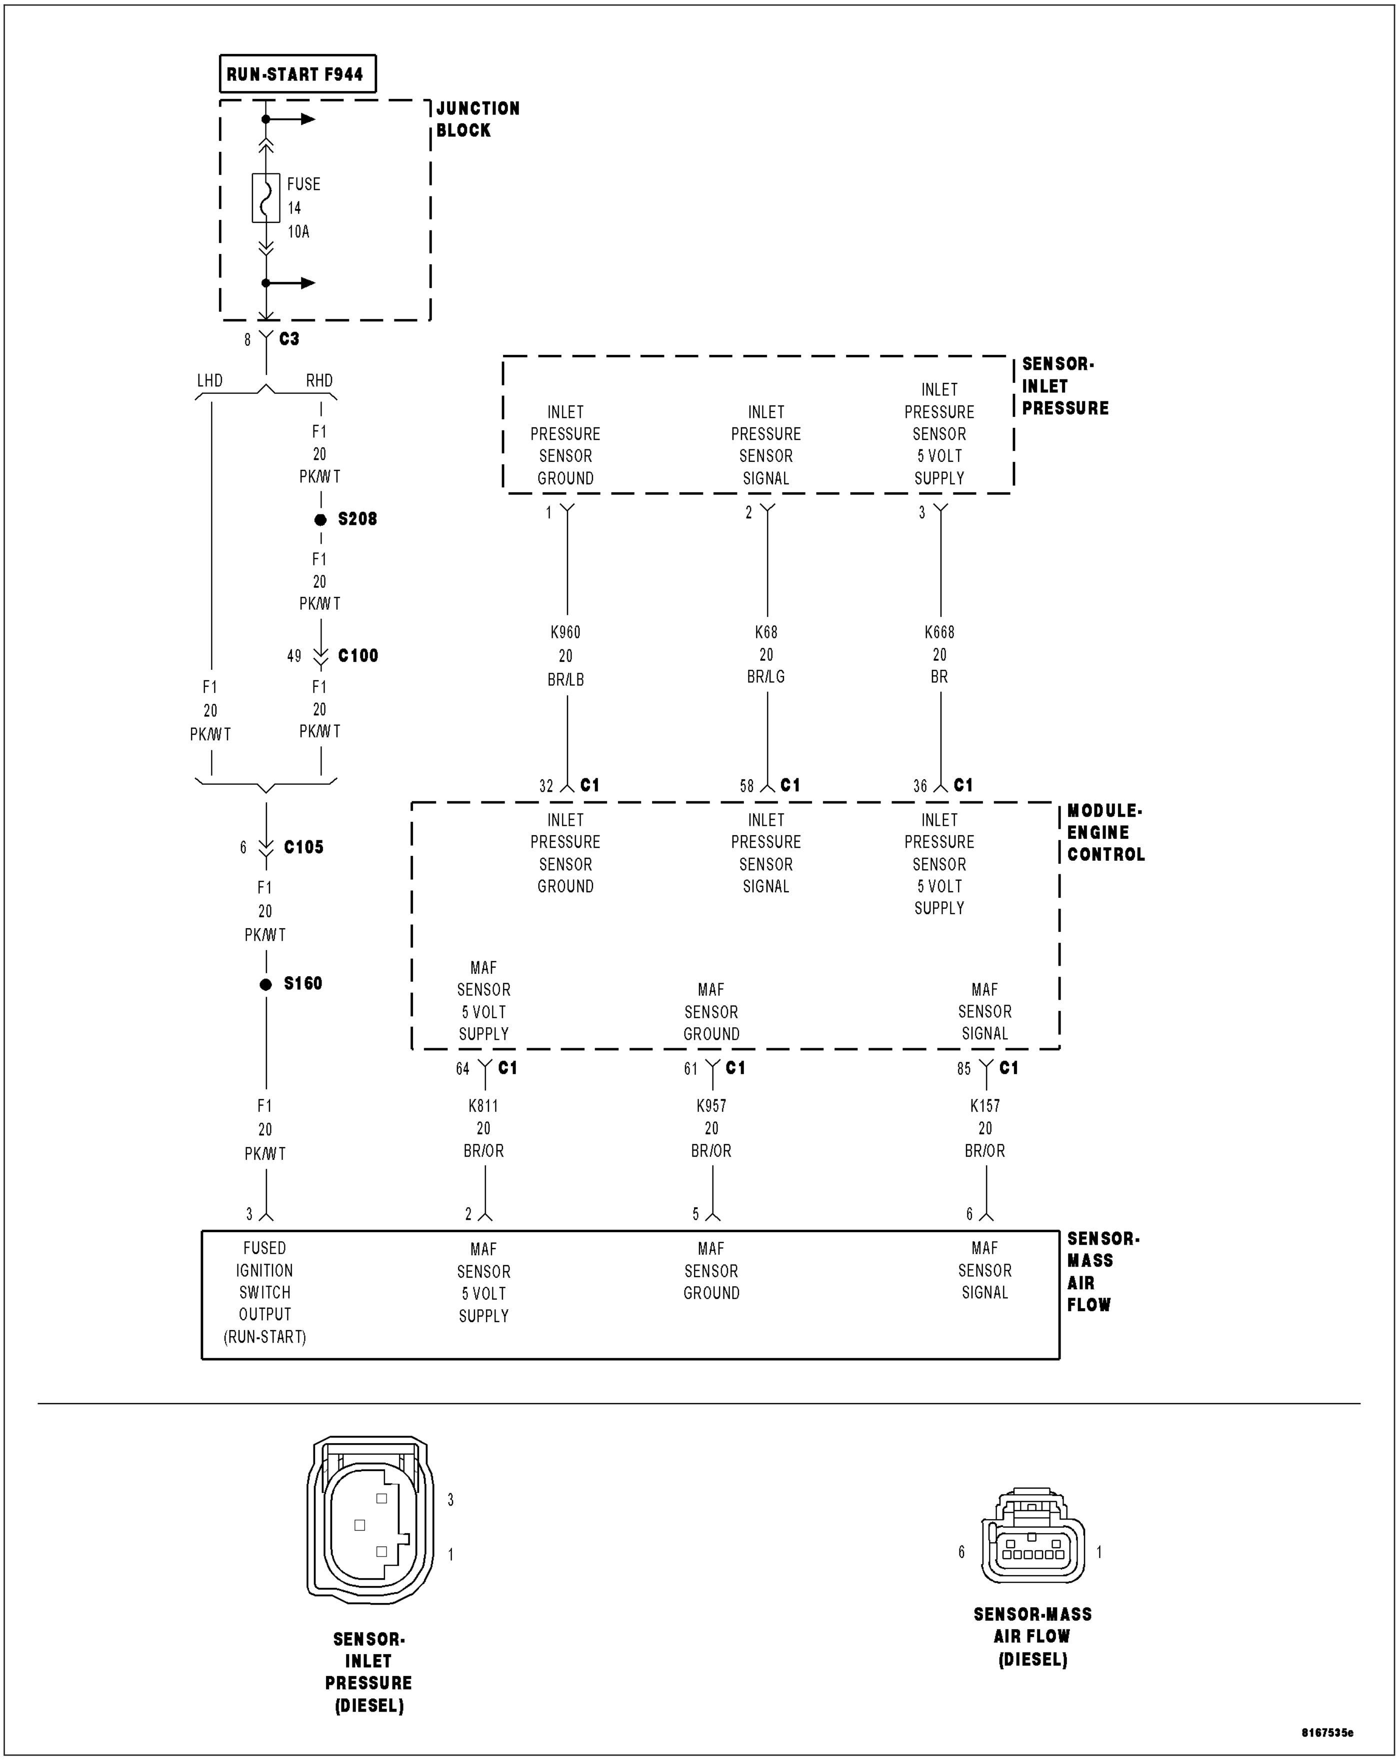
**Yes** >> Replace the Inlet Pressure Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Inlet Pressure Sensor 5 Volt Supply circuit for high resistance.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0105-INLET PRESSURE SENSOR SIGNAL VOLTAGE TOO HIGH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The Inlet Pressure Sensor signal is above 4.75 volts for 2.0 seconds.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| INLET PRESSURE SENSOR GROUND CIRCUIT SHORTED TO VOLTAGE |
| INLET PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| INLET PRESSURE SENSOR GROUND CIRCUIT OPEN |
| INLET PRESSURE SENSOR |
| ENGINE CONTROL MODULE (INTERNAL) |
| ENGINE CONTROL MODULE (SENSOR SIGNAL SHORTED TO VOLTAGE) |

## Diagnostic Test

### 1. CHECKING FOR CURRENT DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: Ensure all turbocharger inlet and outlet tubes are connected properly, without damage and restriction before continuing with this test.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Cycle the ignition key on and off several times, leaving the key on for at least 10 seconds at a time.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

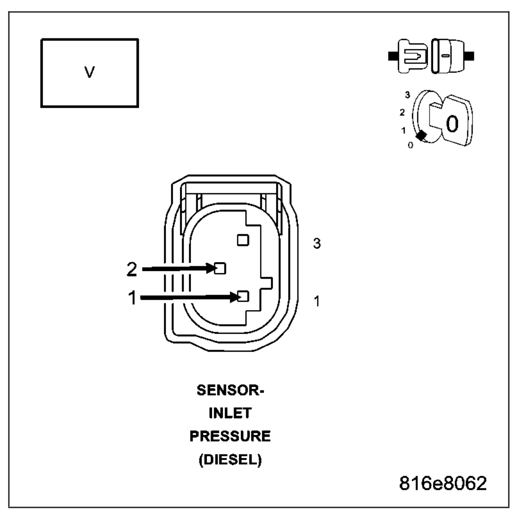
### 2. MEASURE THE INLET PRESSURE SENSOR SIGNAL CIRCUIT VOLTAGE

Turn the ignition off.

Disconnect the Inlet Pressure Sensor harness connector.

Turn the ignition on.

Measure the voltage between ground and the Inlet Pressure Sensor Signal circuit.

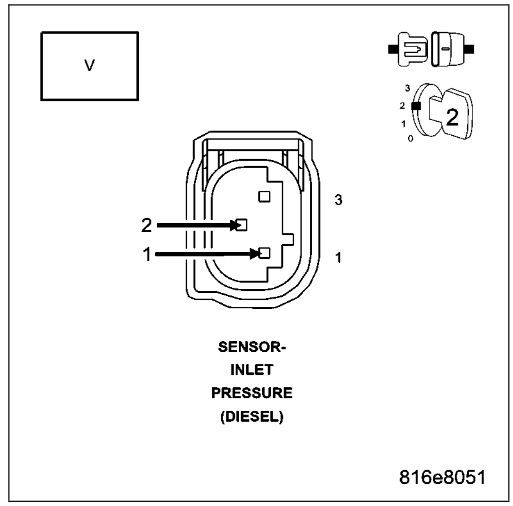


**Is the voltage above 1.0 volt?**

**Yes** >> Go To 3

**No** >> Go To 4

## 3. INLET PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the Inlet Pressure Sensor harness connector.

Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage between ground and the Inlet Pressure Sensor Signal circuit.

**Is the voltage above 1.0 volt?**

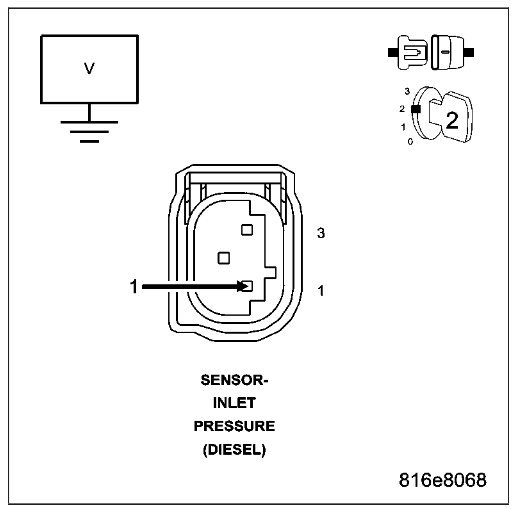
**Yes** >> Repair the Inlet Pressure Sensor Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. INLET PRESSURE SENSOR GROUND CIRCUIT SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the Inlet Pressure Sensor harness connector.

Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage between ground and the Inlet Pressure Sensor Ground circuit.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the Inlet Pressure Sensor Ground circuit for a short to voltage. The ECM will need to be checked for proper operation before the repair is completed. A short to voltage on a ground circuit can damage the ECM.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. INLET PRESSURE SENSOR GROUND CIRCUIT OPEN

Turn the ignition off.

Disconnect the Inlet Pressure Sensor harness connector.

Disconnect the ECM harness connectors.

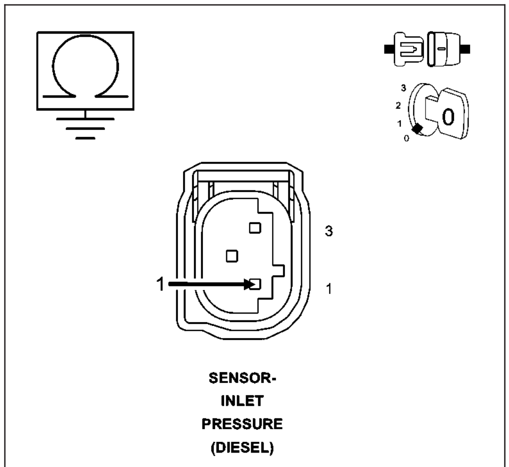
Measure the resistance of the Inlet Pressure Sensor Ground circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Inlet Pressure Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



816e836e

## 6. INLET PRESSURE SENSOR

Turn the ignition off.

**NOTE: Ensure all harness connectors are connected.**

Turn the ignition on.

Measure the voltage of the Inlet Pressure Sensor Signal circuit by back probing ECM harness connector.

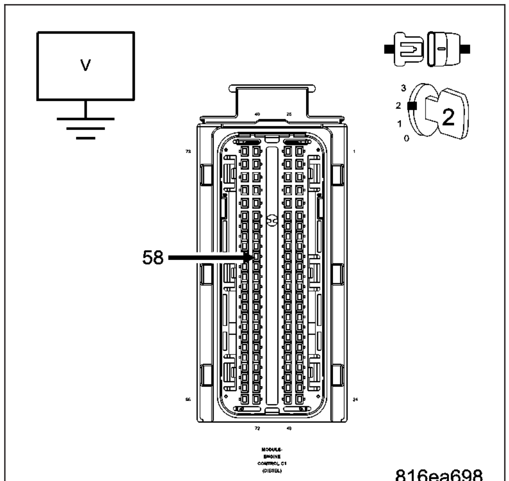
**Is the voltage above 4.85 volts?**

**Yes** >> Replace the Inlet Pressure Sensor.

Perform ROAD TEST VERIFICATION - VER-2.

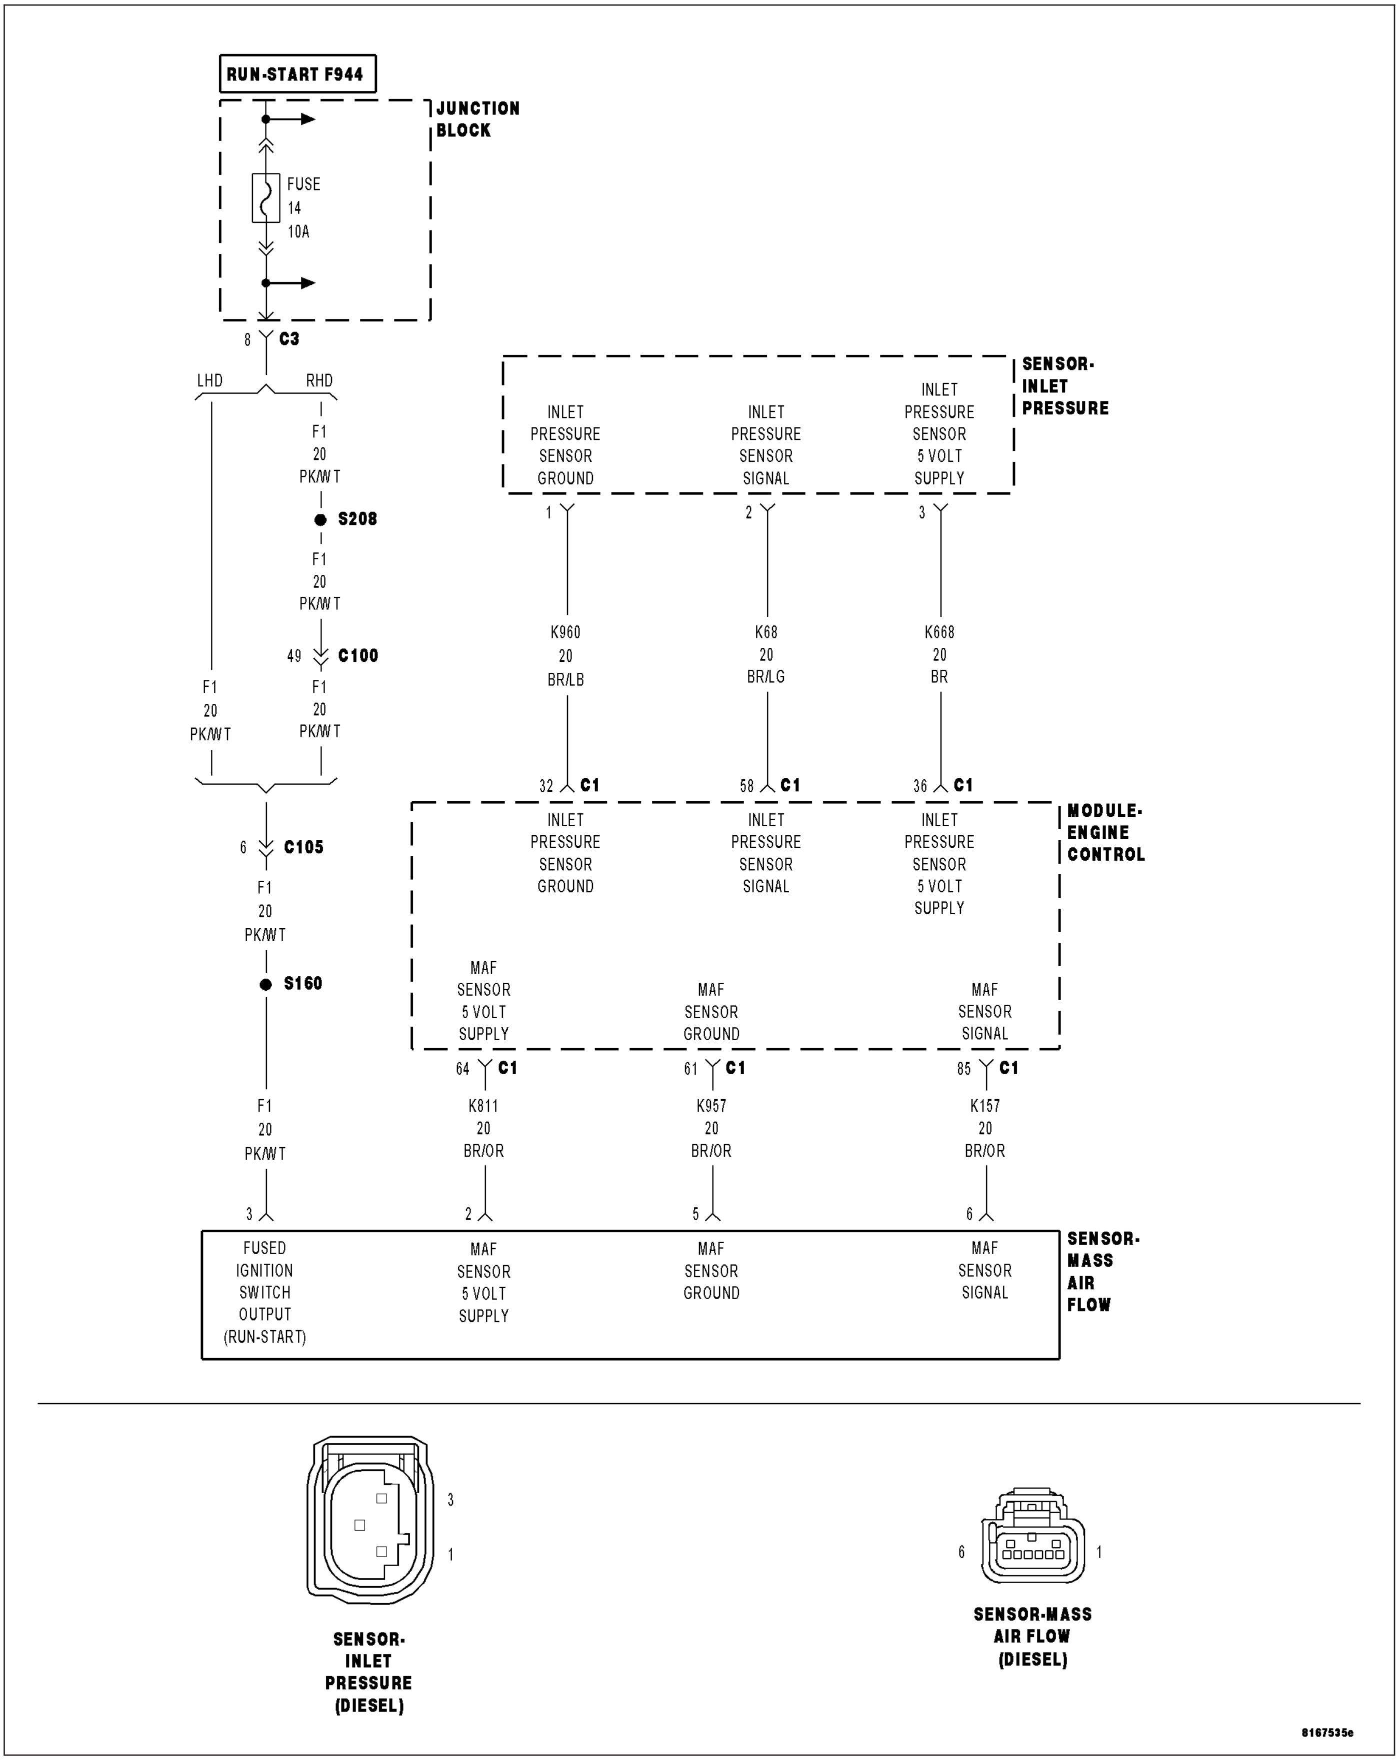
**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



816ea698

## P0105-INLET PRESSURE SENSOR SIGNAL VOLTAGE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The Inlet Pressure Sensor signal is below 0.25 volt for 2.0 seconds.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| INLET PRESSURE SENSOR 5 VOLT SUPPLY |
| INLET PRESSURE SENSOR |
| INLET PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| INLET PRESSURE SENSOR SIGNAL AND GROUND CIRCUITS SHORTED TOGETHER |
| ENGINE CONTROL MODULE |
| INLET PRESSURE SENSOR SIGNAL CIRCUIT OPEN |

## Diagnostic Test

### 1. CHECKING FOR CURRENT DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: Ensure all turbocharger inlet and outlet tubes are connected properly, without damage and restriction before continuing with this test.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Cycle the ignition key on and off several times, leaving the key on for at least 10 seconds at a time.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. INLET PRESSURE SENSOR 5 VOLT SUPPLY VOLTAGE

Turn the ignition off.

Disconnect the Inlet Pressure Sensor harness connector.

Turn the ignition on.

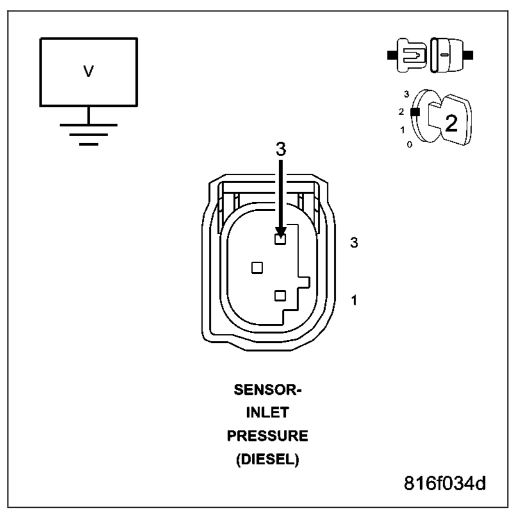
Measure the voltage between ground and the Inlet Pressure Sensor 5 Volt Supply circuit.

**Is the voltage above 4.8 volts?**

**Yes** >> Go To 3

**No** >> Repair the Inlet Pressure Sensor 5 Volt Supply circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



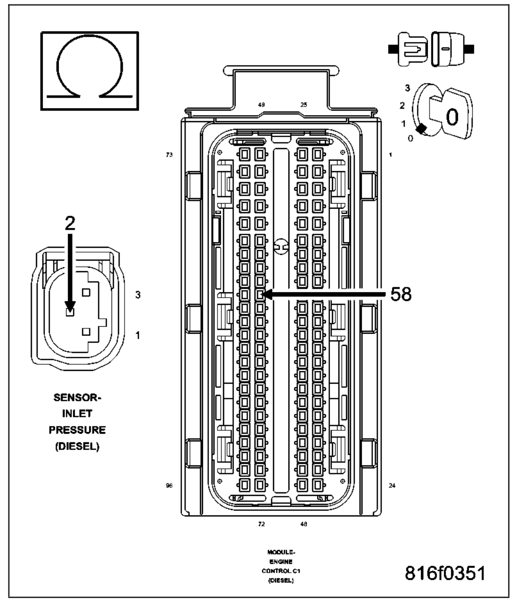
## 3. INLET PRESSURE SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the Inlet Pressure Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Inlet Pressure Sensor Signal circuit.



**Is the resistance below 10.0 ohms?**

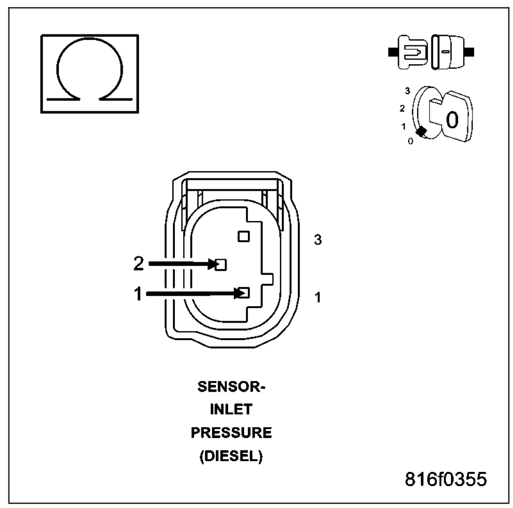
**Yes** >> Go To 4

**No** >> Repair the Inlet Pressure Sensor Signal circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. INLET PRESSURE SENSOR SIGNAL AND GROUND CIRCUITS SHORTED TOGETHER

Measure the resistance between the Inlet Pressure Sensor Signal circuit and Inlet Pressure Sensor Ground circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 5

**No** >> Repair the Inlet Pressure Sensor Signal circuit for a short to the Inlet Pressure Sensor Ground circuit.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. INLET PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

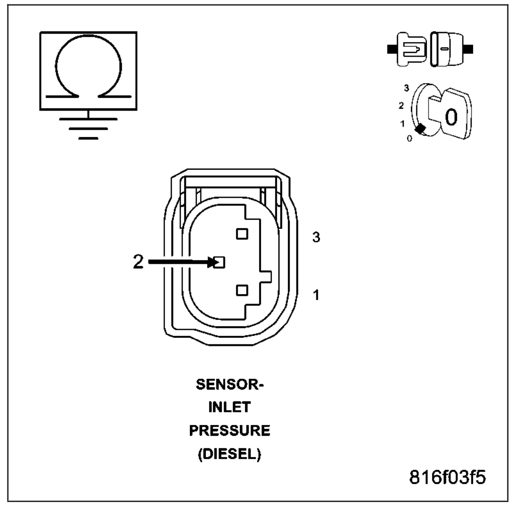
Measure the resistance between ground and the Inlet Pressure Sensor Signal circuit.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Inlet Pressure Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 6. INLET PRESSURE SENSOR

Connect a jumper wire between the Inlet Pressure Sensor Signal and Inlet Pressure Sensor 5 Volt Supply circuits.

With the scan tool, read the Inlet Pressure Sensor voltage.

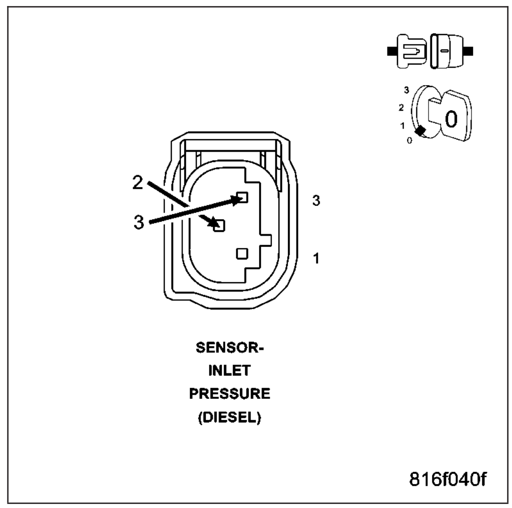
**Is the voltage above 4.5 volts?**

**Yes** >> Replace the Inlet Pressure Sensor.

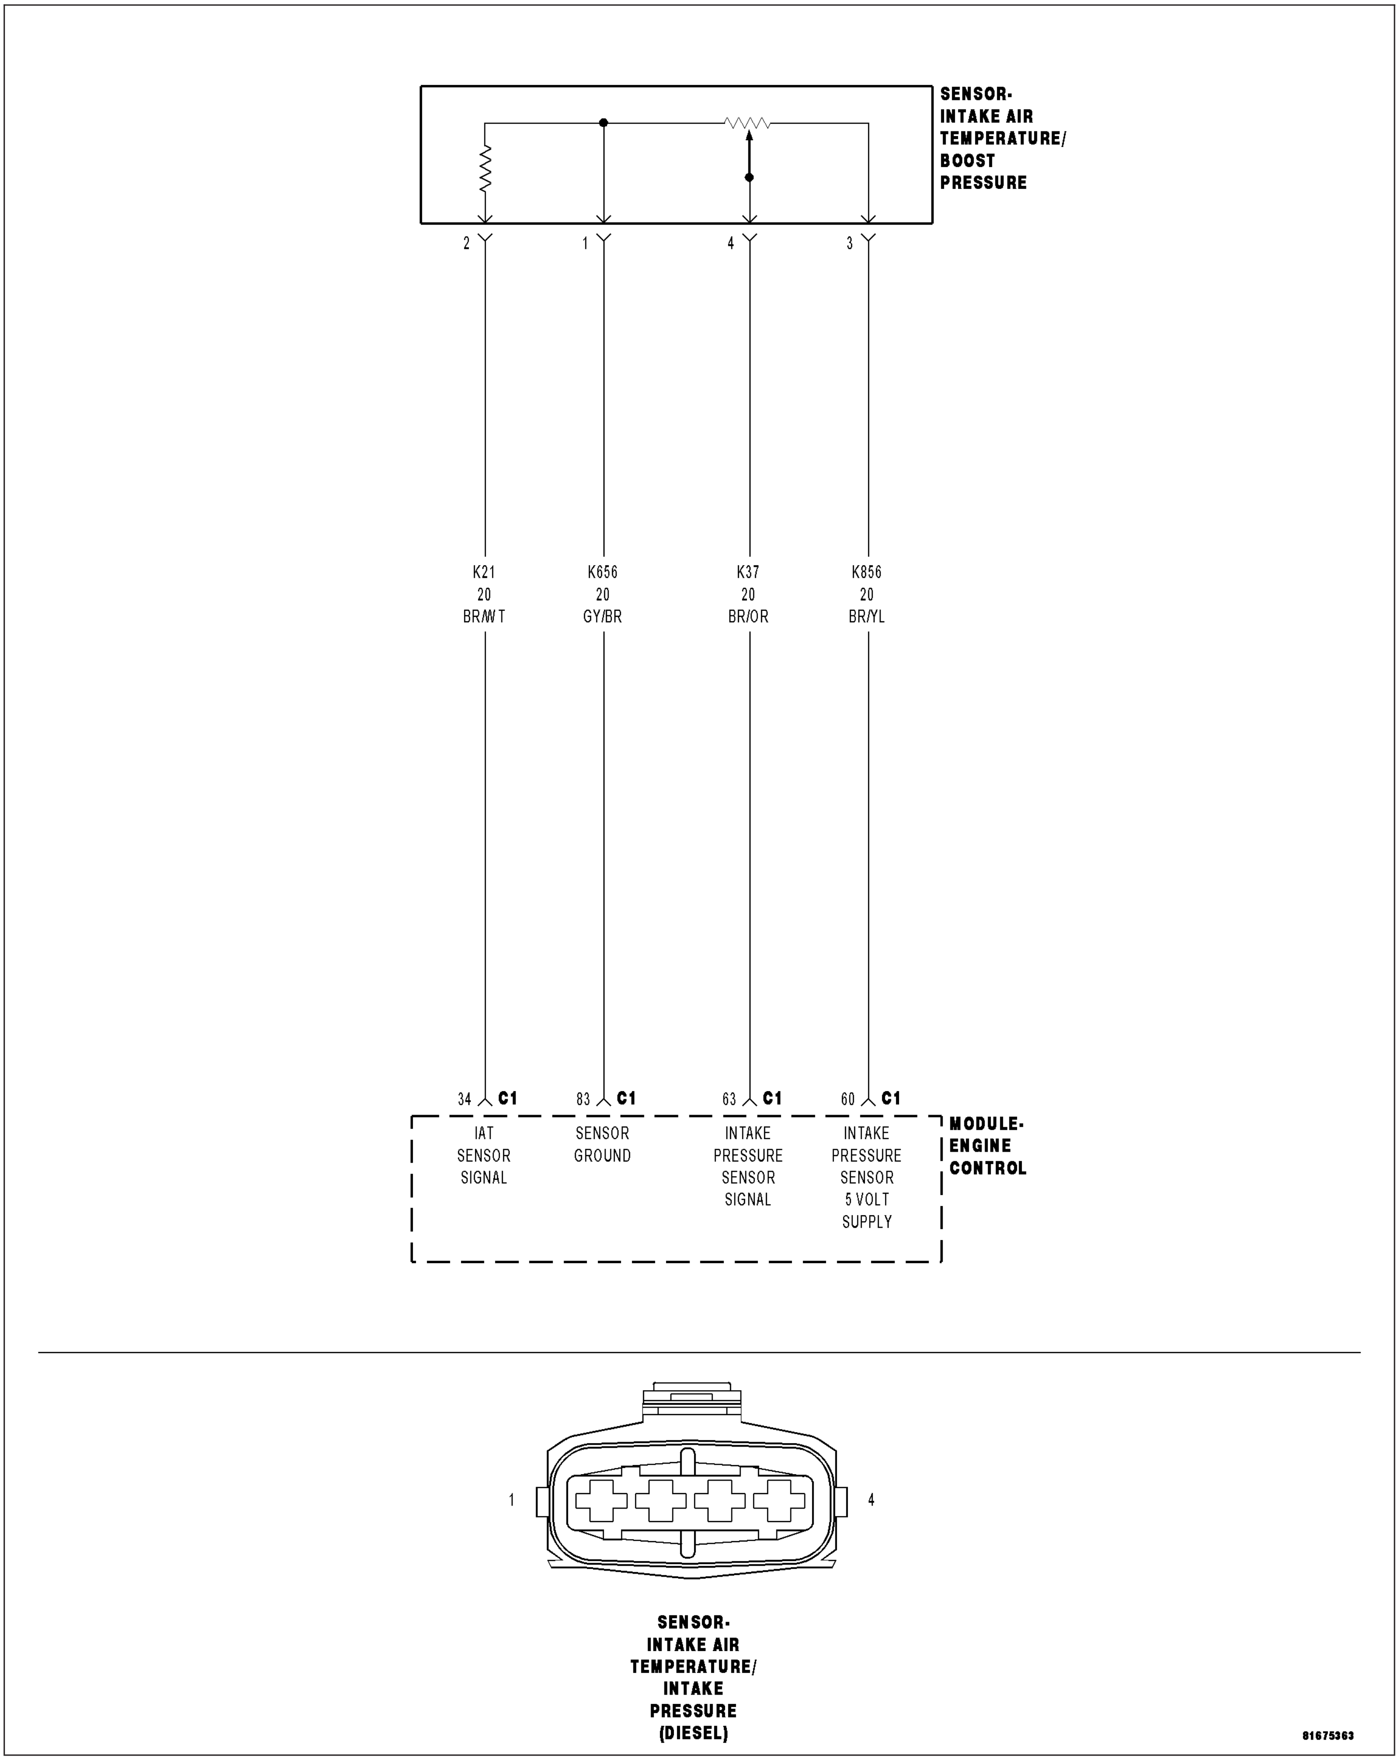
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



# P0110-INTAKE AIR TEMP SENSOR SIGNAL VOLTAGE TOO HIGH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The Intake Air Temperature Sensor signal is above 4.95 volts.

| Possible Causes |
|---|
| INTAKE AIR TEMP SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| SENSOR GROUND CIRCUIT OPEN |
| INTAKE AIR TEMP SENSOR SIGNAL CIRCUIT OPEN |
| BOOST PRESSURE/IAT SENSOR |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Turn the ignition off for 10 seconds.

Turn the ignition on.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. INTAKE AIR TEMP SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the Boost Pressure/IAT Sensor harness connector.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage on the IAT Sensor Signal circuit.

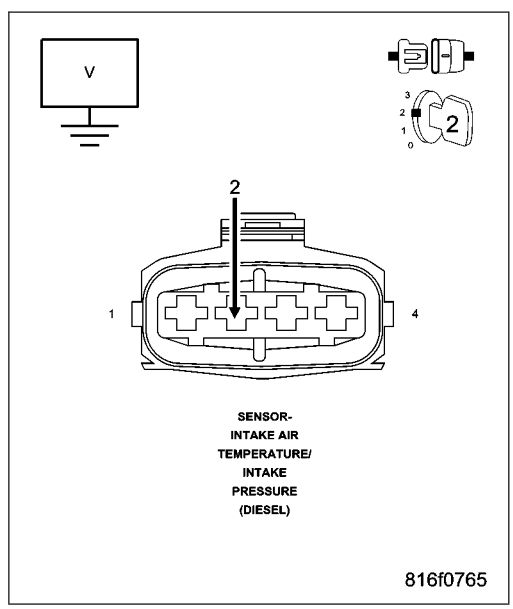
**NOTE: Remove the jumper wire.**

**Is the voltage below 1.0 volt?**

**Yes** >> Go To 3

**No** >> Repair the Intake Air Temperature Sensor Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



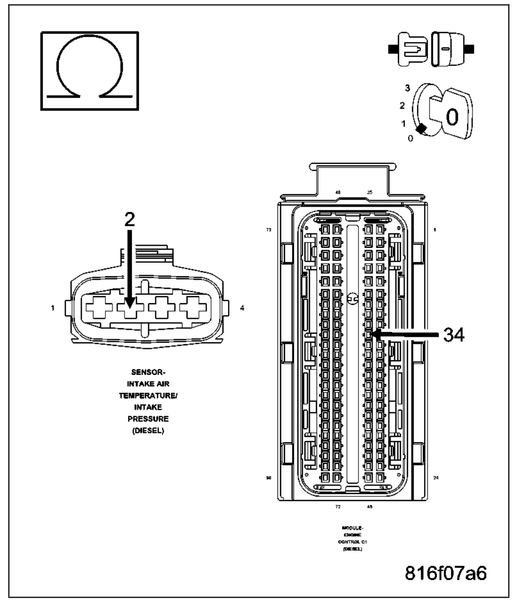
## 3. INTAKE AIR TEMP SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Boost Pressure/IAT Sensor harness connector.

Measure the resistance of the Intake Air Temperature Sensor Signal circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Intake Air Temperature Sensor Signal circuit for an open.

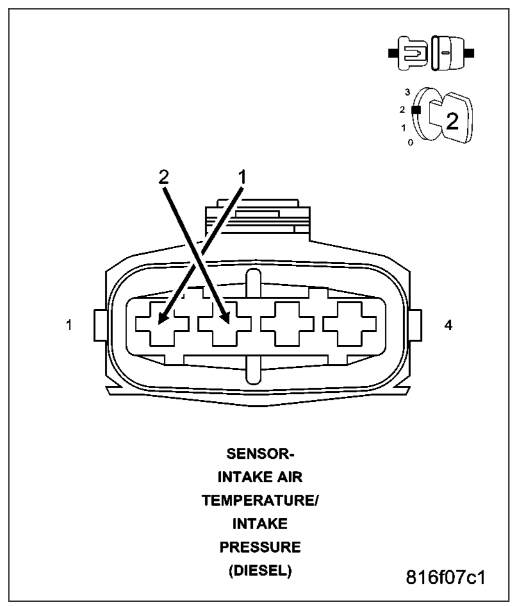
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. BOOST PRESSURE/IAT SENSOR

Connect a jumper wire between the IAT Sensor Signal and Sensor Ground circuits in the Boost Pressure/IAT Sensor harness connector.

Turn the ignition on.

Monitor the scan tool for ECM DTCs.



**Does the scan tool display P0110 INTAKE AIR TEMP. SENSOR CIRCUIT SIGNAL VOLTAGE TOO LOW?**

**Yes** >> Replace the Boost Pressure/Intake Air Temperature Sensor.

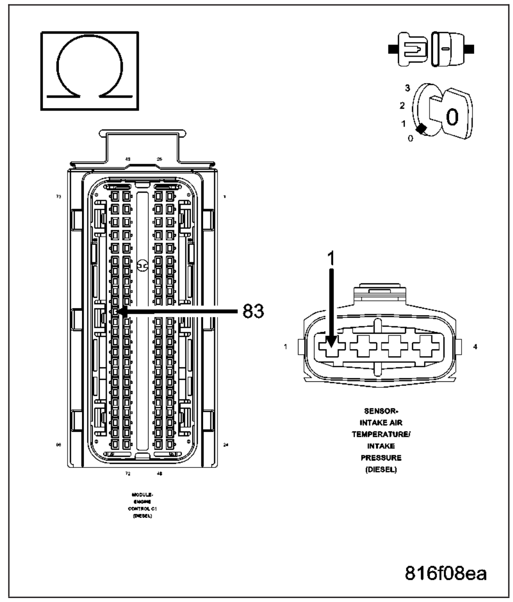
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. SENSOR GROUND CIRCUIT OPEN

Turn the ignition off.

Measure the resistance of the Sensor Ground circuit between the ECM harness connector and the Boost Pressure Sensor harness connector.



**Is the resistance below 10.0 ohms?**

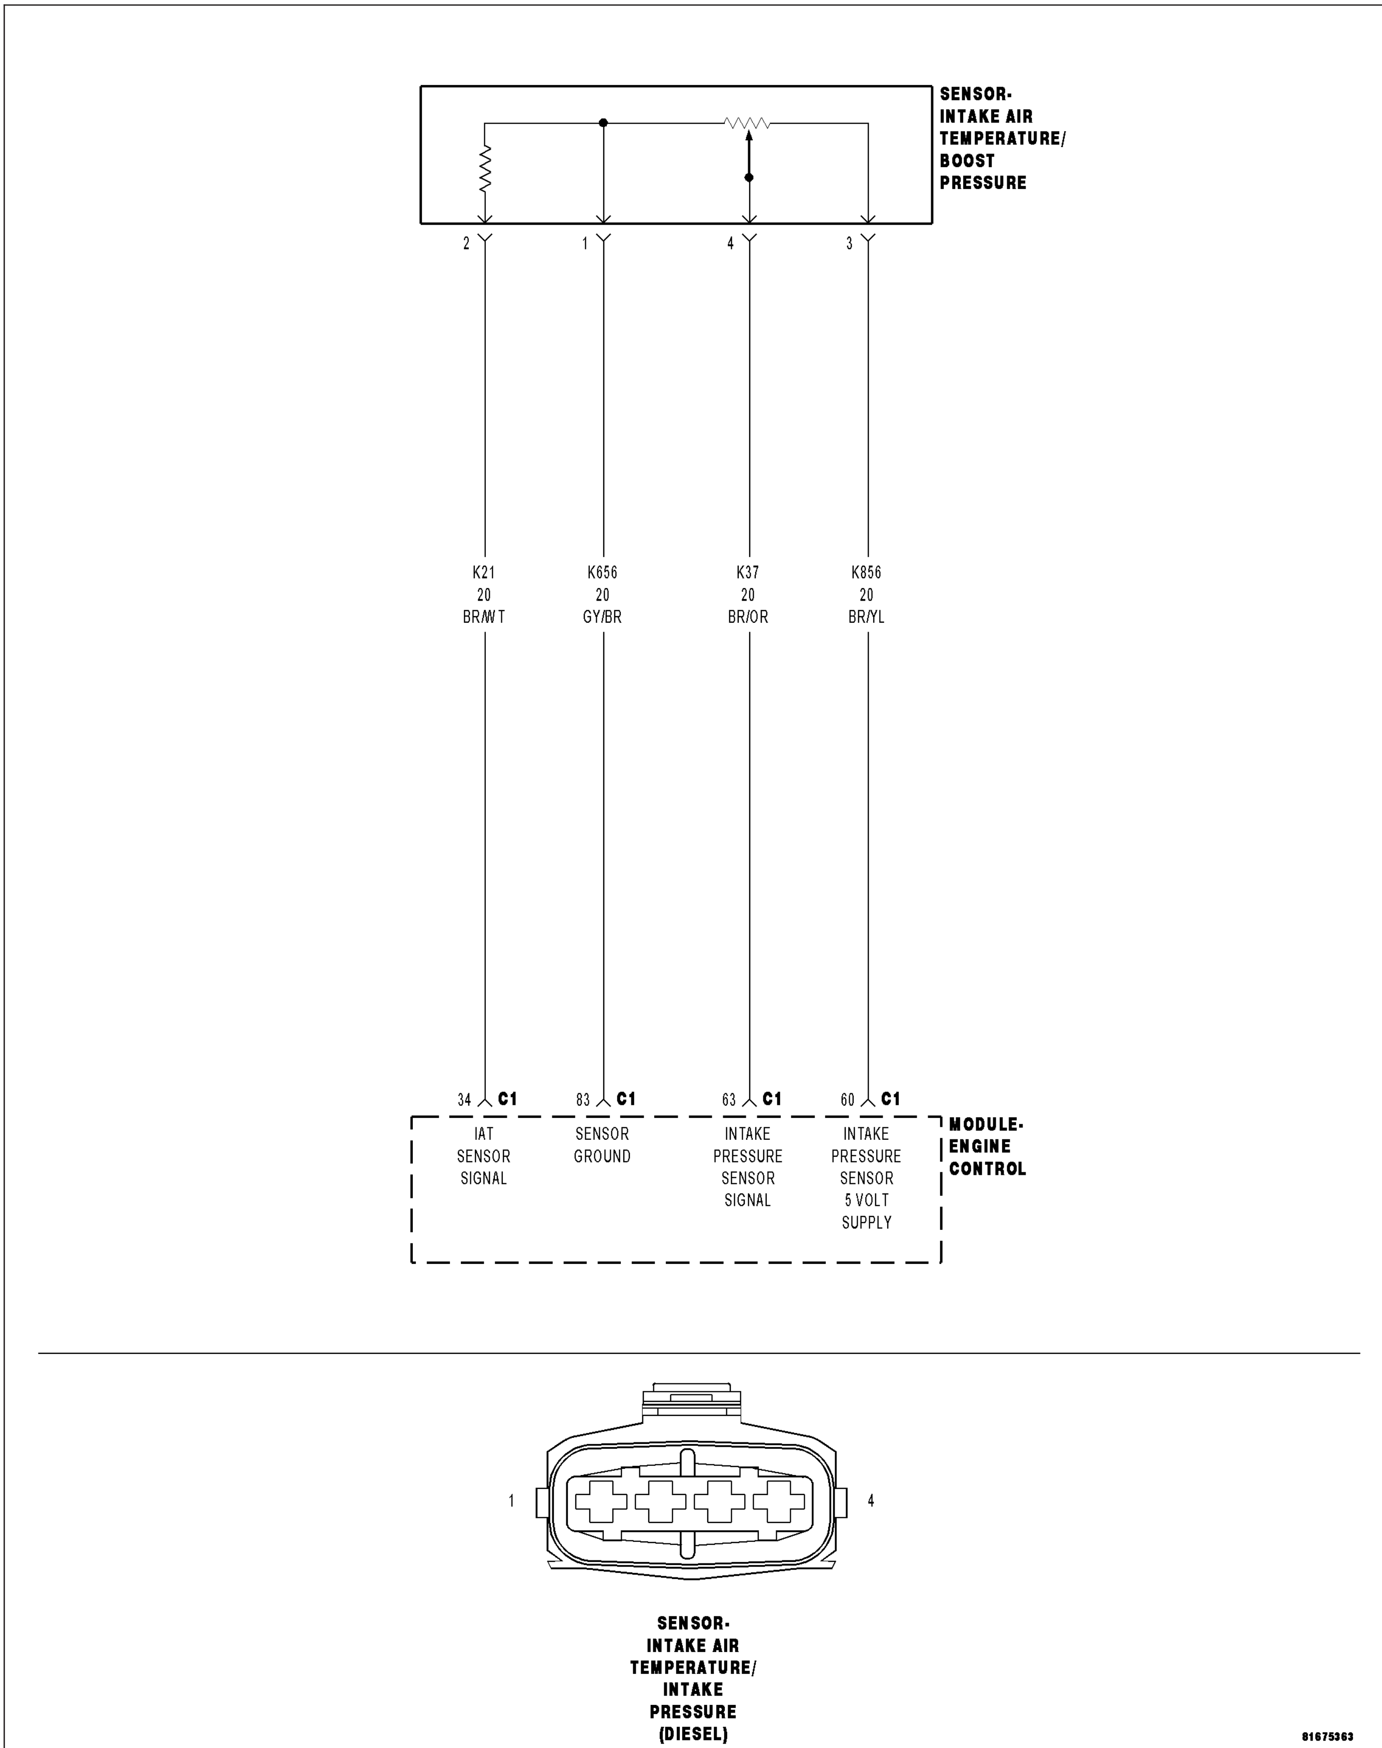
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0110-INTAKE AIR TEMP SENSOR SIGNAL VOLTAGE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The Intake Air Temperature Sensor signal is below 0.45 volt.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| INTAKE AIR TEMP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| INTAKE AIR TEMP SENSOR SIGNAL CIRCUIT SHORTED TO SENSOR GROUND |
| BOOST PRESSURE/IAT SENSOR |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs for at least 2 minutes.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. BOOST PRESSURE/IAT SENSOR

Turn the ignition off.

Disconnect the Boost Pressure/IAT Sensor harness connector.

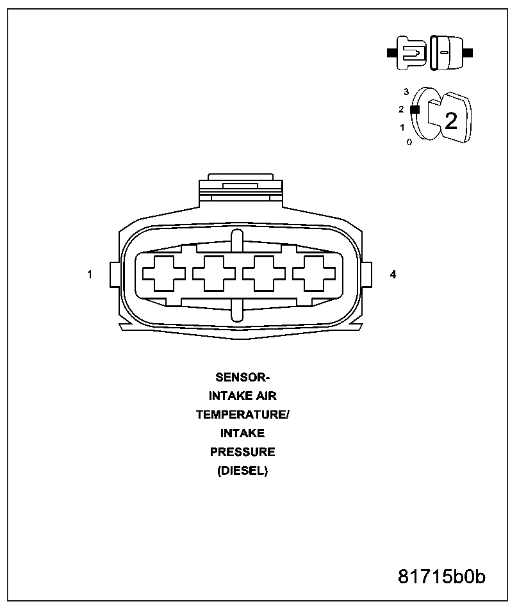
Turn the ignition on.

Monitor the scan tool for ECM DTCs for at least 2 minutes.

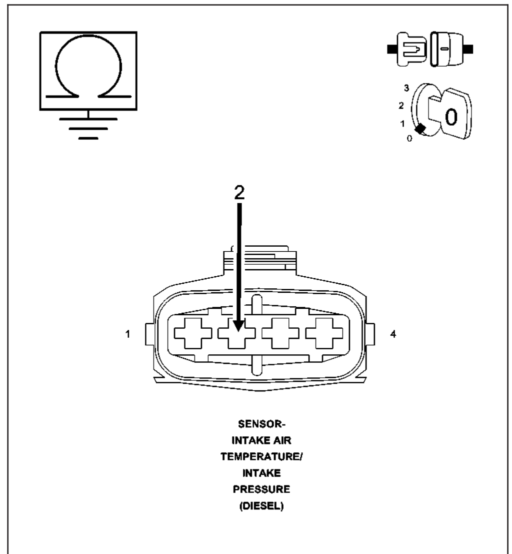
**Does the scan tool display P0110 INTAKE AIR TEMP SIGNAL VOLTAGE TOO HIGH?**

**Yes** >> Replace the Boost Pressure/Intake Air Temperature Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3



## 3. INTAKE AIR TEMP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND



81715a10

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Boost Pressure/IAT Sensor harness connector.

Measure the resistance between ground and the Intake Air Temperature Sensor Signal circuit.

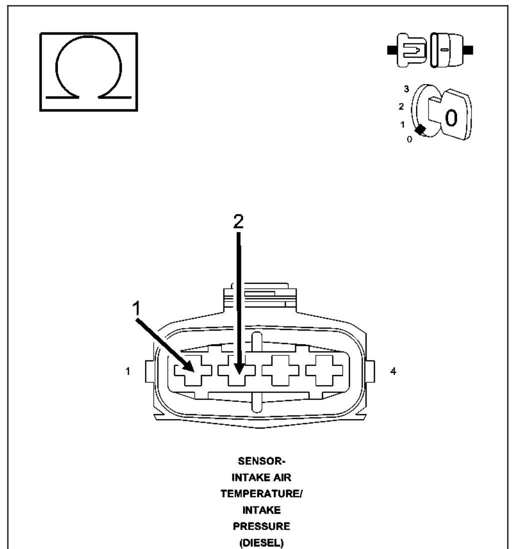
**Is the resistance above 1000 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Intake Air Temperature Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. INTAKE AIR TEMP SENSOR SIGNAL CIRCUIT SHORTED TO SENSOR GROUND



81715a17

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Boost Pressure/IAT Sensor harness connector.

Measure the resistance between the Intake Air Temperature Sensor Signal circuit and the Sensor Ground circuit.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 5

**No** >> Repair the Intake Air Temperature Sensor Signal circuit for a short to the Sensor Ground circuit.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. ENGINE CONTROL MODULE

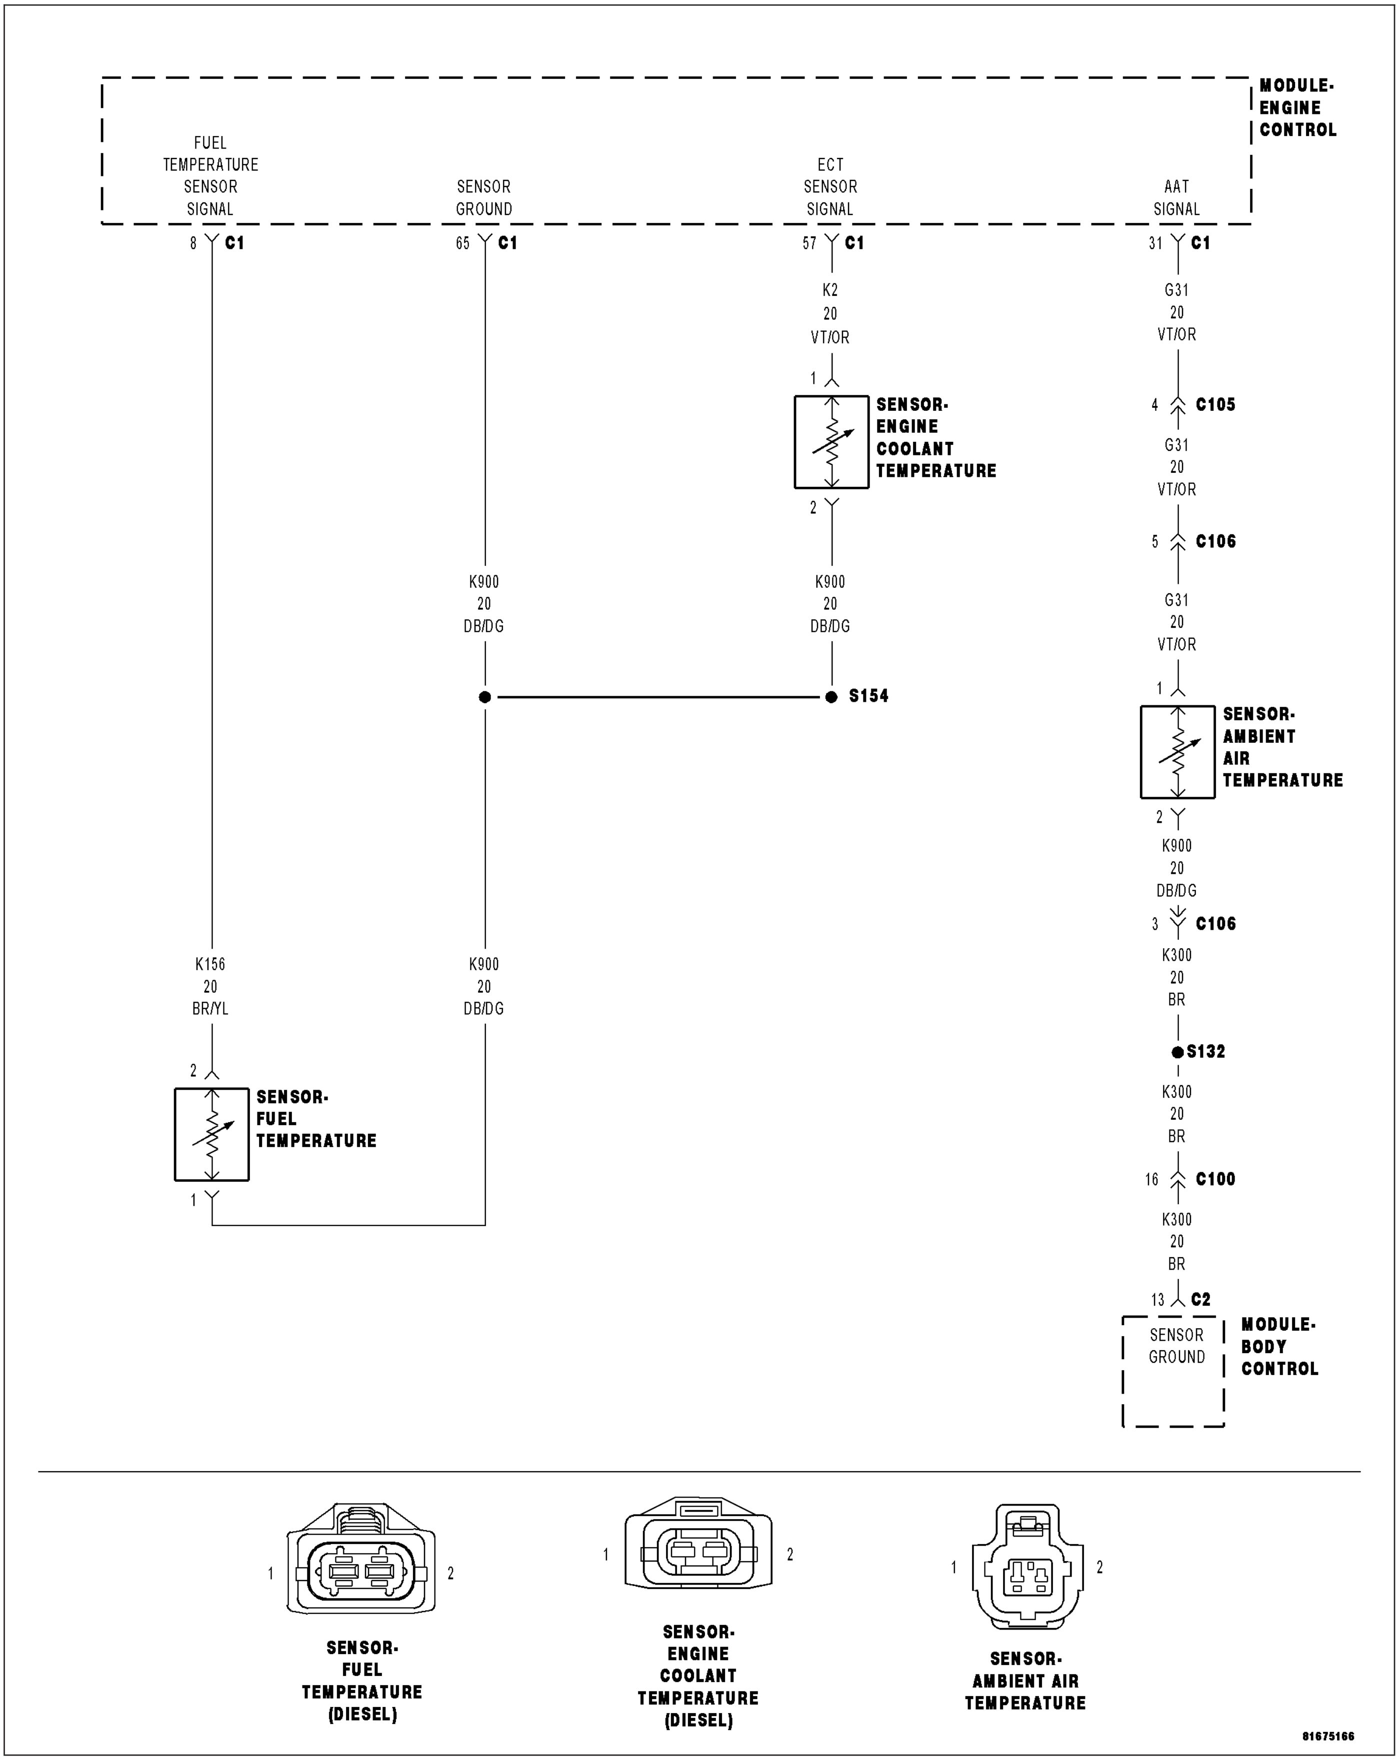
**If there are no possible causes remaining, view repair.**

**Repair**

Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0115-ENGINE COOLANT TEMP SENSOR SIGNAL VOLTAGE TOO HIGH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The Engine Coolant Temperature Sensor signal is above 4.95 volts.

| Possible Causes |
|---|
| ECM ECT SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| SENSOR GROUND CIRCUIT OPEN |
| ECT SENSOR |
| ECT SENSOR SIGNAL CIRCUIT OPEN |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If multiple DTCs are present, the most likely cause is a 5-Volt Supply or Sensor Ground circuit shorted to voltage or ground. Refer to the Service Information Wiring section for circuits that would affect multiple DTCs.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, monitor the Engine Coolant Temperature (ECT) Sensor voltage.

**Is the ECT Sensor voltage above 4.8 volts?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. ECT SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the ECT Sensor harness connector.

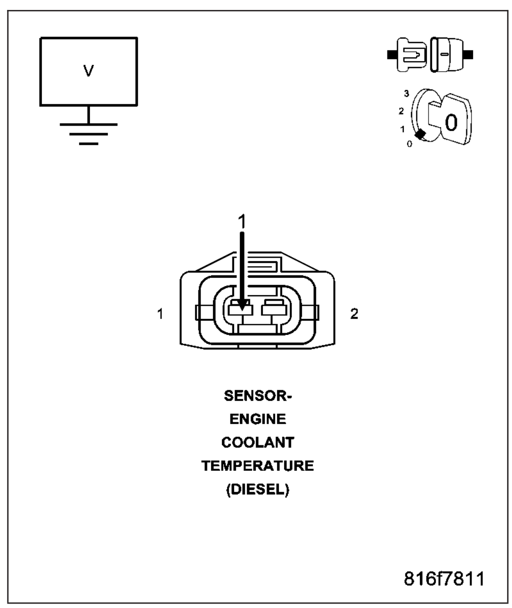
Turn the ignition on.

Measure the voltage on the ECT Sensor Signal circuit.

**Is the voltage above 5.5 volts?**

**Yes** >> Repair the ECT Sensor Signal circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3



## 3. ECT SENSOR

Turn the ignition off.

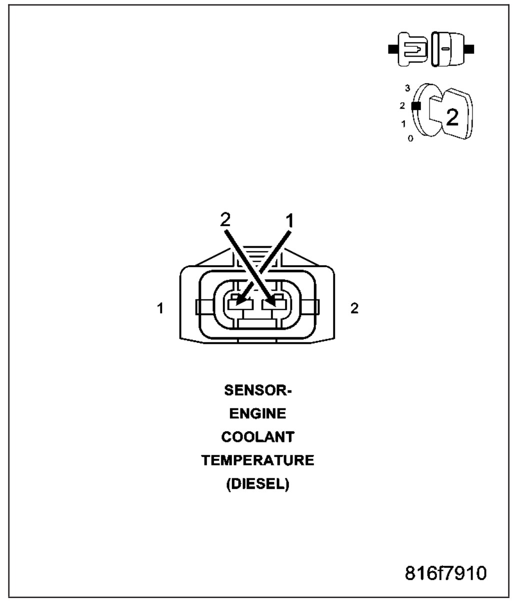
Disconnect the ECT Sensor harness connector.

Connect a jumper wire between the ECT Sensor harness connector cavities.

Turn the ignition on.

With the scan tool, read the ECT Sensor voltage.

**Is the voltage below 1.0 volt?**



**Yes** >> Replace the ECT Sensor in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. SENSOR GROUND CIRCUIT OPEN

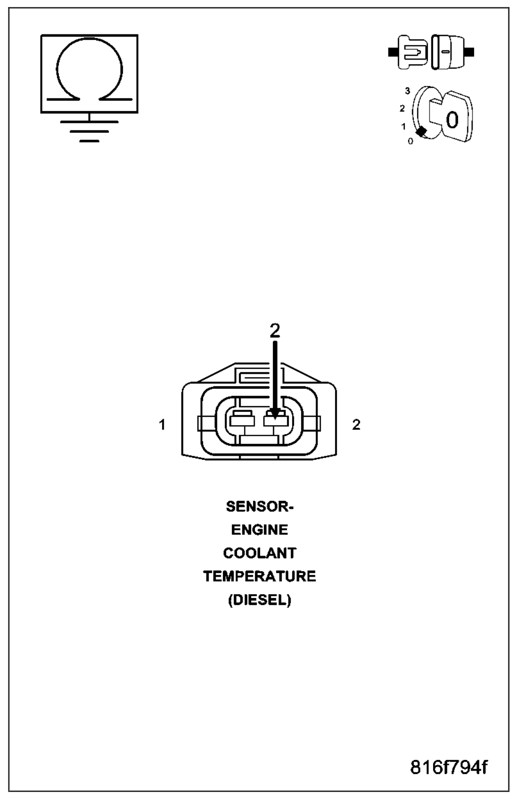
Turn the ignition off.

Disconnect the ECT Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Sensor Ground circuit.

**Is the resistance below 10.0 ohms?**



**Yes** >> Go To 5

**No** >> Repair the Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

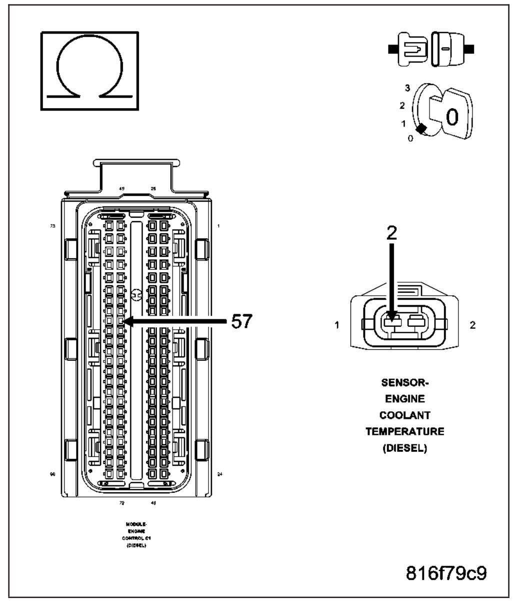
## 5. ECT SENSOR SIGNAL CIRCUIT OPEN

Measure the resistance of the ECT Sensor Signal circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the ECT Sensor Signal circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



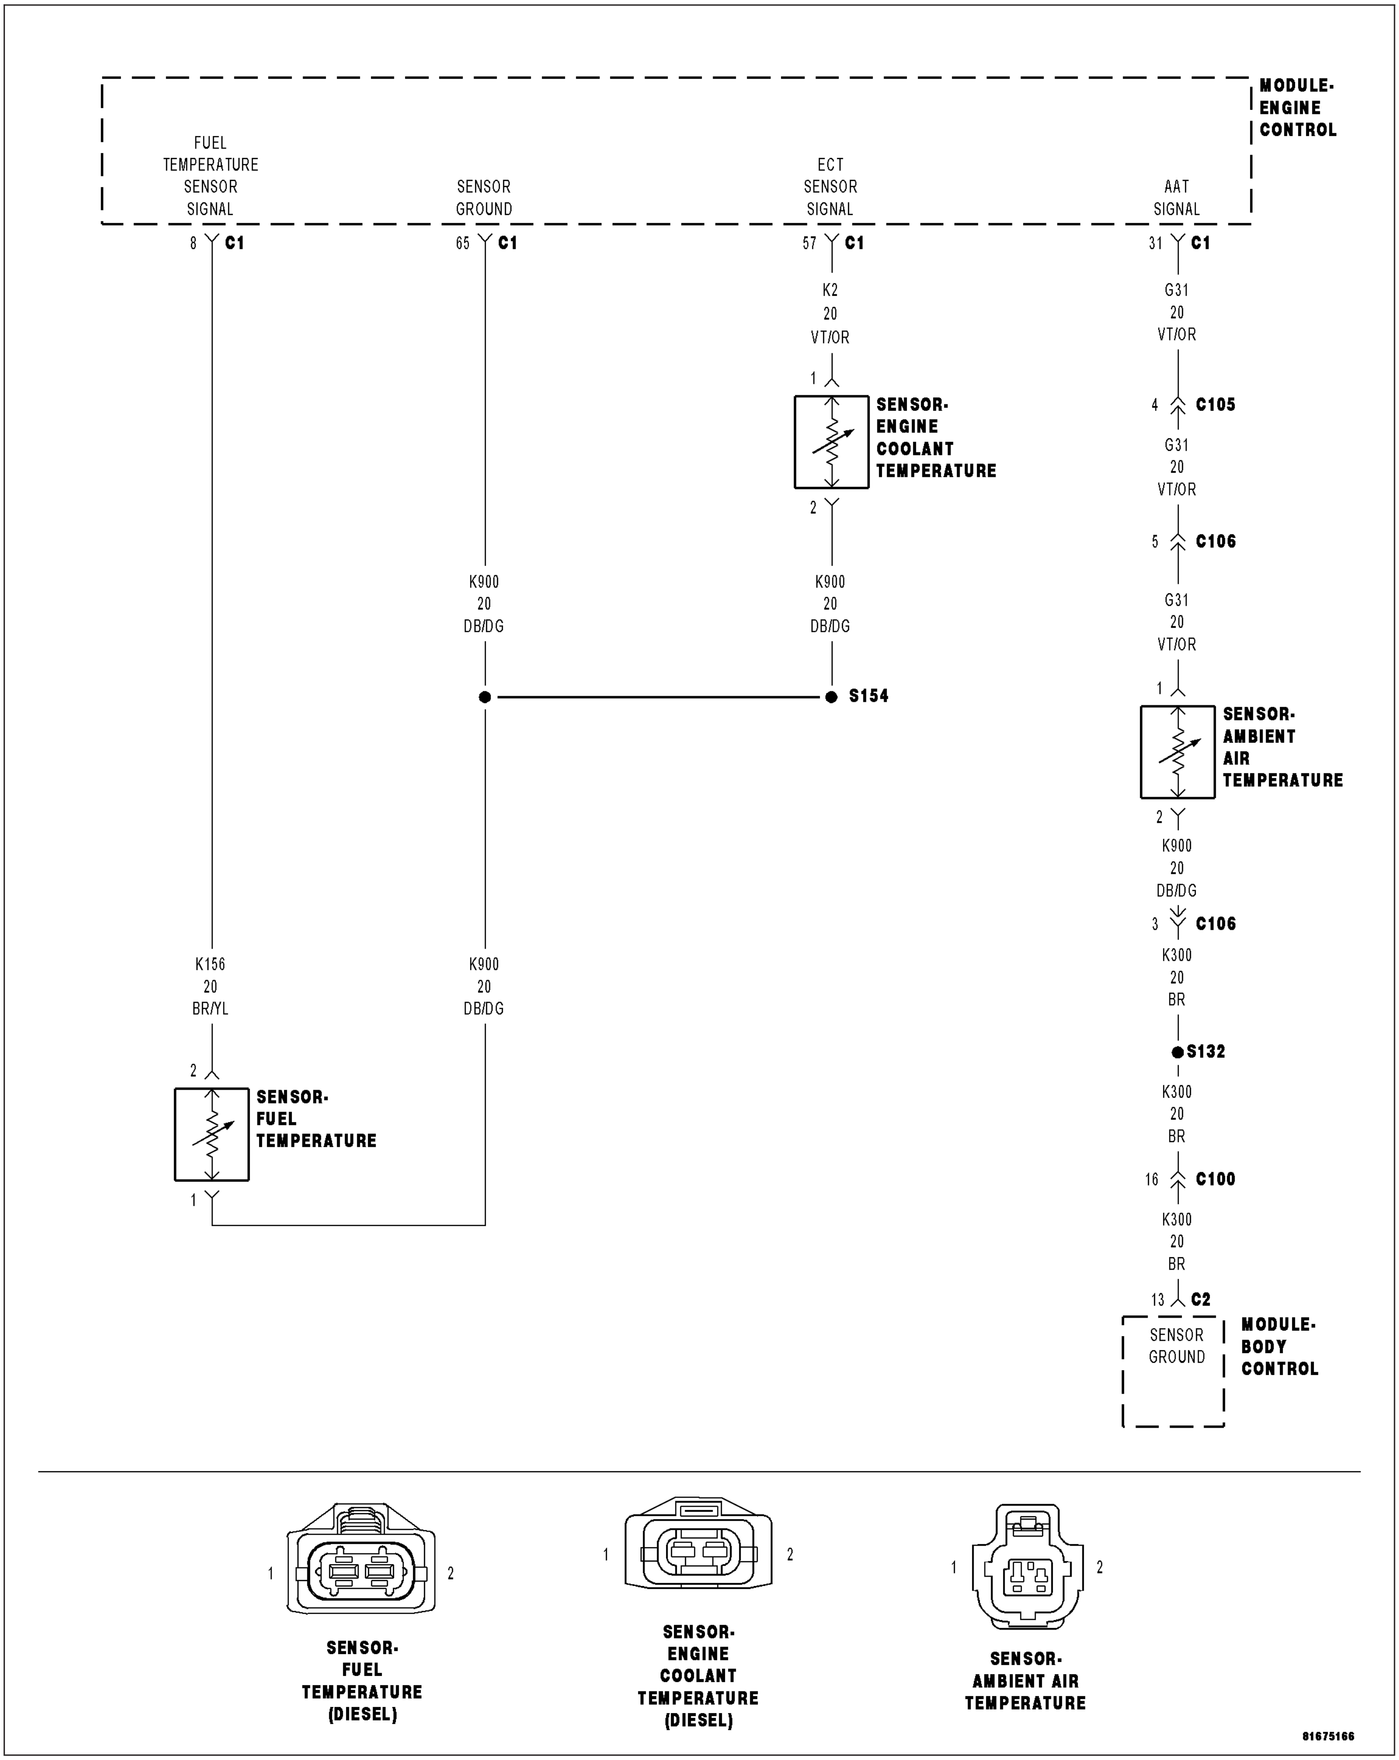
## 6. ENGINE CONTROL MODULE

**If there are no possible causes remaining, view repair.**

**Repair**

Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0115-ENGINE COOLANT TEMP SENSOR SIGNAL VOLTAGE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The Engine Coolant Temperature Sensor signal is below 0.12 volt.

| Possible Causes |
|---|
| ECT SENSOR |
| ECT SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| ECT SENSOR SIGNAL AND GROUND CIRCUITS SHORTED TOGETHER |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, monitor the Engine Coolant Temperature (ECT) Sensor voltage.

**Is the ECT Sensor voltage below 0.25 volt?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. ECT SENSOR

Turn the ignition off.

Disconnect the ECT Sensor harness connector.

Turn the ignition on.

With the scan tool, read the ECT Sensor voltage.

**Is the voltage above 4.0 volts?**

**Yes** >> Replace the ECT Sensor in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

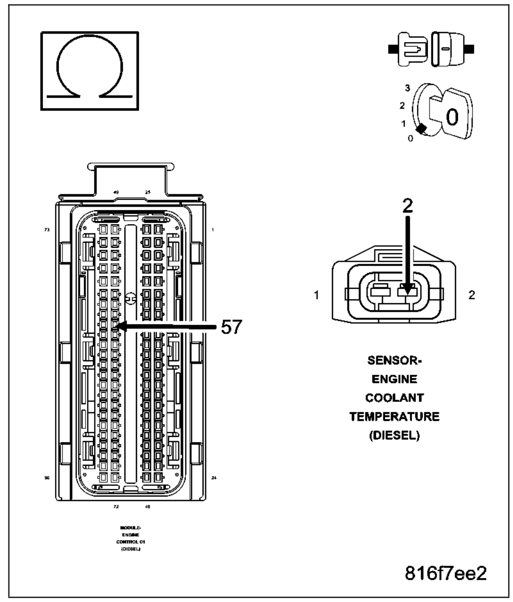
## 3. ECT SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the ECT Sensor harness connector.

Measure the resistance between ground and the ECT Sensor Signal circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 4

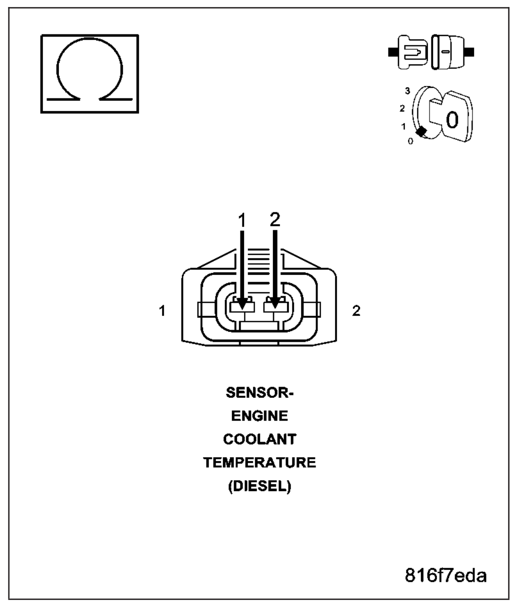
**No** >> Repair the ECT Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. ECT SENSOR SIGNAL AND GROUND CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Measure the resistance between the ECT Sensor Signal circuit and Sensor Ground circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 5

**No** >> Repair the ECT Sensor Signal and Ground circuits for a short together.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. ENGINE CONTROL MODULE

**If there are no possible causes remaining, view repair.**

**Repair**

Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0128-ENGINE COOLANT TEMP SENSOR ENGINE IS COLD TOO LONG

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  When the engine temperature is below 34.0°C.

| Possible Causes |
|---|
| ENGINE COLD TOO LONG |

## Diagnostic Test

### 1. CHECK COOLING SYSTEM PERFORMANCE

**NOTE: The best way to diagnose this DTC is to allow the vehicle to remain outside overnight in order to have a completely cold soaked engine.**

**NOTE: Extremely cold outside ambient temperatures may cause this DTC to set.**

Verify that the coolant level is correct.

Start the engine.

With the scan tool, set the engine RPM to 1500 and allow the engine to warm up for 10-15 minutes.

With the scan tool, monitor the Engine Coolant Temperature value during the warm up cycle. Make sure the transition of temperature change is smooth.

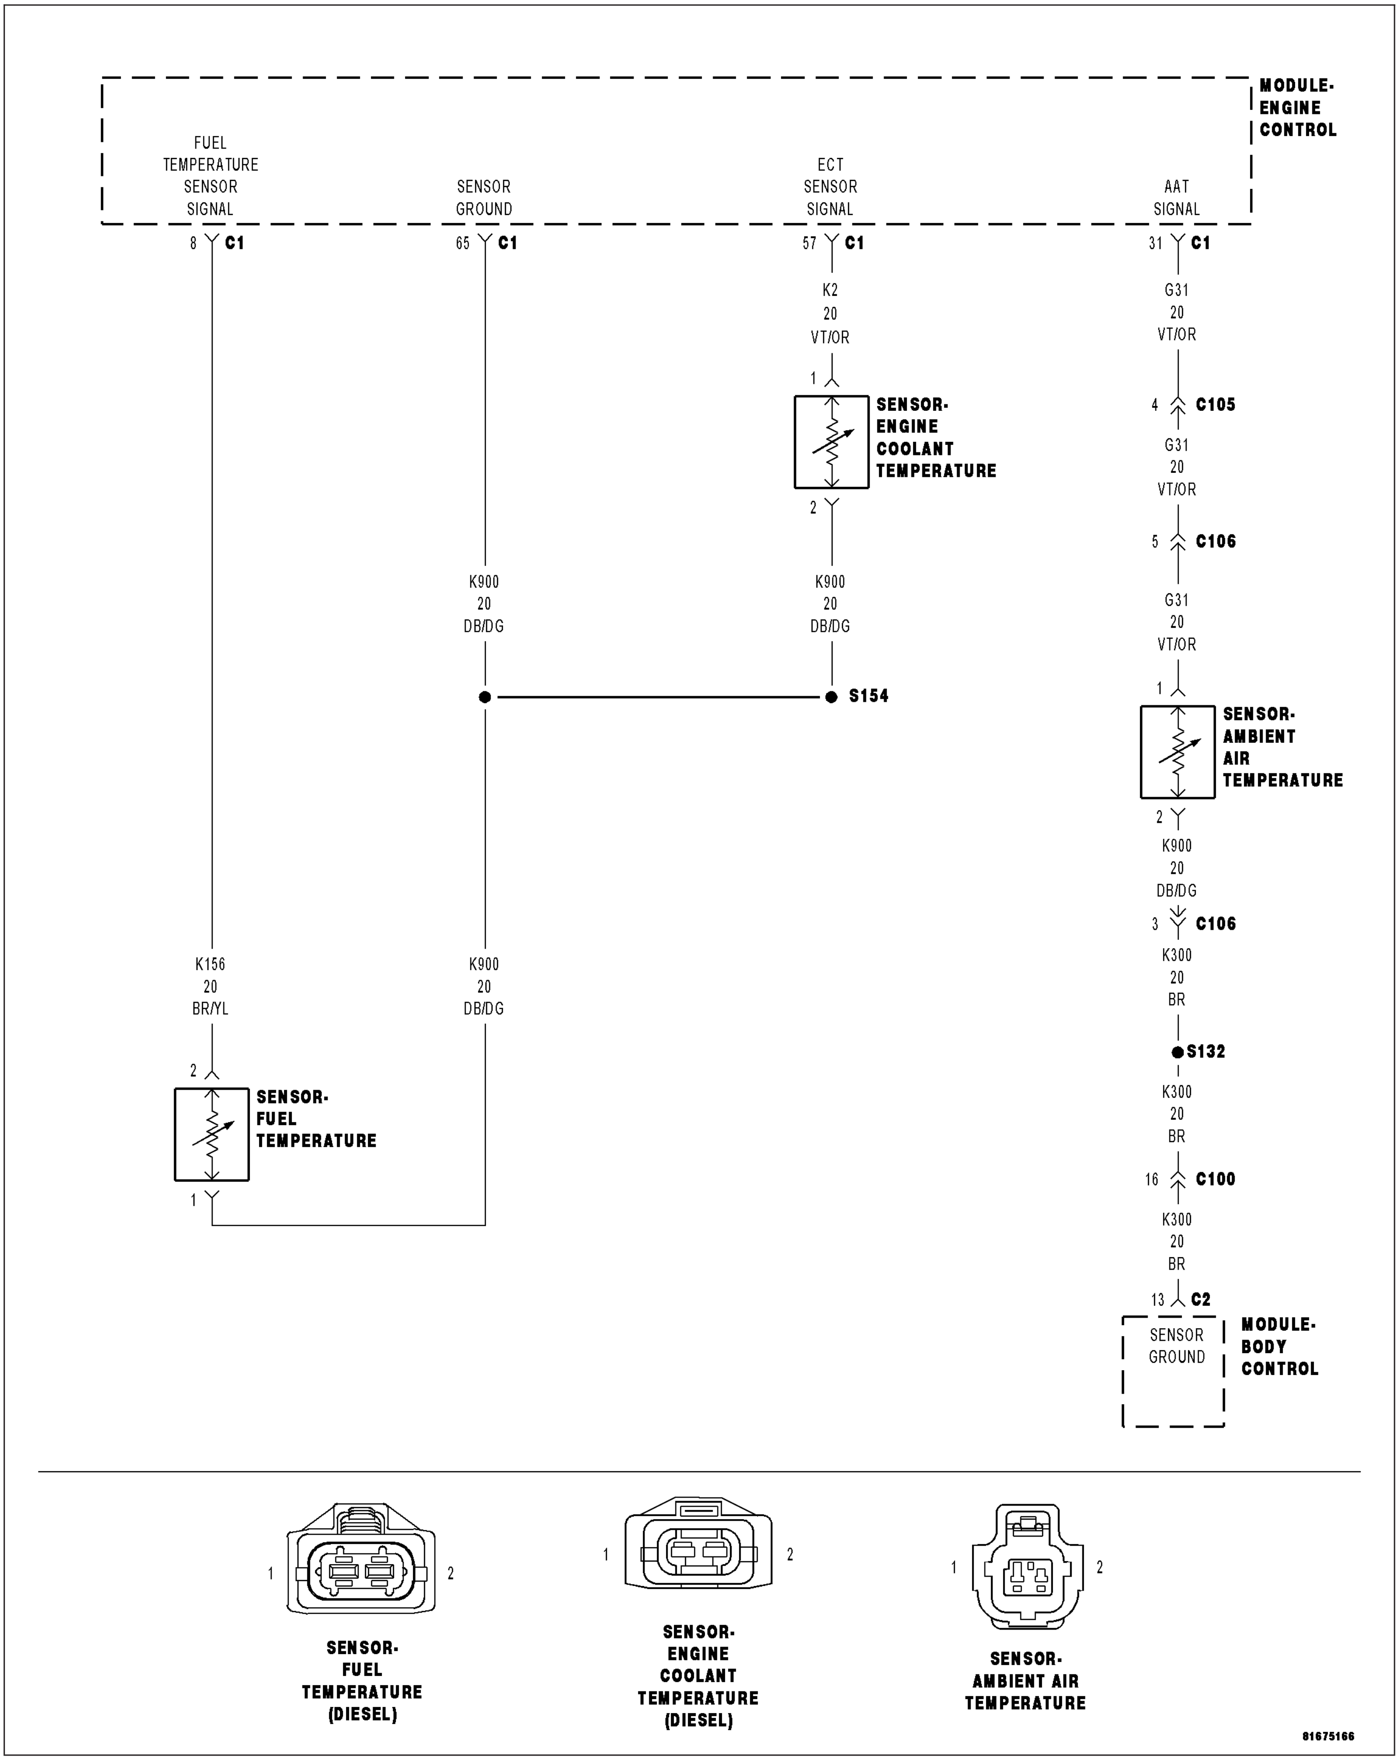
**Did the engine temperature reach a minimum of 80° C (176° F)?**

**Yes** >> Test Complete.

**No** >> Refer to the Service Information for cooling system performance diagnosis. The most probable cause is a Thermostat problem. Also, refer to any related TSBs.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0180-FUEL TEMPERATURE SENSOR SIGNAL VOLTAGE TOO HIGH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The Fuel Temperature Sensor signal is above 4.95 volts for 0.5 seconds.

| Possible Causes |
|---|
| FUEL TEMPERATURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| SENSOR GROUND CIRCUIT OPEN |
| FUEL TEMPERATURE SENSOR |
| FUEL TEMPERATURE SENSOR SIGNAL CIRCUIT OPEN |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If multiple DTCs are present, the most likely cause is a 5-Volt Supply or Sensor Ground circuit shorted to voltage or ground. Refer to the Service Information Wiring section for circuits that would affect multiple DTCs.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, monitor the Fuel Temperature Sensor voltage.

**Is the Fuel Temperature Sensor voltage above 4.80 volts?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. FUEL TEMPERATURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the Fuel Temperature Sensor harness connector.

Turn the ignition on.

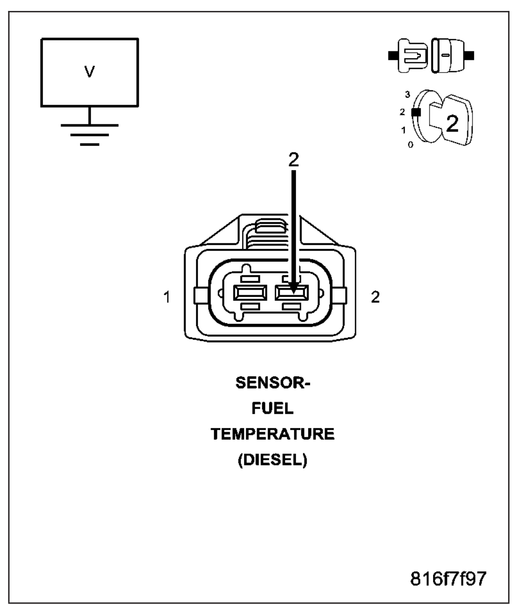
Measure the voltage on the Fuel Temperature Sensor Signal circuit.

**Is the voltage above 5.5 volts?**

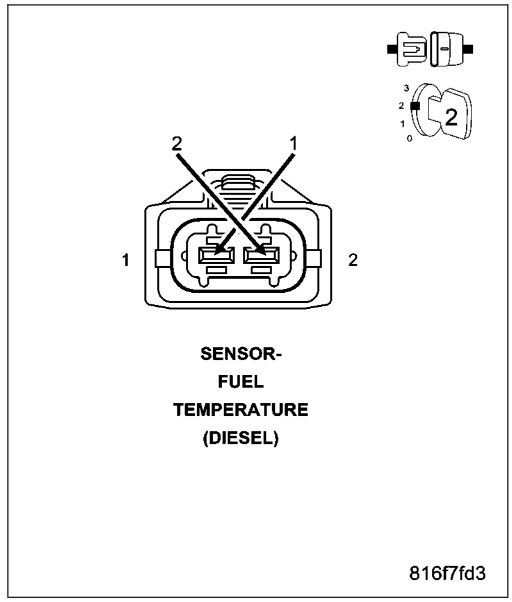
**Yes** >> Repair the Fuel Temperature Sensor Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3



## 3. FUEL TEMPERATURE SENSOR



Turn the ignition off.

Disconnect the Fuel Temperature Sensor harness connector.

Connect a jumper wire between the Fuel Temperature Sensor harness connector cavities.

Turn the ignition on.

With the scan tool, read the Fuel Temperature Sensor voltage.

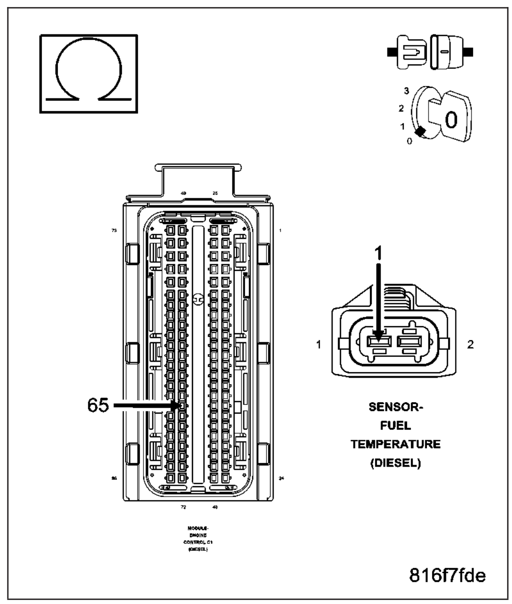
**Is the voltage below 1.0 volt?**

**Yes** >> Replace the Fuel Temperature Sensor in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. SENSOR GROUND CIRCUIT OPEN



Turn the ignition off.

Disconnect the Fuel Temperature Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Sensor Ground circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

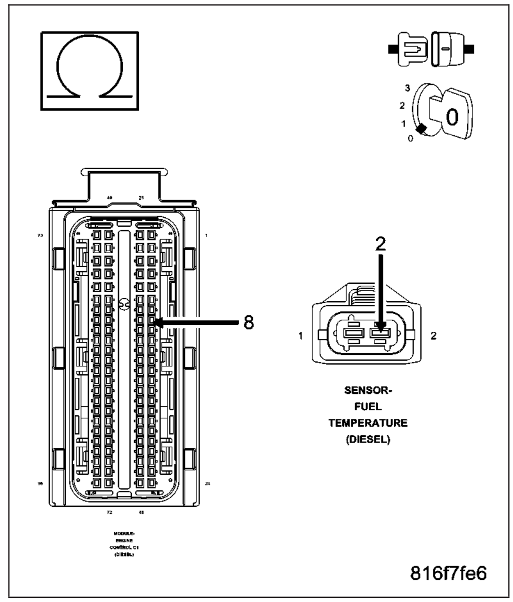
## 5. FUEL TEMPERATURE SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Temperature Sensor harness connector.

Measure the resistance of the Fuel Temperature Sensor Signal circuit.



**Is the resistance below 10.0 ohms?**

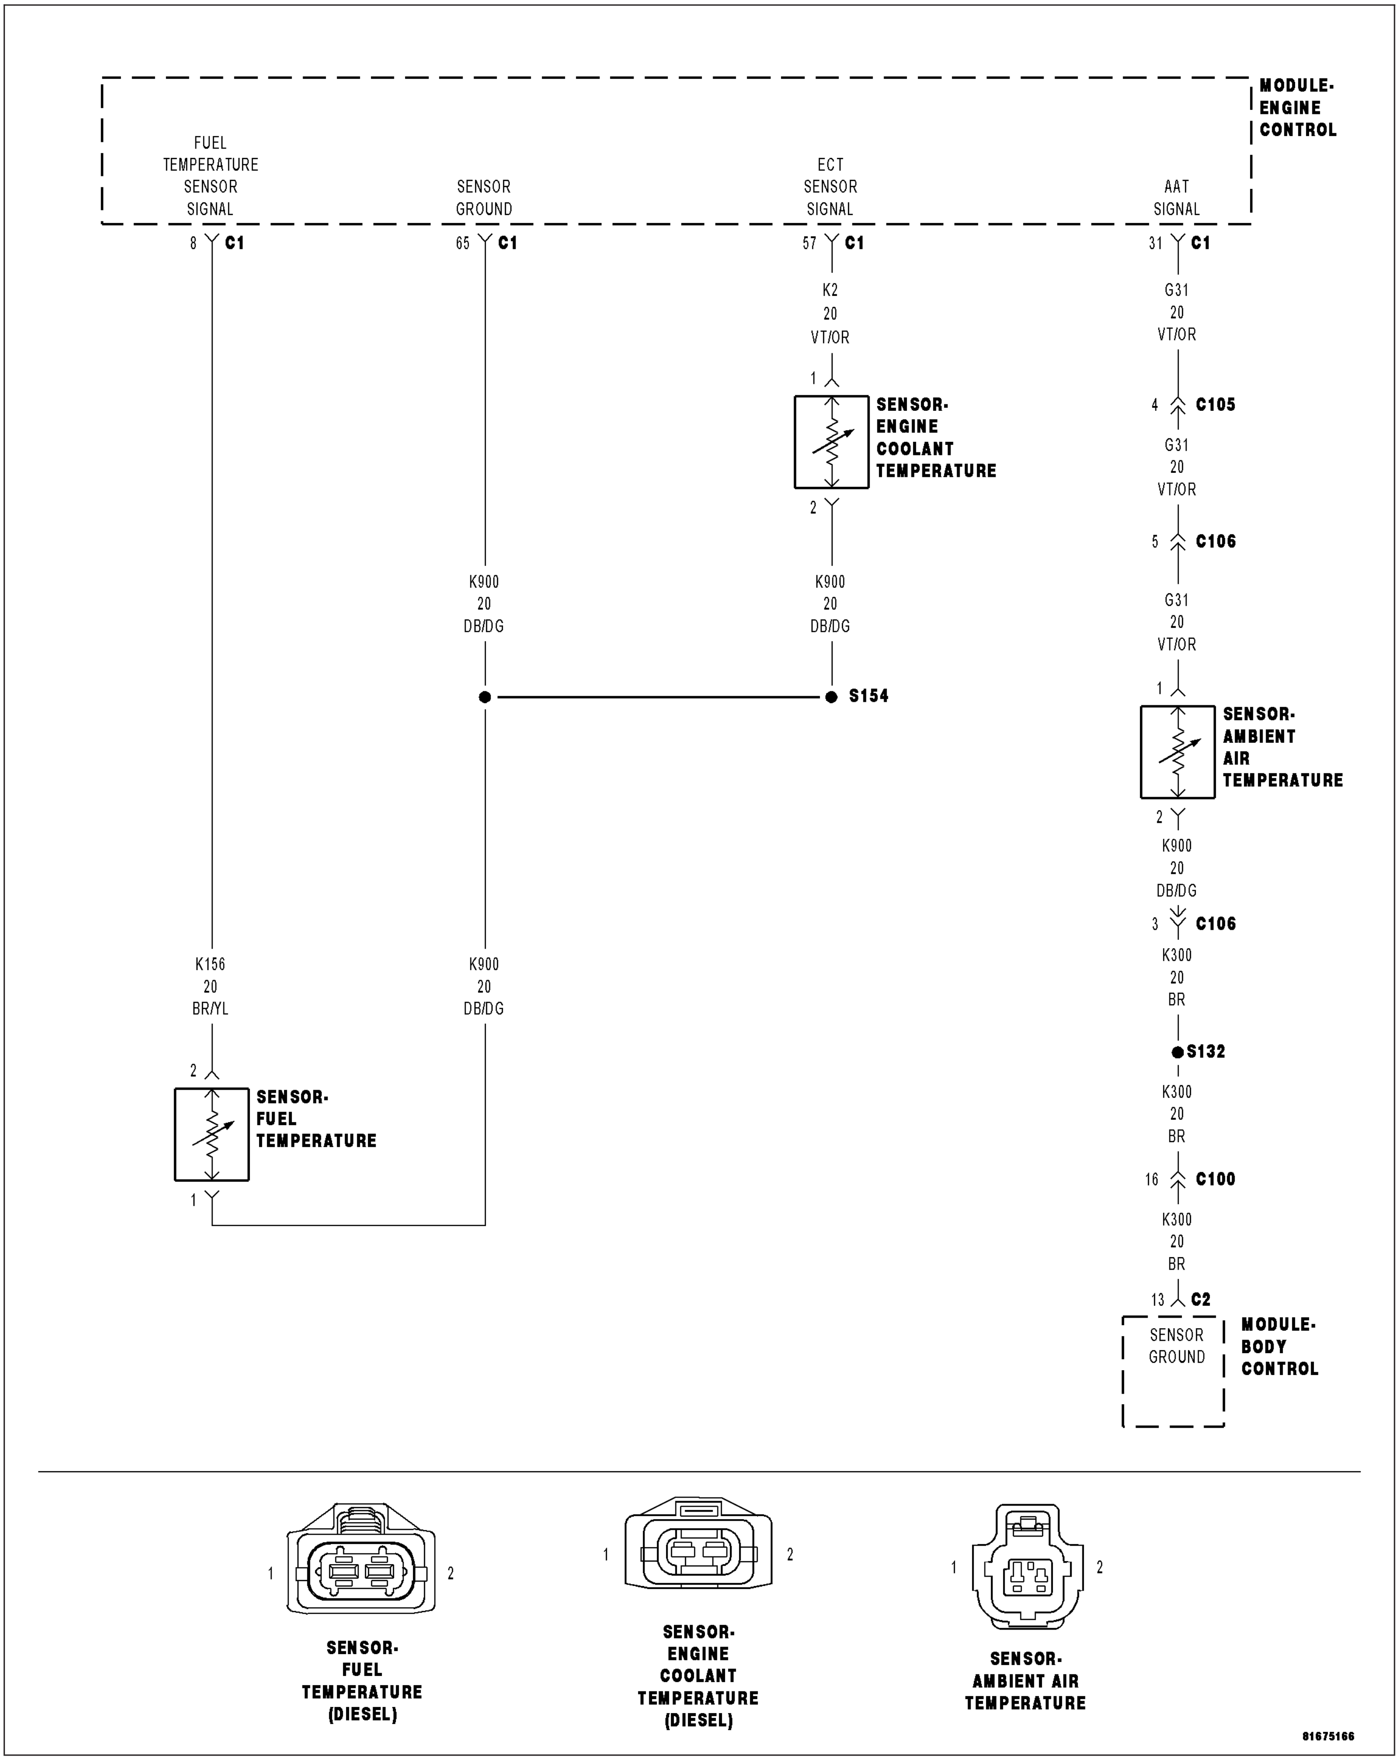
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Fuel Temperature Sensor Signal circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0180-FUEL TEMPERATURE SENSOR SIGNAL VOLTAGE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The Fuel Temperature Sensor signal is below 0.12 volt for 0.5 seconds.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| FUEL TEMPERATURE SENSOR |
| FUEL TEMPERATURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| FUEL TEMPERATURE SENSOR SIGNAL AND GROUND CIRCUITS SHORTED TOGETHER |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, monitor the Fuel Temperature Sensor voltage.

**Is the Fuel Temperature Sensor voltage below 0.20 volt?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. FUEL TEMPERATURE SENSOR

Turn the ignition off.

Disconnect the Fuel Temperature Sensor harness connector.

Turn the ignition on.

With the scan tool, read the Fuel Temperature Sensor voltage.

**Is the voltage above 4.0 volts?**

**Yes** >> Replace the Fuel Temperature Sensor in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> 3

## 3. FUEL TEMPERATURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Temperature Sensor harness connector.

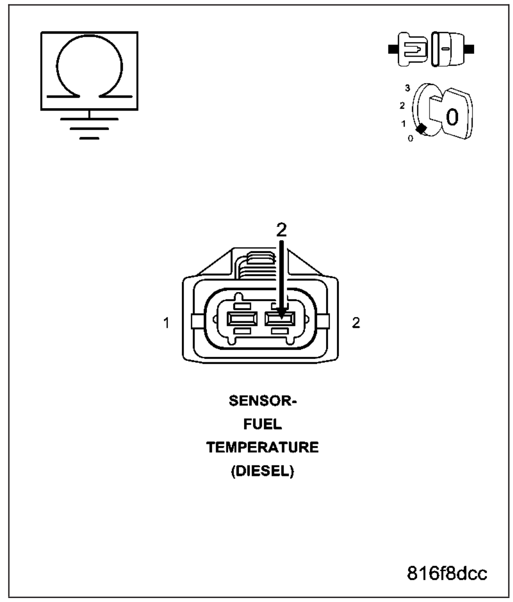
Measure the resistance between ground and the Fuel temperature Sensor Signal circuit.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Fuel Temperature Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 4. FUEL TEMPERATURE SENSOR SIGNAL AND GROUND CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Temperature Sensor harness connector.

Measure the resistance between the Fuel Temperature Sensor Signal circuit and Sensor Ground circuit.

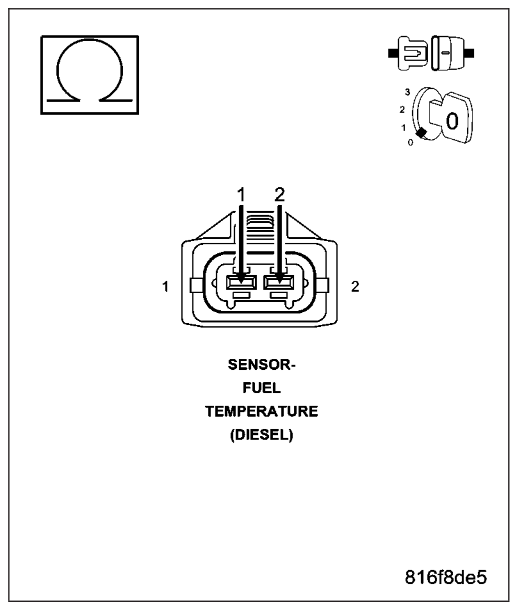
**Is the resistance above 1000 ohms?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

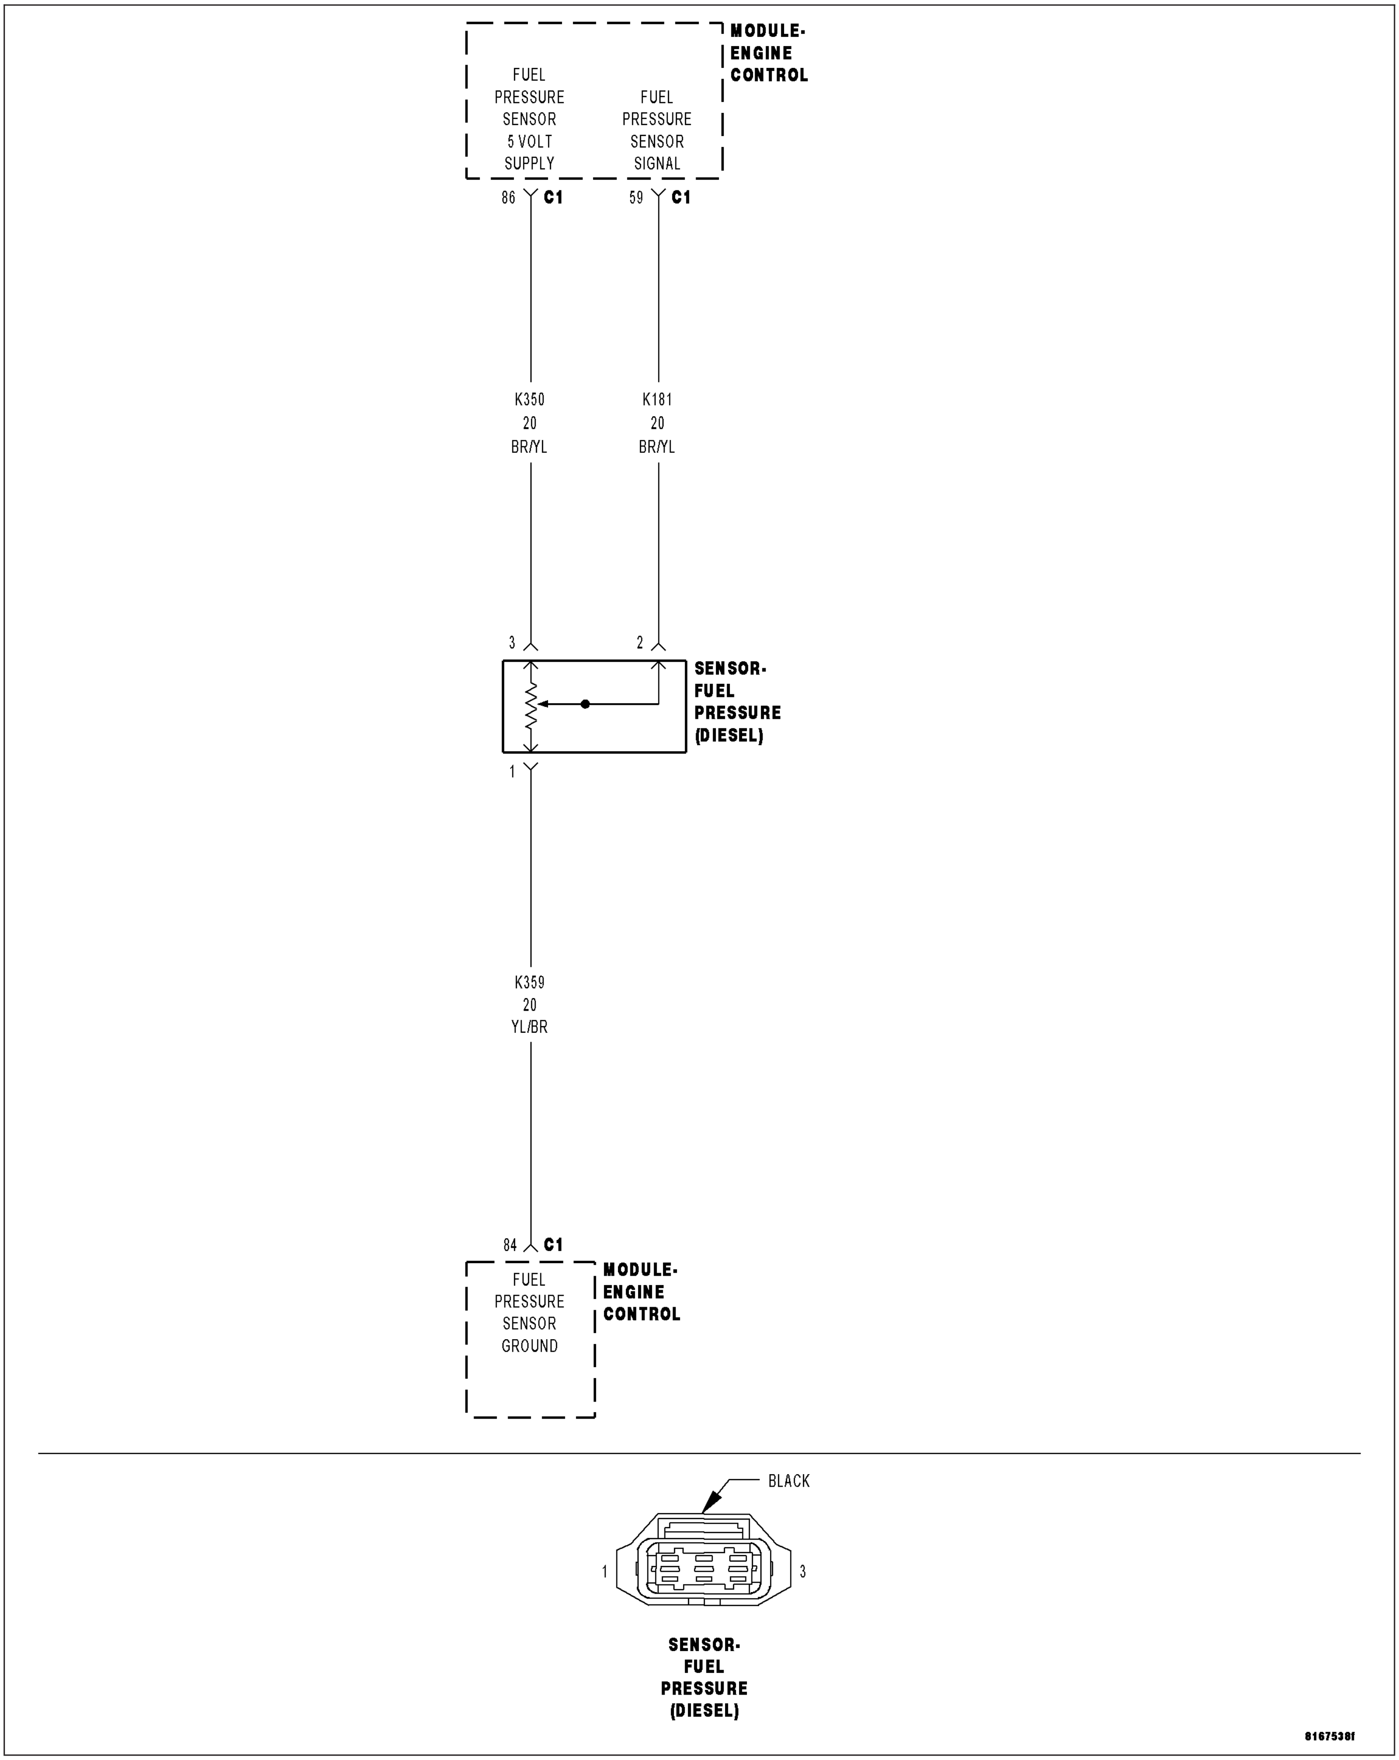
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Fuel Temperature Sensor Signal and Ground circuits for a short together.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## P0190-FUEL PRESS SENSOR SIGNAL VOLTAGE TOO HIGH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The Fuel Rail Pressure Sensor signal voltage is above 4.8 volts.

| Possible Causes |
|---|
| ECM - FUEL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| ECM - FUEL PRESSURE SENSOR SIGNAL OPEN |
| FUEL PRESSURE SENSOR SIGNAL CIRCUIT OPEN |
| FUEL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| SENSOR GROUND CIRCUIT OPEN |
| FUEL PRESSURE SENSOR 5-VOLT SUPPLY CIRCUIT OPEN |
| FUEL PRESSURE SENSOR GROUND CIRCUIT SHORTED TO VOLTAGE |
| FUEL PRESSURE SENSOR |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECKING FOR CURRENT DTC

**WARNING: THE FUEL INJECTION PUMP SUPPLIES HIGH-PRESSURE FUEL TO EACH INDIVIDUAL INJECTOR THROUGH HIGH-PRESSURE FUEL LINES. FUEL UNDER HIGH PRESSURE CAN PENETRATE SKIN AND CAUSE PERSONAL INJURY. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING.**

**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Cycle the ignition key on and off several times, leaving the key on for at least 10 seconds at a time.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

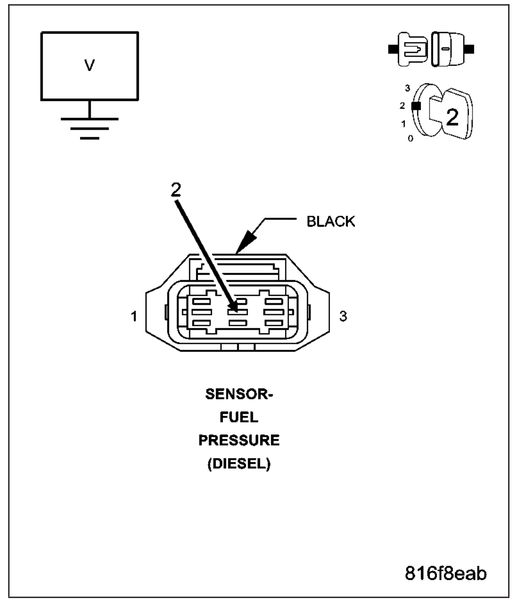
## 2. CHECK FUEL PRESSURE SENSOR SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the Fuel Pressure Sensor harness connector.

Turn the ignition on.

Measure the voltage of the Fuel Pressure Sensor Signal circuit.



**Select the appropriate voltage reading.**

**Voltage is above 5.5 volts.**
Go To 3

**Voltage is between 4.7 and 5.4 volts.**
Go To 4

**Voltage is below 4.7 volts.**
Go To 9

## 3. FUEL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the Fuel Pressure Sensor harness connector.

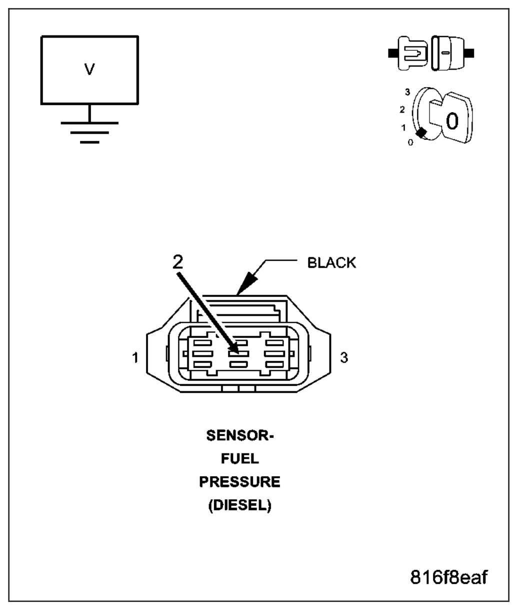
Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the Fuel Pressure Sensor Signal circuit.



**Is the voltage below 1.0 volt?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Fuel Pressure Sensor Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. FUEL PRESSURE SENSOR GROUND CIRCUIT OPEN

Turn the ignition off.

Disconnect the Fuel Pressure Sensor harness connector.

Disconnect the ECM harness connectors.

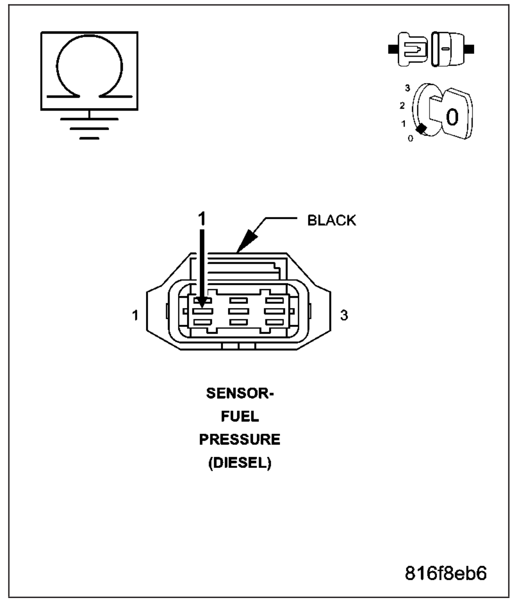
Measure the resistance of the Fuel Pressure Sensor Ground circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the Fuel Pressure Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 5. FUEL PRESSURE SENSOR 5-VOLT SUPPLY CIRCUIT OPEN

Turn the ignition off.

Disconnect the Fuel Pressure Sensor harness connector.

Disconnect the ECM harness connectors.

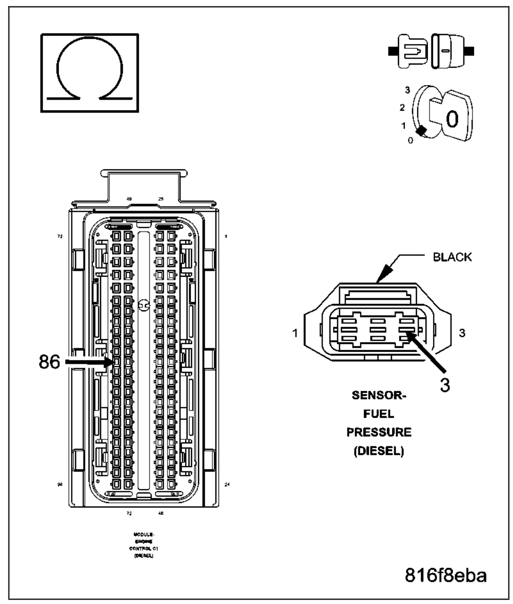
Measure the resistance of the Fuel Pressure Sensor 5-Volt Supply circuit.

**Is the resistance below 10.0 ohms?**

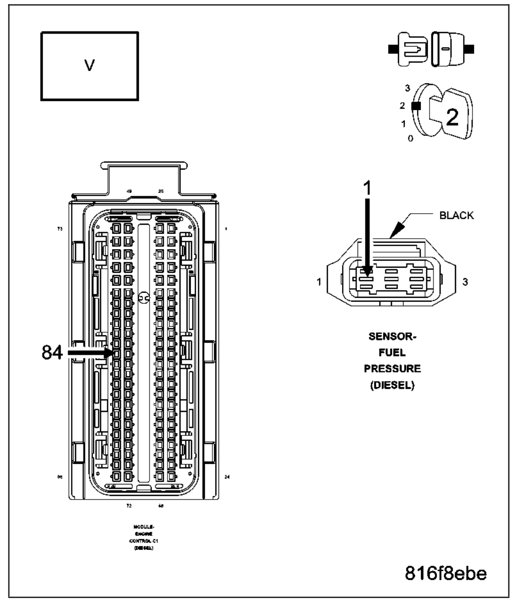
**Yes** >> Go To 6

**No** >> Repair the Fuel Pressure Sensor 5-volt Supply circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 6. FUEL PRESSURE SENSOR GROUND CKT SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the Fuel Pressure Sensor harness connector.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the Fuel Pressure Sensor Ground circuit at the Fuel Pressure Sensor and ECM harness connectors.

**NOTE: If the Fuel Pressure Sensor Ground circuit had a short to voltage on it, the ECM could be damaged. Retest the Fuel Pressure Sensor circuit.**

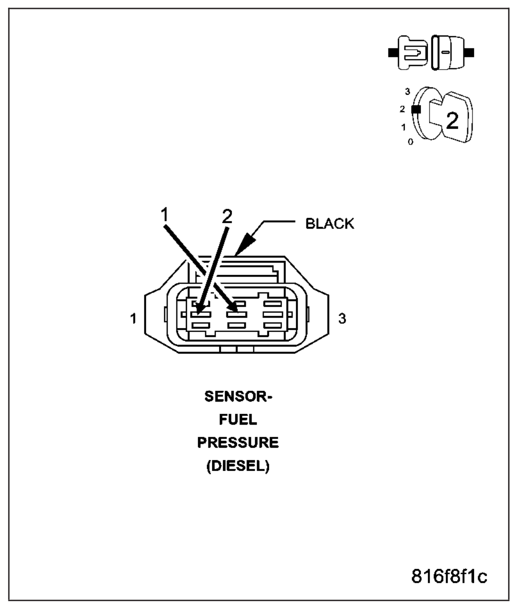
**Is the voltage above 1.0 volt at either connector?**

**Yes** >> Repair the Fuel Pressure Sensor Ground circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 7

## 7. FUEL PRESSURE SENSOR



Turn the ignition off.

Disconnect the Fuel Pressure Sensor harness connector.

Connect a jumper wire between the Fuel Pressure Sensor Signal circuit and the Fuel Pressure Sensor Ground circuit in the Fuel Pressure Sensor harness connector.

Turn the ignition on and monitor the scan tool for DTCs.

**Is DTC P0190 FUEL PRESS SENSOR CIRCUIT MALF SIGNAL VOLTAGE TOO LOW present?**

**Yes** >> Replace the Fuel Pressure Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 8

## 8. ENGINE CONTROL MODULE

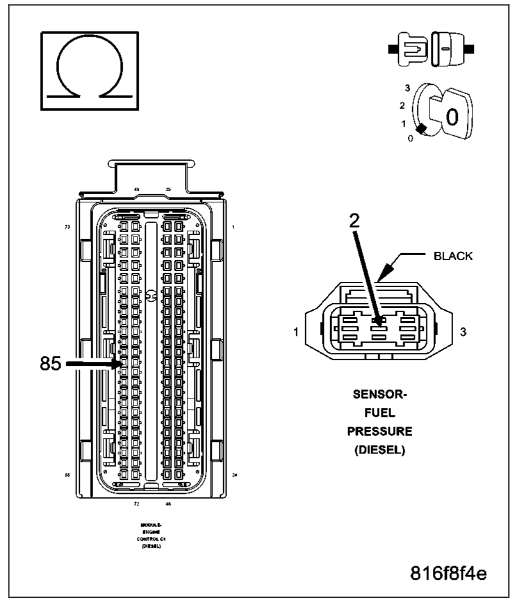
**If there are no possible causes remaining, view repair.**

**Repair**

Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 9. FUEL PRESSURE SENSOR SIGNAL CIRCUIT OPEN



Turn the ignition off.

Disconnect the Fuel Pressure Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Fuel Pressure Sensor Signal circuit.

**Is the resistance below 10.0 ohms?**

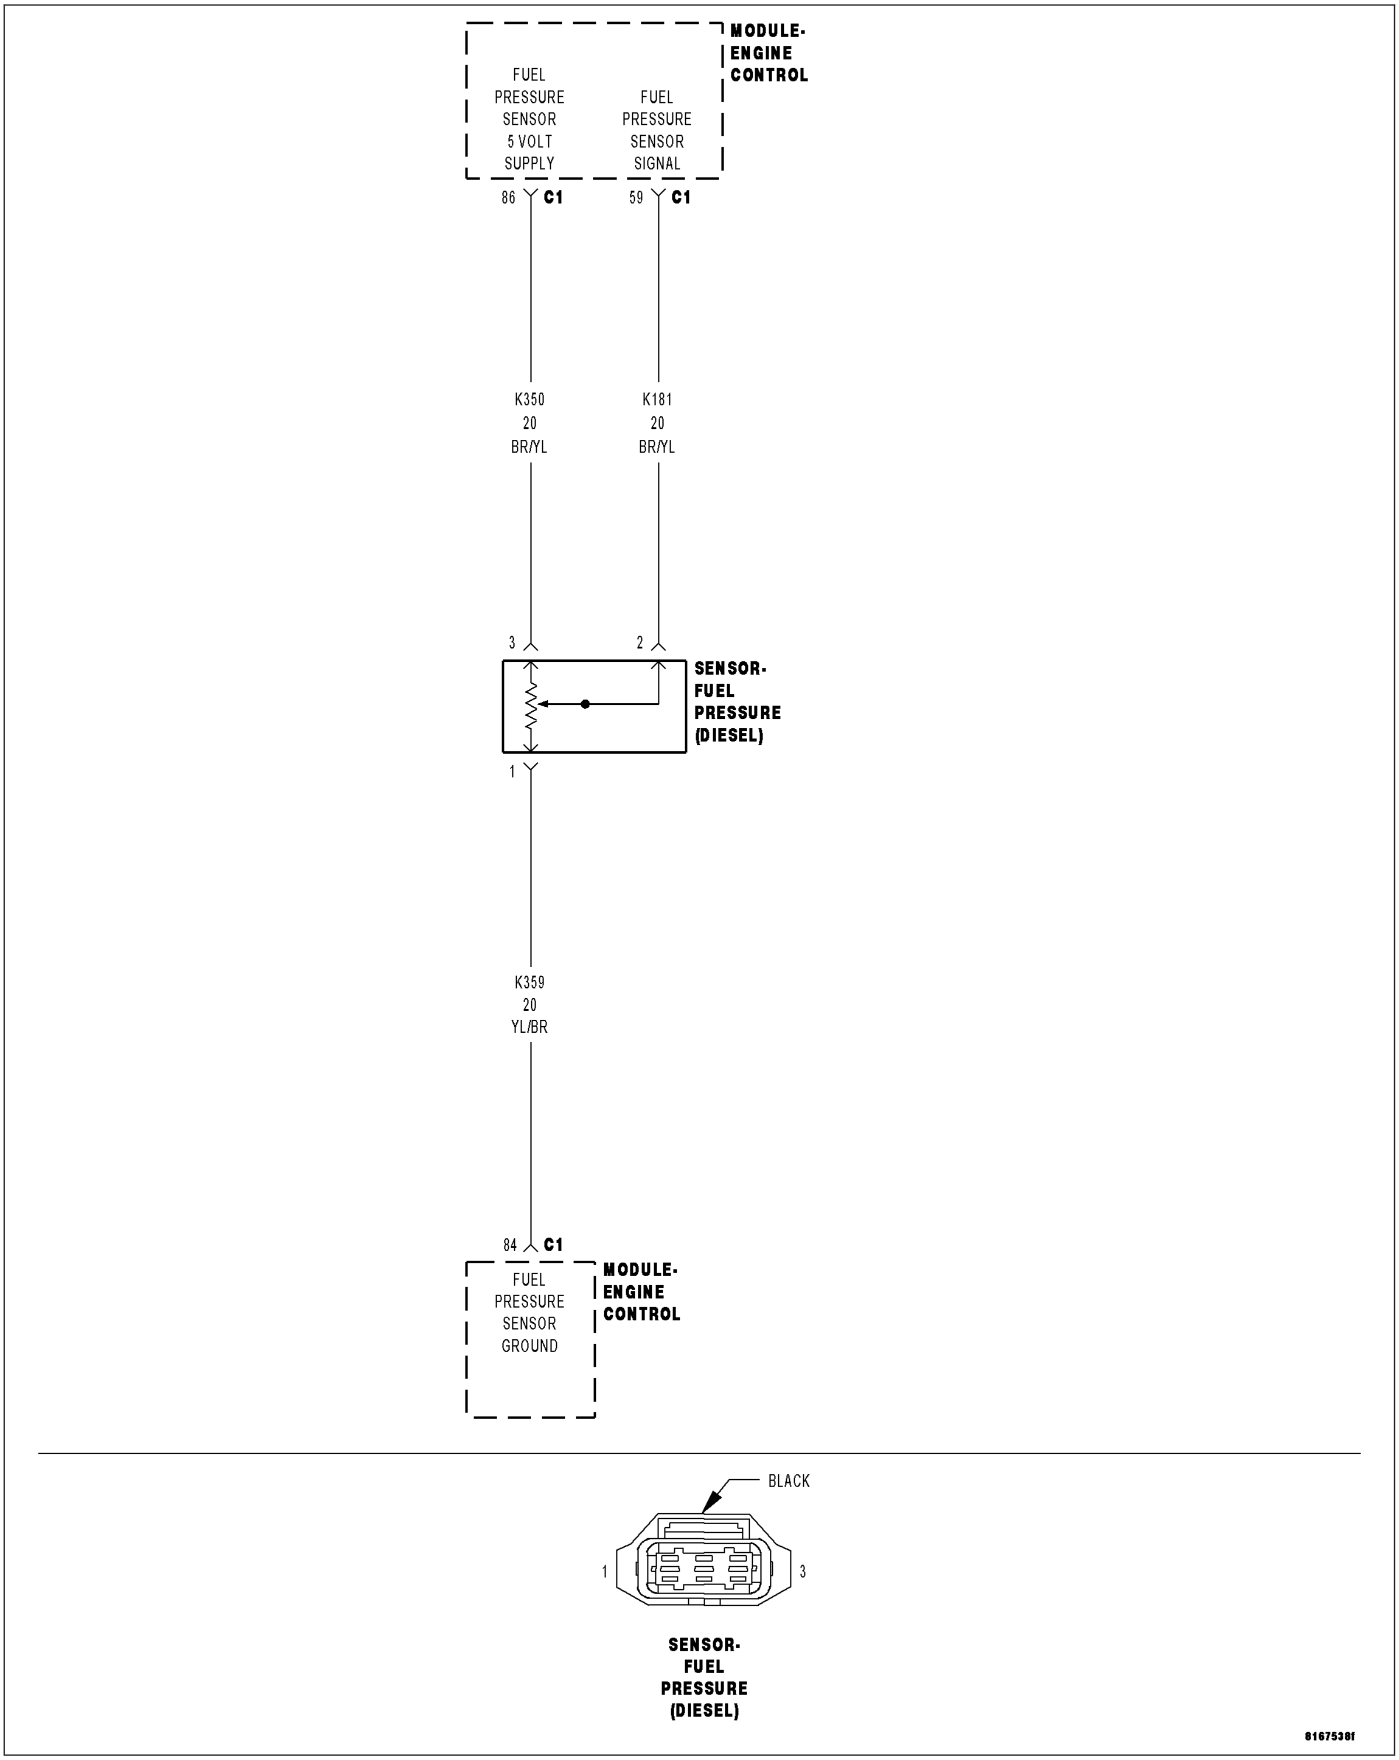
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Fuel Pressure Sensor Signal circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0190-FUEL PRESS SENSOR SIGNAL VOLTAGE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The Fuel Rail Pressure Sensor signal voltage is below 0.2 volt.

| Possible Causes |
|---|
| FUEL PRESSURE SENSOR |
| FUEL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| FUEL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO SENSOR GROUND |
| ECM - FUEL PRESSURE SENSOR SIGNAL SHORTED TO GROUND |

## Diagnostic Test

### 1. CHECKING FOR CURRENT DTC

**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

**WARNING: THE FUEL INJECTION PUMP SUPPLIES HIGH-PRESSURE FUEL TO EACH INDIVIDUAL INJECTOR THROUGH HIGH-PRESSURE FUEL LINES. FUEL UNDER HIGH PRESSURE CAN PENETRATE SKIN AND CAUSE PERSONAL INJURY. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Cycle the ignition key on and off several times, leaving the key on for at least 10 seconds at a time.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

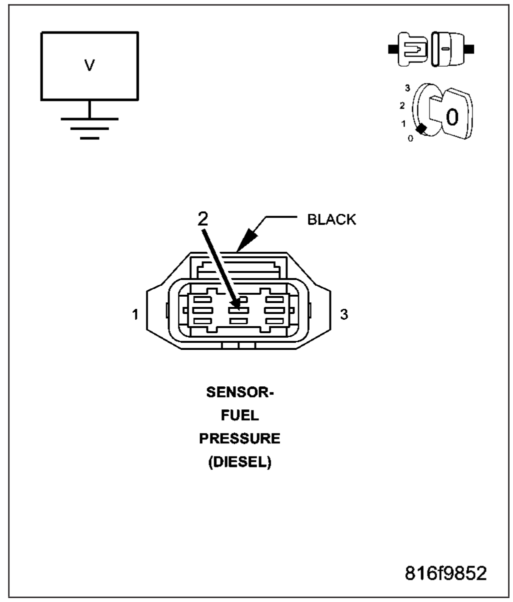
## 2. FUEL PRESSURE SENSOR

Turn the ignition off.

Disconnect the Fuel Pressure Sensor harness connector.

Turn the ignition on.

Measure the voltage of the Fuel Pressure Sensor Signal circuit.



**Is the voltage between 4.7 and 5.3 volts?**

**Yes** >> Replace the Fuel Pressure Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

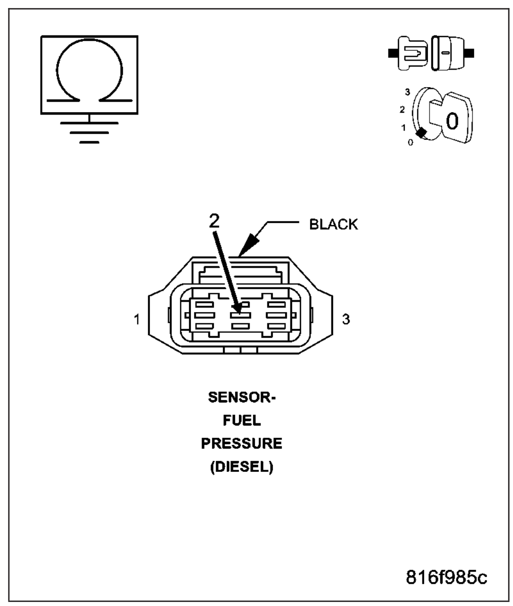
## 3. FUEL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the Fuel Pressure Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Fuel Pressure Sensor Signal circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Fuel Pressure Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

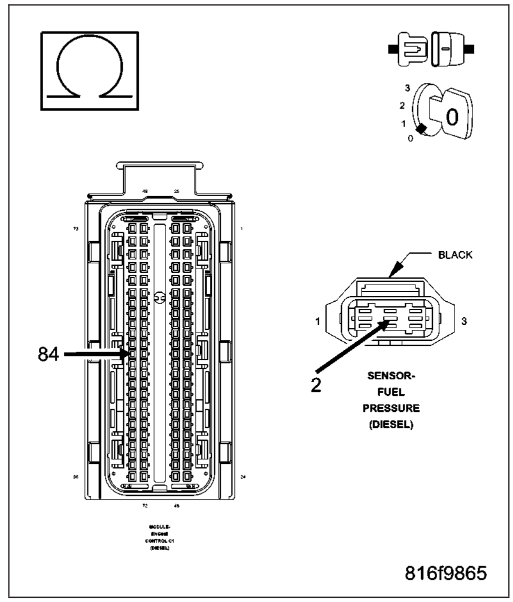
## 4. FUEL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO SENSOR GROUND

Turn the ignition off.

Disconnect the Fuel Pressure Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between the Fuel Pressure Sensor Ground circuit and the Fuel Pressure Sensor Signal circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 5

**No** >> Repair the Fuel Pressure Sensor Signal circuit for a short to the Fuel Pressure Sensor Ground circuit.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. ECM - SHORT TO GROUND

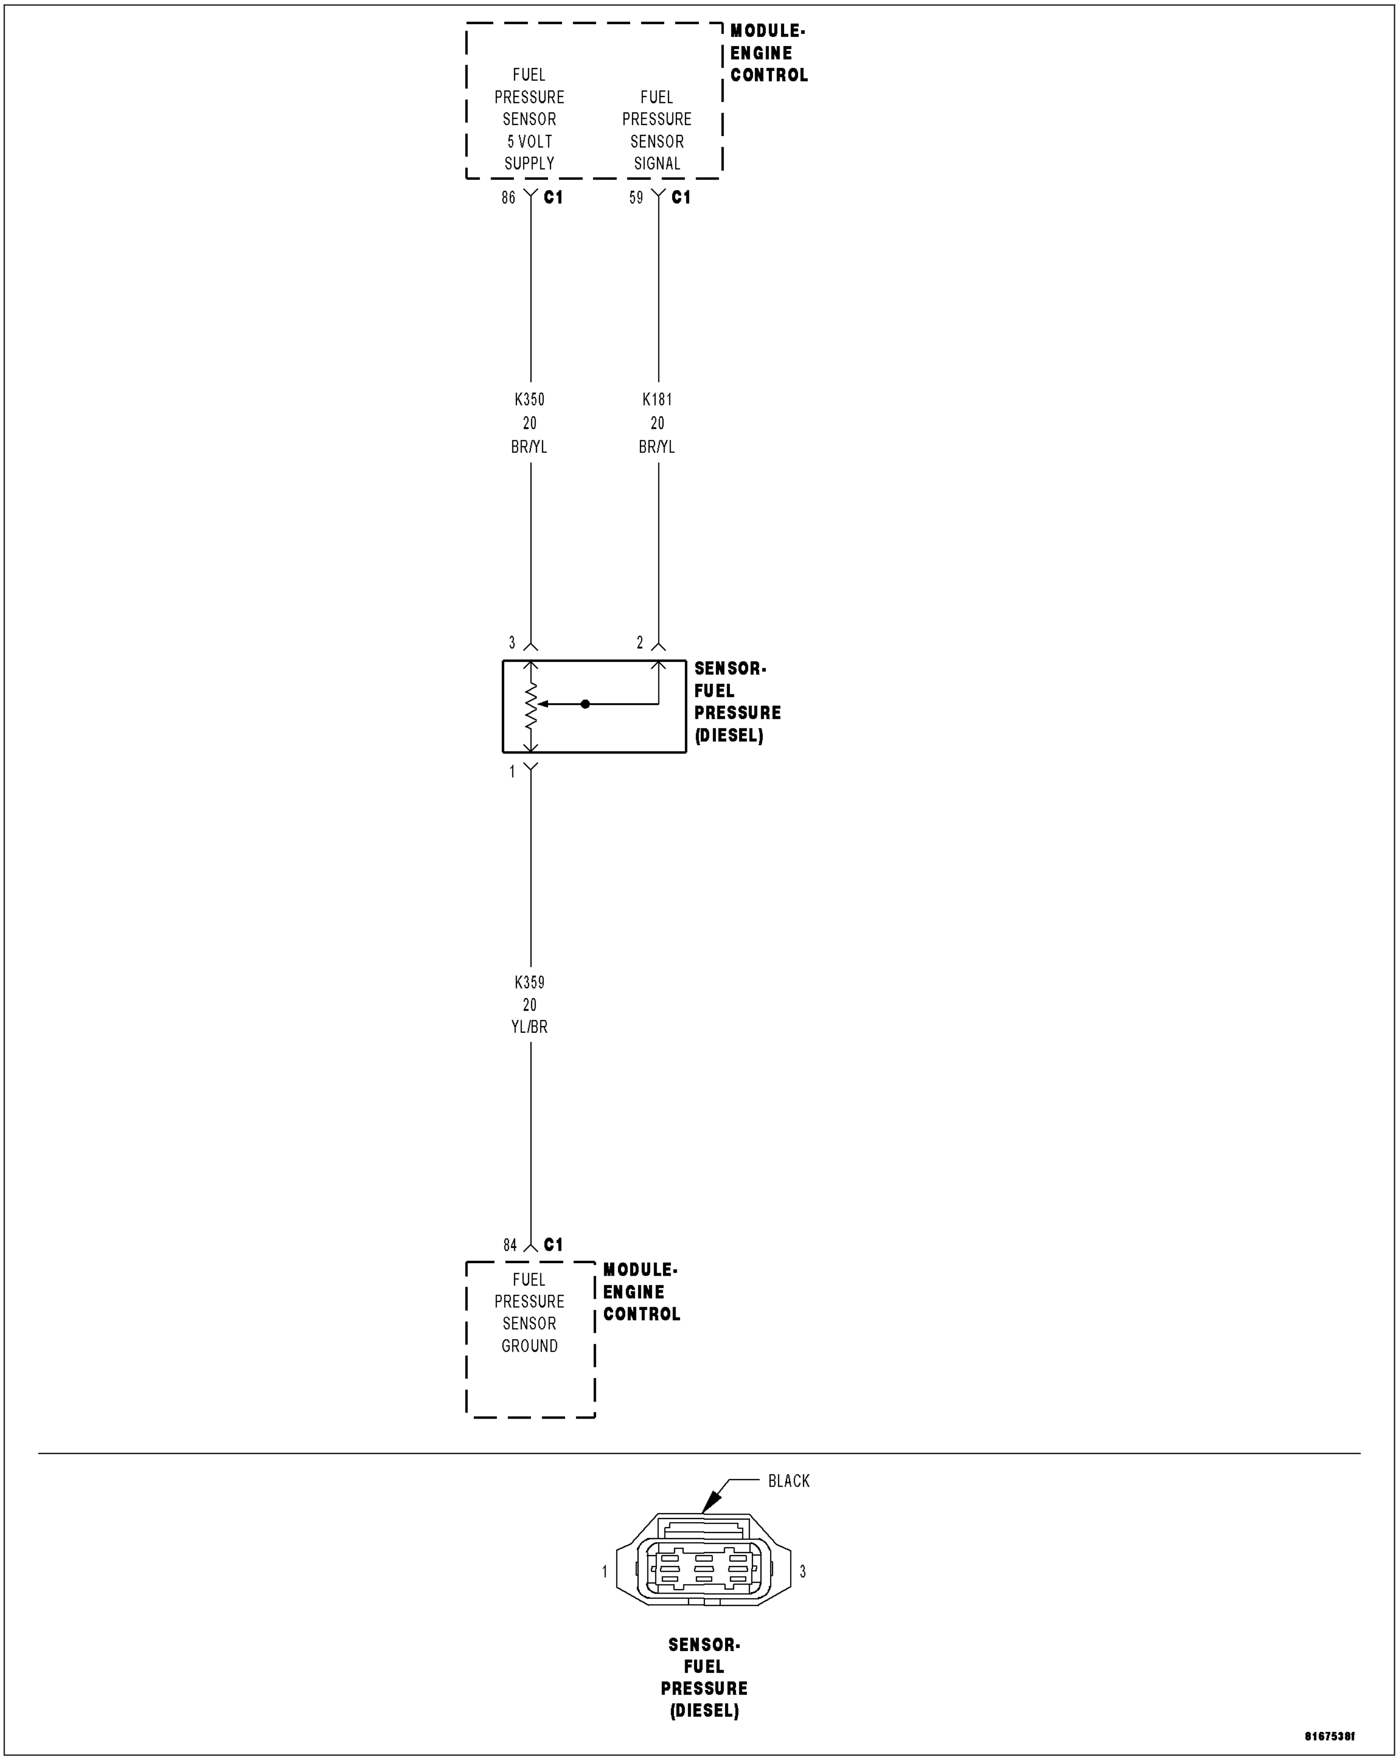
**If there are no possible causes remaining, view repair.**

**Repair**

Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0191-FUEL PRESS SENSOR AFTERRUN NEGATIVE PLAUSIBILITY



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  At ignition shut off during Afterrun.
- **Set Condition:**
  The Fuel Pressure Sensor signal is below 0.298 volt for 1.0 second.

| Possible Causes |
|---|
| FUEL PRESSURE SENSOR |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. FUEL PRESSURE SENSOR

**NOTE: This code can be caused by an intermittent problem in the wiring and connectors to the Fuel Pressure Sensor. Inspect the Fuel Pressure Sensor harness connector and associated wiring for signs of poor terminal contact.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

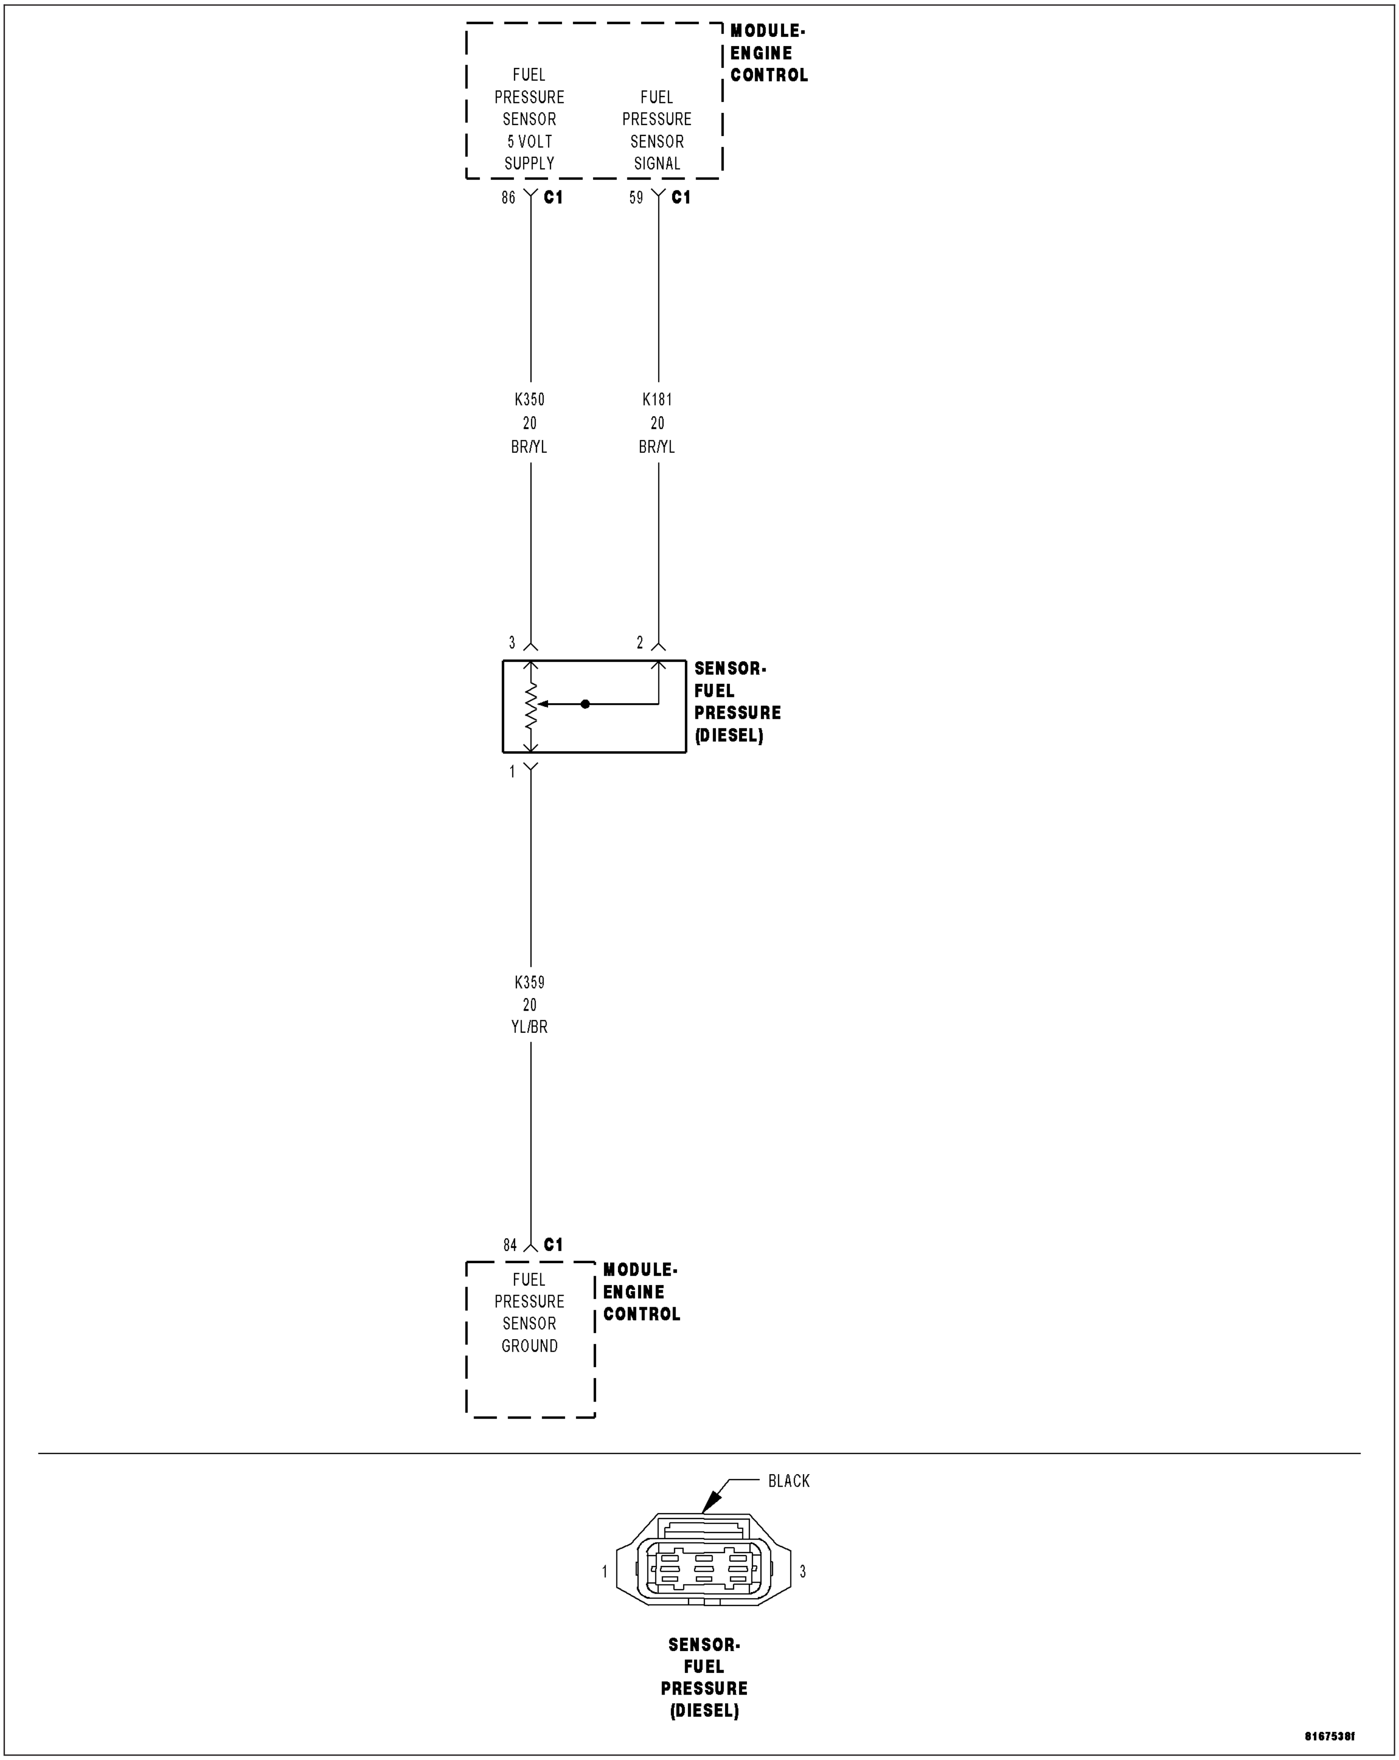
Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle. With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace the Fuel Pressure Sensor in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## P0191-FUEL PRESS SENSOR AFTERRUN POSITIVE PLAUSIBILITY



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  At ignition shut off during Afterrun.
- **Set Condition:**
  The Fuel Pressure Sensor signal is above 0.698 volt for 1.0 second.

| Possible Causes |
|---|
| FUEL PRESSURE SENSOR |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. FUEL PRESSURE SENSOR

**NOTE: This code can be caused by an intermittent problem in the wiring and connectors to the Fuel Pressure Sensor. Inspect the Fuel Pressure Sensor harness connector and associated wiring for signs of poor terminal contact.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

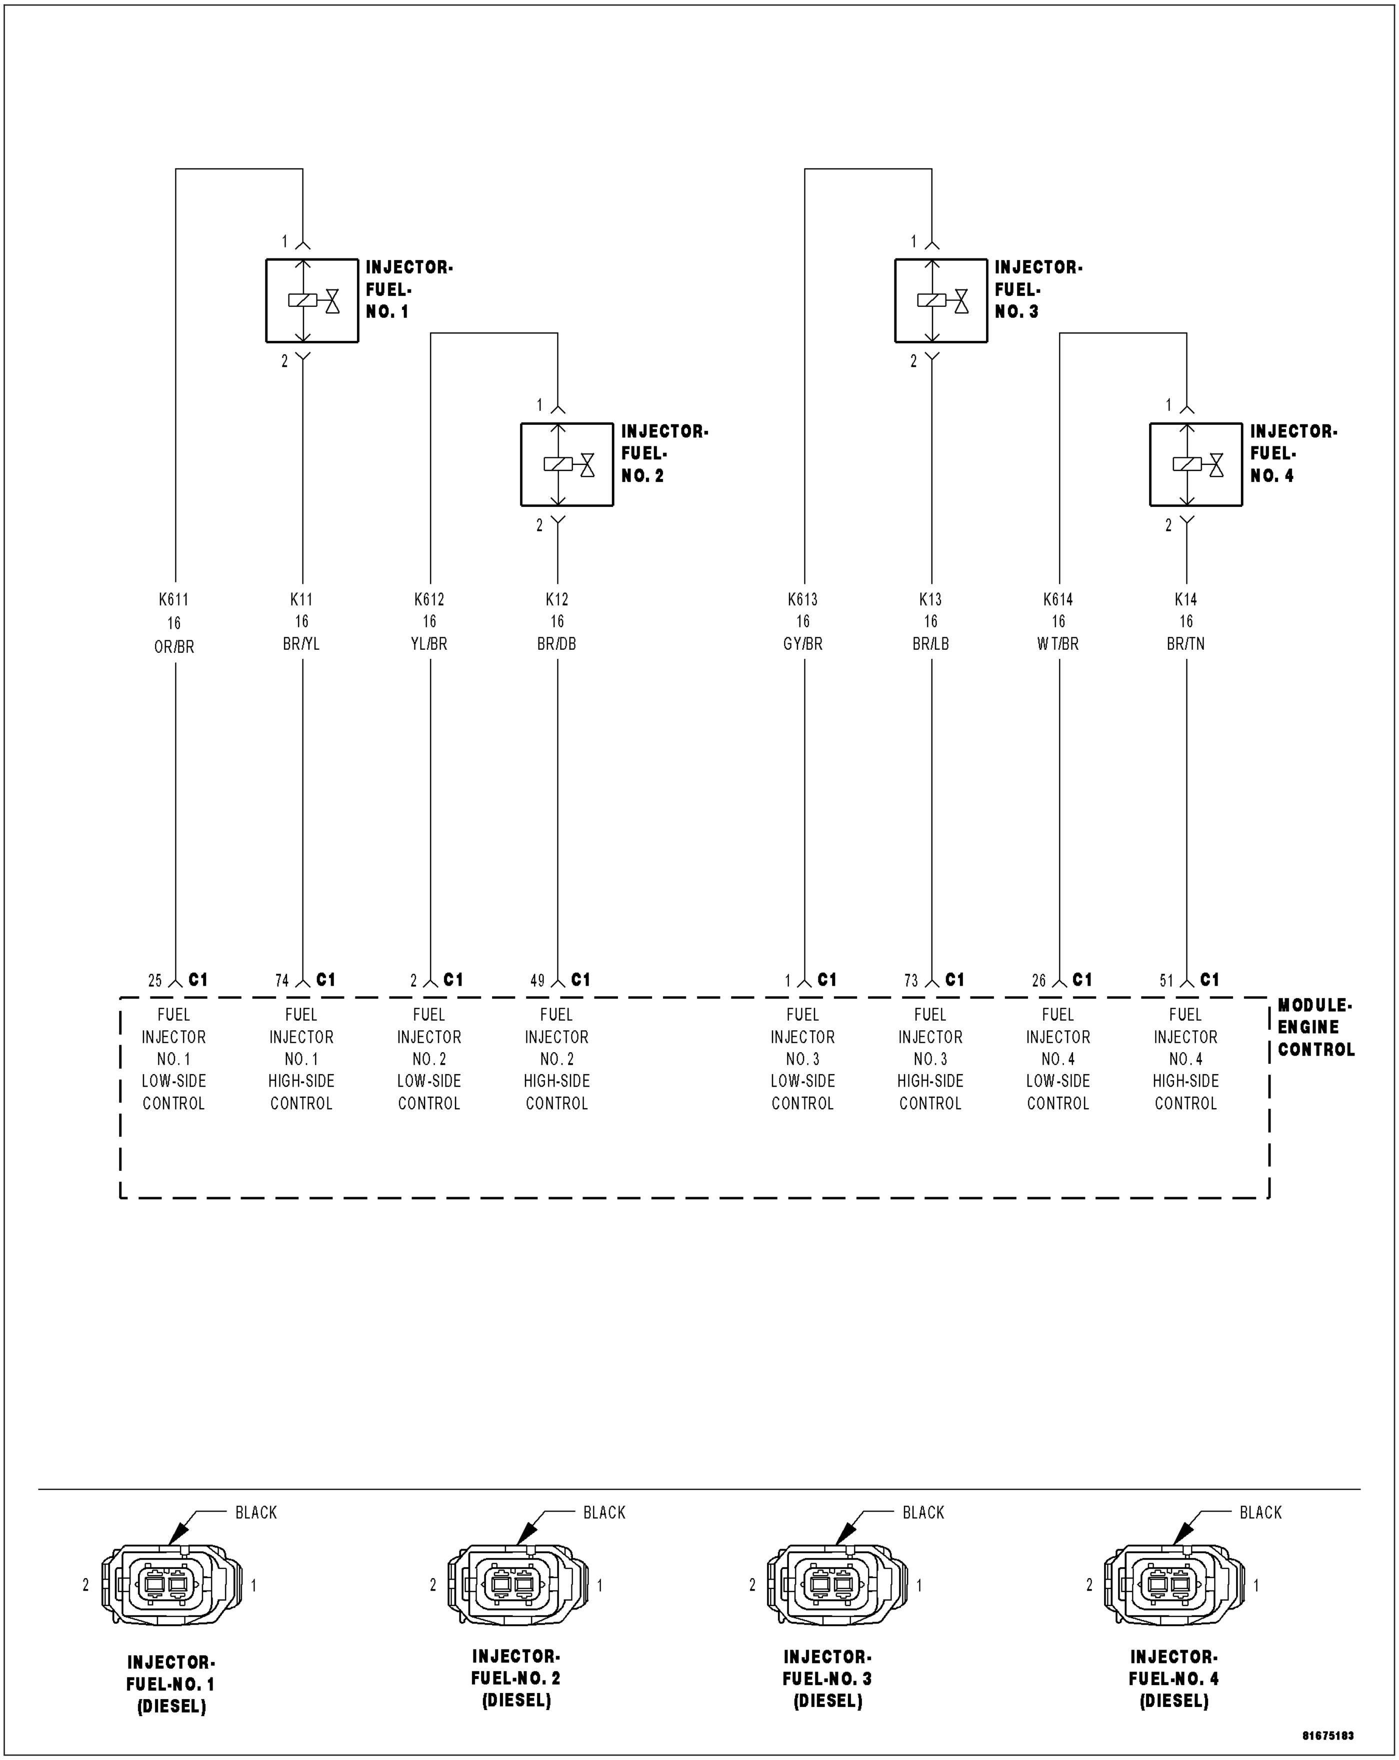
Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle. With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace the Fuel Pressure Sensor in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## P0201-CYLINDER 1-INJECTOR CIRCUIT LOAD DROP



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM detects an incorrect rate of current decrease after injection occurs.

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

## 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of each Fuel Injector High-Side Control circuit.

Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Fuel Injector harness connectors.

Measure the resistance between ground and each Fuel Injector High-Side Control circuits.

Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

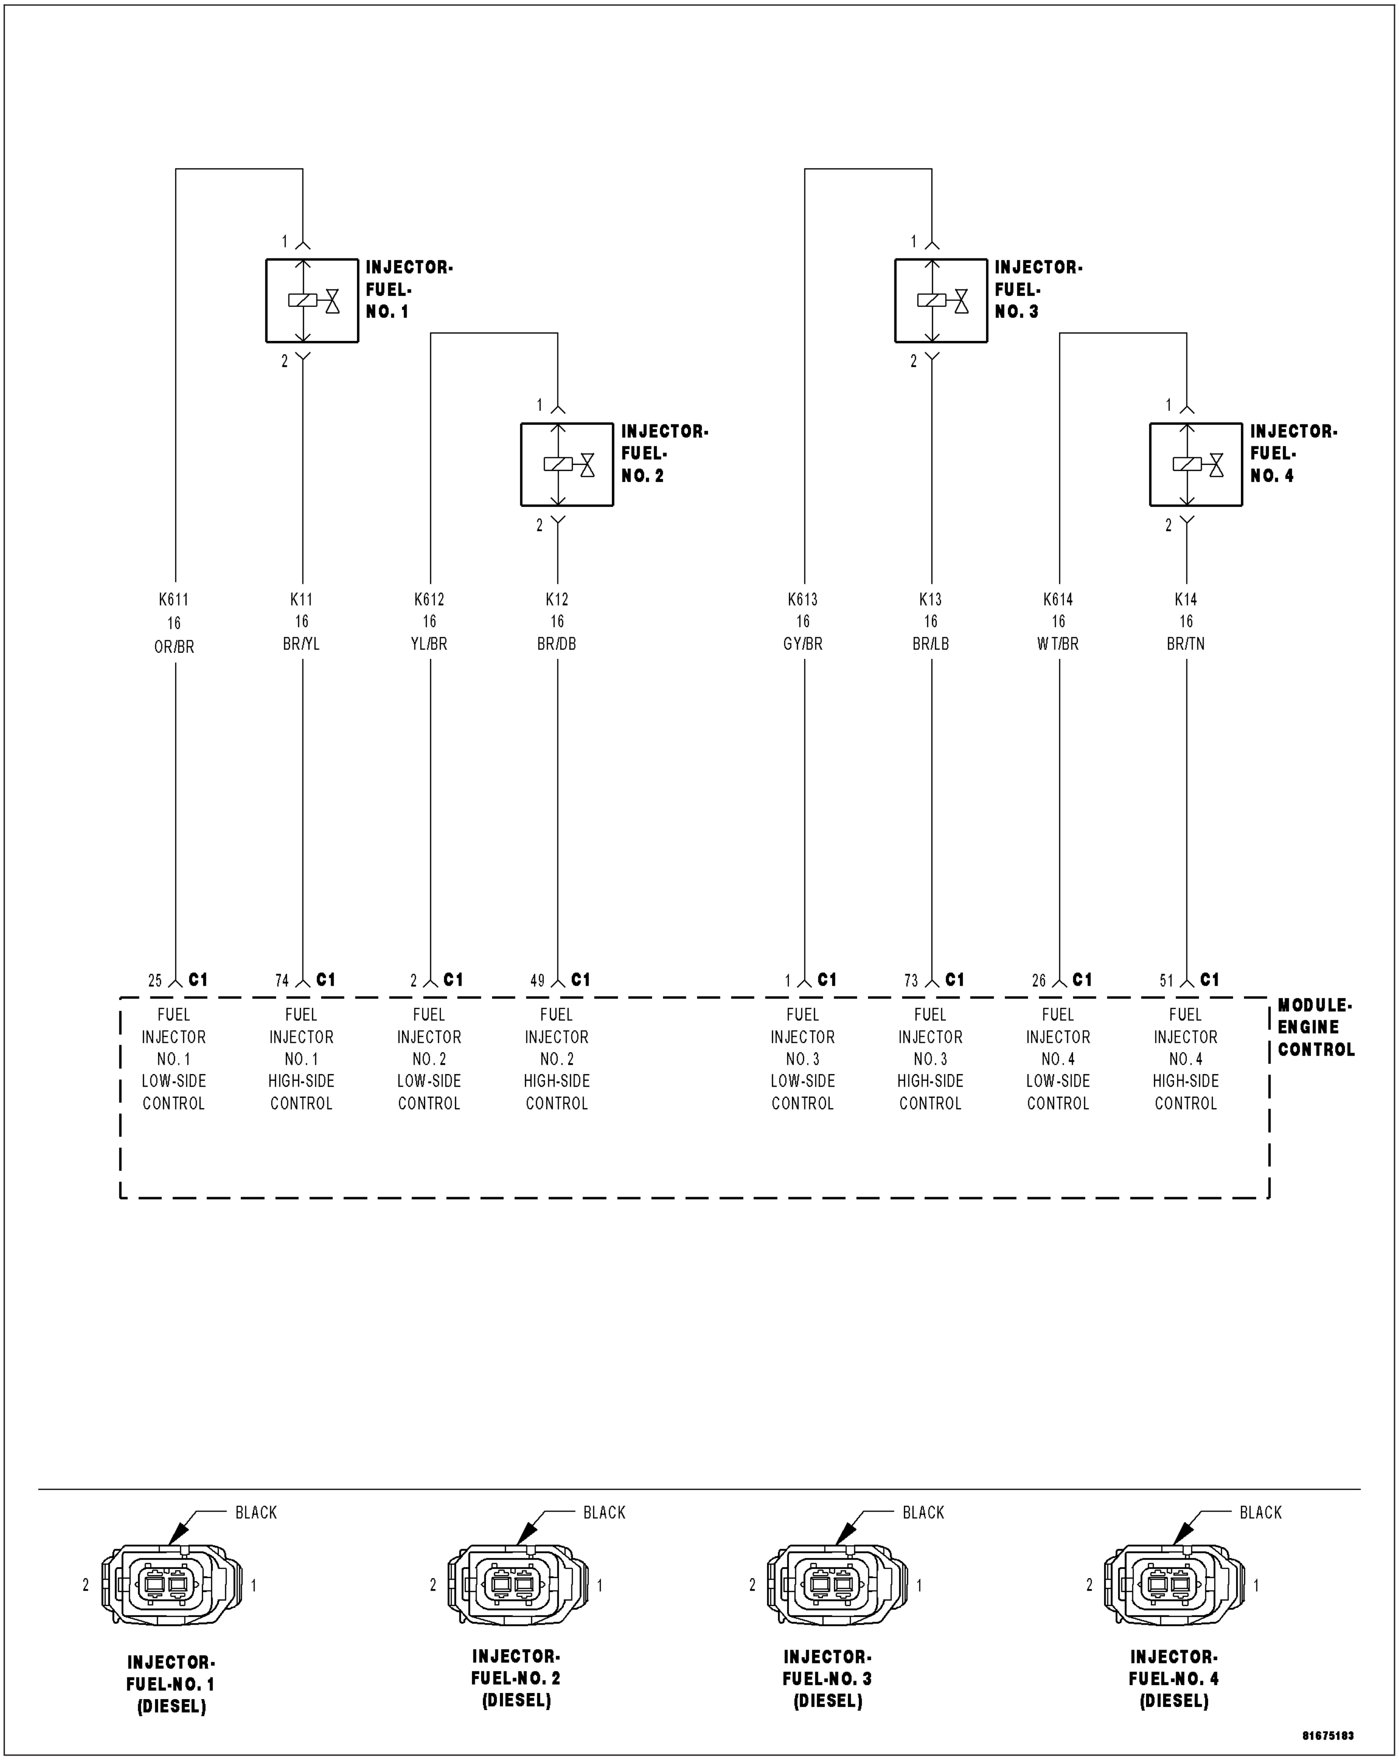
With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0201-CYLINDER 1-INJECTOR CIRCUIT CURRENT DECREASE



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of each Fuel Injector High-Side Control circuit.

Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Fuel Injector harness connectors.

Measure the resistance between ground and each Fuel Injector High-Side Control circuits.

Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

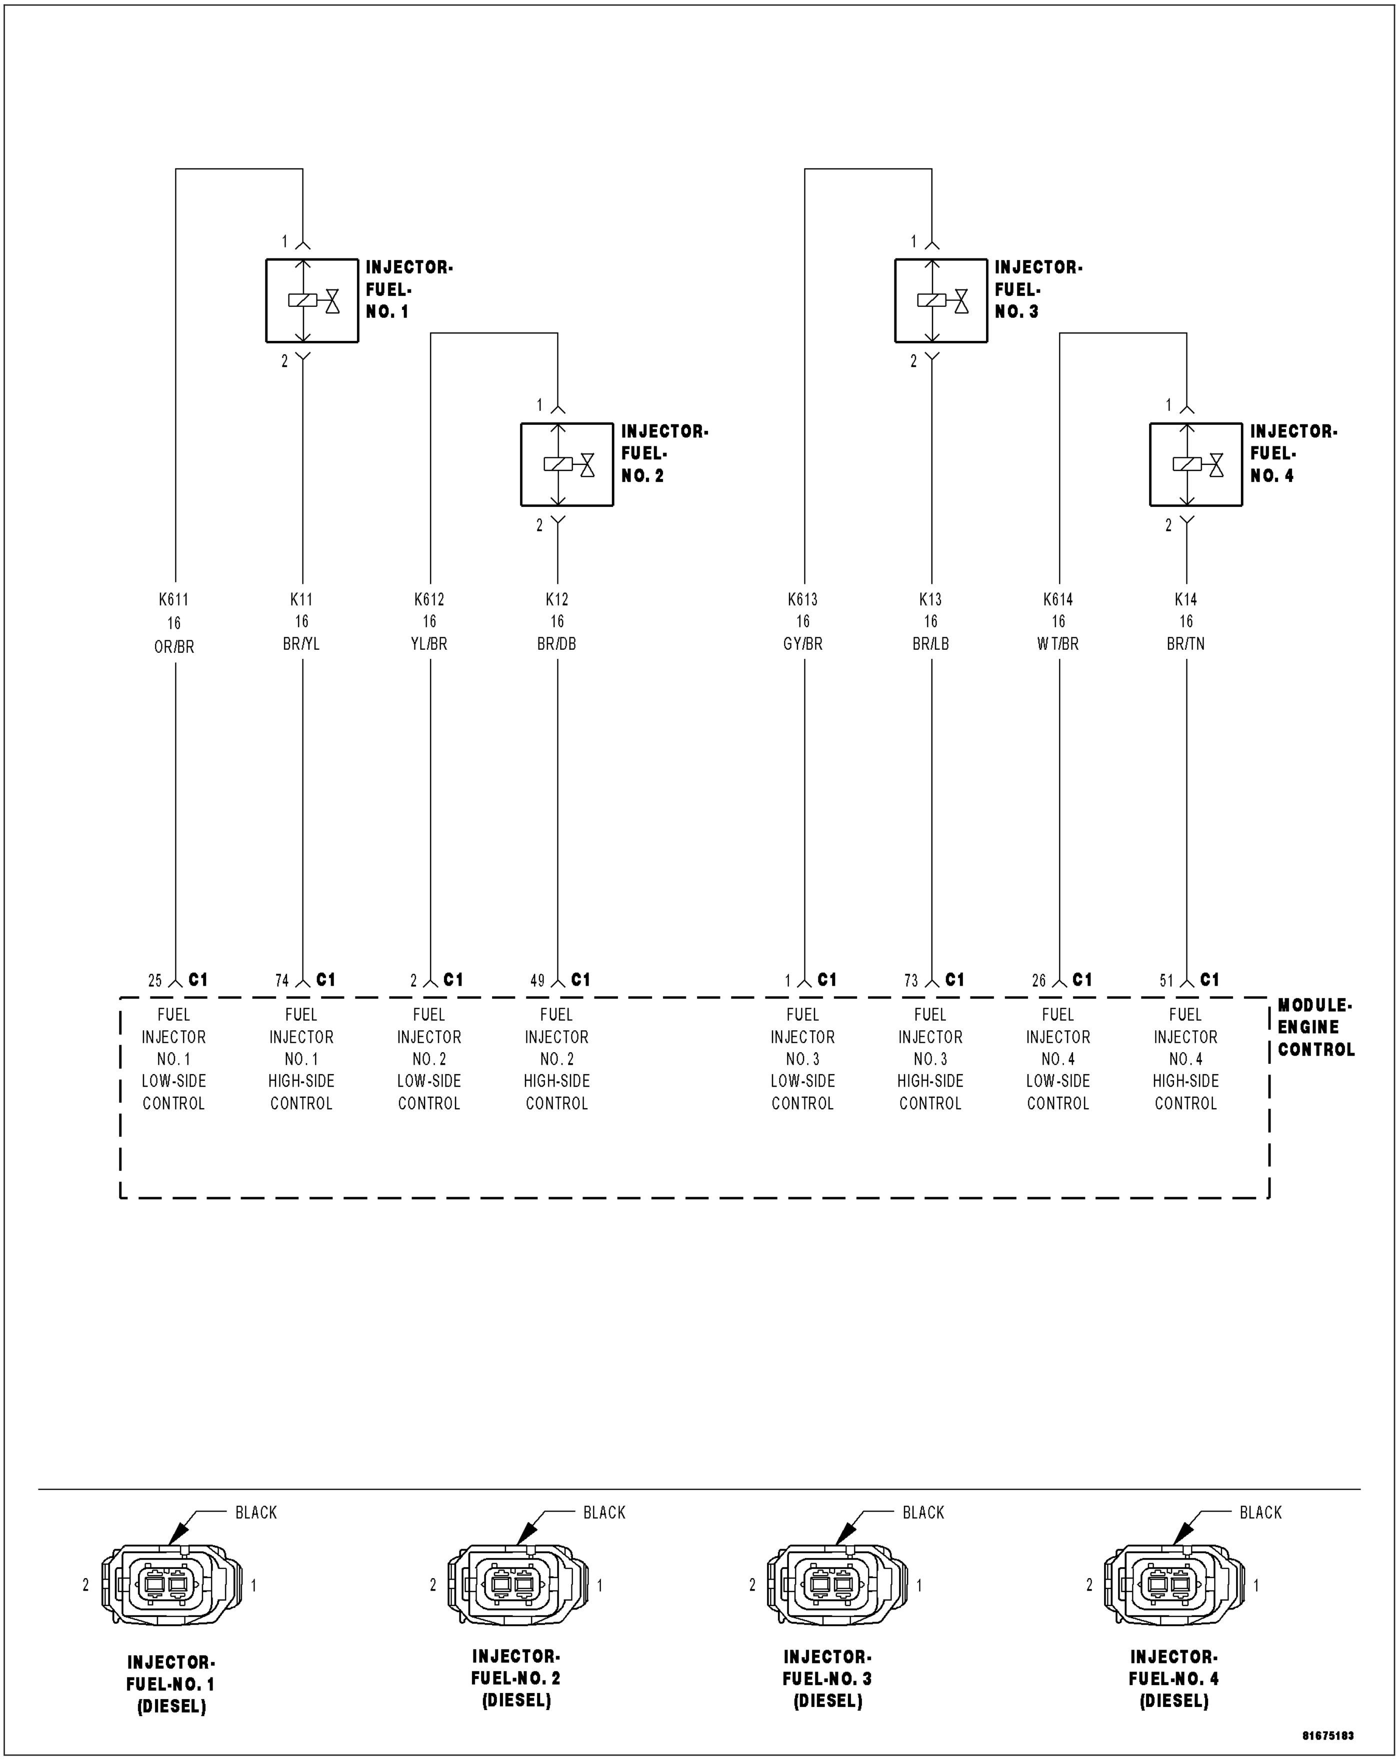
With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0201-CYLINDER 1-INJECTOR OVERCURRENT LOW SIDE



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of each Fuel Injector High-Side Control circuit.

Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Fuel Injector harness connectors.

Measure the resistance between ground and each Fuel Injector High-Side Control circuits.

Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

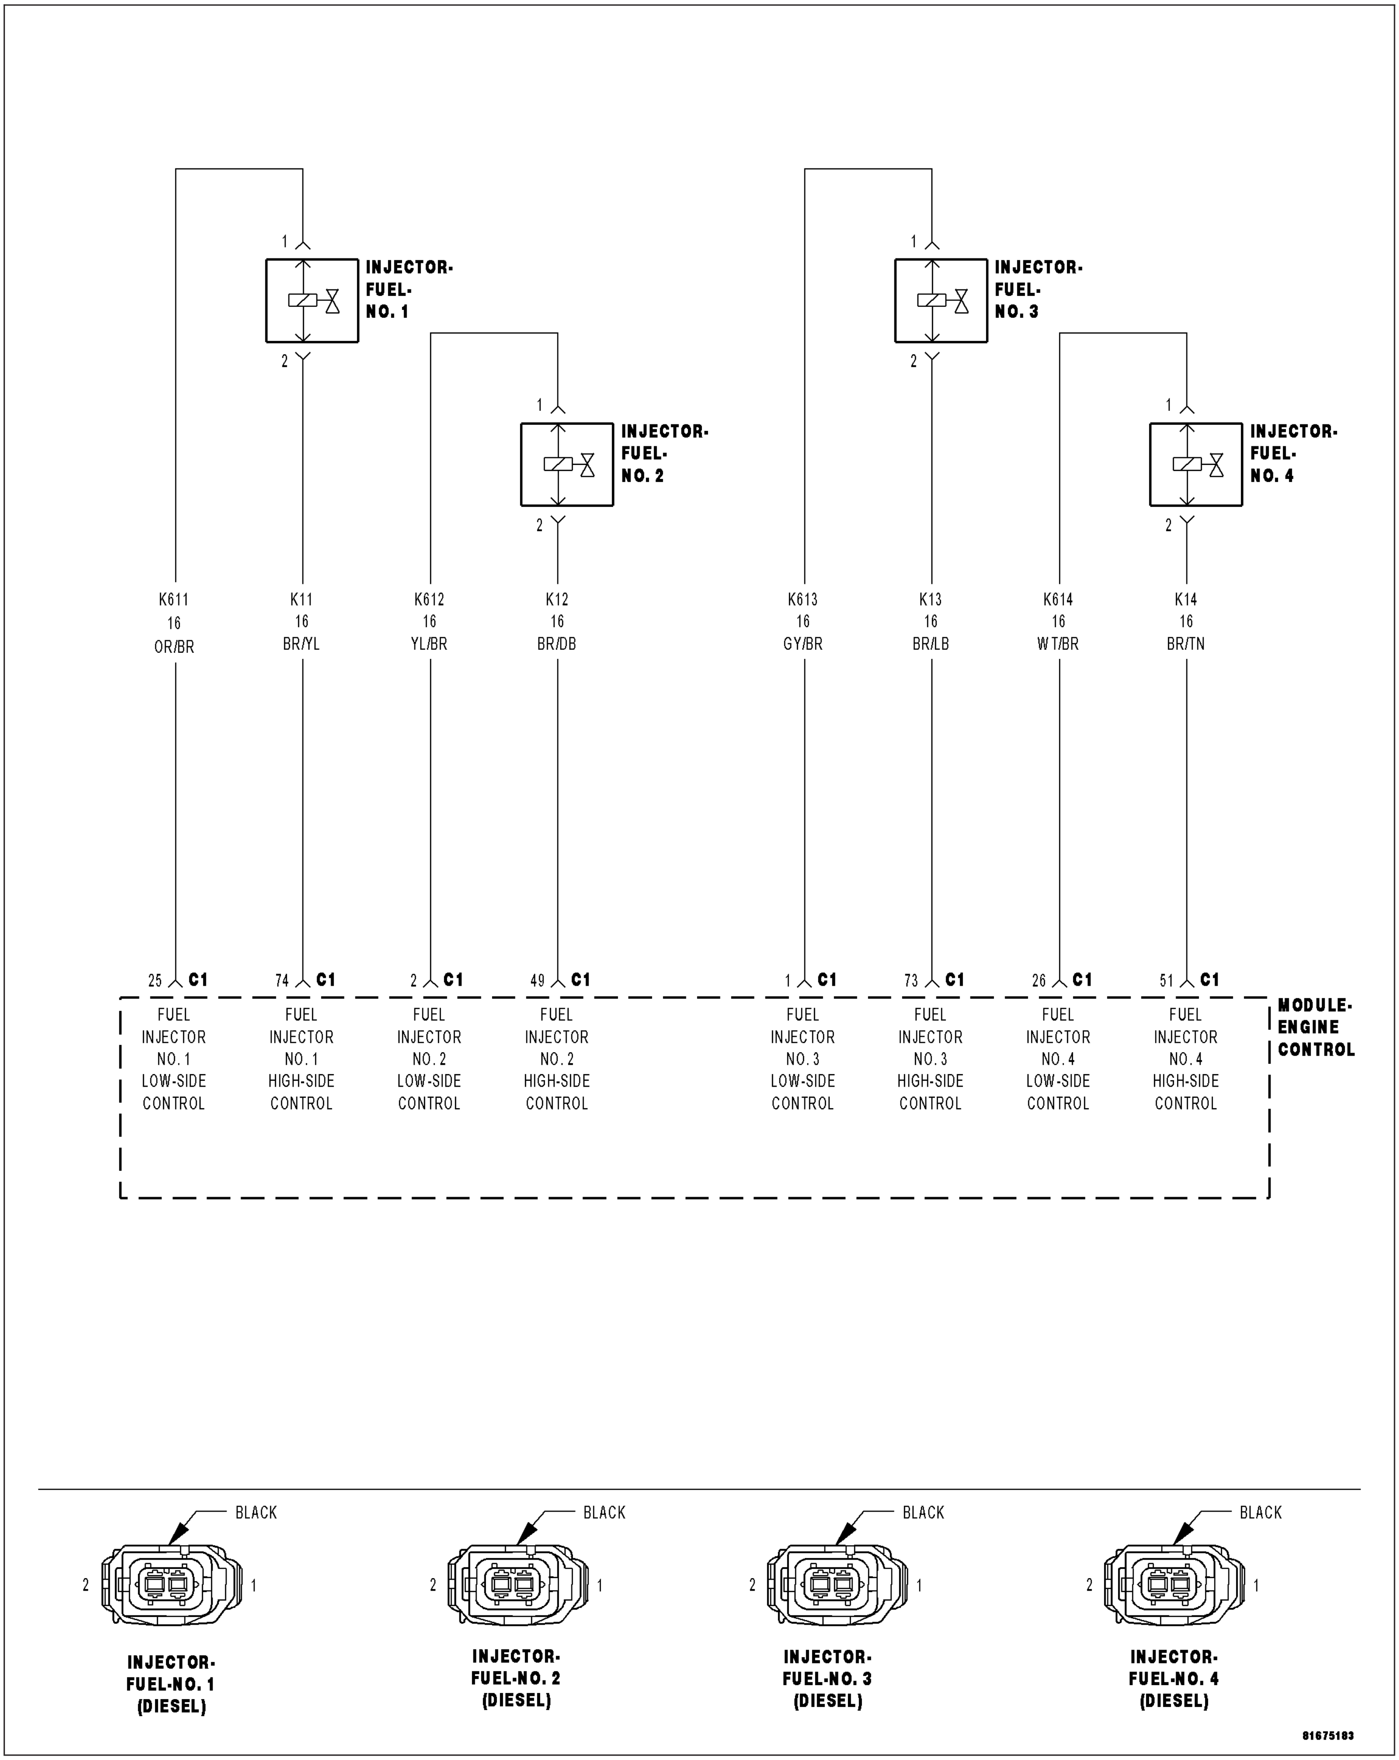
With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0201-CYLINDER 1-INJECTOR CIRCUIT OVERCURRENT HIGH SIDE



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of each Fuel Injector High-Side Control circuit.

Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Fuel Injector harness connectors.

Measure the resistance between ground and each Fuel Injector High-Side Control circuits.

Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

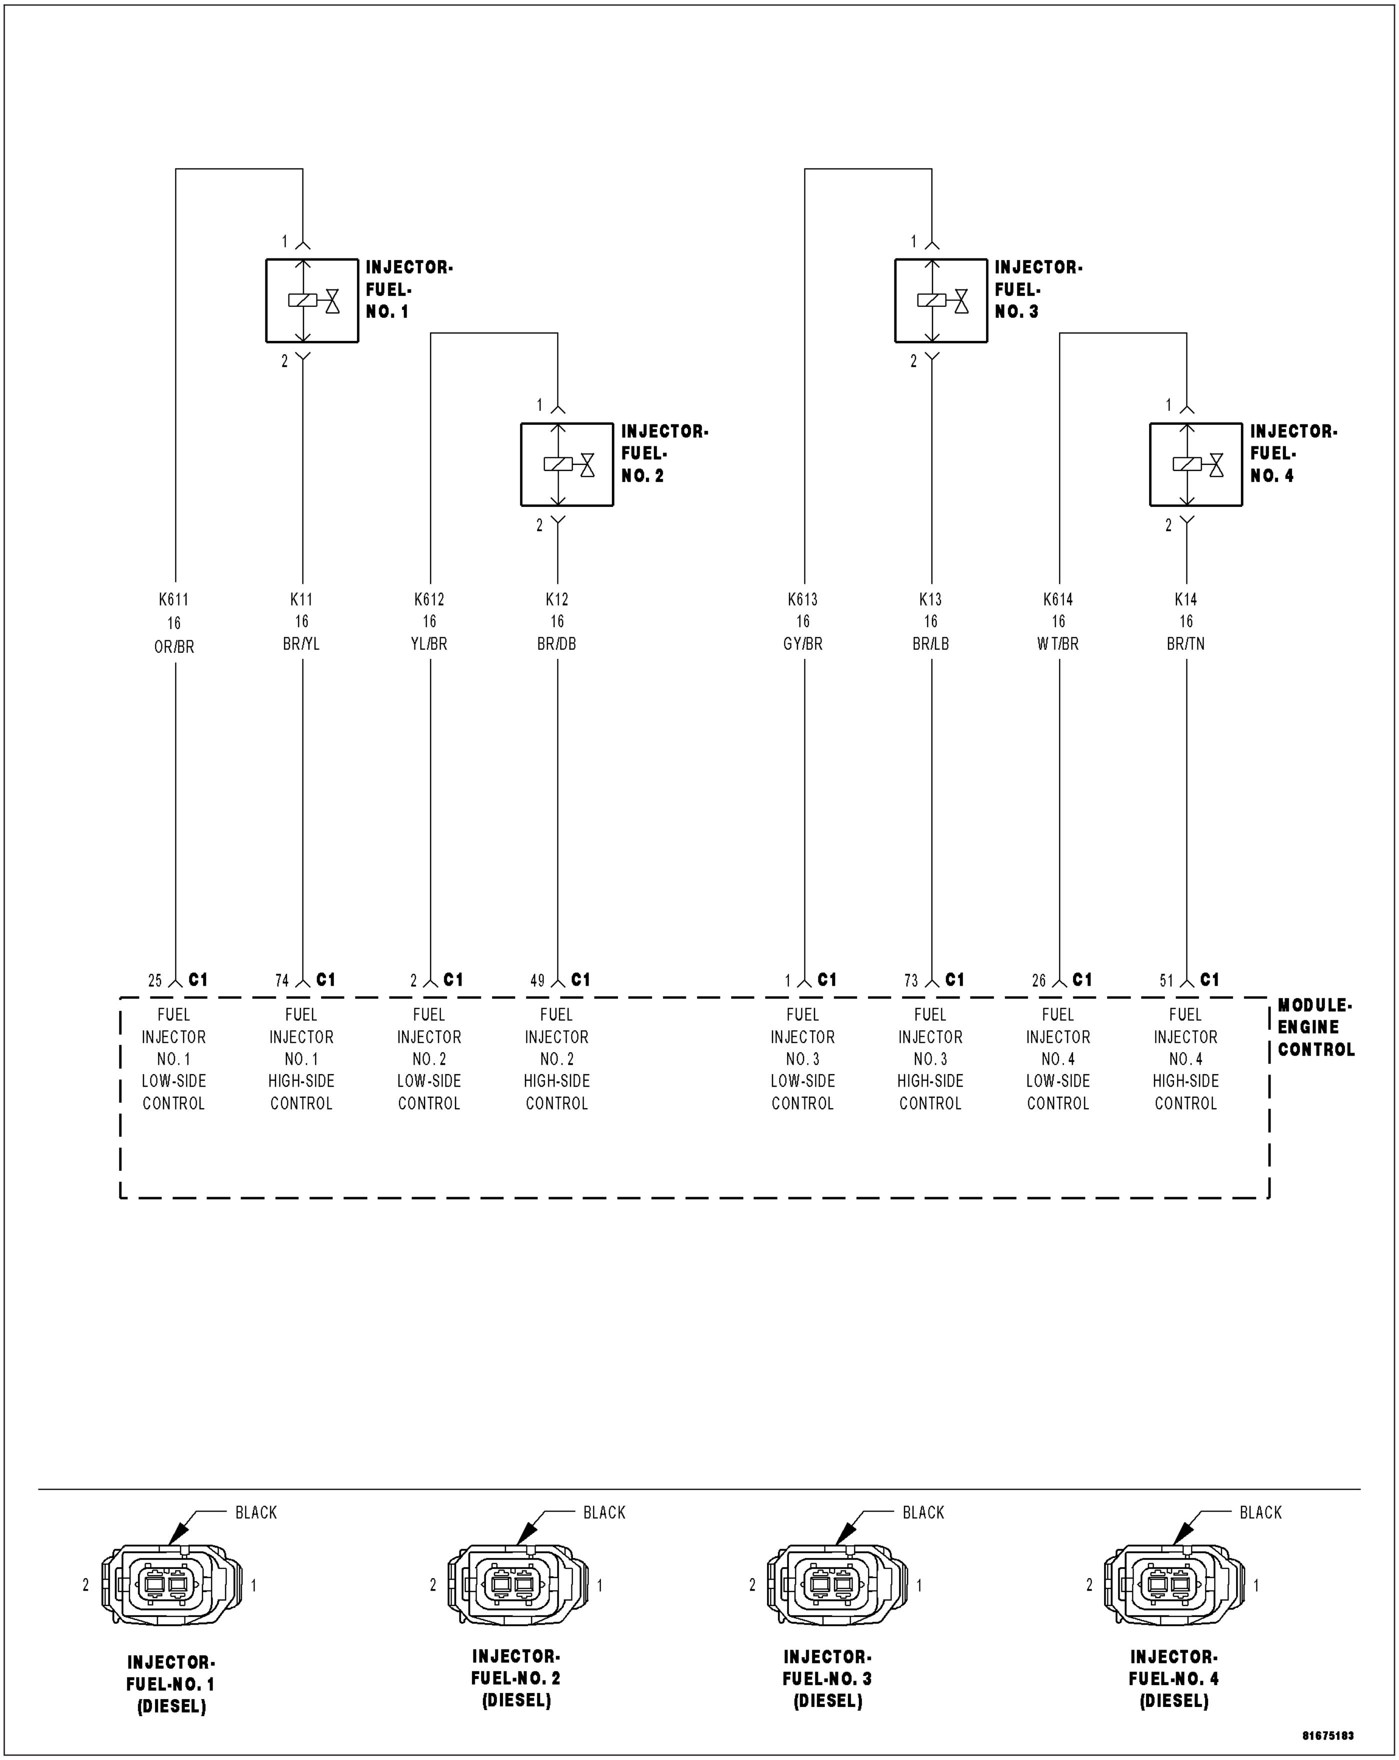
With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0202-CYLINDER 2-INJECTOR CIRCUIT CURRENT DECREASE



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM detects an incorrect rate of current decrease after injection occurs.

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC’s including this DTC to set.**

**NOTE: Check the ECM for other DTC’s. If other DTC’s are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

## 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.
Disconnect all of the Cylinder Fuel Injector harness connectors.
Disconnect the ECM harness connectors.
Remove the ASD Relay from the PDC.
Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.
Turn the ignition on.
Measure the voltage of each Fuel Injector High-Side Control circuit.
Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.
Disconnect the ECM harness connectors.
Disconnect all of the Fuel Injector harness connectors.
Measure the resistance between ground and each Fuel Injector High-Side Control circuits.
Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.
Disconnect the ECM harness connectors.
Disconnect all of the Cylinder Fuel Injector harness connectors.
Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.
Disconnect the ECM harness connectors.
Disconnect all of the Cylinder Fuel Injector harness connectors.
Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

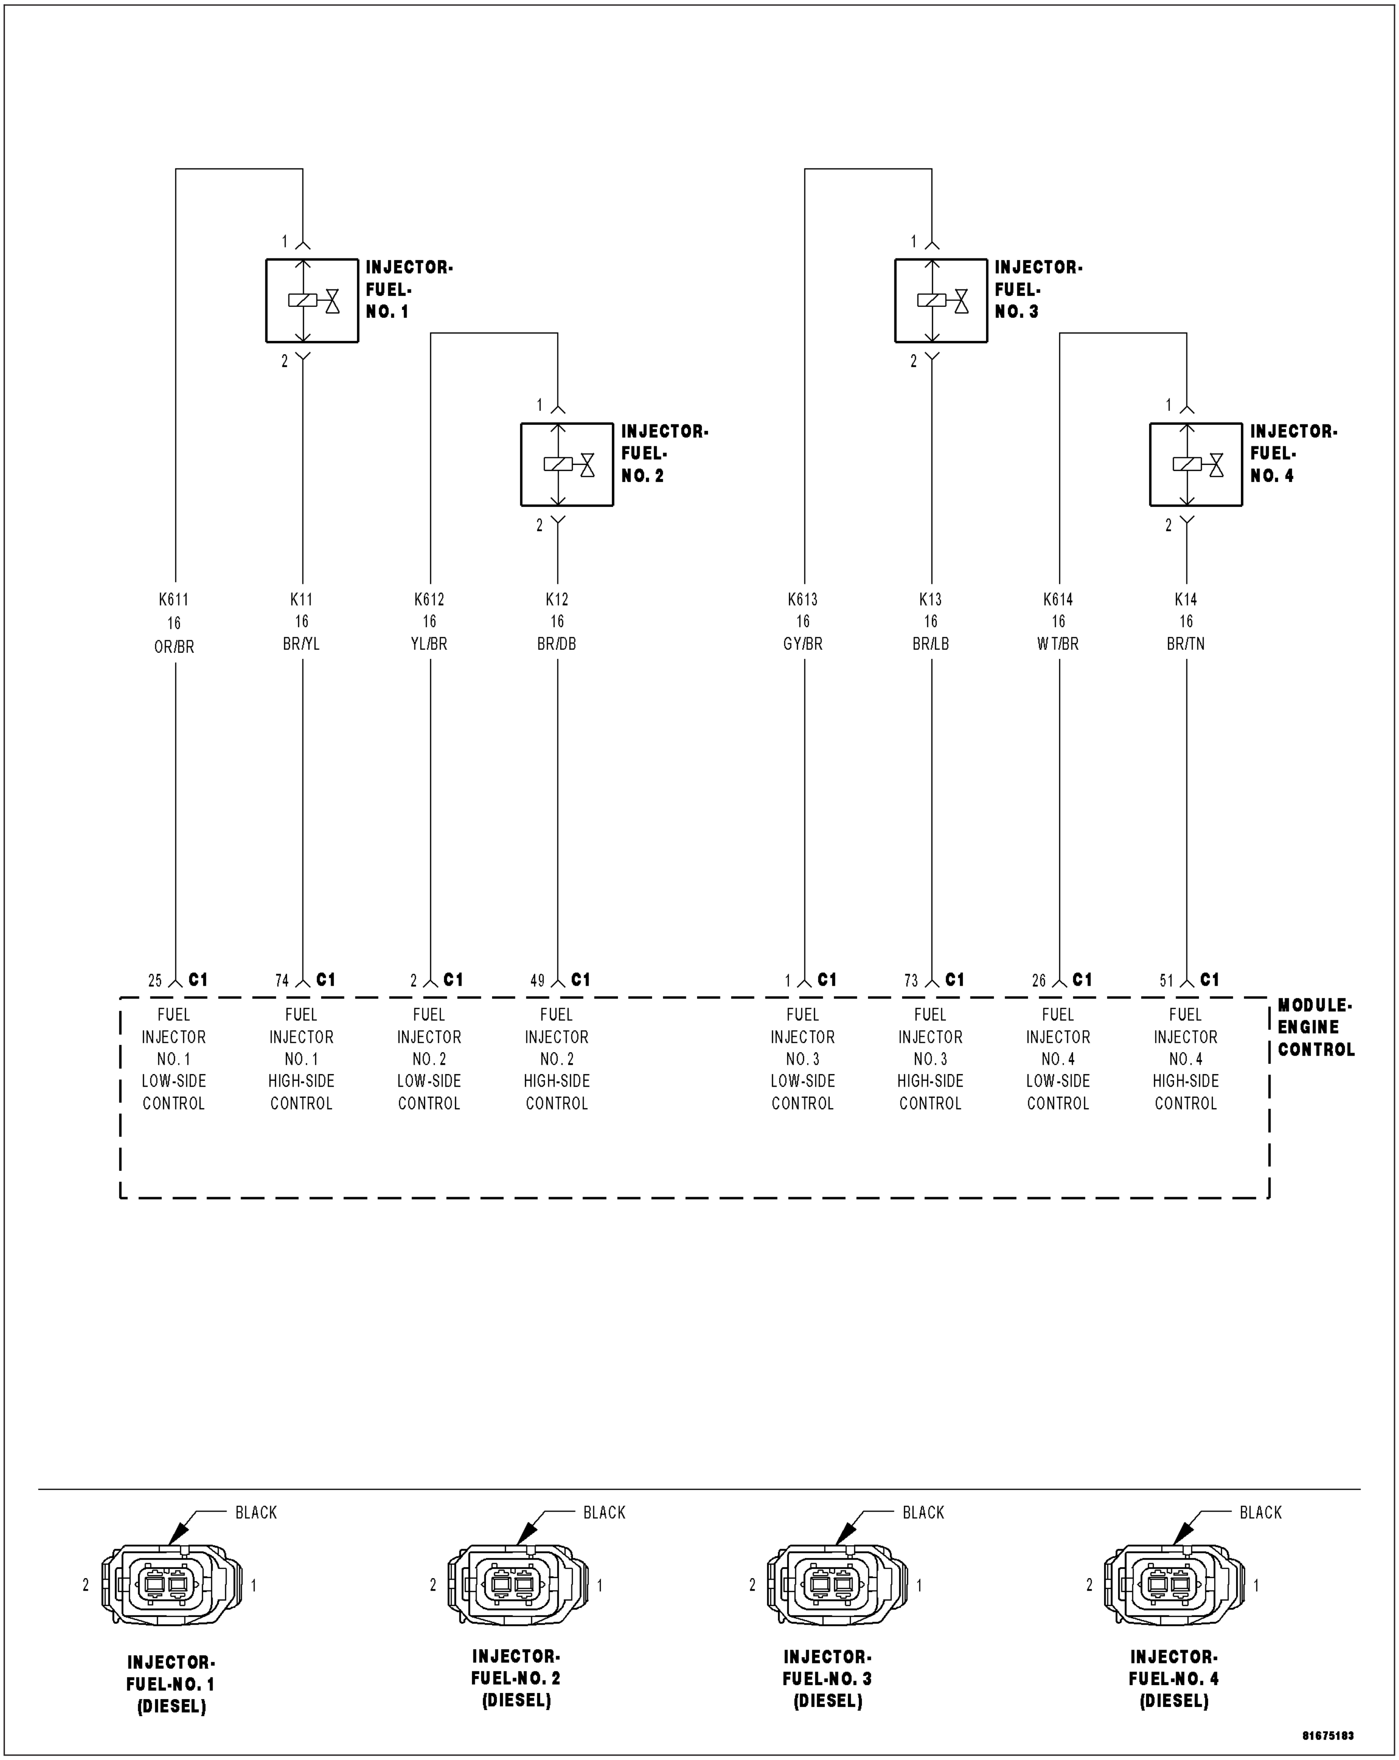
With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0202-CYLINDER 2-INJECTOR CIRCUIT OVERCURRENT HIGH SIDE



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of each Fuel Injector High-Side Control circuit.

Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Fuel Injector harness connectors.

Measure the resistance between ground and each Fuel Injector High-Side Control circuits.

Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

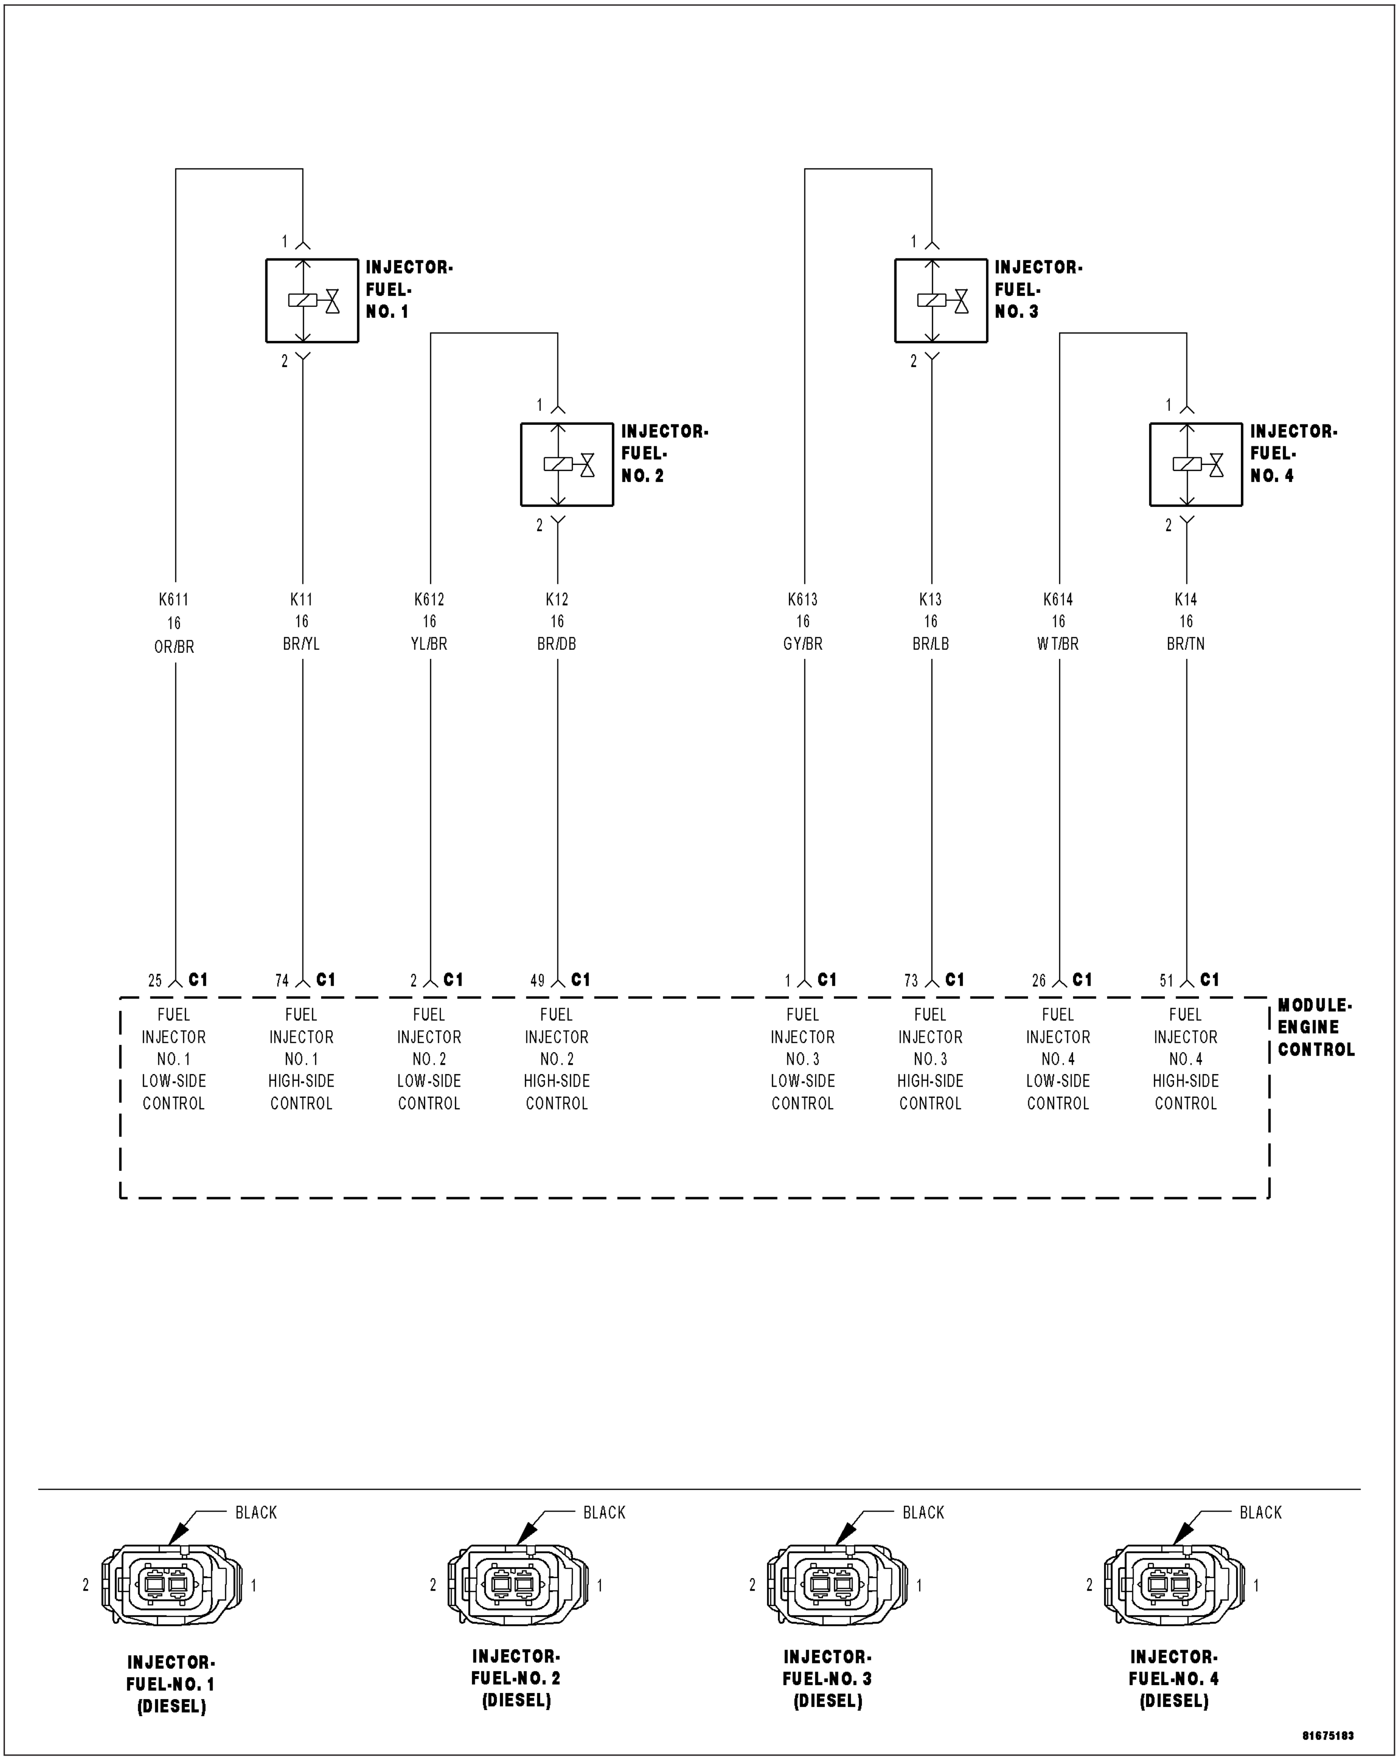
With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0202-CYLINDER 2-INJECTOR CIRCUIT OVERCURRENT LOW SIDE



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
| --- |
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of each Fuel Injector High-Side Control circuit.

Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Fuel Injector harness connectors.

Measure the resistance between ground and each Fuel Injector High-Side Control circuits.

Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

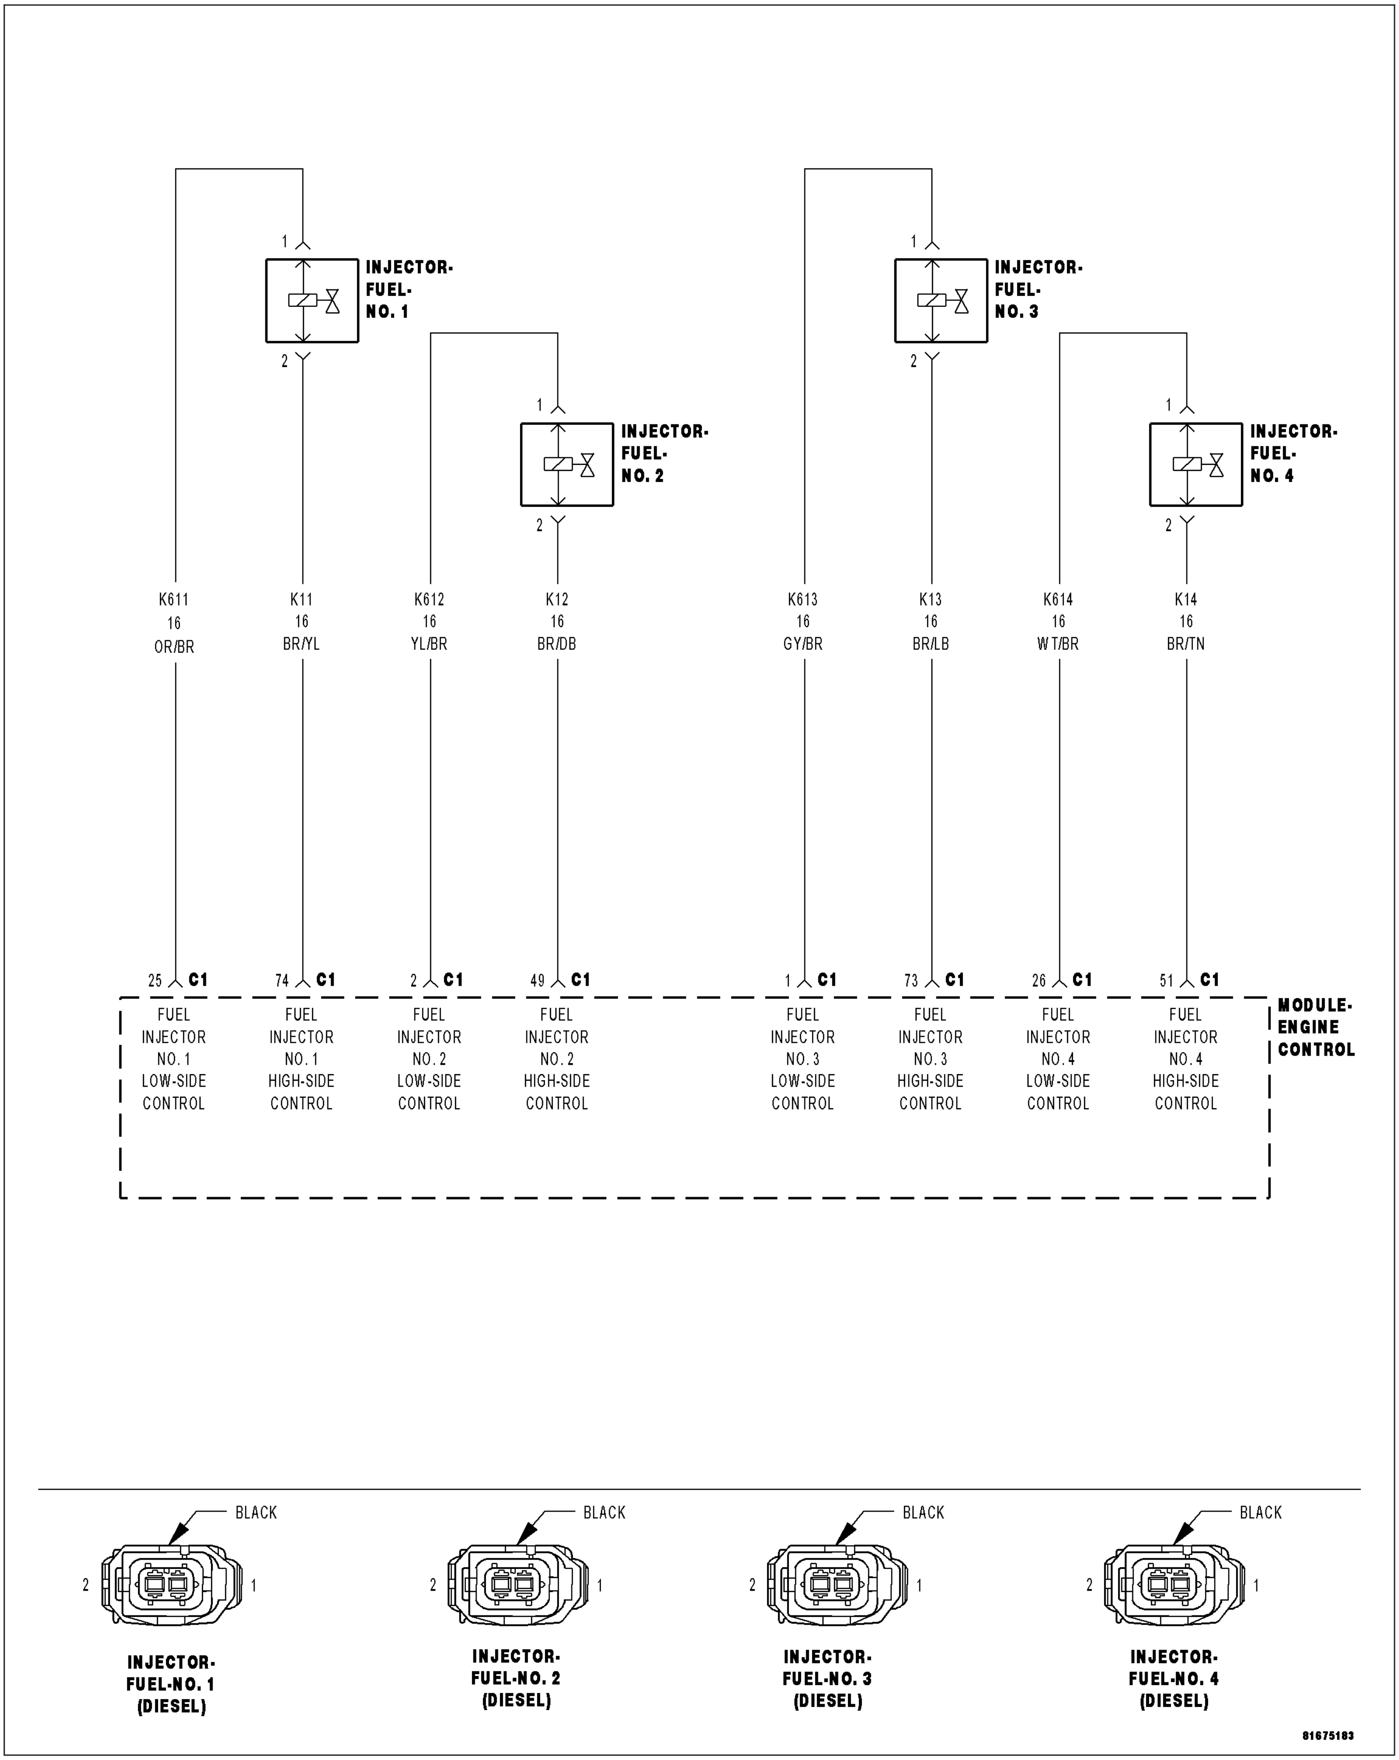
With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0202-CYLINDER 2-INJECTOR CIRCUIT LOAD DROP



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
| --- |
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of each Fuel Injector High-Side Control circuit.

Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Fuel Injector harness connectors.

Measure the resistance between ground and each Fuel Injector High-Side Control circuits.

Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

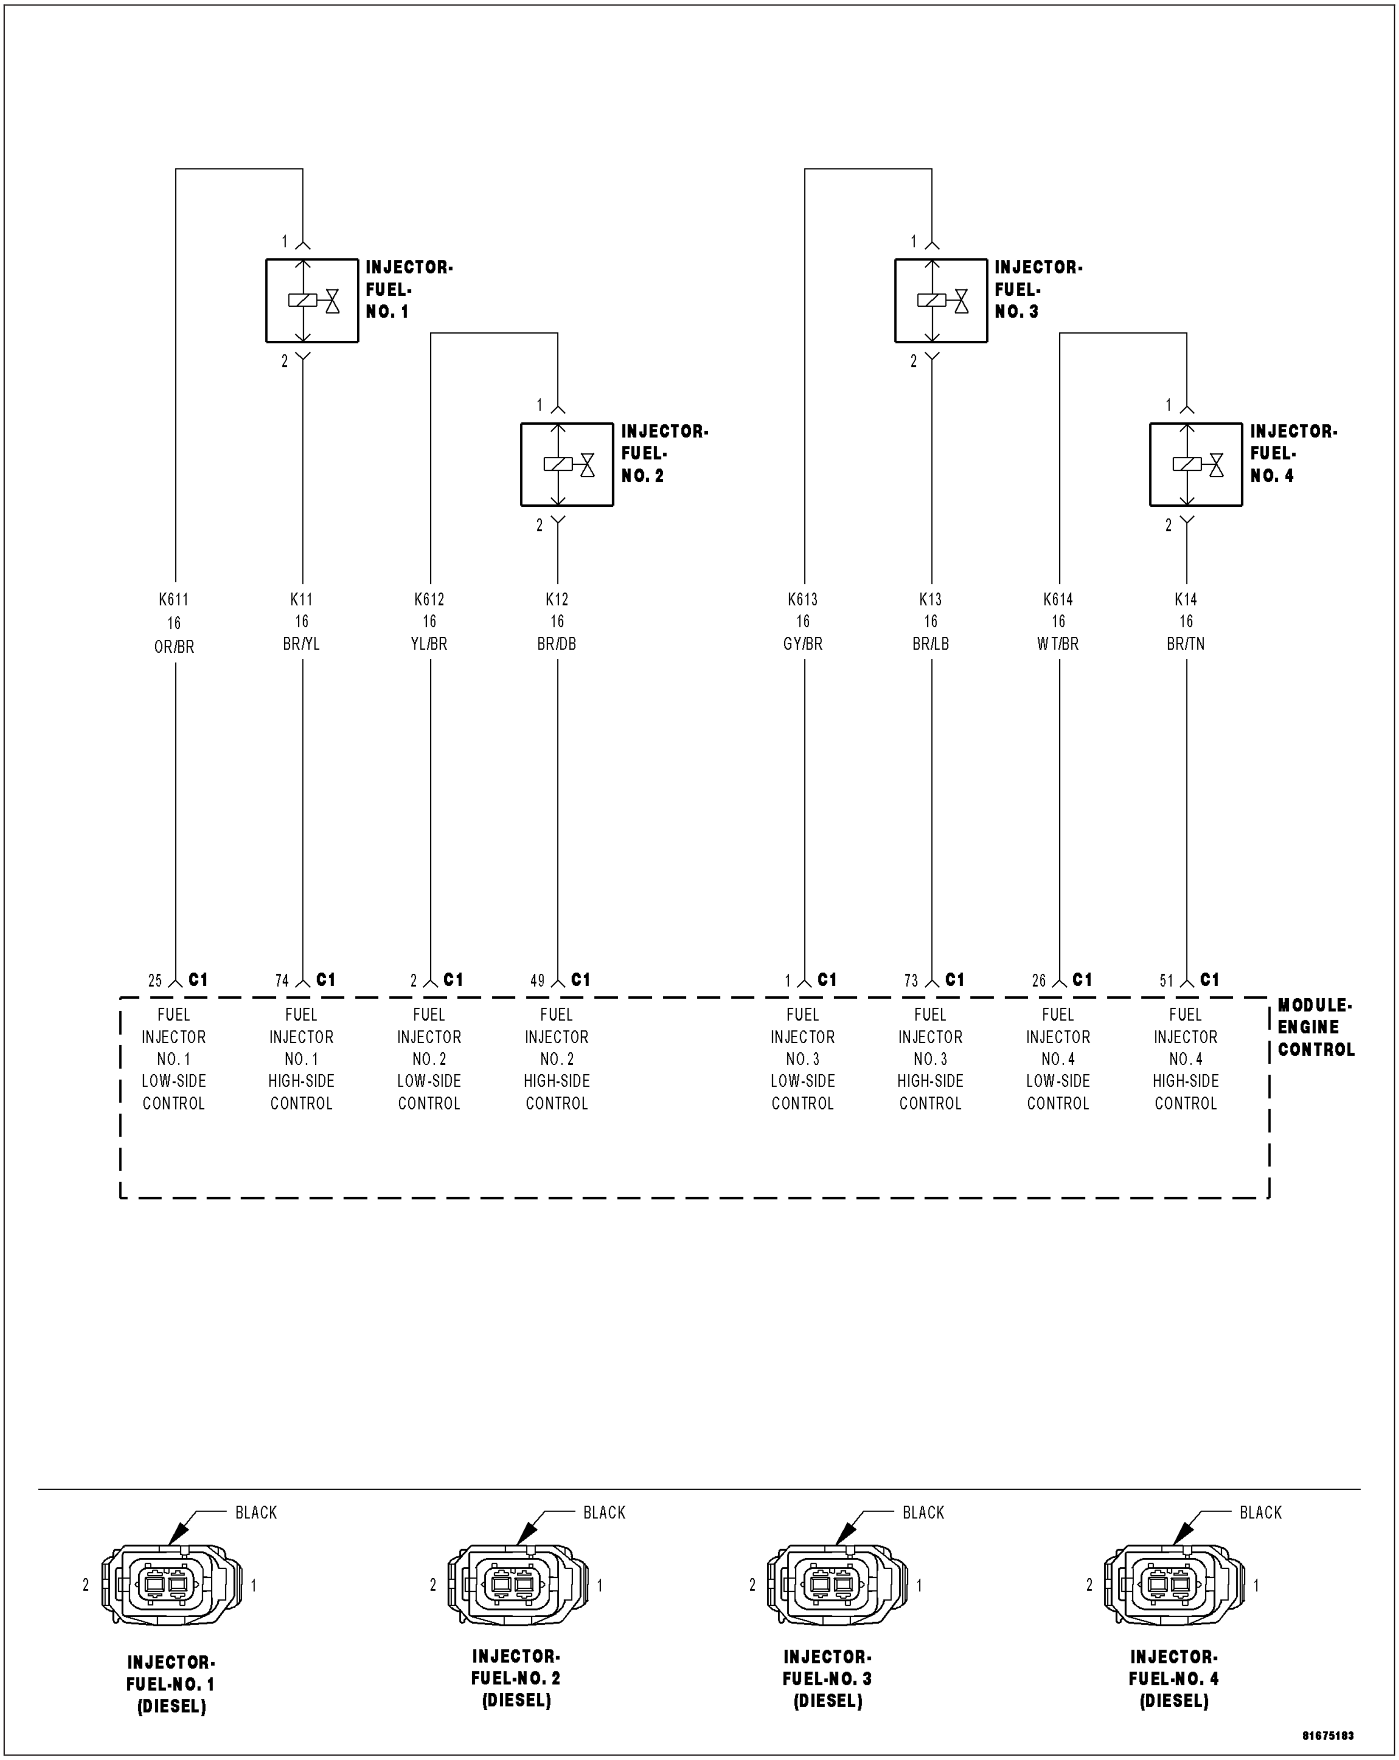
With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0201-CYLINDER 1-INJECTOR CIRCUIT CURRENT DECREASE



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of each Fuel Injector High-Side Control circuit.

Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Fuel Injector harness connectors.

Measure the resistance between ground and each Fuel Injector High-Side Control circuits.

Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

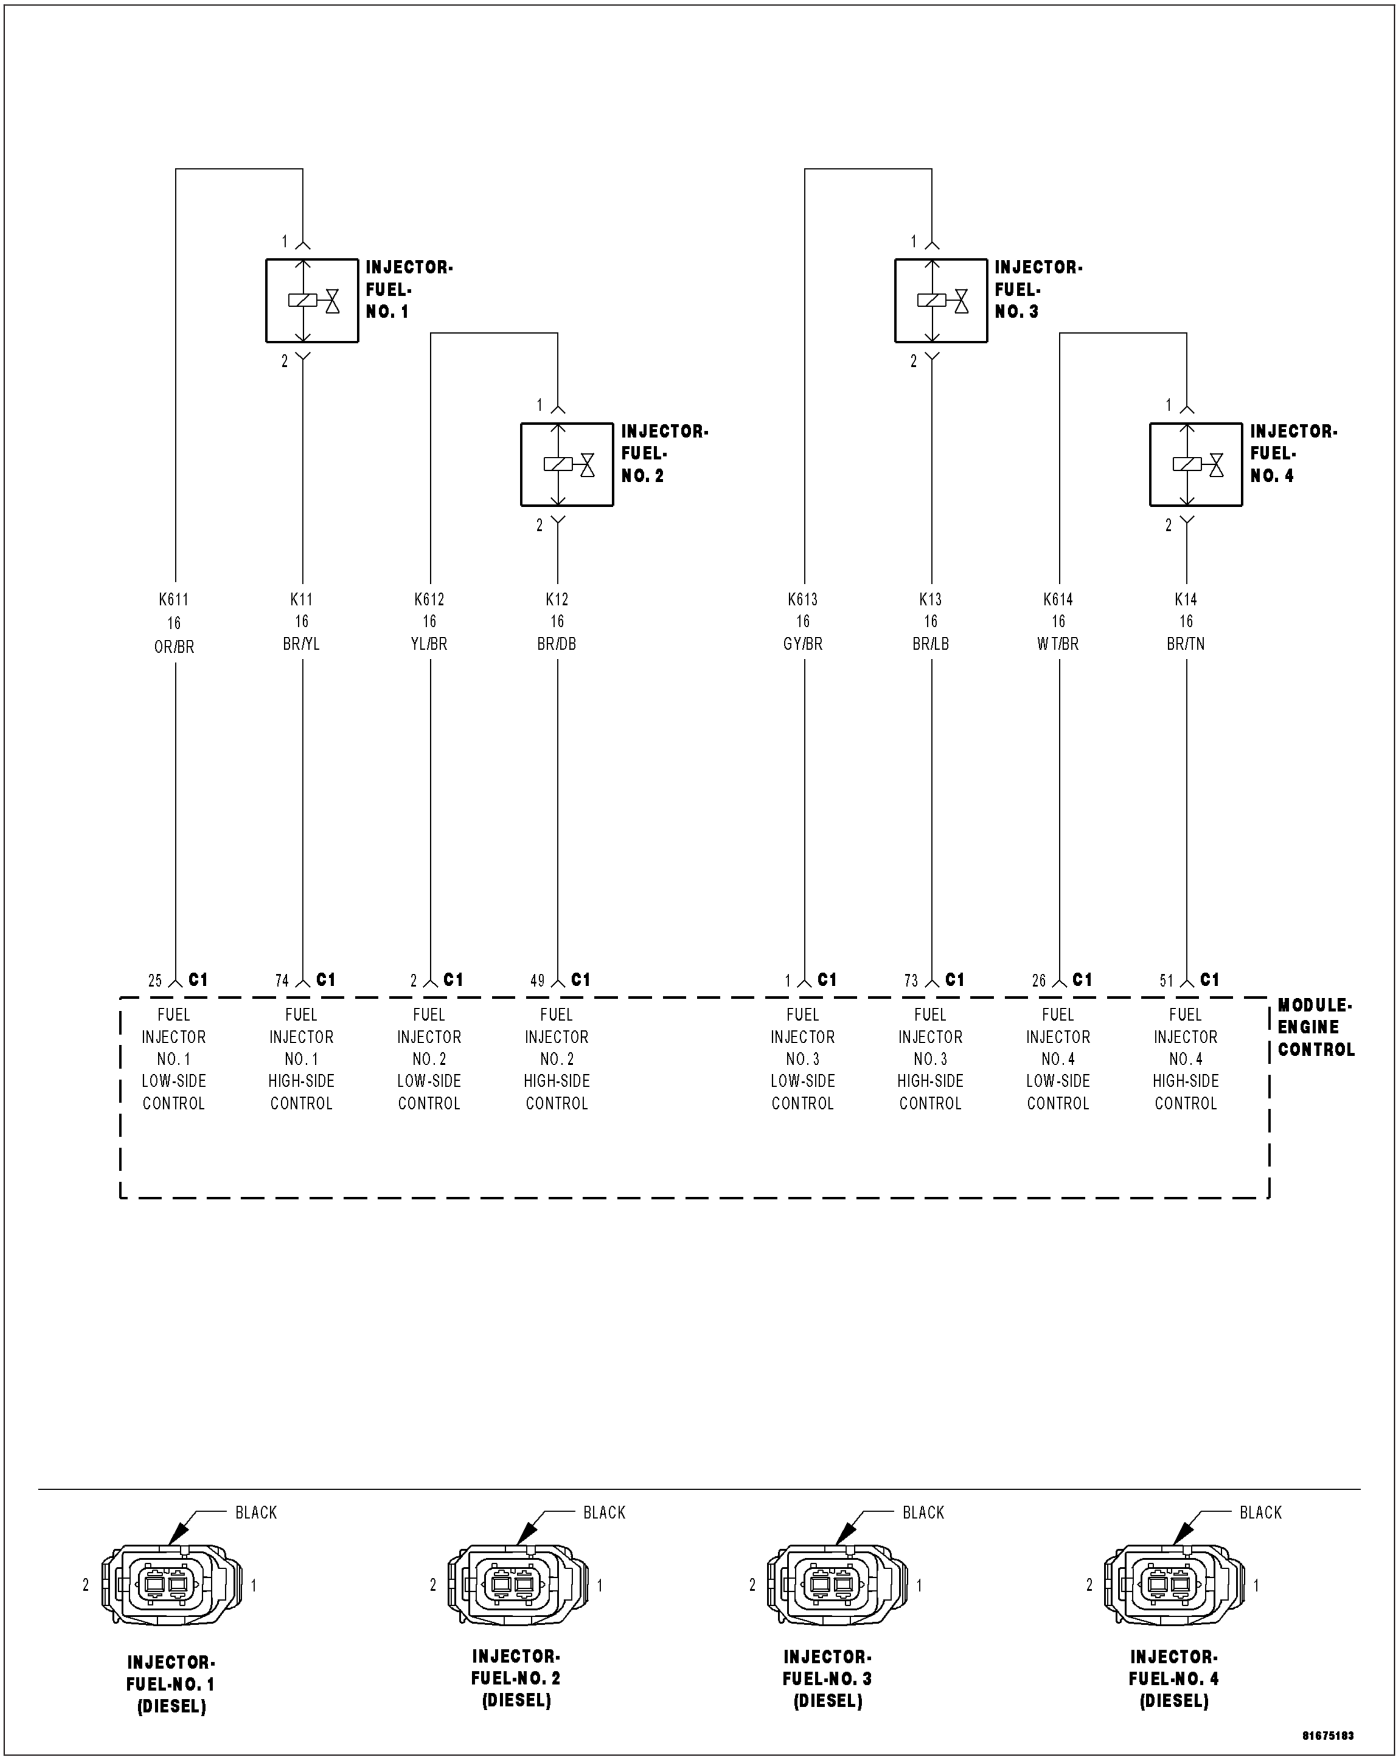
With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0203-CYLINDER 3-INJECTOR CIRCUIT OVERCURRENT LOW SIDE



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
| --- |
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of each Fuel Injector High-Side Control circuit.

Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Fuel Injector harness connectors.

Measure the resistance between ground and each Fuel Injector High-Side Control circuits.

Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

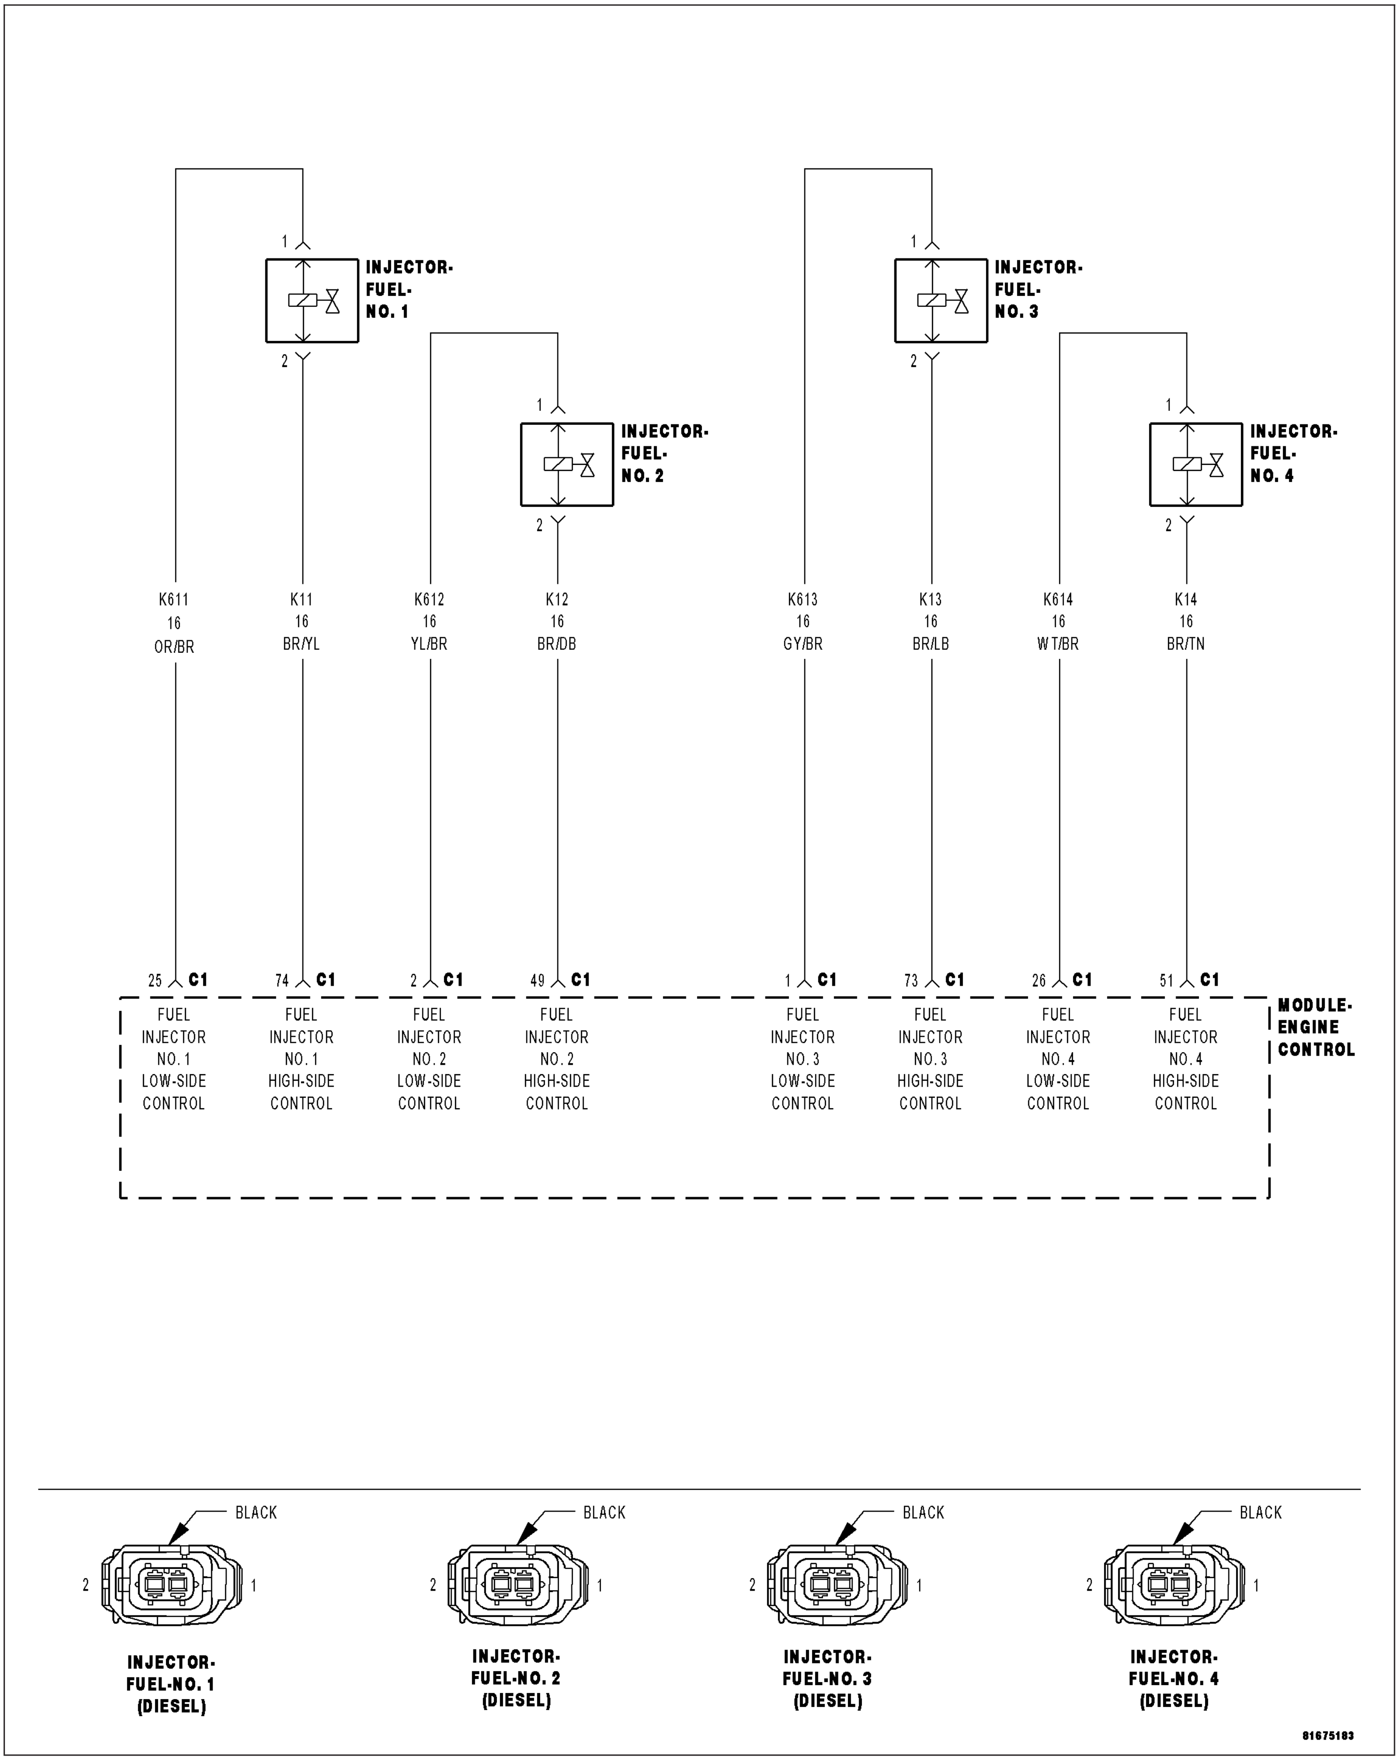
With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0203-CYLINDER 3-INJECTOR CIRCUIT OVERCURRENT LOW SIDE



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of each Fuel Injector High-Side Control circuit.

Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Fuel Injector harness connectors.

Measure the resistance between ground and each Fuel Injector High-Side Control circuits.

Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

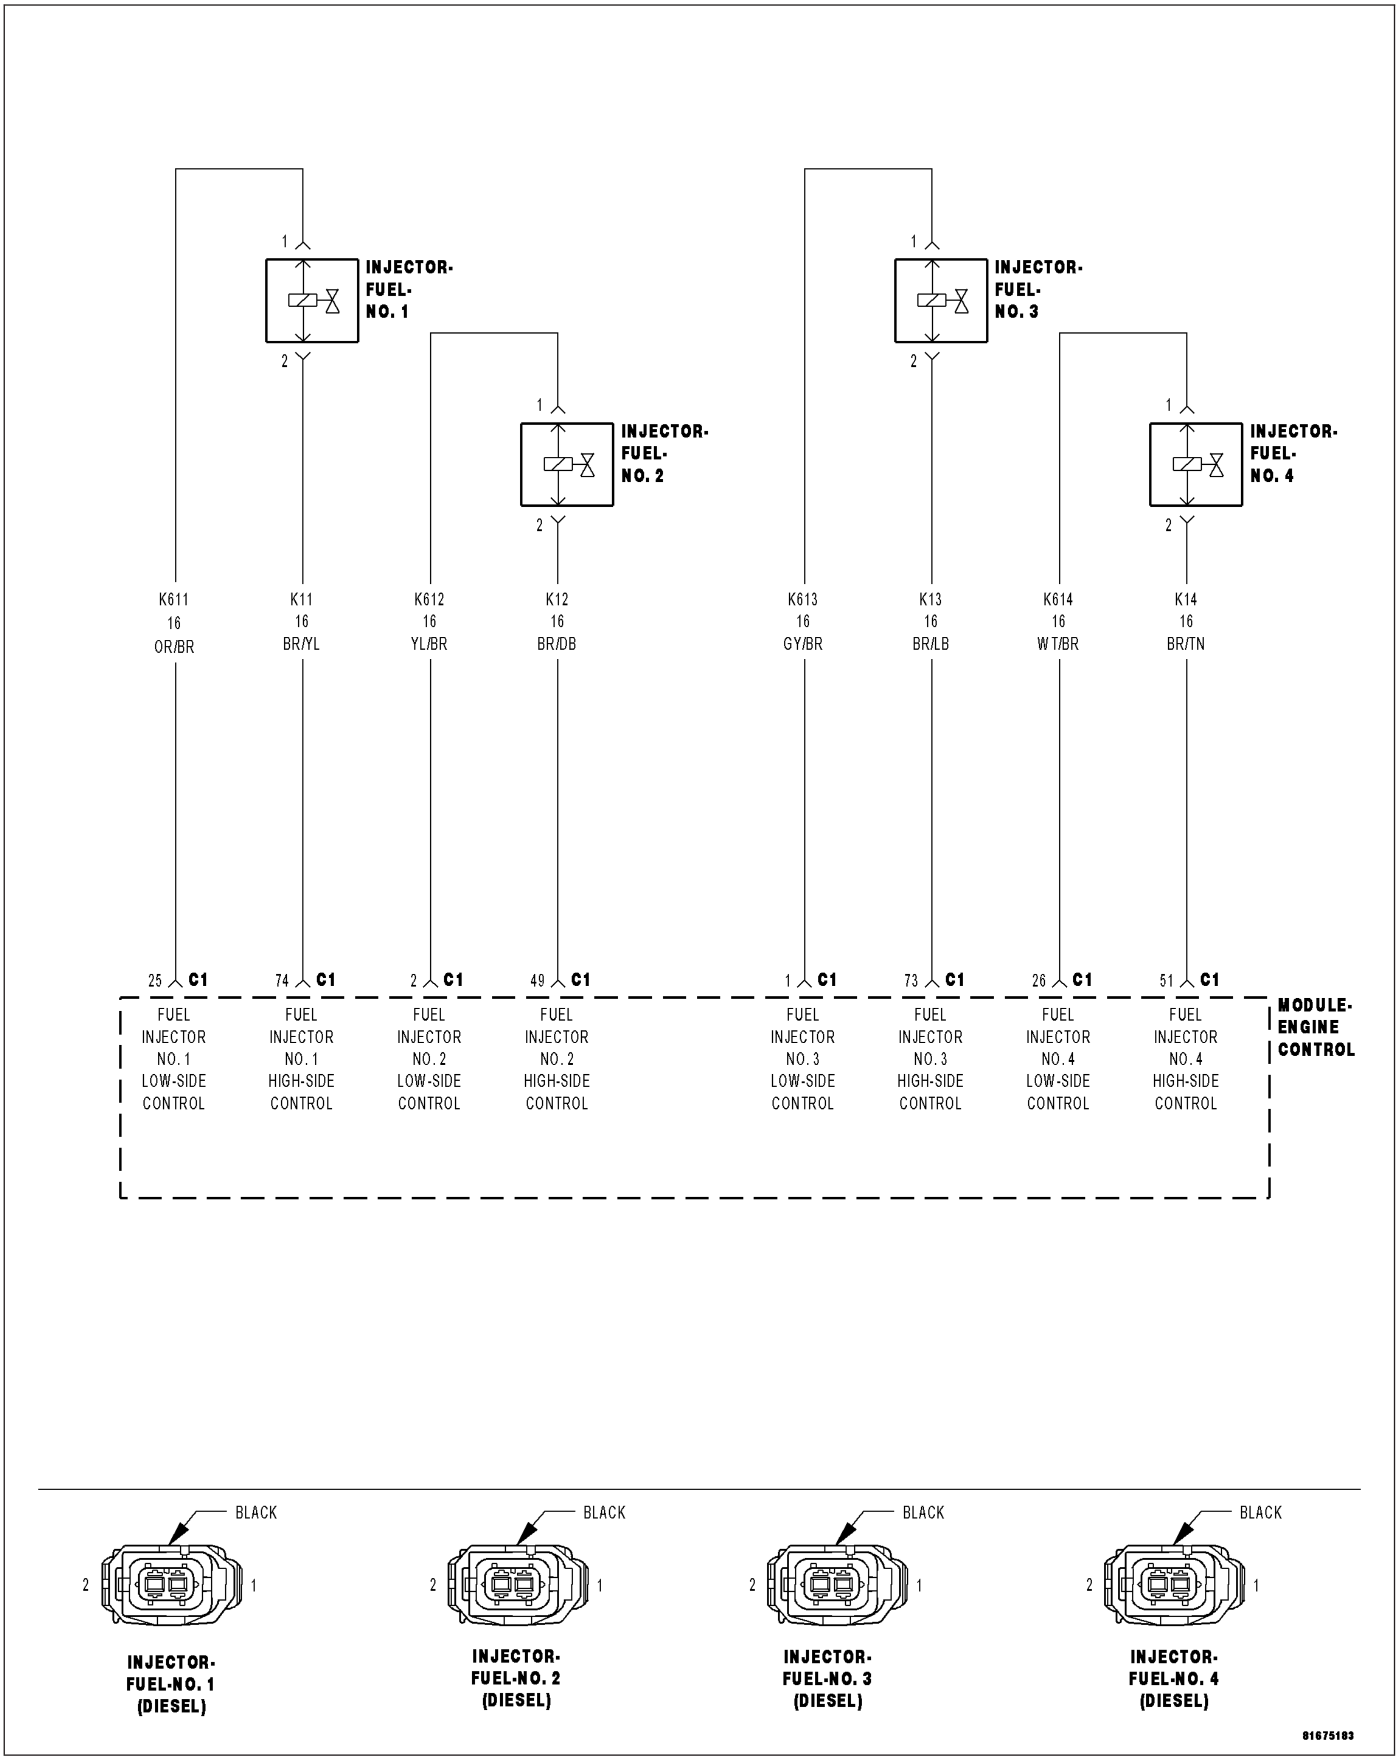
With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0203-CYLINDER 3-INJECTOR CIRCUIT OVERCURRENT HIGH SIDE



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of each Fuel Injector High-Side Control circuit.

Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Fuel Injector harness connectors.

Measure the resistance between ground and each Fuel Injector High-Side Control circuits.

Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

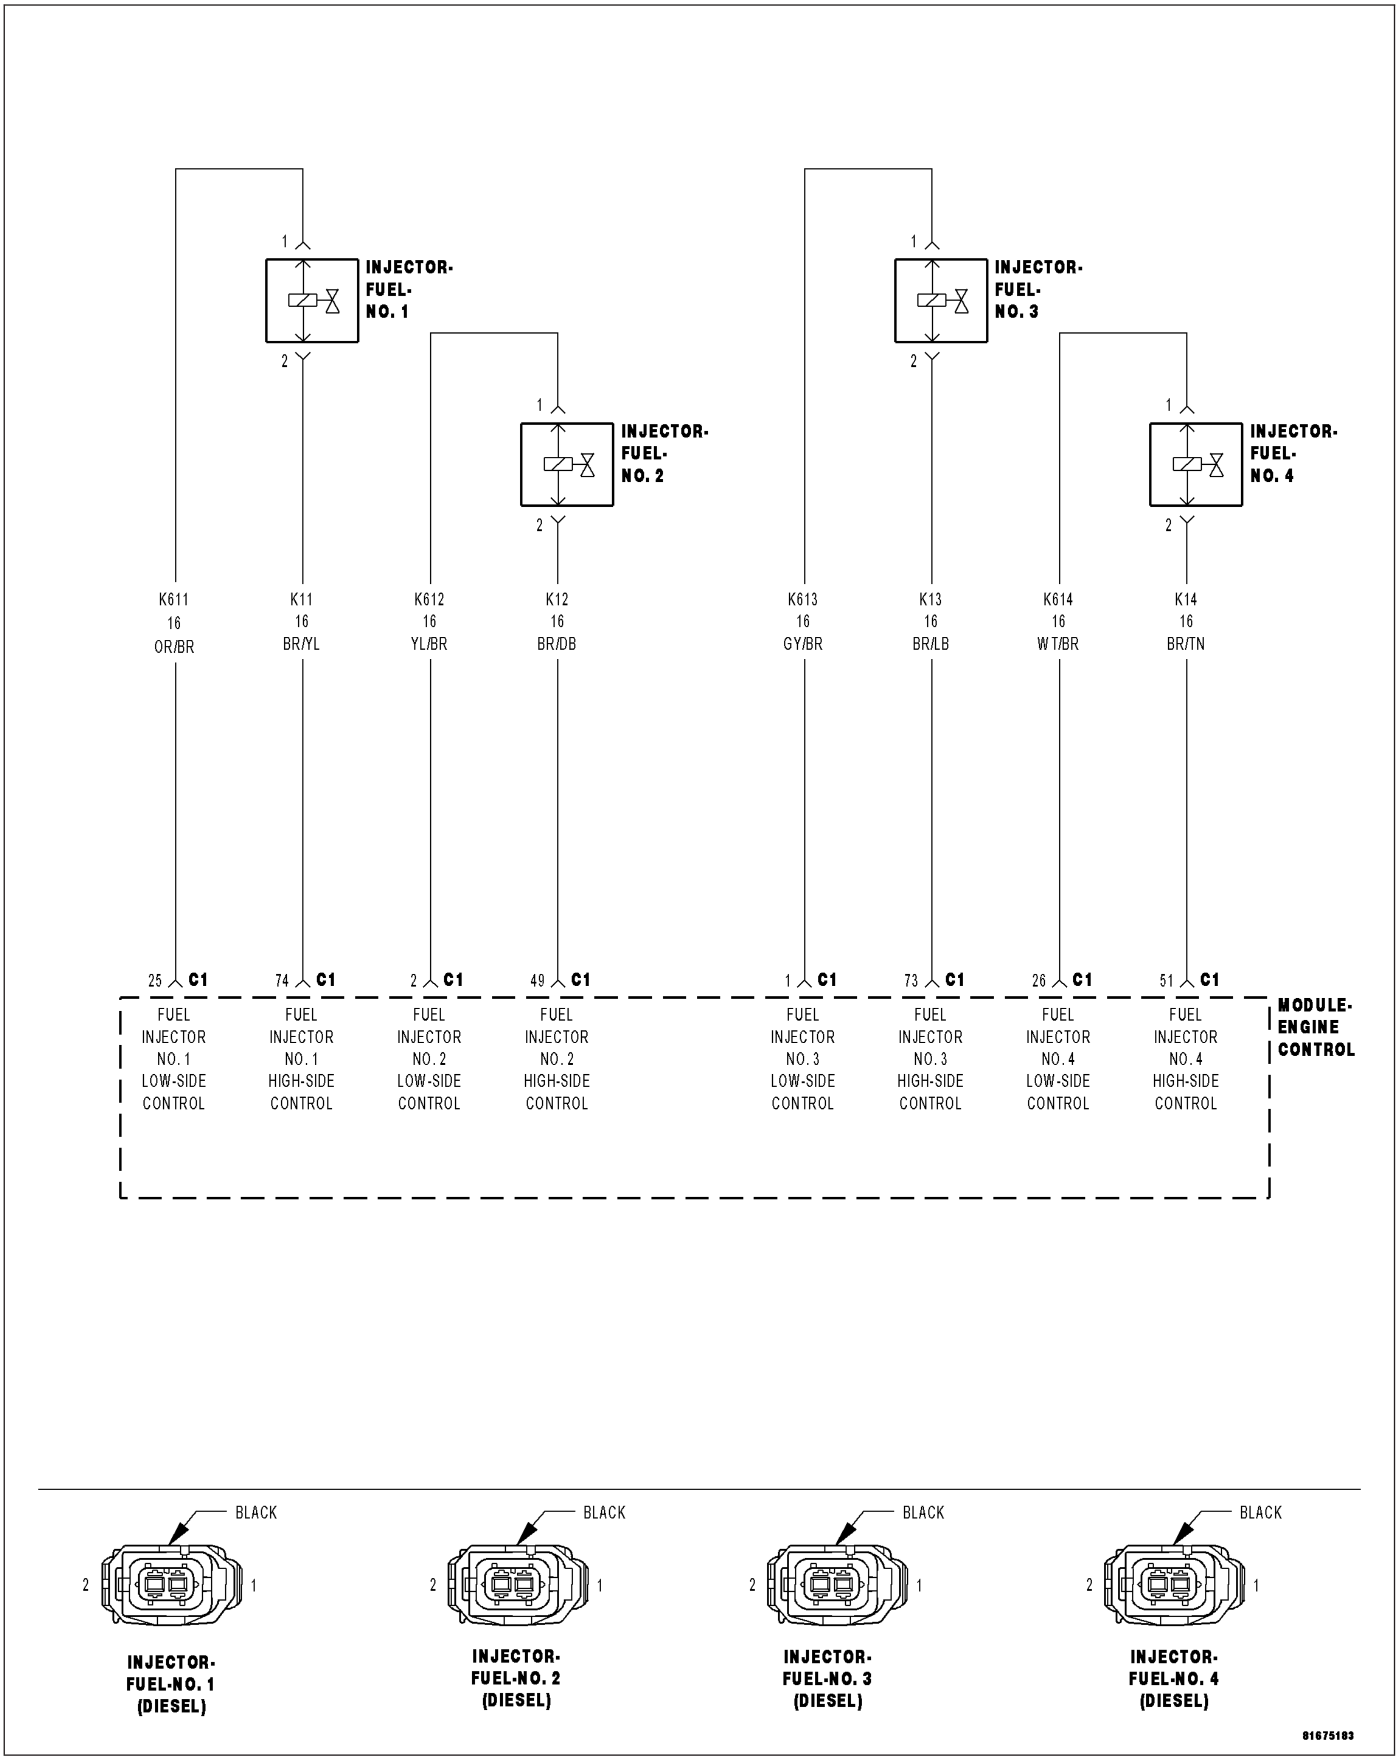
With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0204-CYLINDER 4-INJECTOR CIRCUIT CURRENT DECREASE



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of each Fuel Injector High-Side Control circuit.

Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Fuel Injector harness connectors.

Measure the resistance between ground and each Fuel Injector High-Side Control circuits.

Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

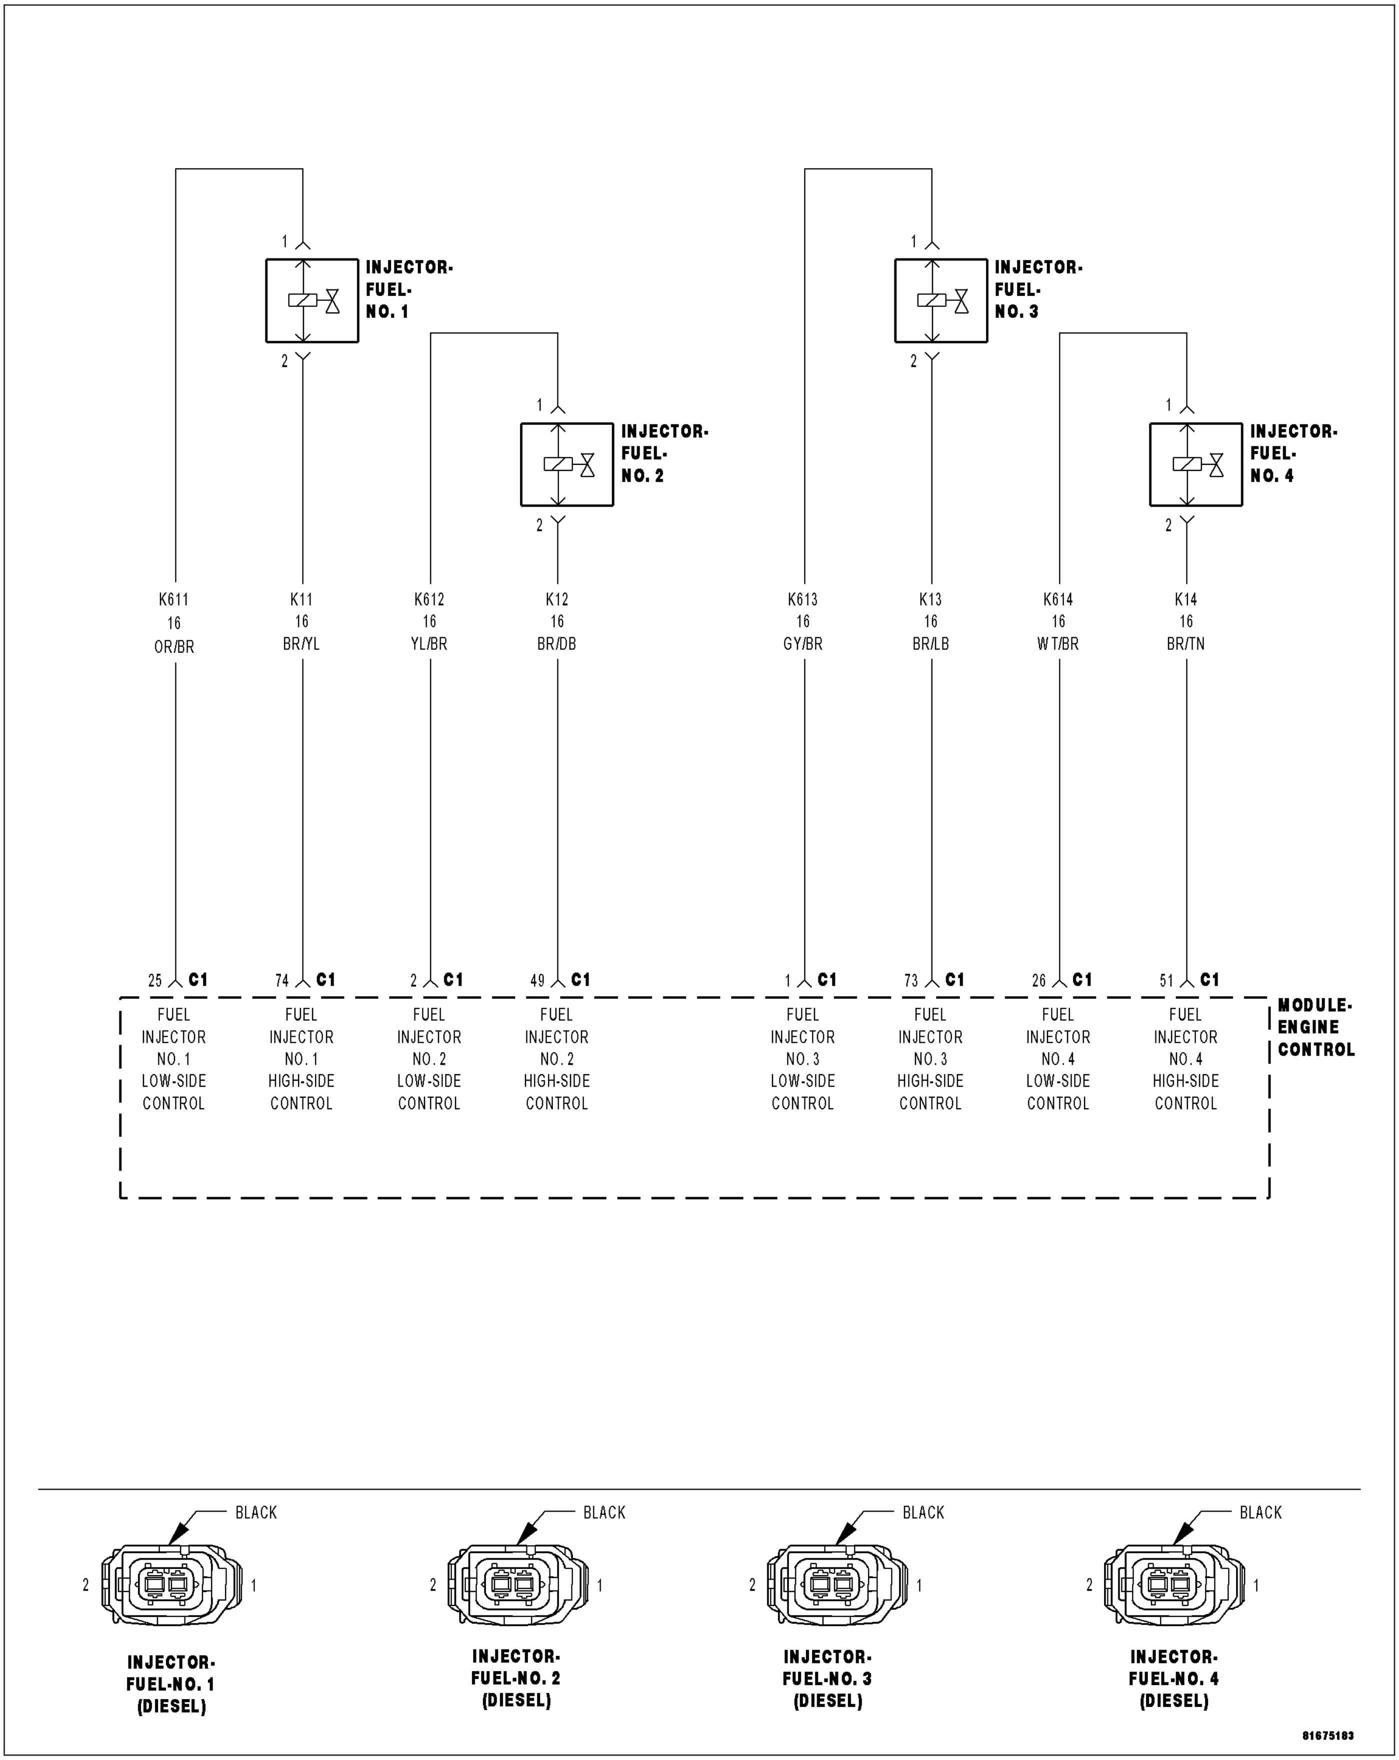
With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0204-CYLINDER 4-INJECTOR CIRCUIT LOAD DROP



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of each Fuel Injector High-Side Control circuit.

Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Fuel Injector harness connectors.

Measure the resistance between ground and each Fuel Injector High-Side Control circuits.

Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

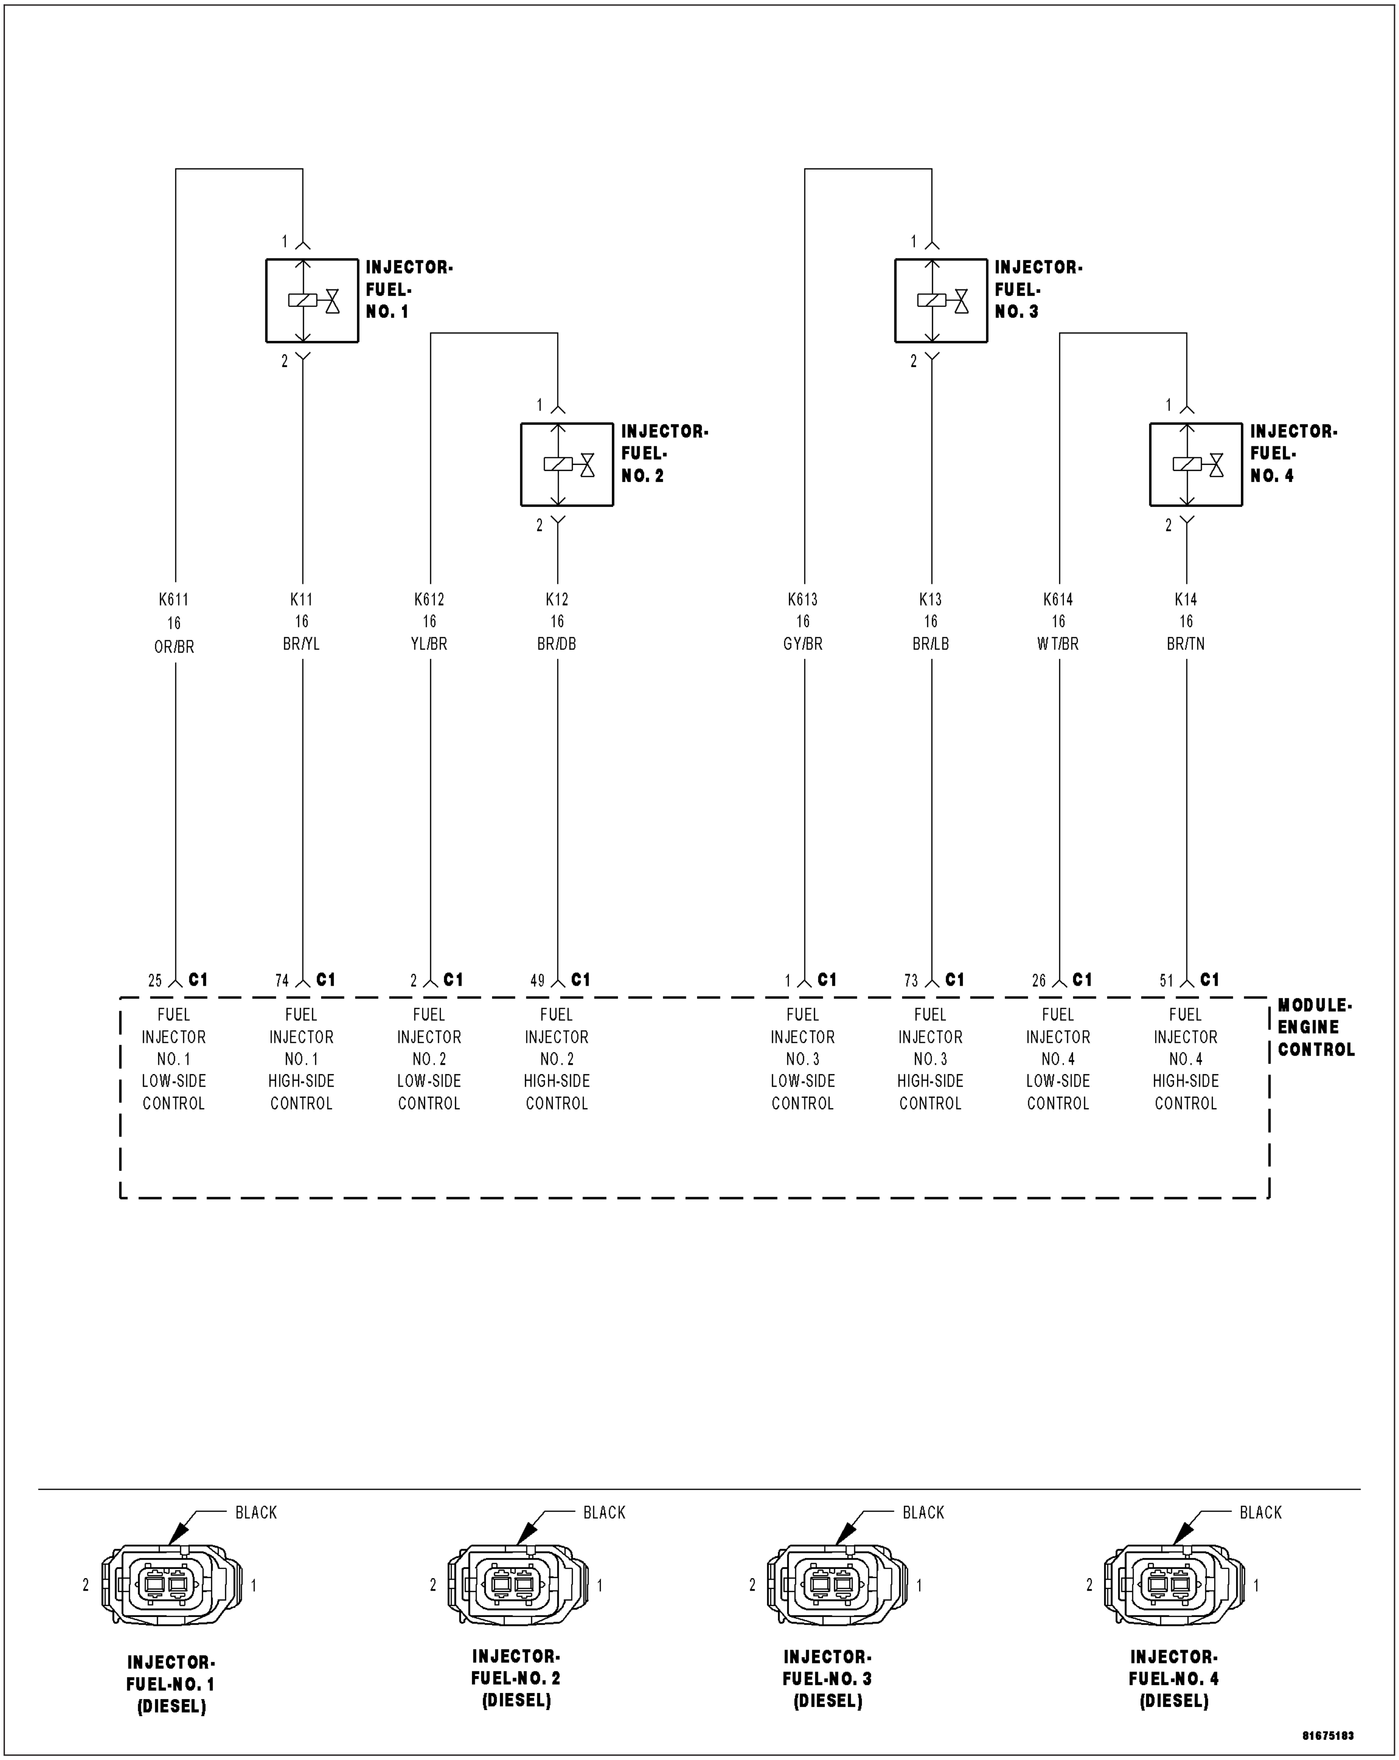
With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0204-CYLINDER 4-INJECTOR CIRCUIT OVERCURRENT HIGH SIDE



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of each Fuel Injector High-Side Control circuit.

Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Fuel Injector harness connectors.

Measure the resistance between ground and each Fuel Injector High-Side Control circuits.

Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

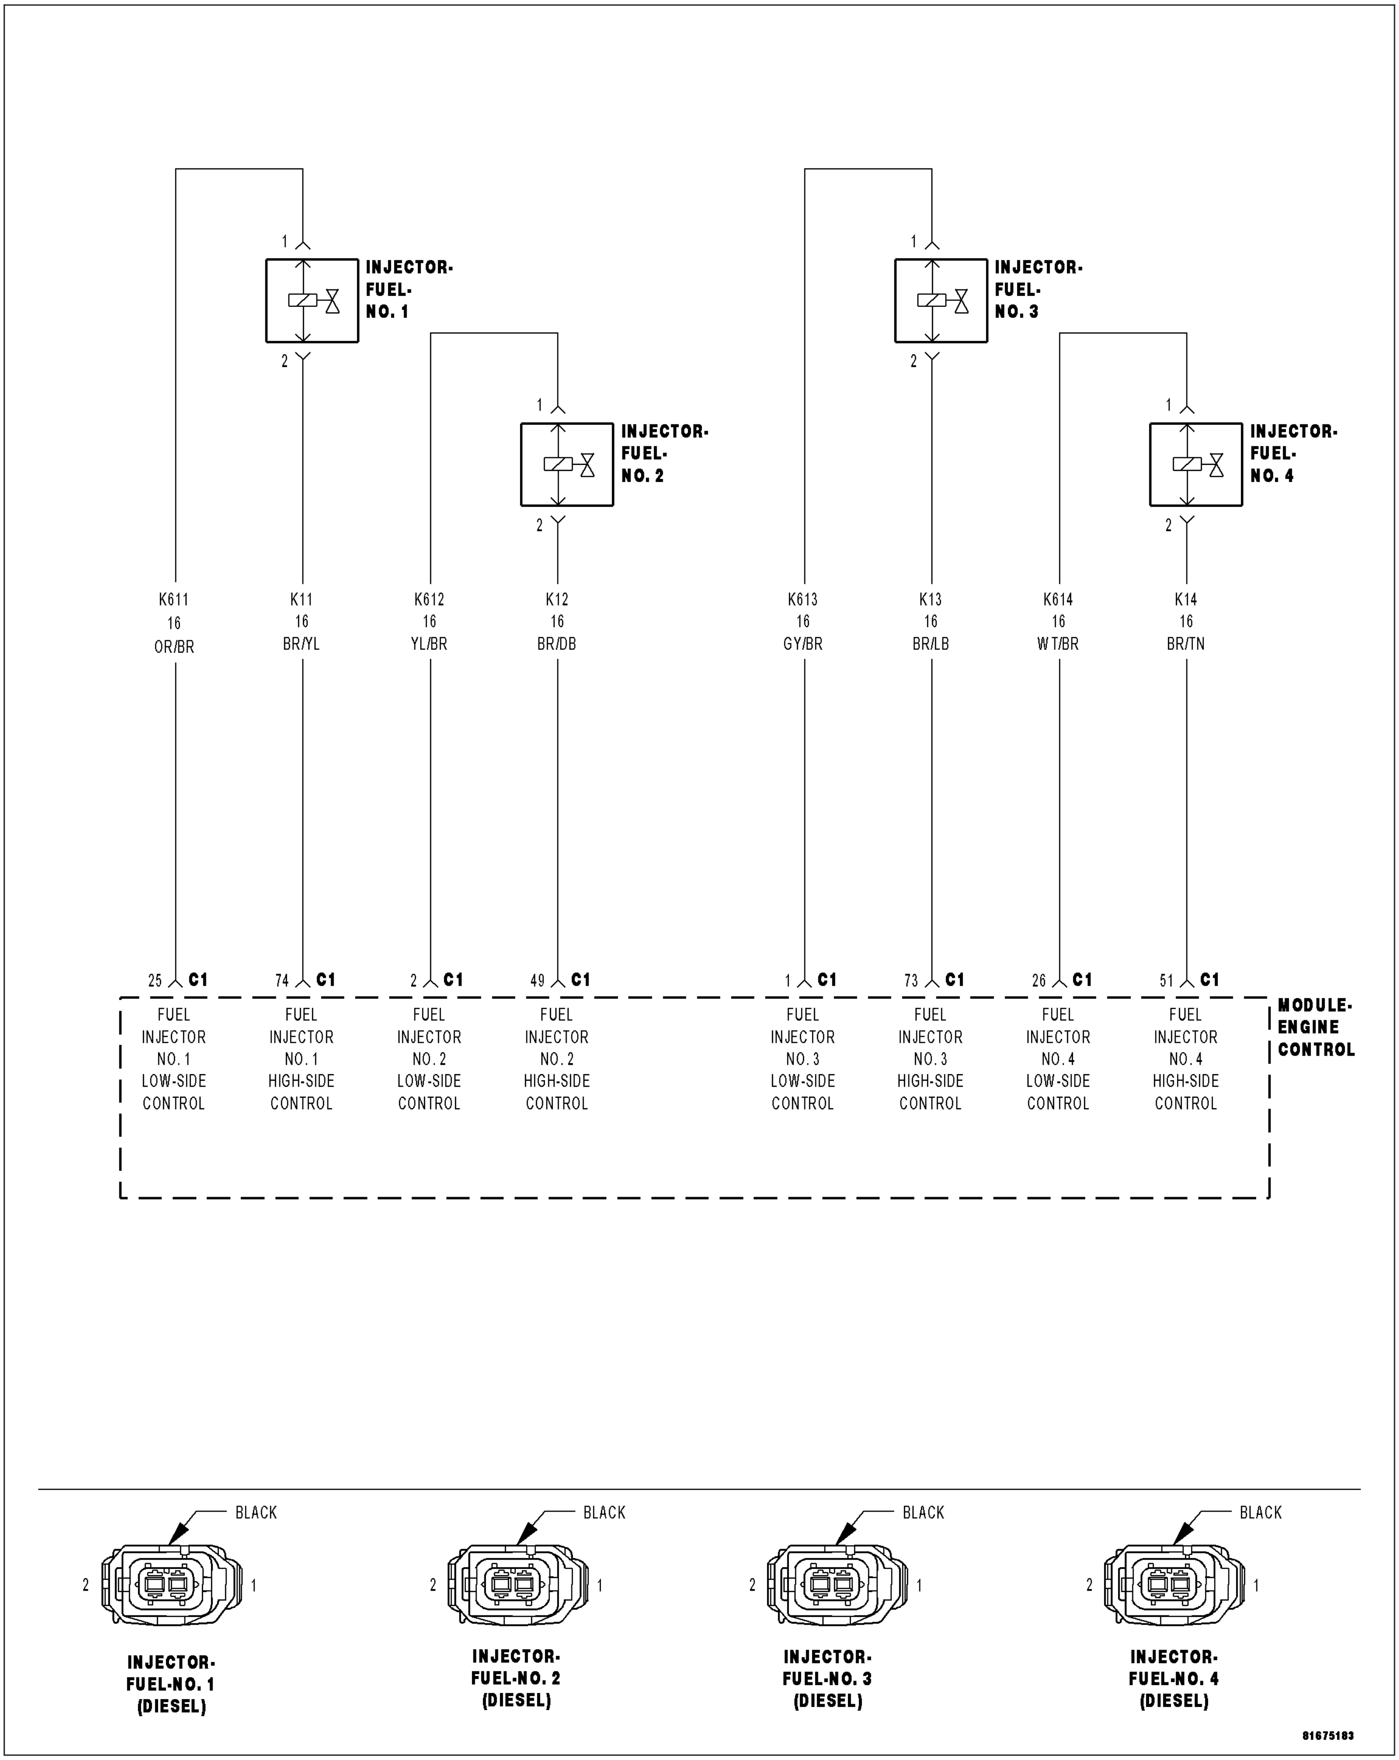
With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0204-CYLINDER 4-INJECTOR CIRCUIT OVERCURRENT LOW SIDE



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of each Fuel Injector High-Side Control circuit.

Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Fuel Injector harness connectors.

Measure the resistance between ground and each Fuel Injector High-Side Control circuits.

Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

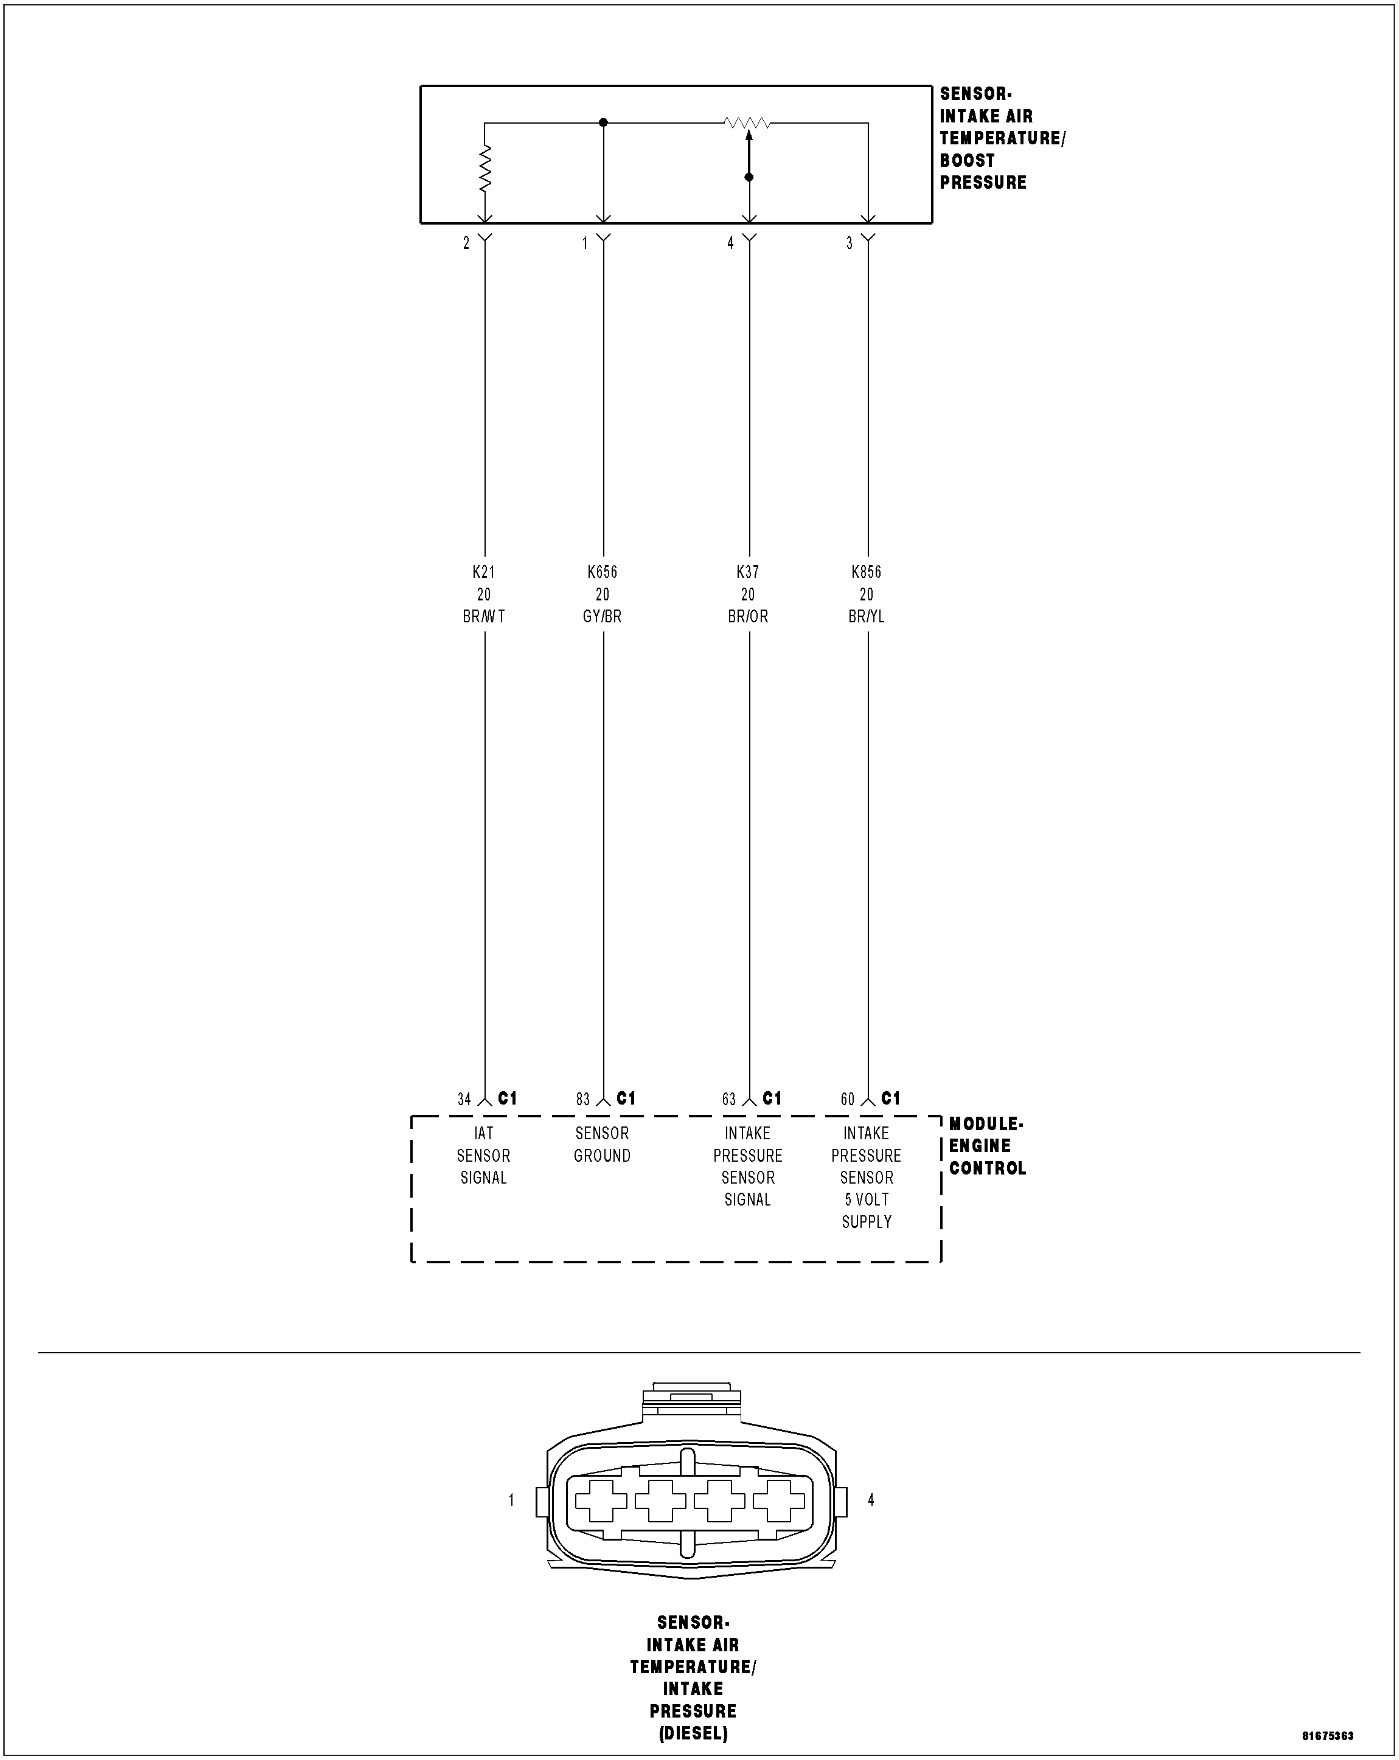
With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0234-BOOST PRESSURE SENSOR NEGATIVE DEVIATION



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The Boost Pressure Sensor indicates actual turbocharger boost is less than the ECM setpoint.

| Possible Causes |
| --- |
| AIR FILTER |
| AIR RESTRICTION |
| AIR LEAKS |
| BOOST CONTROL VACUUM SUPPLY |
| BOOST PRESSURE ACTUATOR |
| TURBOCHARGER |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: Ensure all turbocharger inlet and outlet tubes are connected properly, without damage and restriction before continuing with this test.**

**NOTE: If DTC P0401 or P0402 is present with this DTC, diagnose P0401 or P0402 before diagnosing this DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Test drive the vehicle.

Monitor the scan tool for ECM DTCs.

**NOTE: A clogged Boost Pressure Solenoid Air Filter can cause this DTC to set. Inspect this filter and replace as necessary before continuing with this test.**

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Test Complete.

### 2. AIR FILTER

Turn the ignition off.

Remove and inspect the Air Filter for soiling or excessive dirt and debris which may cause air flow restriction.

**Were any of these problems found?**

**Yes** >> Replace the Air Filter element.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. AIR RESTRICTION

**NOTE: Inspect all air intake and turbocharger related tubes for damage, restriction or poor connection. Any of these conditions can cause a this DTC to set.**

Turn the ignition off.

Inspect all air intake, crankcase vent and turbocharger related tubes and connections.

**Were any problems found?**

**Yes** >> Repair or replace as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. CHECKING THE BOOST CONTROL VACUUM SUPPLY

Refer to symptom Checking The Boost Control Vacuum Supply to check the turbocharger vacuum supply system.

**Were any problems found?**

**Yes** >> Repair as necessary
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. CHECKING FOR AIR LEAKS

Turn the ignition off.

Remove the Inlet Pressure Sensor.

Connect smoke machine 84-04 to the Inlet Pressure Sensor port in the intake duct and begin injecting smoke into the intake system.

Observe all intake system components for evidence of smoke leakage.

**Is there evidence of smoke leakage?**

**Yes** >> Repair or replace as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. BOOST PRESSURE ACTUATOR

Turn the ignition off.

Replace the Boost Pressure Actuator in accordance with the Service Information.

**NOTE: Ensure the ECM and Boost Pressure Actuator harness connectors are connected.**

Test drive the vehicle.

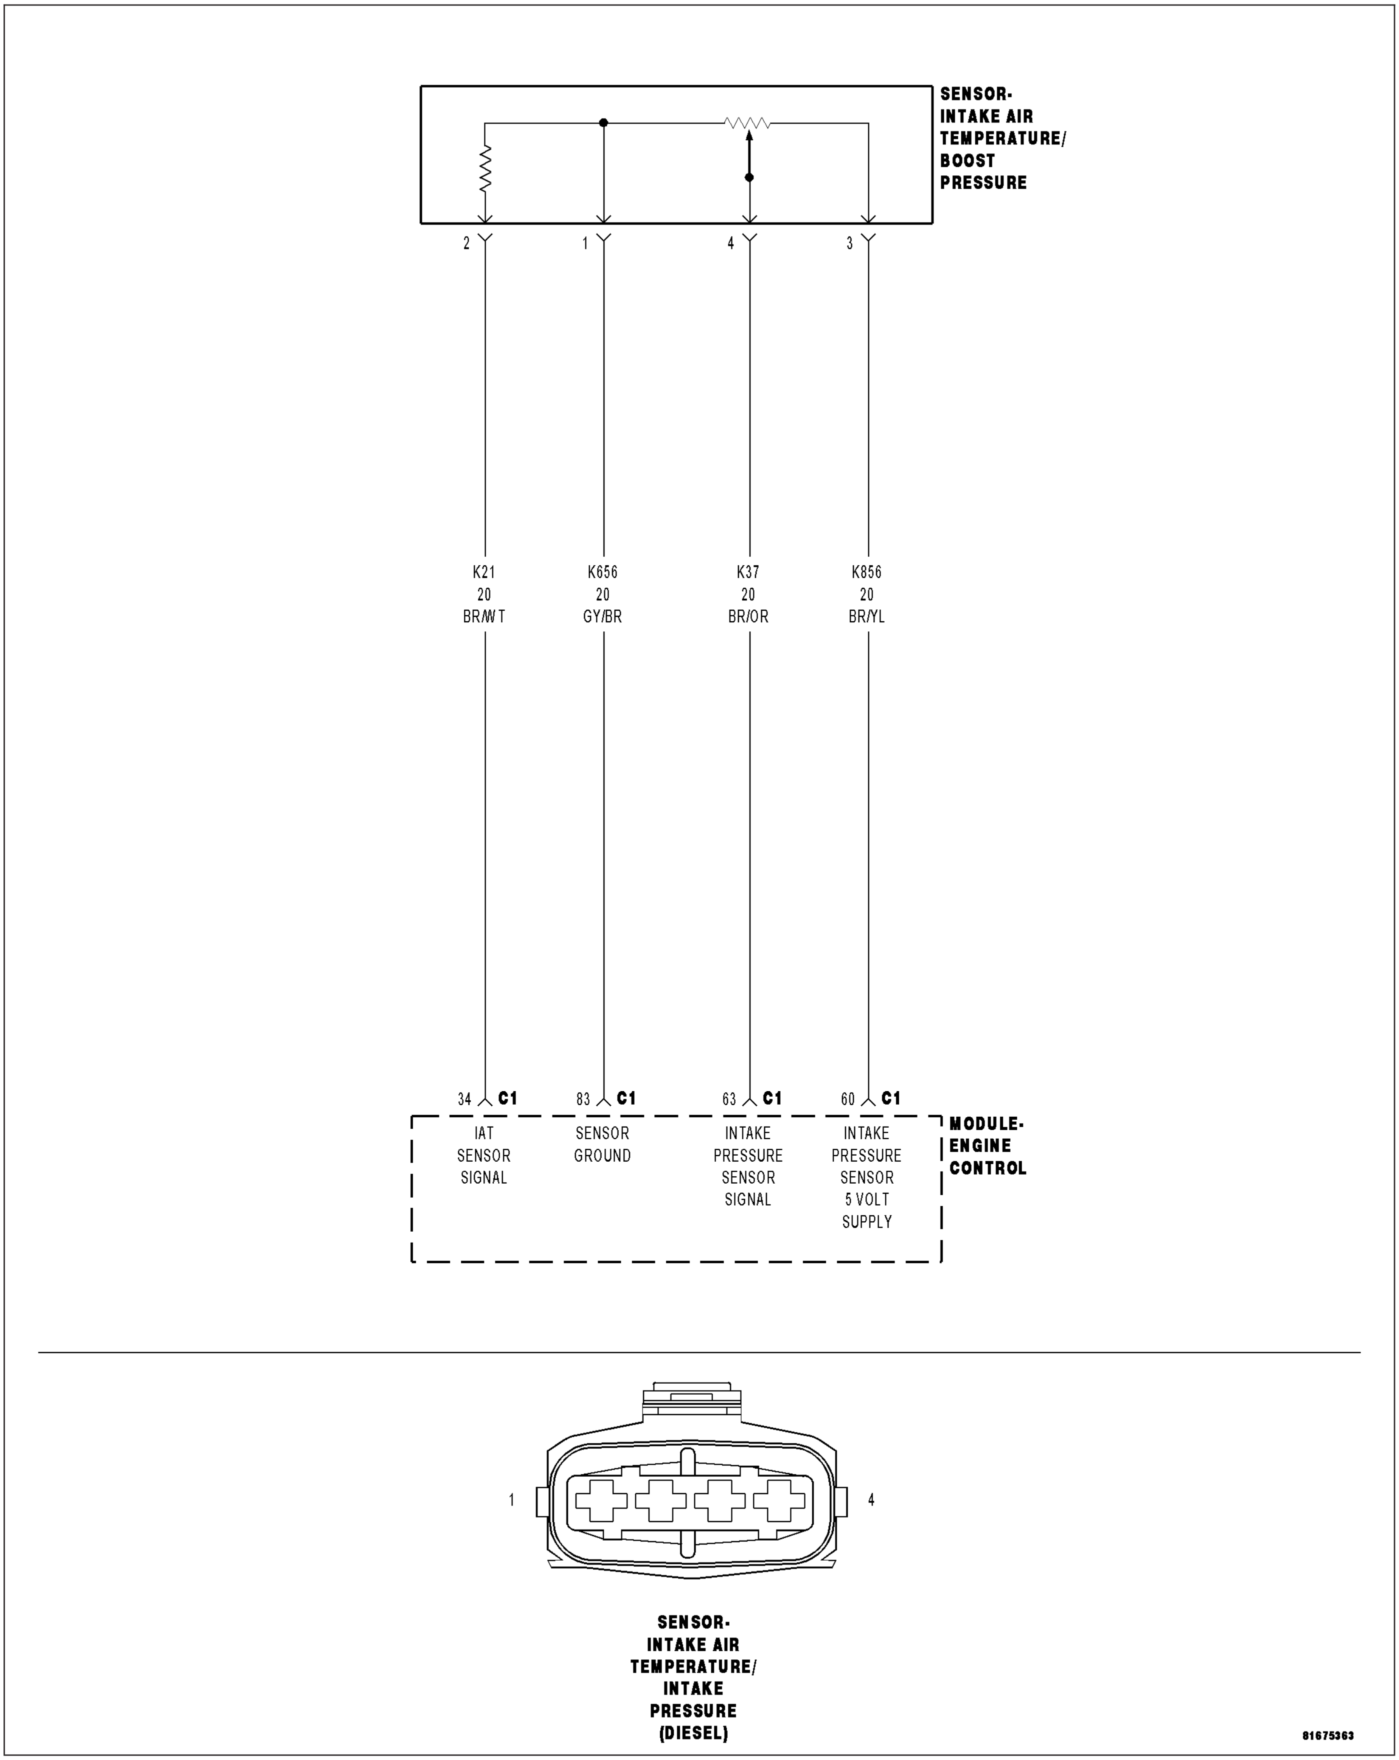
With the scan tool, check for this DTC to set again.

**Did this DTC set again?**

**Yes** >> Replace the Turbocharger assembly in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Boost Pressure Actuator.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0235-BOOST PRESSURE SENSOR PLAUSIBILITY



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine speed below 850 rpm. No other Boost Pressure Sensor DTC's. No Atmospheric Pressure Sensor DTC's.
- **Set Condition:**
  The Boost Pressure Sensor signal differs from the Atmospheric Pressure Sensor signal by 150 hpa or greater for at least 2.0 seconds.

| Possible Causes |
|---|
| HIGH RESISTANCE IN THE BOOST PRESSURE SENSOR SIGNAL CIRCUIT |
| HIGH RESISTANCE IN THE BOOST PRESSURE SENSOR GROUND CIRCUIT |
| HIGH RESISTANCE IN THE BOOST PRESSURE SENSOR 5-VOLT SUPPLY CIRCUIT |
| BOOST PRESSURE/INTAKE AIR TEMPERATURE SENSOR |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If DTC P0641 or P0651 is present with this DTC, diagnose DTCs P0641 and P0651 before diagnosing this DTC.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Turn the ignition off, wait 30 seconds, then start and idle the engine for at least 30 seconds.

**NOTE: Engine idle speed must be below 870 RPM.**

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 2. HIGH RESISTANCE IN THE BOOST PRESSURE SENSOR SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the Boost Pressure/IAT Sensor harness connector.

Disconnect the ECM harness connectors.

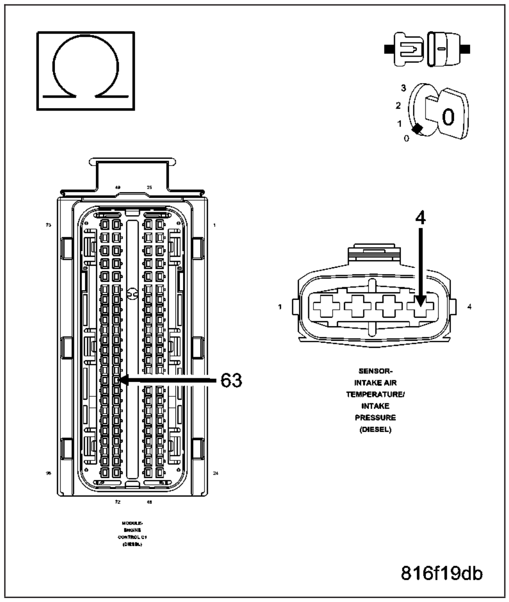
Measure the resistance of the Boost Pressure Sensor Signal circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 3

**No** >> Repair the Boost Pressure Sensor Signal circuit for high resistance.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 3. HIGH RESISTANCE IN THE BOOST PRESSURE SENSOR GROUND CIRCUIT

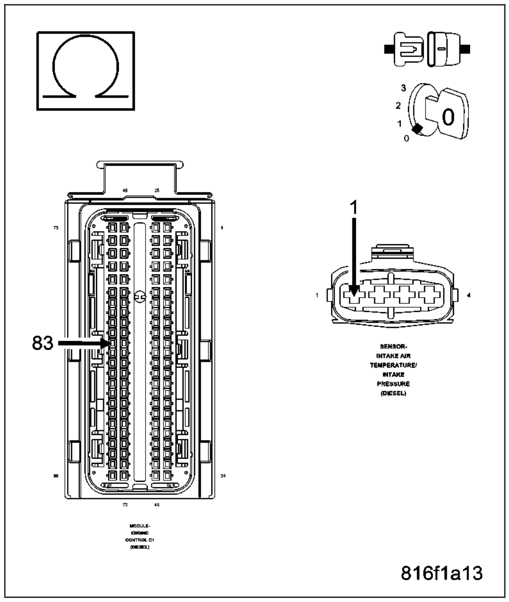
Measure the resistance of the Sensor Ground circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 4

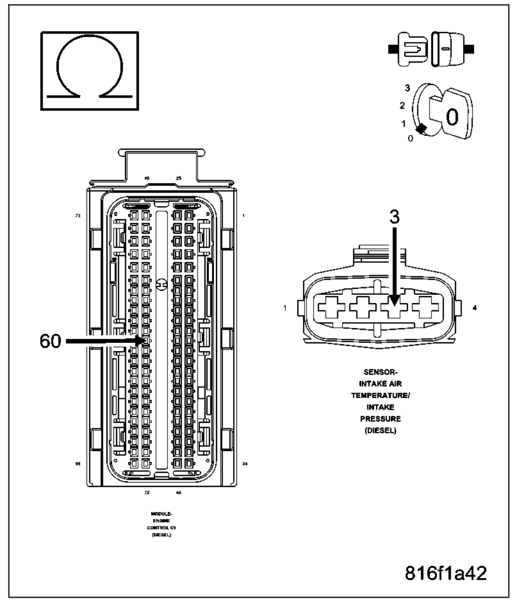
**No** >> Repair the Boost Pressure Sensor Ground circuit for high resistance.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 4. HIGH RESISTANCE IN THE BOOST PRESSURE SENSOR 5-VOLT SUPPLY CIRCUIT

Measure the resistance of the Boost Pressure Sensor 5-Volt Supply circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the Boost Pressure Sensor 5-Volt Supply circuit for high resistance.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. BOOST PRESSURE/INTAKE AIR TEMPERATURE SENSOR

Replace the Boost Pressure/Intake Air Temperature Sensor.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Test drive the vehicle, pausing several times to cycle the ignition.

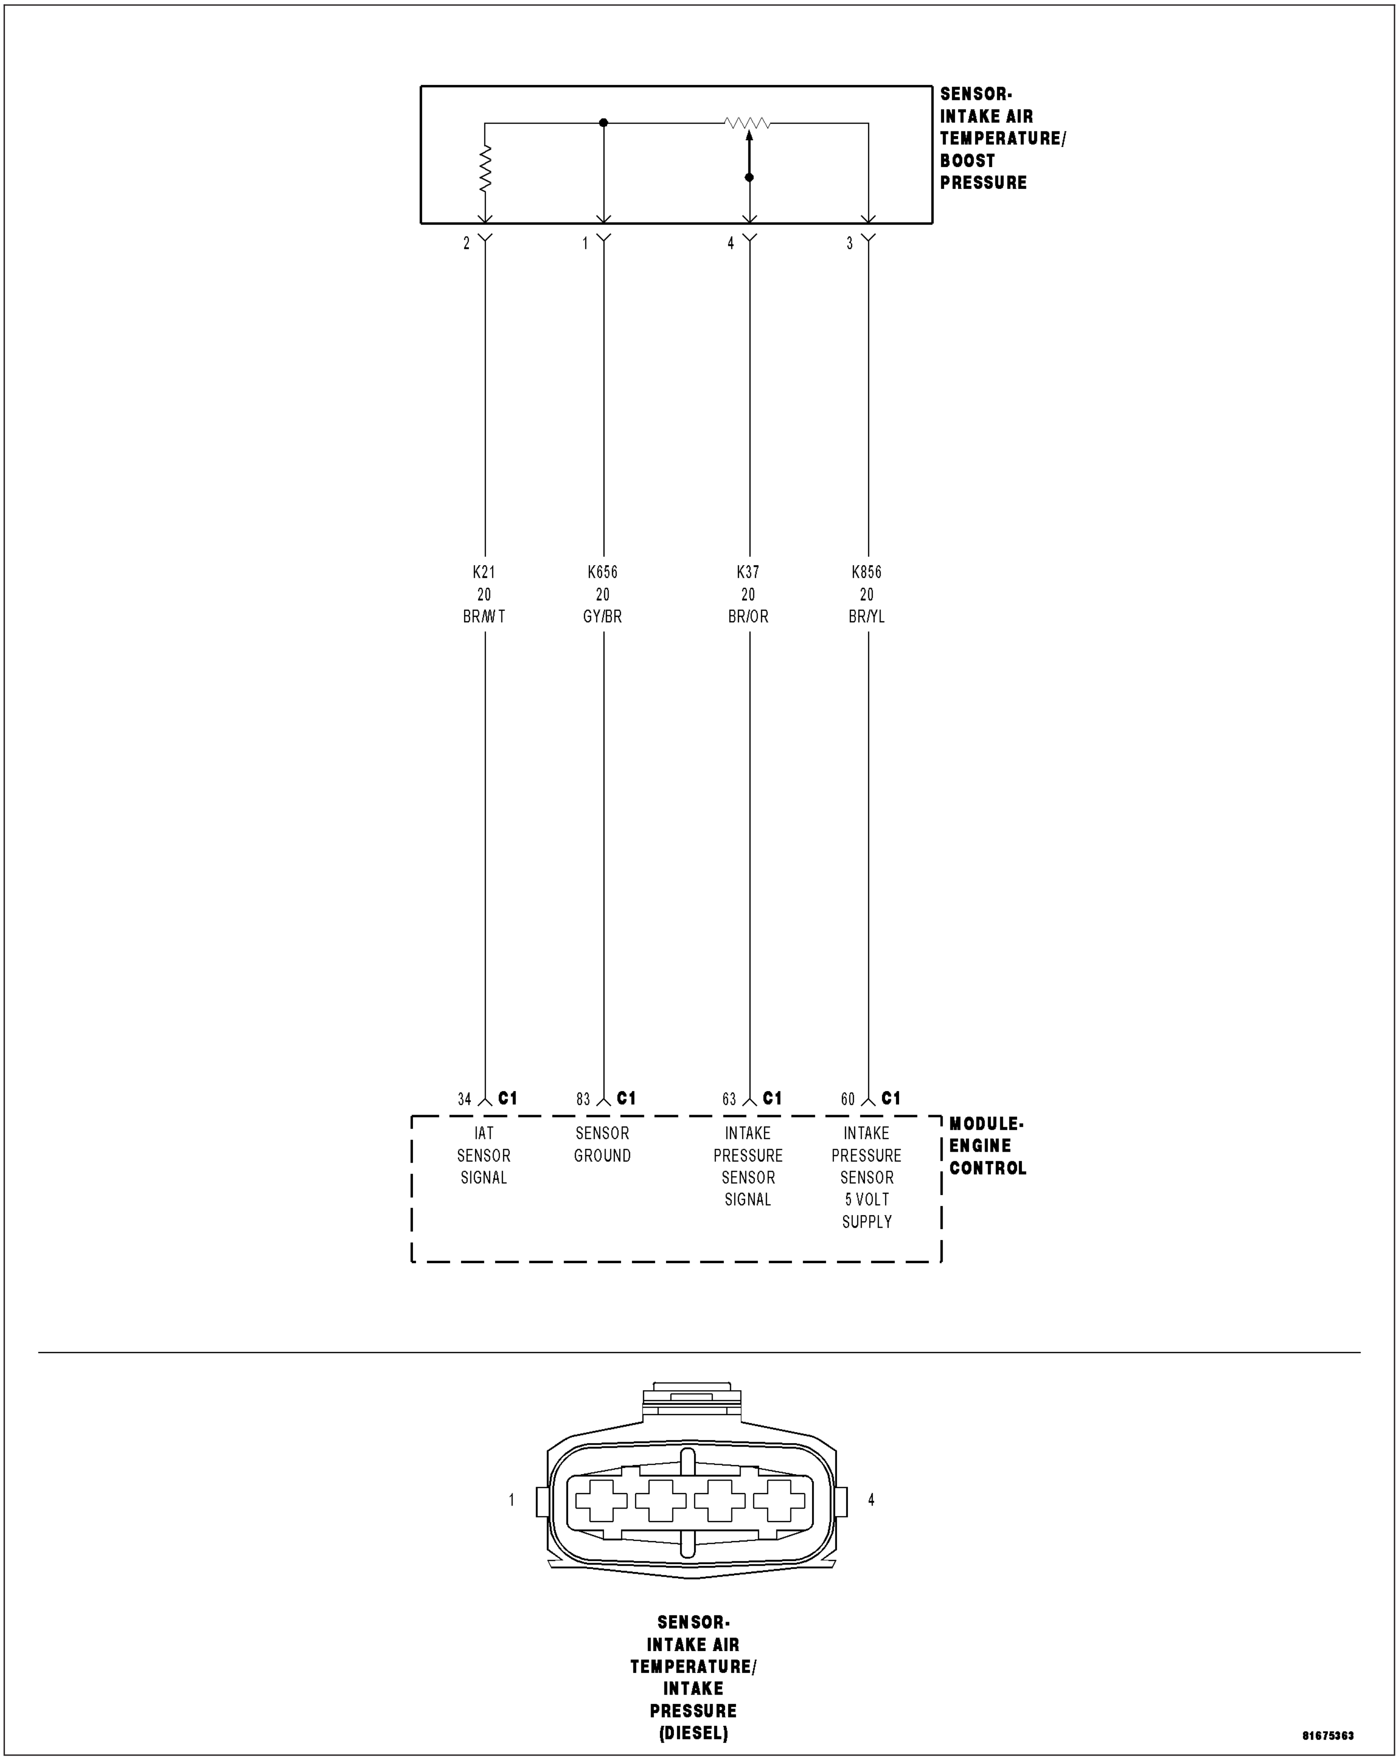
Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0235-BOOST PRESSURE SENSOR SIGNAL VOLTAGE TOO HIGH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The Boost Pressure Sensor signal voltage is above 4.79 volts for 0.5 seconds.

| Possible Causes |
| --- |
| BOOST PRESSURE SENSOR GROUND CIRCUIT SHORTED TO VOLTAGE |
| BOOST PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| BOOST PRESSURE SENSOR GROUND CIRCUIT OPEN |
| BOOST PRESSURE SENSOR |
| POOR CONNECTOR TERMINAL CONTACT |
| ENGINE CONTROL MODULE (INTERNAL) |
| ENGINE CONTROL MODULE (SENSOR SIGNAL SHORTED TO VOLTAGE) |

## Diagnostic Test

### 1. CHECKING FOR CURRENT DTC

**NOTE: If a P0234 or P0299 DTC is present with this DTC, diagnose P0234 or P0299 DTC before continuing.**

**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: Ensure all turbocharger inlet and outlet tubes are connected properly, without damage and restriction before continuing with this test. Also ensure the wastegate actuator and actuator rod are attached and functioning properly.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Cycle the ignition key on and off several times, leaving the key on for at least 10 seconds at a time.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 2. MEASURE THE BOOST PRESSURE SENSOR SIGNAL CIRCUIT VOLTAGE

Turn the ignition off.

Disconnect the Boost Pressure Sensor harness connector.

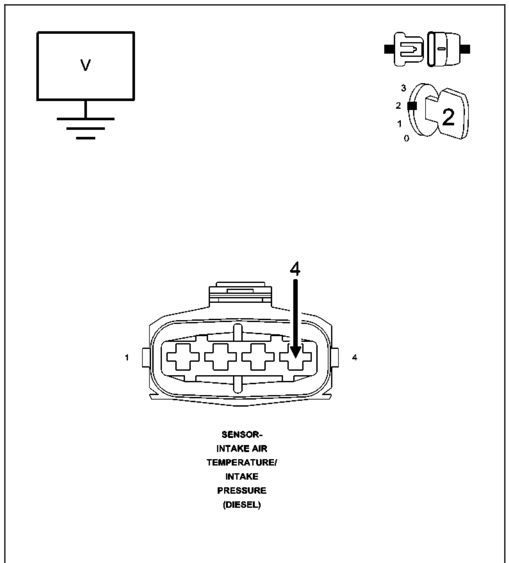
Turn the ignition on.

Measure the voltage between ground and the Boost Pressure Sensor Signal circuit.

**Is the voltage above 1.0 volt?**

**Yes** >> Go To 3

**No** >> Go To 4



81701fbb

## 3. BOOST PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage between ground and the Boost Pressure Sensor Signal circuit.

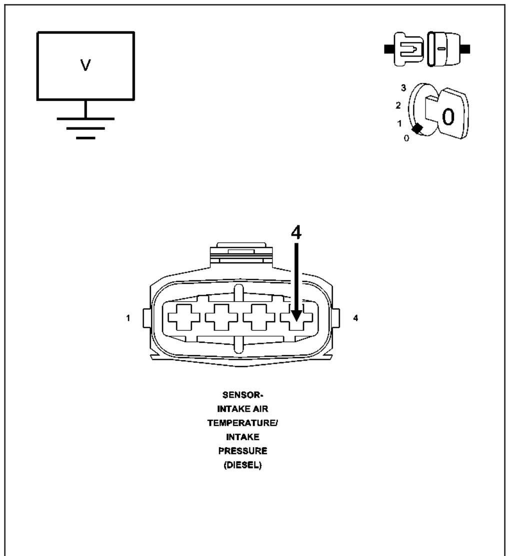
**Is the voltage above 1.0 volt?**

**Yes** >> Repair the Boost Pressure Sensor Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



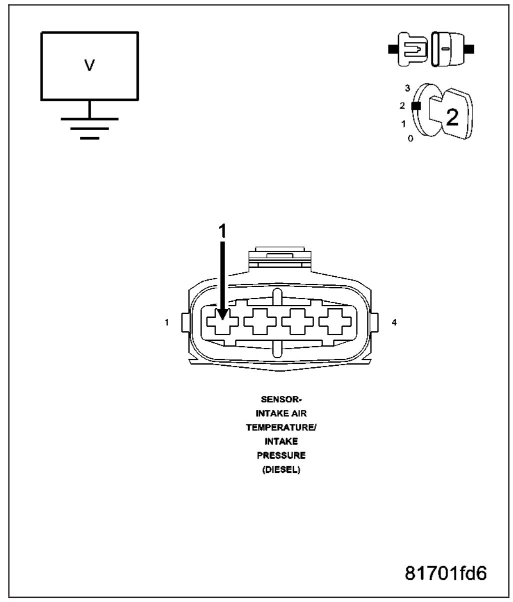
81701fc6

## 4. BOOST PRESSURE SENSOR GROUND CIRCUIT SHORTED TO VOLTAGE

Measure the voltage between ground and the Boost Pressure Sensor Ground circuit.

**NOTE: If the Sensor Ground circuit had a short to voltage on it, the ECM could be damaged. Retest the Fuel Pressure Sensor circuit.**

**Is the voltage above 1.0 volt?**



**Yes** >> Repair the Boost Pressure Sensor Ground circuit for a short to voltage. The ECM will need to be checked for proper operation before the repair is completed. A short to voltage on a ground circuit can damage the ECM.

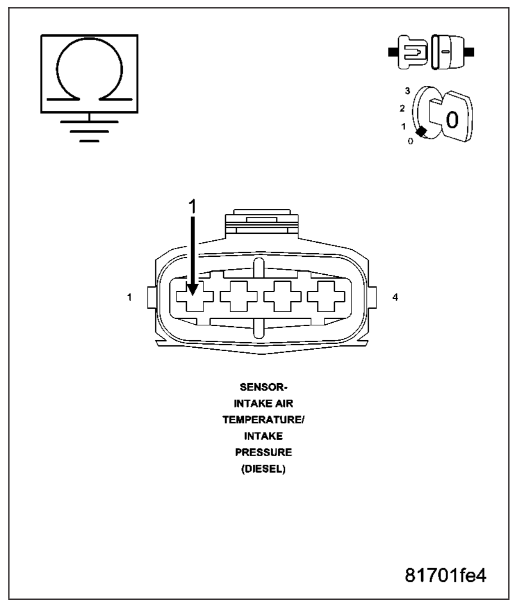
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. BOOST PRESSURE SENSOR GROUND CIRCUIT OPEN

Measure the resistance of the Sensor Ground circuit.

**Is the resistance below 10.0 ohms?**



**Yes** >> Go To 6

**No** >> Repair the Boost Pressure Sensor Ground circuit for an open.

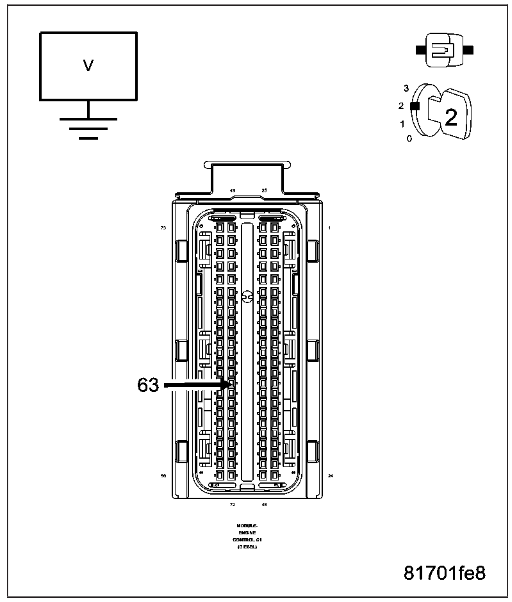
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. BOOST PRESSURE SENSOR

**NOTE: Ensure all harness connectors are connected.**

Turn the ignition on.

Measure the voltage of the Boost Pressure Sensor Signal circuit by back probing ECM harness connector C1, cavity 63.



**Is the voltage above 4.85 volts?**

**Yes** >> Replace the Boost Pressure Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 7

## 7. POOR CONNECTOR TERMINAL CONTACT

Turn the ignition on.

With the scan tool, read ECM DTCs.

With the scan tool, erase ECM DTCs.

**Did this DTC set again?**

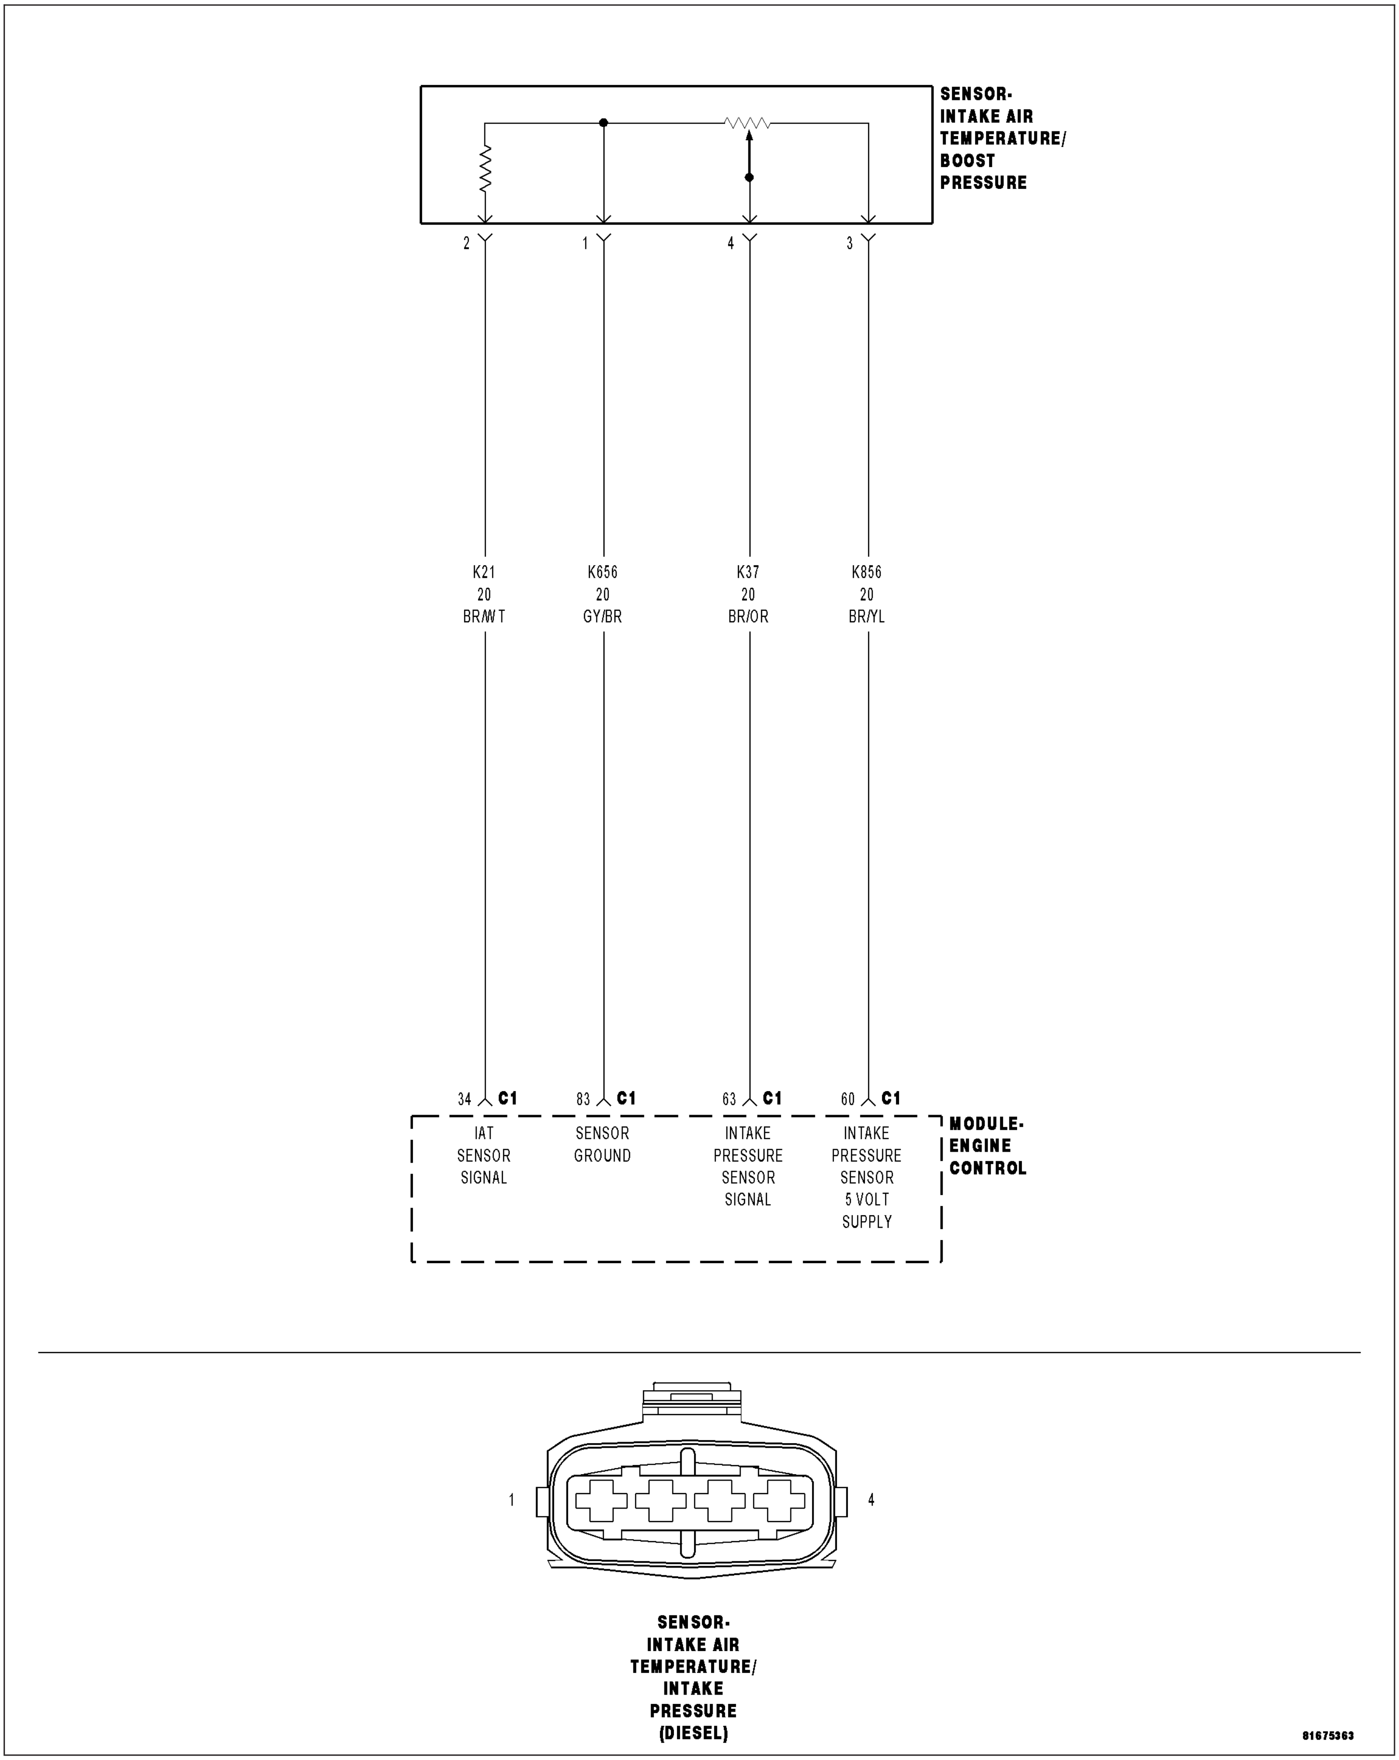
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Ensure good terminal contact between the Boost Pressure Sensor harness connector and the sensor. The repair is complete.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0235-BOOST PRESSURE SENSOR SIGNAL VOLTAGE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The Boost Pressure Sensor signal voltage is below 0.29 volt for 0.5 seconds.

| Possible Causes |
| --- |
| BOOST PRESSURE SENSOR 5-VOLT SUPPLY CIRCUIT OPEN |
| BOOST PRESSURE/INTAKE AIR TEMPERATURE SENSOR |
| BOOST PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| BOOST PRESSURE SENSOR SIGNAL AND GROUND CIRCUITS SHORTED TOGETHER |
| BOOST PRESSURE SENSOR SIGNAL CIRCUIT OPEN |
| ENGINE CONTROL MODULE |

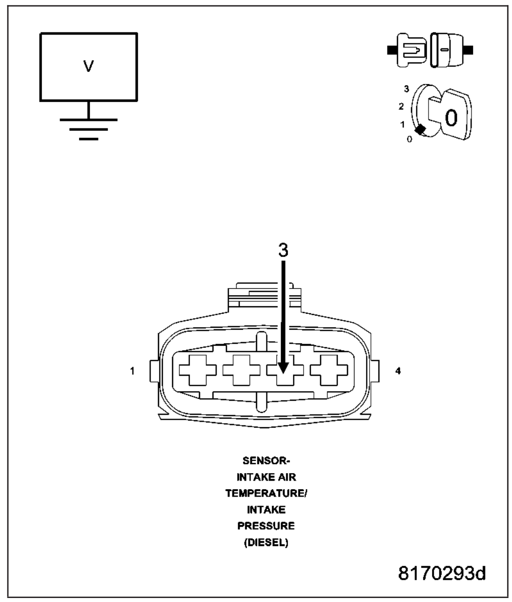
## Diagnostic Test

### 1. READ THE BOOST PRESSURE SENSOR VOLTAGE ON THE SCAN TOOL

**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

Turn the ignition on.

With the scan tool, read the Boost Pressure Sensor voltage.



**Is the voltage below 0.2 volt?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 2. SENSOR REFERENCE VOLTAGE B CIRCUIT OPEN

Turn the ignition off.

Disconnect the Boost Pressure/IAT Sensor harness connector.

Turn the ignition on.

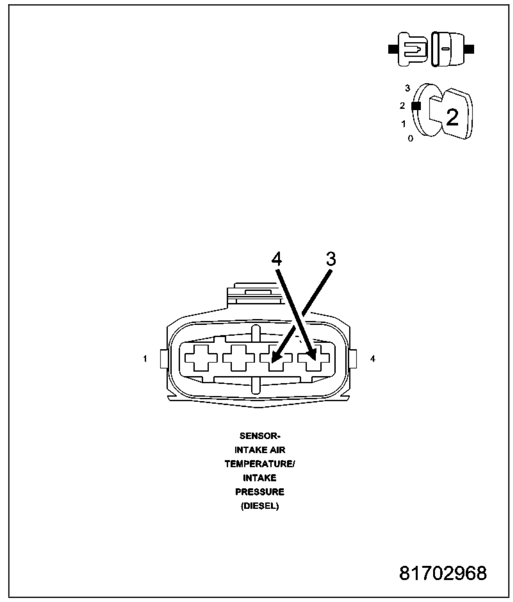
Measure the voltage between ground and the Boost Pressure Sensor 5-Volt Supply circuit.

**Is the voltage above 4.9 volts?**

**Yes** >> Go To 3

**No** >> Repair the Boost Pressure Sensor 5-Volt Supply circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 3. BOOST PRESSURE/INTAKE AIR TEMPERATURE SENSOR

Turn the ignition off.

Disconnect the Boost Pressure/IAT Sensor harness connector.

Turn the ignition on.

Connect a jumper wire between the Boost Pressure Sensor Signal and Boost Pressure Sensor 5-Volt Supply circuits.

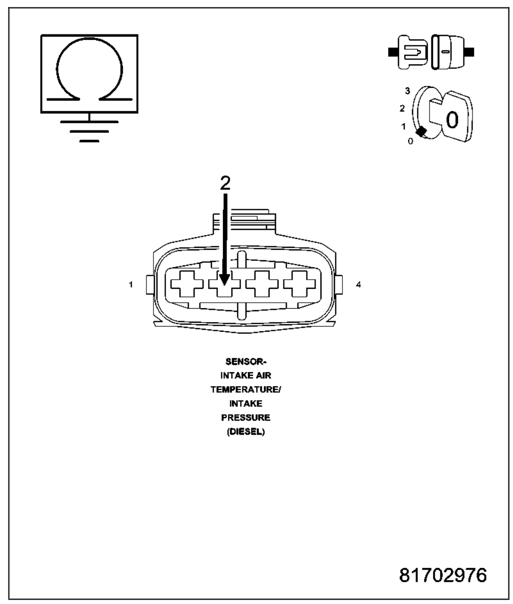
With the scan tool, read the Boost Pressure Sensor voltage.

**Is the Boost Pressure Sensor voltage above 4.5 volts?**

**Yes** >> Replace the Boost Pressure/Intake Air Temperature Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4



## 4. BOOST PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

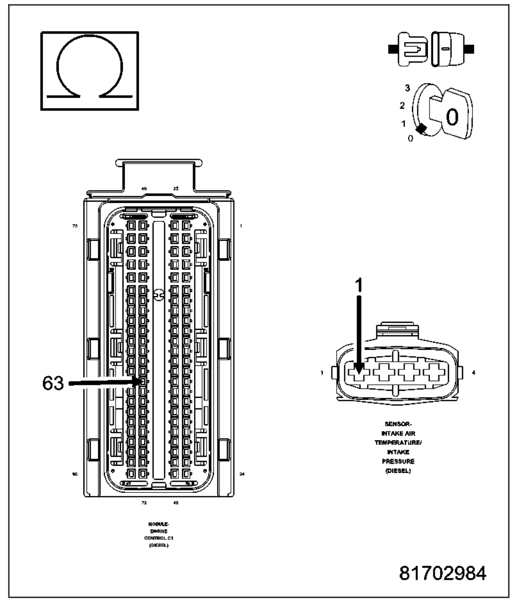
Measure the resistance between ground and the Boost Pressure Sensor Signal circuit.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 5

**No** >> Repair the Boost Pressure Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 5. BOOST PRESSURE SENSOR SIGNAL AND GROUND CIRCUITS SHORTED TOGETHER

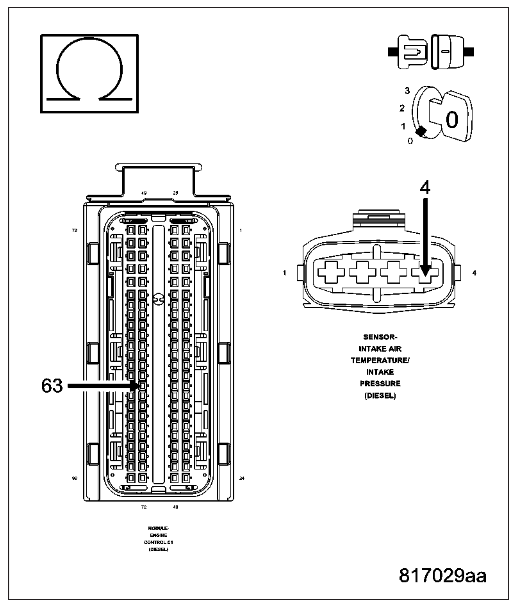
Measure the resistance between the Boost Pressure Sensor Signal circuit and Sensor Ground circuit.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

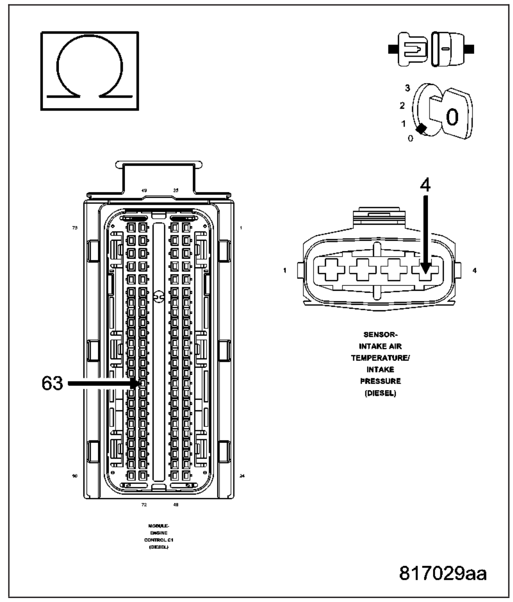
**No** >> Repair the Boost Pressure Sensor Signal circuit for a short to the Sensor Ground circuit.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 6. BOOST PRESSURE SENSOR SIGNAL CIRCUIT OPEN

Measure the resistance of the Boost Pressure Sensor Signal circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the Boost Pressure Sensor Signal circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. ENGINE CONTROL MODULE

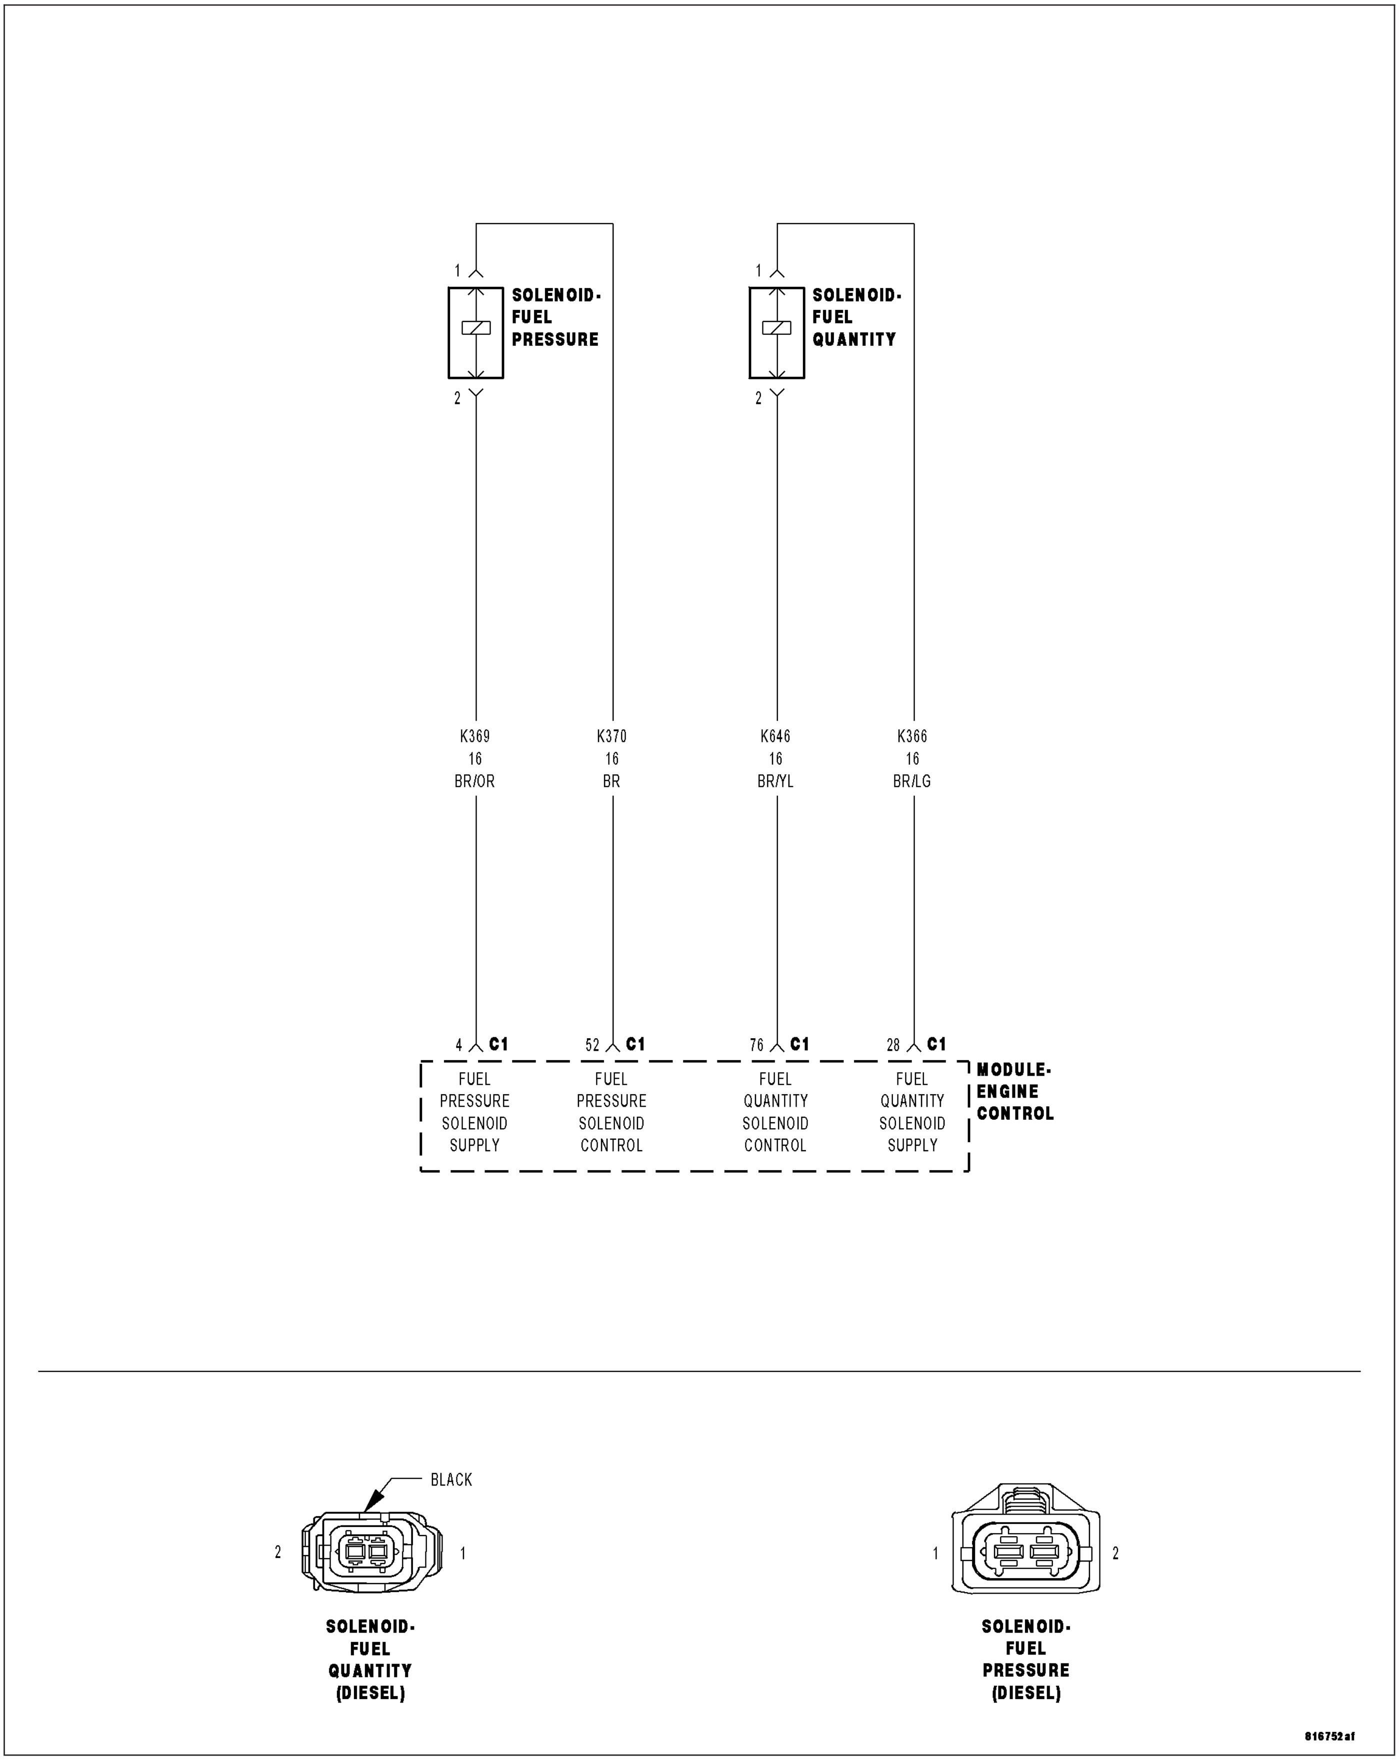
**If there are no possible causes remaining, view repair.**

**Repair**

Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0251-FUEL QUANTITY SOLENOID OPEN OR SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects an open or excessive current on the Fuel Quantity Solenoid circuit.

| Possible Causes |
|---|
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO GROUND |
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE |
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TOGETHER |
| FUEL QUANTITY SOLENOID OPEN CIRCUIT(S) |
| FUEL QUANTITY SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. VERIFY CURRENT DTC

Turn the ignition on.
With the scan tool, erase ECM DTCs.
Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.
With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

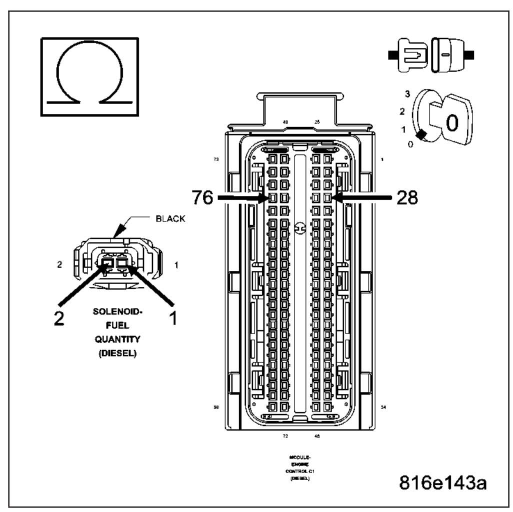
**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL QUANTITY SOLENOID CIRCUIT(S) OPEN

Turn the ignition off.
Disconnect the ECM harness connectors.
Disconnect the Fuel Quantity Solenoid harness connector.
Measure the resistance of each of the Fuel Quantity Solenoid circuits between the ECM harness connector and the Fuel Quantity Solenoid harness connector.



**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 4

**No** >> Repair the circuit(s) that measured above 10.0 ohms for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. FUEL QUANTITY SOLENOID

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P0251-FUEL QUANTITY SOLENOID OPEN CIRCUIT.**

Turn the ignition off.

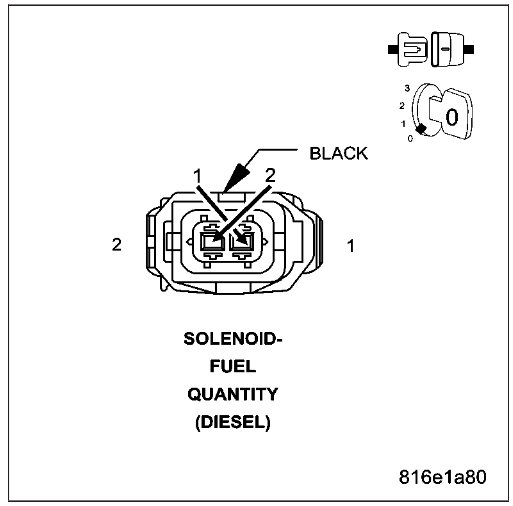
Connect a jumper wire between cavity 1 and cavity 2 of the Fuel Quantity Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P0251-FUEL QUANTITY SOLENOID SHORT CIRCUIT.**

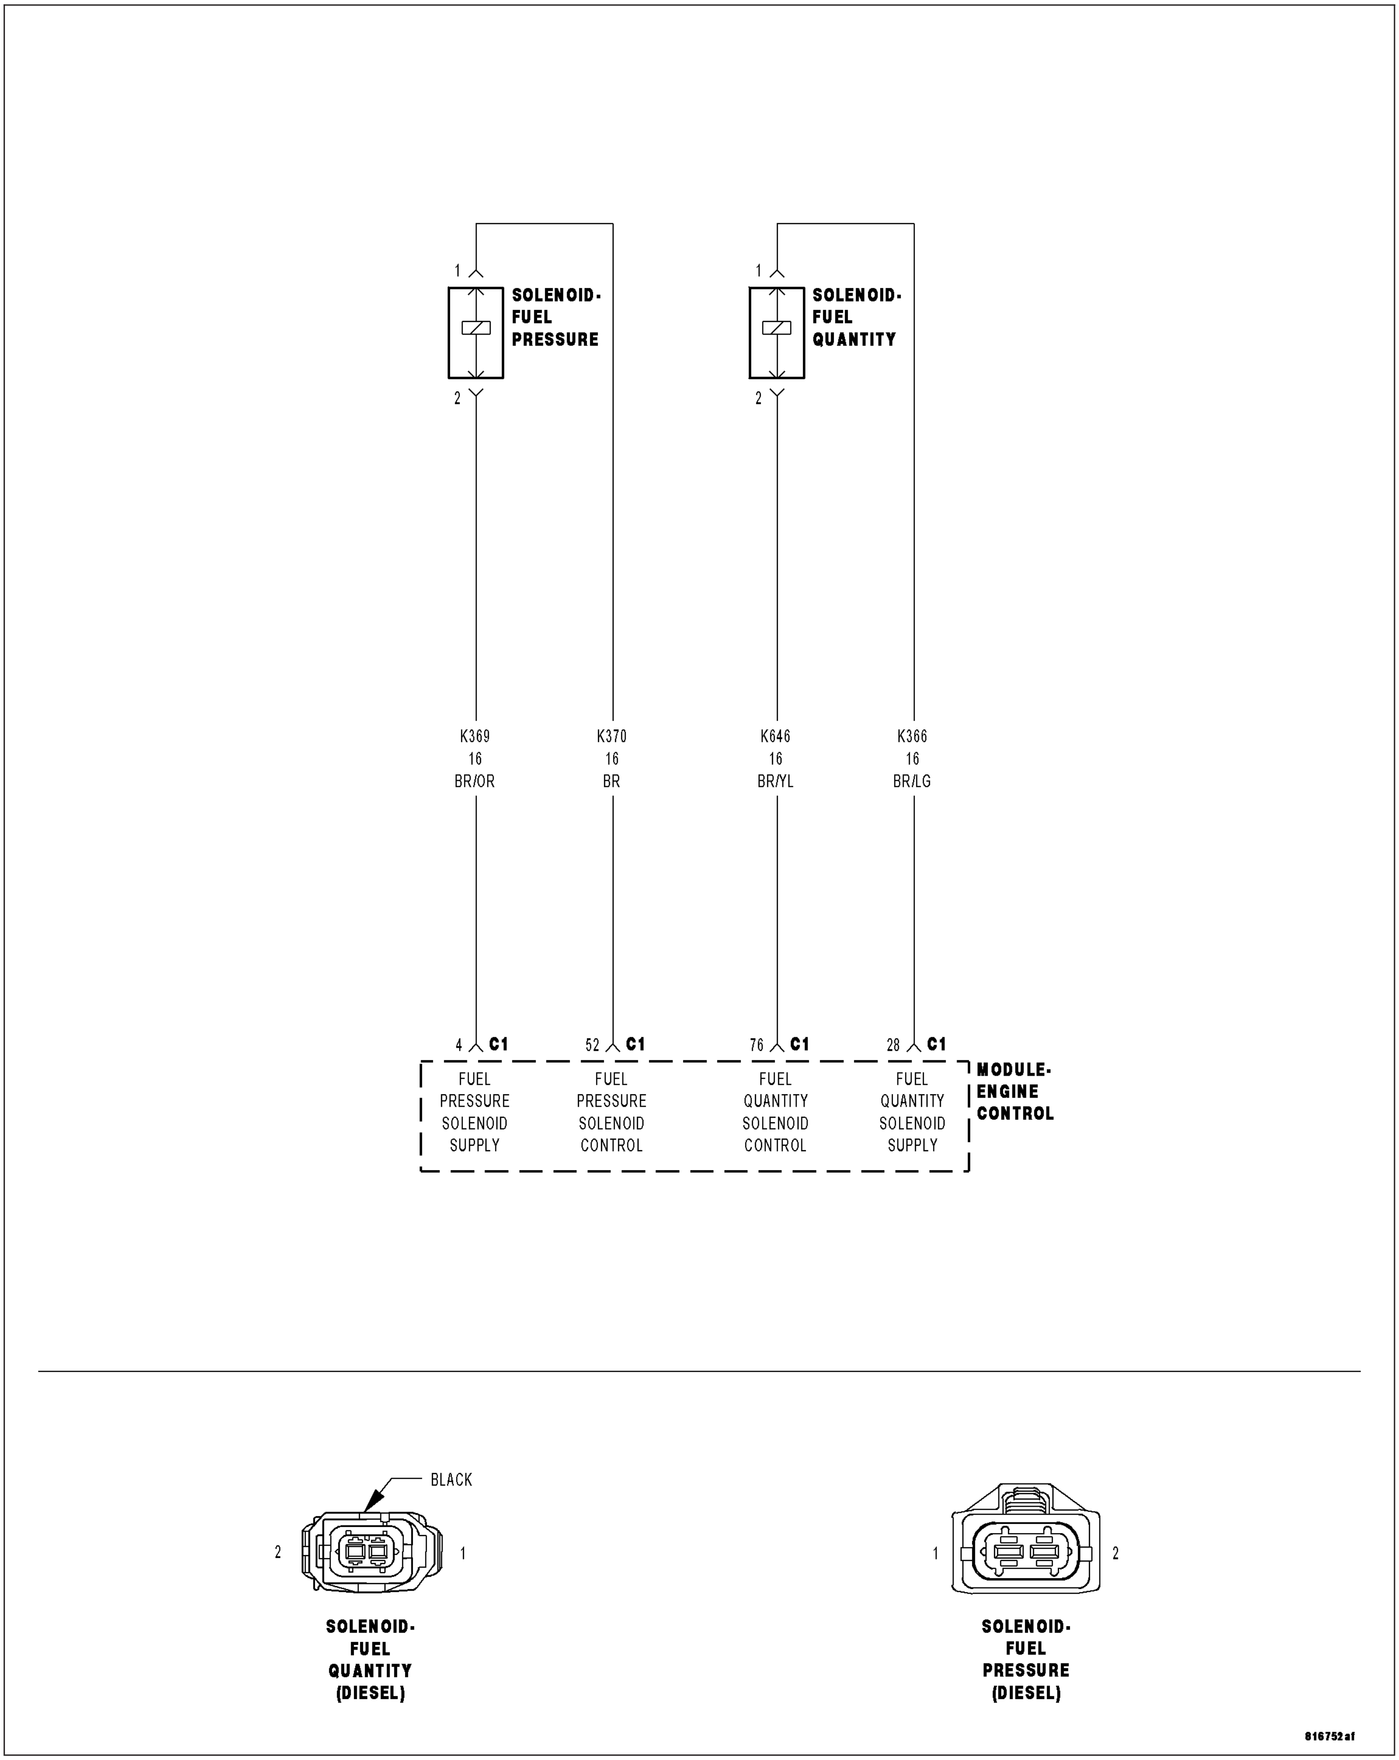


**Does the scan tool display the appropriate DTC for each condition?**

**Yes** >> Replace the Fuel Quantity Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0252-FUEL QUANTITY SOLENOID CIRCUIT MALFUNCTION



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Fuel Quantity Solenoid command on.
- **Set Condition:**
  The ECM detects excessive current on the Fuel Quantity Solenoid circuit.

| Possible Causes |
| --- |
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO GROUND |
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE |
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TOGETHER |
| FUEL QUANTITY SOLENOID OPEN CIRCUIT(S) |
| INTERMITTENT CONDITION |
| FUEL QUANTITY SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. VERIFY CURRENT DTC

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL QUANTITY SOLENOID CIRCUIT(S) OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Quantity Solenoid harness connector.

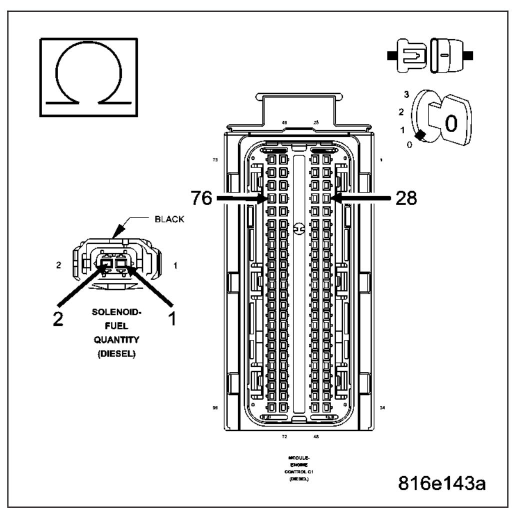
Measure the resistance of each of the Fuel Quantity Solenoid circuits between the ECM harness connector and the Fuel Quantity Solenoid harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 4

**No** >> Repair the circuit(s) that measured above 10.0 ohms for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



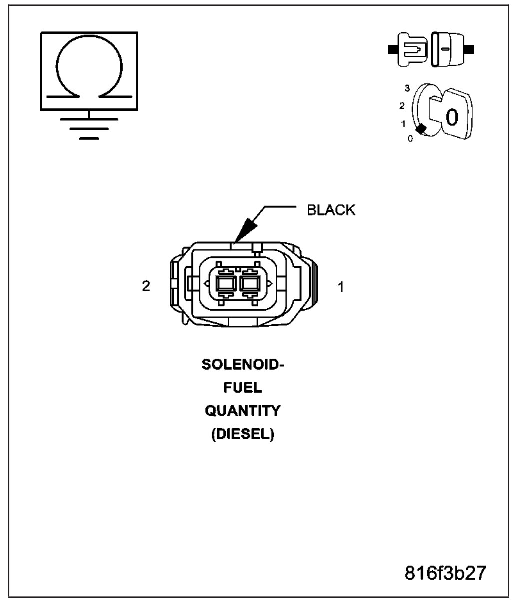
## 4. FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Quantity Solenoid harness connector.

Measure the resistance between ground and each of the Fuel Quantity Solenoid circuits.



**Is the resistance above 1000 ohms for each measurement?**

**Yes** >> Go To 5

**No** >> Repair the circuit(s) that measured below 1000 ohms for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

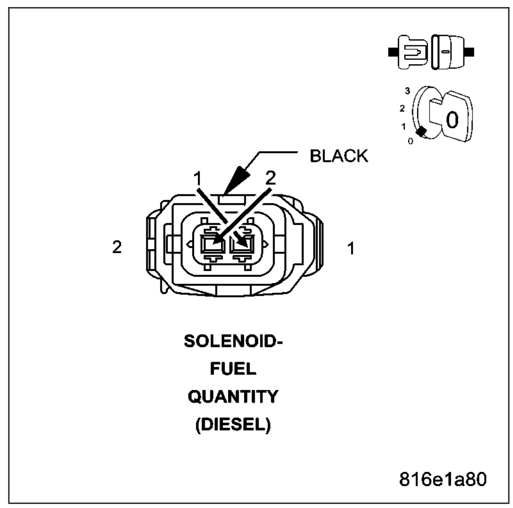
## 5. FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Quantity Solenoid harness connector.

Measure the resistance between the Fuel Quantity Solenoid circuits.



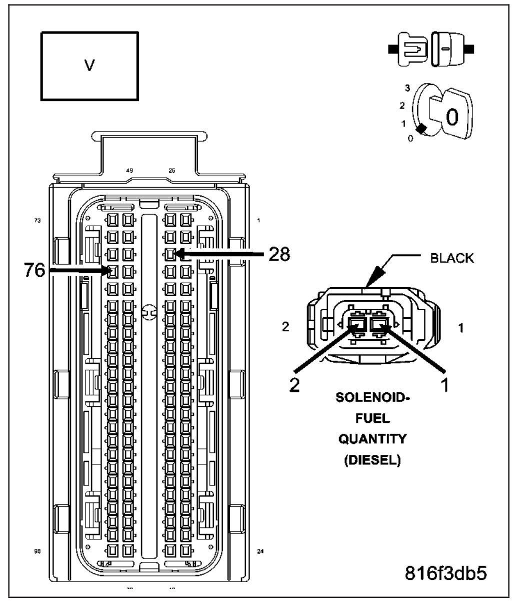
**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Fuel Quantity Solenoid circuits for a short together.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Quantity Solenoid harness connector.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage each of the Fuel Quantity Solenoid circuits.

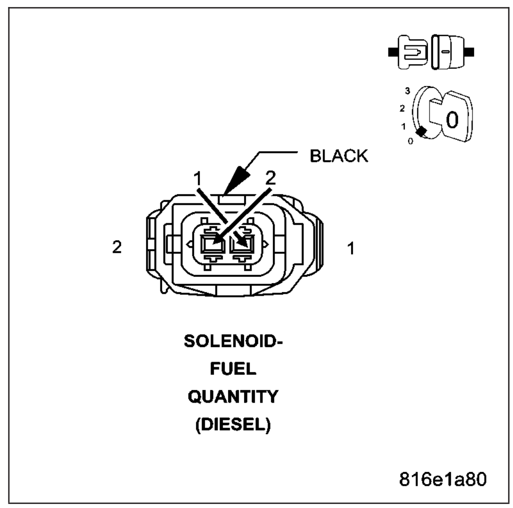
**Is the voltage below 1.0 volt for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the circuit(s) that measured above 1.0 volts for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. FUEL QUANTITY SOLENOID



Turn the ignition off.

Disconnect the Fuel Quantity Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P0090-FUEL QUANTITY SOLENOID OPEN CIRCUIT.**

Turn the ignition off.

Connect a jumper wire between cavity 1 and cavity 2 of the Fuel Quantity Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P0092-FUEL QUANTITY SOLENOID SHORT CIRCUIT.**

**Does the scan tool display the appropriate DTC for each condition?**

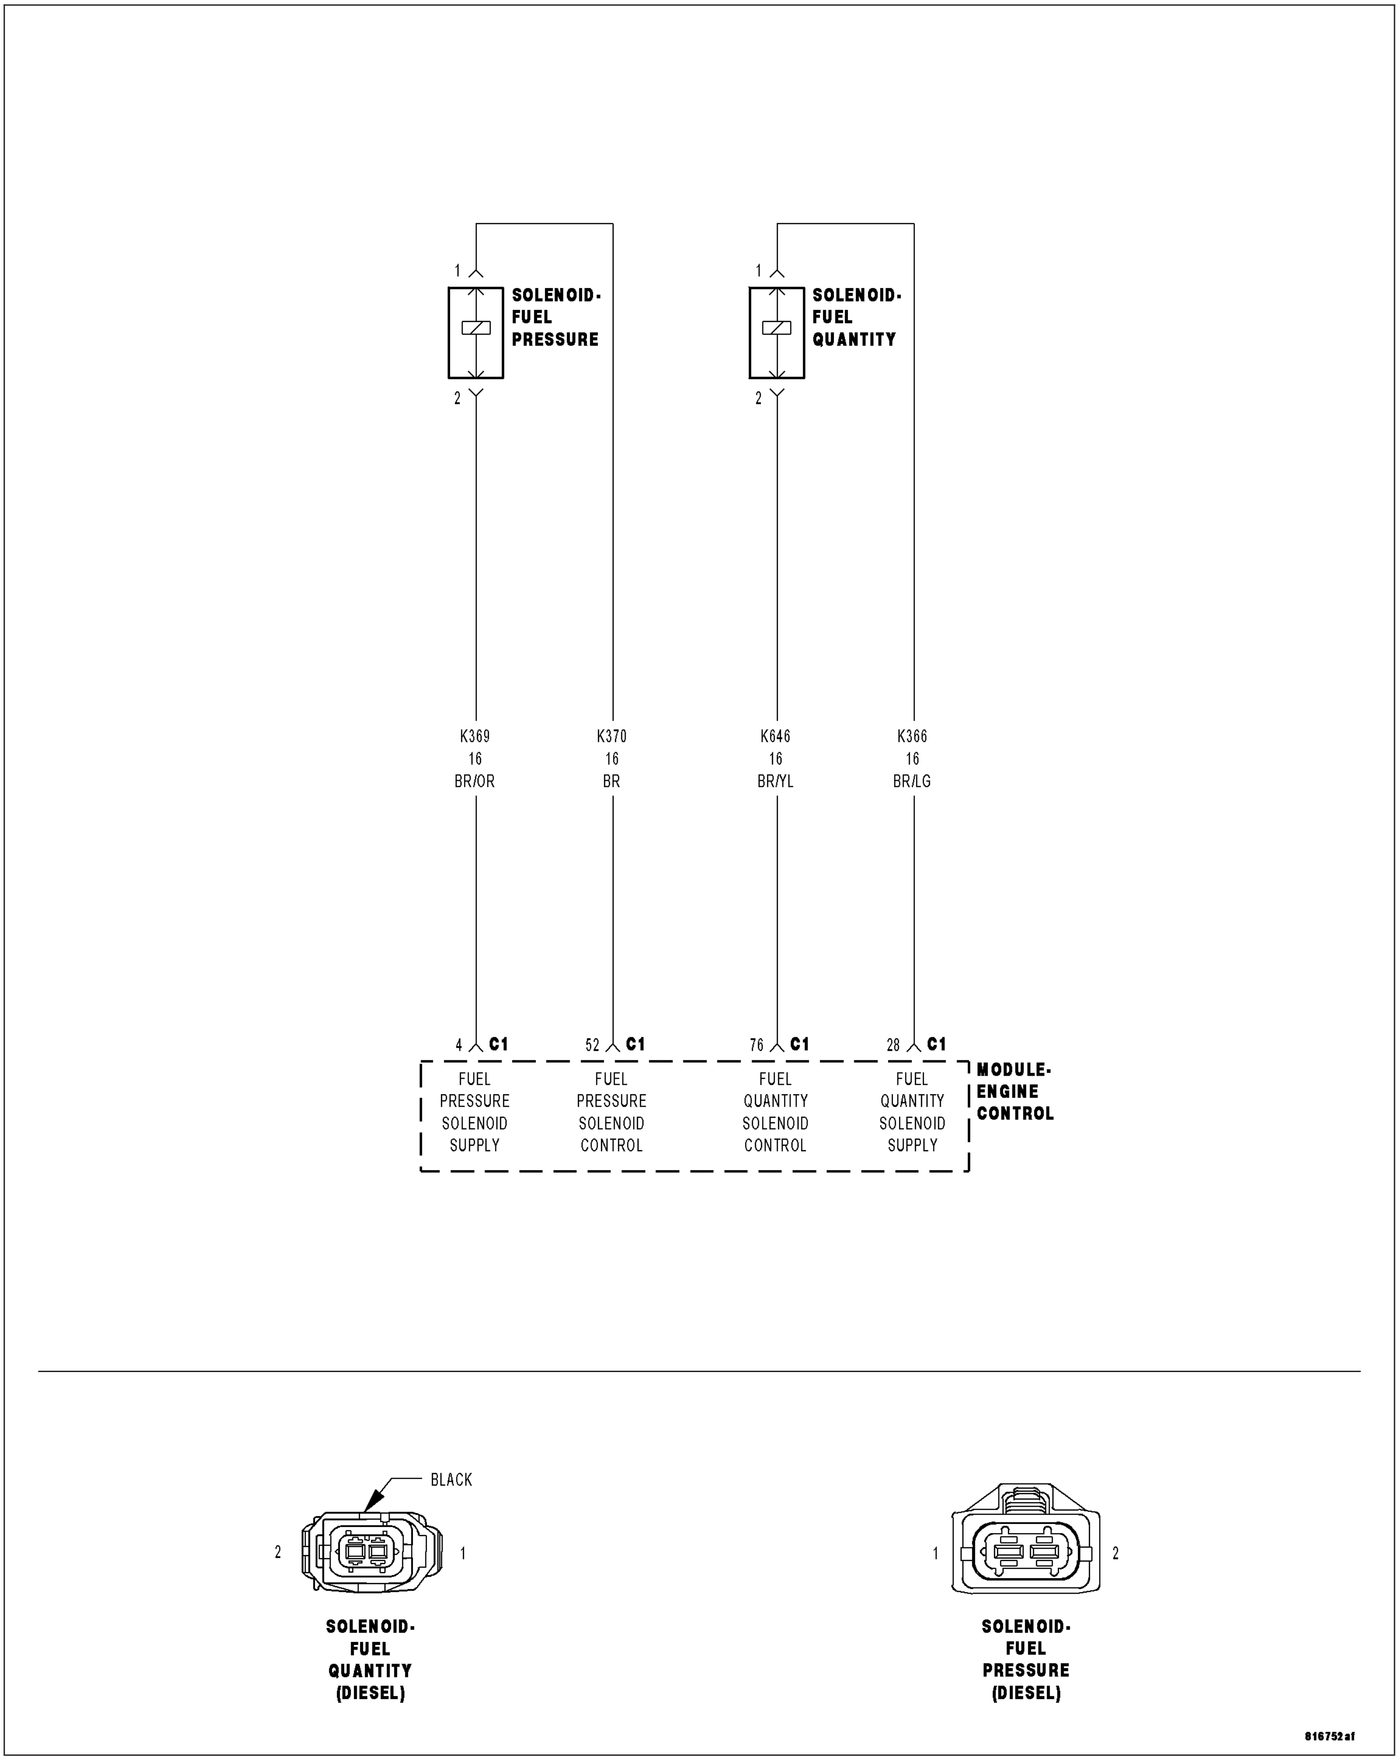
**Yes** >> Replace the Fuel Quantity Solenoid in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0253-FUEL QUANTITY SOLENOID SHORT TO GROUND



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Fuel Quantity Solenoid command off.
- **Set Condition:**
  The ECM detects a short to ground on the Fuel Quantity Solenoid circuit.

| Possible Causes |
|---|
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO GROUND |
| FUEL QUANTITY SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. VERIFY CURRENT DTC

Turn the ignition on.
With the scan tool, erase ECM DTCs.
Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.
With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

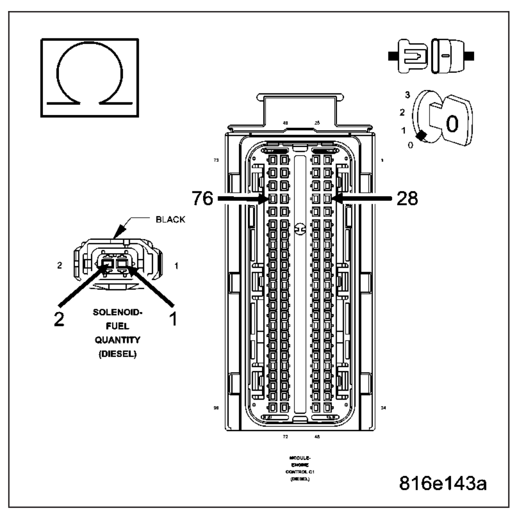
**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO GROUND

Turn the ignition off.
Disconnect the ECM harness connectors.
Disconnect the Fuel Quantity Solenoid harness connector.
Measure the resistance between ground and each of the Fuel Quantity Solenoid circuits.



**Is the resistance above 1000 ohms for each measurement?**

**Yes** >> Go To 4

**No** >> Repair the circuit(s) that measured below 1000 ohms for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. FUEL QUANTITY SOLENOID

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P0252-FUEL QUANTITY SOLENOID OPEN CIRCUIT.**

Turn the ignition off.

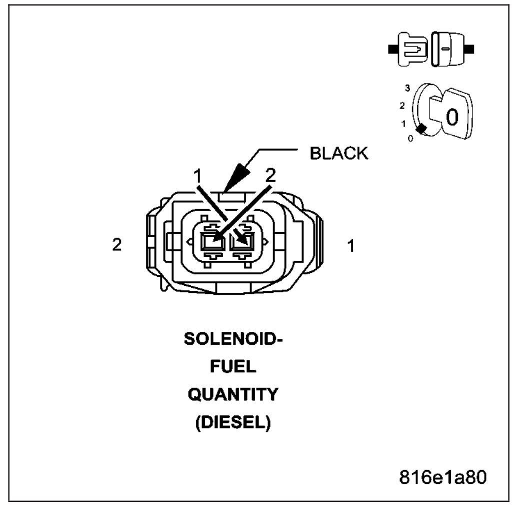
Connect a jumper wire between cavity 1 and cavity 2 of the Fuel Quantity Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P0252-FUEL QUANTITY SOLENOID SHORT CIRCUIT.**

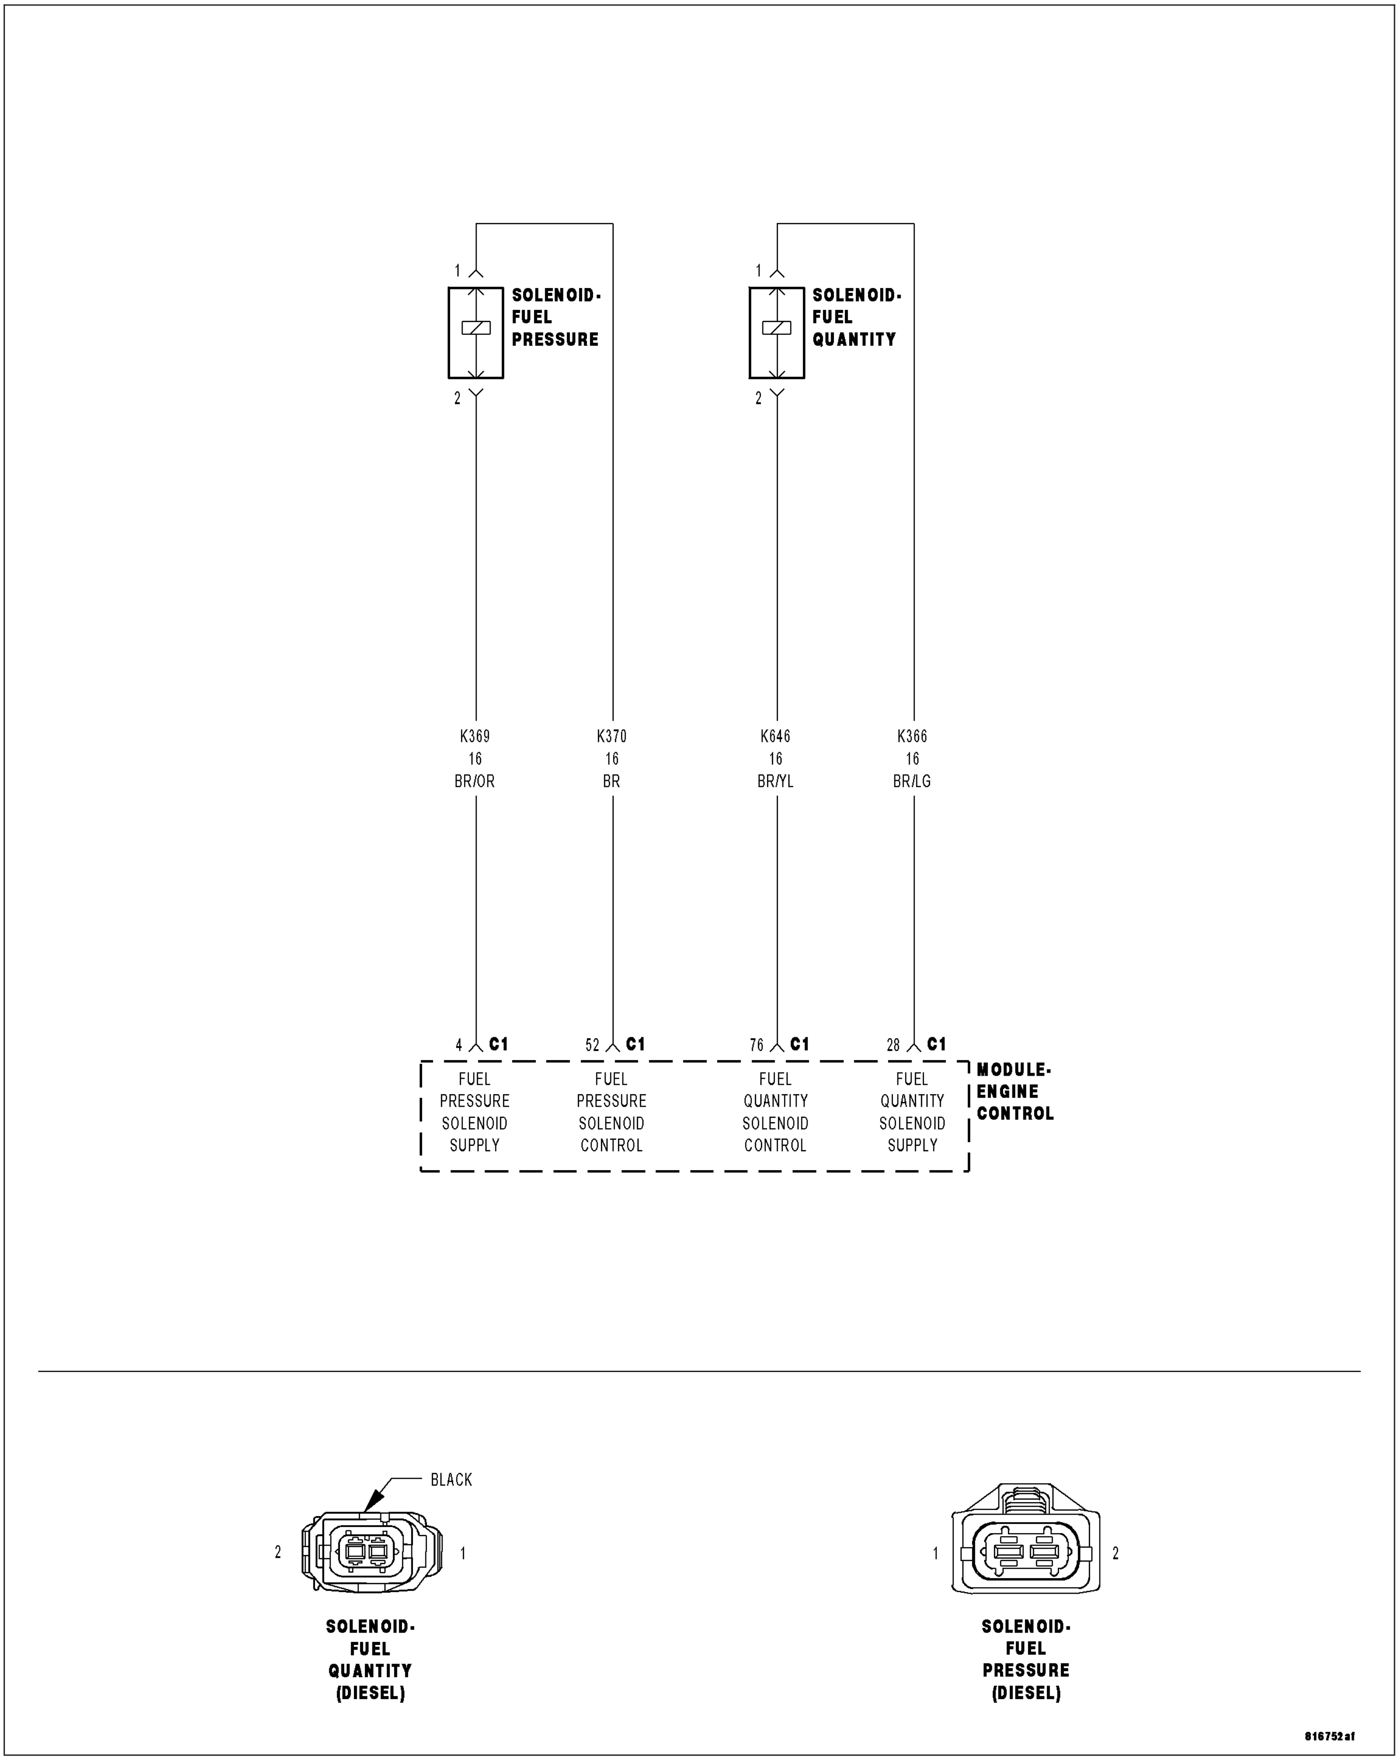


**Does the scan tool display the appropriate DTC for each condition?**

**Yes** >> Replace the Fuel Quantity Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0254-FUEL QUANTITY SOLENOID SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Fuel Quantity Solenoid command on.
- **Set Condition:**
  The ECM detects excessive current on the Fuel Quantity Solenoid circuit.

| Possible Causes |
|---|
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE |
| FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TOGETHER |
| FUEL QUANTITY SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. VERIFY CURRENT DTC

Turn the ignition on.
With the scan tool, erase ECM DTCs.
Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.
With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

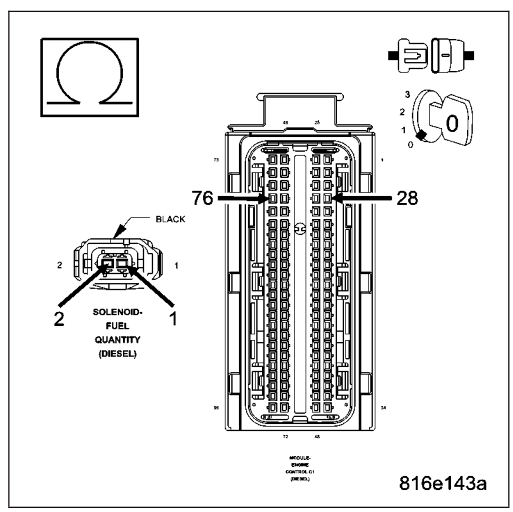
**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TOGETHER

Turn the ignition off.
Disconnect the ECM harness connectors.
Disconnect the Fuel Quantity Solenoid harness connector.
Measure the resistance between the Fuel Quantity Solenoid circuits.

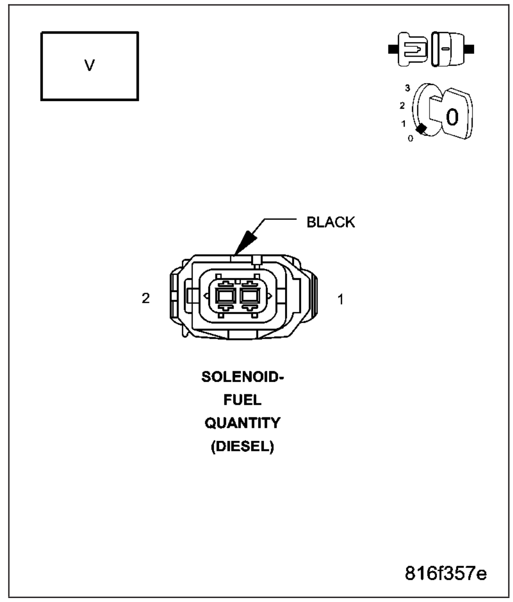


**Is the resistance above 1000 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Fuel Quantity Solenoid circuits for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. FUEL QUANTITY SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Quantity Solenoid harness connector.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

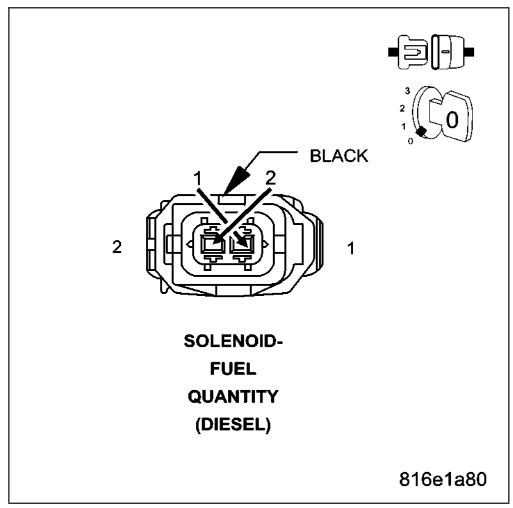
Measure the voltage each of the Fuel Quantity Solenoid circuits.

**Is the voltage below 1.0 volt for each measurement?**

**Yes** >> Go To 5

**No** >> Repair the circuit(s) that measured above 1.0 volts for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. FUEL QUANTITY SOLENOID



Turn the ignition off.

Disconnect the Fuel Quantity Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P0090-FUEL QUANTITY SOLENOID OPEN CIRCUIT.**

Turn the ignition off.

Connect a jumper wire between cavity 1 and cavity 2 of the Fuel Quantity Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P0092-FUEL QUANTITY SOLENOID SHORT CIRCUIT.**

**Does the scan tool display the appropriate DTC for each condition?**

**Yes** >> Replace the Fuel Quantity Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0299-BOOST PRESSURE SENSOR POSITIVE DEVIATION

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The Boost Pressure Sensor indicates actual turbocharger boost is greater than the ECM setpoint.

| Possible Causes |
|---|
| AIR FILTER |
| AIR RESTRICTION |
| CHECKING FOR AIR LEAKS |
| CHECKING THE BOOST CONTROL VACUUM SUPPLY |
| BOOST PRESSURE ACTUATOR |
| TURBOCHARGER |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: Ensure all turbocharger inlet and outlet tubes are connected properly, without damage and restriction before continuing with this test.**

**NOTE: If DTC P0401 or P0402 is present with this DTC, diagnose P0401 or P0402 before diagnosing this DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Test drive the vehicle.

Monitor the scan tool for ECM DTCs.

**NOTE: A clogged Boost Pressure Solenoid Air Filter can cause this DTC to set. Inspect this filter and replace as necessary before continuing with this test.**

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Test Complete.

### 2. AIR FILTER

Turn the ignition off.

Remove and inspect the Air Filter for soiling or excessive dirt and debris which may cause air flow restriction.

**Were any of these problems found?**

**Yes** >> Replace the Air Filter element.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. AIR RESTRICTION

**NOTE: Inspect all air intake and turbocharger related tubes for damage, restriction or poor connection. Any of these conditions can cause a this DTC to set.**

Turn the ignition off.

Inspect all air intake, crankcase vent and turbocharger related tubes and connections.

**Were any problems found?**

**Yes** >> Repair or replace as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. CHECKING THE BOOST CONTROL VACUUM SUPPLY

Turn the ignition off.

Refer to symptom Checking The Boost Control Vacuum Supply to check the turbocharger vacuum supply system.

**Were any problems found?**

**Yes** >> Repair as necessary
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. CHECKING FOR AIR LEAKS

Turn the ignition off.

Remove the Inlet Pressure Sensor.

Connect smoke machine 84-04 to the Inlet Pressure Sensor port in the intake duct and begin injecting smoke into the intake system.

Observe all intake system components for evidence of smoke leakage.

**Is there evidence of smoke leakage?**

**Yes** >> Repair or replace as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. BOOST PRESSURE ACTUATOR

Turn the ignition off.

Replace the Boost Pressure Actuator in accordance with the Service Information.

**NOTE: Ensure the ECM and Boost Pressure Actuator harness connectors are connected.**

Test drive the vehicle.

With the scan tool, check for this DTC to set again.

**Did this DTC set again?**

**Yes** >> Replace the Turbocharger assembly in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Boost Pressure Actuator.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0300-MISFIRE DETECTED

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM detects multiple misfires from one or more cylinders.

| Possible Causes |
|---|
| ENGINE COMPRESSION |
| FUEL INJECTOR QUANTITY |
| FUEL SUPPLY CONTAMINATION |
| INJECTOR LEAKAGE |
| INTERMITTENT CONDITION |

### Diagnostic Test

#### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

With the scan tool, erase ECM DTCs.

Test drive the vehicle and attempt to duplicate the problem.

With the scan tool, read ECM DTC's.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

#### 2. FUEL CONTAMINATION

Refer to the Service Information and inspect the fuel supply for contamination.

**Is the fuel contaminated?**

**Yes** >> Refer to the Service Information to remove and replace fuel throughout the fuel system.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

#### 3. ENGINE COMPRESSION

Turn the ignition off.

With the scan tool, perform the Cylinder Compression Test.

**Is the cylinder compression within specification for all cylinders?**

**Yes** >> Go To 4

**No** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. FUEL INJECTOR QUANTITY

Turn the ignition off.
With the scan tool, perform the Injector Quantity Test.

**Is the Injector Quantity within specification for all cylinders?**

**Yes** >> Go To 5

**No** >> Repair or replace as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. FUEL INJECTOR LEAKAGE

Turn the ignition off.
Perform the INJECTOR LEAKAGE TEST in accordance with the Service Information.

**Were any problems found?**

**Yes** >> Repair or replace as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P0301-MISFIRE DETECTED CYLINDER #1

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM detects multiple misfires from cylinder #1.

| Possible Causes |
|---|
| ENGINE COMPRESSION |
| FUEL INJECTOR QUANTITY |
| FUEL SUPPLY CONTAMINATION |
| INJECTOR LEAKAGE |
| INTERMITTENT CONDITION |

### Diagnostic Test

#### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

With the scan tool, erase ECM DTCs.

Test drive the vehicle and attempt to duplicate the problem.

With the scan tool, read ECM DTC's.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

#### 2. FUEL CONTAMINATION

Refer to the Service Information and inspect the fuel supply for contamination.

**Is the fuel contaminated?**

**Yes** >> Refer to the Service Information to remove and replace fuel throughout the fuel system.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

#### 3. ENGINE COMPRESSION

Turn the ignition off.

With the scan tool, perform the Cylinder Compression Test.

**Is the cylinder compression within specification for all cylinders?**

**Yes** >> Go To 4

**No** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. FUEL INJECTOR QUANTITY

Turn the ignition off.
With the scan tool, perform the Injector Quantity Test.

**Is the Injector Quantity within specification for all cylinders?**

**Yes** >> Go To 5

**No** >> Repair or replace as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. FUEL INJECTOR LEAKAGE

Turn the ignition off.
Perform the INJECTOR LEAKAGE TEST in accordance with the Service Information.

**Were any problems found?**

**Yes** >> Repair or replace as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P0302-MISFIRE DETECTED CYLINDER #2

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM detects multiple misfires from cylinder #2.

| Possible Causes |
|---|
| ENGINE COMPRESSION |
| FUEL INJECTOR QUANTITY |
| FUEL SUPPLY CONTAMINATION |
| INJECTOR LEAKAGE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

With the scan tool, erase ECM DTCs.

Test drive the vehicle and attempt to duplicate the problem.

With the scan tool, read ECM DTC's.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. FUEL CONTAMINATION

Refer to the Service Information and inspect the fuel supply for contamination.

**Is the fuel contaminated?**

**Yes** >> Refer to the Service Information to remove and replace fuel throughout the fuel system.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

### 3. ENGINE COMPRESSION

Turn the ignition off.

With the scan tool, perform the Cylinder Compression Test.

**Is the cylinder compression within specification for all cylinders?**

**Yes** >> Go To 4

**No** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. FUEL INJECTOR QUANTITY

Turn the ignition off.
With the scan tool, perform the Injector Quantity Test.

**Is the Injector Quantity within specification for all cylinders?**

**Yes** >> Go To 5

**No** >> Repair or replace as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. FUEL INJECTOR LEAKAGE

Turn the ignition off.
Perform the INJECTOR LEAKAGE TEST in accordance with the Service Information.

**Were any problems found?**

**Yes** >> Repair or replace as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P0303-MISFIRE DETECTED CYLINDER #3

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM detects multiple misfires from cylinder #3.

| Possible Causes |
|---|
| ENGINE COMPRESSION |
| FUEL INJECTOR QUANTITY |
| FUEL SUPPLY CONTAMINATION |
| INJECTOR LEAKAGE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

With the scan tool, erase ECM DTCs.

Test drive the vehicle and attempt to duplicate the problem.

With the scan tool, read ECM DTC's.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. FUEL CONTAMINATION

Refer to the Service Information and inspect the fuel supply for contamination.

**Is the fuel contaminated?**

**Yes** >> Refer to the Service Information to remove and replace fuel throughout the fuel system.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

### 3. ENGINE COMPRESSION

Turn the ignition off.

With the scan tool, perform the Cylinder Compression Test.

**Is the cylinder compression within specification for all cylinders?**

**Yes** >> Go To 4

**No** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. FUEL INJECTOR QUANTITY

Turn the ignition off.

With the scan tool, perform the Injector Quantity Test.

**Is the Injector Quantity within specification for all cylinders?**

**Yes** >> Go To 5

**No** >> Repair or replace as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. FUEL INJECTOR LEAKAGE

Turn the ignition off.

Perform the INJECTOR LEAKAGE TEST in accordance with the Service Information.

**Were any problems found?**

**Yes** >> Repair or replace as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P0304-MISFIRE DETECTED CYLINDER #4

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM detects multiple misfires from cylinder #4.

| Possible Causes |
| --- |
| ENGINE COMPRESSION |
| FUEL INJECTOR QUANTITY |
| FUEL SUPPLY CONTAMINATION |
| INJECTOR LEAKAGE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

With the scan tool, erase ECM DTCs.

Test drive the vehicle and attempt to duplicate the problem.

With the scan tool, read ECM DTC's.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. FUEL CONTAMINATION

Refer to the Service Information and inspect the fuel supply for contamination.

**Is the fuel contaminated?**

**Yes** >> Refer to the Service Information to remove and replace fuel throughout the fuel system.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

### 3. ENGINE COMPRESSION

Turn the ignition off.

With the scan tool, perform the Cylinder Compression Test.

**Is the cylinder compression within specification for all cylinders?**

**Yes** >> Go To 4

**No** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. FUEL INJECTOR QUANTITY

Turn the ignition off.
With the scan tool, perform the Injector Quantity Test.

**Is the Injector Quantity within specification for all cylinders?**

**Yes** >> Go To 5

**No** >> Repair or replace as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. FUEL INJECTOR LEAKAGE

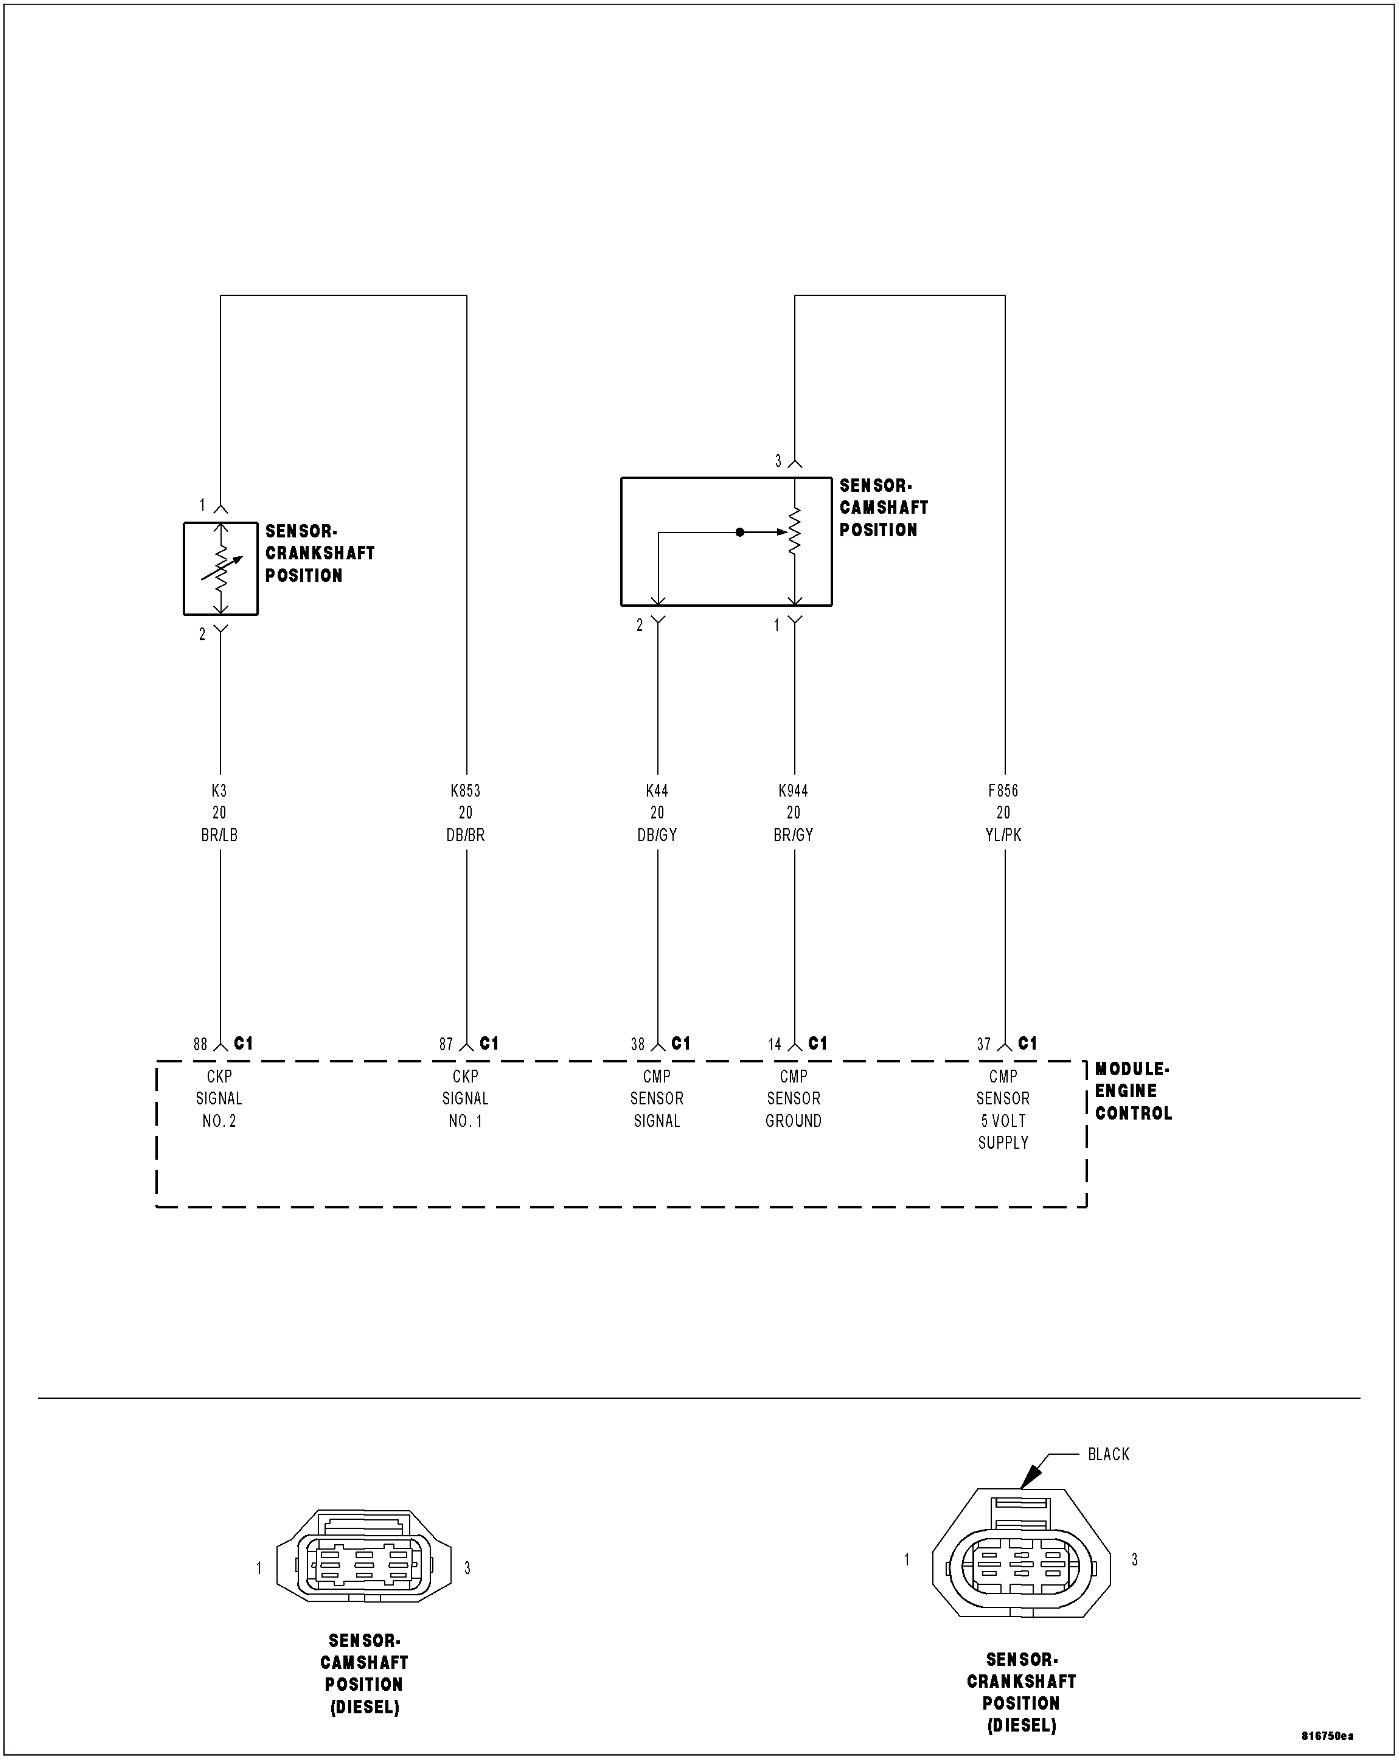
Turn the ignition off.
Perform the INJECTOR LEAKAGE TEST in accordance with the Service Information.

**Were any problems found?**

**Yes** >> Repair or replace as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

# P0335-CRANKSHAFT POSITION SENSOR CIRCUIT INCORRECT OR MISSING SIGNAL



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine speed between 20 and 6000 rpm.
- **Set Condition:**
  The ECM does not receive a Crankshaft Position Sensor signal or receives an incorrect signal.

| Possible Causes |
| --- |
| CRANKSHAFT POSITION SENSOR |
| INTERMITTENT CONDITION |
| (K853, K3) CRANKSHAFT POSITION SENSOR SIGNAL CIRCUIT(S) SHORTED TO GROUND |
| (K853, K3) CKP SENSOR CIRCUITS SHORTED TOGETHER |
| (K853, K3) CKP SENSOR SIGNAL CIRCUITS OPEN |
| (K853, K3) CKP SENSOR SIGNAL CIRCUIT(S) SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. ATTEMPT TO START THE ENGINE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Attempt to start the engine.

**Did the engine start?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 2

### 2. (K853, K3) CKP SENSOR SIGNAL CIRCUITS SHORTED TO GROUND

Turn the ignition off.

Disconnect the CKP Sensor harness connector.

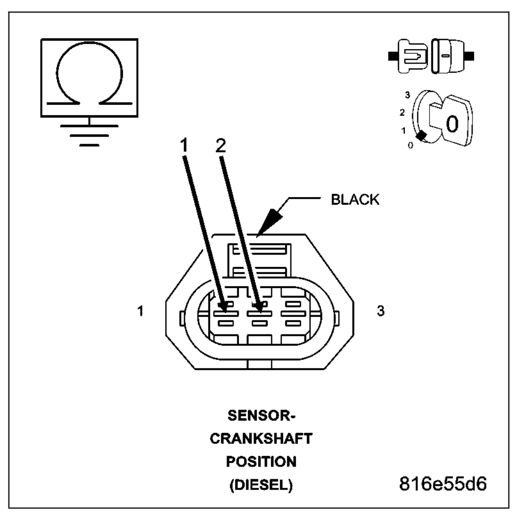
Disconnect the ECM harness connectors.

Measure the resistance between ground and both of the CKP Sensor Signal circuits.

**Is the resistance above 1000 ohms for both measurements?**

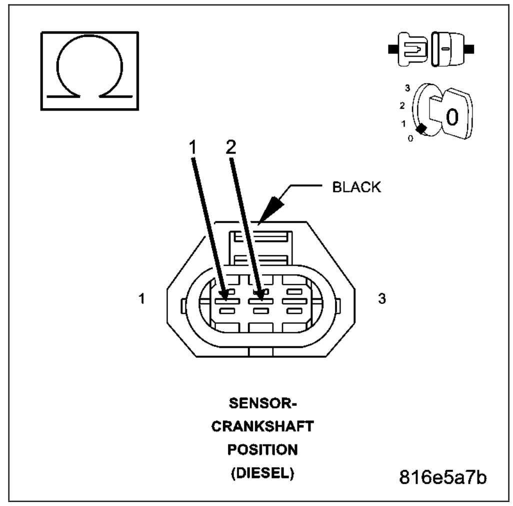
**Yes** >> Go To 3

**No** >> Repair the CKP Sensor Signal circuit(s) for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 3. (K853, K3) CKP SENSOR CIRCUITS SHORTED TOGETHER

Measure the resistance between the CKP Sensor Signal circuits.



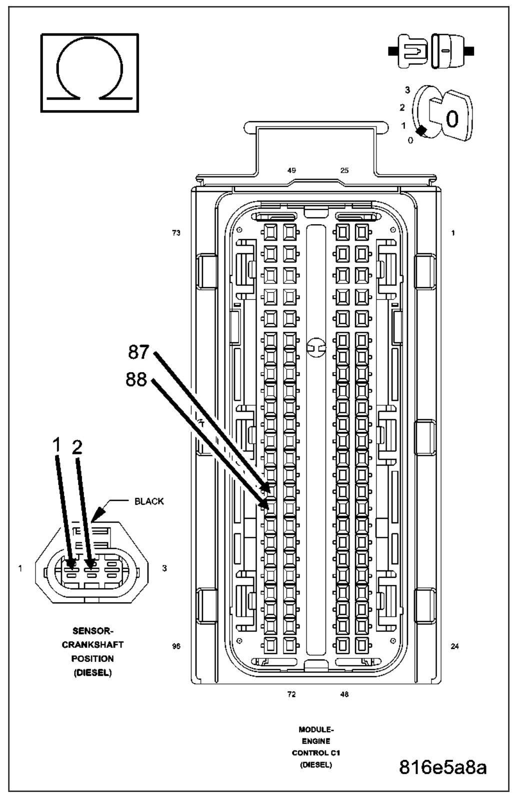
**Is the resistance above 1000 ohms?**

**Yes** >> Go To 4

**No** >> Repair the CKP Sensor Signal circuits for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. (K853, K3) CKP SENSOR SIGNAL CIRCUIT(S) OPEN

Measure the resistance of CKP Sensor Signal circuits between CKP Sensor harness connector and ECM harness connector.

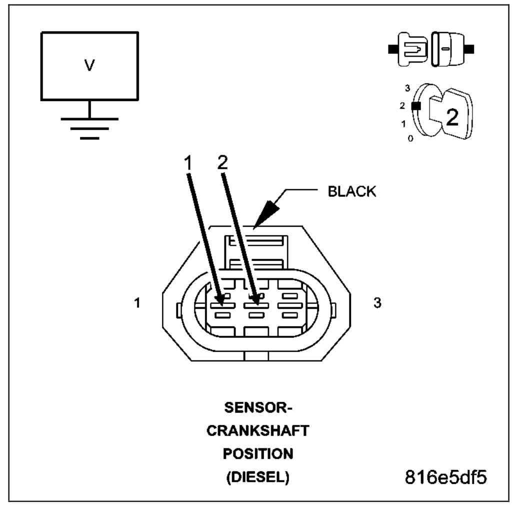


**Is the resistance below 10.0 ohms for both measurements?**

**Yes** >> Go To 5

**No** >> Repair the CKP Sensor Signal circuit(s) for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. (K853, K3) CKP SENSOR SIGNAL CIRCUIT(S) SHORTED TO VOLTAGE



Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of both CKP Sensor Signal circuits.

**Is the voltage below 1.0 volt for both measurements?**

**Yes** >> Go To 6

**No** >> Repair the CKP Sensor Signal circuit(s) for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. CRANKSHAFT POSITION SENSOR

Turn the ignition off.

Use a lab scope, backprobe both of the CKP Sensor Signal circuits at the ECM harness connector.

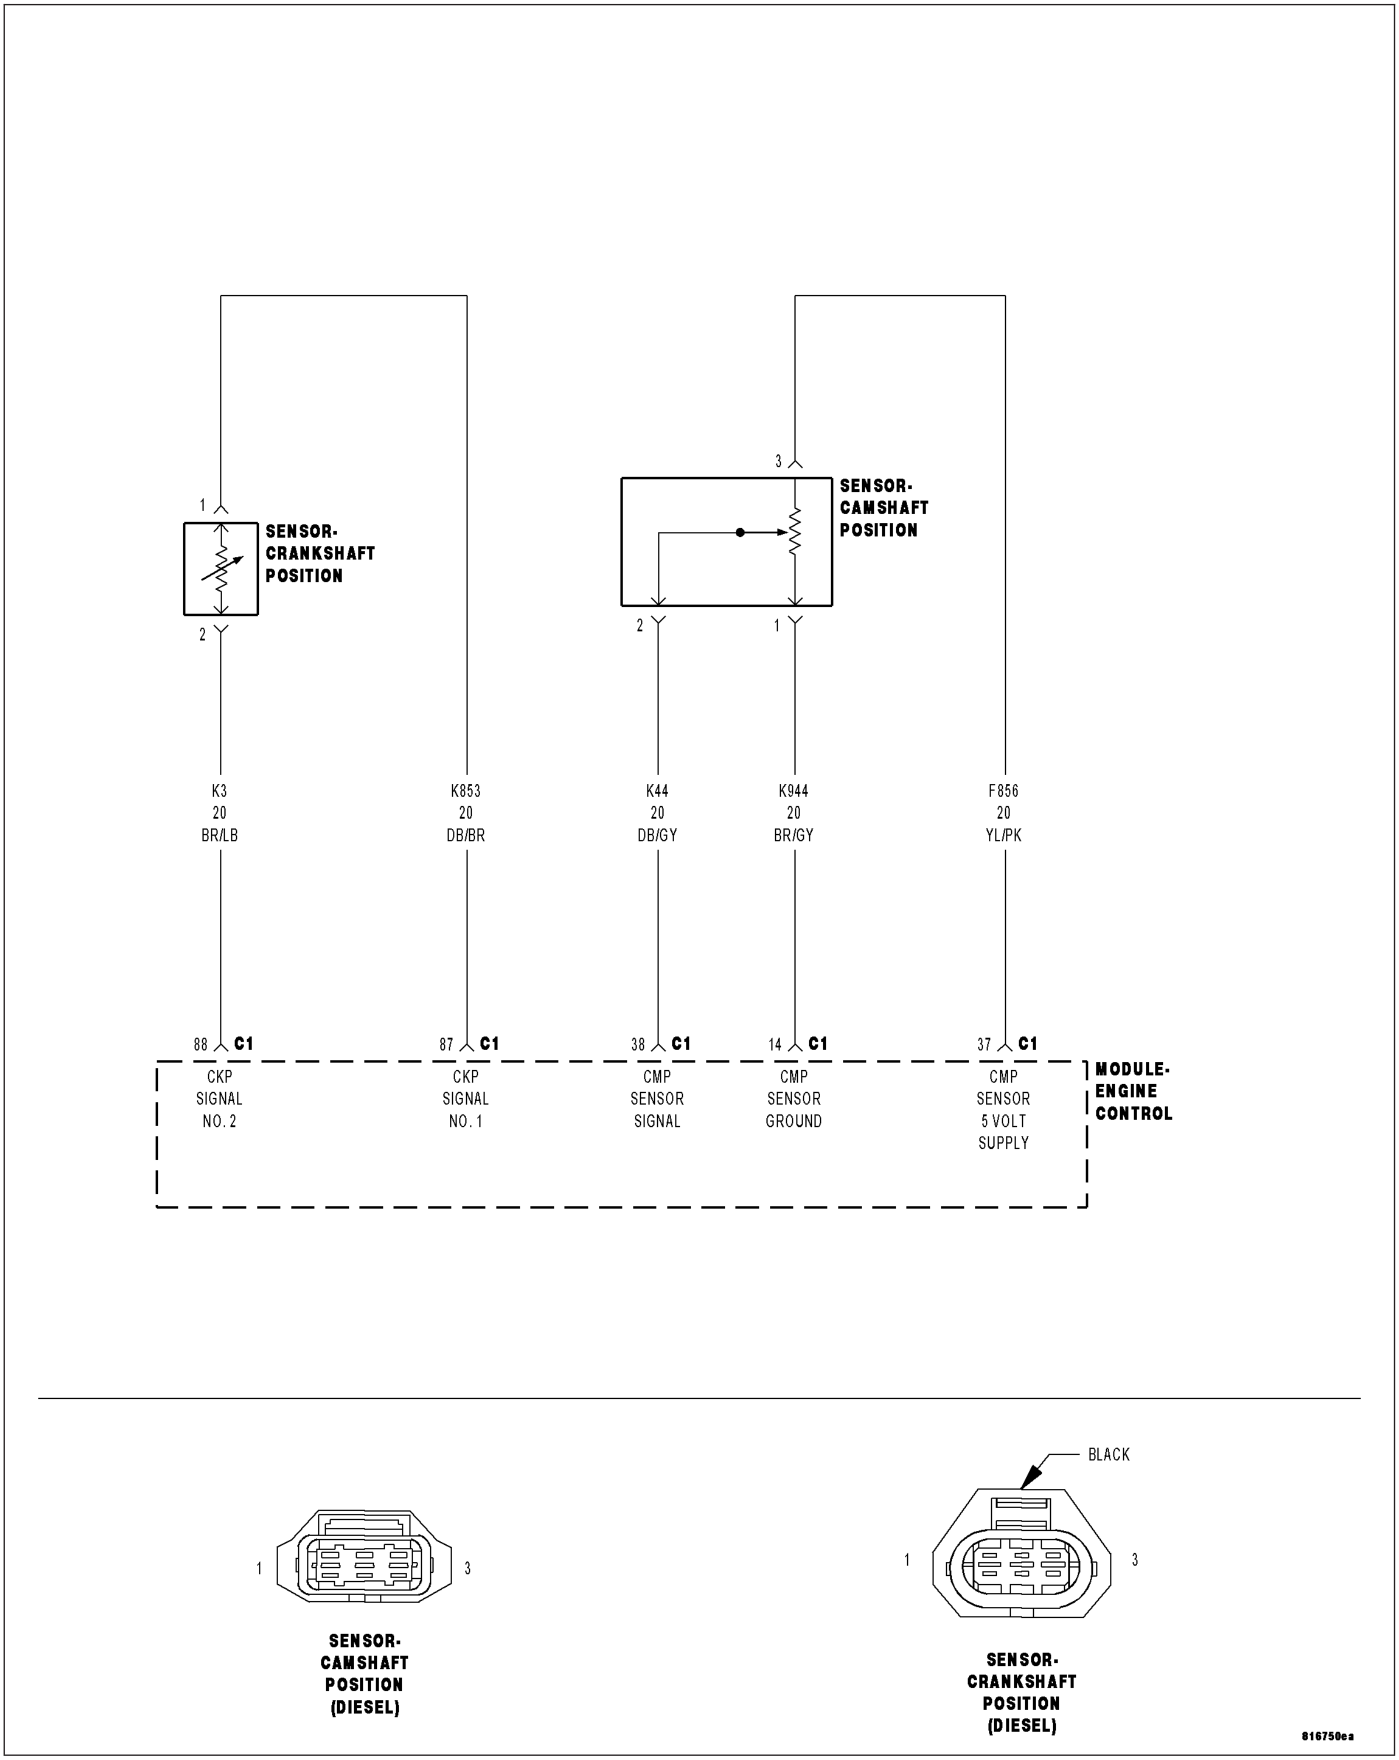
Start the engine, if the engine will not start, crank the engine for several seconds while monitoring the scan tool.

**Does the lab scope display a steady clean CKP Signal pattern for each circuit?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Crankshaft Position Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0339-CRANKSHAFT POSITION SENSOR CIRCUIT INTERMITTENT INCORRECT OR MISSING SIGNAL



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine speed between 20 and 6000 rpm.
- **Set Condition:**
  The ECM does not receive a Crankshaft Position Sensor signal or receives an incorrect signal.

| Possible Causes |
|---|
| CRANKSHAFT POSITION SENSOR |
| INTERMITTENT CONDITION |
| (K853, K3) CRANKSHAFT POSITION SENSOR SIGNAL CIRCUIT(S) SHORTED TO GROUND |
| (K853, K3) CKP SENSOR CIRCUITS SHORTED TOGETHER |
| (K853, K3) CKP SENSOR SIGNAL CIRCUITS OPEN |
| (K853, K3) CKP SENSOR SIGNAL CIRCUIT(S) SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. ATTEMPT TO START THE ENGINE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Attempt to start the engine.

**Did the engine start?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 2

### 2. (K853, K3) CKP SENSOR SIGNAL CIRCUITS SHORTED TO GROUND

Turn the ignition off.

Disconnect the CKP Sensor harness connector.

Disconnect the ECM harness connectors.

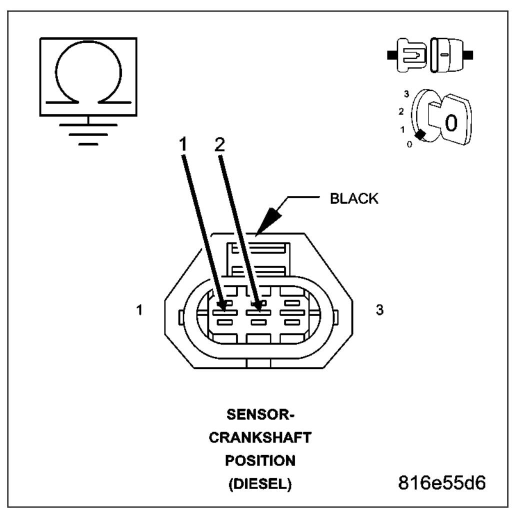
Measure the resistance between ground and both of the CKP Sensor Signal circuits.

**Is the resistance above 1000 ohms for both measurements?**

**Yes** >> Go To 3

**No** >> Repair the CKP Sensor Signal circuit(s) for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



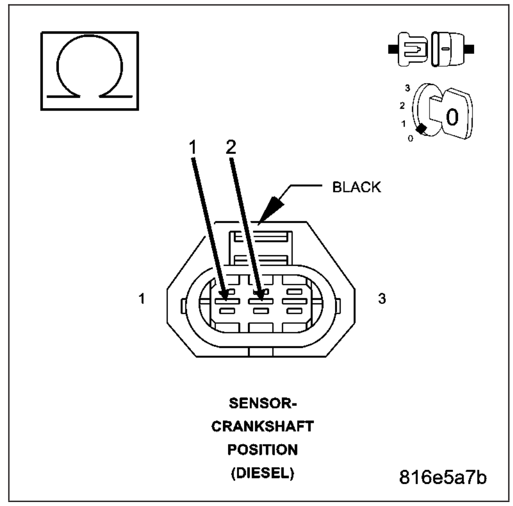
## 3. (K853, K3) CKP SENSOR CIRCUITS SHORTED TOGETHER

Measure the resistance between the CKP Sensor Signal circuits.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 4

**No** >> Repair the CKP Sensor Signal circuits for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



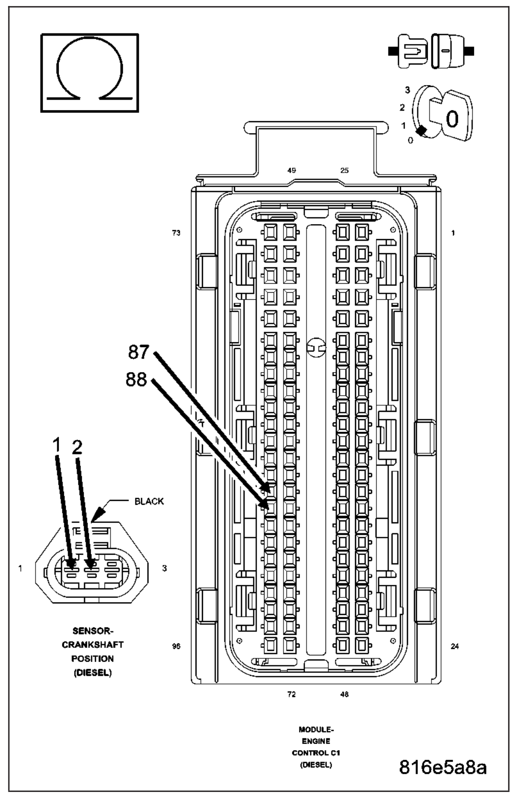
## 4. (K853, K3) CKP SENSOR SIGNAL CIRCUIT(S) OPEN

Measure the resistance of CKP Sensor Signal circuits between CKP Sensor harness connector and ECM harness connector.

**Is the resistance below 10.0 ohms for both measurements?**

**Yes** >> Go To 5

**No** >> Repair the CKP Sensor Signal circuit(s) for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 5. (K853, K3) CKP SENSOR SIGNAL CIRCUIT(S) SHORTED TO VOLTAGE

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

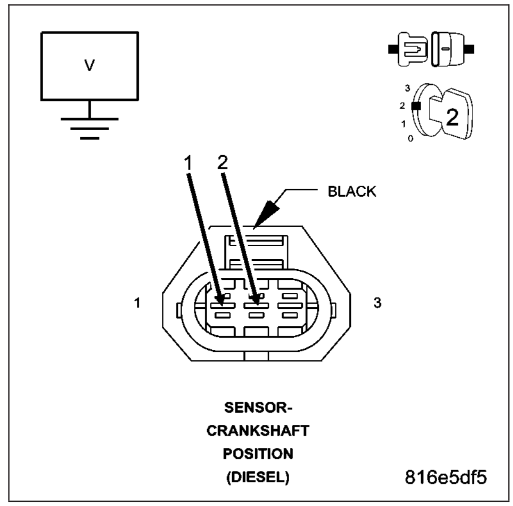
Measure the voltage of both CKP Sensor Signal circuits.

**Is the voltage below 1.0 volt for both measurements?**

**Yes** >> Go To 6

**No** >> Repair the CKP Sensor Signal circuit(s) for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 6. CRANKSHAFT POSITION SENSOR

Turn the ignition off.

Using the lab scope, backprobe both of the CKP Sensor Signal circuits at the ECM harness connector.

Start the engine, if the engine will not start, crank the engine for several seconds while monitoring the scan tool.

**Does the lab scope display a steady clean CKP Signal pattern for each circuit?**

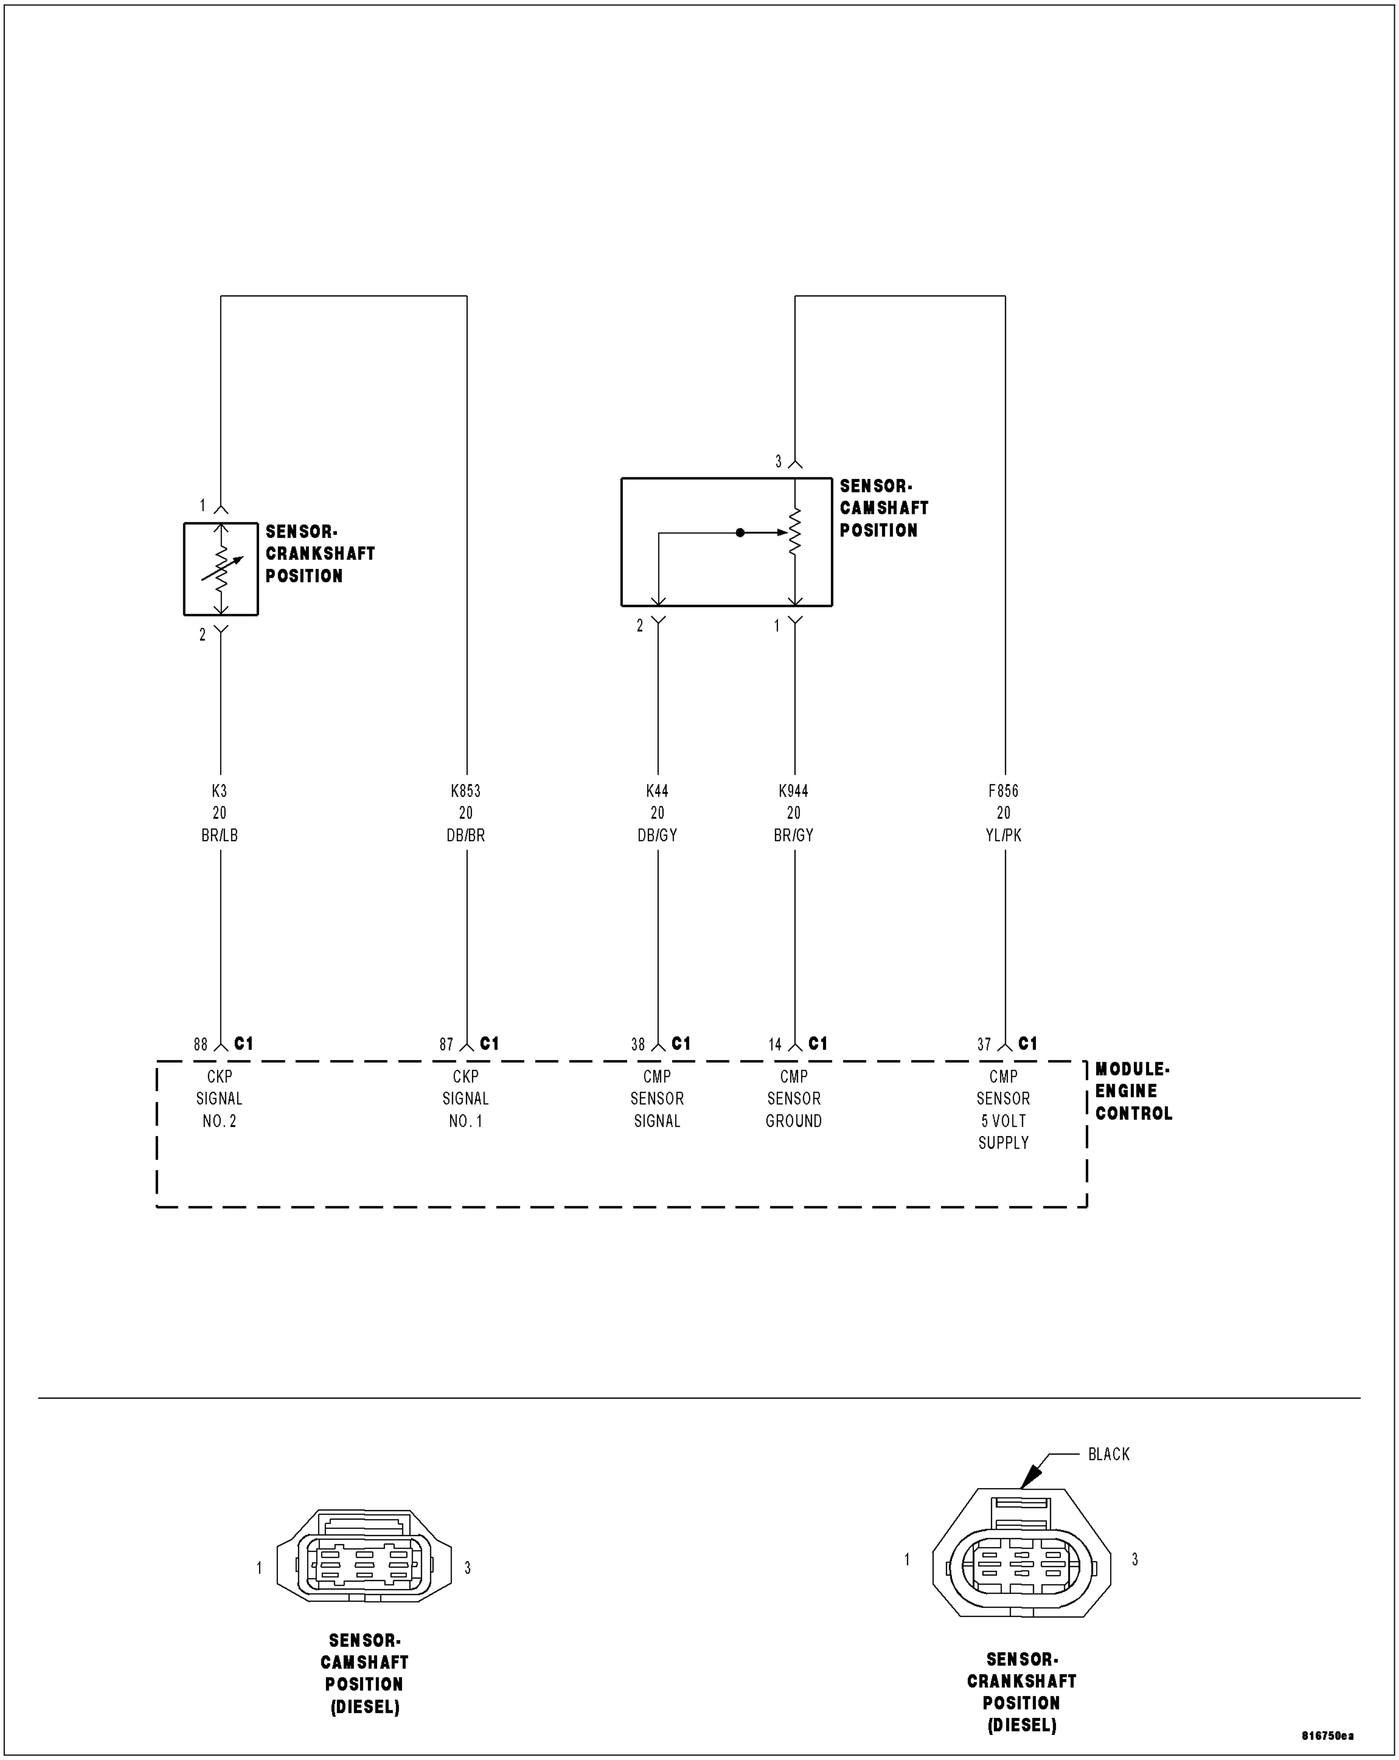
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Crankshaft Position Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0340-CAMSHAFT POSITION SENSOR CIRCUIT MISSING SIGNAL



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine speed between 20 and 6000 rpm.
- **Set Condition:**
  The ECM does not receive a Camshaft Position Sensor signal.

| **Possible Causes** |
|---|
| INTERMITTENT CONDITION |
| CHECKING (K44) CAMSHAFT SENSOR SIGNAL CIRCUIT |
| (K44) CAMSHAFT POSITION SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| CHECKING (F856) 5-VOLT SUPPLY CIRCUIT |
| (K944) SENSOR GROUND CIRCUIT OPEN |
| ECM SENSOR GROUND CIRCUIT OPEN |
| DAMAGED CMP SENSOR OR CAMSHAFT |
| CAMSHAFT POSITION SENSOR |
| (F856) 5-VOLT SUPPLY CIRCUIT OPEN |
| (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO THE (K944) SENSOR GROUND CIRCUIT |
| (K44) CMP SENSOR SIGNAL CIRCUIT OPEN |
| (K44) CMP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| (K44) CMP SENSOR SIGNAL CIRCUIT SHORTED TO (K944) SENSOR GROUND CIRCUIT |
| ECM |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

**NOTE: The Timing Belt/Chain must be correctly installed and operational before diagnosis can be made. Refer to the Service Information to ensure the timing belt is properly installed.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine cranking the engine for at least 7 seconds.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Go To 2

## 2. TEST DRIVE

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

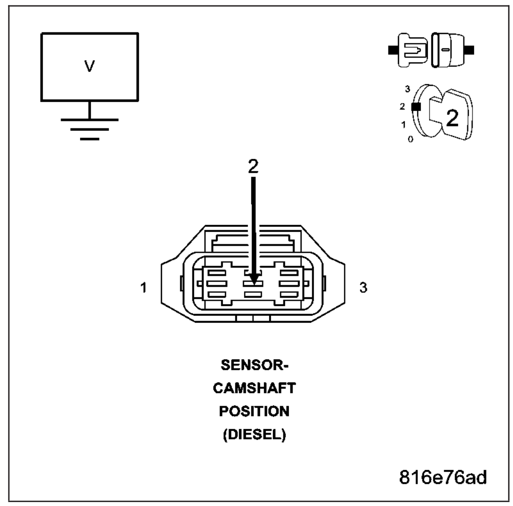
## 3. CHECKING CAMSHAFT POSITION SENSOR SIGNAL CKT

Turn the ignition off.

Disconnect the Camshaft Position Sensor harness connector.

Turn the ignition on.

Measure the voltage of the (K44) CMP Sensor Signal circuit.



**Select the appropriate voltage reading.**

**Voltage is above 5.4 volts.**
Go To 4

**Voltage is between 4.7 and 5.4 volts.**
Go To 5

**Voltage is below 4.7 volts.**
Go To 13

## 4. (K44) CAMSHAFT POSITION SENSOR SIGNAL CIRCUIT SHORT TO VOLTAGE

Turn the ignition off.

Disconnect the Camshaft Position Sensor harness connector.

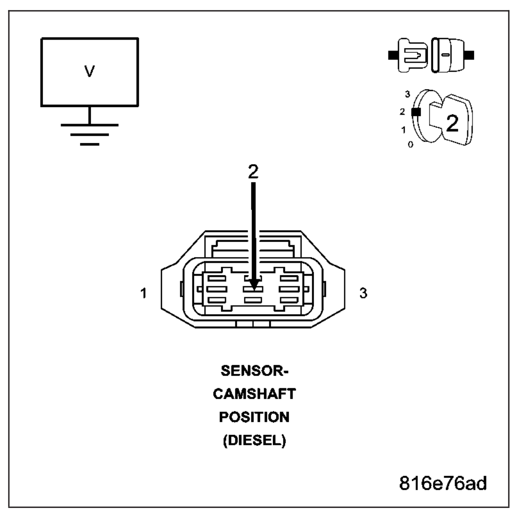
Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the (K44) CMP Position Sensor Signal circuit.



**Is the voltage below 1.0 volt?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the (K44) Camshaft Position Sensor Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. CHECKING (F856) 5-VOLT SUPPLY CIRCUIT

Disconnect the ECM harness connectors.

Measure the voltage of the (F856) CMP Sensor 5-Volt Supply circuit.

**Select the appropriate voltage reading.**

**Voltage is above 5.4 volts.**

Repair the (F856) CMP 5-Volt Supply circuit for a short to voltage.

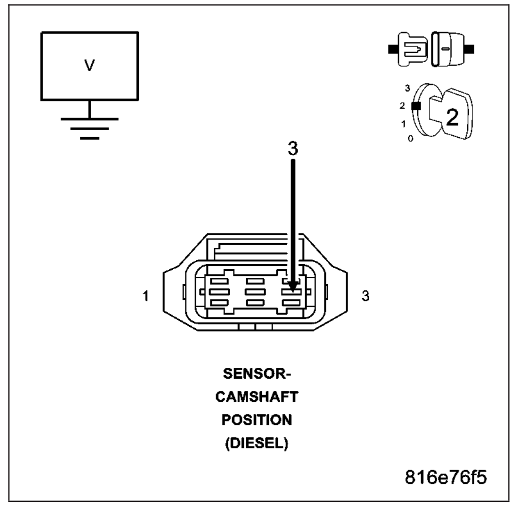
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Voltage is between 4.7 and 5.4 volts.**

Go To 6

**Voltage is below 4.7 volts.**

Go To 10



## 6. (K944) SENSOR GND CKT OPEN

Turn the ignition off.

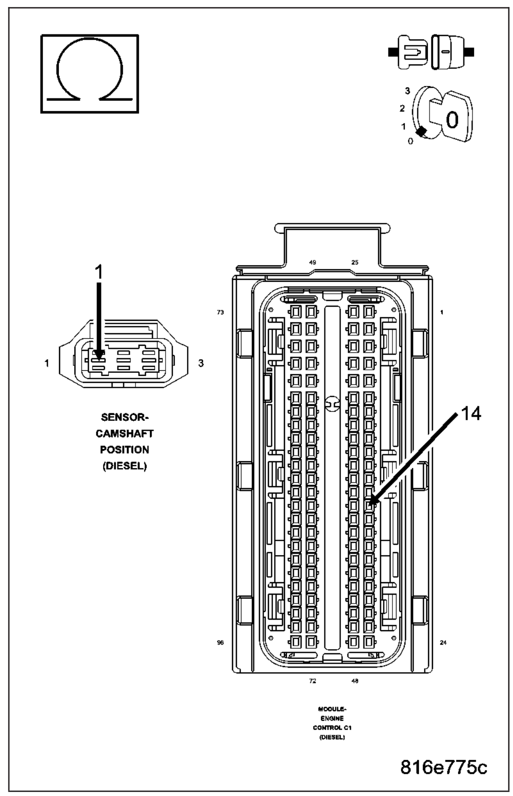
Measure the resistance of the (K944) Sensor Ground circuit between the CMP Sensor harness connector and the ECM C1 harness connector.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the (K944) Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 7. ECM - SENSOR GROUND CIRCUIT OPEN

Connect ECM harness connectors.

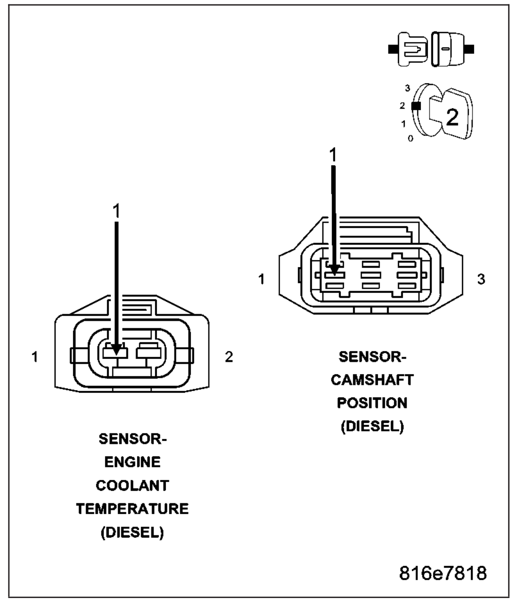
Turn the ignition on.

Disconnect the ECT Sensor harness connector.

Connect one end of a jumper wire to the (K2) ECT Sensor signal circuit in the ECT Sensor harness connector.

Connect the other end of the jumper wire to the (K944) Sensor Ground circuit in the Camshaft Position Sensor harness connector.

With the scan tool, read the Engine Coolant Temp volts.



**Is the voltage below 0.5 volt?**

**Yes** >> Go To 8

**No** >> Replace and program the ECM in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 8. DAMAGED CMP SENSOR OR CAMSHAFT

Turn the ignition off.

Connect ECT Sensor harness connector.

Remove the CMP Sensor.

Inspect the CMP Sensor for conditions such as loose mounting screws, damage, or cracks.

Inspect the camshaft for conditions such as damage, debris or cracked teeth.

**Is there any evidence of these conditions?**

**Yes** >> Repair as necessary.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 9

## 9. CAMSHAFT POSITION SENSOR

Install and connect CMP Sensor.

With the lab scope lead, backprobe the (K44) CMP Signal circuit.

While observing the display, crank the engine.

**Does the scan tool display an uninterrupted digital signal (square wave)?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

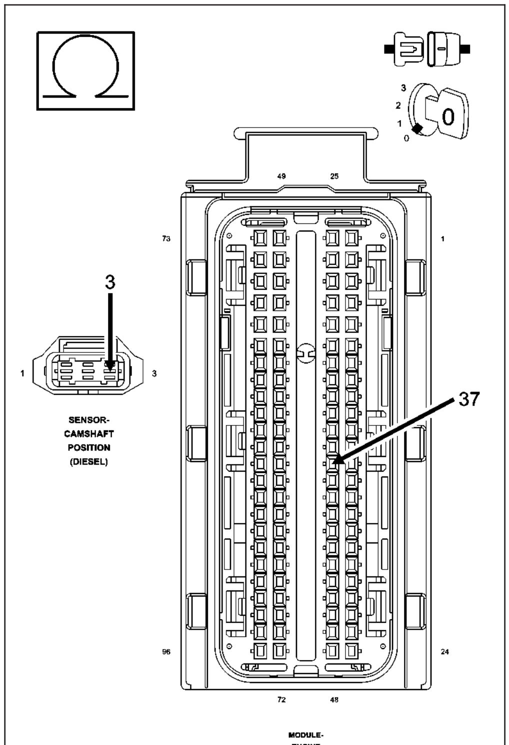
**No** >> Replace the Camshaft Position Sensor in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 10. (F856) 5-VOLT SUPPLY CIRCUIT OPEN

Turn the ignition off.

Measure the resistance of the (F856) 5-Volt Supply circuit between the CMP harness connector and the ECM C1 harness connector..



816e78f2

**Is the resistance below 10.0 ohms?**

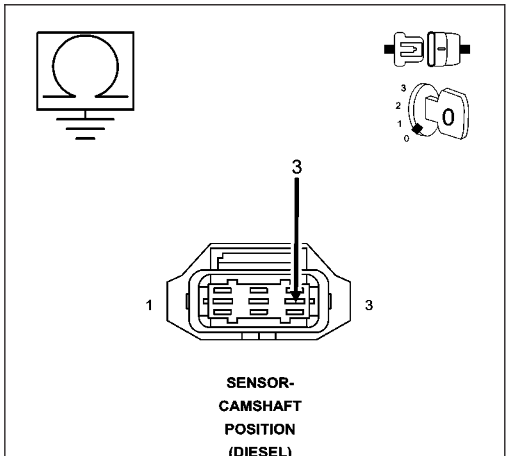
**Yes** >> Go To 11

**No** >> Repair the (F856) 5-Volt Supply circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 11. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the CMP Sensor 5-Volt Supply circuit.



816e792d

**Is the resistance above 1000 ohms?**

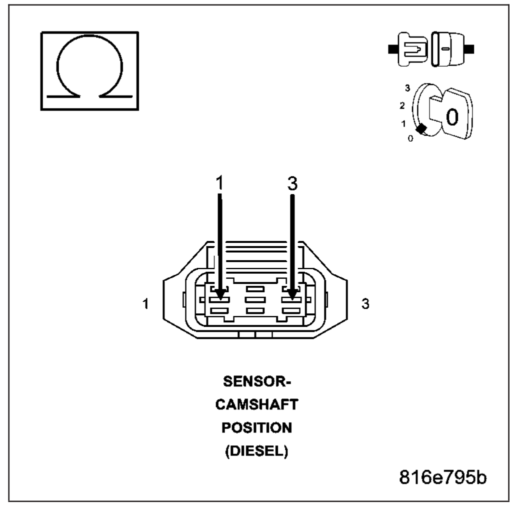
**Yes** >> Go To 12

**No** >> Repair the (F856) CMP Sensor 5-Volt Supply circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 12. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO THE (K944) SENSOR GROUND CIRCUIT

Measure the resistance between the (F856) CMP Sensor 5-Volt Supply circuit and the (K944) Sensor Ground circuit at the CMP Sensor harness connector.



**Is the resistance above 1000 ohms?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the (F856) CMP Sensor 5-Volt Supply and (K944) Sensor Ground circuits for a short together.

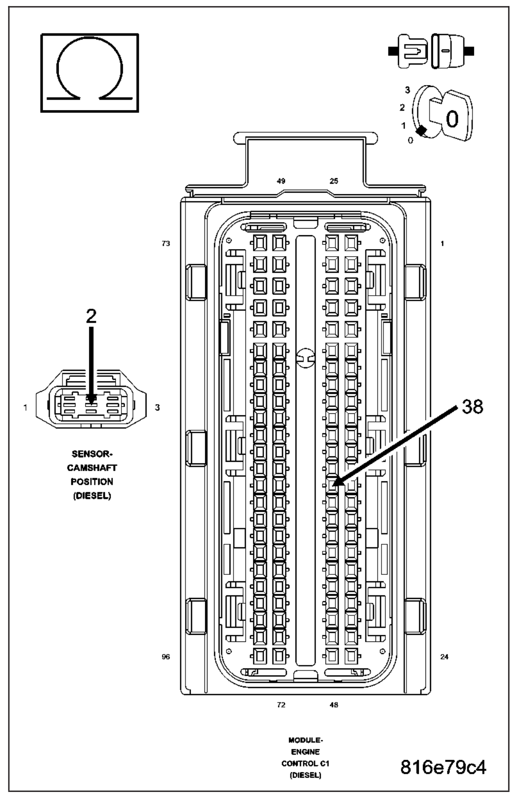
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 13. (K44) CMP SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Measure the resistance of the (K44) CMP Sensor Signal circuit.



**Is the resistance below 10.0 ohms?**

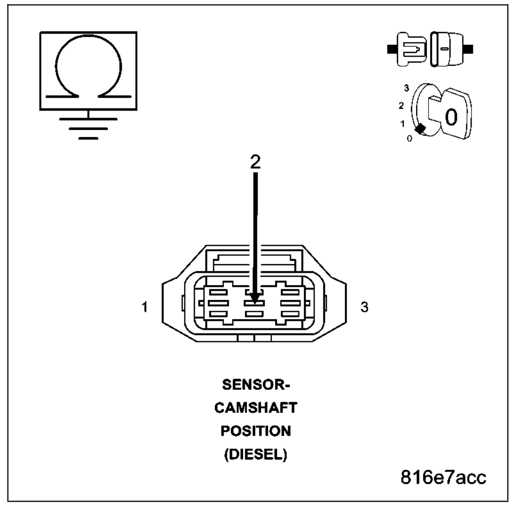
**Yes** >> Go To 14

**No** >> Repair the CMP Sensor Signal circuit for an open

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 14. (K44) CMP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K44) CMP Sensor Signal circuit.



**Is the resistance below 1000 ohms?**

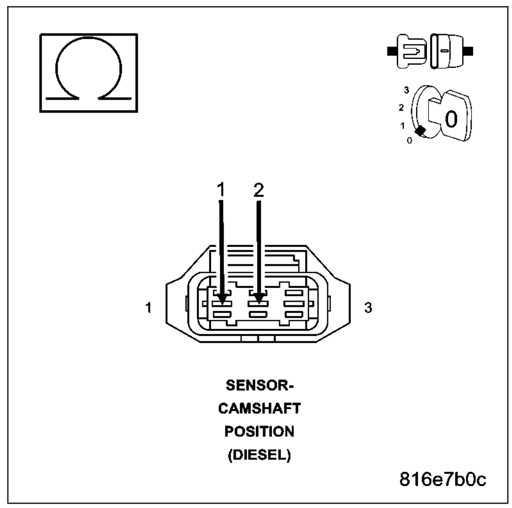
**Yes** >> Repair the (K44) CMP Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 15

## 15. (K44) CMP SENSOR SIGNAL CIRCUIT SHORTED TO THE (K944) SENSOR GROUND CIRCUIT

Measure the resistance between the (K44) CMP Sensor Signal circuit and (K944) Sensor Ground circuit at the CMP Sensor harness connector.



**Is the resistance below 1000 ohms?**

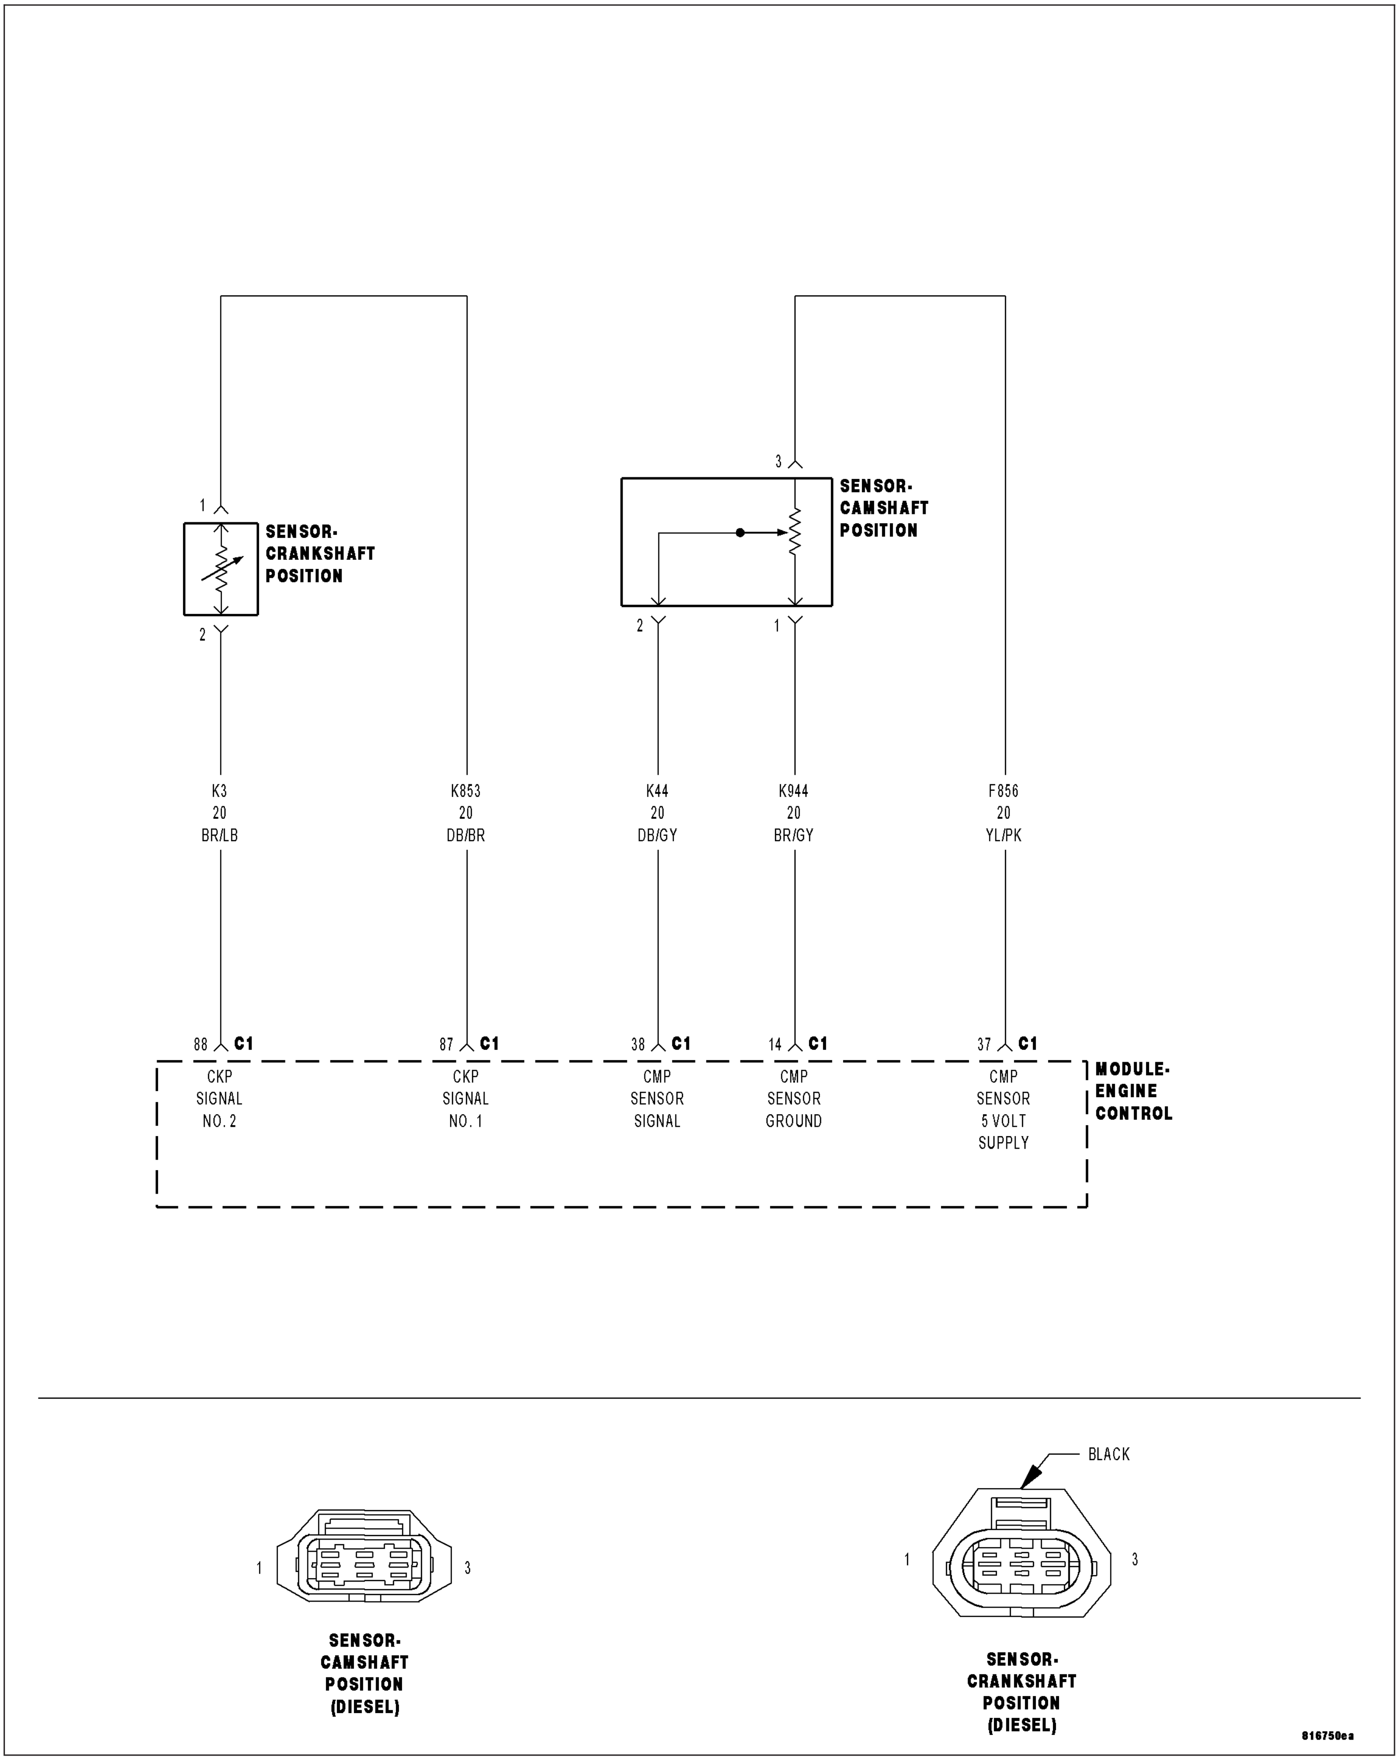
**Yes** >> Repair the (K44) CMP Sensor Signal and (K944) Sensor Ground circuits for a short together.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0340-CAMSHAFT POSITION SENSOR CIRCUIT MISSING SIGNAL PLAUSIBILITY



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine speed between 20 and 6000 rpm.
- **Set Condition:**
  The ECM does not receive a Camshaft Position Sensor signal.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| CHECKING (K44) CAMSHAFT SENSOR SIGNAL CIRCUIT |
| (K44) CAMSHAFT POSITION SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| CHECKING (F856) 5-VOLT SUPPLY CIRCUIT |
| (K944) SENSOR GROUND CIRCUIT OPEN |
| ECM SENSOR GROUND CIRCUIT OPEN |
| DAMAGED CMP SENSOR OR CAMSHAFT |
| CAMSHAFT POSITION SENSOR |
| (F856) 5-VOLT SUPPLY CIRCUIT OPEN |

| (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO THE (K944) SENSOR GROUND CIRCUIT |
| (K44) CMP SENSOR SIGNAL CIRCUIT OPEN |
| (K44) CMP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| (K44) CMP SENSOR SIGNAL CIRCUIT SHORTED TO (K944) SENSOR GROUND CIRCUIT |
| ECM |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

**NOTE: The Timing Belt/Chain must be correctly installed and operational before diagnosis can be made. Refer to the Service Information to ensure the timing belt is properly installed.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine cranking the engine for at least 7 seconds.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Go To 2

## 2. TEST DRIVE

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

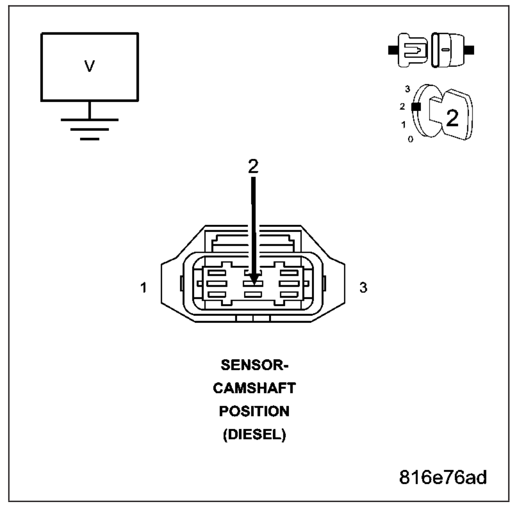
## 3. CHECKING CAMSHAFT POSITION SENSOR SIGNAL CKT

Turn the ignition off.

Disconnect the Camshaft Position Sensor harness connector.

Turn the ignition on.

Measure the voltage of the (K44) CMP Sensor Signal circuit.



**Select the appropriate voltage reading.**

**Voltage is above 5.4 volts.**
Go To 4

**Voltage is between 4.7 and 5.4 volts.**
Go To 5

**Voltage is below 4.7 volts.**
Go To 13

## 4. (K44) CAMSHAFT POSITION SENSOR SIGNAL CIRCUIT SHORT TO VOLTAGE

Turn the ignition off.

Disconnect the Camshaft Position Sensor harness connector.

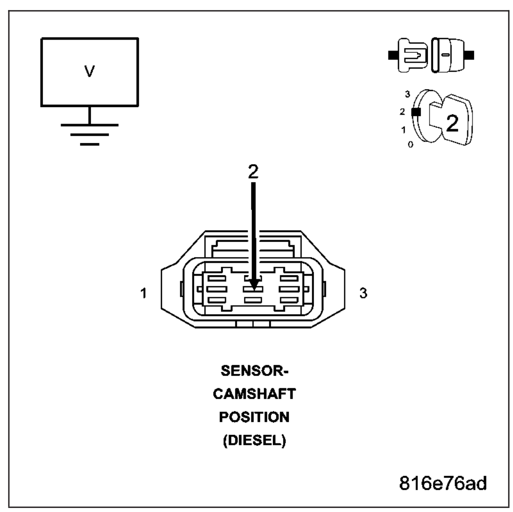
Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the (K44) CMP Position Sensor Signal circuit.



**Is the voltage below 1.0 volt?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

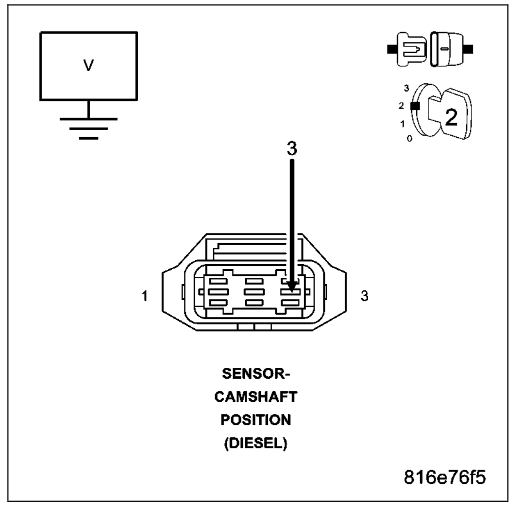
**No** >> Repair the (K44) Camshaft Position Sensor Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. CHECKING (F856) 5-VOLT SUPPLY CIRCUIT

Disconnect the ECM harness connectors.

Measure the voltage of the (F856) CMP Sensor 5-Volt Supply circuit.



**Select the appropriate voltage reading.**

**Voltage is above 5.4 volts.**
Repair the (F856) CMP 5-Volt Supply circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

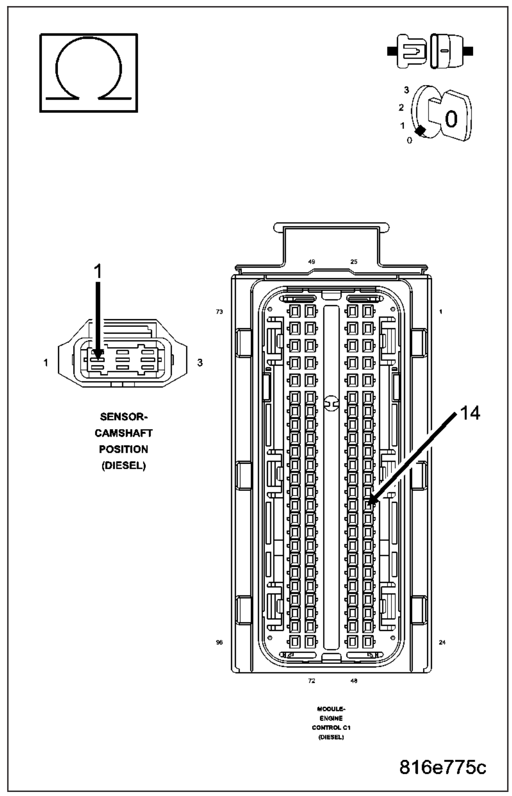
**Voltage is between 4.7 and 5.4 volts.**
Go To 6

**Voltage is below 4.7 volts.**
Go To 10

## 6. (K944) SENSOR GND CKT OPEN

Turn the ignition off.

Measure the resistance of the (K944) Sensor Ground circuit between the CMP Sensor harness connector and the ECM C1 harness connector.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the (K944) Sensor Ground circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. ECM - SENSOR GROUND CIRCUIT OPEN

Connect ECM harness connectors.

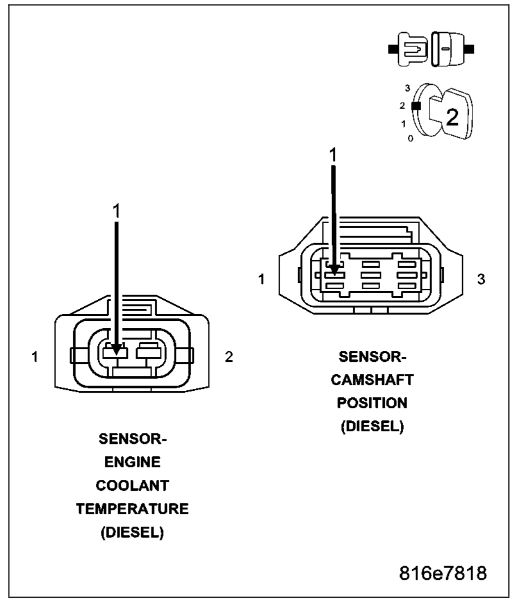
Turn the ignition on.

Disconnect the ECT Sensor harness connector.

Connect one end of a jumper wire to the (K2) ECT Sensor signal circuit in the ECT Sensor harness connector.

Connect the other end of the jumper wire to the (K944) Sensor Ground circuit in the Camshaft Position Sensor harness connector.

With the scan tool, read the Engine Coolant Temp volts.



**Is the voltage below 0.5 volt?**

**Yes** >> Go To 8

**No** >> Replace and program the ECM in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 8. DAMAGED CMP SENSOR OR CAMSHAFT

Turn the ignition off.

Connect ECT Sensor harness connector.

Remove the CMP Sensor.

Inspect the CMP Sensor for conditions such as loose mounting screws, damage, or cracks.

Inspect the camshaft for conditions such as damage, debris or cracked teeth.

**Is there any evidence of these conditions?**

**Yes** >> Repair as necessary.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 9

## 9. CAMSHAFT POSITION SENSOR

Install and connect CMP Sensor.

With the lab scope lead, backprobe the (K44) CMP Signal circuit.

While observing the display, crank the engine.

**Does the scan tool display an uninterrupted digital signal (square wave)?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

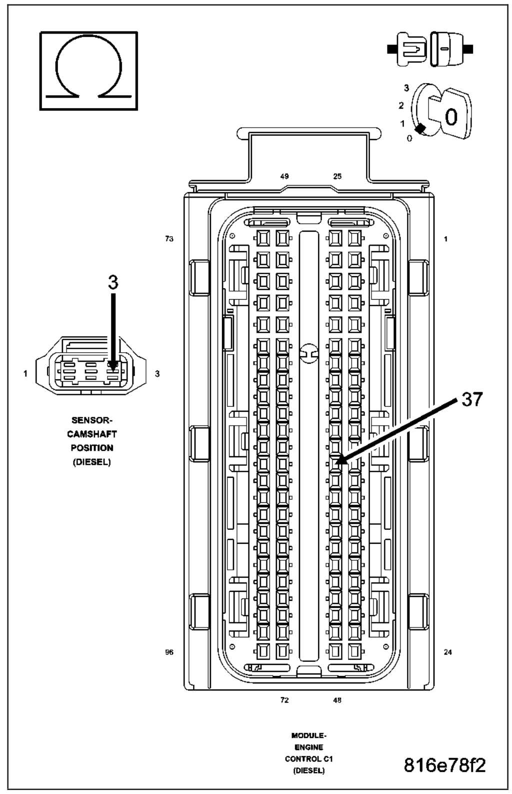
**No** >> Replace the Camshaft Position Sensor in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 10. (F856) 5-VOLT SUPPLY CIRCUIT OPEN

Turn the ignition off.

Measure the resistance of the (F856) 5-Volt Supply circuit between the CMP harness connector and the ECM C1 harness connector..



**Is the resistance below 10.0 ohms?**

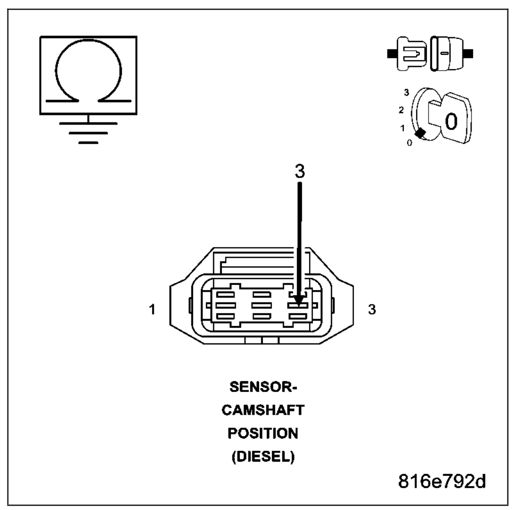
**Yes** >> Go To 11

**No** >> Repair the (F856) 5-Volt Supply circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 11. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the CMP Sensor 5-Volt Supply circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 12

**No** >> Repair the (F856) CMP Sensor 5-Volt Supply circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 12. (F856) 5-VOLT SUPPLY CIRCUIT SHORTED TO THE (K944) SENSOR GROUND CIRCUIT

Measure the resistance between the (F856) CMP Sensor 5-Volt Supply circuit and the (K944) Sensor Ground circuit at the CMP Sensor harness connector.

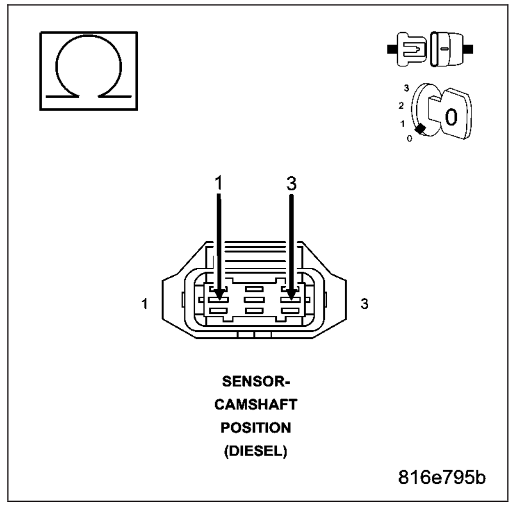
**Is the resistance above 1000 ohms?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the (F856) CMP Sensor 5-Volt Supply and (K944) Sensor Ground circuits for a short together.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 13. (K44) CMP SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

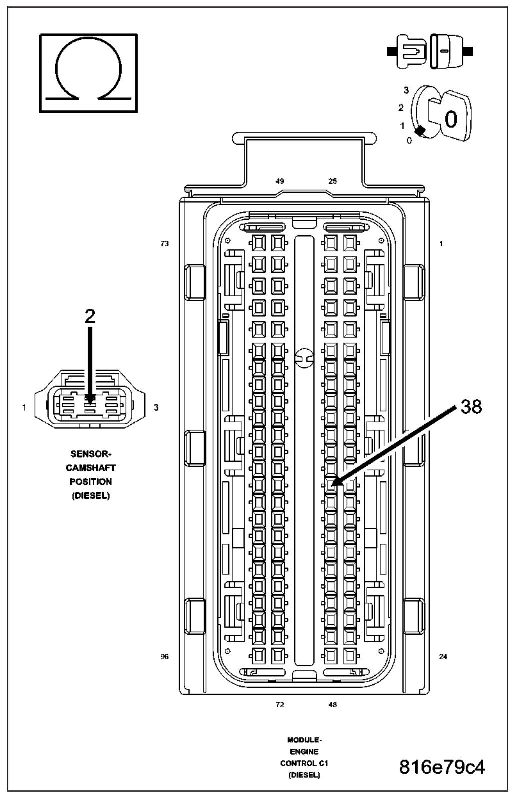
Measure the resistance of the (K44) CMP Sensor Signal circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 14

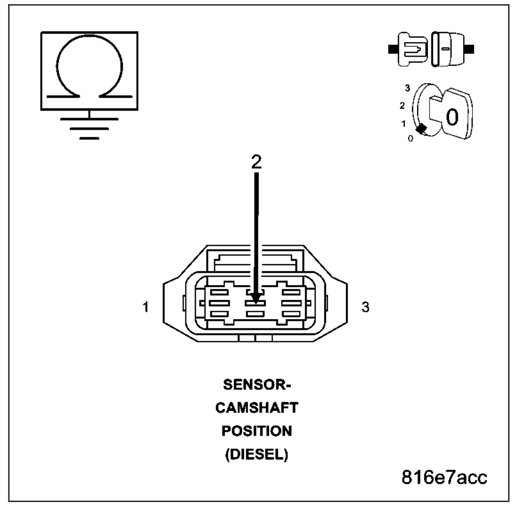
**No** >> Repair the CMP Sensor Signal circuit for an open

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 14. (K44) CMP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Measure the resistance between ground and the (K44) CMP Sensor Signal circuit.



**Is the resistance below 1000 ohms?**

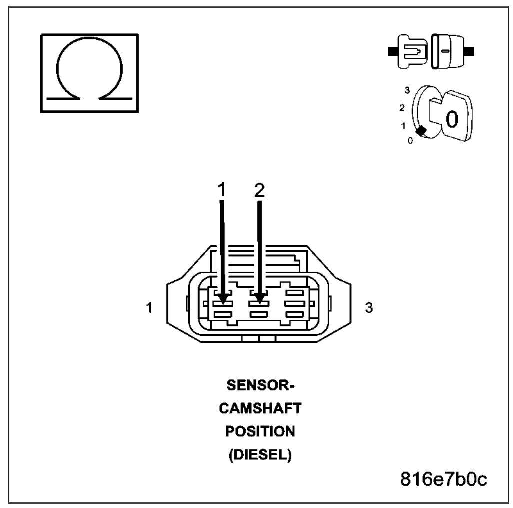
**Yes** >> Repair the (K44) CMP Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 15

## 15. (K44) CMP SENSOR SIGNAL CIRCUIT SHORTED TO THE (K944) SENSOR GROUND CIRCUIT

Measure the resistance between the (K44) CMP Sensor Signal circuit and (K944) Sensor Ground circuit at the CMP Sensor harness connector.



**Is the resistance below 1000 ohms?**

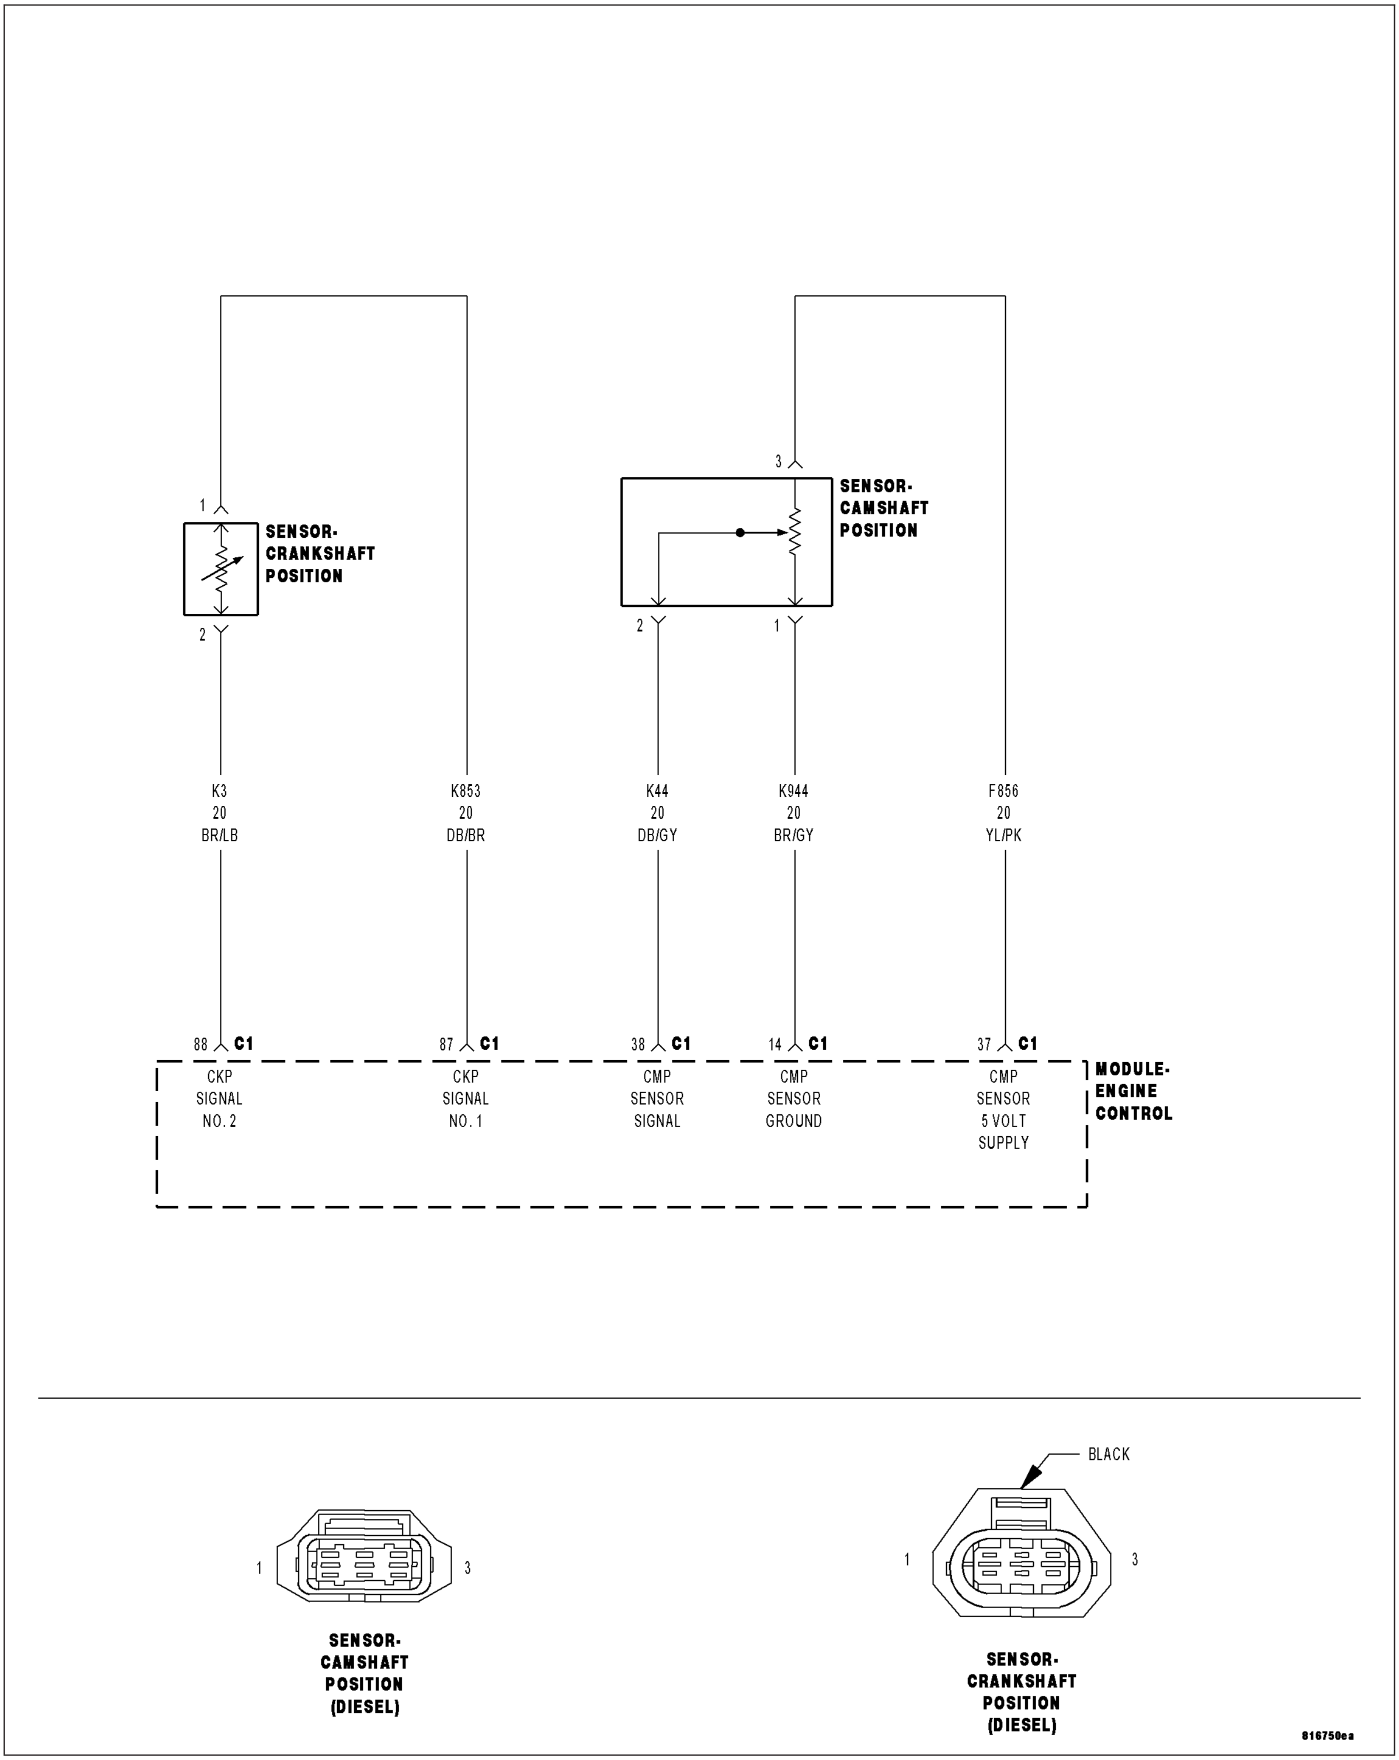
**Yes** >> Repair the (K44) CMP Sensor Signal and (K944) Sensor Ground circuits for a short together.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0344-CAMSHAFT POSITION SENSOR INTERMITTENT OR MISSING SIGNAL



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine speed between 20 and 6000 rpm.
- **Set Condition:**
  The ECM does not receive a Camshaft Position Sensor signal.

| Possible Causes |
|---|
| 5-VOLT SUPPLY CIRCUIT OPEN |
| CAMSHAFT POSITION SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| CHECKING 5-VOLT SUPPLY CIRCUIT |
| DAMAGED CMP SENSOR OR CAMSHAFT |
| ECM |
| ECM |
| ECM - CAMSHAFT POSITION SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| SENSOR GROUND CIRCUIT OPEN |
| INTERMITTENT CONDITION |
| CMP SENSOR SIGNAL CIRCUIT OPEN |
| 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| CMP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| CMASHAFT POSITION SENSOR |
| ECM SENSOR GROUND CIRCUIT OPEN |
| 5-VOLT SUPPLY CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT |
| CMP SENSOR SIGNAL CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

**NOTE: The Timing Belt/Chain must be correctly installed and operational before diagnosis can be made. Refer to the Service Information to ensure the timing belt is properly installed.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine cranking the engine for at least 7 seconds.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Go To 2

## 2. TEST DRIVE

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

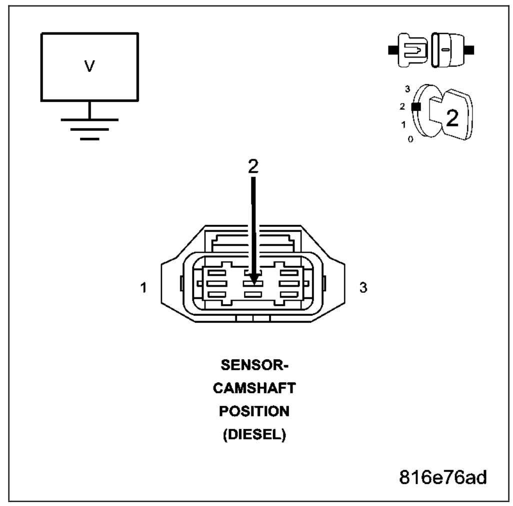
## 3. CHECKING CAMSHAFT POSITION SENSOR SIGNAL CKT

Turn the ignition off.

Disconnect the Camshaft Position Sensor harness connector.

Turn the ignition on.

Measure the voltage of the CMP Sensor Signal circuit.



**Select the appropriate voltage reading.**

**Voltage is above 5.4 volts.**
Go To 4

**Voltage is between 4.7 and 5.4 volts.**
Go To 5

**Voltage is below 4.7 volts.**
Go To 13

## 4. CAMSHAFT POSITION SENSOR SIGNAL CIRCUIT SHORT TO VOLTAGE

Turn the ignition off.

Disconnect the Camshaft Position Sensor harness connector.

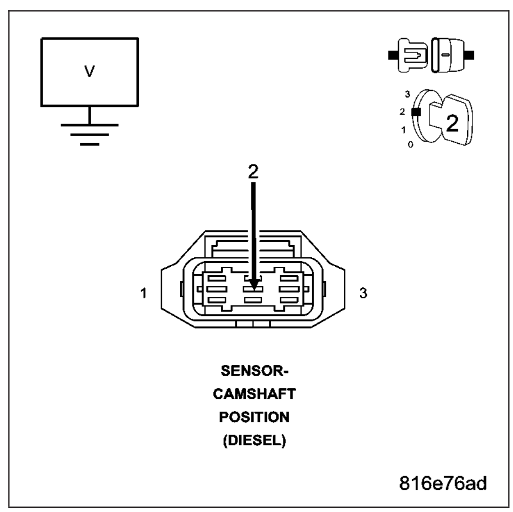
Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the CMP Position Sensor Signal circuit.



**Is the voltage below 1.0 volt?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Camshaft Position Sensor Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

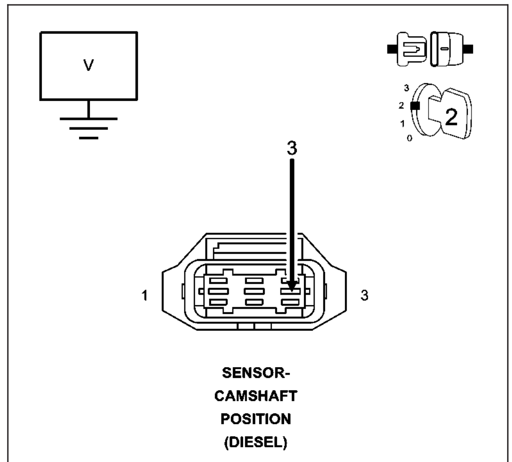
## 5. CHECKING 5-VOLT SUPPLY CIRCUIT

Turn the ignition off.

Disconnect the Camshaft Position Sensor harness connector.

Turn the ignition on.

Measure the voltage of the CMP Sensor 5-Volt Supply circuit.



816e76f5

**Select the appropriate voltage reading.**

**Voltage is above 5.4 volts.**

Repair the CMP 5-Volt Supply circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Voltage is between 4.7 and 5.4 volts.**

Go To 6

**Voltage is below 4.7 volts.**

Go To 10

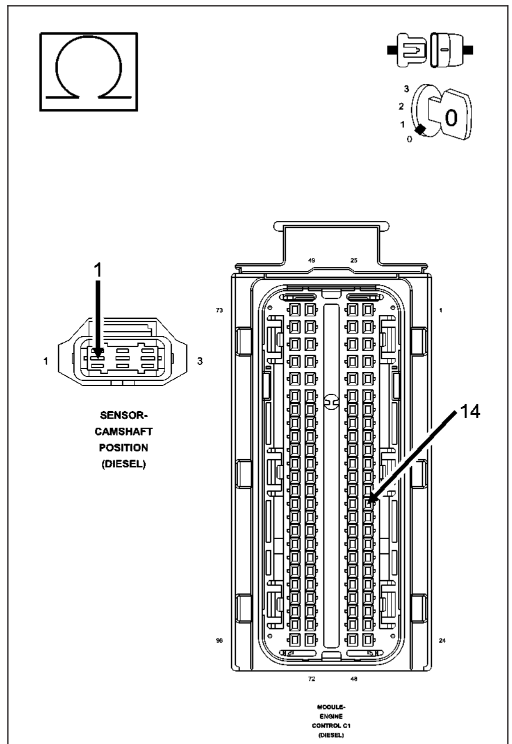
## 6. SENSOR GND CKT OPEN

Turn the ignition off.

Disconnect the CMP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Sensor Ground circuit between the CMP Sensor harness connector and the ECM harness connector.



816e775c

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. ECM - SENSOR GROUND CIRCUIT OPEN

Turn the ignition on.

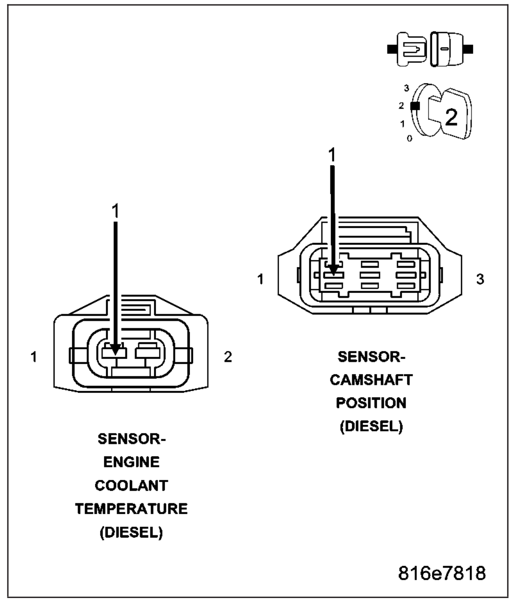
Disconnect the ECT Sensor harness connector.

Disconnect the Camshaft Position Sensor harness connector.

Connect one end of a jumper wire to the ECT Sensor signal circuit in the ECT Sensor harness connector.

Connect the other end of the jumper wire to the Sensor Ground circuit in the Camshaft Position Sensor harness connector.

With the scan tool read the Engine Coolant Temp volts.



**Is the voltage below 0.5 volt?**

**Yes** >> Go To 8

**No** >> Replace and program the ECM in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 8. DAMAGED CMP SENSOR OR CAMSHAFT

Turn the ignition off.

Remove the CMP Sensor.

Inspect the CMP Sensor for conditions such as loose mounting screws, damage, or cracks.

Inspect the camshaft for conditions such as damage, debris or cracked teeth.

**Is there any evidence of these conditions?**

**Yes** >> Repair as necessary.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 9

## 9. CAMSHAFT POSITION SENSOR

Turn the ignition off.

With the lab scope lead, backprobe the CMP Signal circuit.

While observing the lab scope display, crank the engine.

**NOTE: The lab scope should display a digital signal (square wave) similar to that shown in Charts and Graphs.**

**Does the lab scope display an uninterrupted digital signal (square wave)?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Camshaft Position Sensor in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

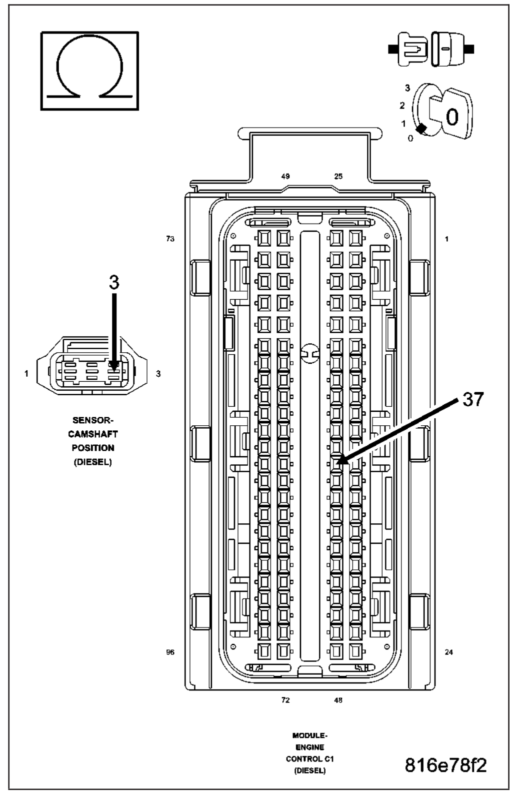
## 10. 5-VOLT SUPPLY CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the CMP Sensor harness connector.

Measure the resistance of the 5-Volt Supply circuit between the ECM harness connector and the CMP Sensor harness connector.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 11

**No** >> Repair the 5-Volt Supply circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

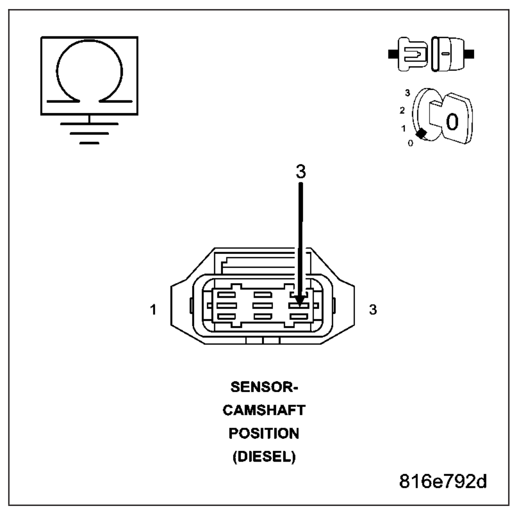
## 11. 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the CMP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the CMP Sensor 5-Volt Supply circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 12

**No** >> Repair the CMP Sensor 5-Volt Supply circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

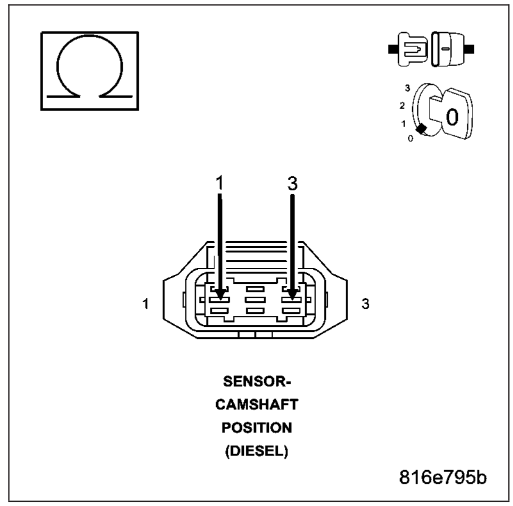
## 12. 5-VOLT SUPPLY CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT

Turn the ignition off.

Disconnect the CMP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between the CMP Sensor 5-Volt Supply circuit and the Sensor Ground circuit at the CMP Sensor harness connector.



**Is the resistance above 1000 ohms?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the CMP Sensor 5-Volt Supply and Sensor Ground circuits for a short together.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

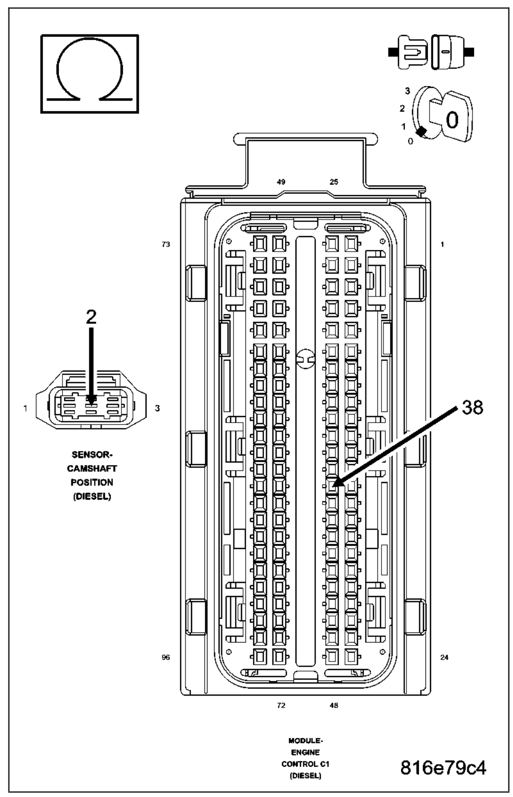
## 13. CMP SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the CMP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the CMP Sensor Signal circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 14

**No** >> Repair the CMP Sensor Signal circuit for an open

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 14. CMP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the CMP Sensor harness connector.

Disconnect the ECM harness connectors.

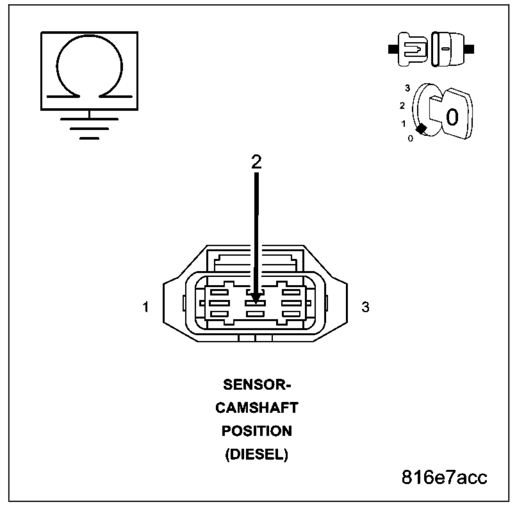
Measure the resistance between ground and the CMP Sensor Signal circuit.

**Is the resistance below 1000 ohms?**

**Yes** >> Repair the CMP Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 15



## 15. CMP SENSOR SIGNAL CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT

Turn the ignition off.

Disconnect the CMP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between the CMP Sensor Signal circuit and the Sensor Ground circuit at the CMP Sensor harness connector.

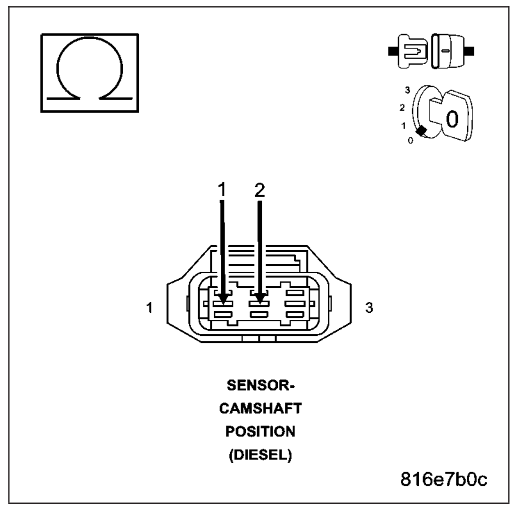
**Is the resistance below 1000 ohms?**

**Yes** >> Repair the CMP Sensor Signal and Sensor Ground circuits for a short together.

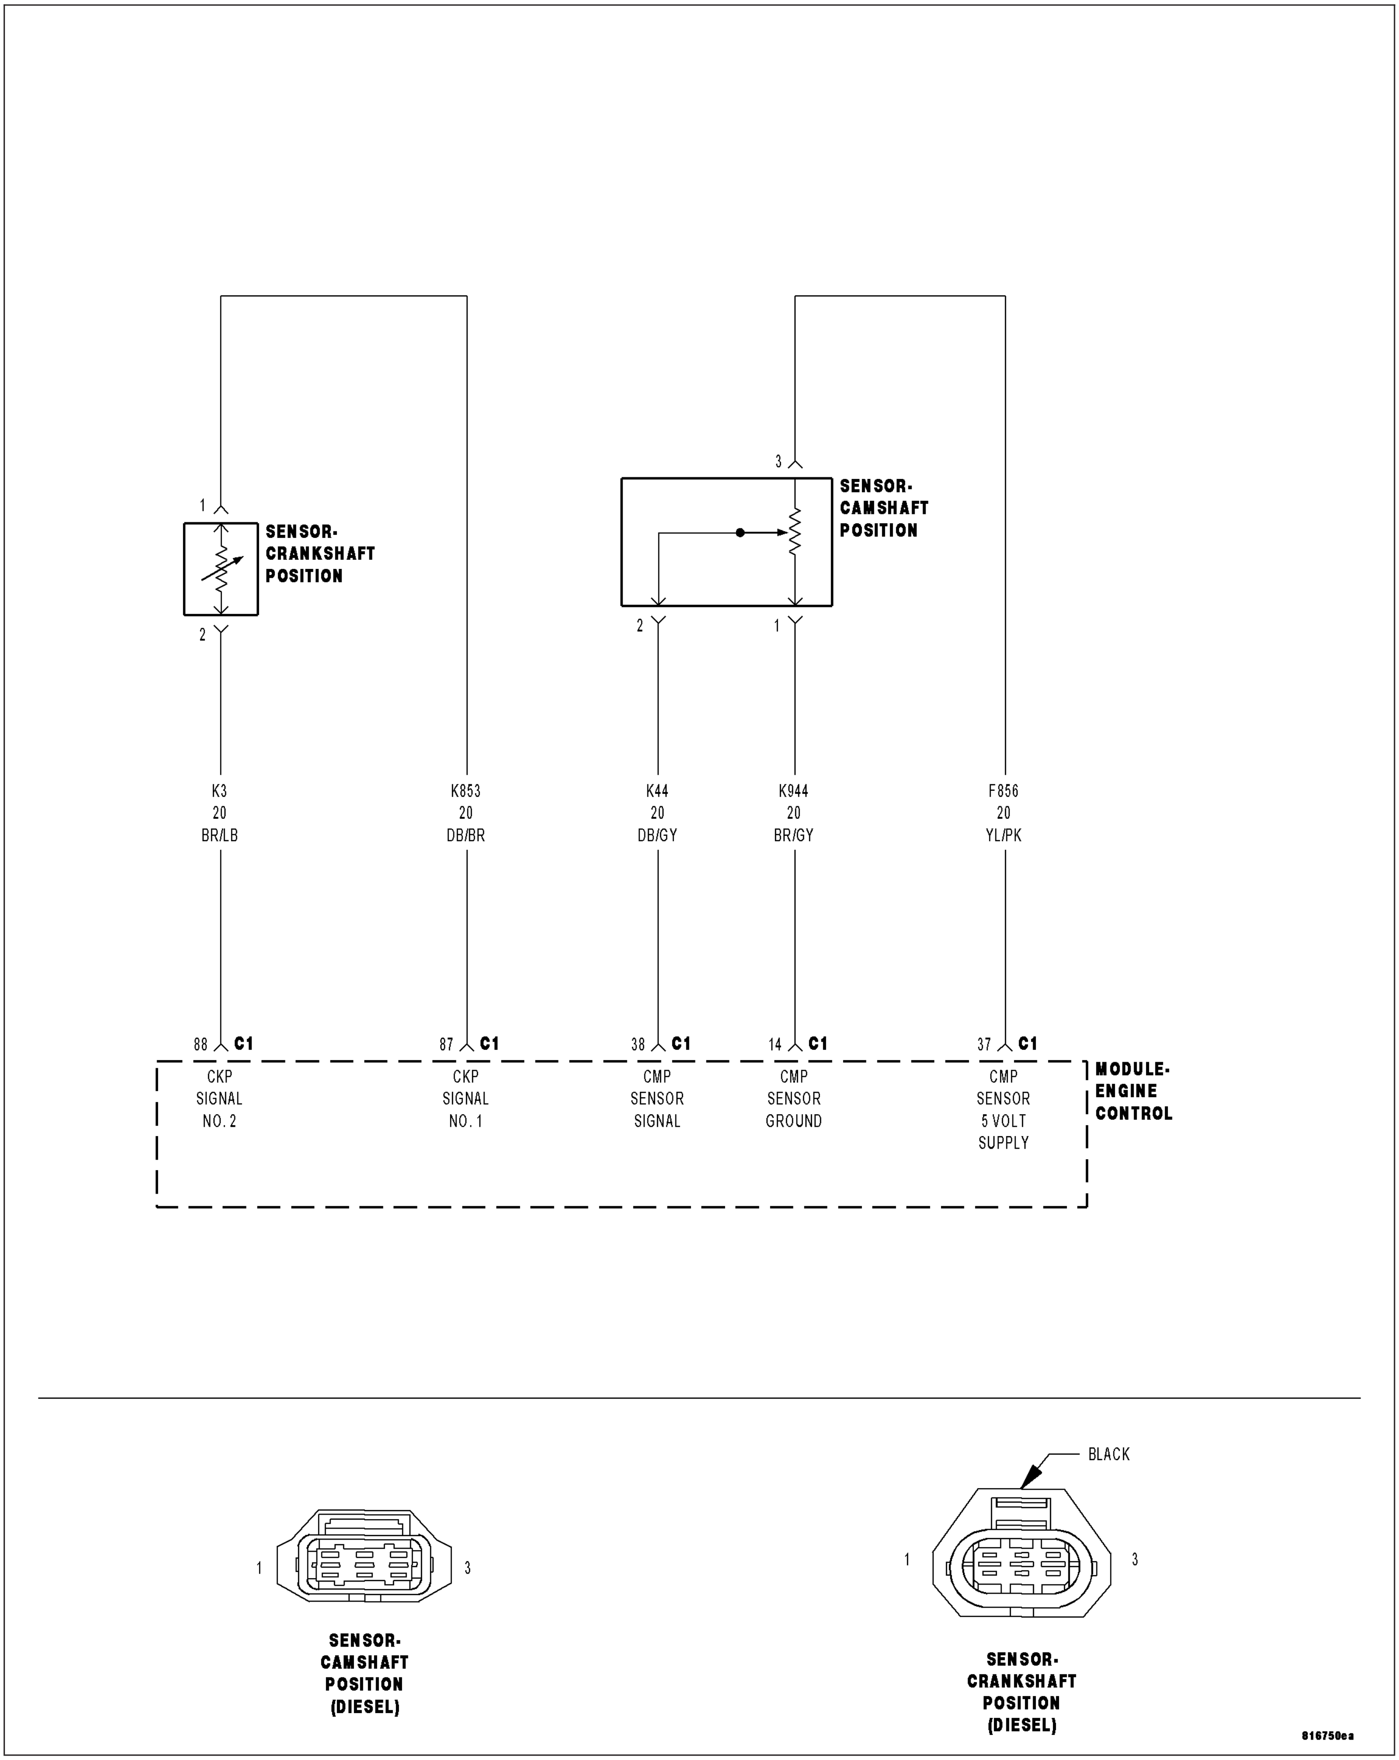
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



# P0344-CAMSHAFT POSITION SENSOR INTERMITTENT SIGNAL PLAUSIBILITY



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine speed between 20 and 6000 rpm.
- **Set Condition:**
  The ECM does not receive a Camshaft Position Sensor signal.

| **Possible Causes** |
|---|
| 5-VOLT SUPPLY CIRCUIT OPEN |
| CAMSHAFT POSITION SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| CHECKING 5-VOLT SUPPLY CIRCUIT |
| DAMAGED CMP SENSOR OR CAMSHAFT |
| ECM |
| ECM |
| ECM - CAMSHAFT POSITION SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| SENSOR GROUND CIRCUIT OPEN |
| INTERMITTENT CONDITION |
| CMP SENSOR SIGNAL CIRCUIT OPEN |
| 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| CMP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| CMASHAFT POSITION SENSOR |
| ECM SENSOR GROUND CIRCUIT OPEN |
| 5-VOLT SUPPLY CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT |
| CMP SENSOR SIGNAL CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

**NOTE: The Timing Belt/Chain must be correctly installed and operational before diagnosis can be made. Refer to the Service Information to ensure the timing belt is properly installed.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine cranking the engine for at least 7 seconds.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Go To 2

## 2. TEST DRIVE

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

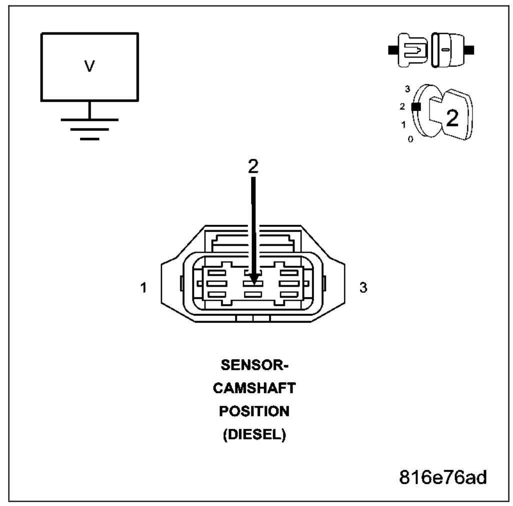
## 3. CHECKING CAMSHAFT POSITION SENSOR SIGNAL CKT

Turn the ignition off.

Disconnect the Camshaft Position Sensor harness connector.

Turn the ignition on.

Measure the voltage of the CMP Sensor Signal circuit.



**Select the appropriate voltage reading.**

**Voltage is above 5.4 volts.**
Go To 4

**Voltage is between 4.7 and 5.4 volts.**
Go To 5

**Voltage is below 4.7 volts.**
Go To 13

## 4. CAMSHAFT POSITION SENSOR SIGNAL CIRCUIT SHORT TO VOLTAGE

Turn the ignition off.

Disconnect the Camshaft Position Sensor harness connector.

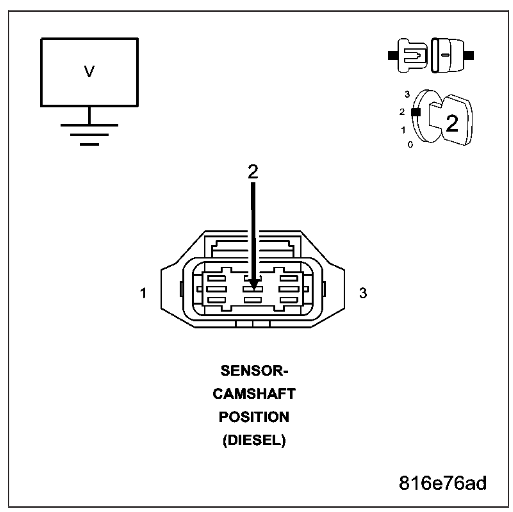
Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the CMP Position Sensor Signal circuit.



**Is the voltage below 1.0 volt?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Camshaft Position Sensor Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

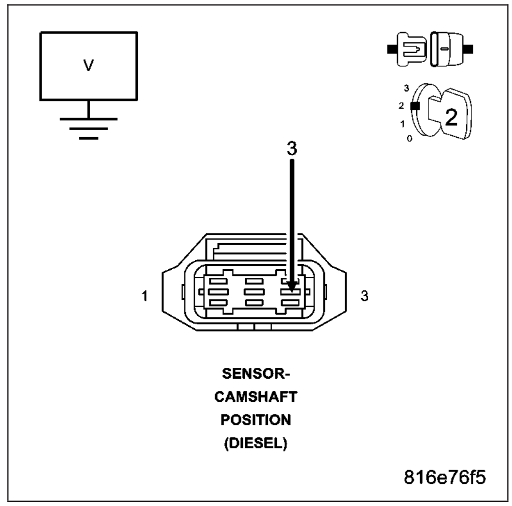
## 5. CHECKING 5-VOLT SUPPLY CIRCUIT

Turn the ignition off.

Disconnect the Camshaft Position Sensor harness connector.

Turn the ignition on.

Measure the voltage of the CMP Sensor 5-Volt Supply circuit.



**Select the appropriate voltage reading.**

**Voltage is above 5.4 volts.**

Repair the CMP 5-Volt Supply circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Voltage is between 4.7 and 5.4 volts.**

Go To 6

**Voltage is below 4.7 volts.**

Go To 10

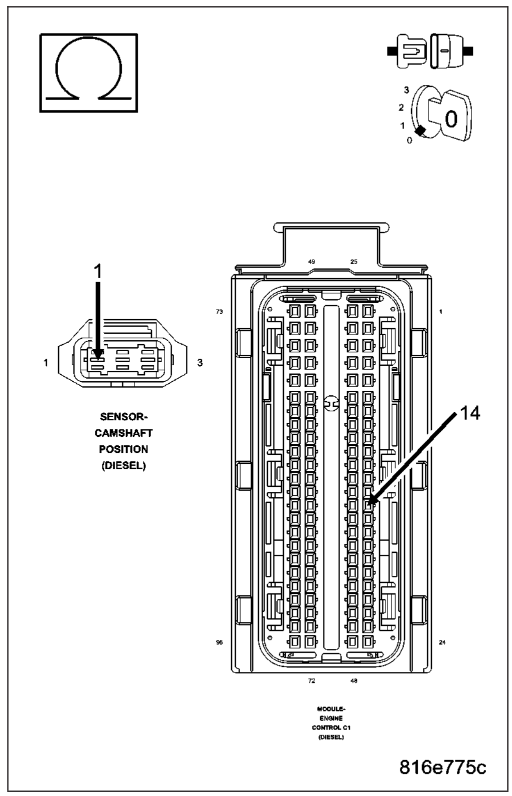
## 6. SENSOR GND CKT OPEN

Turn the ignition off.

Disconnect the CMP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Sensor Ground circuit between the CMP Sensor harness connector and the ECM harness connector.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. ECM - SENSOR GROUND CIRCUIT OPEN

Turn the ignition on.

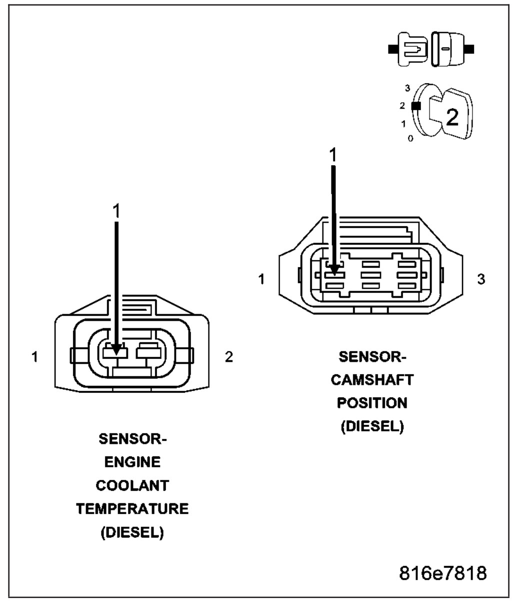
Disconnect the ECT Sensor harness connector.

Disconnect the Camshaft Position Sensor harness connector.

Connect one end of a jumper wire to the ECT Sensor signal circuit in the ECT Sensor harness connector.

Connect the other end of the jumper wire to the Sensor Ground circuit in the Camshaft Position Sensor harness connector.

With the scan tool read the Engine Coolant Temp volts.



**Is the voltage below 0.5 volt?**

**Yes** >> Go To 8

**No** >> Replace and program the ECM in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 8. DAMAGED CMP SENSOR OR CAMSHAFT

Turn the ignition off.

Remove the CMP Sensor.

Inspect the CMP Sensor for conditions such as loose mounting screws, damage, or cracks.

Inspect the camshaft for conditions such as damage, debris or cracked teeth.

**Is there any evidence of these conditions?**

**Yes** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 9

## 9. CAMSHAFT POSITION SENSOR

Turn the ignition off.

With the ab scope lead, backprobe the CMP Signal circuit.

While observing the lab scope display, crank the engine.

**Does the lab scope display an uninterrupted digital signal (square wave)?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Camshaft Position Sensor in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 10. 5-VOLT SUPPLY CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the CMP Sensor harness connector.

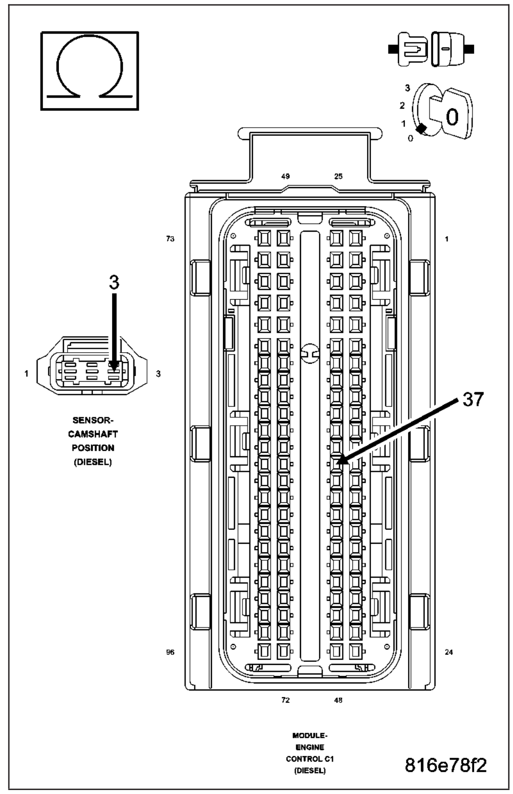
Measure the resistance of the 5-Volt Supply circuit between the ECM harness connector and the CMP Sensor harness connector.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 11

**No** >> Repair the 5-Volt Supply circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 11. 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the CMP Sensor harness connector.

Disconnect the ECM harness connectors.

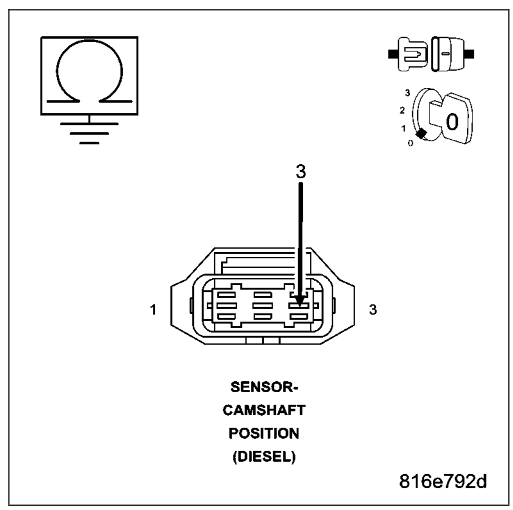
Measure the resistance between ground and the CMP Sensor 5-Volt Supply circuit.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 12

**No** >> Repair the CMP Sensor 5-Volt Supply circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



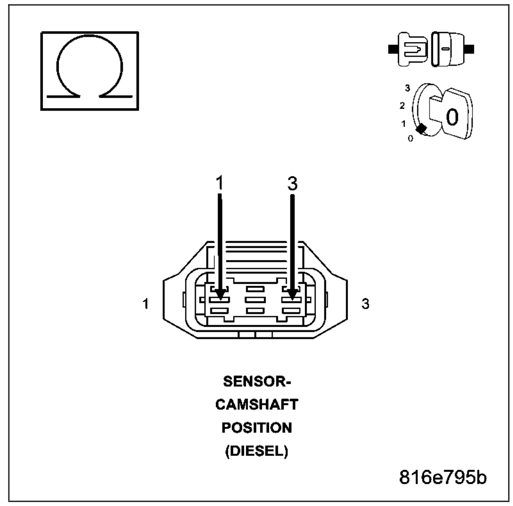
## 12. 5-VOLT SUPPLY CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT

Turn the ignition off.

Disconnect the CMP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between the CMP Sensor 5-Volt Supply circuit and the Sensor Ground circuit at the CMP Sensor harness connector.



**Is the resistance above 1000 ohms?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the CMP Sensor 5-Volt Supply and Sensor Ground circuits for a short together.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

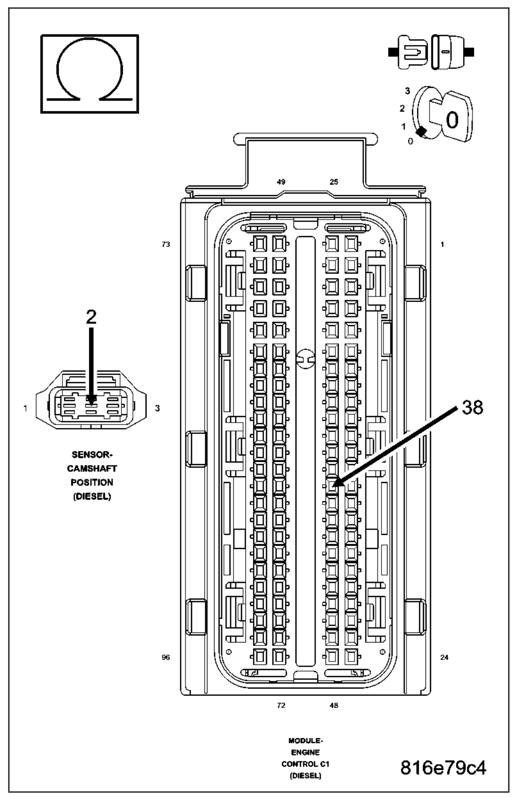
## 13. CMP SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the CMP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the CMP Sensor Signal circuit.



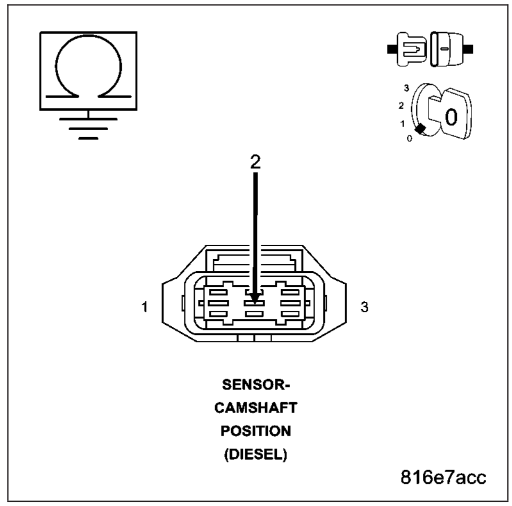
**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 14

**No** >> Repair the CMP Sensor Signal circuit for an open

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 14. CMP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND



Turn the ignition off.

Disconnect the CMP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the CMP Sensor Signal circuit.

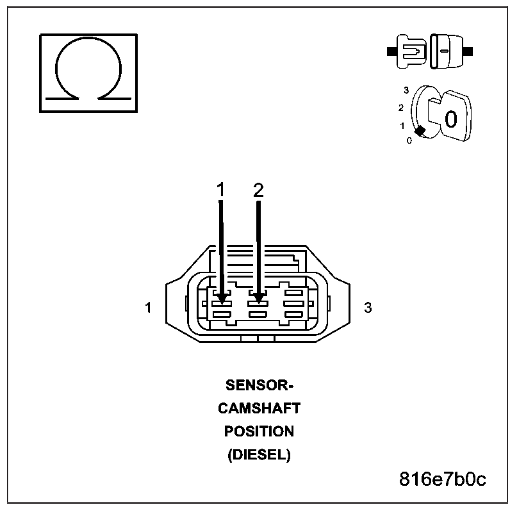
**Is the resistance below 1000 ohms?**

**Yes** >> Repair the CMP Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 15

## 15. CMP SENSOR SIGNAL CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT



Turn the ignition off.

Disconnect the CMP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between the CMP Sensor Signal circuit and the Sensor Ground circuit at the CMP Sensor harness connector.

**Is the resistance below 1000 ohms?**

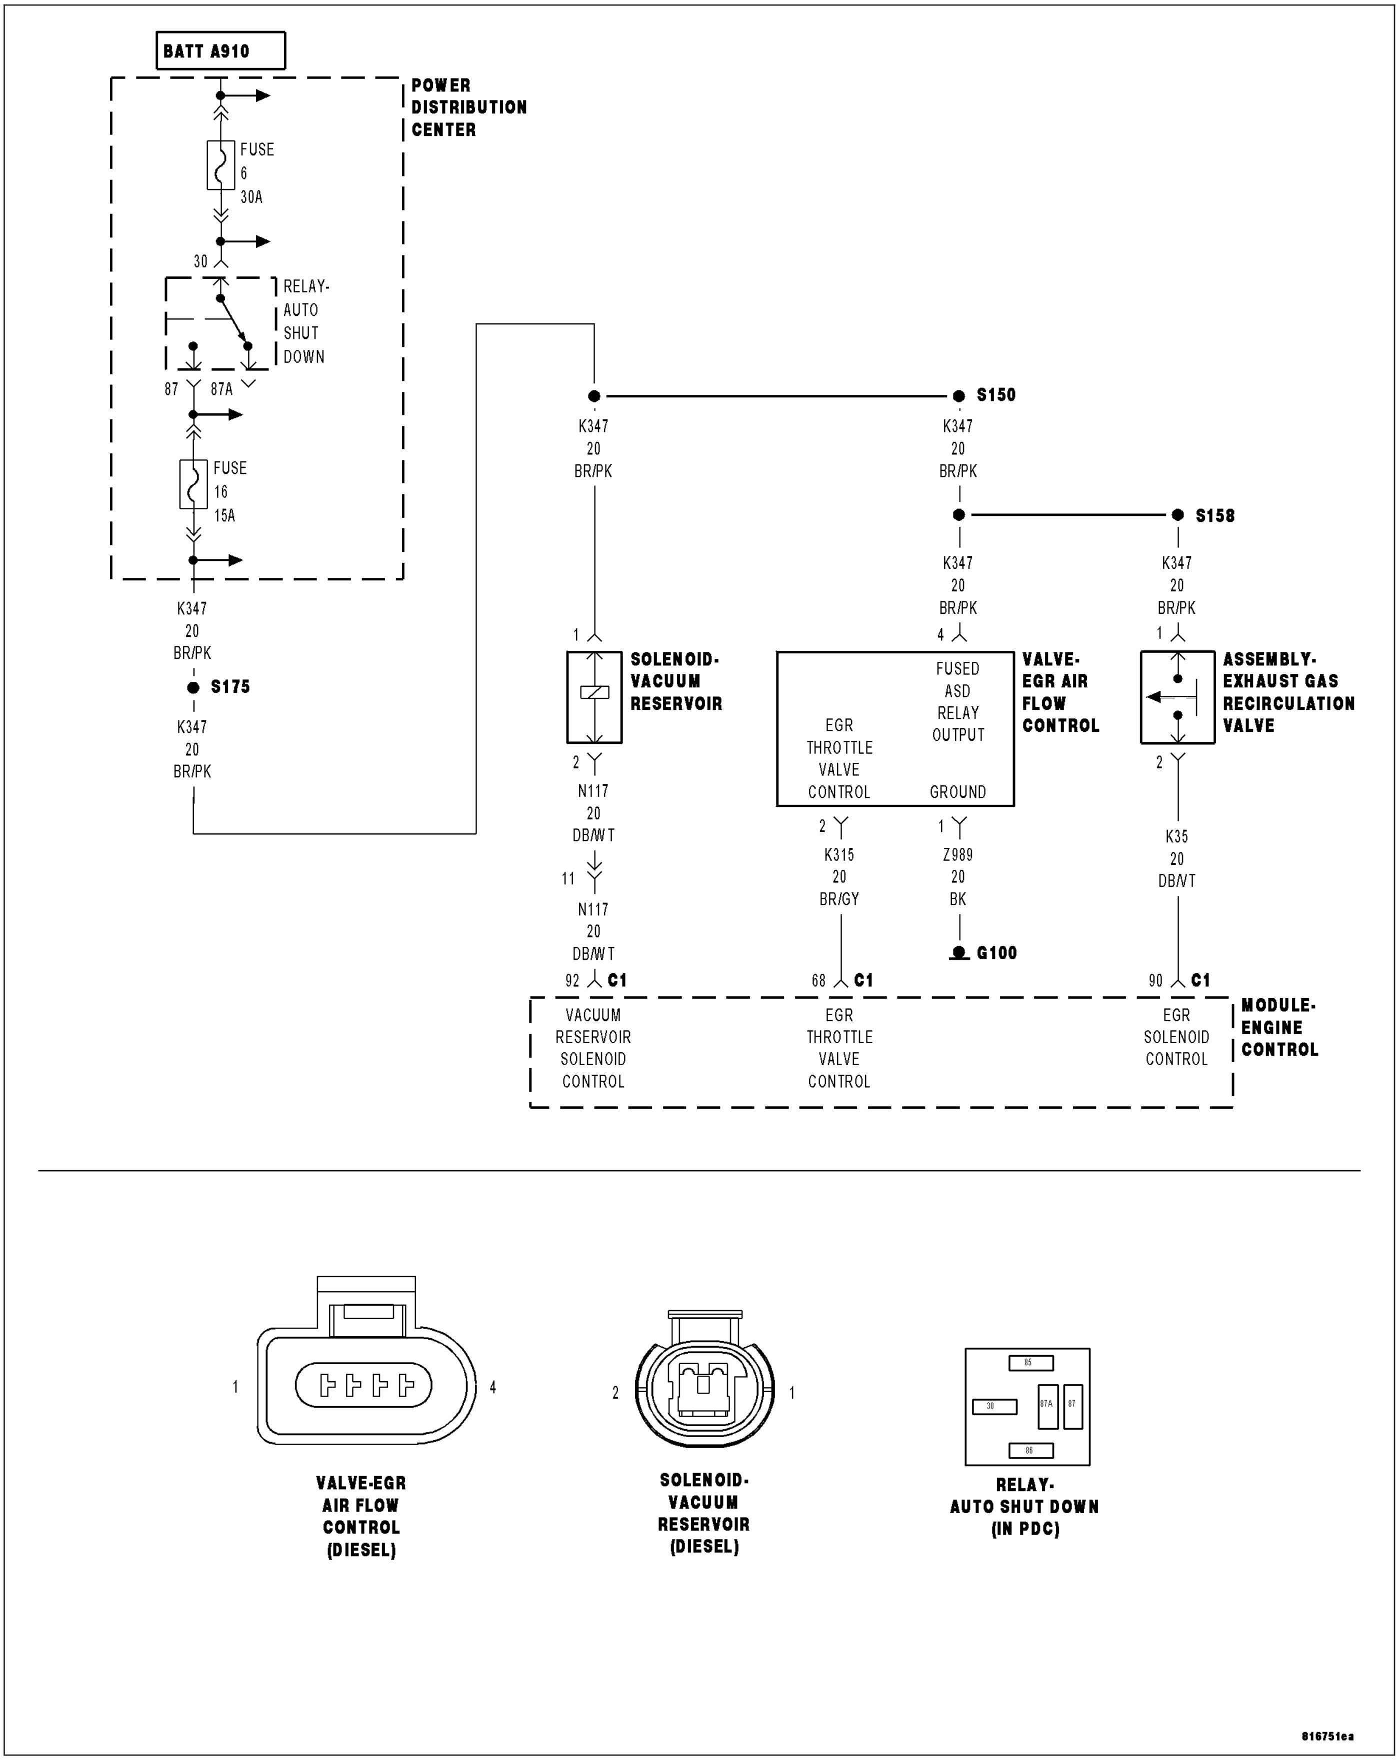
**Yes** >> Repair the CMP Sensor Signal and Sensor Ground circuits for a short together.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0401-EGR SOLENOID CIRCUIT NEGATIVE DEVIATION



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM detects EGR flow is less than the requested flow.

| Possible Causes |
|---|
| AIR FILTER |
| AIR RESTRICTION |
| CHECKING FOR AIR LEAKS |
| EGR VALVE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Test drive the vehicle and monitor the scan tool for ECM DTCs.

**NOTE: If there are any Mass Air Flow DTC's, diagnose the MAF DTC's before continuing EGR diagnostics.**

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. AIR FILTER

Turn the ignition off.

Remove and inspect the Air Filter for soiling or excessive dirt and debris which may cause air flow restriction.

**Were any of these problems found?**

**Yes** >> Replace the Air Filter element.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

### 3. AIR RESTRICTION

**NOTE: Inspect all air intake, crankcase vent and turbocharger related tubes for damage, restriction or poor connection. Any of these conditions can cause a this DTC to set.**

**NOTE: Inspect the exhaust system and related tubes for damage, restriction or poor connection. Any of these conditions can cause a this DTC to set.**

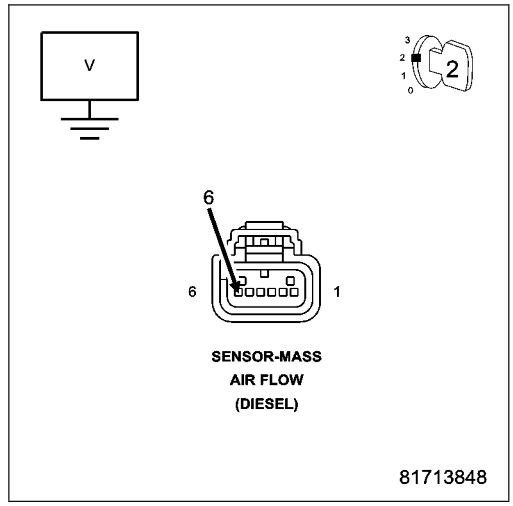
Inspect the intake system, exhaust system and related tubes and connections.

**Were any problems found?**

**Yes** >> Repair or replace as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. EGR ACTUATION - IDLE



**NOTE: Inspect the complete exhaust system for restriction. Restrictions in the exhaust system can cause improper EGR flow. Repair as necessary**

Start engine.

Allow the engine to idle until the engine reaches operating temperature.

While back probing, measure the MAF Sensor Signal circuit at the MAF Sensor harness connector.

With the scan tool, perform the EGR Actuator with the engine idling.

**NOTE: The MAF reading should change by at least 0.23 volts during EGR actuation**

Note the MAF readings.

**Does the MAF reading switch a minimum of 0.23 volt during EGR actuation?**

**Yes** >> Go To 5

**No** >> Go To 6

## 5. EGR ACTUATION - 1000 RPM

While back probing, measure the MAF Sensor Signal circuit at the MAF Sensor harness connector.

With the scan tool, perform the EGR Actuator with the engine speed at 1000 rpm.

**NOTE: The MAF reading should change by at least 0.30 volts during EGR actuation**

Note the MAF readings.

**Does the MAF reading switch a minimum of 0.30 volt during EGR actuation?**

**Yes** >> Test Complete.

**No** >> Go To 6

## 6. CHECKING FOR AIR LEAKS

Turn the ignition off.

Remove the Inlet Pressure Sensor.

Connect smoke machine 84-04 to the Inlet Pressure Sensor port in the intake duct and begin injecting smoke into the intake system.

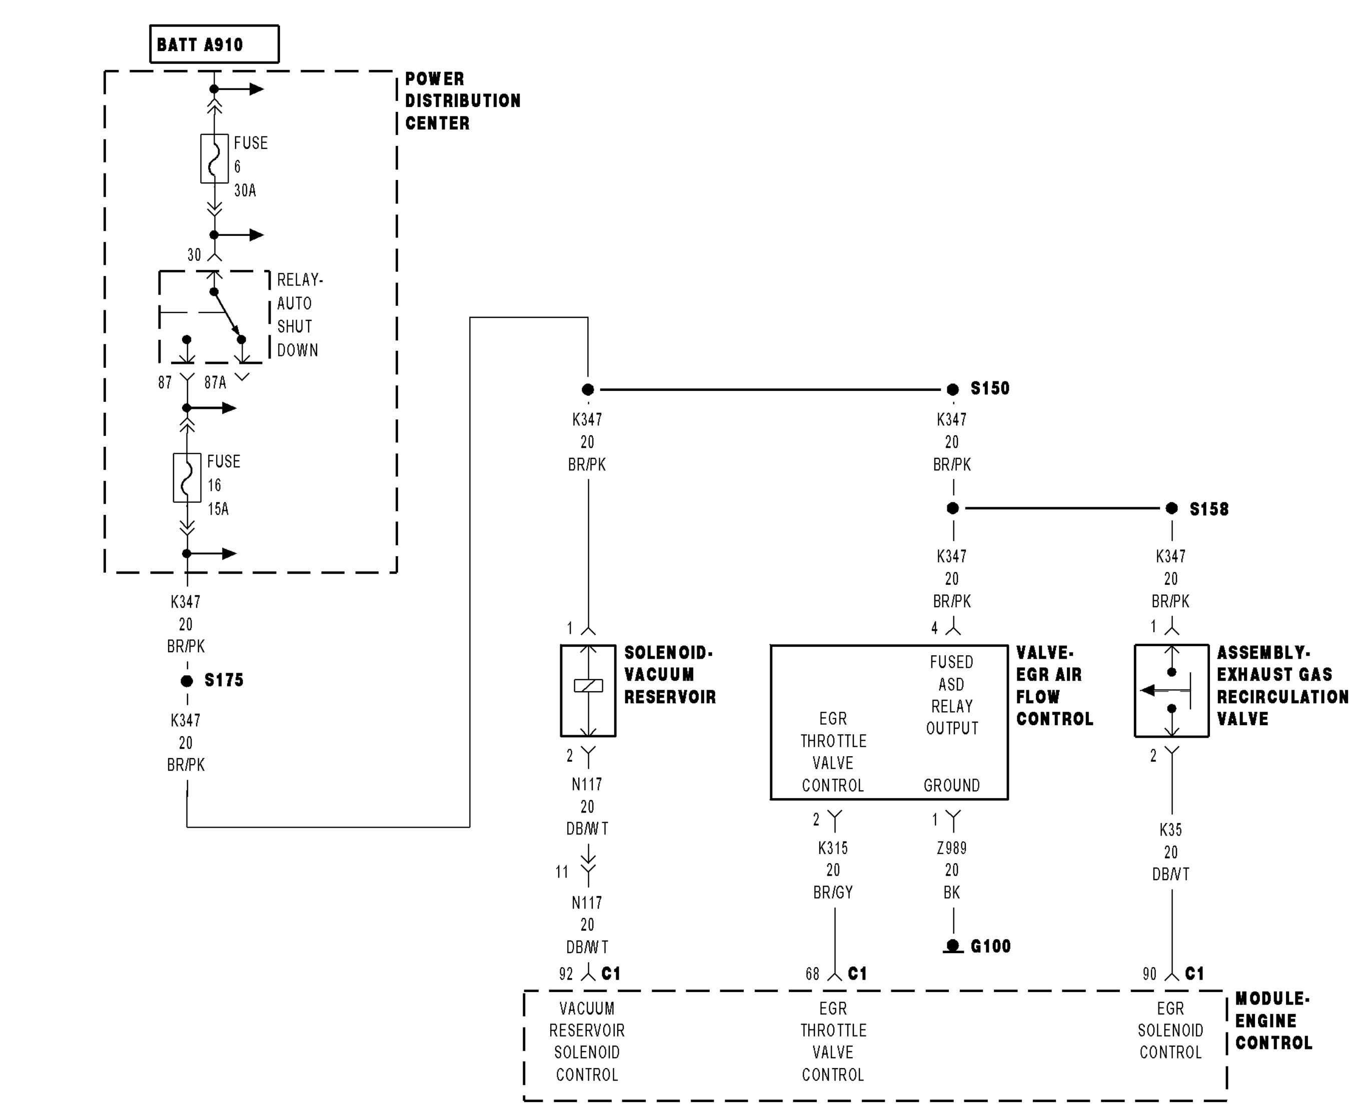
Observe all intake system components for evidence of smoke leakage.

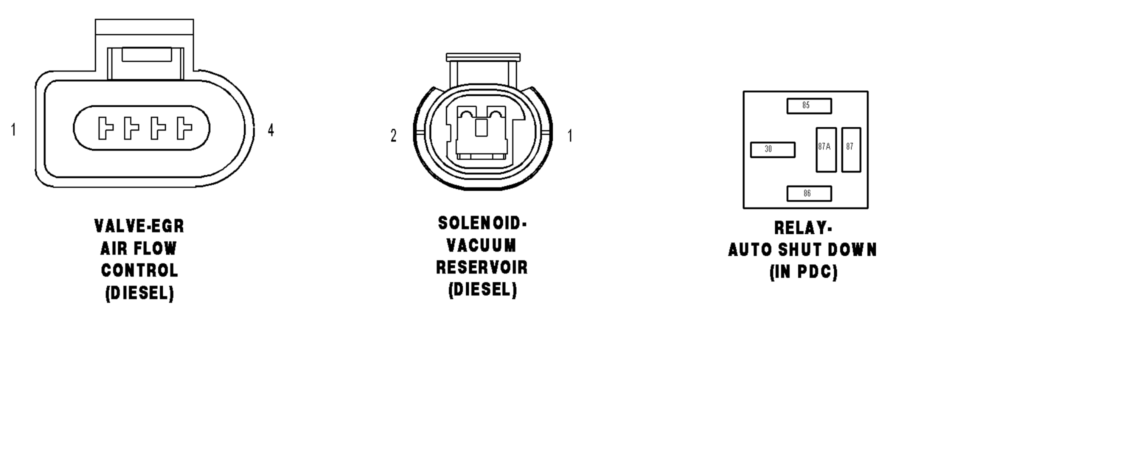
**Is there evidence of smoke leakage?**

**Yes** >> Repair or replace as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the EGR Valve.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0402-EGR SOLENOID CIRCUIT POSITIVE DEVIATION





For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM detects EGR flow is more than the requested flow.

| Possible Causes |
|---|
| AIR FILTER |
| AIR RESTRICTION |
| CHECKING FOR AIR LEAKS |
| EGR VALVE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Test drive the vehicle and monitor the scan tool for ECM DTCs.

**NOTE: If there are any Mass Air Flow DTC's, diagnose the MAF DTC's before continuing EGR diagnostics.**

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. AIR FILTER

Turn the ignition off.

Remove and inspect the Air Filter for soiling or excessive dirt and debris which may cause air flow restriction.

**Were any of these problems found?**

**Yes** >> Replace the Air Filter element.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

### 3. AIR RESTRICTION

**NOTE: Inspect all air intake, crankcase vent and turbocharger related tubes for damage, restriction or poor connection. Any of these conditions can cause a this DTC to set.**

**NOTE: Inspect the exhaust system and related tubes for damage, restriction or poor connection. Any of these conditions can cause a this DTC to set.**

Inspect the intake system, exhaust system and related tubes and connections.

**Were any problems found?**

**Yes** >> Repair or replace as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. EGR ACTUATION - IDLE

**NOTE: Inspect the complete exhaust system for restriction. Restrictions in the exhaust system can cause improper EGR flow. Repair as necessary**

Start engine.

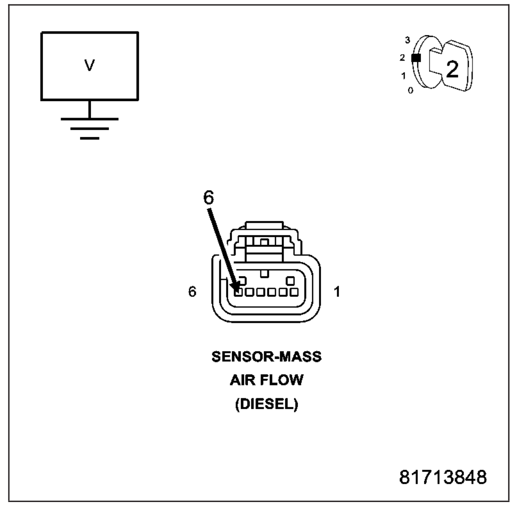
Allow the engine to idle until the engine reaches operating temperature.

While back probing, measure the MAF Sensor Signal circuit at the MAF Sensor harness connector.

With the scan tool, perform the EGR Actuator with the engine idling.

**NOTE: The MAF reading should change by at least 0.23 volts during EGR actuation**

Note the MAF readings.



**Does the MAF reading switch a minimum of 0.23 volt during EGR actuation?**

**Yes** >> Go To 5

**No** >> Go To 6

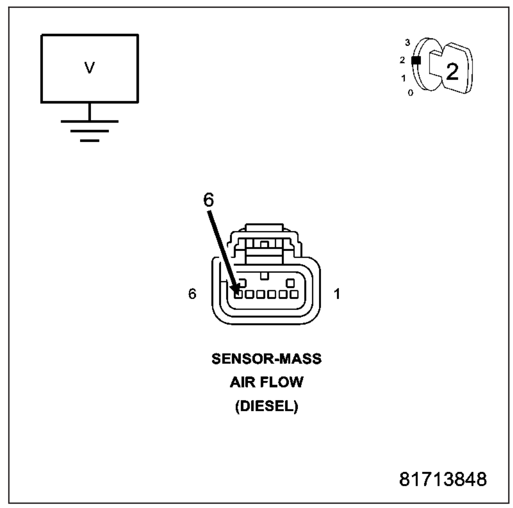
## 5. EGR ACTUATION - 1000 RPM

While back probing, measure the MAF Sensor Signal circuit at the MAF Sensor harness connector.

With the scan tool, perform the EGR Actuator with the engine speed at 1000 rpm.

**NOTE: The MAF reading should change by at least 0.30 volts during EGR actuation**

Note the MAF readings.



**Does the MAF reading switch a minimum of 0.30 volt during EGR actuation?**

**Yes** >> Test Complete.

**No** >> Go To 6

## 6. CHECKING FOR AIR LEAKS

Turn the ignition off.

Remove the Inlet Pressure Sensor.

Connect smoke machine 84-04 to the Inlet Pressure Sensor port in the intake duct and begin injecting smoke into the intake system.

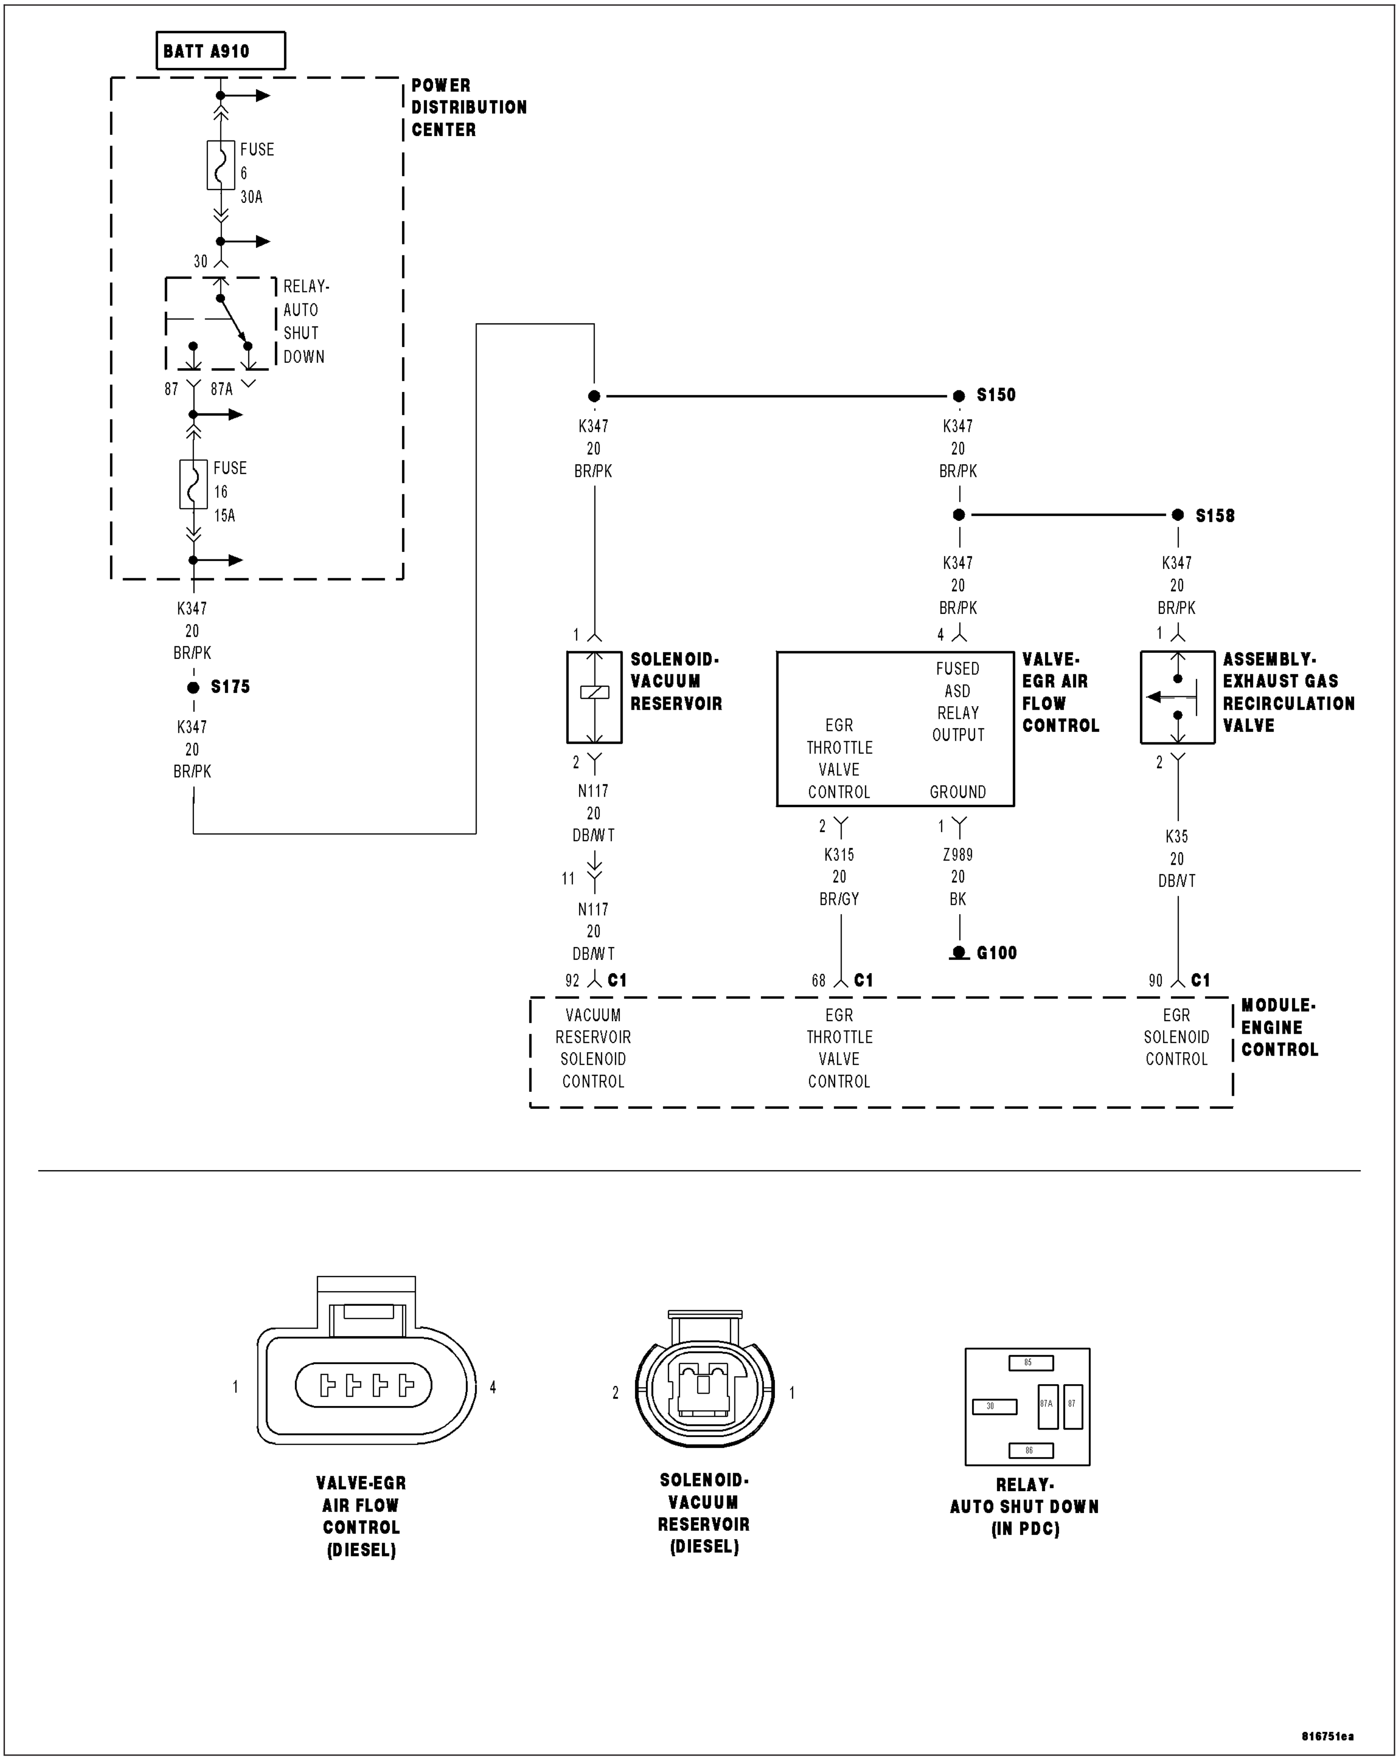
Observe all intake system components for evidence of smoke leakage.

**Is there evidence of smoke leakage?**

**Yes** >> Repair or replace as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the EGR Valve.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0403-EGR SOLENOID CIRCUIT EXCESSIVE CURRENT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM EGR Solenoid command on.
- **Set Condition:**
  The ECM detects excessive current on the EGR Solenoid Control circuit.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| EGR SOLENOID |
| (K35) EGR SOLENOID CONTROL SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE - INTERNAL SHORT TO VOLTAGE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Test drive the vehicle and monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. EGR SOLENOID

Turn the ignition off.

Disconnect the EGR Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**Does the scan tool display P0403 EGR OPEN CIRCUIT?**

**Yes** >> Replace the EGR Solenoid.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. (K35) EGR SOLENOID CONTROL SHORTED TO VOLTAGE

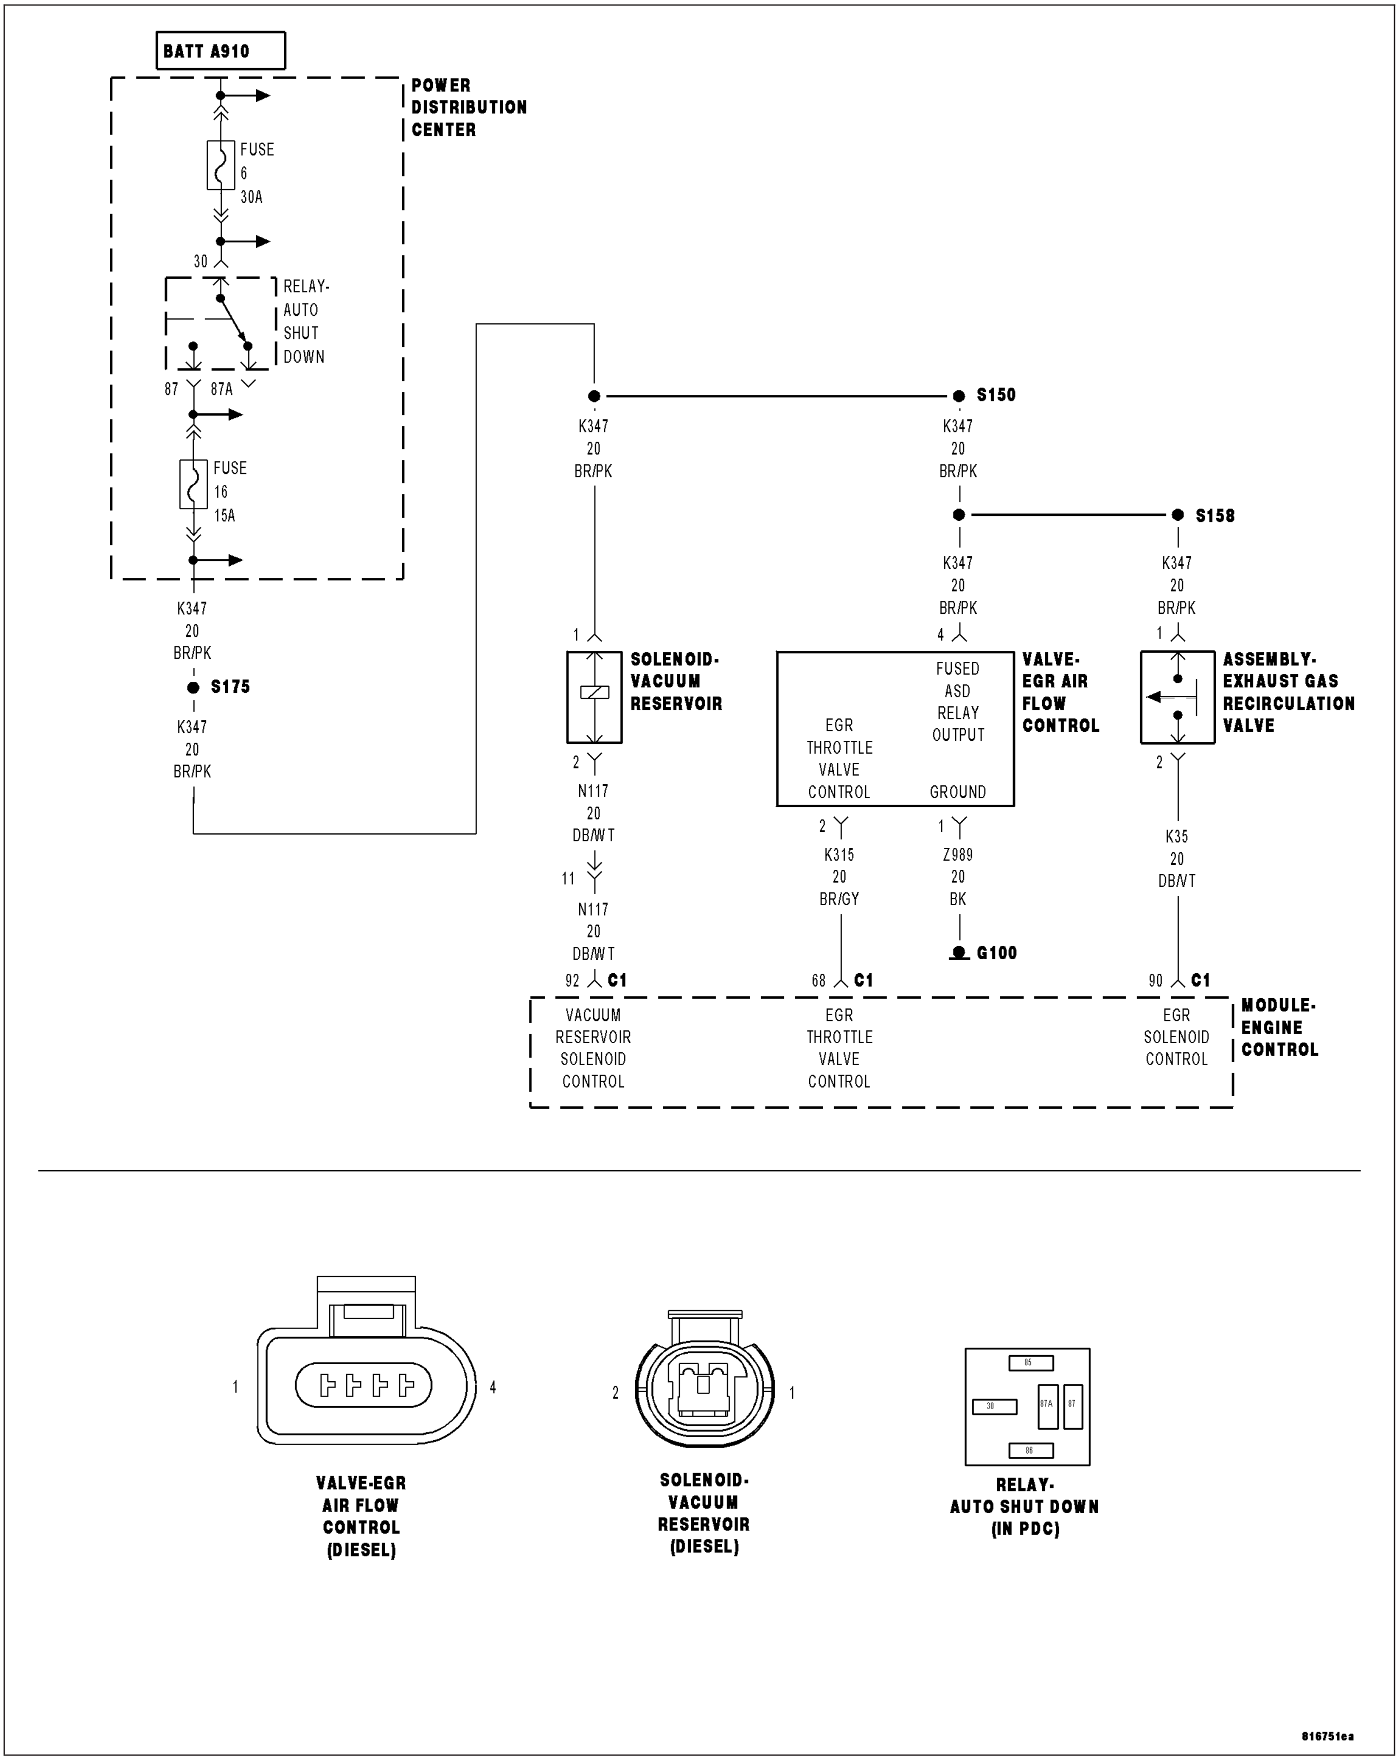
Turn the ignition off.
Disconnect the EGR Solenoid harness connector.
Disconnect the ECM harness connectors.
Remove the ASD Relay from the PDC.
Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.
Turn the ignition on.
Measure the voltage of the (K35) EGR Solenoid Control circuit.

**Is the voltage below 0.5 volt?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the (K35) EGR Solenoid Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0403-EGR SOLENOID CIRCUIT OPEN CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM EGR Solenoid command off.
- **Set Condition:**
  The ECM does not detect voltage on the EGR Solenoid Control circuit.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| (K35) EGR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND |
| (K35) EGR SOLENOID CONTROL CIRCUIT OPEN |
| EGR SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several ignition cycles, turning the ignition off for at least 10 seconds between each ignition cycle.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

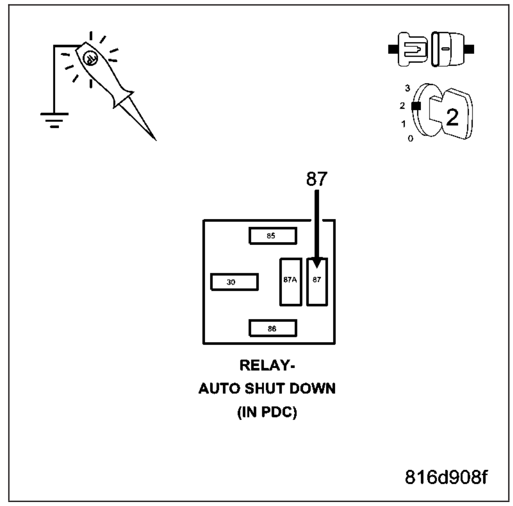
## 3. ASD OUTPUT CKT OPEN

Turn the ignition off.

Disconnect the EGR Solenoid harness connector.

Turn the ignition on.

Using a 12-volt test light connected to ground, check the ASD Relay Output circuit.



**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the ASD Relay Output circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. (K35) EGR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the EGR Solenoid harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the (K35) EGR Solenoid Control circuit.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 5

**No** >> Repair the (K35) EGR Solenoid Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. (K35) EGR SOLENOID CONTROL CIRCUIT OPEN

Measure the resistance of the (K35) EGR Solenoid Control circuit between the EGR Solenoid harness connector and the ECM C1 harness connector.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the (K35) EGR Solenoid Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. EGR SOLENOID

Install a substitute EGR Solenoid in place of the vehicle's EGR Solenoid.

**NOTE: Ensure the ECM and EGR Solenoid harness connectors are connected.**

Turn the ignition on.

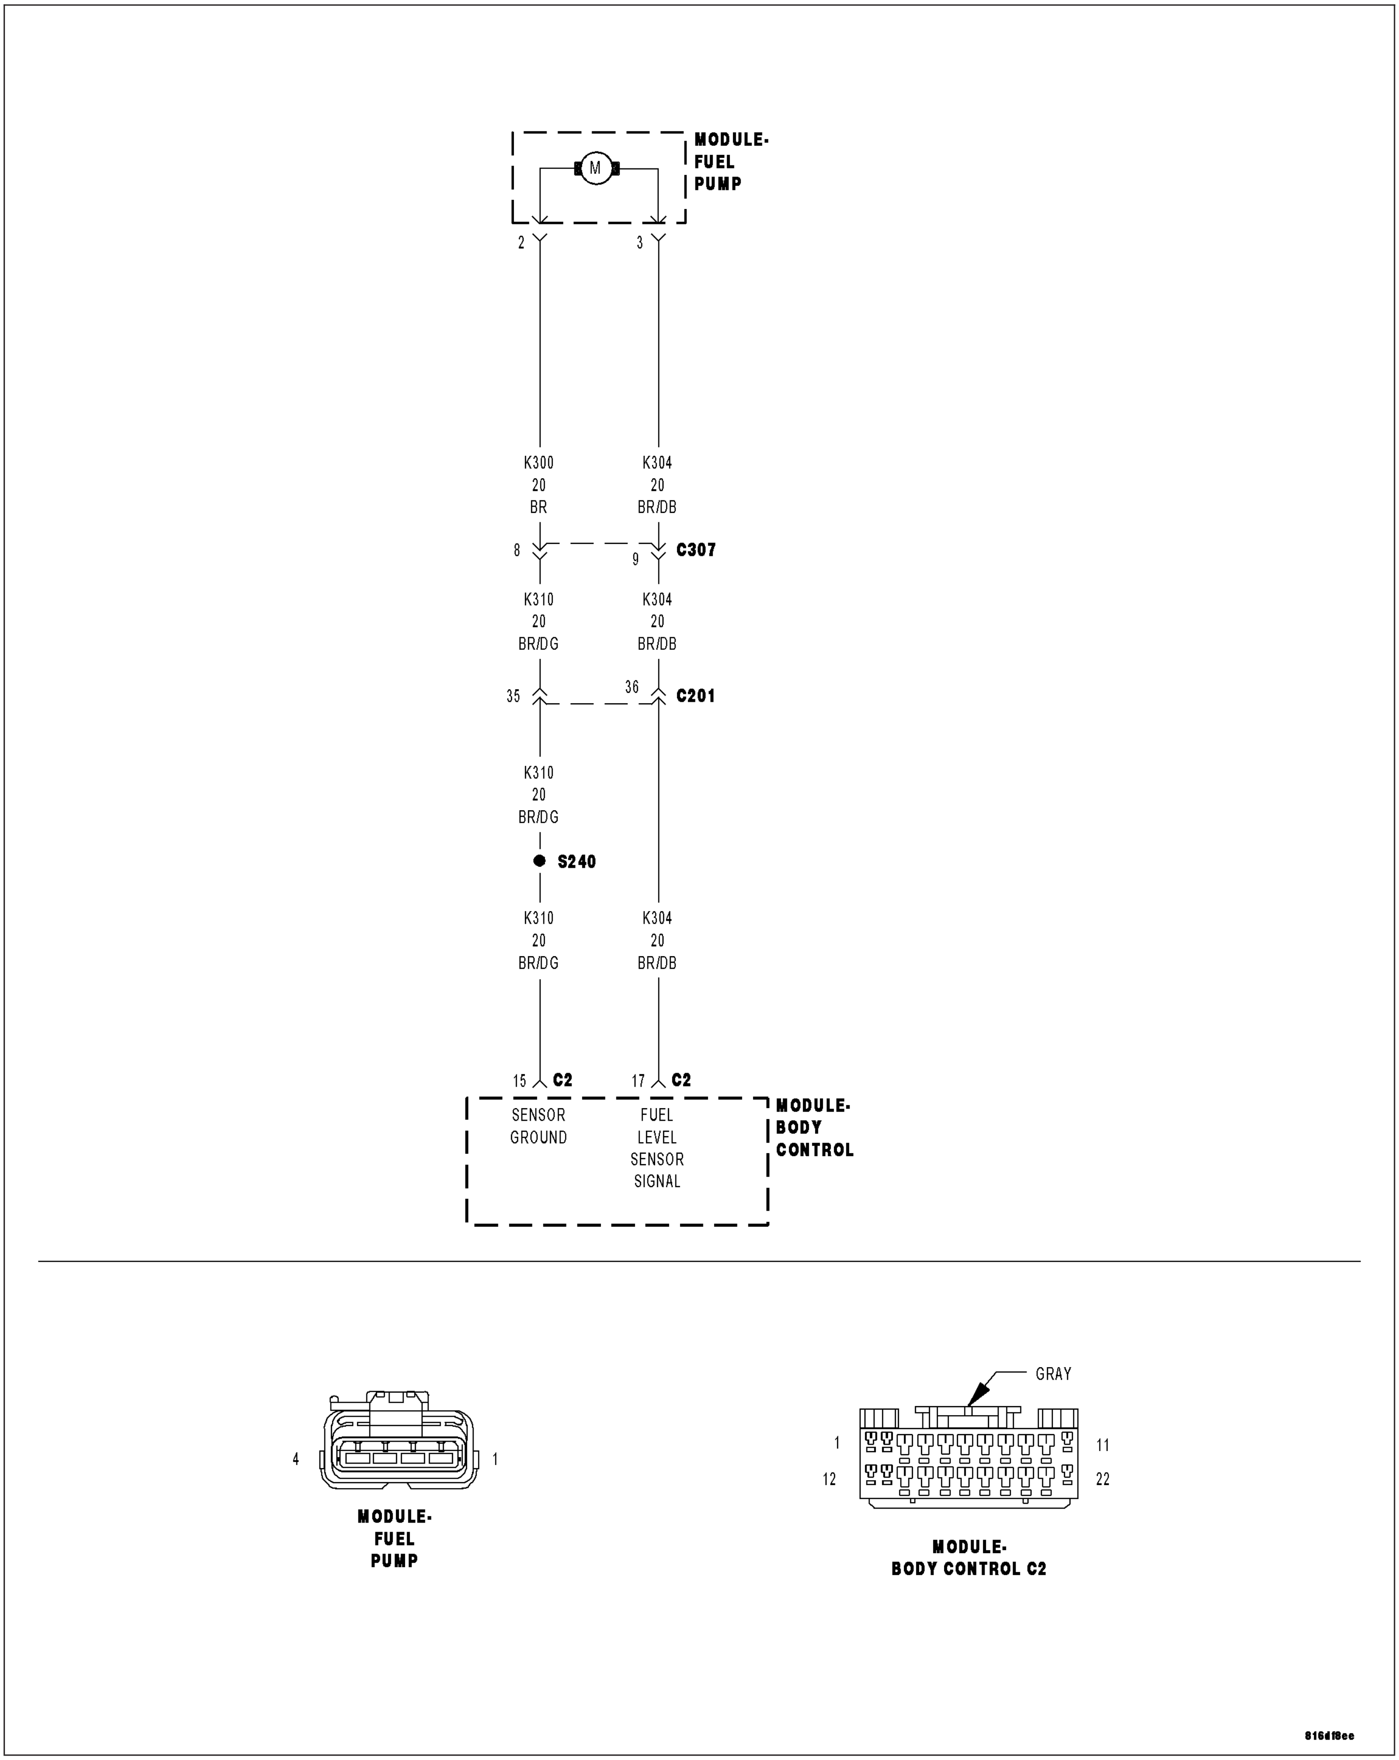
With the scan tool, check for this DTC to set again.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the EGR Solenoid.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0460-FUEL LEVEL SENSOR CIRCUIT SIGNAL VOLTAGE TOO HIGH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The Fuel Level Sensor signal voltage is above 4.51 volts for 1.0 seconds.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| (K304) FUEL LEVEL SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| (K304) FUEL LEVEL SENSOR SIGNAL CIRCUIT OPEN |
| (K300) FUEL LEVEL SENSOR GROUND CIRCUIT OPEN |
| FUEL PUMP MODULE |
| BODY CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Turn the ignition off, wait 10 seconds, then turn the ignition on.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. (K304) FUEL LEVEL SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the BCM harness connectors.

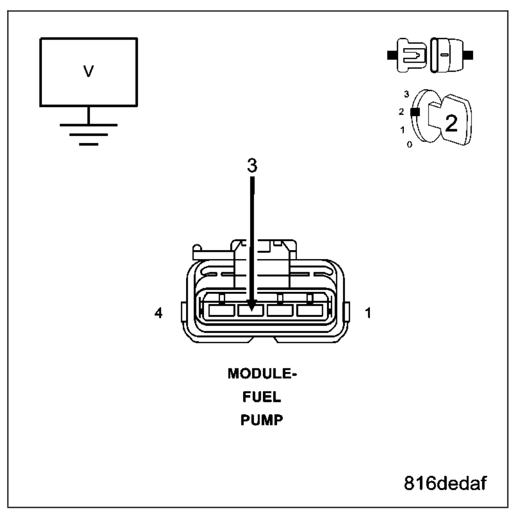
Disconnect the Fuel Pump Module harness connector.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage on the (K304) Fuel Level Sensor Signal circuit.



**Is the voltage below 0.5 volt?**

**Yes** >> Go To 3

**No** >> Repair the (K304) Fuel Level Sensor Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. (K304) FUEL LEVEL SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off.

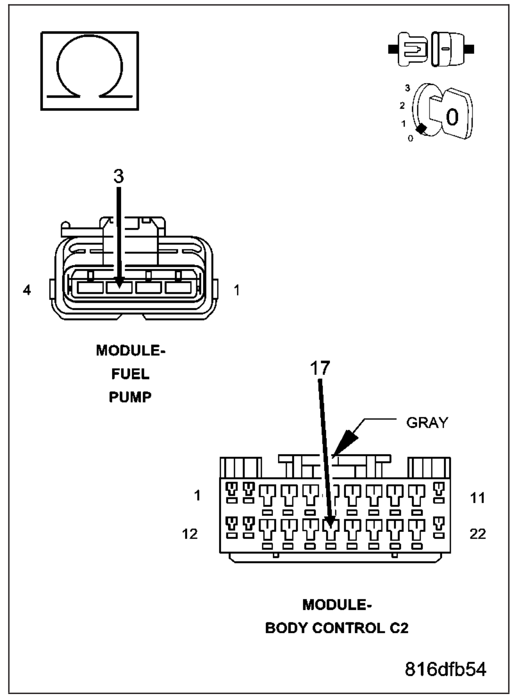
Measure the resistance of the (K304) Fuel Level Sensor Signal circuit from the Fuel Pump Module harness connector to the BCM harness connector.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the (K304) Fuel Level Sensor Signal circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 4. FUEL LEVEL SENSOR GROUND CIRCUIT OPEN

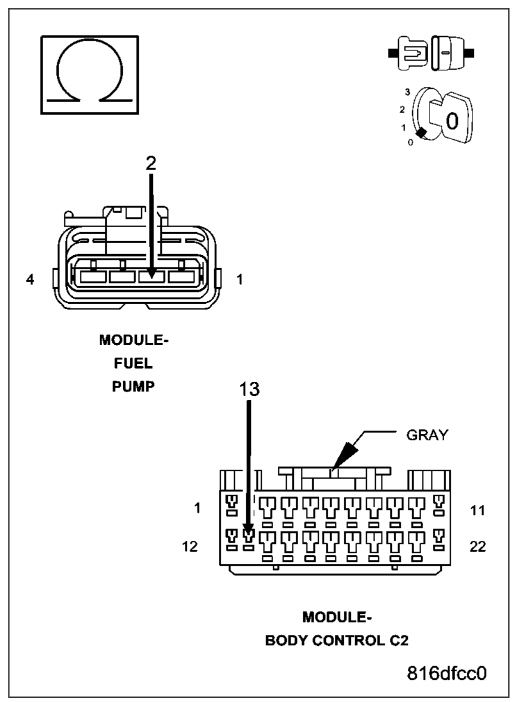
Measure the resistance of the (K300) Fuel Level Sensor Ground circuit from the Fuel Pump Module harness connector to the BCM harness connector.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the (K300) Fuel Level Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 5. FUEL LEVEL SENSOR

Turn the ignition on.

With the scan tool, read and record the Fuel Level Sensor voltage.

**NOTE: The Fuel Level Sensor voltage should be 5.0 ± 0.3 volts with the sensor harness connector disconnected.**

Connect a jumper wire across the Fuel Level Sensor Signal circuit and Sensor Ground circuit at the Fuel Pump Module harness connector.

With the scan tool, read the Fuel Level Sensor voltage.

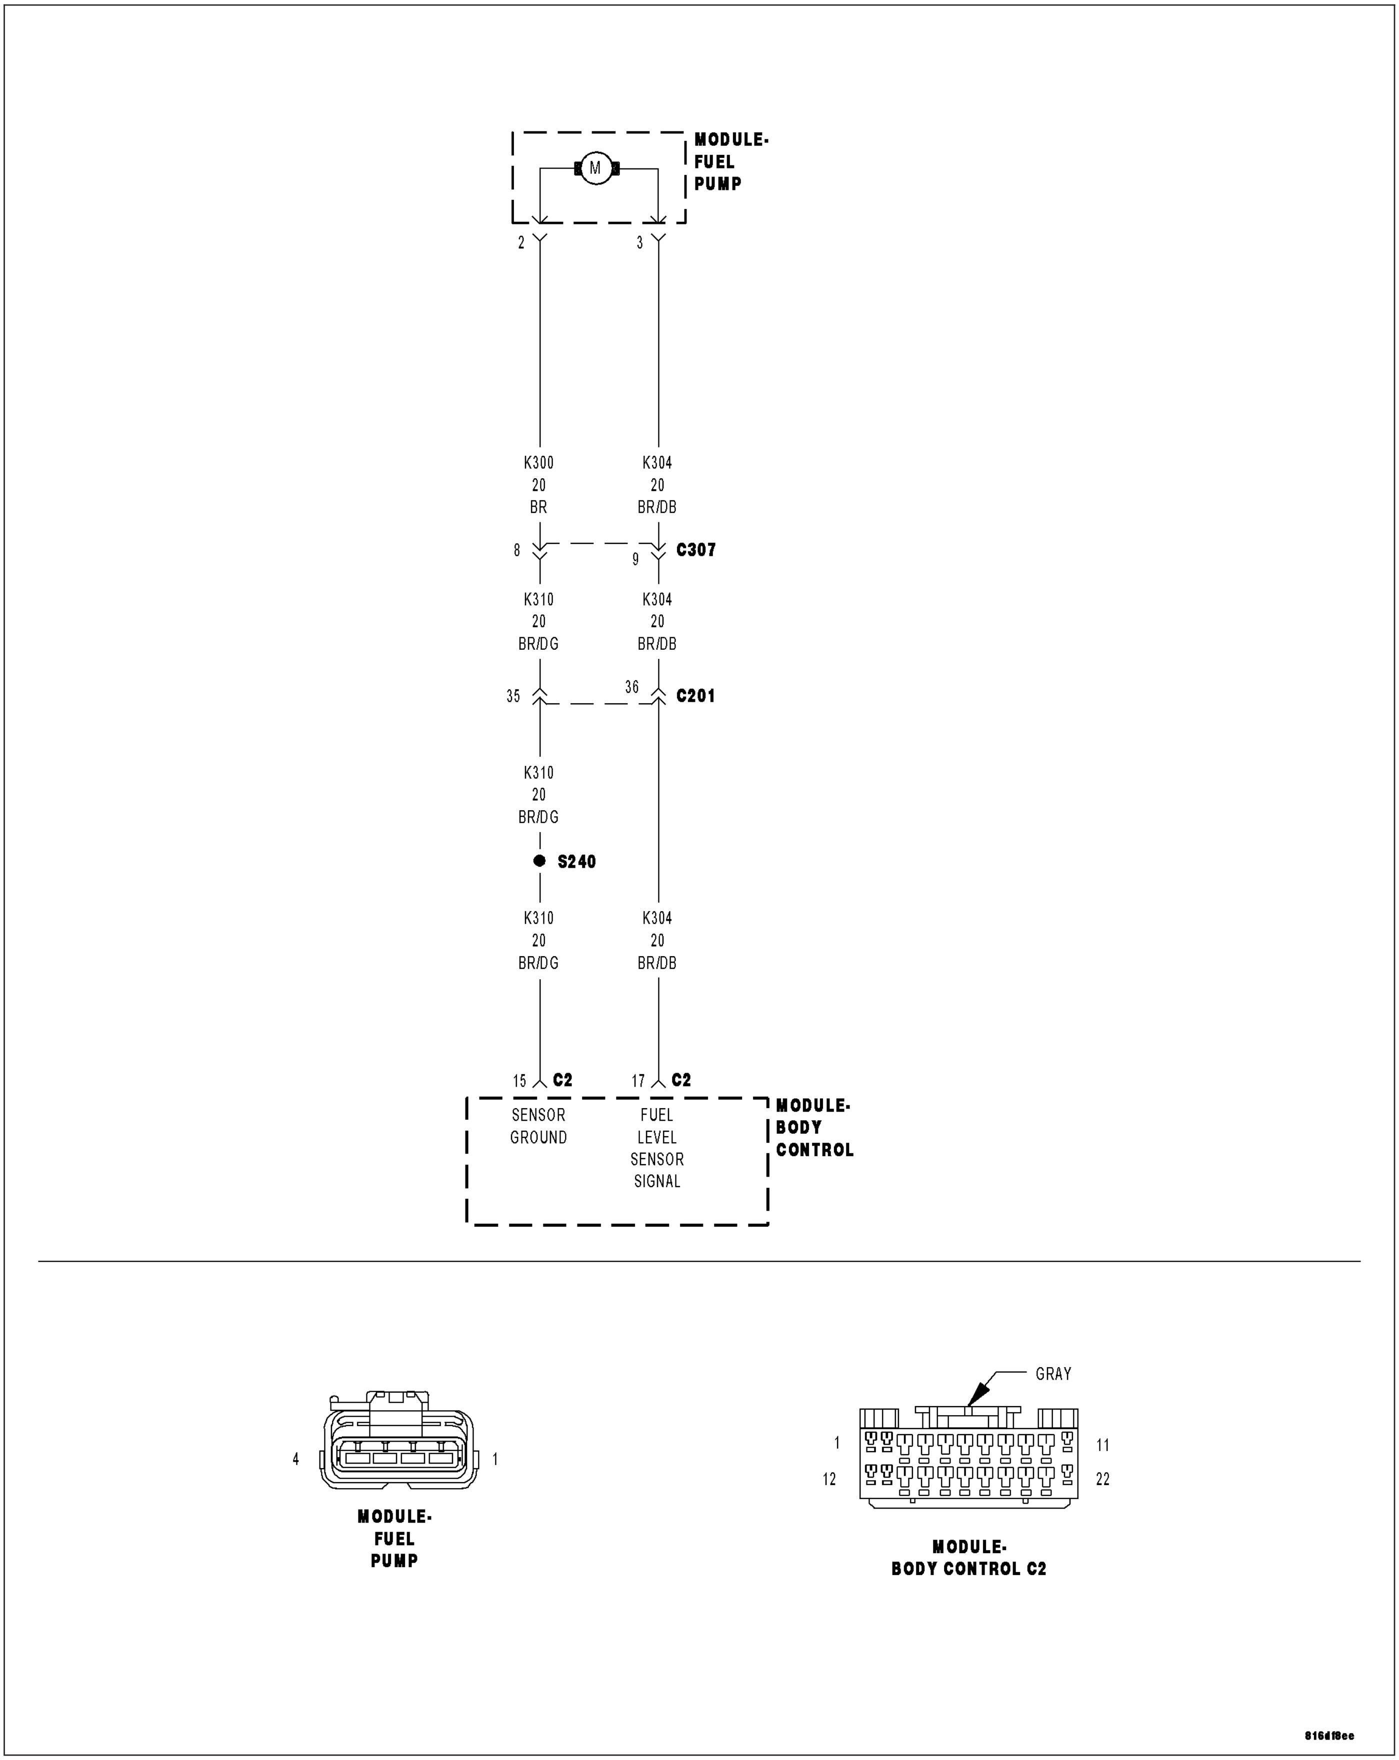
**NOTE: The Fuel Level Sensor voltage should be less then 1.0 volt with the jumper wire connected.**

**Are the voltage readings the expected voltages?**

**Yes** >> Replace the Fuel Pump Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Body Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0460-FUEL LEVEL SENSOR CIRCUIT SIGNAL VOLTAGE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The Fuel Level Sensor signal voltage is below 0.19 volt for 1.0 second.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| FUEL PUMP MODULE |
| (K304) FUEL LEVEL SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| FUEL LEVEL SENSOR SIGNAL AND GROUND CIRCUIT SHORTED TOGETHER |
| BODY CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Turn the ignition off, wait 10 seconds, then turn the ignition on.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. FUEL LEVEL SENSOR

Turn the ignition off.

Disconnect the Fuel Level Sensor harness connector.

Turn the ignition on.

With the scan tool, read the Fuel Level Sensor voltage.

**Is the voltage above 4.8 volts?**

**Yes** >> Replace the Fuel Level Sensor in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. (K304) FUEL LEVEL SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the Fuel Pump Module harness connector.

Measure the resistance between ground and the (K304) Fuel Level Sensor Signal circuit at the Fuel Pump Module connector.

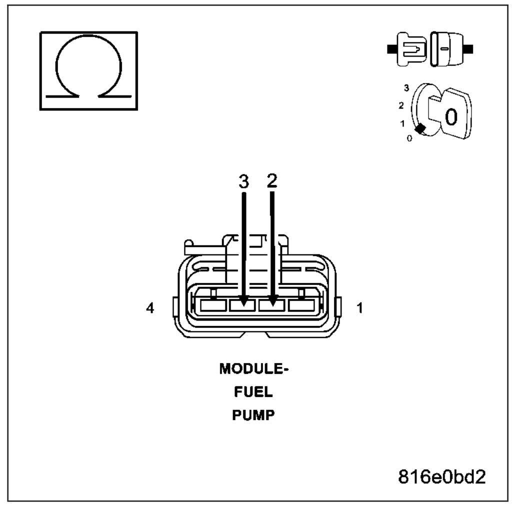
**Is the resistance above 1000 ohms?**

**Yes** >> Go To 4

**No** >> Repair the (K304) Fuel Level Sensor Signal circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. (K304) FUEL LEVEL SENSOR SIGNAL AND (K300) GROUND CIRCUIT SHORTED TOGETHER

Measure the resistance between the (K304) Fuel Level Sensor Signal circuit and (K300) Sensor Ground circuit.

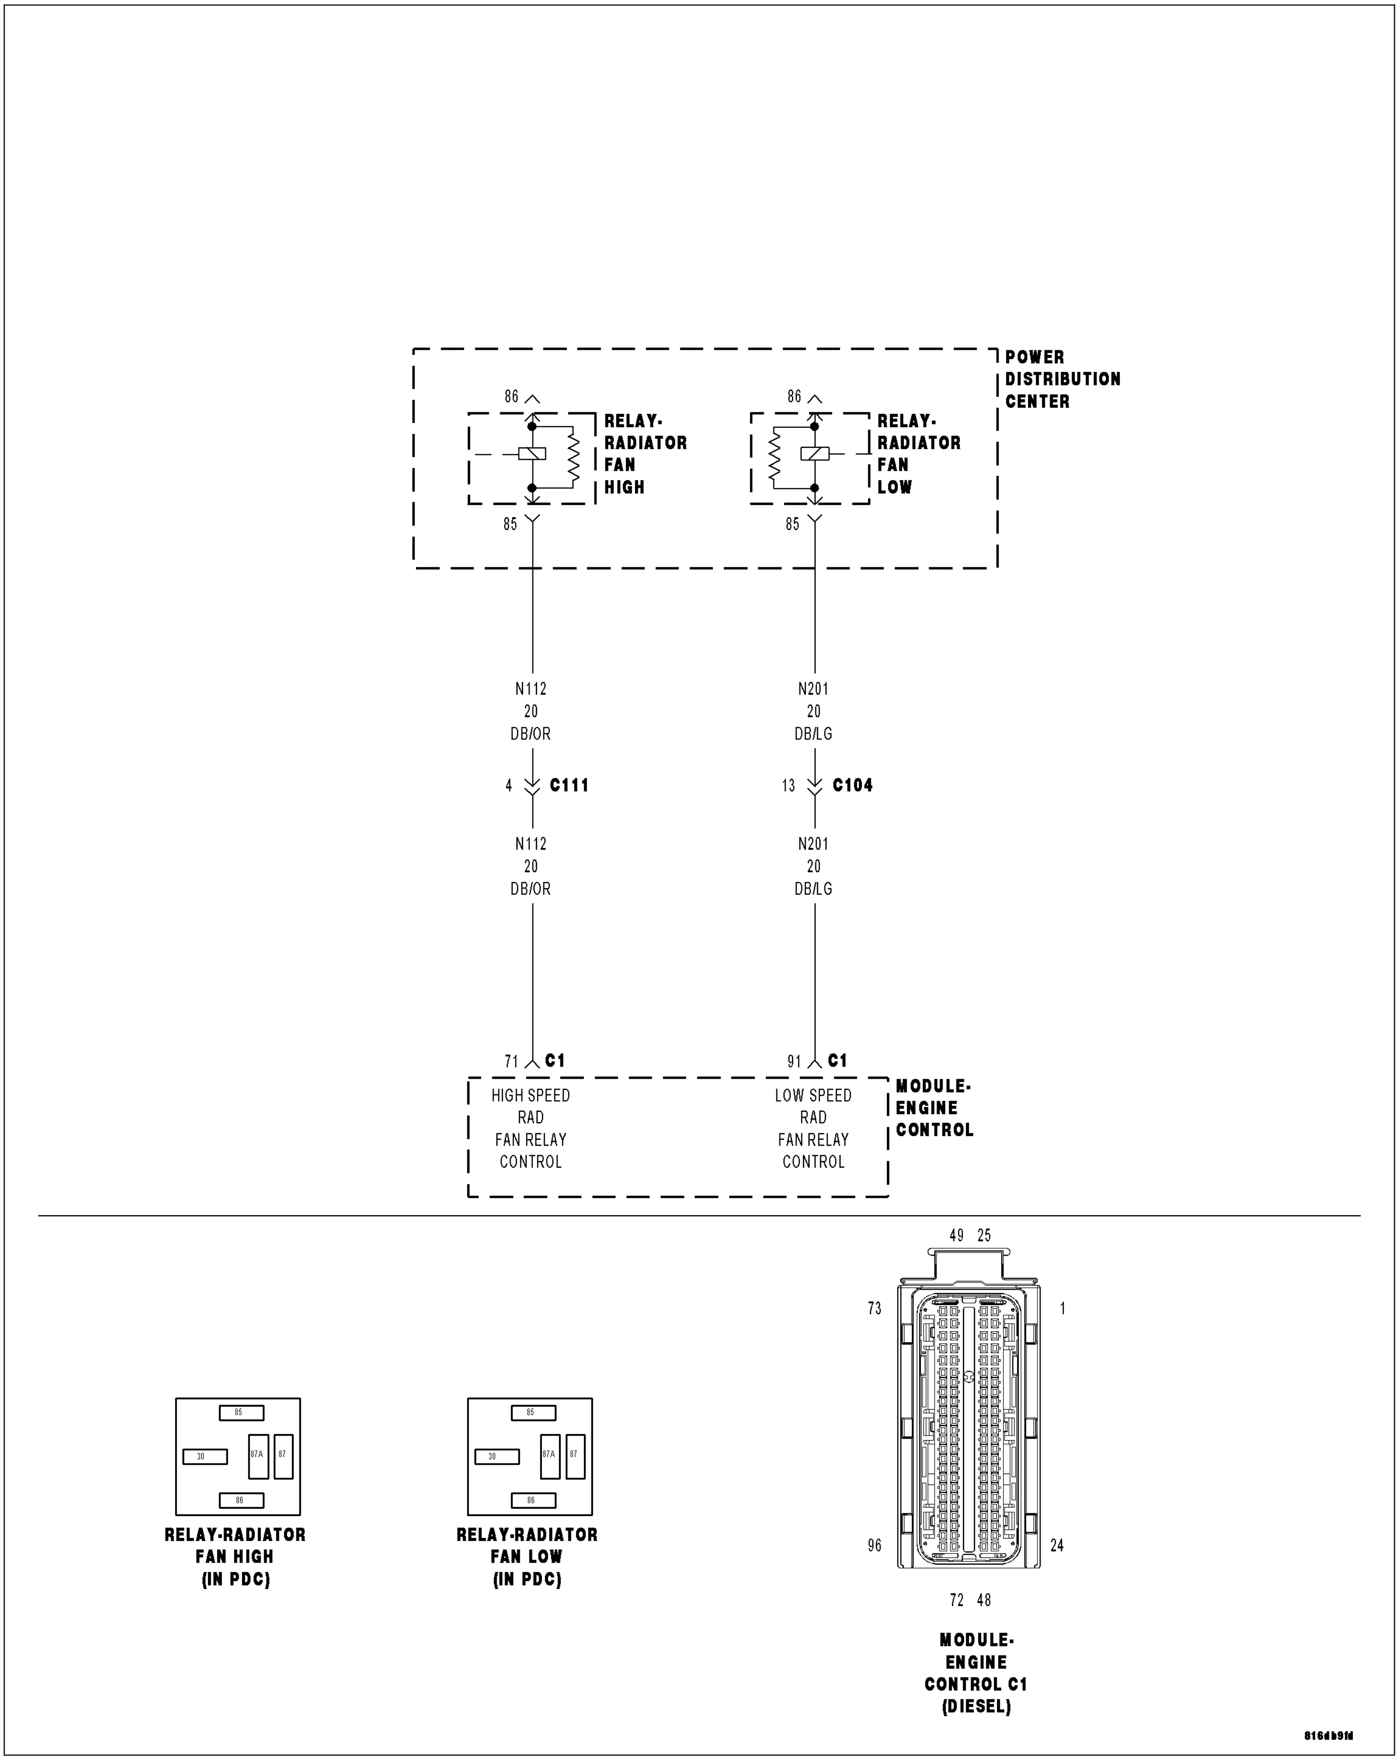


**Is the resistance above 1000 ohms?**

**Yes** >> Replace and program the Body Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the (K304) Fuel Level Sensor Signal and (K300) Ground circuit for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0480-FAN 1 CONTROL CIRCUIT EXCESSIVE CURRENT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Low Speed Rad Fan Relay command on.
- **Set Condition:**
  The ECM detects excessive current on the Low Speed Rad Fan Relay Control circuit.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| LOW SPEED RADIATOR FAN RELAY |
| (N201) LOW SPEED RADIATOR FAN CONTROL CIRCUIT SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, actuate the Low Speed Radiator Fan Relay.

**Does the Radiator Fan cycle on and off?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 2

### 2. LOW SPEED RADIATOR FAN RELAY

Turn the ignition off.

Install a know good relay in place of the Low Speed Radiator Fan Relay.

Turn the ignition on.

With the scan tool, actuate the Low Speed Radiator Fan Relay.

**Does the Radiator Fan cycle on and off?**

**Yes** >> Replace the Low Speed Radiator Fan Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. (N201) LOW SPEED RADIATOR FAN CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the ECM harness connectors.

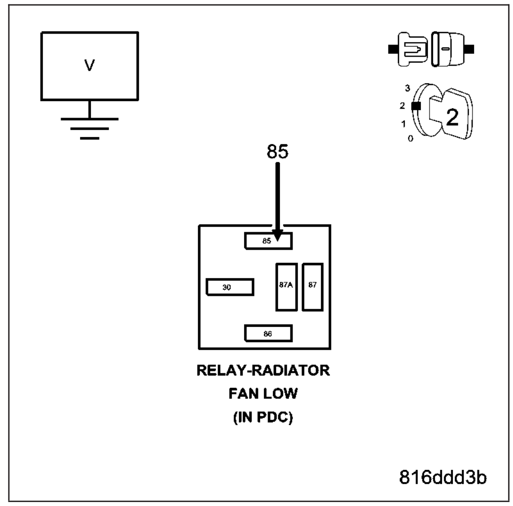
Remove the Low Speed Radiator Fan Relay from the PDC.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of (N201) Low Speed Radiator Fan Control circuit.



**Is the voltage below 1.0 volt?**

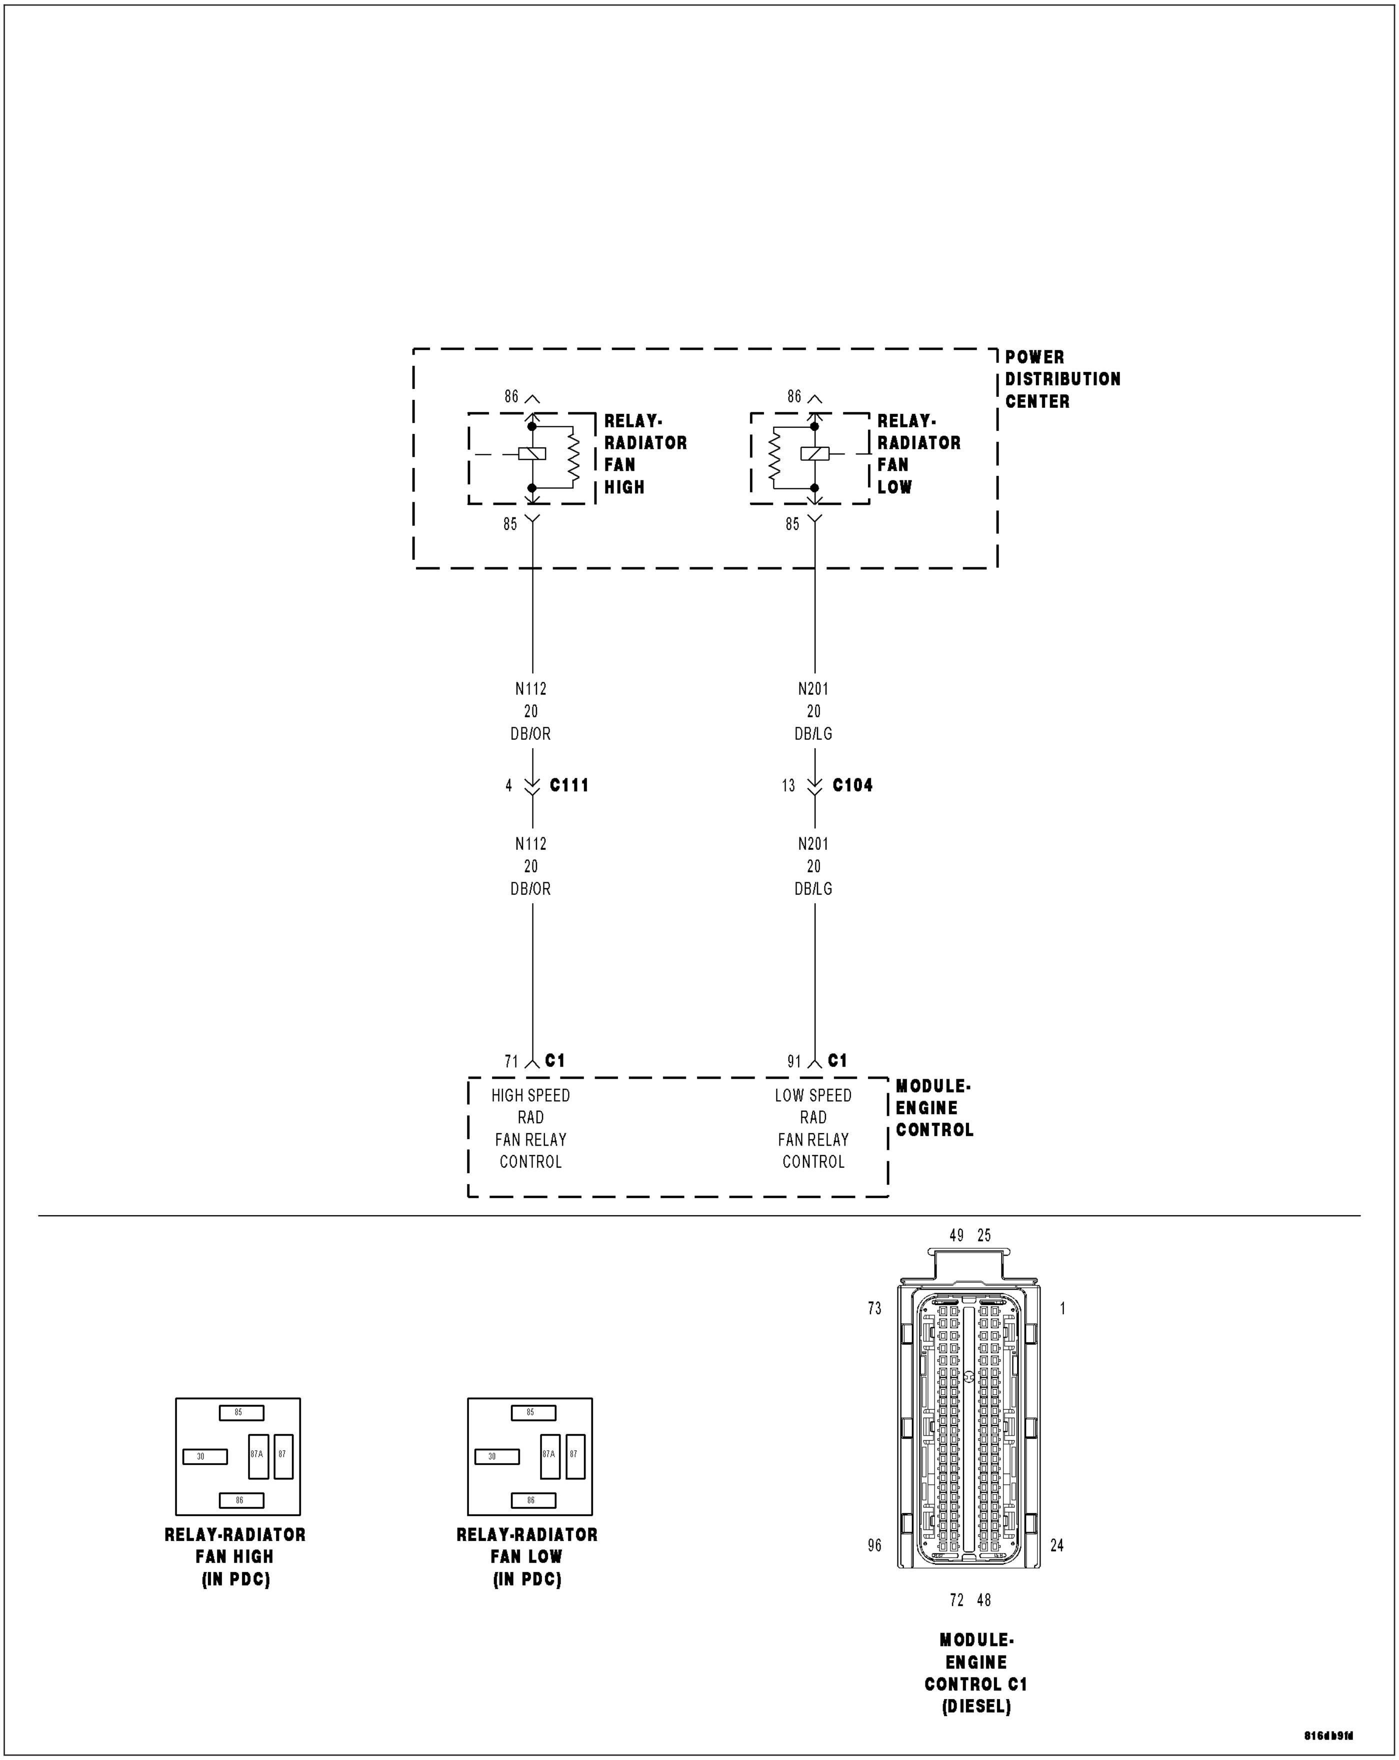
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the (N201) Low Speed Radiator Fan Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0480-FAN 1 CONTROL CIRCUIT OPEN CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Low Speed Rad Fan Relay command off.
- **Set Condition:**
  The ECM does not detect voltage on the Low Speed Rad Fan Relay Control circuit.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| LOW SPEED RADIATOR FAN RELAY |
| (N201) LOW SPEED RADIATOR FAN CONTROL CIRCUIT SHORTED TO GROUND |
| (N201) LOW SPEED RADIATOR FAN CONTROL CIRCUIT OPEN |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, actuate the Low Speed Radiator Fan Relay.

**Does the Radiator Fan cycle on and off?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. ASD RELAY OUTPUT CIRCUIT OPEN

Turn the ignition off.

Remove the Low Speed Radiator Fan Relay from the PDC.

Turn the ignition on.

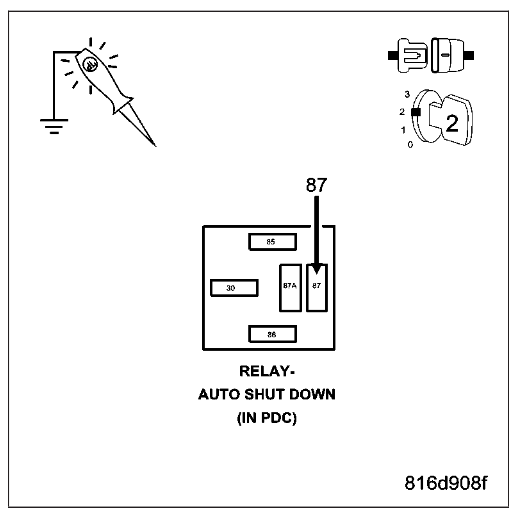
Using a 12-volt test light connected to ground, check the ASD Relay Output circuit.

**Did the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the ASD Relay Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 3. LOW SPEED RADIATOR FAN RELAY

Turn the ignition off.

Install a known good relay in place of the Low Speed Radiator Fan Relay.

Turn the ignition on.

With the scan tool, actuate the Low Speed Rad Fan Relay.

**Does the Radiator Fan cycle on and off?**

**Yes** >> Replace the Low Speed Radiator Fan Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. (N201) LOW SPEED RADIATOR FAN CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Remove the Low Speed Radiator Fan Relay from the PDC.

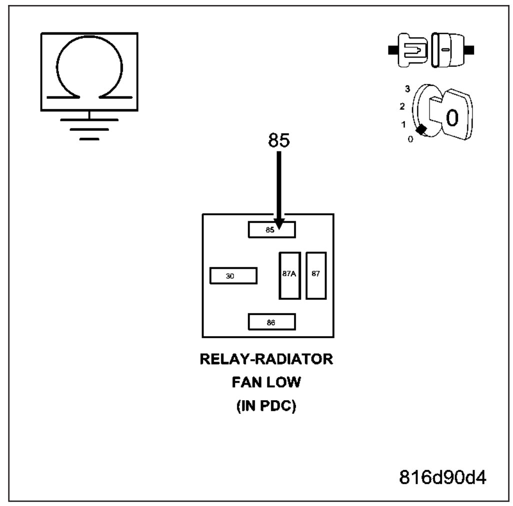
Disconnect the ECM C1 harness connectors.

Measure the resistance between ground and the (N201) Low Speed Radiator Fan Control circuit at the PDC.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 5

**No** >> Repair the (N201) Low Speed Radiator Fan Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



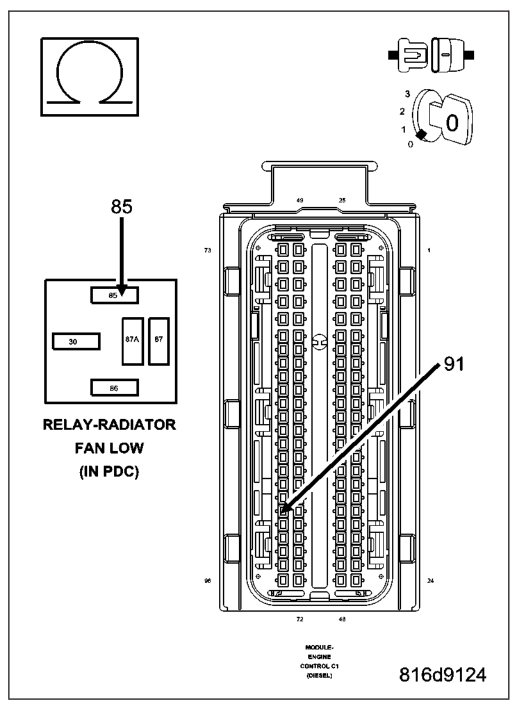
## 5. (N201) LOW SPEED RADIATOR FAN CONTROL CIRCUIT OPEN

Measure the resistance of the (N201) Low Speed Radiator Fan Control circuit between the PDC and the ECM C1 harness connector.

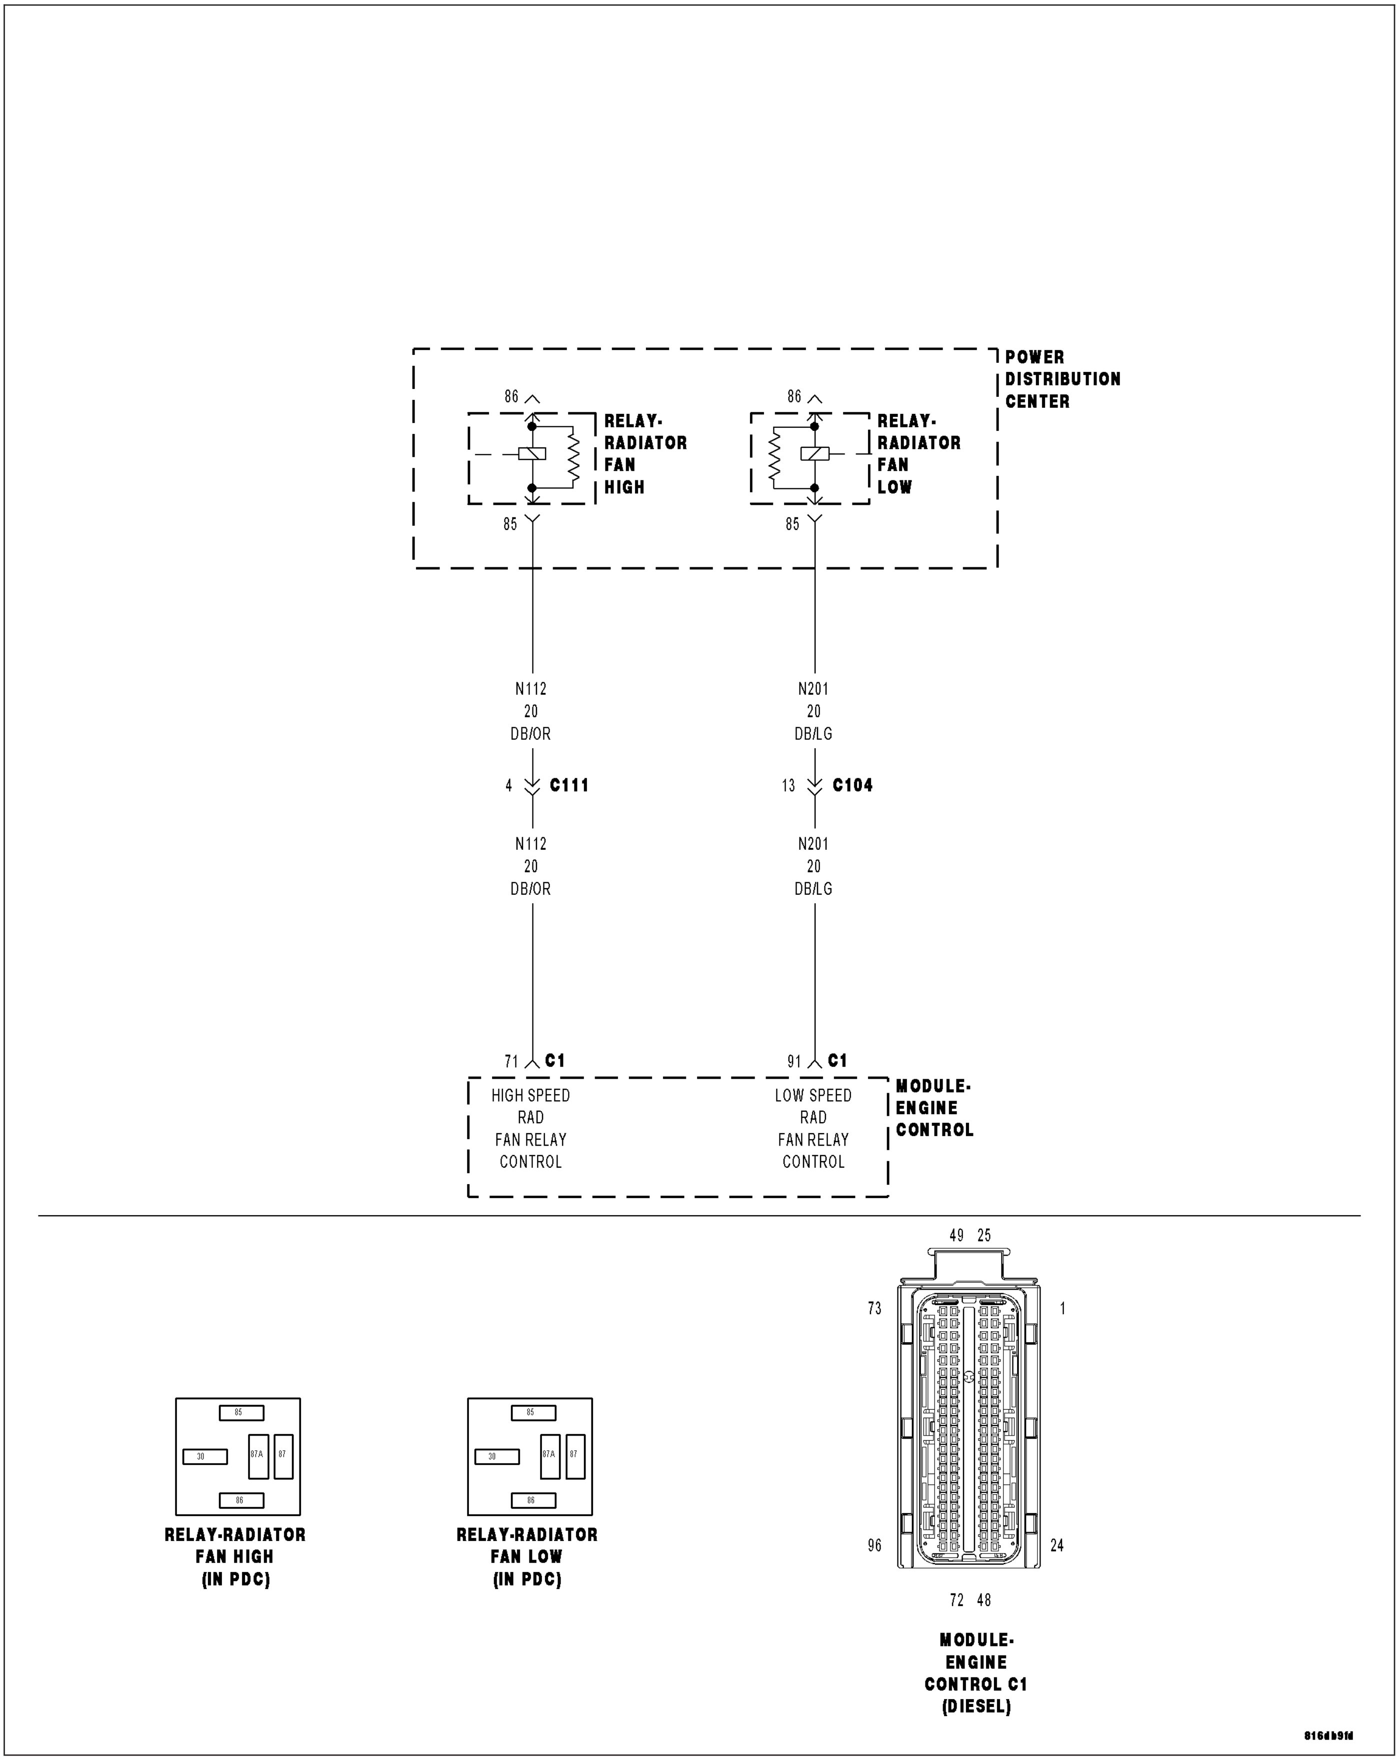
**Is the resistance below 10.0 ohms?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Low Speed Radiator Fan Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## P0480-FAN 1 CONTROL CIRCUIT SHORT TO GROUND



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Low Speed Rad Fan Relay command off.
- **Set Condition:**
  The ECM detects a short to ground on the Low Speed Rad Fan Relay Control circuit.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| LOW SPEED RADIATOR FAN RELAY |
| (N201) LOW SPEED RADIATOR FAN CONTROL CIRCUIT SHORTED TO GROUND |
| (N201) LOW SPEED RADIATOR FAN CONTROL CIRCUIT OPEN |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, actuate the Low Speed Radiator Fan Relay.

**Does the Radiator Fan cycle on and off?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 2

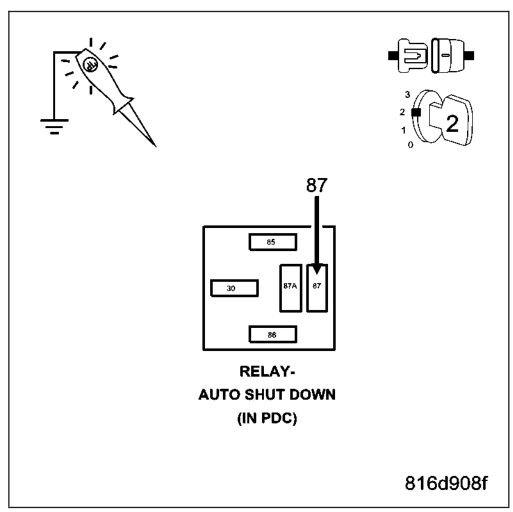
### 2. ASD RELAY OUTPUT CIRCUIT OPEN

Turn the ignition off.

Remove the Low Speed Radiator Fan Relay from the PDC.

Turn the ignition on.

Using a 12-volt test light connected to ground, check the ASD Relay Output circuit.



**Did the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the ASD Relay Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. LOW SPEED RADIATOR FAN RELAY

Turn the ignition off.

Install a substitute relay in place of the Low Speed Radiator Fan Relay.

Turn the ignition on.

With the scan tool, actuate the Low Speed Rad Fan Relay.

**Does the Radiator Fan cycle on and off?**

**Yes** >> Replace the Low Speed Radiator Fan Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. (N201) LOW SPEED RADIATOR FAN CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Remove the Low Speed Radiator Fan Relay from the PDC.

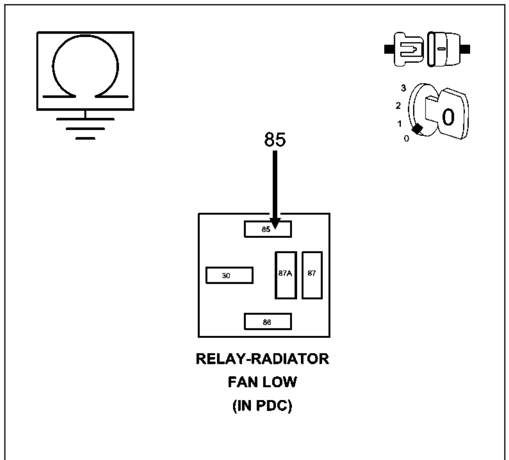
Disconnect the ECM C1 harness connectors.

Measure the resistance between ground and the (N201) Low Speed Radiator Fan Control circuit.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 5

**No** >> Repair the (N201) Low Speed Radiator Fan Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



816d90d4

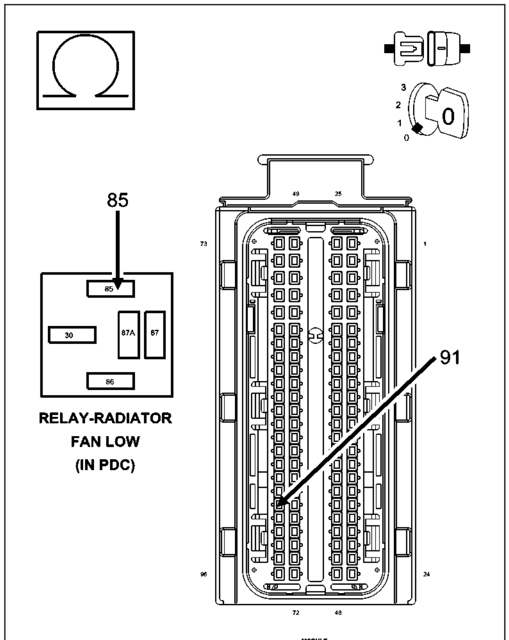
## 5. (N201) LOW SPEED RADIATOR FAN CONTROL CIRCUIT OPEN

Measure the resistance of the (N201) Low Speed Radiator Fan Control circuit between the PDC and the ECM C1 harness connector.

**Is the resistance below 10.0 ohms?**

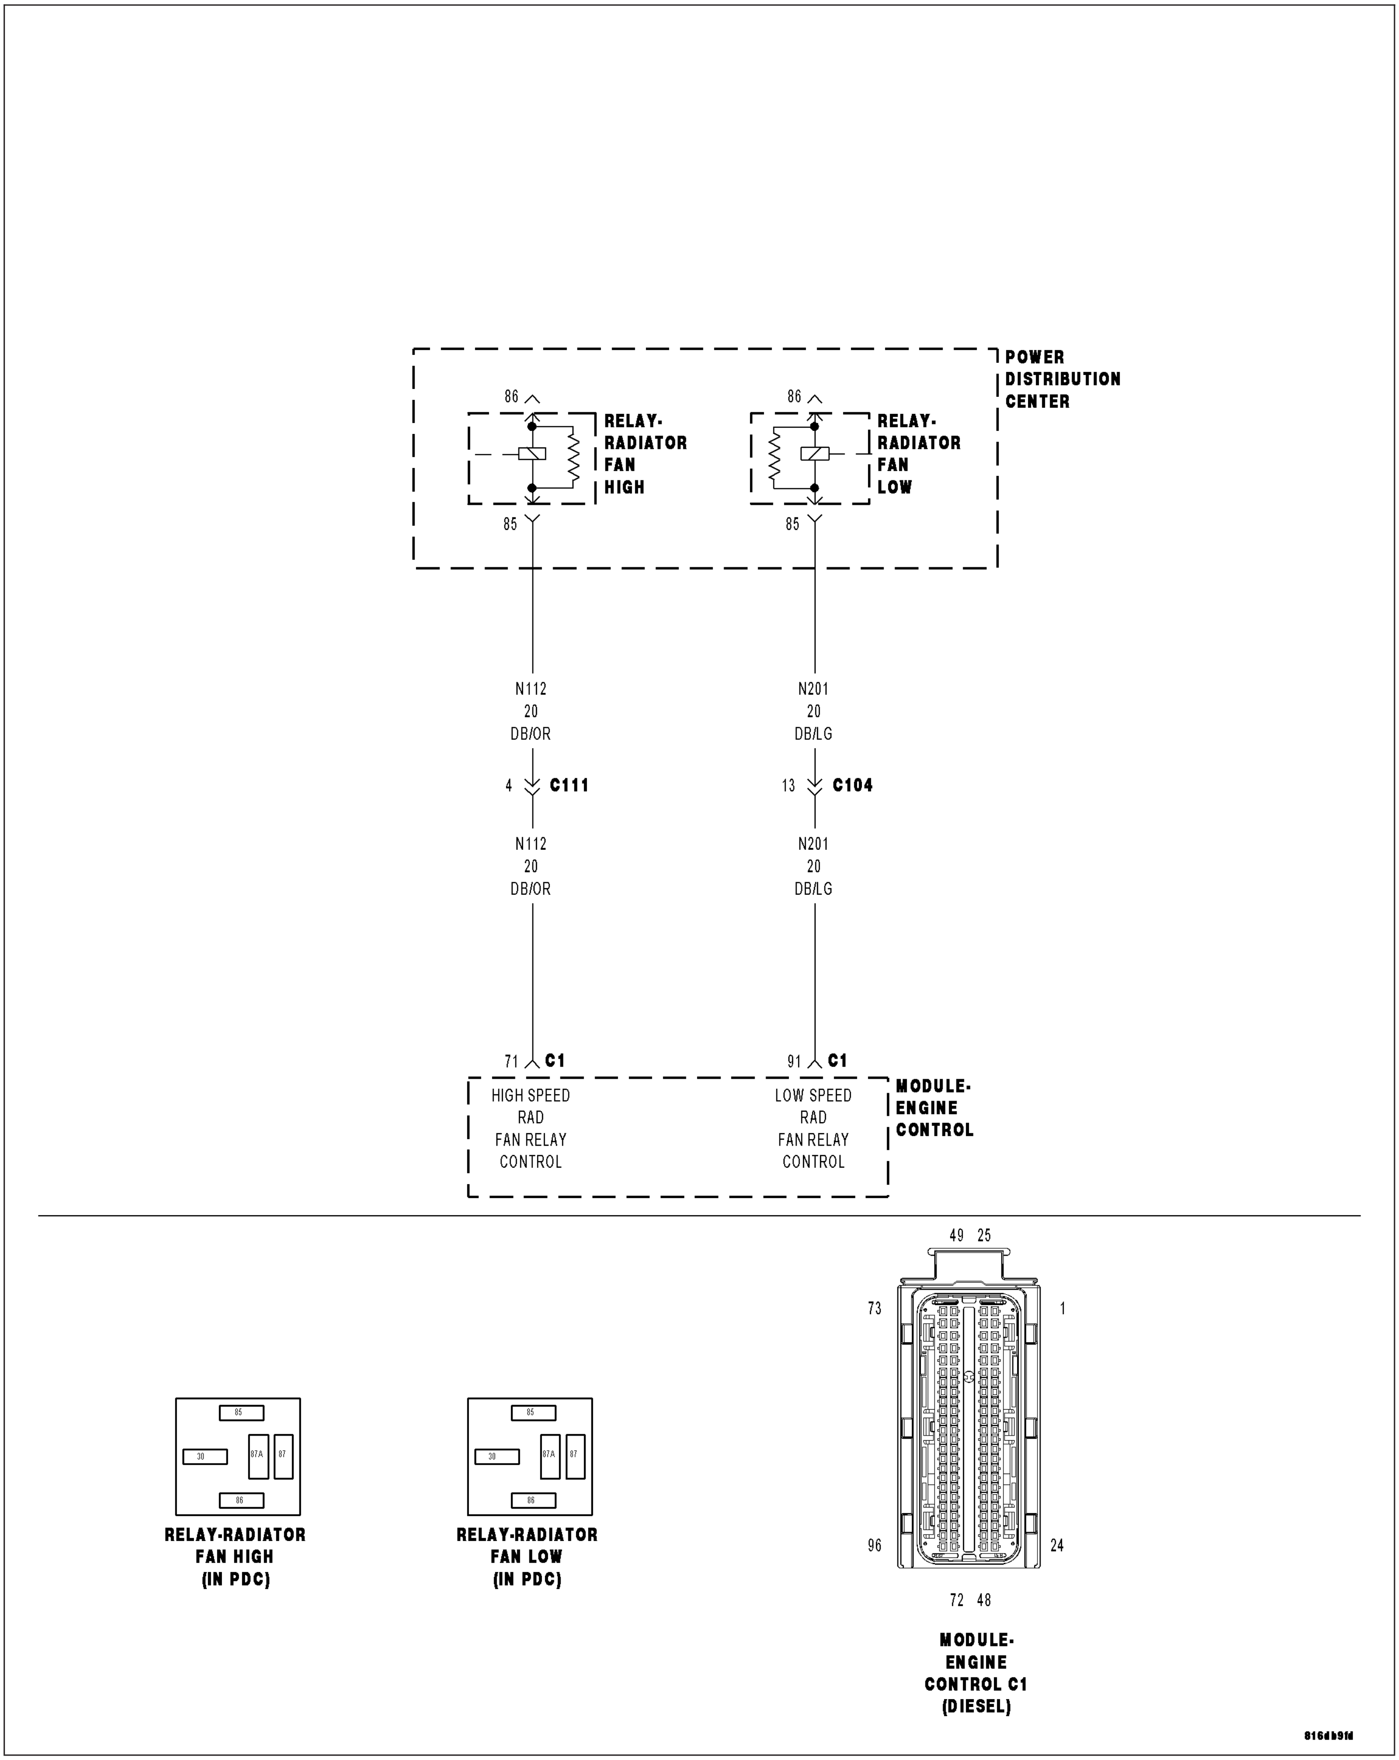
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the (N201) Low Speed Radiator Fan Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



816d9124

## P0480-FAN 1 CONTROL CIRCUIT SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Low Speed Rad Fan Relay command on.
- **Set Condition:**
  The ECM detects excessive current on the Low Speed Rad Fan Relay Control circuit.

| Possible Causes |
| --- |
| INTERMITTENT CONDITION |
| LOW SPEED RADIATOR FAN RELAY |
| (N201) LOW SPEED RADIATOR FAN CONTROL CIRCUIT SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, actuate the Low Speed Radiator Fan Relay.

**Does the Radiator Fan cycle on and off?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 2

### 2. LOW SPEED RADIATOR FAN RELAY

Turn the ignition off.

Install a know good relay in place of the Low Speed Radiator Fan Relay.

Turn the ignition on.

With the scan tool, actuate the Low Speed Radiator Fan Relay.

**Does the Radiator Fan cycle on and off?**

**Yes** >> Replace the Low Speed Radiator Fan Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. (N201) LOW SPEED RADIATOR FAN CONTROL CIRCUIT SHORTED TO VOLTAGE

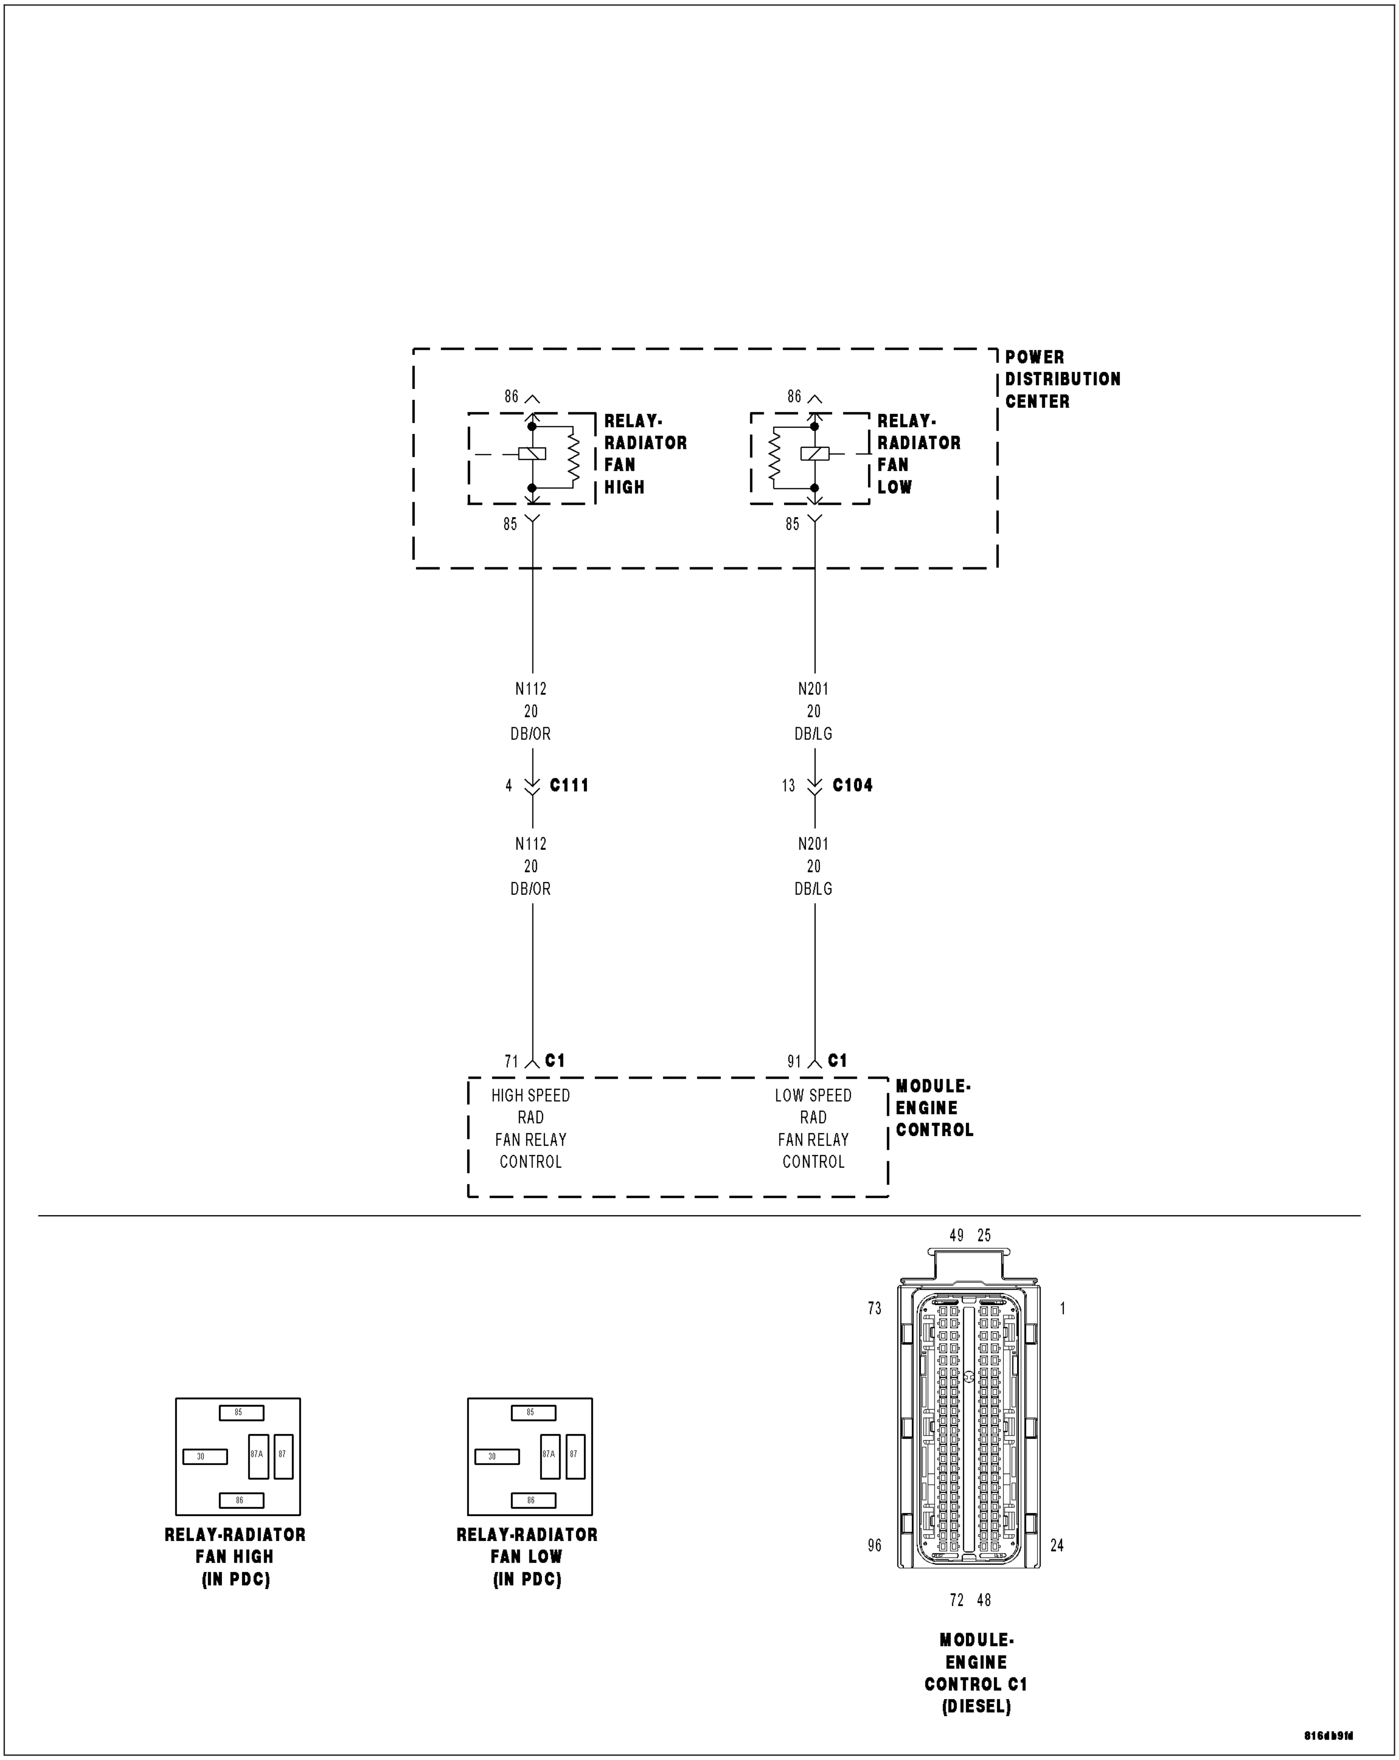
Turn the ignition off.
Disconnect the ECM harness connectors.
Remove the Low Speed Radiator Fan Relay from the PDC.
Remove the ASD Relay from the PDC.
Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.
Turn the ignition on.
Measure the voltage of (N201) Low Speed Radiator Fan Control circuit.

**Is the voltage below 1.0 volt?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the (N201) Low Speed Radiator Fan Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0481-FAN 2 CONTROL CIRCUIT EXCESSIVE CURRENT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM High Speed Rad Fan Relay command on.
- **Set Condition:**
  The ECM detects excessive current on the Low Speed Rad Fan Relay Control circuit.

| Possible Causes |
| --- |
| INTERMITTENT CONDITION |
| LOW SPEED RADIATOR FAN RELAY |
| (N201) LOW SPEED RADIATOR FAN CONTROL CIRCUIT SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, actuate the Low Speed Radiator Fan Relay.

**Does the Radiator Fan cycle on and off?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 2

### 2. LOW SPEED RADIATOR FAN RELAY

Turn the ignition off.

Install a know good relay in place of the Low Speed Radiator Fan Relay.

Turn the ignition on.

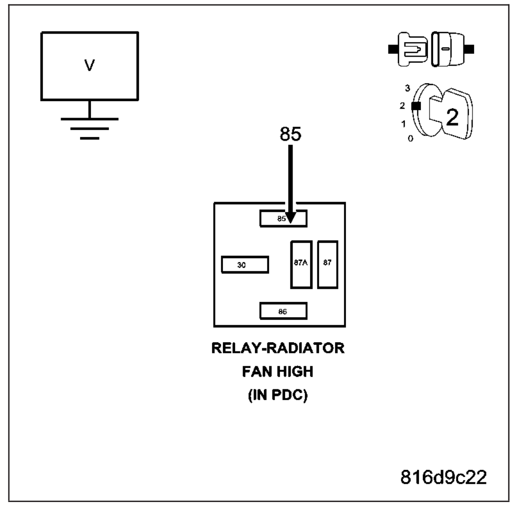
With the scan tool, actuate the Low Speed Radiator Fan Relay.

**Does the Radiator Fan cycle on and off?**

**Yes** >> Replace the Low Speed Radiator Fan Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. (N201) LOW SPEED RADIATOR FAN CONTROL CIRCUIT SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the ECM harness connectors.

Remove the Low Speed Radiator Fan Relay from the PDC.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of (N201) Low Speed Radiator Fan Control circuit.

**Is the voltage below 1.0 volt?**

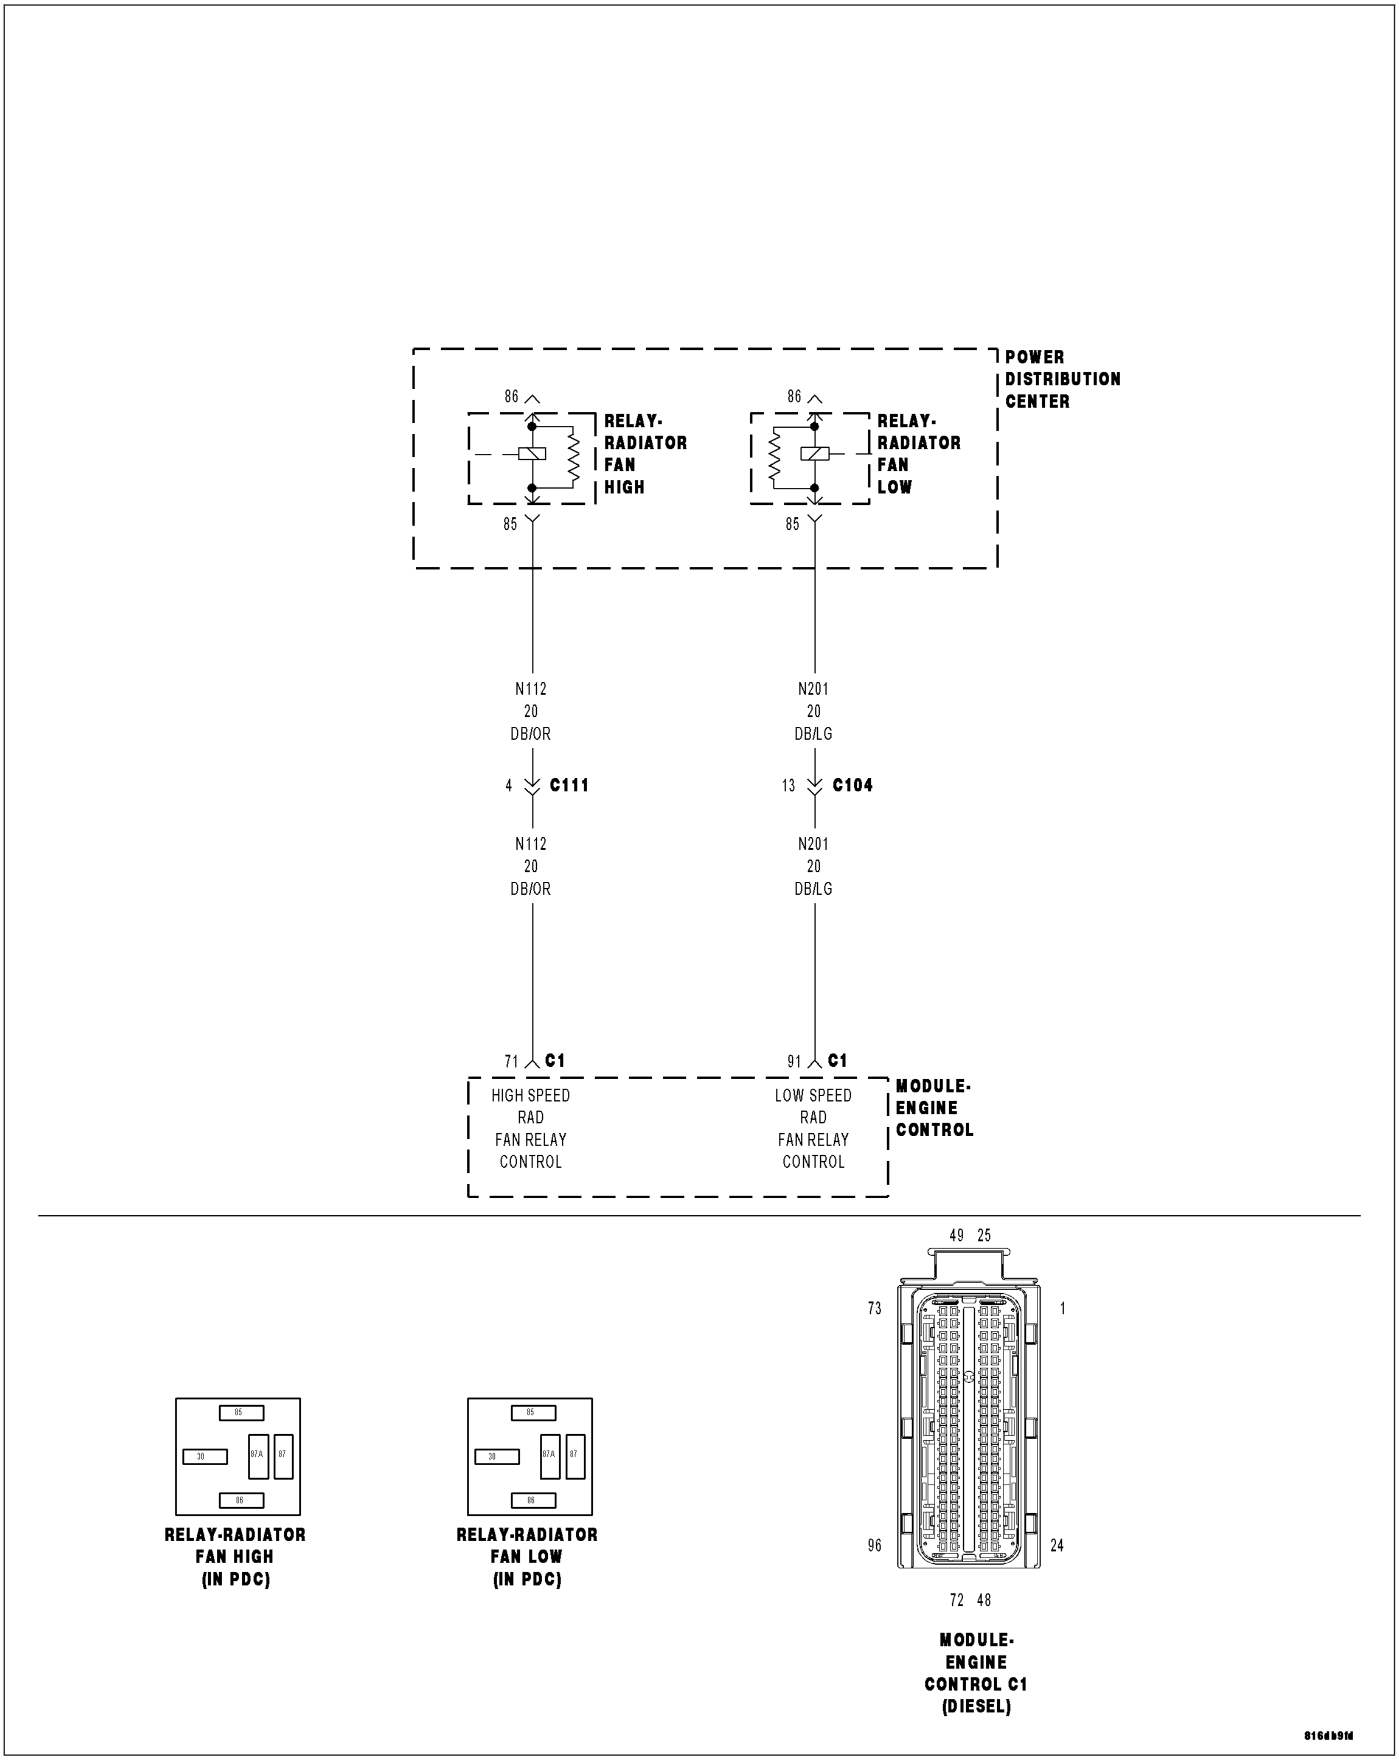
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the (N201) Low Speed Radiator Fan Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0481-FAN 2 CONTROL CIRCUIT OPEN CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Low Speed Rad Fan Relay command off.
- **Set Condition:**
  The ECM does not detect voltage on the Low Speed Rad Fan Relay Control circuit.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| LOW SPEED RADIATOR FAN RELAY |
| (N201) LOW SPEED RADIATOR FAN CONTROL CIRCUIT SHORTED TO GROUND |
| (N201) LOW SPEED RADIATOR FAN CONTROL CIRCUIT OPEN |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the DRB at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, actuate the Low Speed Radiator Fan Relay.

**Does the Radiator Fan cycle on and off?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. ASD RELAY OUTPUT CIRCUIT OPEN

Turn the ignition off.

Remove the Low Speed Radiator Fan Relay from the PDC.

Turn the ignition on.

Using a 12-volt test light connected to ground, check the ASD Relay Output circuit.

**Did the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the ASD Relay Output circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

### 3. LOW SPEED RADIATOR FAN RELAY

Turn the ignition off.

Install a known good relay in place of the Low Speed Radiator Fan Relay.

Turn the ignition on.

With the scan tool, actuate the Low Speed Rad Fan Relay.

**Does the Radiator Fan cycle on and off?**

**Yes** >> Replace the Low Speed Radiator Fan Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

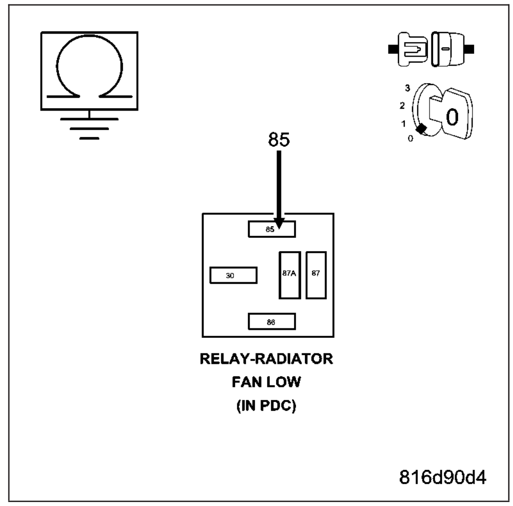
## 4. (N201) LOW SPEED RADIATOR FAN CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Remove the Low Speed Radiator Fan Relay from the PDC.

Disconnect the ECM C1 harness connectors.

Measure the resistance between ground and the (N201) Low Speed Radiator Fan Control circuit at the PDC.



**Is the resistance above 1000 ohms?**

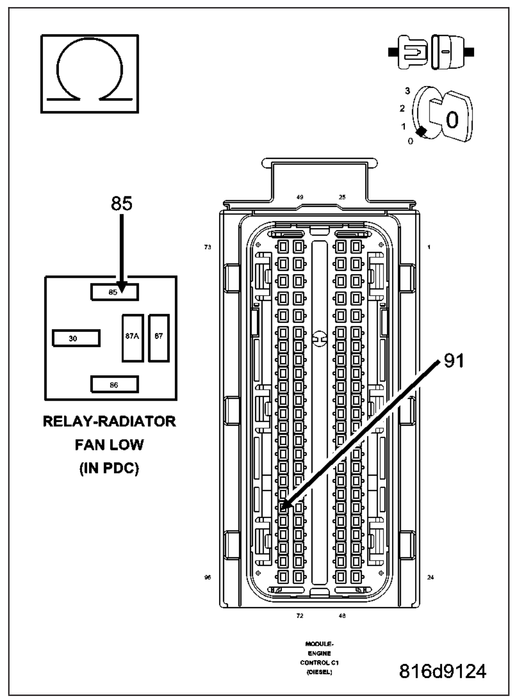
**Yes** >> Go To 5

**No** >> Repair the (N201) Low Speed Radiator Fan Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. (N201) LOW SPEED RADIATOR FAN CONTROL CIRCUIT OPEN

Measure the resistance of the (N201) Low Speed Radiator Fan Control circuit between the PDC and the ECM C1 harness connector.



**Is the resistance below 10.0 ohms?**

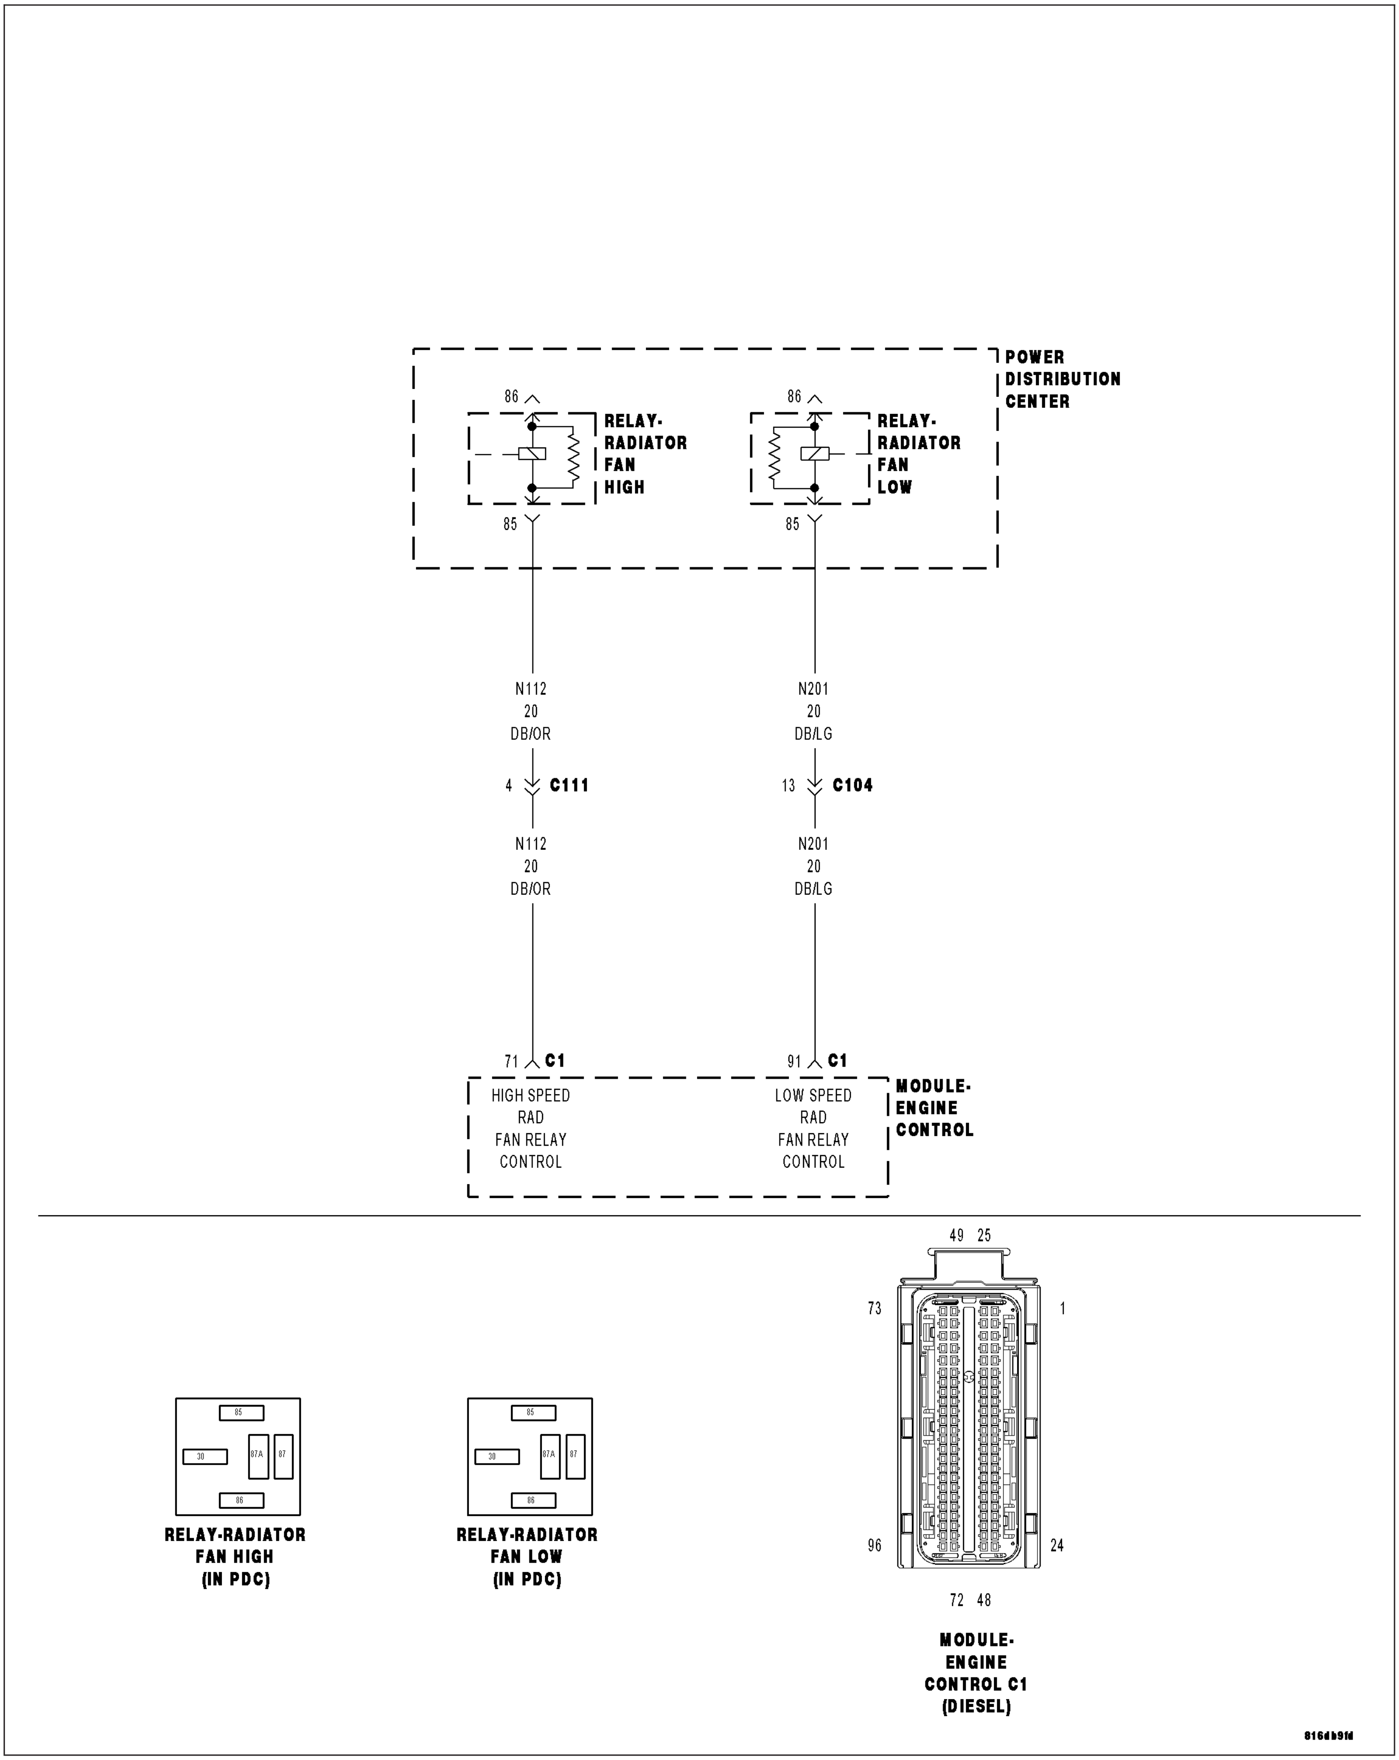
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Low Speed Radiator Fan Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0481-FAN 2 CONTROL CIRCUIT SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM High Speed Rad Fan Relay command on.
- **Set Condition:**
  The ECM detects a short circuit on the High Speed Rad Fan Relay Control circuit.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| HIGH SPEED RADIATOR FAN RELAY |
| (N112) HIGH SPEED RADIATOR FAN CONTROL CIRCUIT SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, actuate the High Speed Radiator Fan Relay.

**Does the Radiator Fan cycle on and off?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 2

### 2. HIGH SPEED RADIATOR FAN RELAY

Turn the ignition off.

Install a known good relay in place of the High Speed Radiator Fan Relay.

Turn the ignition on.

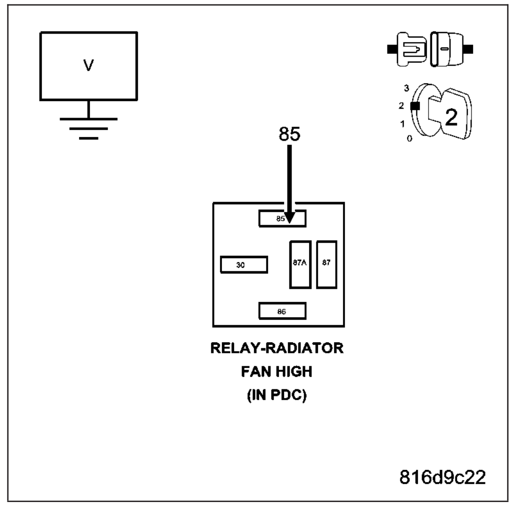
With the scan tool, actuate the High Speed Radiator Fan Relay.

**Does the Radiator Fan cycle on and off?**

**Yes** >> Replace High Speed Radiator Fan Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. (N112) HIGH SPEED RADIATOR FAN CONTROL CIRCUIT SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the ECM harness connectors.

Remove the High Speed Radiator Fan Relay from the PDC.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of (N112) High Speed Radiator Fan Control circuit.

**Is the voltage below 1.0 volt?**

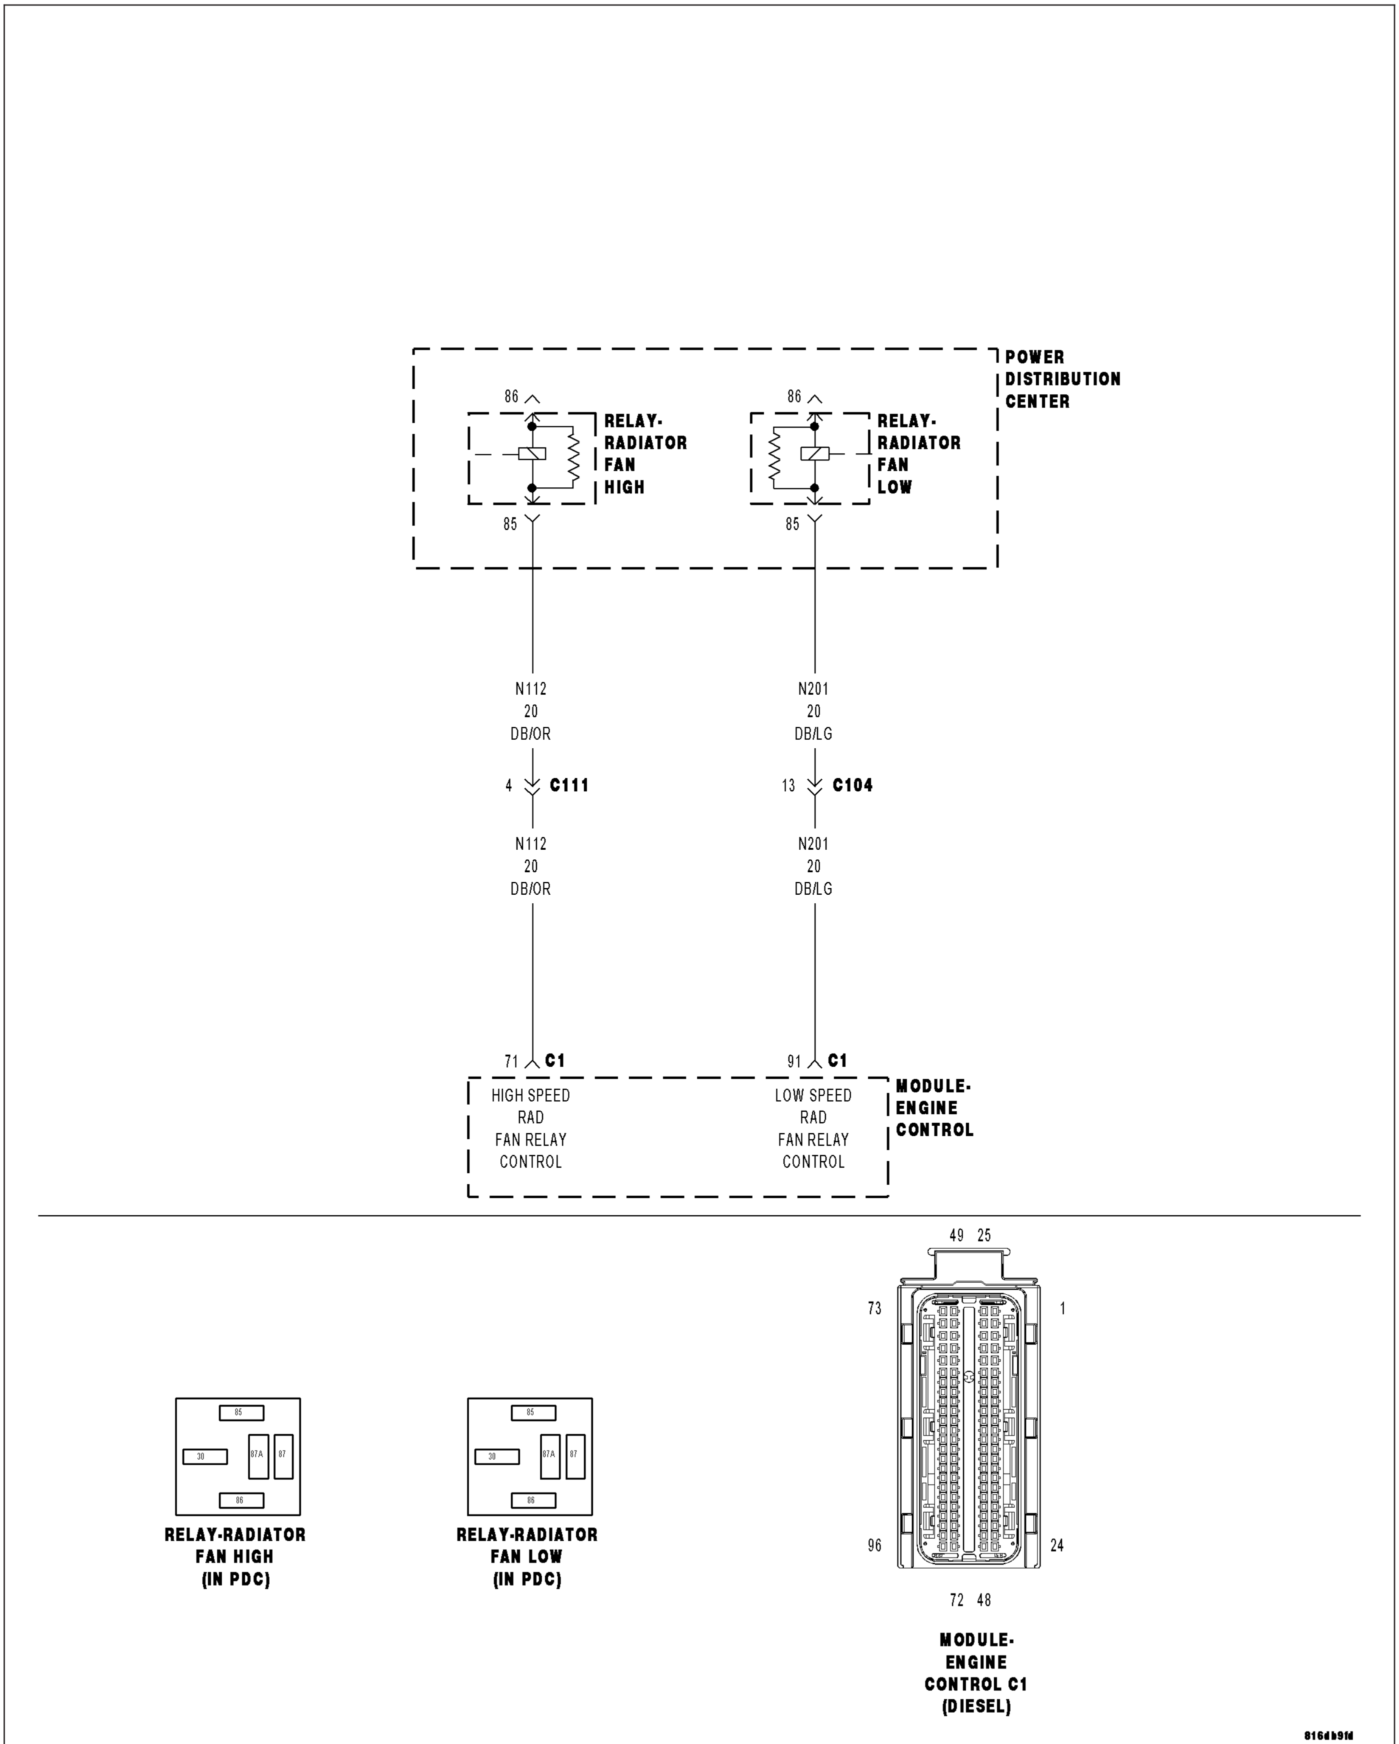
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair (N112) High Speed Radiator Fan Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0481-FAN 2 CONTROL CIRCUIT SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM High Speed Rad Fan Relay command on.
- **Set Condition:**
  The ECM detects a short circuit on the High Speed Rad Fan Relay Control circuit.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| HIGH SPEED RADIATOR FAN RELAY |
| (N112) HIGH SPEED RADIATOR FAN CONTROL CIRCUIT SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, actuate the High Speed Radiator Fan Relay.

**Does the Radiator Fan cycle on and off?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 2

### 2. HIGH SPEED RADIATOR FAN RELAY

Turn the ignition off.

Install a known good relay in place of the High Speed Radiator Fan Relay.

Turn the ignition on.

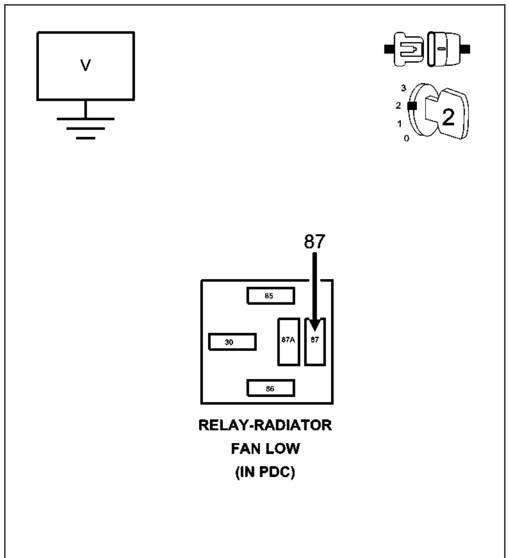
With the scan tool, actuate the High Speed Radiator Fan Relay.

**Does the Radiator Fan cycle on and off?**

**Yes** >> Replace High Speed Radiator Fan Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. (N112) HIGH SPEED RADIATOR FAN CONTROL CIRCUIT SHORTED TO VOLTAGE



816d7741

Turn the ignition off.

Disconnect the ECM harness connectors.

Remove the High Speed Radiator Fan Relay from the PDC.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of (N112) High Speed Radiator Fan Control circuit.

**Is the voltage below 1.0 volt?**

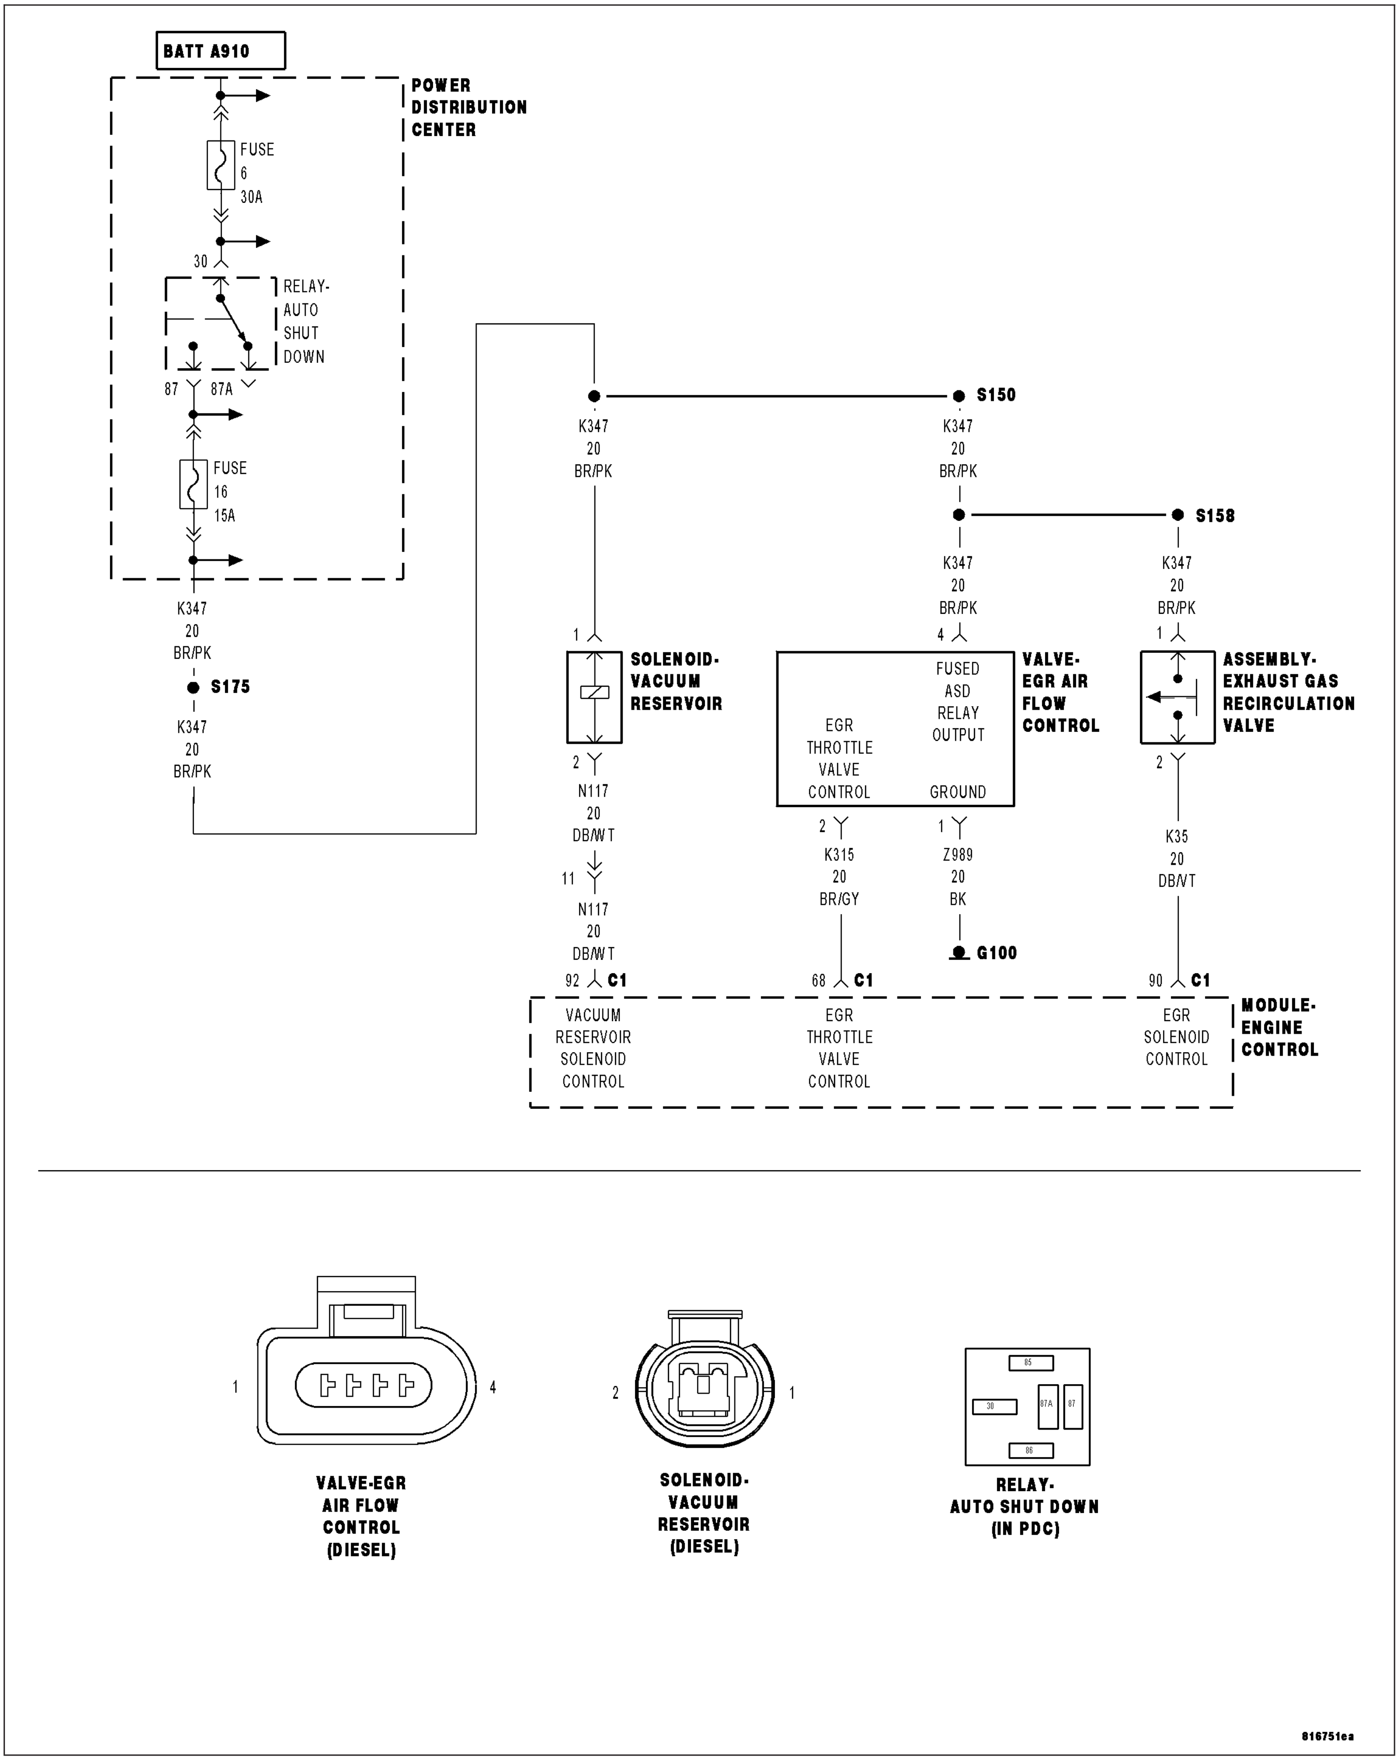
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair (N112) High Speed Radiator Fan Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0489-EGR SOLENOID CIRCUIT SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM EGR Solenoid command on.
- **Set Condition:**
  The ECM detects excessive current on the EGR Solenoid Control circuit.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| (K35) EGR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND |
| (K35) EGR SOLENOID CONTROL CIRCUIT OPEN |
| EGR SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several ignition cycles, turning the ignition off for at least 10 seconds between each ignition cycle.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

## 3. ASD OUTPUT CKT OPEN

Turn the ignition off.

Disconnect the EGR Solenoid harness connector.

Turn the ignition on.

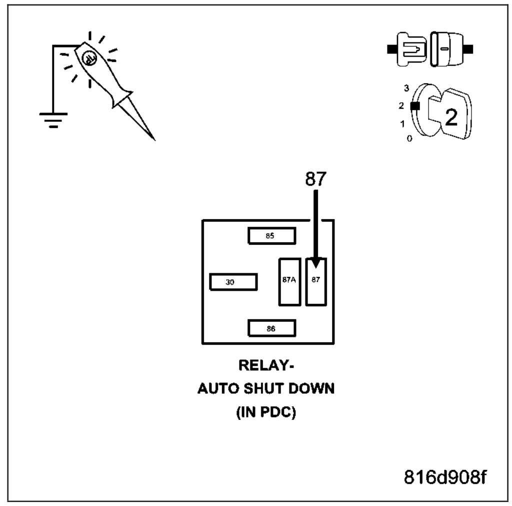
Using a 12-volt test light connected to ground, check the ASD Relay Output circuit.

**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the ASD Relay Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 4. (K35) EGR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the EGR Solenoid harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and (K35) EGR Solenoid Control circuit at EGR Solenoid harness connector.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 5

**No** >> Repair (K35) EGR Solenoid Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. (K35) EGR SOLENOID CONTROL CIRCUIT OPEN

Measure the resistance of (K35) EGR Solenoid Control circuit between EGR Solenoid harness connector and ECM C1 harness connector.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair (K35) EGR Solenoid Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. EGR SOLENOID

Install a substitute EGR Solenoid in place of the vehicle's EGR Solenoid.

**NOTE: Ensure the ECM and EGR Solenoid harness connectors are connected.**

Turn the ignition on.

With the scan tool, check for this DTC to set again.

**Did this DTC set again?**

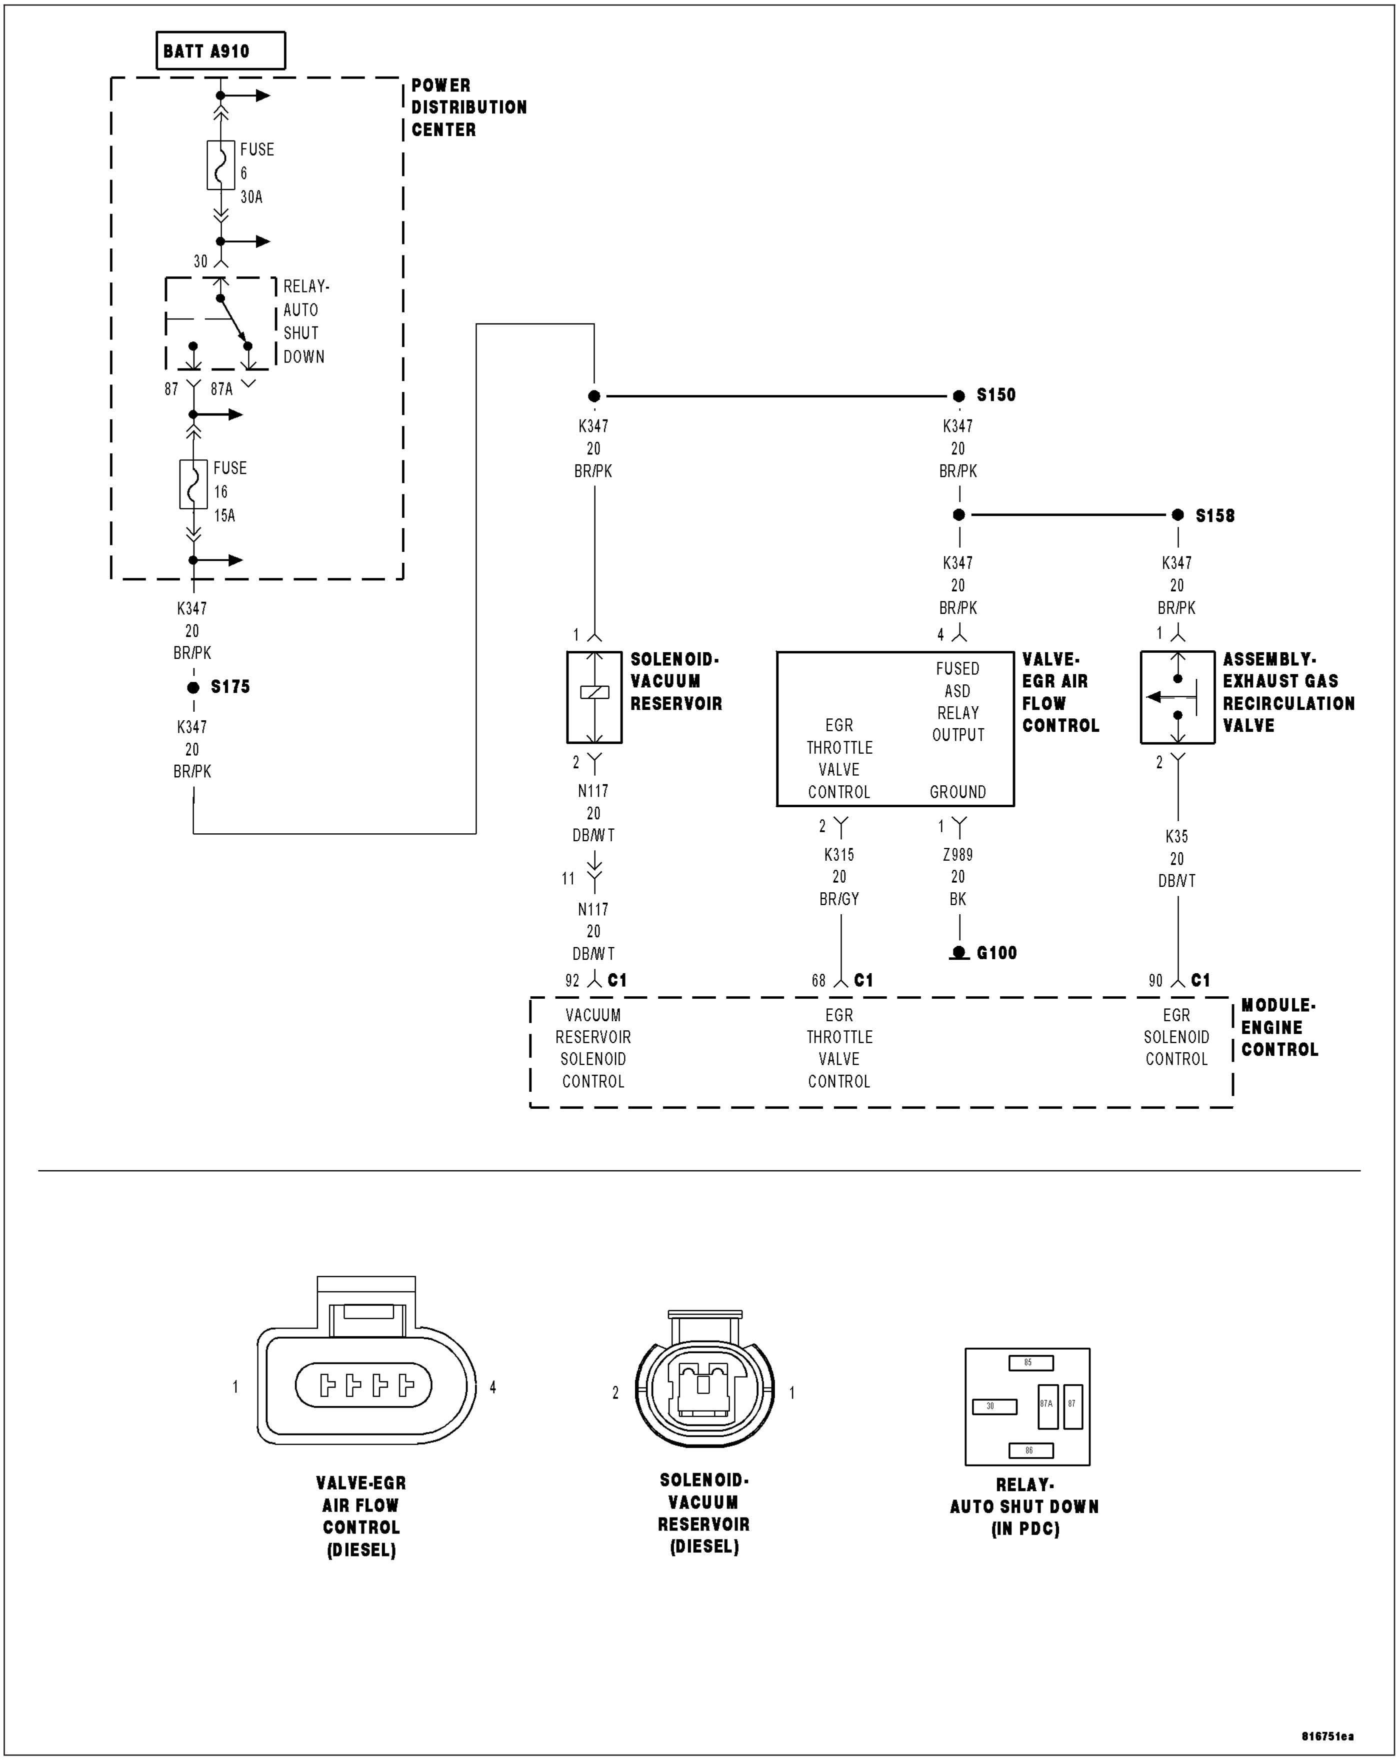
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the EGR Solenoid.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0490-EGR SOLENOID CIRCUIT SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM EGR Solenoid command on.
- **Set Condition:**
  The ECM detects excessive current on the EGR Solenoid Control circuit.

| Possible Causes |
| --- |
| INTERMITTENT CONDITION |
| (K35) EGR SOLENOID CONTROL CIRCUIT SHORTED TO VOLTAGE |
| EGR SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several ignition cycles, turning the ignition off for at least 10 seconds between each ignition cycle.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. EGR SOLENOID CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Remove the EGR Solenoid from the PDC.

Disconnect the ECM harness connector.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the EGR Solenoid Control circuit.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the EGR Solenoid Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. EGR SOLENOID

Install a substitute EGR Solenoid in place of the vehicle's EGR Solenoid.

**NOTE: Ensure the ECM and EGR Solenoid harness connectors are connected.**

Turn the ignition on.

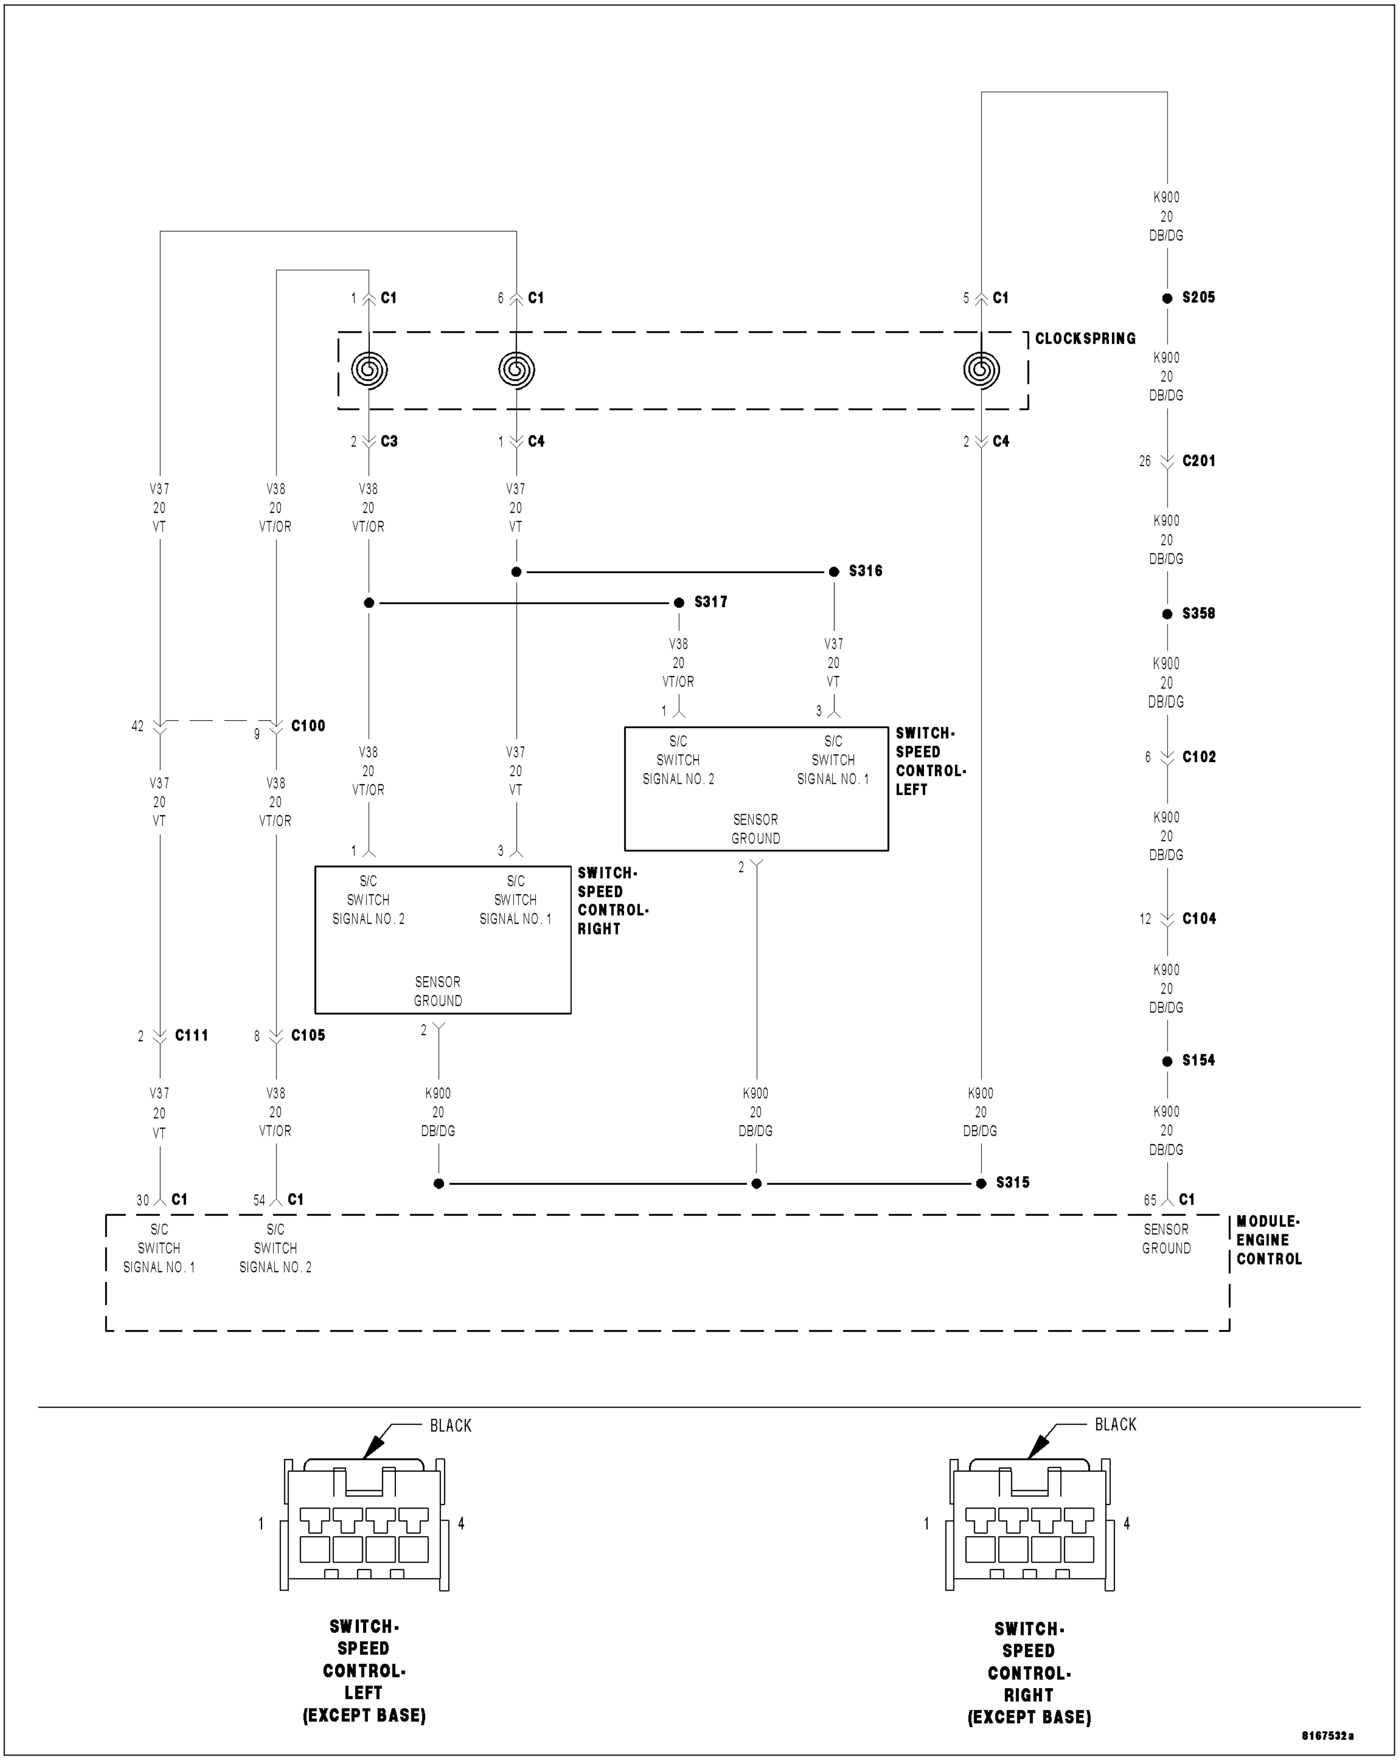
With the scan tool, check for this DTC to set again.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the EGR Solenoid.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0501-VEHICLE SPEED SENSOR PLAUSIBILITY



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  Engine temperature above 10.0°C. Battery voltage above 11.0 volts Transmission in drive gear. Brake Switch off (brakes not applied). Varying engine speed and load (indicating vehicle motion).
- **Set Condition:**
  The vehicle speed message to the ECM indicates 0 mph when the ECM monitoring condition indicate that vehicle speed should be above 0 mph.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| CHECK FOR RELATED CONTROLLER ANTILOCK BRAKES DTCS |
| CHECK FOR RELATED TRANSMISSION CONTROL MODULE DTCS |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM displays multiple CAN Bus related DTC's, check the CAN Bus circuits at the ECM harness connector for proper connection before continuing with this test.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Test drive the vehicle.

With the scan tool, read the ECM DTC's.

**Does the scan tool display this DTC?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECK FOR RELATED CAB DTCS

Turn the ignition on.

With the scan tool, check for Controller Antilock Brakes DTCs.

**NOTE: The ECM Receives vehicle speed messages via CAB Bus from the ABS module. An interruption on the CAN Bus can cause this fault to set.**

**Are any related CAB DTCs present?**

**Yes** >> Refer to symptom list for problems related to CAB DTCs before continuing.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. CHECK FOR RELATED TCM DTCS

**NOTE: The TCM Receives vehicle speed messages via CAB Bus from the ABS module. An interruption on the CAN Bus can cause this fault to set.**

Turn the ignition on.

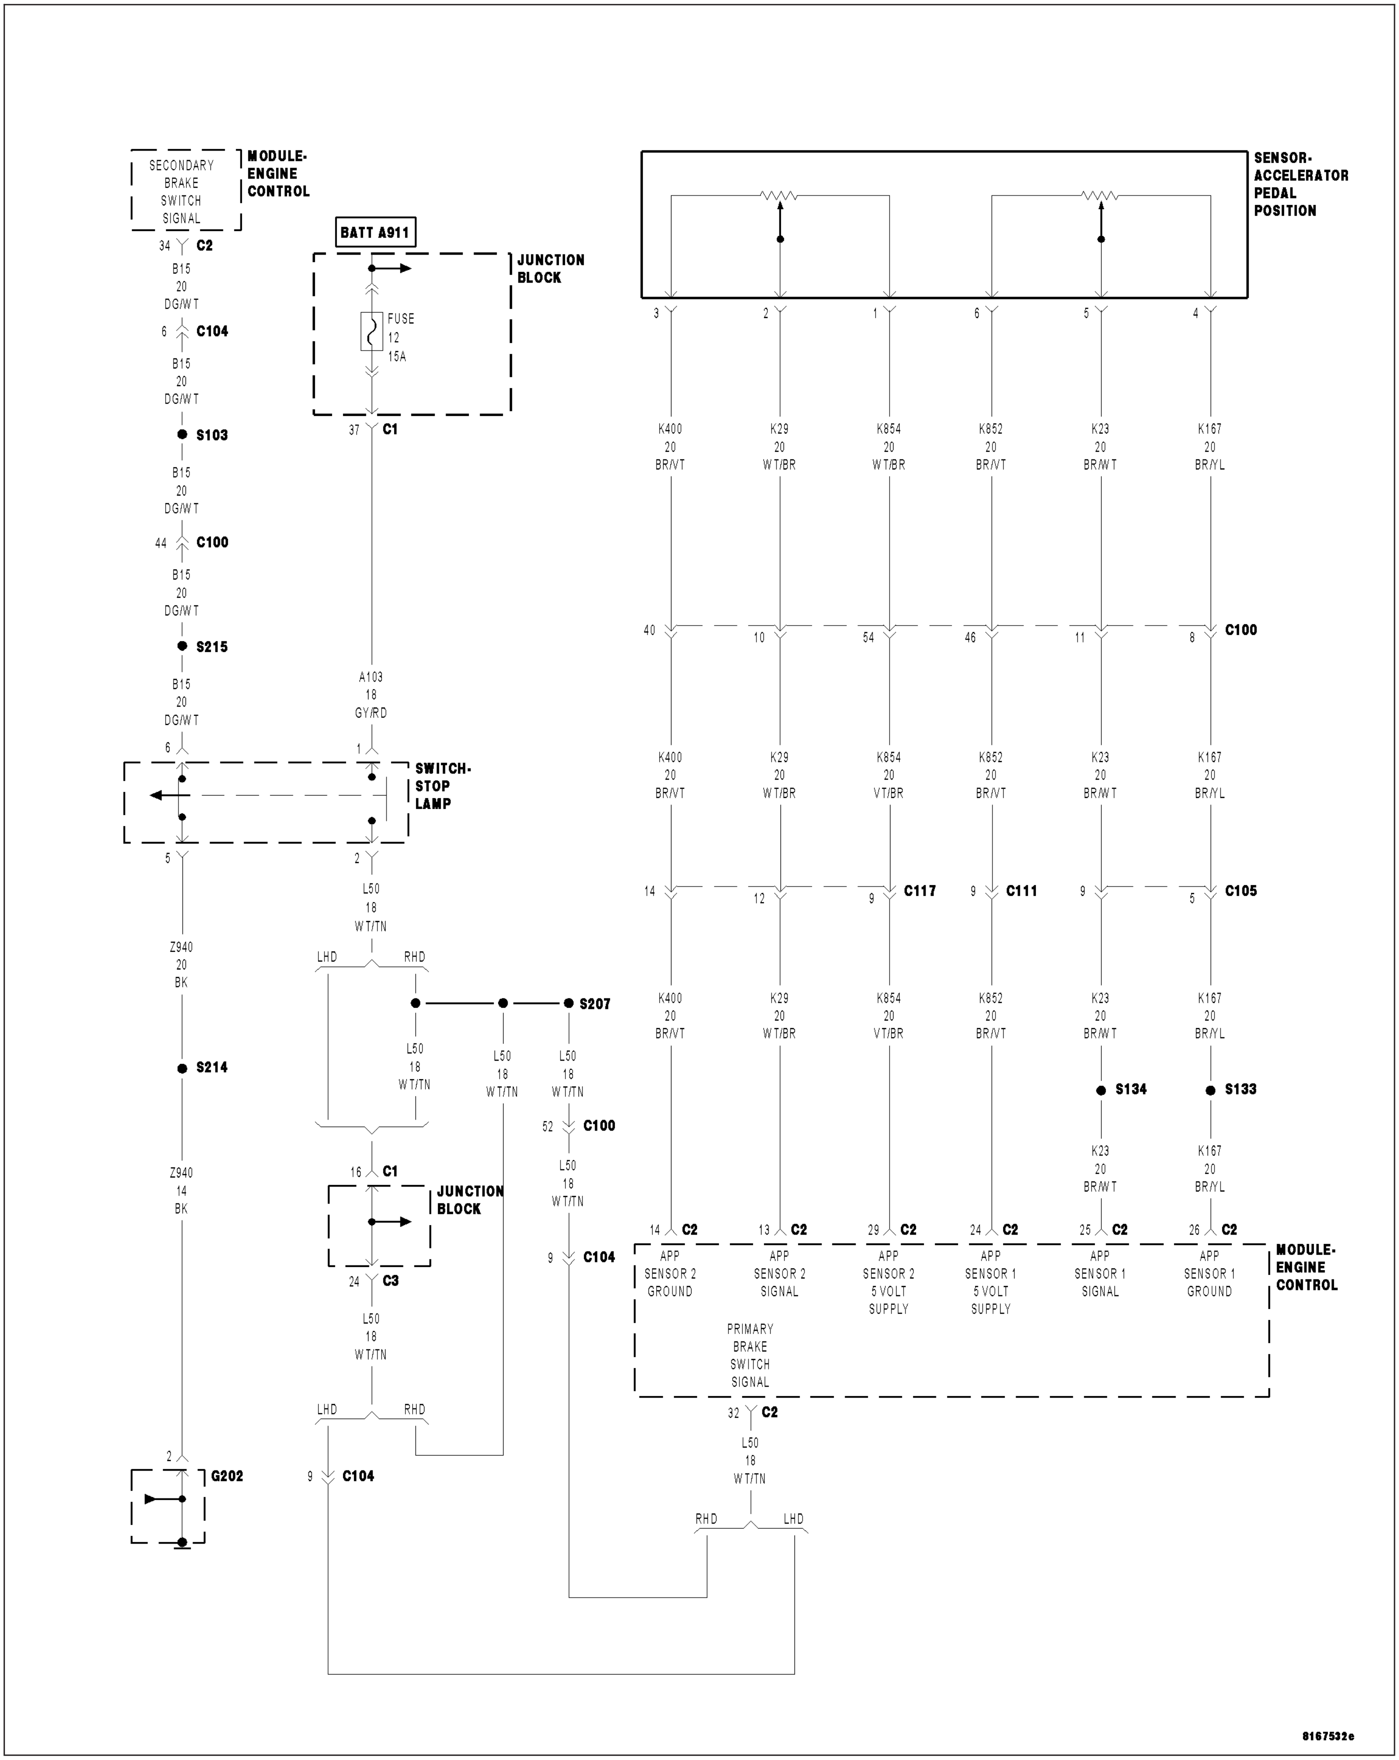
With the scan tool, check the TCM for DTCs.

**Are any ABS CAN Bus Message or Vehicle Speed related TCM DTCs present?**

**Yes** >> Replace the CAB in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0504-BRAKE SWITCH SIGNAL CIRCUITS PLAUSIBILITY WITH REDUNDANT CONTACT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The Primary Brake Switch Signal and Secondary Brake Switch Signal inputs to the ECM do not agree.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| BRAKE LAMP SWITCH - SENSE CKT OPEN |
| BRAKE LAMP SWITCH FUSED B+ CIRCUIT OPEN |
| BRAKE SWITCH SENSE CIRCUIT SHORTED TO GROUND |
| BRAKE LAMP SWITCH - OUTPUT OPEN |
| BRAKE SWITCH SENSE CIRCUIT OPEN |
| BRAKE SWITCH SENSE GROUND CIRCUIT OPEN |
| BRAKE LAMP SWITCH OUTPUT CIRCUIT SHORTED TO VOLTAGE |
| BRAKE LAMP SWITCH OUTPUT CIRCUIT OPEN |
| ENGINE CONTROL MODULE - BRAKE SWITCH SENSE |
| ENGINE CONTROL MODULE - INTERNAL |
| ENGINE CONTROL MODULE - PRIMARY BRAKE SIGNAL |

## Diagnostic Test

### 1. CHECK THE PRIMARY BRAKE SWITCH STATUS WITH THE SCAN TOOL

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

While observing the PRIMARY BRAKE SWITCH status on the scan tool display, press and release the brake pedal several times.

**Does the scan tool display PRIMARY BRAKE SWITCH: PRESSED and RELEASED for the appropriate pedal position?**

**Yes** >> Go To 2

**No** >> Go To 10

### 2. CHECK THE SECONDARY BRAKE SWITCH STATUS WITH THE SCAN TOOL

Turn the ignition on.

While observing the SECONDARY BRAKE SWITCH status on the scan tool display, press and release the brake pedal several times.

**Does the scan tool display SECONDARY BRAKE SWITCH: PRESSED and RELEASED for the appropriate pedal position**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 3

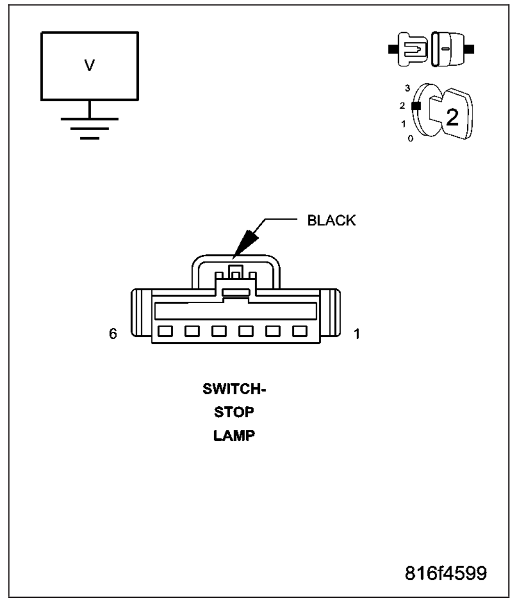
## 3. BRAKE SWITCH SENSE CIRCUIT VOLTAGE

Turn the ignition off.

Disconnect the Brake Lamp Switch harness connector.

Turn the ignition on.

Measure the voltage between the Brake Switch Sense circuit and ground.



**Is the voltage above 9.0 volts?**

**Yes** >> Go To 4

**No** >> Go To 7

## 4. BRAKE LAMP SWITCH - SENSE CKT OPEN

Disconnect the Brake Lamp Switch harness connector.

Turn the ignition on.

While monitoring the SECONDARY BRAKE SWITCH status with the scan tool, connect a jumper wire between ground and the Secondary Brake Switch Sense circuit.

**Does the scan tool display change from PRESSED to RELEASED?**

**Yes** >> Adjust or replace the Brake Lamp Switch in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

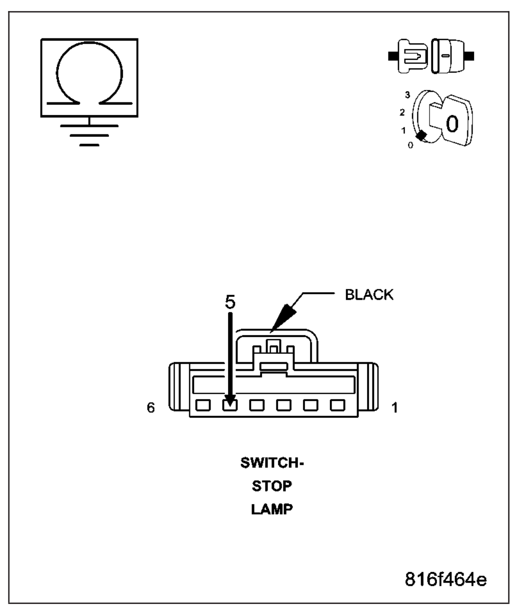
**No** >> Go To 5

## 5. BRAKE SWITCH SENSE GROUND CIRCUIT OPEN

Turn the ignition off.

Disconnect the Brake Lamp Switch harness connector.

Measure the resistance between ground and the Secondary Brake Switch Ground circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Brake Switch Sense Ground circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. ENGINE CONTROL MODULE - INTERNAL

**If there are no possible causes remaining, view repair.**

**Repair**

Replace and program the Engine Control Module in accordance with the Service Information. Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

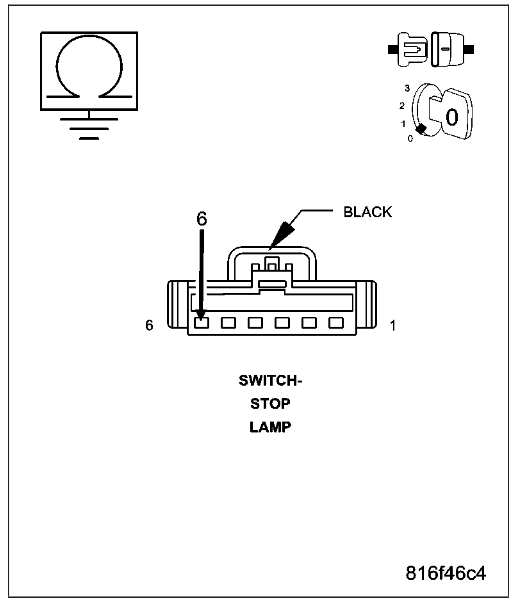
## 7. BRAKE SWITCH SENSE CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the Brake Lamp Switch harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Brake Switch Sense circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 8

**No** >> Repair the Brake Switch Sense circuit for a short to ground. Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

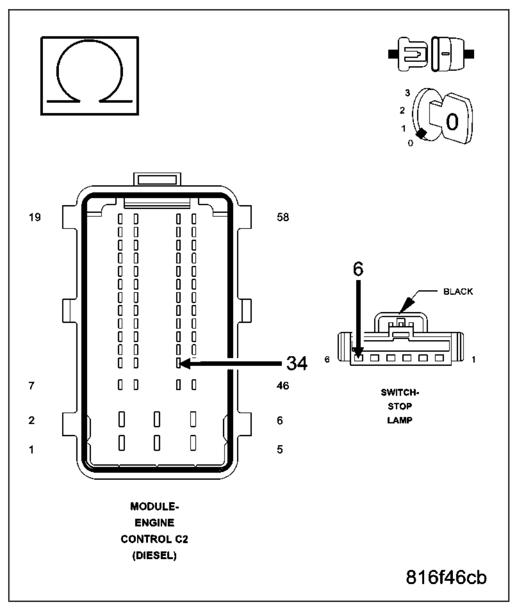
## 8. BRAKE SWITCH SENSE CIRCUIT OPEN

Turn the ignition off.

Disconnect the Brake Lamp Switch harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Brake Switch Sense circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the Brake Switch Sense circuit for an open. Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 9. ENGINE CONTROL MODULE - SECONDARY BRAKE SIGNAL

**If there are no possible causes remaining, view repair.**

**Repair**

Replace and program the Engine Control Module in accordance with the Service Information.

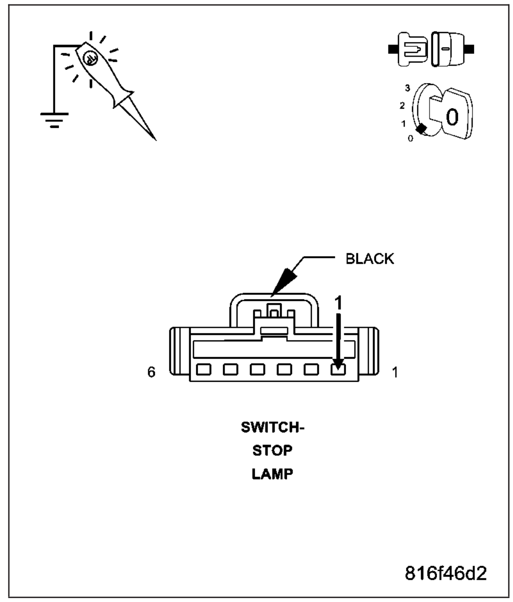
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 10. BRAKE LAMP SWITCH FUSED B+ CIRCUIT OPEN

Disconnect the Brake Lamp Switch harness connector.

Using a 12-volt test light connected to ground, check the Fused B+ circuit.

**Does the test light illuminate brightly?**



**Yes** >> Go To 11

**No** >> Repair the Brake Lamp Switch Fused B+ circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 11. BRAKE LAMP SWITCH - PRIMARY OPEN

Disconnect the Brake Lamp Switch harness connector.

Turn the ignition on.

While monitoring the PRIM BRAKE SWITCH status with the Scan Tool, connect a jumper wire between the Brake Lamp Switch Output circuit and the Fused B(+) circuit.

**Does the scan tool display change from RELEASED to PRESSED?**

**Yes** >> Adjust or replace the Brake Lamp Switch in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 12

## 12. BRAKE LAMP SWITCH OUTPUT CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the Brake Lamp Switch harness connector.

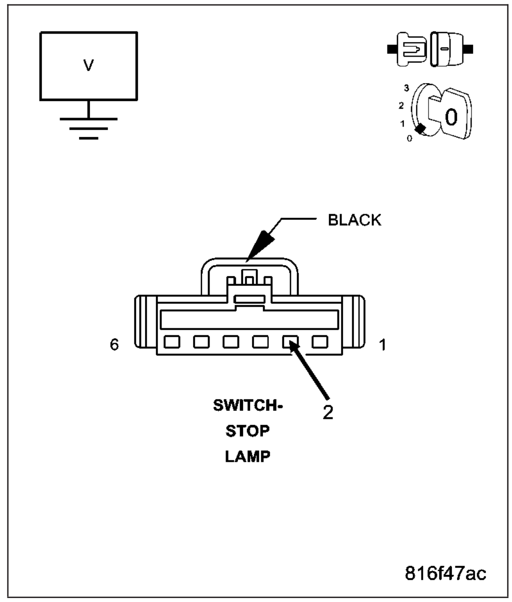
Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage between the Brake Lamp Switch Output circuit and ground.



**Is the voltage above 1.0 volt?**

**Yes** >> Repair the Brake Lamp Switch Output circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 13

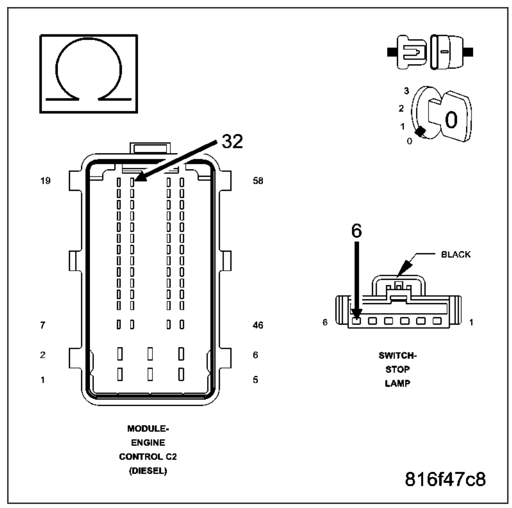
## 13. BRAKE LAMP SWITCH OUTPUT CIRCUIT OPEN

Turn the ignition off.

Disconnect the Brake Lamp Switch harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Brake Lamp Switch Output circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Brake Lamp Switch Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0513-SKIM SYSTEM INVALID KEY CODE RECEIVED

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects an internal mismatch of the secret key code when performing an internal EEPROM check.

| Possible Causes |
|---|
| SKIM |
| INTERMITTENT CONDITION |
| CHECK FOR SKIM COMMUNICATION AND DTCS |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR SKIM COMMUNICATION AND DTCS

Turn the ignition on.

With the scan tool, check for Sentry Key Immobilizer Module communication and DTCs.

**Are any SKIS problems or DTCs present?**

**Yes** >> Refer to symptom list for problems related to SKIM Communication and DTCs before continuing. Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

### 2. CHECK FOR ECM DTCS

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Turn the ignition on and off several times pausing 10 seconds between each key cycle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 3. SKIM

Replace and program the SKIM in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase ECM DTCs.
Turn the ignition on and off several times pausing for 10 seconds between key cycles.
With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The test is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0513-SKIM SYSTEM READ ACCESS TO EEPROM FAILURE

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects an internal EEPROM fault.

| Possible Causes |
| --- |
| SKIM |
| INTERMITTENT CONDITION |
| CHECK FOR SKIM COMMUNICATION AND DTCS |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR SKIM COMMUNICATION AND DTCS

Turn the ignition on.

With the scan tool, check for Sentry Key Immobilizer Module communication and DTCs.

**Are any SKIS problems or DTCs present?**

**Yes** >> Refer to symptom list for problems related to SKIM Communication and DTCs before continuing. Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

### 2. CHECK FOR ECM DTCS

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Turn the ignition on and off several times pausing 10 seconds between each key cycle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 3. SKIM

Replace and program the SKIM in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase ECM DTCs.
Turn the ignition on and off several times pausing for 10 seconds between key cycles.
With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The test is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0513-SKIM SYSTEM WRITE ACCESS TO EEPROM FAILURE

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects an internal EEPROM fault.

| Possible Causes |
|---|
| SKIM |
| INTERMITTENT CONDITION |
| CHECK FOR SKIM COMMUNICATION AND DTCS |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR SKIM COMMUNICATION AND DTCS

Turn the ignition on.

With the scan tool, check for Sentry Key Immobilizer Module communication and DTCs.

**Are any SKIS problems or DTCs present?**

**Yes** >> Refer to symptom list for problems related to SKIM Communication and DTCs before continuing. Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

### 2. CHECK FOR ECM DTCS

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Turn the ignition on and off several times pausing 10 seconds between each key cycle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 3. SKIM

Replace and program the SKIM in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase ECM DTCs.
Turn the ignition on and off several times pausing for 10 seconds between key cycles.
With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The test is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0513-SKIM SYSTEM WRITE ACCESS TO EEPROM FAILURE

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects an internal EEPROM fault.

| Possible Causes |
|---|
| SKIM |
| INTERMITTENT CONDITION |
| CHECK FOR SKIM COMMUNICATION AND DTCS |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR SKIM COMMUNICATION AND DTCS

Turn the ignition on.

With the scan tool, check for Sentry Key Immobilizer Module communication and DTCs.

**Are any SKIS problems or DTCs present?**

**Yes** >> Refer to symptom list for problems related to SKIM Communication and DTCs before continuing. Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

### 2. CHECK FOR ECM DTCS

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Turn the ignition on and off several times pausing 10 seconds between each key cycle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 3. SKIM

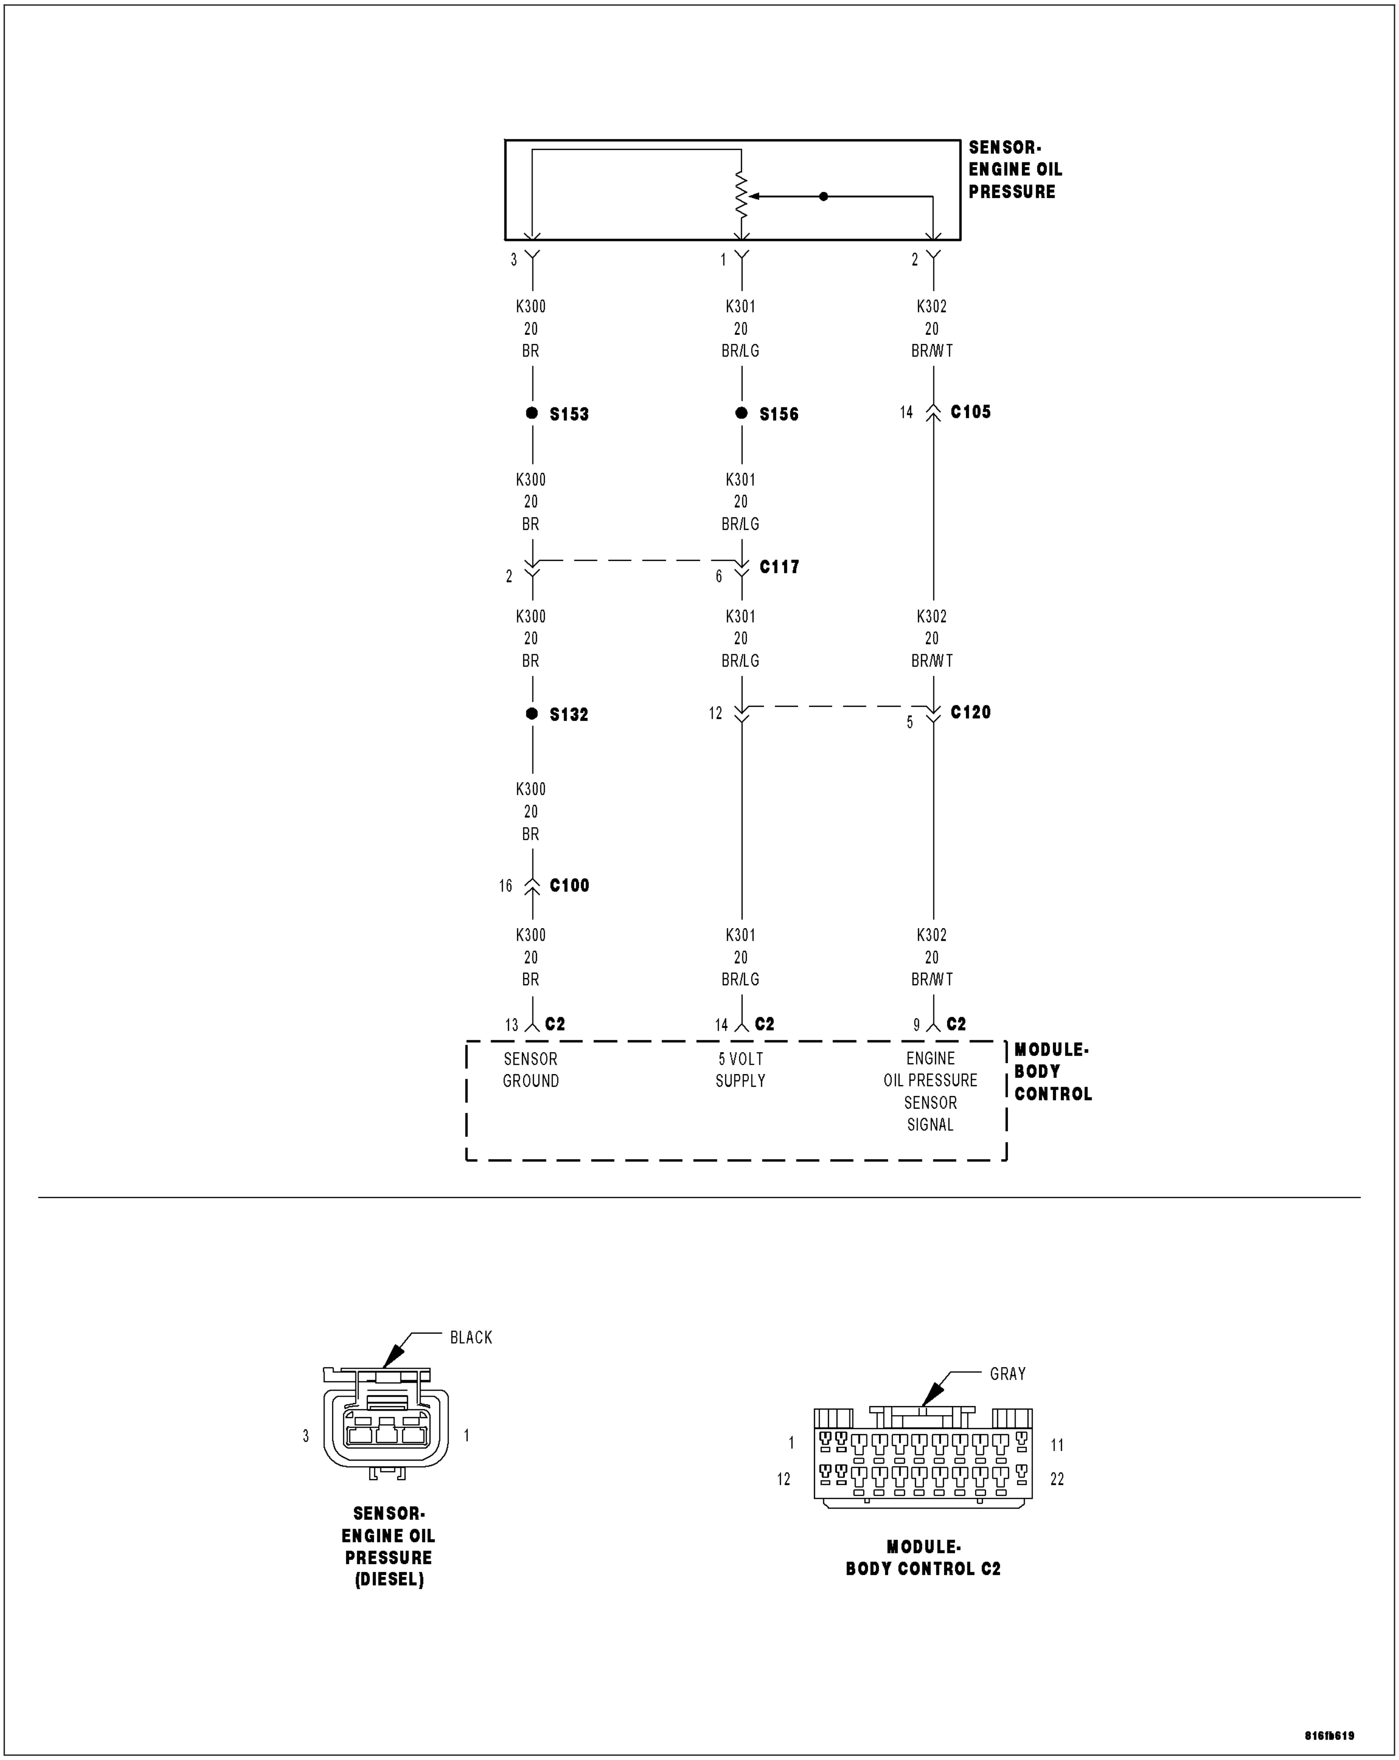
Replace and program the SKIM in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase ECM DTCs.
Turn the ignition on and off several times pausing for 10 seconds between key cycles.
With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The test is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0520- OIL PRESS SENSOR CIRCUIT MALF PLAUSIBILITY



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  At engine start-up.
- **Set Condition:**
  The oil pressure signal is below 0.19 volts for 8 seconds after engine start-up.

| Possible Causes |
|---|
| 5-VOLT SUPPLY CIRCUIT OPEN |
| BCM - OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| BCM - OIL PRESSURE SENSOR SIGNAL SHORT TO GROUND |
| MECHANICAL PROBLEM |
| OIL PRESSURE SENSOR FAILURE |
| OIL PRESSURE SENSOR SIGNAL CIRCUIT OPEN |
| OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO SENSOR GROUND |
| OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| SENSOR GROUND CIRCUIT OPEN |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECKING FOR CURRENT DTC

**NOTE: If DTC P0641 or P0651 is present with this DTC, diagnose DTCs P0641 and P0651 before diagnosing this DTC.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Start the engine several times, letting the engine run for at least 30 seconds at a time.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. MECHANICAL PROBLEM

Refer to the Service Information and perform the Oil Pressure Test.

**Is the oil pressure within specification?**

**Yes** >> Go To 3

**No** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

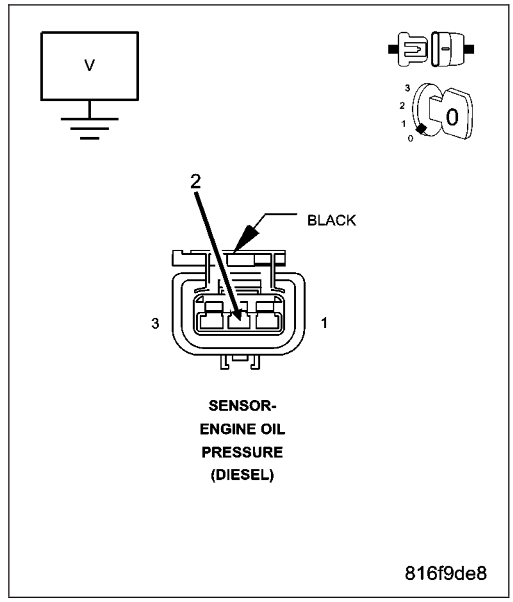
## 3. CHECKING OP SENSOR SIGNAL CKT

Turn the ignition off.

Disconnect the Oil Pressure Sensor harness connector.

Turn the ignition on.

Measure the voltage of the Oil Pressure Sensor Signal circuit.



**Select the appropriate voltage reading.**

**Voltage is above 5.5 volts.**
Go To 4

**Voltage is between 4.7 and 5.4 volts.**
Go To 5

**Voltage is below 4.7 volts.**
Go To 7

## 4. OP SENSOR SIGNAL CIRCUIT SHORT TO VOLTAGE

Turn the ignition off.

Disconnect the Oil Pressure Sensor harness connector.

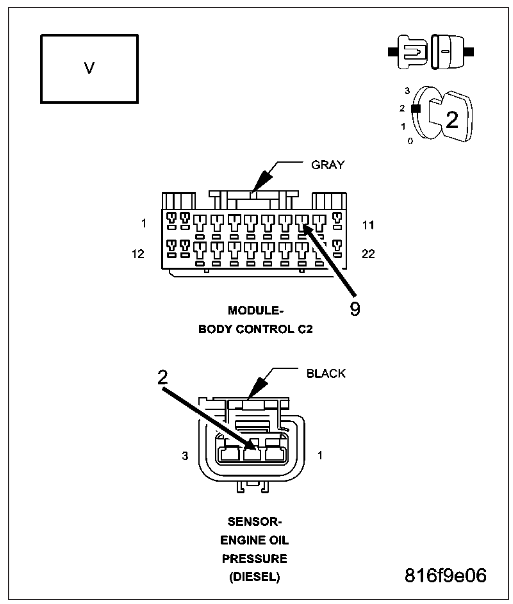
Disconnect the BCM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the Oil Pressure Sensor Signal circuit.



**Is the voltage below 1.0 volt?**

**Yes** >> Replace and program the Body Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Oil Pressure Sensor Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. 5-VOLT SUPPLY CIRCUIT OPEN

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the Oil Pressure Sensor harness connector.

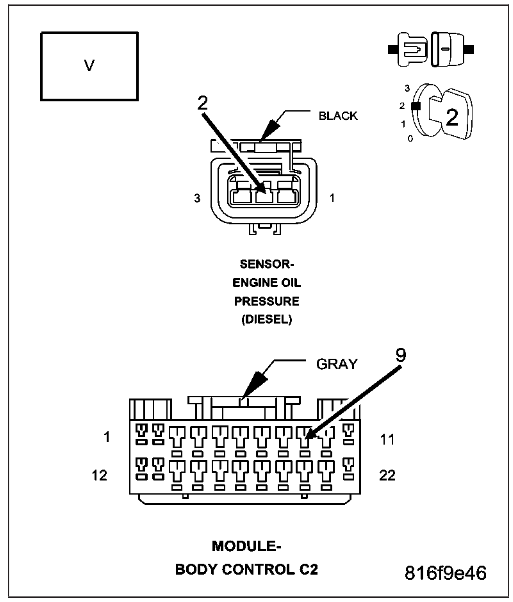
Measure the resistance of the 5-Volt Supply circuit between the BCM harness connector and the Oil Pressure Sensor harness connector.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 6

**No** >> Repair the 5-Volt Supply circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 6. SENSOR GROUND CKT OPEN

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the Oil Pressure Sensor harness connector.

Measure the resistance of the Sensor Ground circuit.

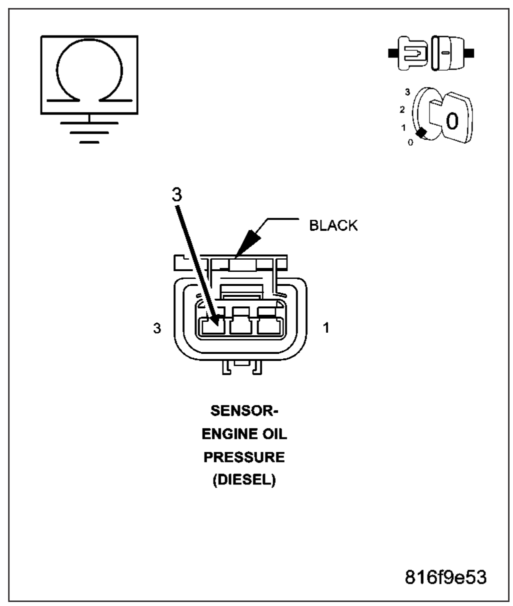
**Is the resistance below 10.0 ohms?**

**Yes** >> Replace the Oil Pressure Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 7. OP SENSOR SIGNAL CKT OPEN

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the Oil Pressure Sensor harness connector.

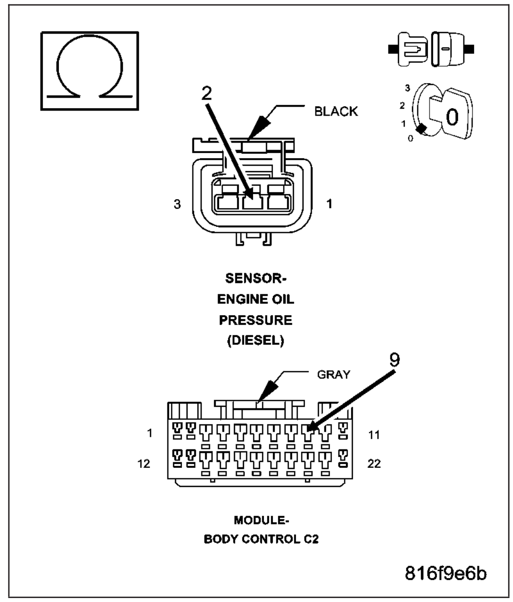
Measure the resistance of the Oil Pressure Sensor Signal circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 8

**No** >> Repair the Oil Pressure Sensor Signal circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 8. OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the Oil Pressure Sensor harness connector.

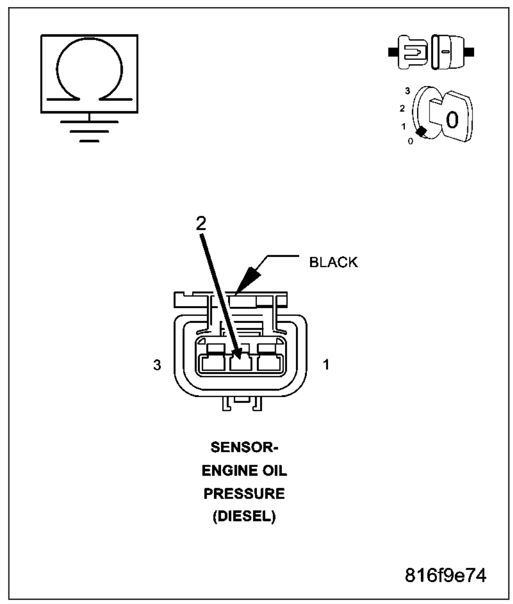
Measure the resistance between ground and the Oil Pressure Sensor Signal circuit.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 9

**No** >> Repair the Oil Pressure Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



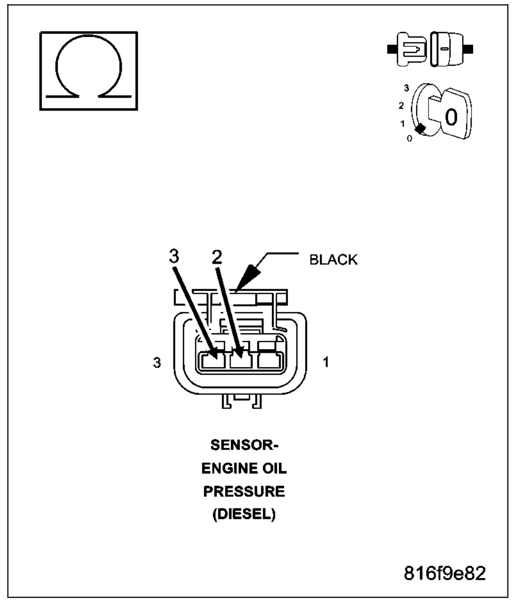
## 9. OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO SENSOR GROUND

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the Oil Pressure Sensor harness connector.

Measure the resistance between Sensor Ground and the Oil Pressure Sensor Signal circuit.



**Is the resistance above 1000 ohms?**

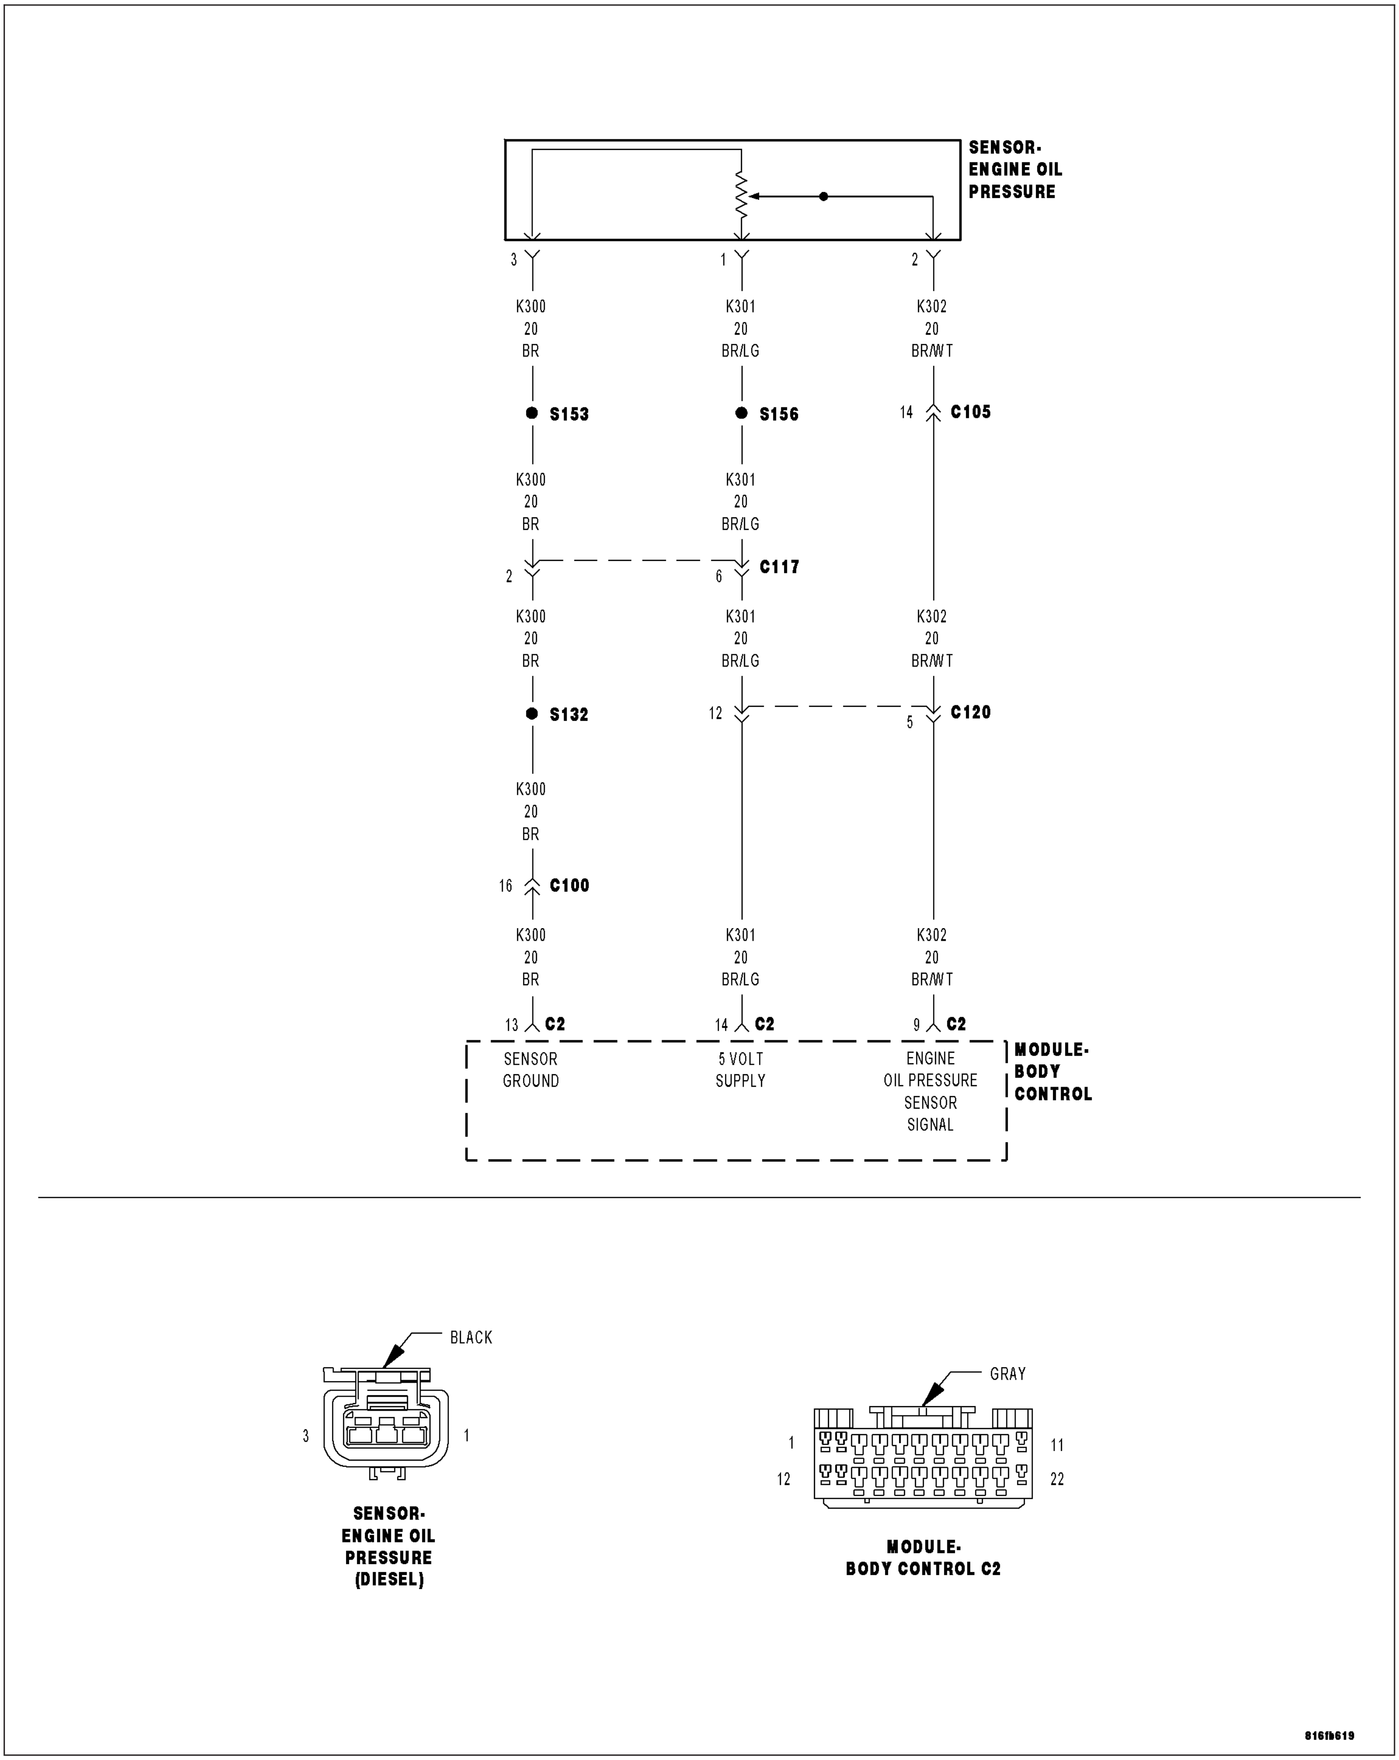
**Yes** >> Replace and program the Body Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Oil Pressure Sensor Signal circuit for a short to the Sensor Ground circuit.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0520-OIL PRESS SENSOR CKT MALF SIGNAL VOLTAGE TOO HIGH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The Oil Pressure Sensor signal is above 4.8 volts for 0.5 second.

| Possible Causes |
|---|
| ENGINE OIL PRESSURE SENSOR |
| BCM - OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| BCM - OIL PRESSURE SENSOR SIGNAL OPEN |
| OIL PRESSURE SENSOR SIGNAL CIRCUIT OPEN |
| OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| SENSOR GROUND CIRCUIT OPEN |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR CURRENT DTC

**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Start the engine several times, letting the engine run for at least 30 seconds at a time.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

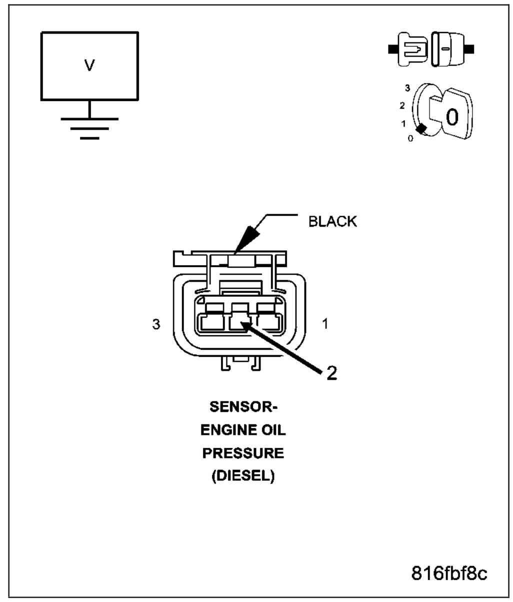
## 2. CHECK OIL PRESSURE SENSOR SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the Oil Pressure Sensor harness connector.

Turn the ignition on.

Measure the voltage of the Oil Pressure Sensor Signal circuit.



**Select the appropriate voltage reading.**

**Voltage is above 5.5 volts.**
Go To 3

**Voltage is between 4.7 and 5.4 volts.**
Go To 4

**Voltage is below 4.7 volts.**
Go To 5

## 3. OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the Oil Pressure Sensor harness connector.

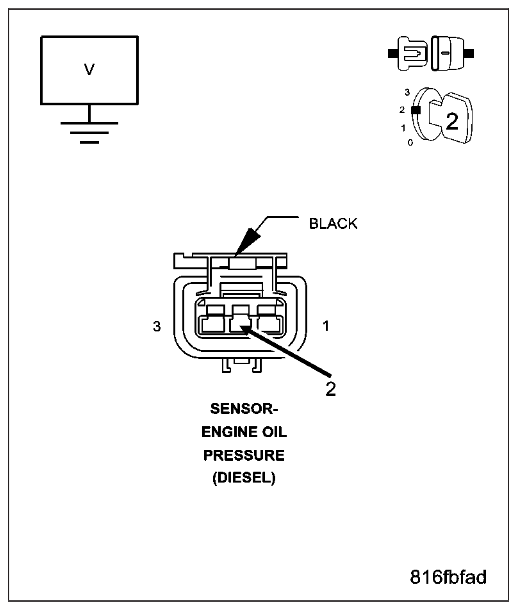
Disconnect the BCM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the Oil Pressure Sensor Signal circuit.



**Is the voltage below 1.0 volt?**

**Yes** >> Replace and program the Body Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Oil Pressure Sensor Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

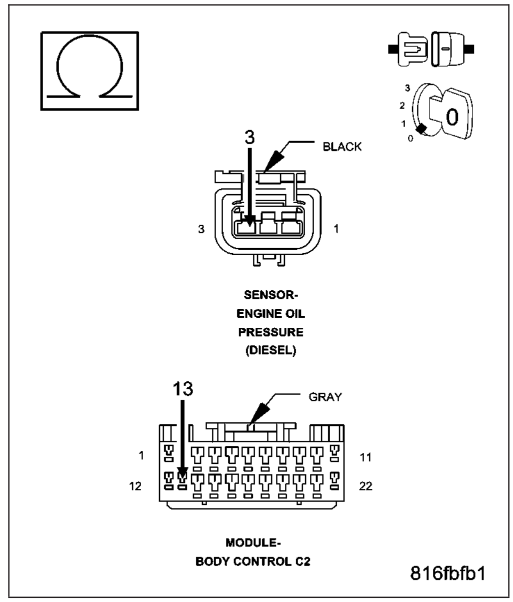
## 4. SENSOR GROUND CIRCUIT OPEN

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the Oil Pressure Sensor harness connector.

Measure the resistance of the Sensor Ground circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Replace the Engine Oil Pressure Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

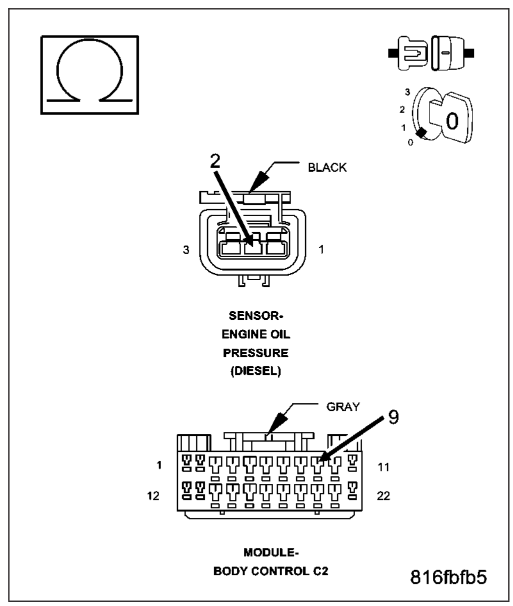
## 5. OIL PRESSURE SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the Oil Pressure Sensor harness connector.

Measure the resistance of the Oil Pressure Sensor Signal circuit.



**Is the resistance below 10.0 ohms?**

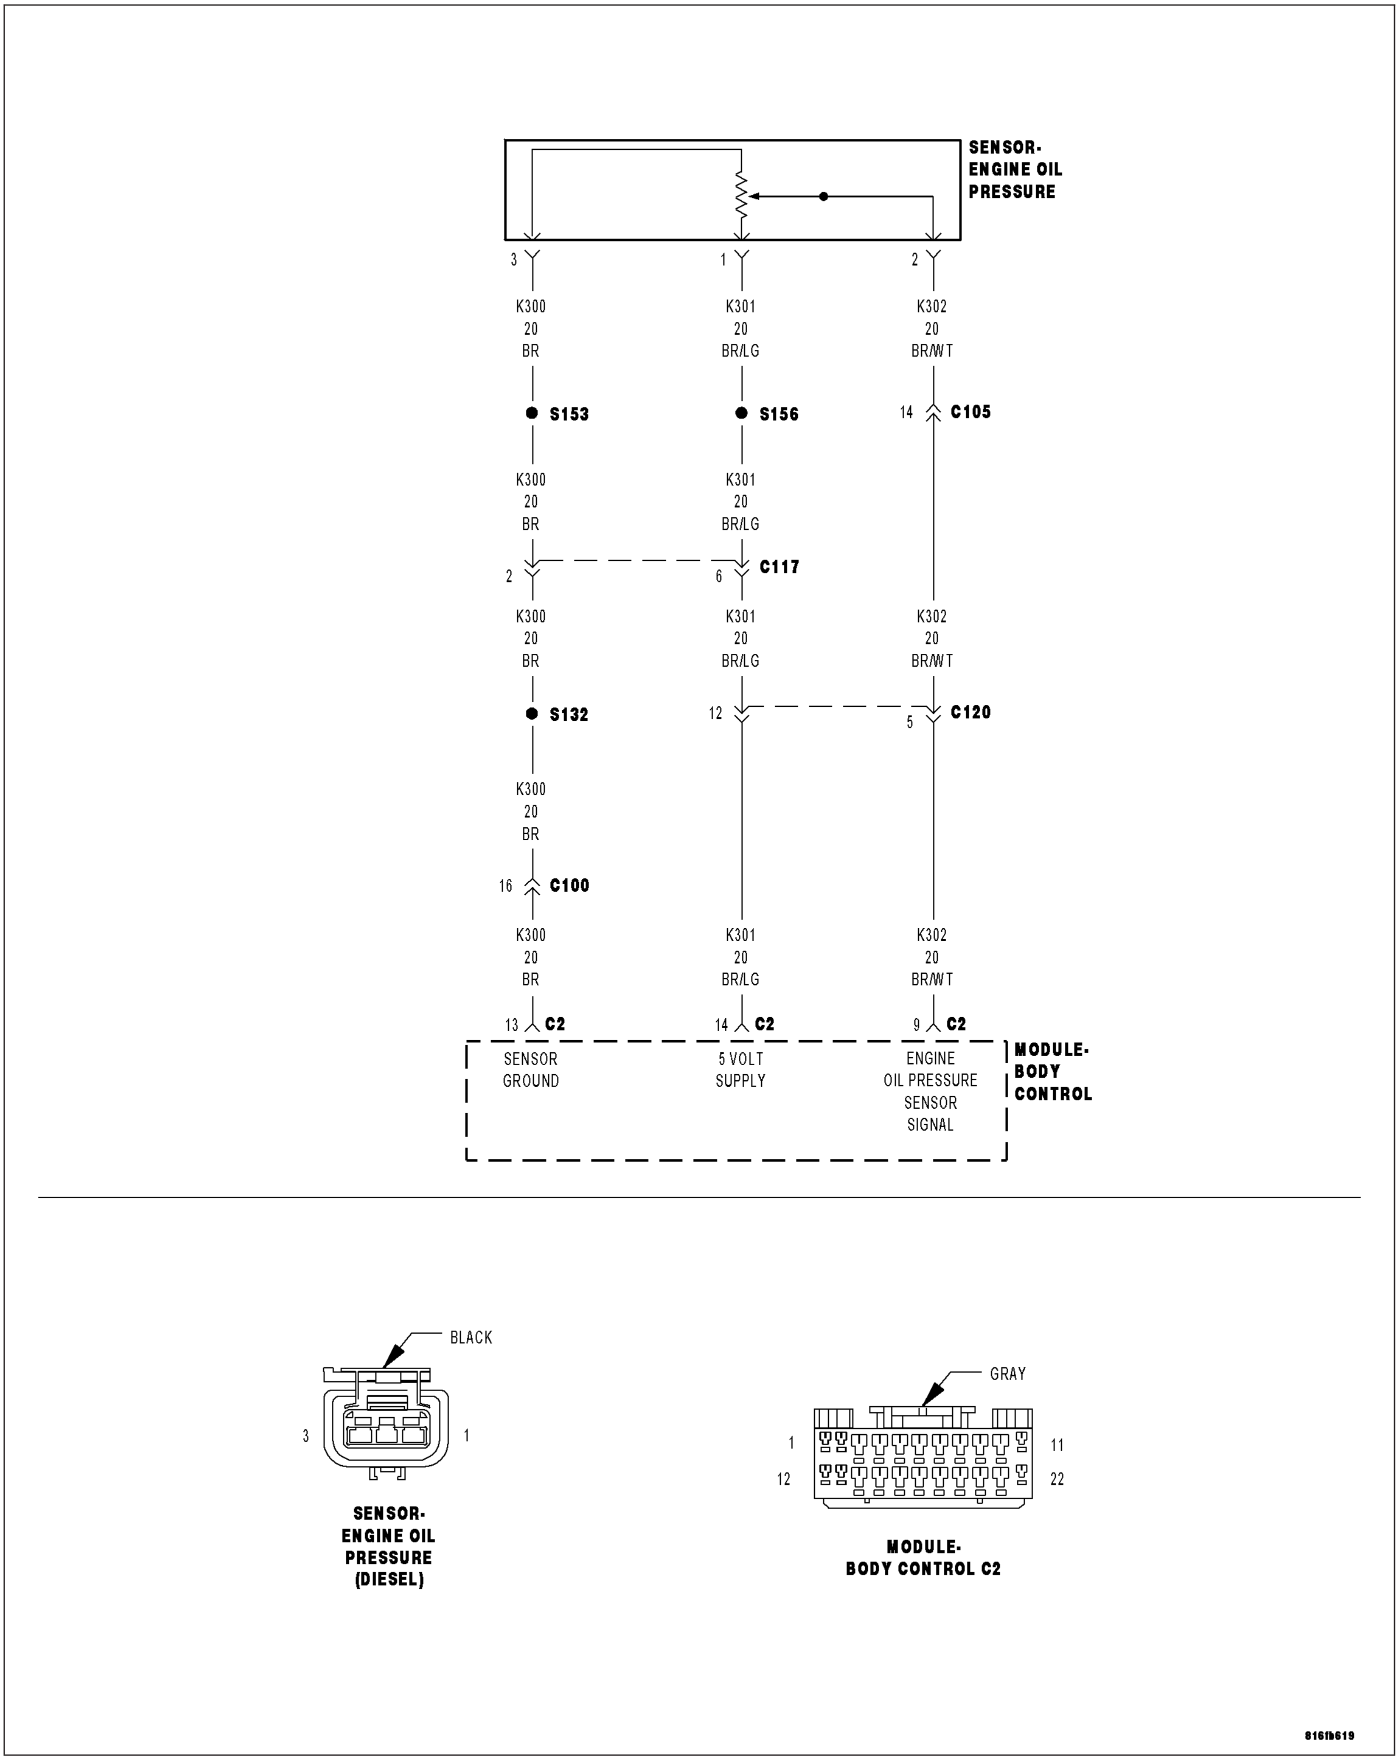
**Yes** >> Replace and program the Body Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Oil Pressure Sensor Signal circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0520-OIL PRESS SENSOR CKT MALF SIGNAL VOLTAGE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The Oil Pressure Sensor signal is below 0.19 volt for 0.5 seconds.

| Possible Causes |
| --- |
| ENGINE OIL PRESSURE SENSOR |
| BCM - OIL PRESSURE SENSOR SIGNAL SHORT TO GROUND |
| OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO SENSOR GROUND |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR CURRENT DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 10 seconds between run cycles.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. ENGINE OIL PRESSURE SENSOR

Turn the ignition off.

Disconnect the Oil Pressure Sensor harness connector.

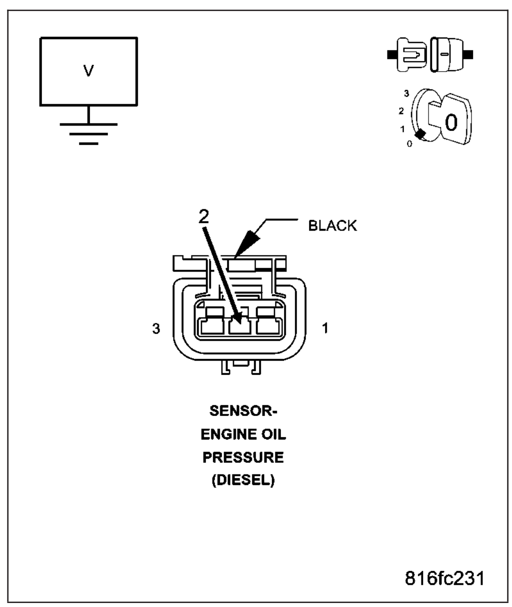
Measure the voltage of the Oil Pressure Sensor Signal circuit.

**Is the voltage between 4.7 and 5.3 volts?**

**Yes** >> Replace the Engine Oil Pressure Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3



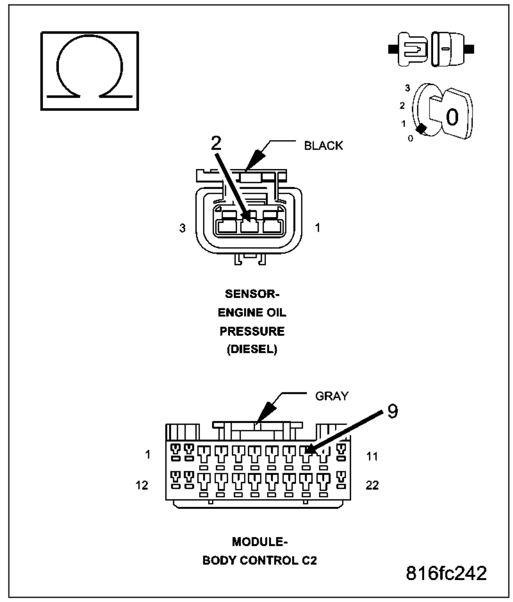
## 3. OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the Oil Pressure Sensor harness connector.

Measure the resistance between ground and the Oil Pressure Sensor Signal circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Oil Pressure Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

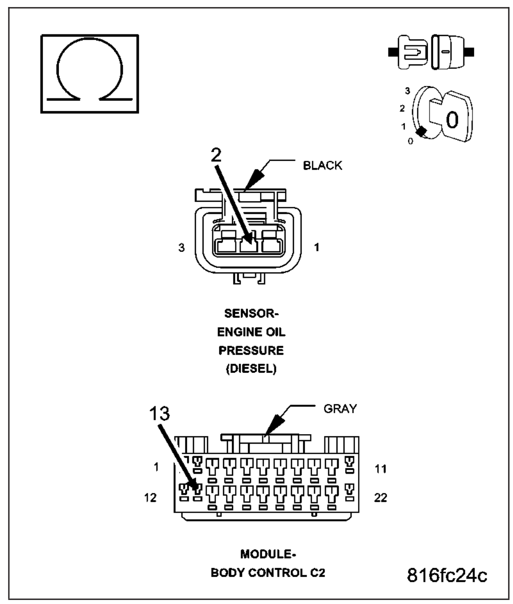
## 4. OIL PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO SENSOR GROUND

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the Oil Pressure Sensor harness connector.

Measure the resistance between Sensor Ground and the Oil Pressure Sensor Signal circuit.



**Is the resistance above 1000 ohms?**

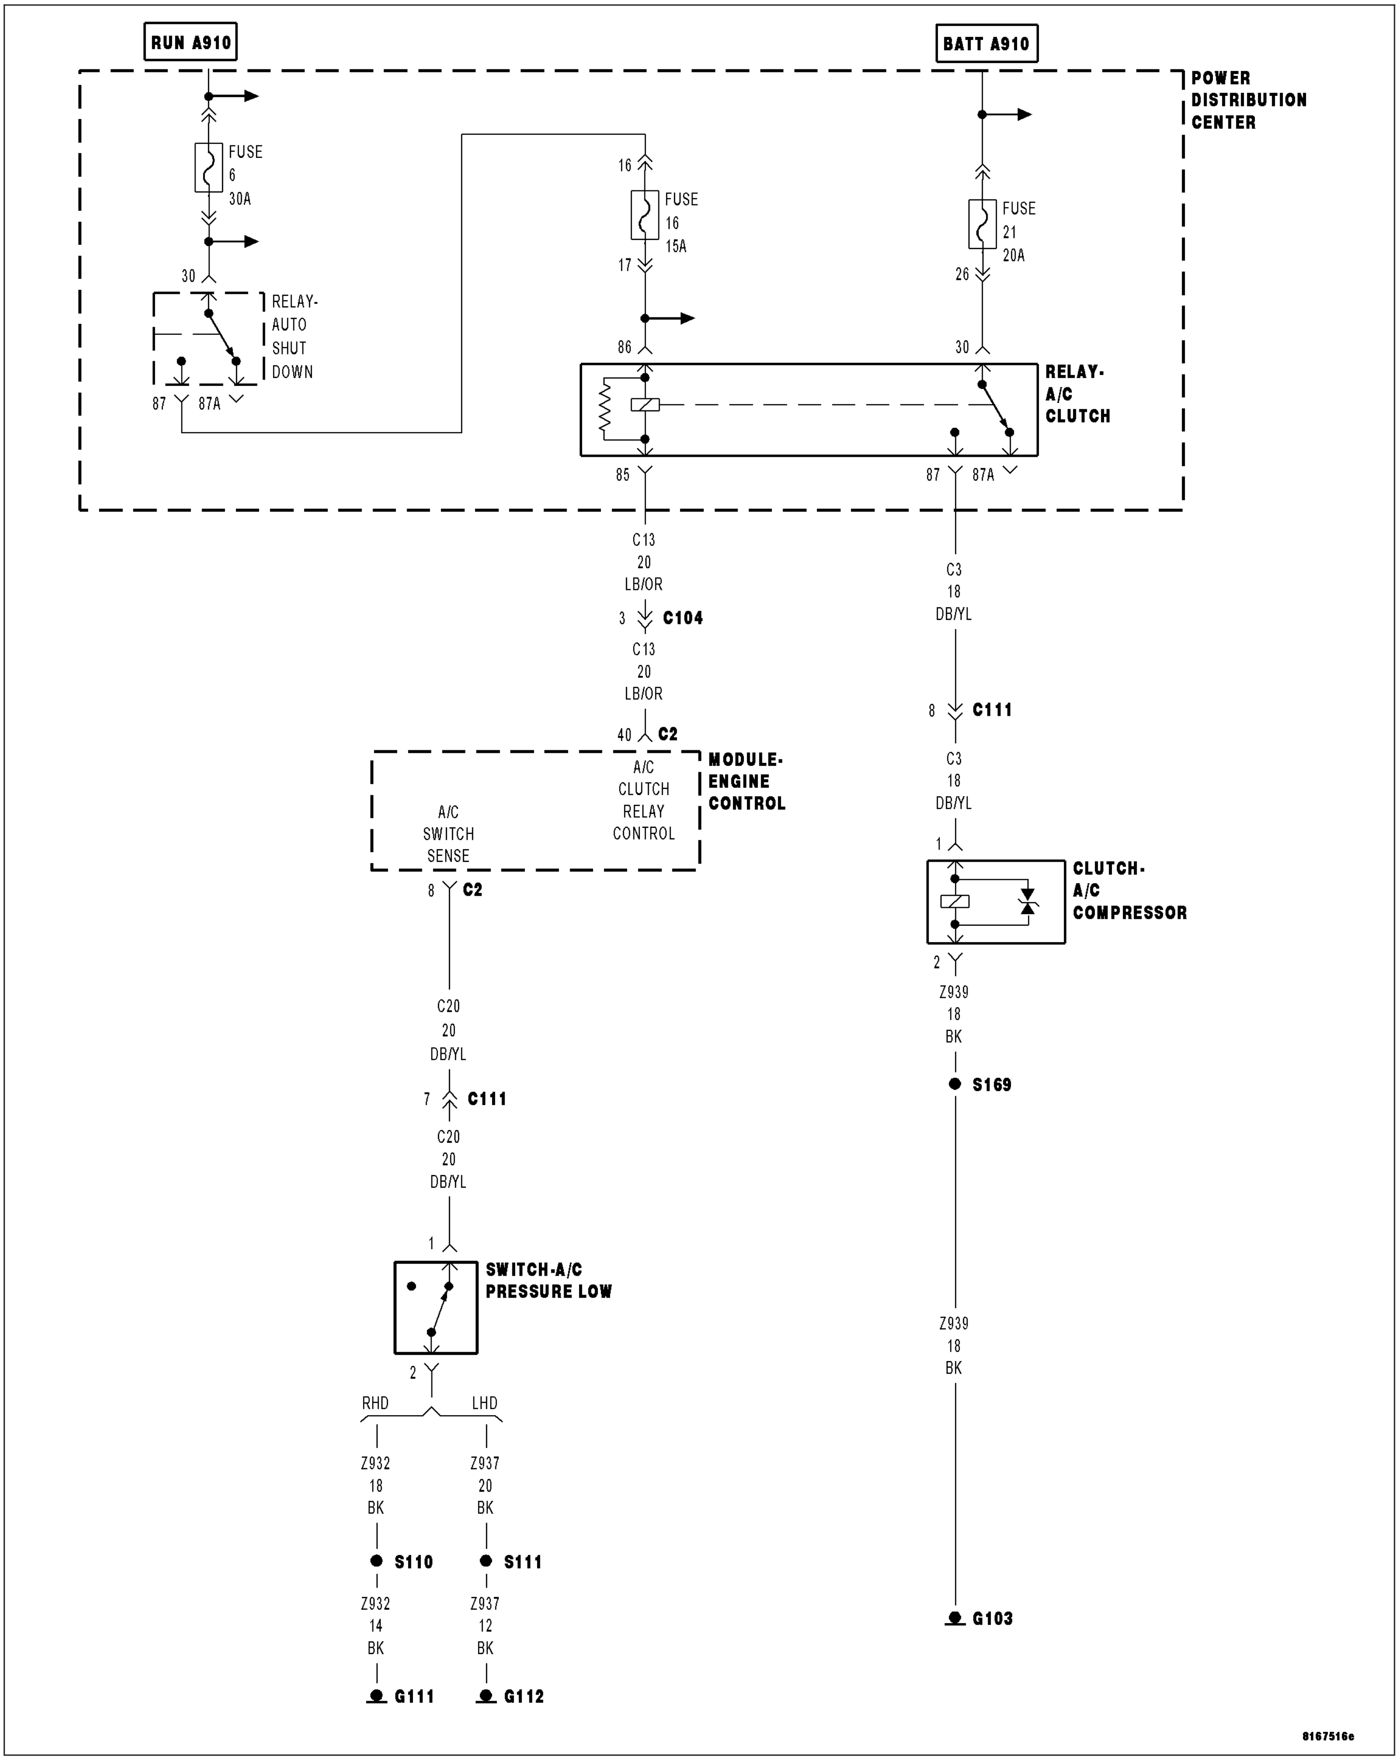
**Yes** >> Replace and program the Body Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Oil Pressure Sensor Signal circuit for a short to Sensor Ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0530- A/C PRESS SENSOR CIRCUIT MALF PLAUSIBILITY



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  An error occurs with the A/C pressure CAN bus message from the Body Control Module to the Engine Control Module.

| Possible Causes |
|---|
| 5-VOLT SUPPLY CIRCUIT OPEN |
| BCM - A/C PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| BCM - A/C PRESSURE SENSOR SIGNAL SHORT TO GROUND |
| A/C PRESSURE SENSOR FAILURE |
| A/C PRESSURE SENSOR SIGNAL CIRCUIT OPEN |
| A/C PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| A/C PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO SENSOR GROUND |
| A/C PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| SENSOR GROUND CIRCUIT OPEN |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECKING FOR CURRENT DTC

**NOTE: If DTC P0641 or P0651 is present with this DTC, diagnose DTCs P0641 and P0651 before diagnosing this DTC.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Start the engine several times, letting the engine run for at least 30 seconds at a time.

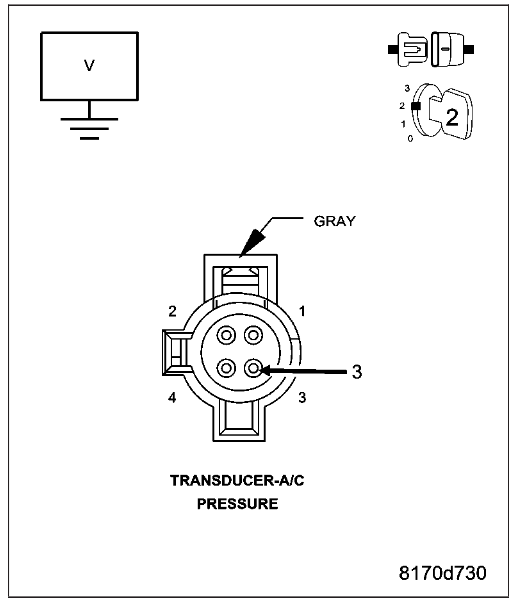
With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 2. CHECKING A/C SENSOR SIGNAL CKT



Turn the ignition off.

Disconnect the A/C Pressure Sensor harness connector.

Turn the ignition on.

Measure the voltage of the A/C Pressure Sensor Signal circuit.

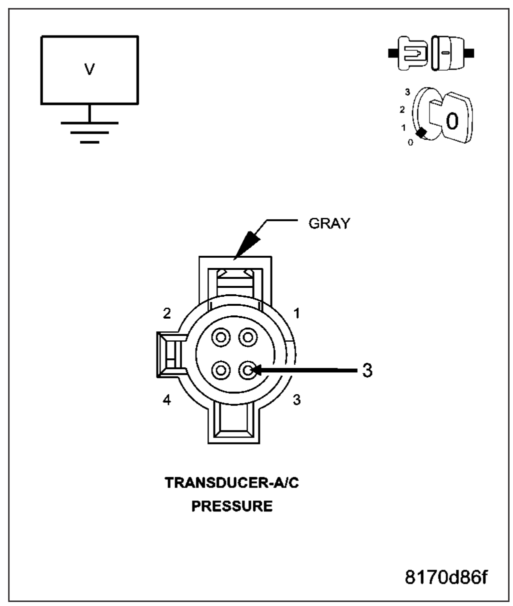
**Select the appropriate voltage reading.**

**Voltage is above 5.5 volts.**
Go To 3

**Voltage is between 4.7 and 5.4 volts.**
Go To 4

**Voltage is below 4.7 volts.**
Go To 6

## 3. A/C SENSOR SIGNAL CIRCUIT SHORT TO VOLTAGE



Turn the ignition off.

Disconnect the A/C Pressure Sensor harness connector.

Disconnect the BCM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the A/C Pressure Sensor Signal circuit.

**Is the voltage below 1.0 volt?**

**Yes** >> Replace and program the Body Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the A/C Pressure Sensor Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

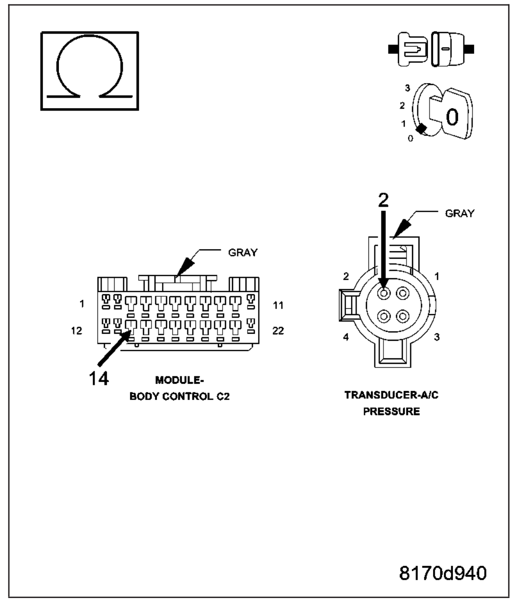
## 4. 5-VOLT SUPPLY CIRCUIT OPEN

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the A/C Pressure Sensor harness connector.

Measure the resistance of the 5-Volt Supply circuit between the BCM harness connector and the A/C Pressure Sensor harness connector.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the 5-Volt Supply circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

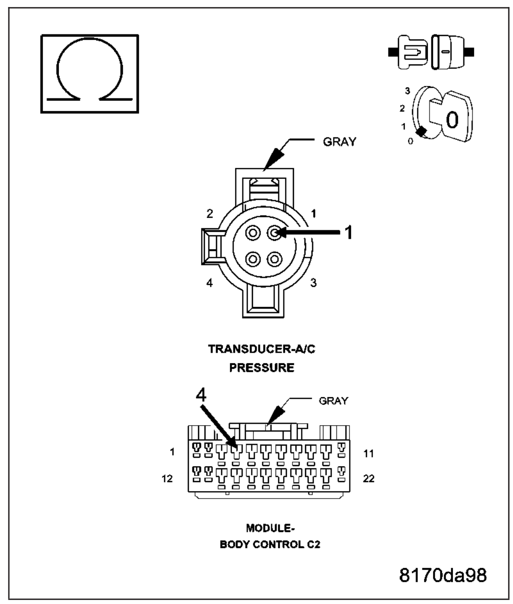
## 5. SENSOR GROUND CKT OPEN

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the A/C Pressure Sensor harness connector.

Measure the resistance of the Sensor Ground circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Replace the A/C Pressure Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

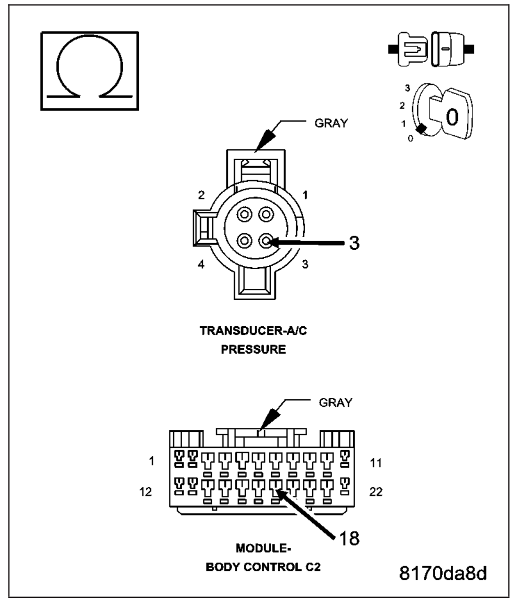
## 6. A/C SENSOR SIGNAL CKT OPEN

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the A/C Pressure Sensor harness connector.

Measure the resistance of the A/C Pressure Sensor Signal circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the A/C Pressure Sensor Signal circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

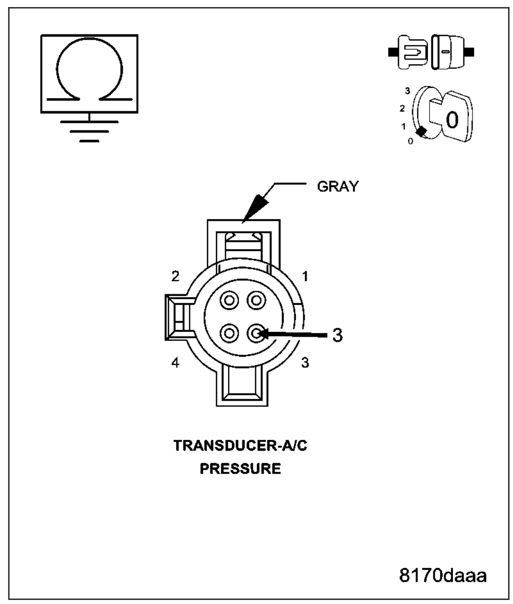
## 7. A/C PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the A/C Pressure Sensor harness connector.

Measure the resistance between ground and the A/C Pressure Sensor Signal circuit.

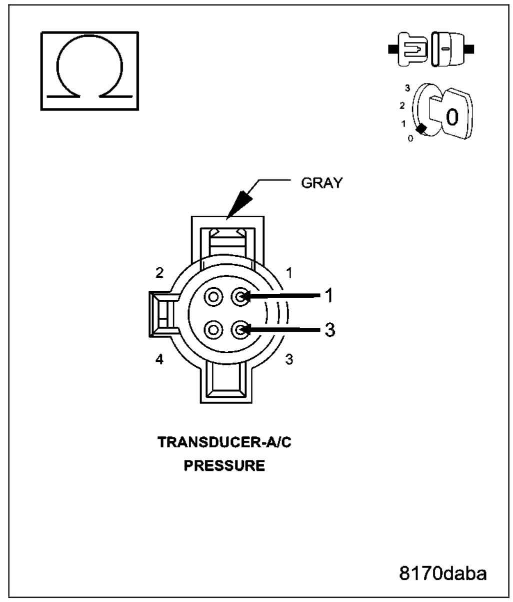


**Is the resistance above 1000 ohms?**

**Yes** >> Go To 8

**No** >> Repair the A/C Pressure Sensor Signal circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 8. A/C PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO SENSOR GROUND



Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the A/C Pressure Sensor harness connector.

Measure the resistance between Sensor Ground and the A/C Pressure Sensor Signal circuit.

**Is the resistance above 1000 ohms?**

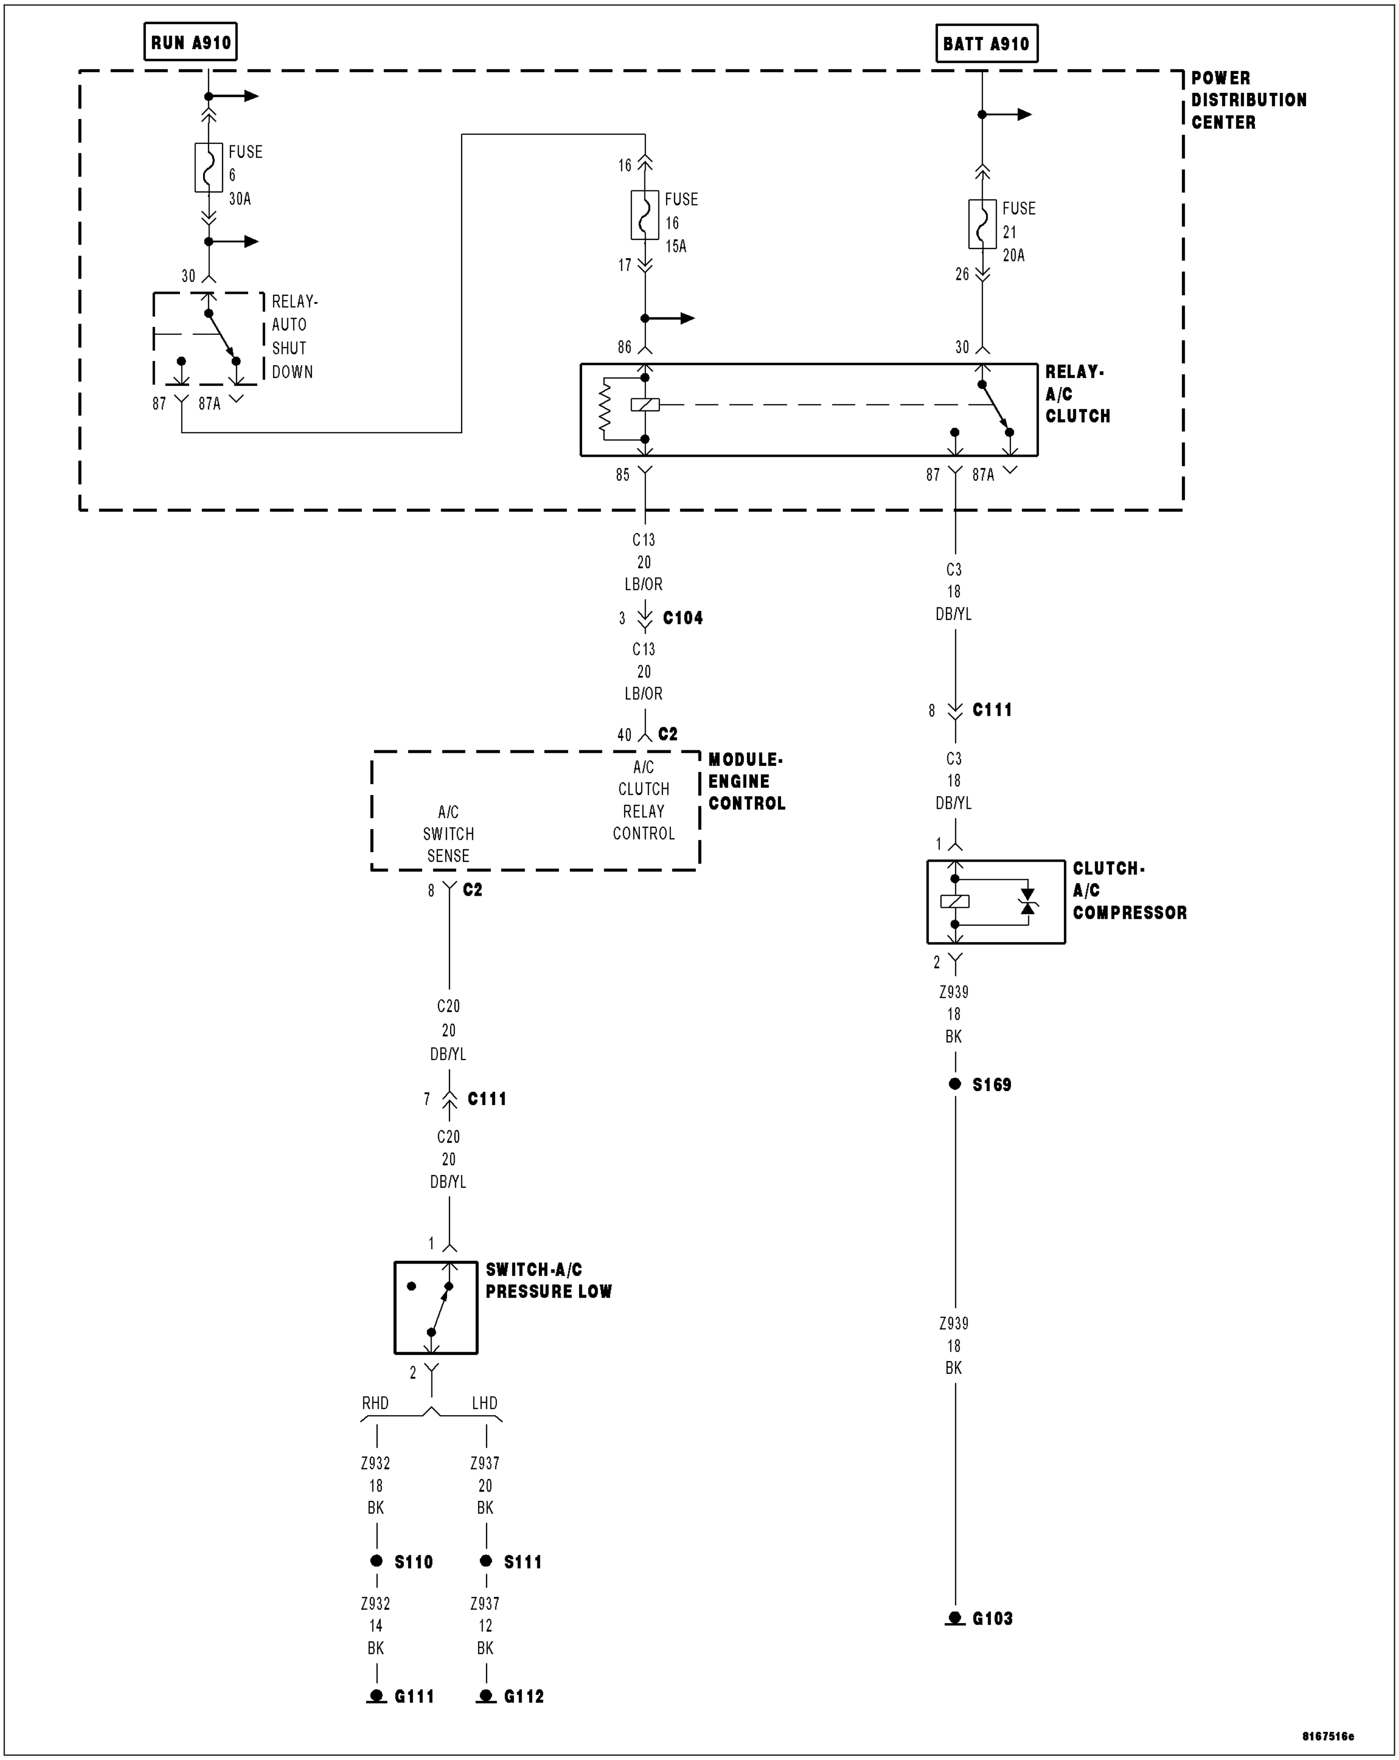
**Yes** >> Replace and program the Body Control Module in accordance with the Service Information.

Perform the BCM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the A/C Pressure Sensor Signal circuit for a short to the Sensor Ground circuit.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0530- A/C PRESS SENSOR CIRCUIT VOLTAGE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The A/C Pressure Sensor Signal is below 0.06 volt for 0.6 second.

| Possible Causes |
| --- |
| 5-VOLT SUPPLY CIRCUIT OPEN |
| BCM - A/C PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| BCM - A/C PRESSURE SENSOR SIGNAL SHORT TO GROUND |
| A/C PRESSURE SENSOR FAILURE |
| A/C PRESSURE SENSOR SIGNAL CIRCUIT OPEN |
| A/C PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| A/C PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO SENSOR GROUND |
| A/C PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| SENSOR GROUND CIRCUIT OPEN |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECKING FOR CURRENT DTC

**NOTE: If DTC P0641 or P0651 is present with this DTC, diagnose DTCs P0641 and P0651 before diagnosing this DTC.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Start the engine several times, letting the engine run for at least 30 seconds at a time.

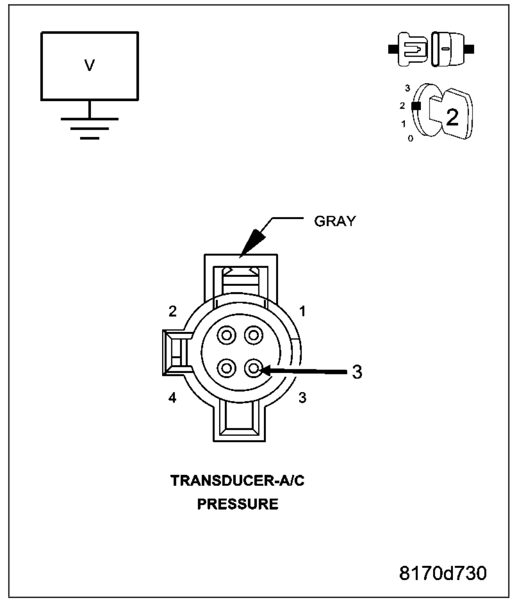
With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 2. CHECKING A/C SENSOR SIGNAL CKT



Turn the ignition off.

Disconnect the A/C Pressure Sensor harness connector.

Turn the ignition on.

Measure the voltage of the A/C Pressure Sensor Signal circuit.

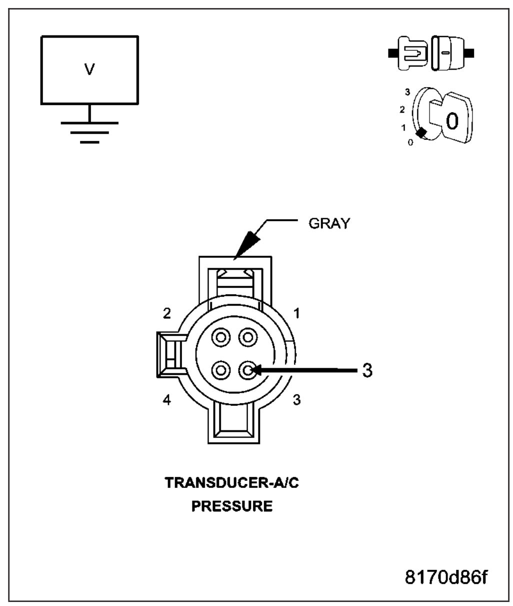
**Select the appropriate voltage reading.**

**Voltage is above 5.5 volts.**
Go To 3

**Voltage is between 4.7 and 5.4 volts.**
Go To 4

**Voltage is below 4.7 volts.**
Go To 6

## 3. A/C SENSOR SIGNAL CIRCUIT SHORT TO VOLTAGE



Turn the ignition off.

Disconnect the A/C Pressure Sensor harness connector.

Disconnect the BCM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the A/C Pressure Sensor Signal circuit.

**Is the voltage below 1.0 volt?**

**Yes** >> Replace and program the Body Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the A/C Pressure Sensor Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

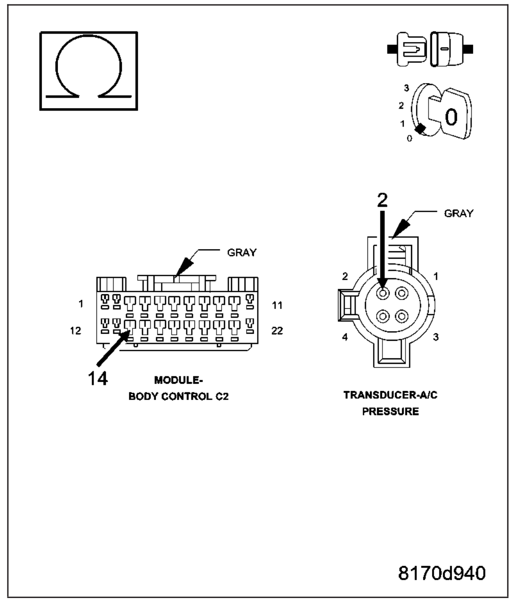
## 4. 5-VOLT SUPPLY CIRCUIT OPEN

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the A/C Pressure Sensor harness connector.

Measure the resistance of the 5-Volt Supply circuit between the BCM harness connector and the A/C Pressure Sensor harness connector.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the 5-Volt Supply circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

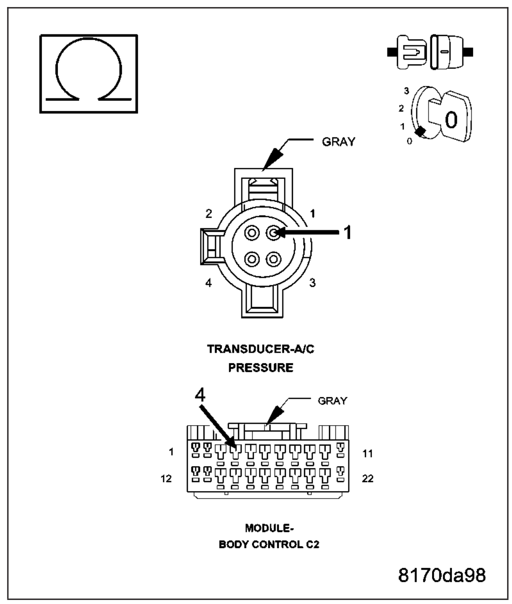
## 5. SENSOR GROUND CKT OPEN

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the A/C Pressure Sensor harness connector.

Measure the resistance of the Sensor Ground circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Replace the A/C Pressure Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

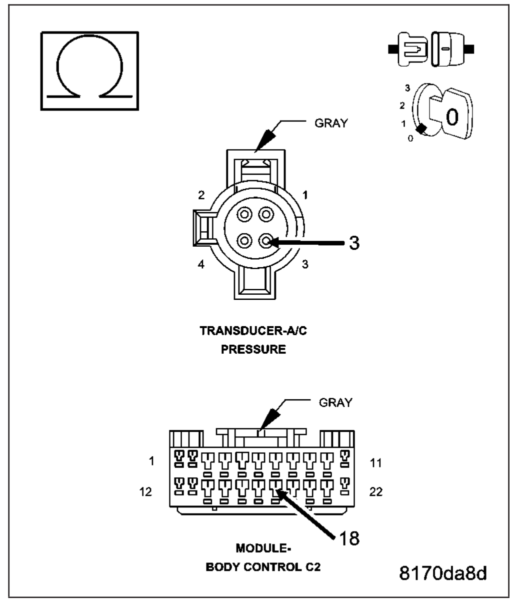
## 6. A/C SENSOR SIGNAL CKT OPEN

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the A/C Pressure Sensor harness connector.

Measure the resistance of the A/C Pressure Sensor Signal circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the A/C Pressure Sensor Signal circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

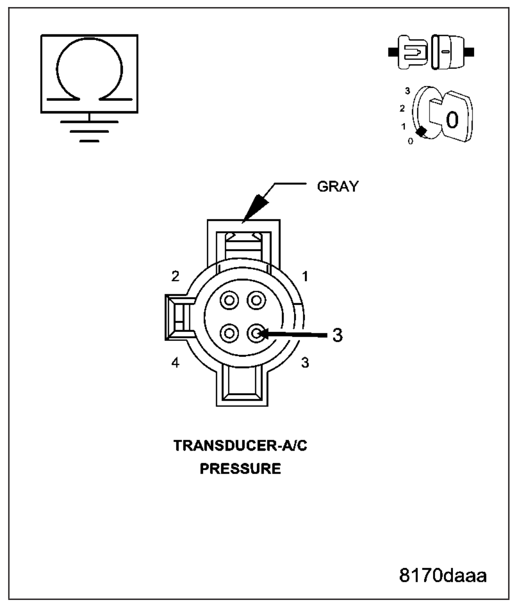
## 7. A/C PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the A/C Pressure Sensor harness connector.

Measure the resistance between ground and the A/C Pressure Sensor Signal circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 8

**No** >> Repair the A/C Pressure Sensor Signal circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

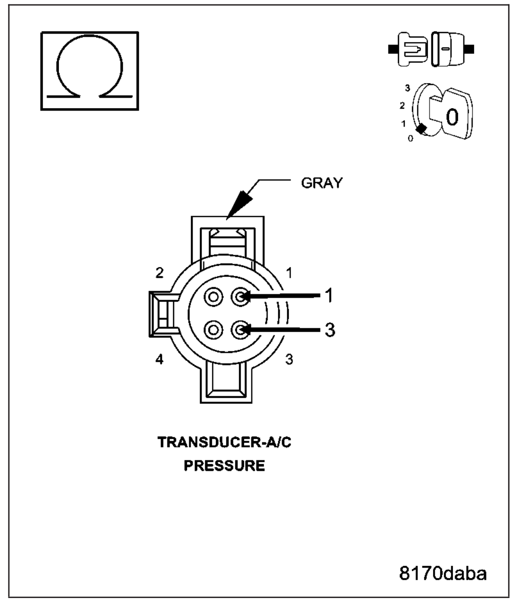
## 8. A/C PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO SENSOR GROUND

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the A/C Pressure Sensor harness connector.

Measure the resistance between Sensor Ground and the A/C Pressure Sensor Signal circuit.



**Is the resistance above 1000 ohms?**

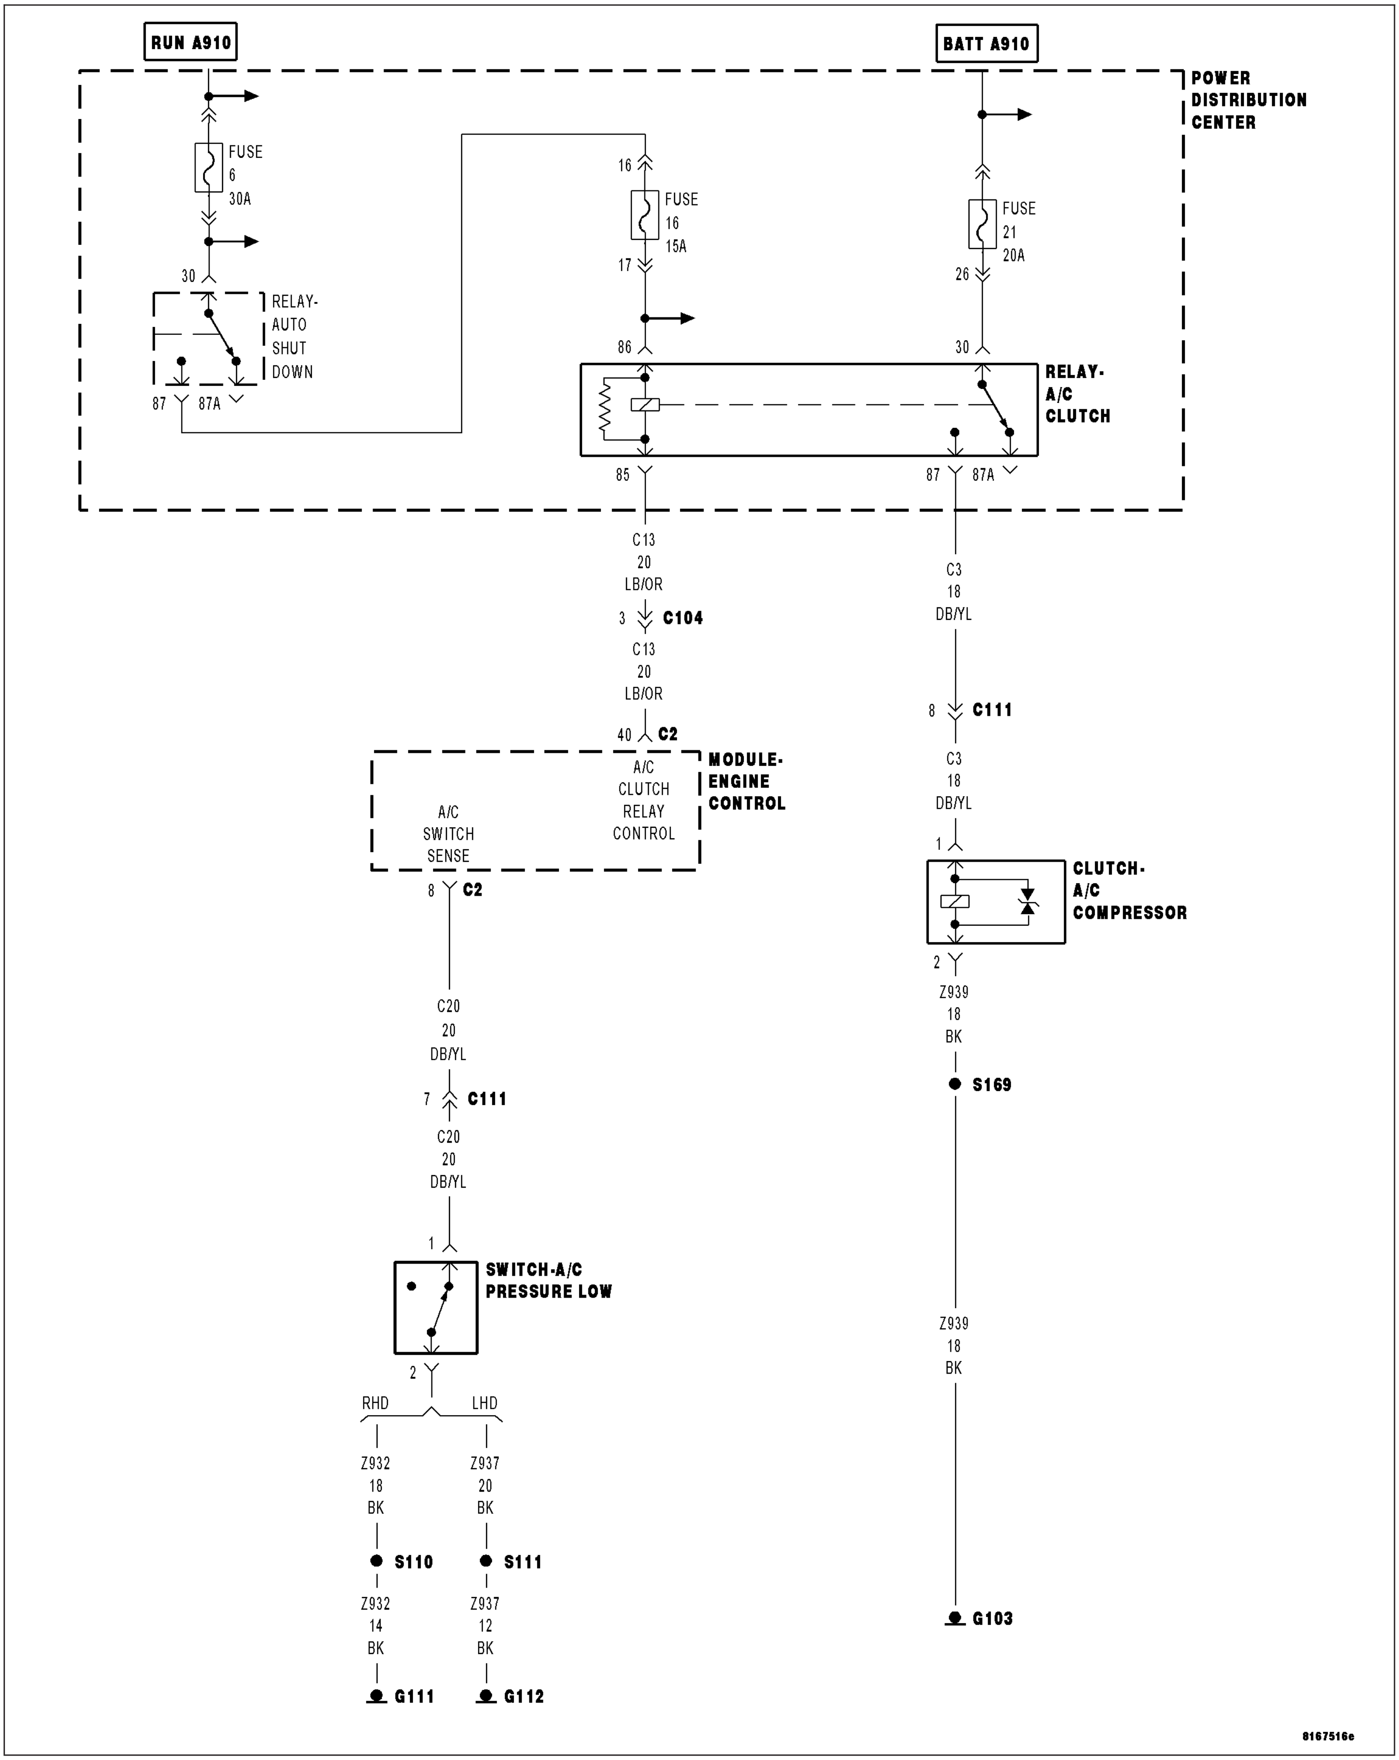
**Yes** >> Replace and program the Body Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the A/C Pressure Sensor Signal circuit for a short to the Sensor Ground circuit.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0530- A/C PRESS SENSOR CIRCUIT VOLTAGE TOO HIGH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The A/C Pressure Sensor Signal is above 4.74 volts for 0.6 second.

| Possible Causes |
|---|
| 5-VOLT SUPPLY CIRCUIT OPEN |
| BCM - A/C PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| BCM - A/C PRESSURE SENSOR SIGNAL SHORT TO GROUND |
| A/C PRESSURE SENSOR FAILURE |
| A/C PRESSURE SENSOR SIGNAL CIRCUIT OPEN |
| A/C PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| A/C PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO SENSOR GROUND |
| A/C PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| SENSOR GROUND CIRCUIT OPEN |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECKING FOR CURRENT DTC

**NOTE: If DTC P0641 or P0651 is present with this DTC, diagnose DTCs P0641 and P0651 before diagnosing this DTC.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Start the engine several times, letting the engine run for at least 30 seconds at a time.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

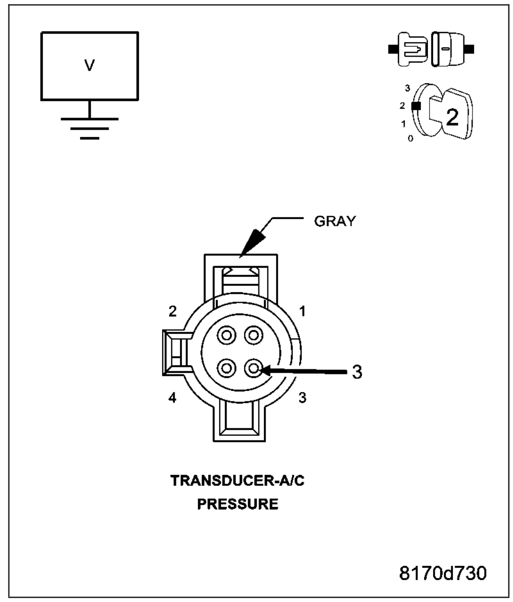
## 2. CHECKING A/C SENSOR SIGNAL CKT

Turn the ignition off.

Disconnect the A/C Pressure Sensor harness connector.

Turn the ignition on.

Measure the voltage of the A/C Pressure Sensor Signal circuit.



**Select the appropriate voltage reading.**

**Voltage is above 5.5 volts.**
Go To 3

**Voltage is between 4.7 and 5.4 volts.**
Go To 4

**Voltage is below 4.7 volts.**
Go To 6

## 3. A/C SENSOR SIGNAL CIRCUIT SHORT TO VOLTAGE

Turn the ignition off.

Disconnect the A/C Pressure Sensor harness connector.

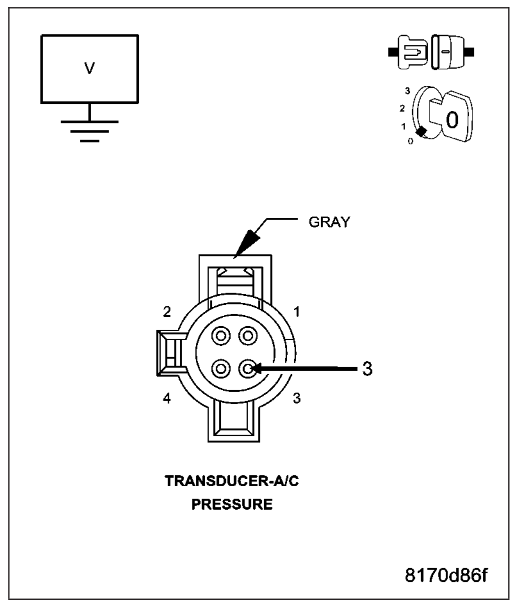
Disconnect the BCM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the A/C Pressure Sensor Signal circuit.



**Is the voltage below 1.0 volt?**

**Yes** >> Replace and program the body Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the A/C Pressure Sensor Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

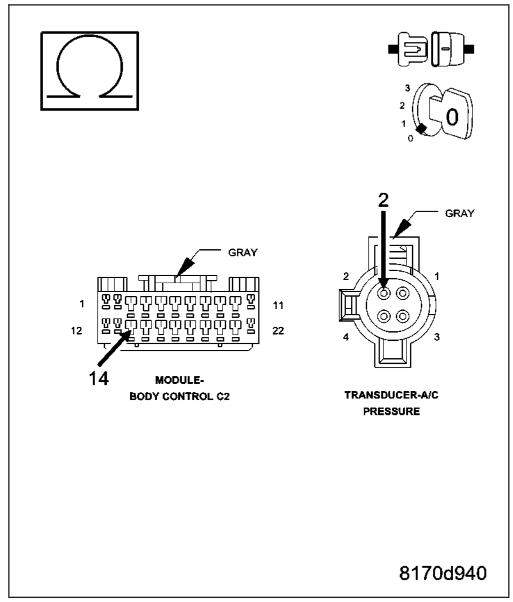
## 4. 5-VOLT SUPPLY CIRCUIT OPEN

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the A/C Pressure Sensor harness connector.

Measure the resistance of the 5-Volt Supply circuit between the BCM harness connector and the A/C Pressure Sensor harness connector.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the 5-Volt Supply circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

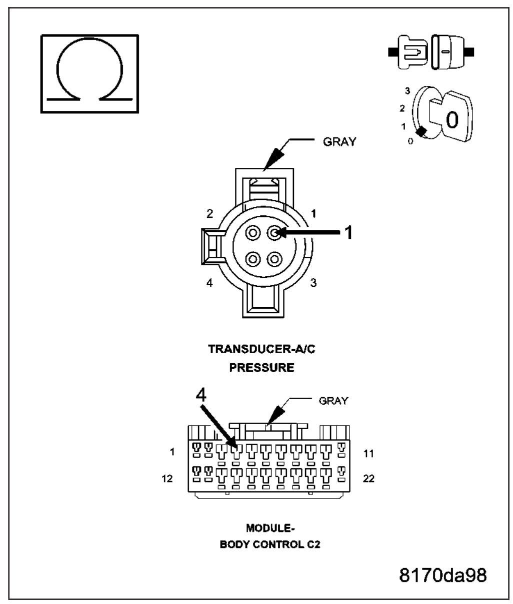
## 5. SENSOR GROUND CKT OPEN

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the A/C Pressure Sensor harness connector.

Measure the resistance of the Sensor Ground circuit.

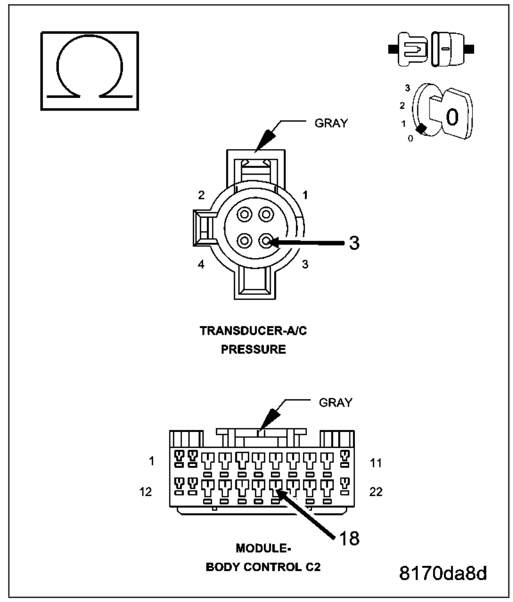


**Is the resistance below 10.0 ohms?**

**Yes** >> Replace the A/C Pressure Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Sensor Ground circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. A/C SENSOR SIGNAL CKT OPEN



Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the A/C Pressure Sensor harness connector.

Measure the resistance of the A/C Pressure Sensor Signal circuit.

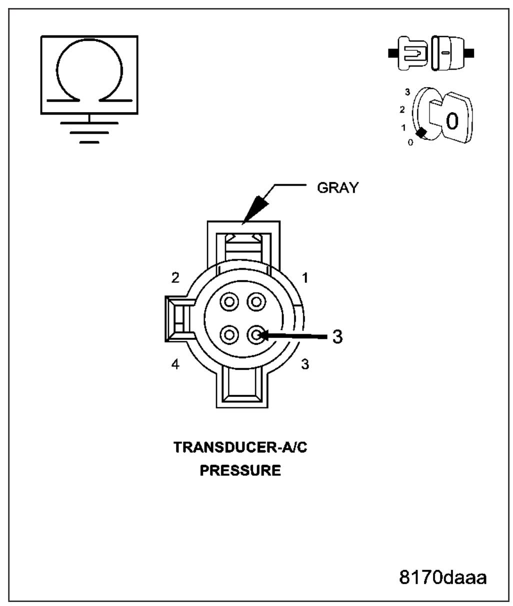
**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the A/C Pressure Sensor Signal circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. A/C PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO GROUND



Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the A/C Pressure Sensor harness connector.

Measure the resistance between ground and the A/C Pressure Sensor Signal circuit.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 8

**No** >> Repair the A/C Pressure Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 8. A/C PRESSURE SENSOR SIGNAL CIRCUIT SHORTED TO SENSOR GROUND

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the A/C Pressure Sensor harness connector.

Measure the resistance between Sensor Ground and the A/C Pressure Sensor Signal circuit.

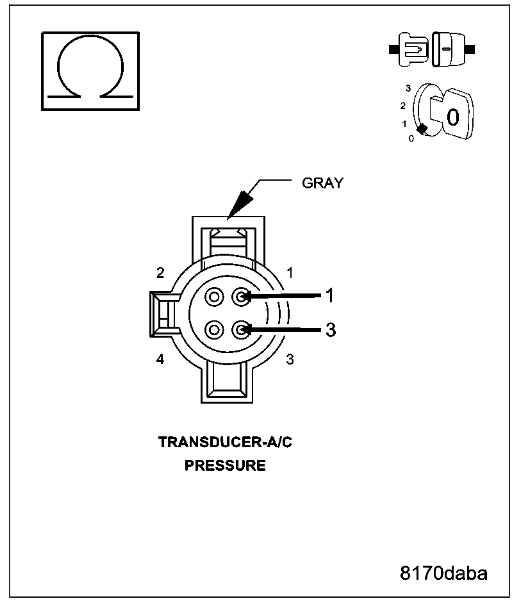
**Is the resistance above 1000 ohms?**

**Yes** >> Replace and program the body Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the A/C Pressure Sensor Signal circuit for a short to the Sensor Ground circuit.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## P0560-ECM VOLTAGE TOO HIGH

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on or the engine running.
- **Set Condition:**

| Possible Causes |
|---|
| CHECKING ECM POWER AND GROUNDS |
| ECM |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

**NOTE: This DTC may be caused by a charging system problem. Refer to the Service Information and verify proper charging system operation before continuing.**

Test drive the vehicle.

Turn the ignition on.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECK POWER AND GROUNDS

Refer to the symptom list and perform the Checking the ECM Power and Ground test.

**Were any problem found with the ECM powers and grounds?**

**Yes** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0560-ECM VOLTAGE TOO LOW

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on or the engine running.
- **Set Condition:**

| Possible Causes |
|---|
| CHECKING ECM POWER AND GROUNDS |
| ECM |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

**NOTE: This DTC may be caused by a charging system problem. Refer to the Service Information and verify proper charging system operation before continuing.**

Test drive the vehicle.

Turn the ignition on.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECK POWER AND GROUNDS

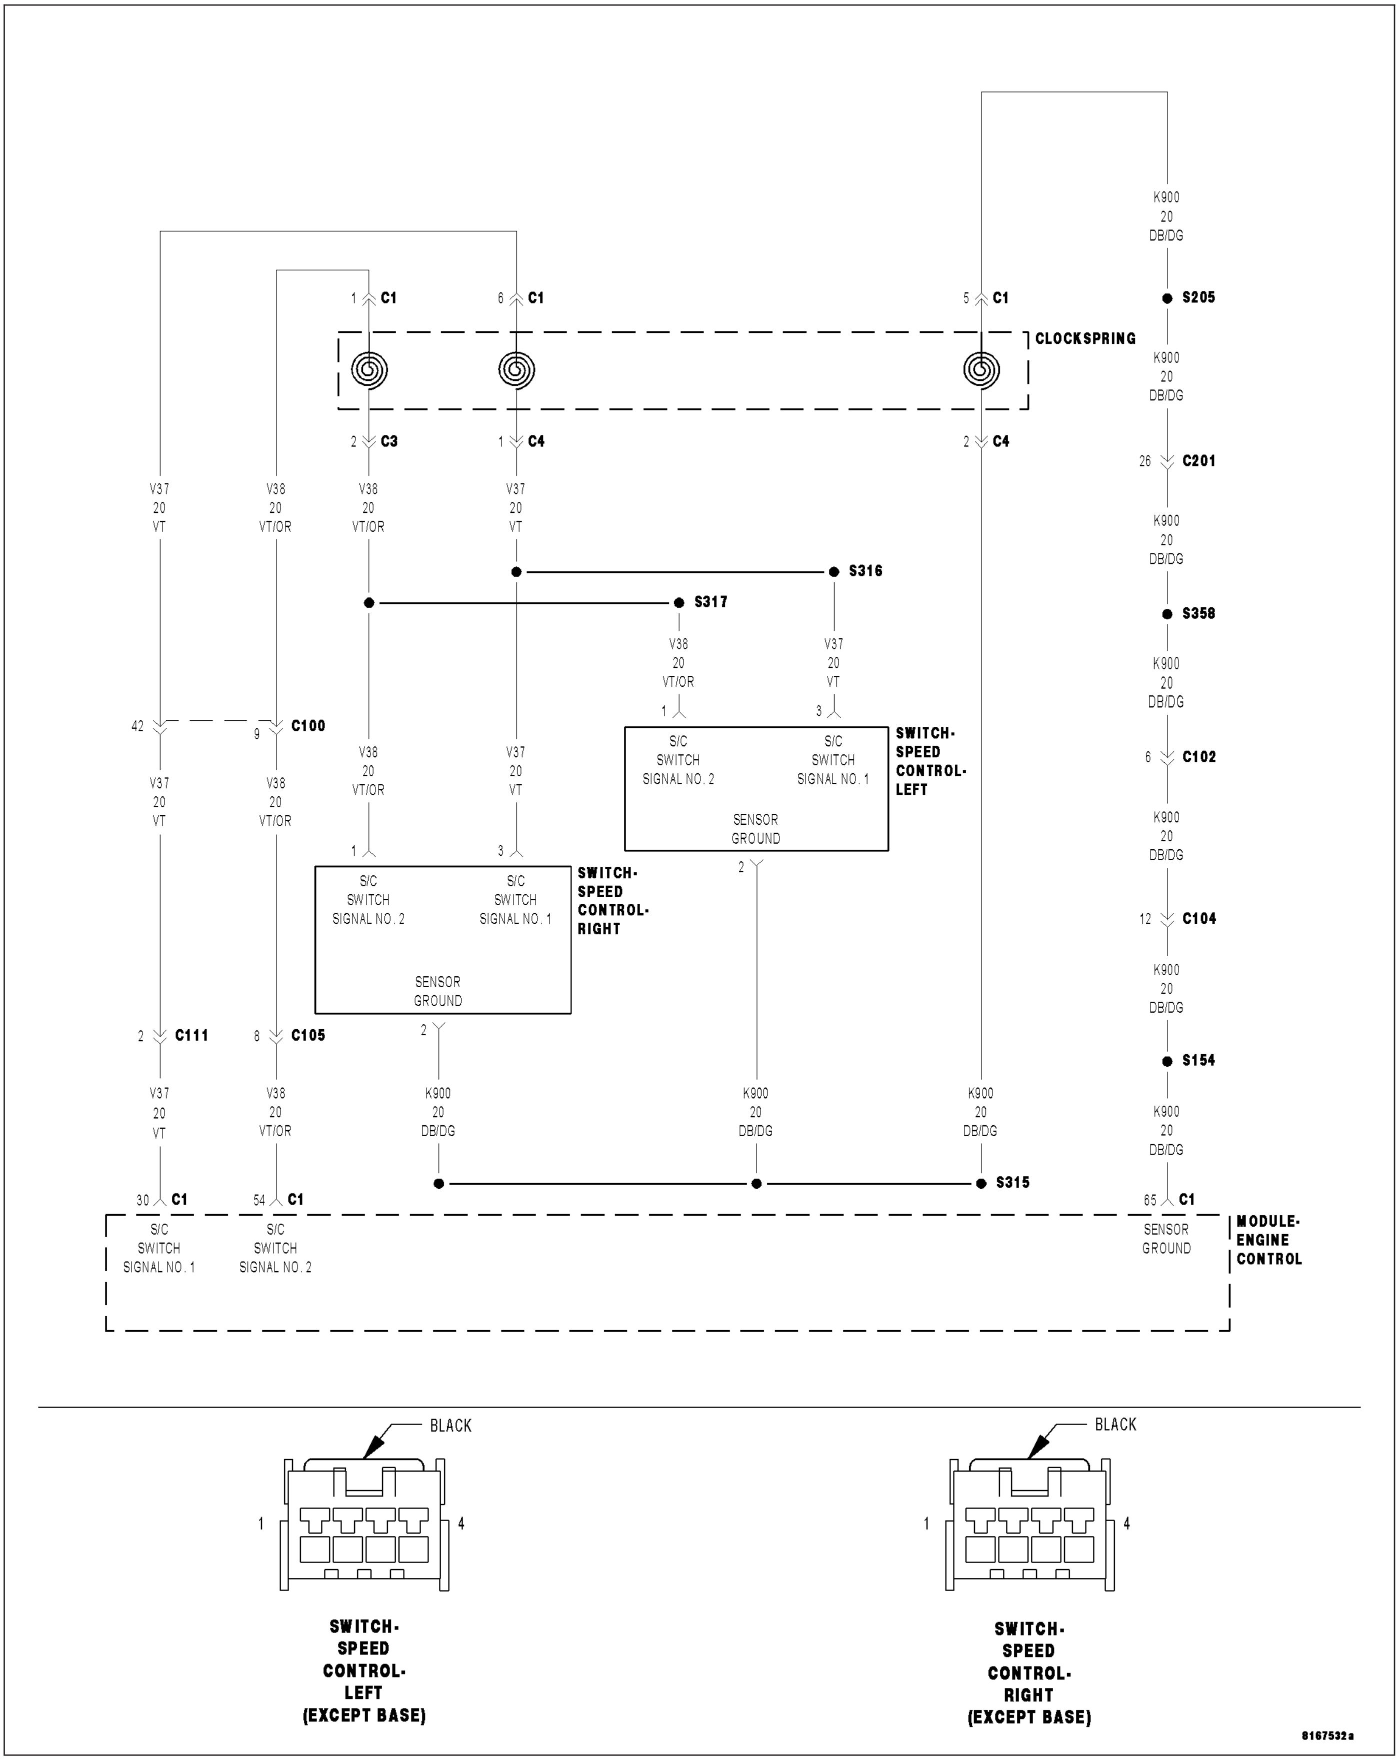
Refer to the symptom list and perform the Checking the ECM Power and Ground test.

**Were any problem found with the ECM powers and grounds?**

**Yes** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0564-S/C SWITCH #1 SIGNAL CIRCUIT PLAUSIBILITY



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition switch on and no other S/C Switch DTC's present.
- **Set Condition:**
  The S/C Switch #1 signal voltage is not within a valid switch signal range.

| Possible Causes |
| --- |
| ECM - S/C SIGNAL CIRCUIT OPEN |
| ECM - S/C SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| ECM - SENSOR GROUND OPEN |
| S/C SWITCH SIGNAL CIRCUIT OPEN |
| S/C SWITCH SIGNAL CIRCUIT OPEN |
| S/C SWITCH SIGNAL CIRCUIT SHORT TO GROUND |
| S/C SWITCH SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| SENSOR GROUND OPEN |
| SPEED CONTROL SWITCHES |

## Diagnostic Test

### 1. VERIFY S/C SWITCH SIGNAL CIRCUIT VOLTAGE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

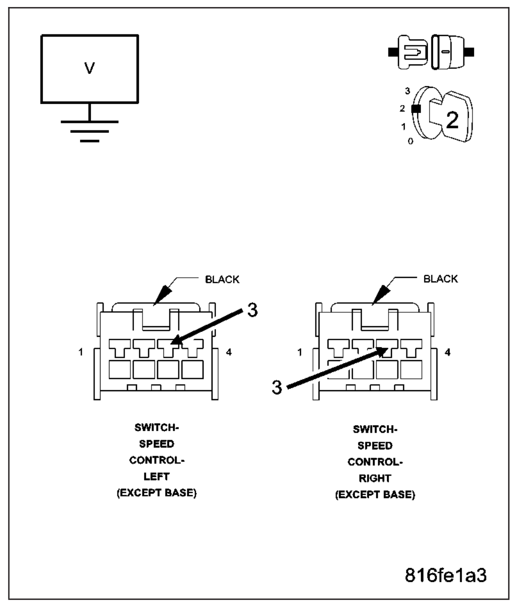
**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition off.

Disconnect the harness connectors from both S/C Switches.

Turn the ignition on.

Measure the voltage of the S/C Switch #1 Signal circuit at both S/C Switch harness connectors.



**Select the appropriate voltage reading.**

**4.5 to 5.5 volts at both connectors.**
Go To 2

**4.5 to 5.5 volts at only one connector.**
Repair the S/C Switch Signal circuit that measured below 4.5 volts for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Below 4.5 volts at both connectors.**
Go To 4

**Above 5.5 volts for either measurement.**
Go To 6

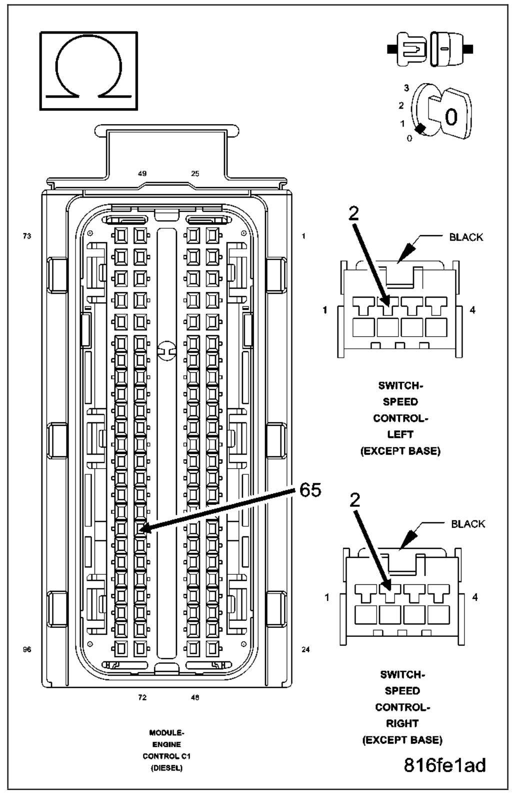
## 2. SENSOR GROUND OPEN

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance of the Sensor Ground circuit between each S/C Switch harness connector and the ECM harness connector.



**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 3

**No** >> Repair the Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

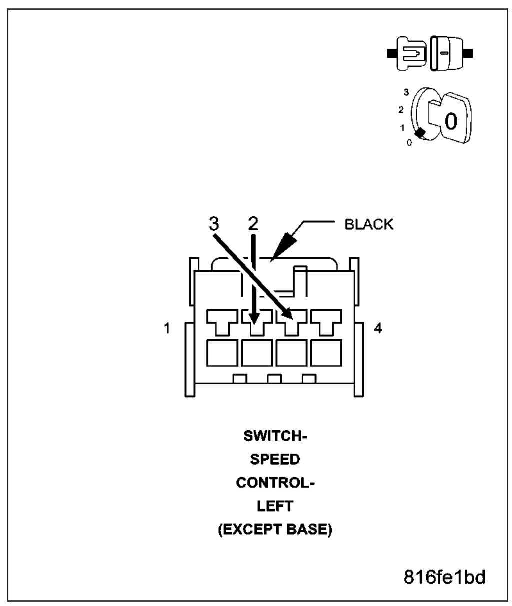
## 3. ECM - SENSOR GROUND OPEN

Turn the ignition off.

Disconnect one of the S/C Switch harness connectors.

With the scan tool, read the S/C Switch Voltage.

While monitoring the scan tool, connect a jumper wire between the S/C Switch #1 Signal circuit and the Sensor Ground circuit in the S/C Switch harness connector.



**Does the scan tool display below 0.1 volt with the jumper wire connected?**

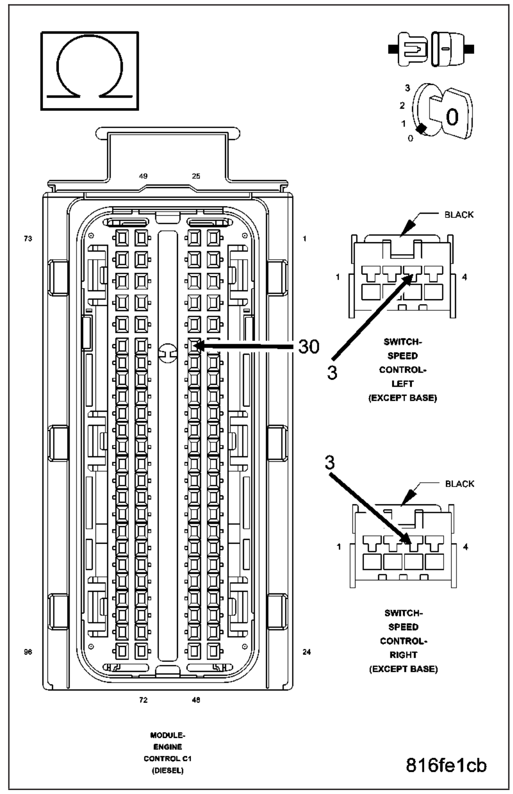
**Yes** >> Replace the Speed Control Switches.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. S/C SWITCH #1 SIGNAL CIRCUIT OPEN



Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance between the S/C Switch #1 Signal circuit between both S/C Switch harness connectors and the ECM harness connector.

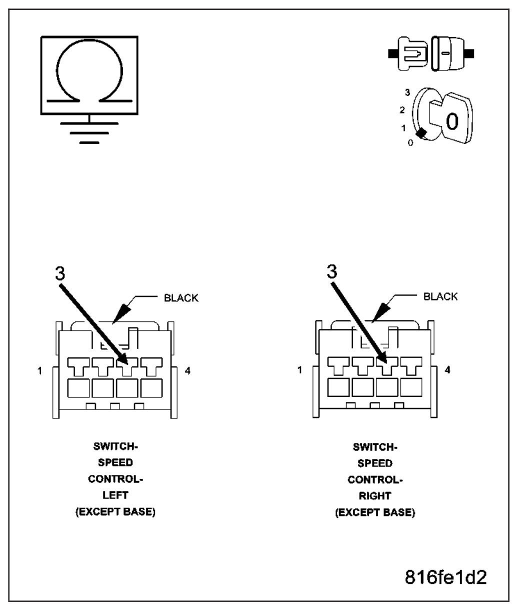
**Is the resistance below 10.0 ohms for both measurements?**

**Yes** >> Go To 5

**No** >> Repair the S/C Switch #1 Signal circuit that measured above 10.0 ohms for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. S/C SWITCH #1 SIGNAL CIRCUIT SHORT TO GROUND



Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the S/C Switch #1 Signal circuit.

**Is the resistance above 1000 ohms?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the S/C Switch #1 Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. S/C SWITCH #1 SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

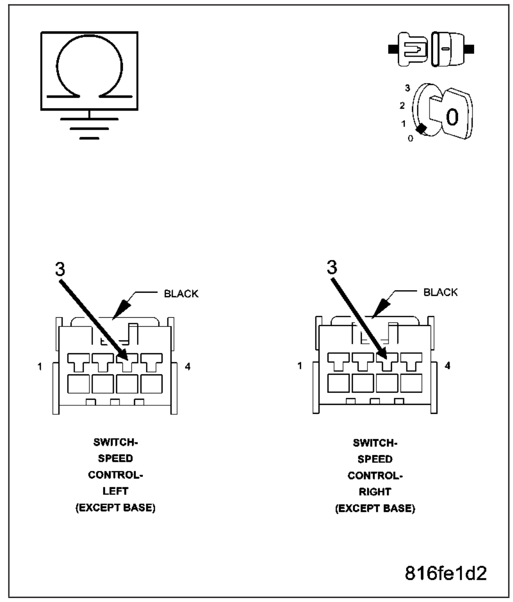
Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the S/C Switch #1 Signal circuit.



**Is the voltage above 1.0 volt?**

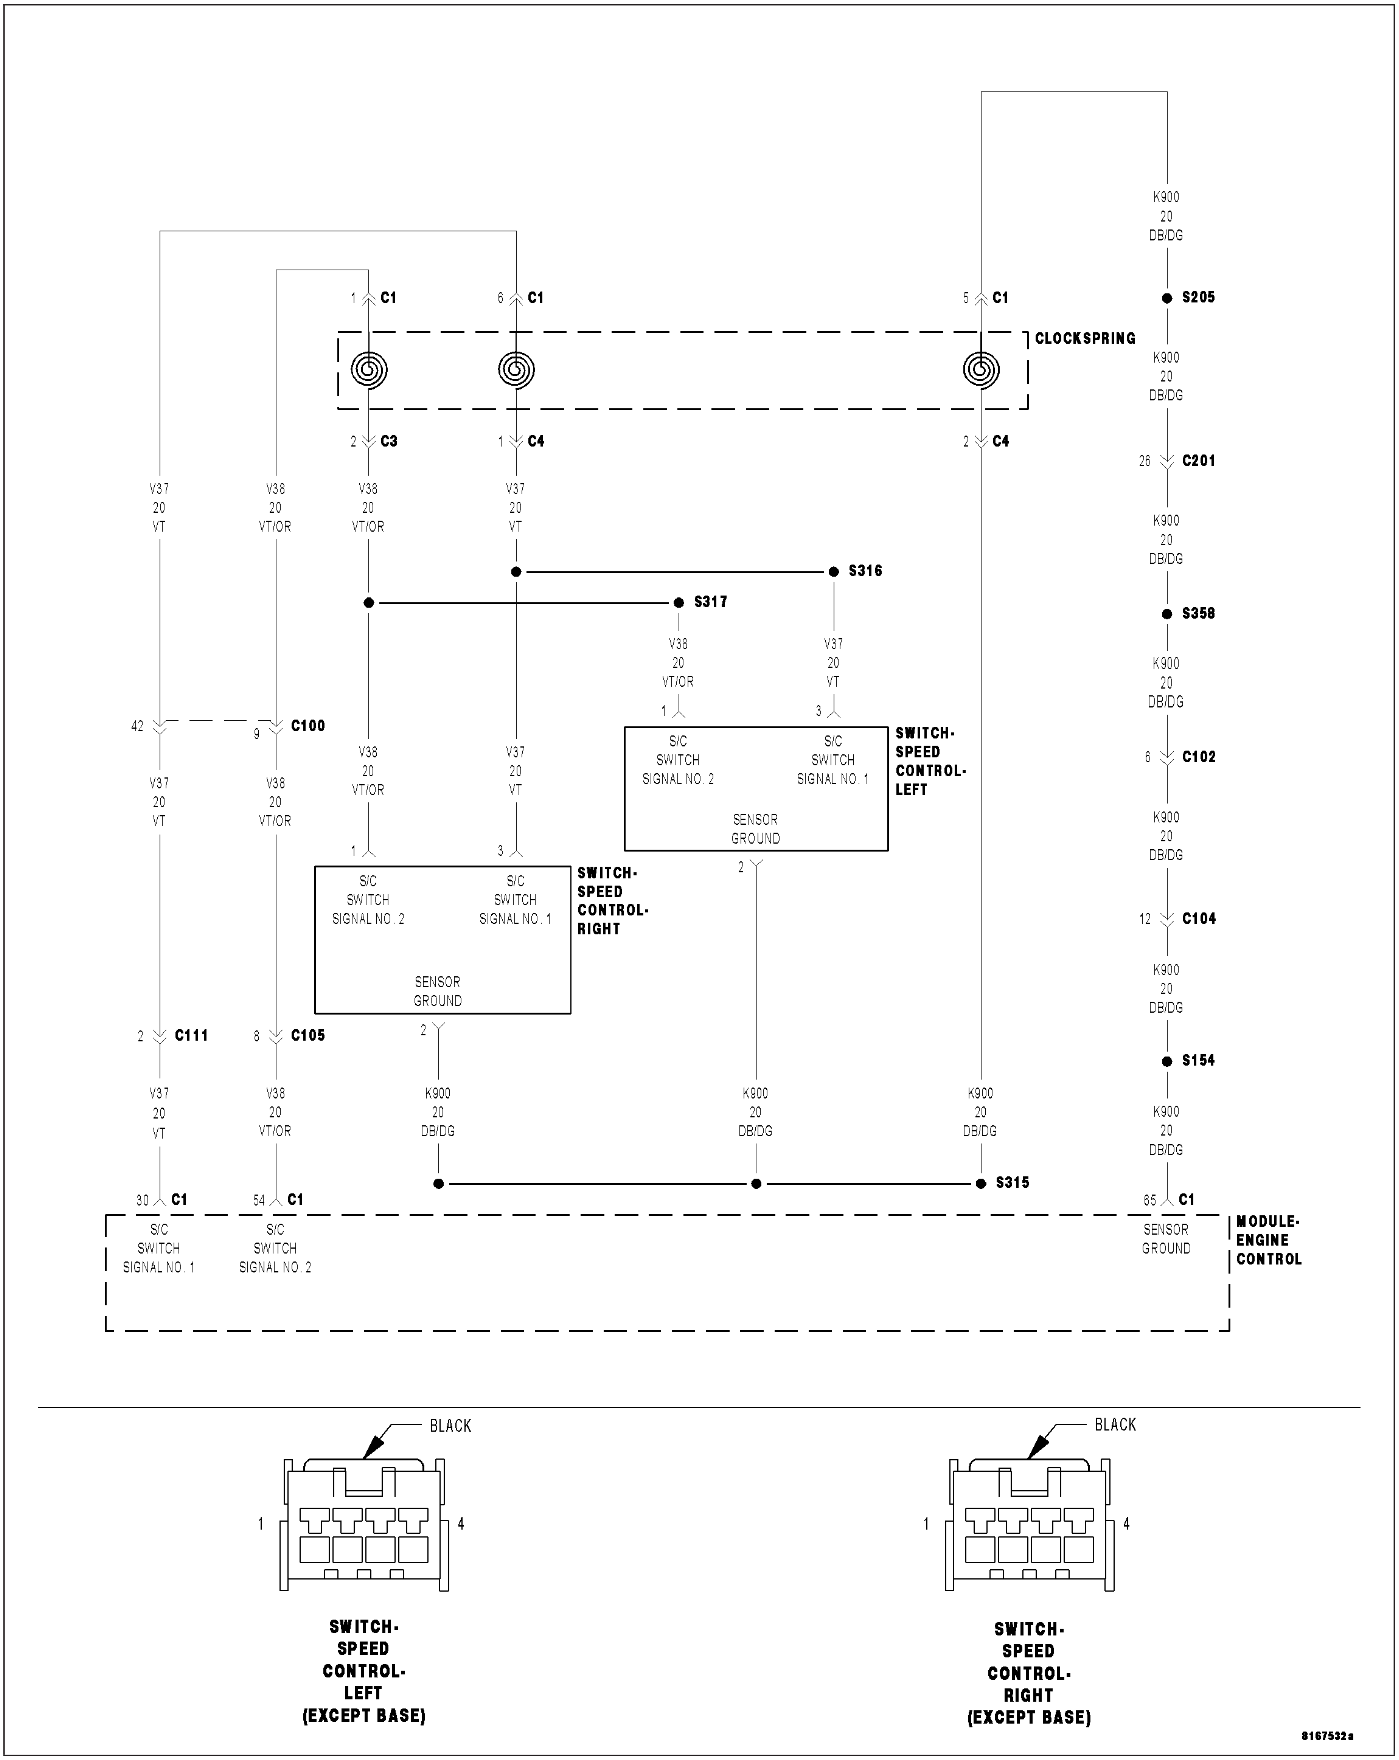
**Yes** >> Repair the S/C Switch #1 Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0564-S/C SWITCH #1 SIGNAL CIRCUIT VOLTAGE TOO HIGH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The S/C Switch #1 Signal is above 4.90 volts for 1.0 second.

| Possible Causes |
|---|
| ECM - S/C SIGNAL CIRCUIT OPEN |
| ECM - S/C SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| ECM - SENSOR GROUND OPEN |
| S/C SWITCH SIGNAL CIRCUIT OPEN |
| S/C SWITCH SIGNAL CIRCUIT OPEN |
| S/C SWITCH SIGNAL CIRCUIT SHORT TO GROUND |
| S/C SWITCH SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| SENSOR GROUND OPEN |
| SPEED CONTROL SWITCHES |

## Diagnostic Test

### 1. VERIFY S/C SWITCH SIGNAL CIRCUIT VOLTAGE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

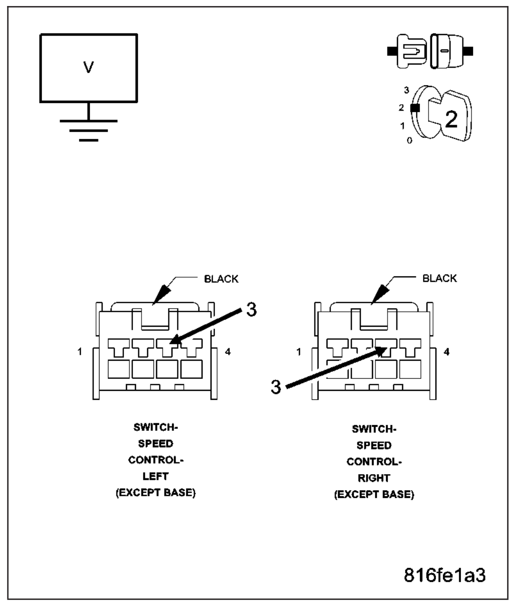
**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition off.

Disconnect the harness connectors from both S/C Switches.

Turn the ignition on.

Measure the voltage of the S/C Switch #1 Signal circuit at both S/C Switch harness connectors.



**Select the appropriate voltage reading.**

**4.5 to 5.5 volts at both connectors.**
Go To 2

**4.5 to 5.5 volts at only one connector.**
Repair the S/C Switch Signal circuit that measured below 4.5 volts for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Below 4.5 volts at both connectors.**
Go To 4

**Above 5.5 volts for either measurement.**
Go To 6

## 2. SENSOR GROUND OPEN

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

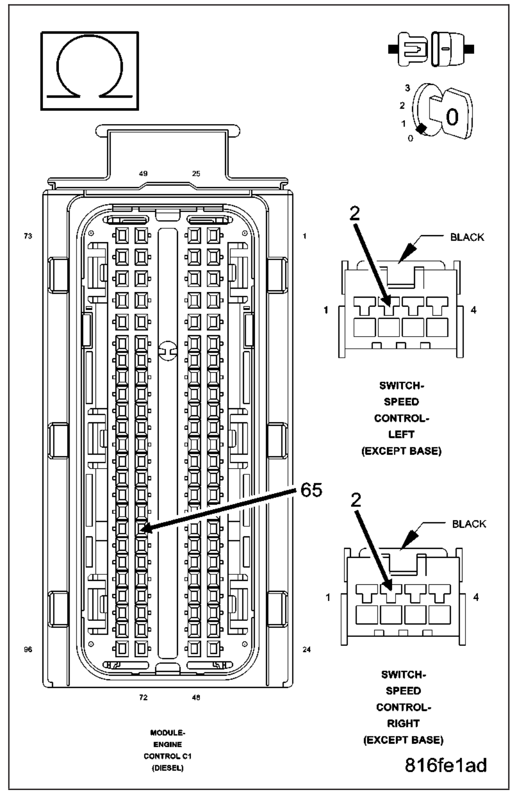
Measure the resistance of the Sensor Ground circuit between each S/C Switch harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 3

**No** >> Repair the Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 3. ECM - SENSOR GROUND OPEN

Turn the ignition off.

Disconnect one of the S/C Switch harness connectors.

With the scan tool, read the S/C Switch Voltage.

While monitoring the scan tool, connect a jumper wire between the S/C Switch #1 Signal circuit and the Sensor Ground circuit in the S/C Switch harness connector.

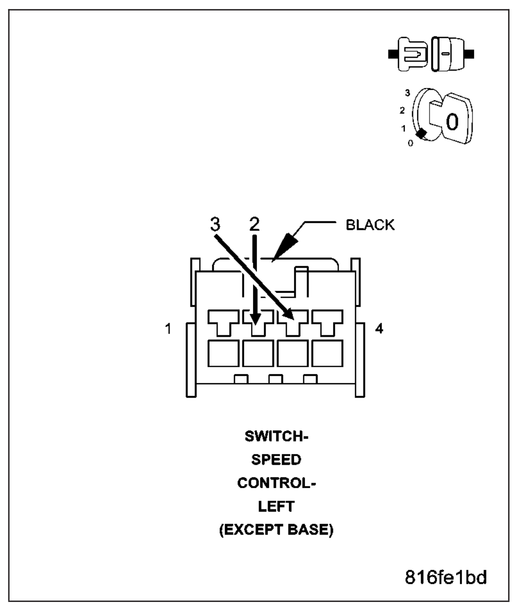
**Does the scan tool display below 0.1 volt with the jumper wire connected?**

**Yes** >> Replace the Speed Control Switches.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



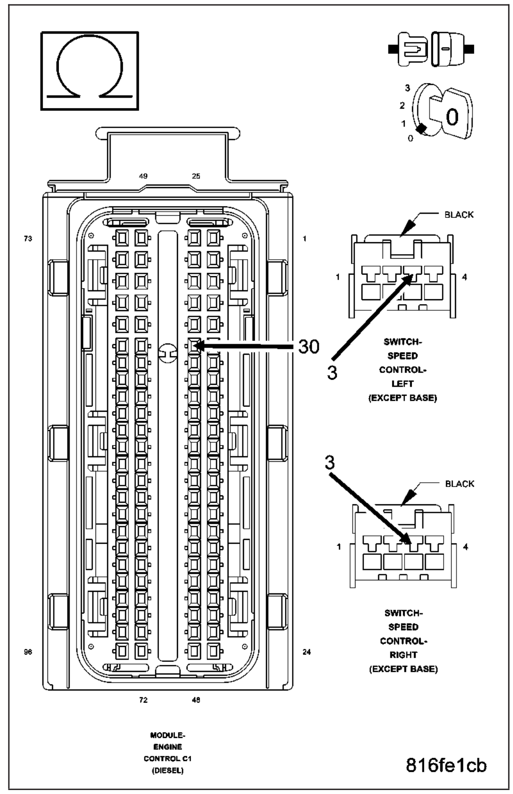
## 4. S/C SWITCH #1 SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance between the S/C Switch #1 Signal circuit between both S/C Switch harness connectors and the ECM harness connector.



**Is the resistance below 10.0 ohms for both measurements?**

**Yes** >> Go To 5

**No** >> Repair the S/C Switch #1 Signal circuit that measured above 10.0 ohms for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

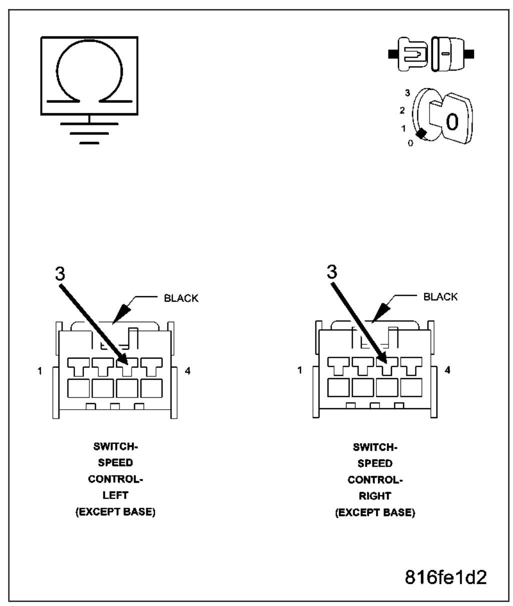
## 5. S/C SWITCH #1 SIGNAL CIRCUIT SHORT TO GROUND

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the S/C Switch #1 Signal circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the S/C Switch #1 Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. S/C SWITCH #1 SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

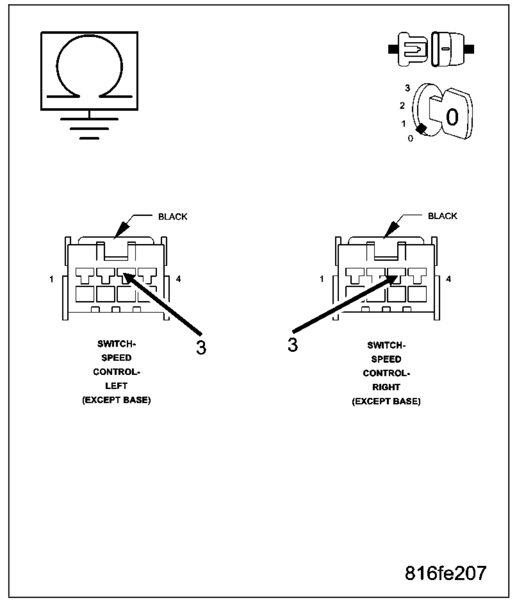
Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the S/C Switch #1 Signal circuit.



**Is the voltage above 1.0 volt?**

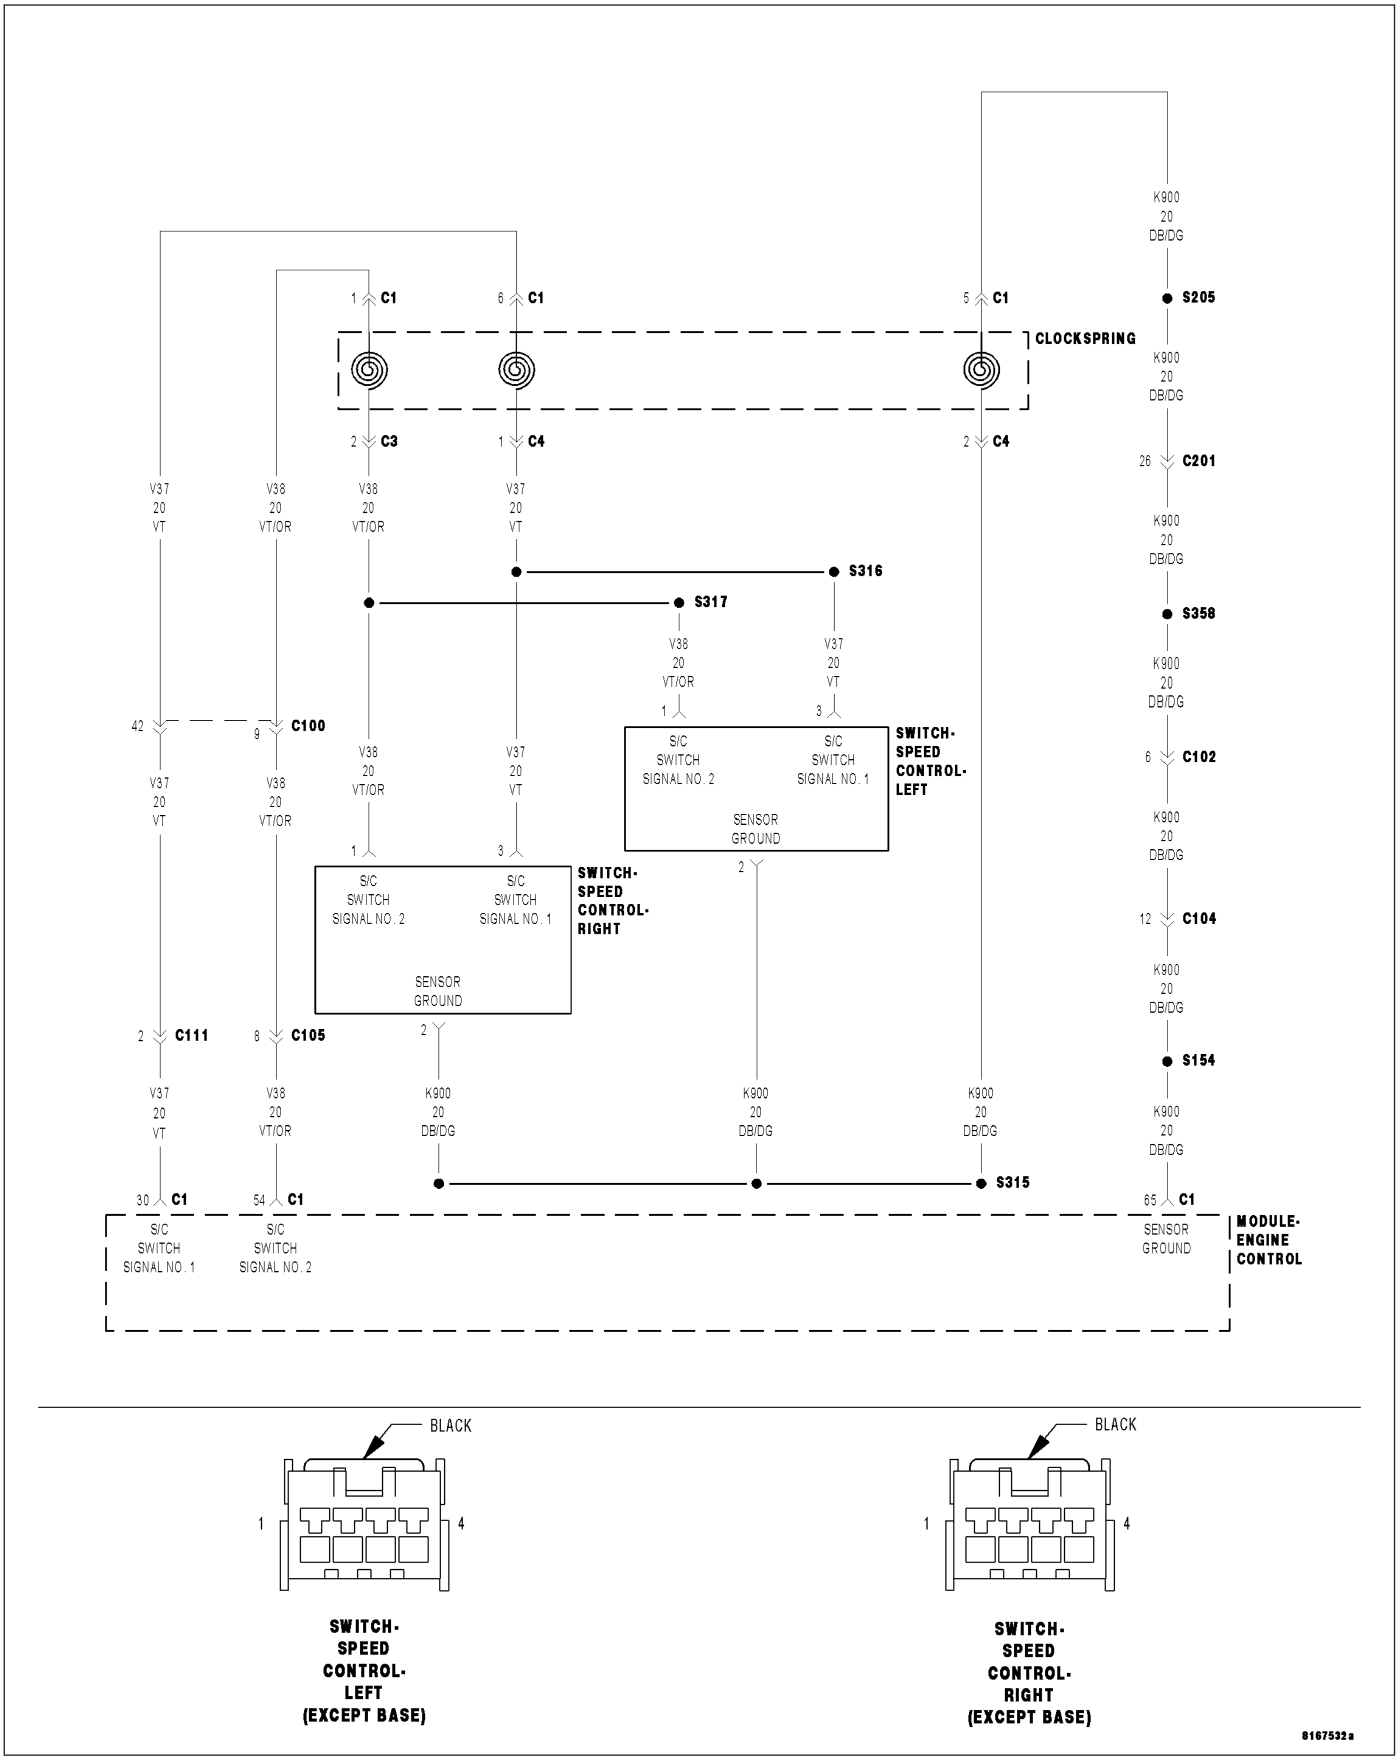
**Yes** >> Repair the S/C Switch #1 Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0564-S/C SWITCH #1 SIGNAL CIRCUIT VOLTAGE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The S/C Switch #1 Signal is below 0.60 volt for 1.0 second.

| Possible Causes |
|---|
| ECM - S/C SIGNAL CIRCUIT OPEN |
| ECM - S/C SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| ECM - SENSOR GROUND OPEN |
| S/C SWITCH SIGNAL CIRCUIT OPEN |
| S/C SWITCH SIGNAL CIRCUIT OPEN |
| S/C SWITCH SIGNAL CIRCUIT SHORT TO GROUND |
| S/C SWITCH SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| SENSOR GROUND OPEN |
| SPEED CONTROL SWITCHES |

## Diagnostic Test

### 1. VERIFY S/C SWITCH SIGNAL CIRCUIT VOLTAGE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

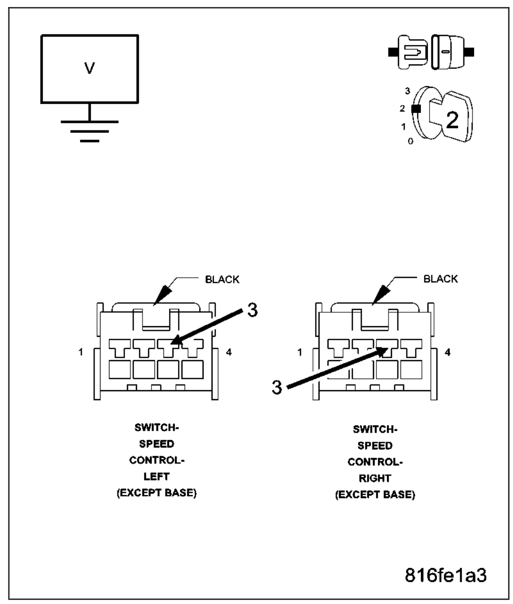
**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition off.

Disconnect the harness connectors from both S/C Switches.

Turn the ignition on.

Measure the voltage of the S/C Switch #1 Signal circuit at both S/C Switch harness connectors.



**Select the appropriate voltage reading.**

**4.5 to 5.5 volts at both connectors.**
Go To 2

**4.5 to 5.5 volts at only one connector.**
Repair the S/C Switch Signal circuit that measured below 4.5 volts for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Below 4.5 volts at both connectors.**
Go To 4

**Above 5.5 volts for either measurement.**
Go To 6

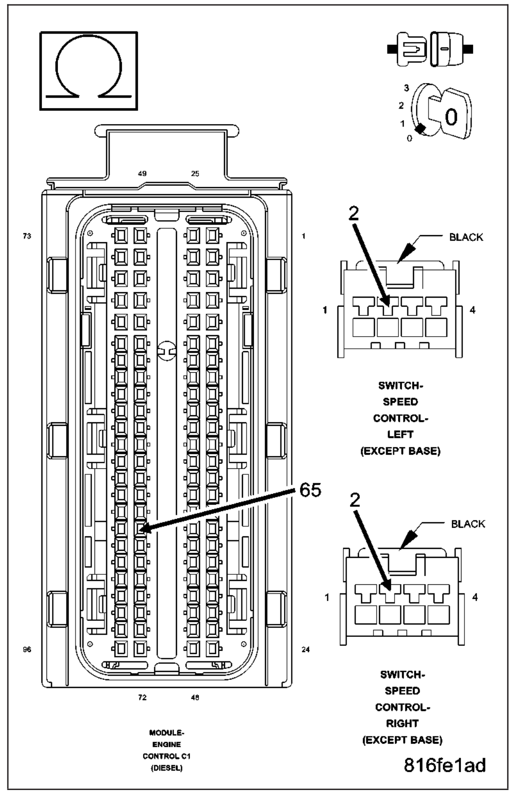
## 2. SENSOR GROUND OPEN

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance of the Sensor Ground circuit between each S/C Switch harness connector and the ECM harness connector.



**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 3

**No** >> Repair the Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

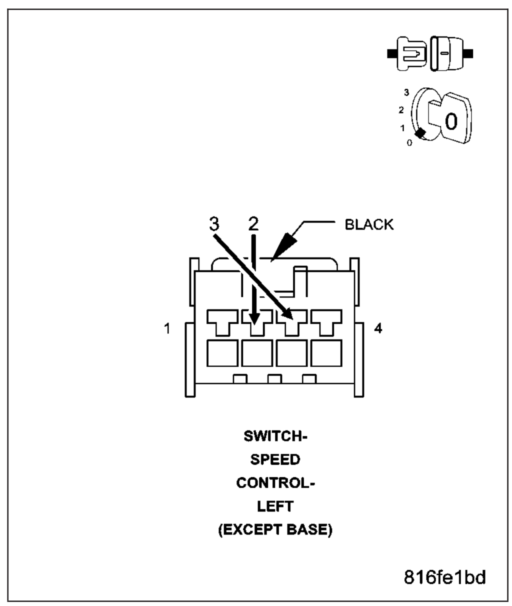
## 3. ECM - SENSOR GROUND OPEN

Turn the ignition off.

Disconnect one of the S/C Switch harness connectors.

With the scan tool, read the S/C Switch Voltage.

While monitoring the scan tool, connect a jumper wire between the S/C Switch #1 Signal circuit and the Sensor Ground circuit in the S/C Switch harness connector.



**Does the scan tool display below 0.1 volt with the jumper wire connected?**

**Yes** >> Replace the Speed Control Switches.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. S/C SWITCH #1 SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

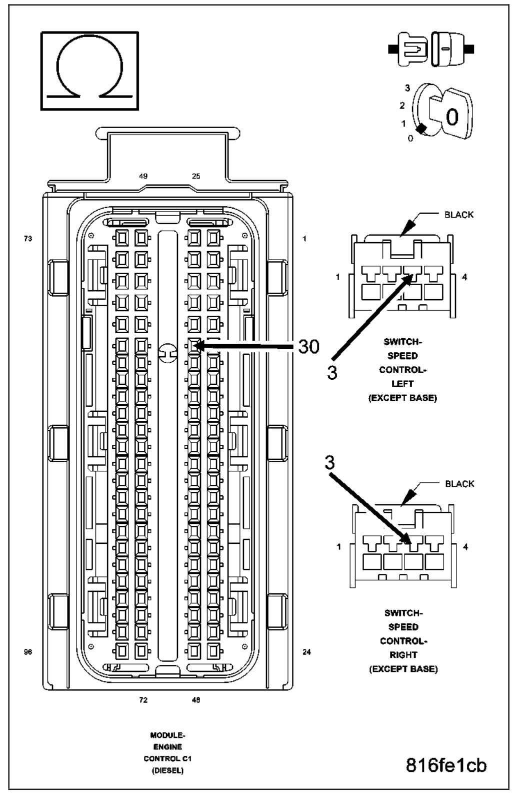
Measure the resistance between the S/C Switch #1 Signal circuit between both S/C Switch harness connectors and the ECM harness connector.

**Is the resistance below 10.0 ohms for both measurements?**

**Yes** >> Go To 5

**No** >> Repair the S/C Switch #1 Signal circuit that measured above 10.0 ohms for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 5. S/C SWITCH #1 SIGNAL CIRCUIT SHORT TO GROUND

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the S/C Switch #1 Signal circuit.

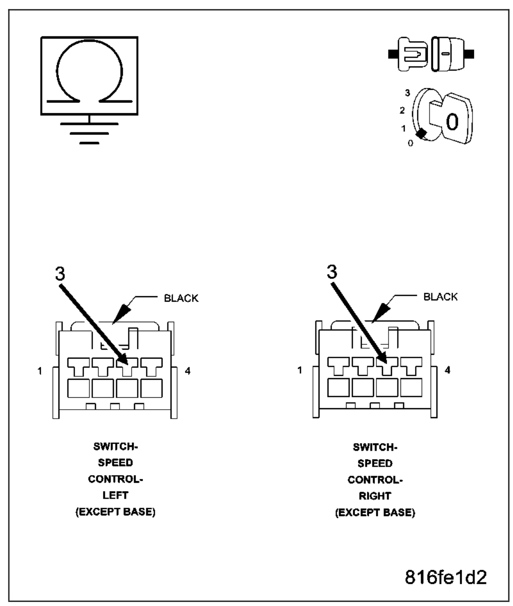
**Is the resistance above 1000 ohms?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the S/C Switch #1 Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 6. S/C SWITCH #1 SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

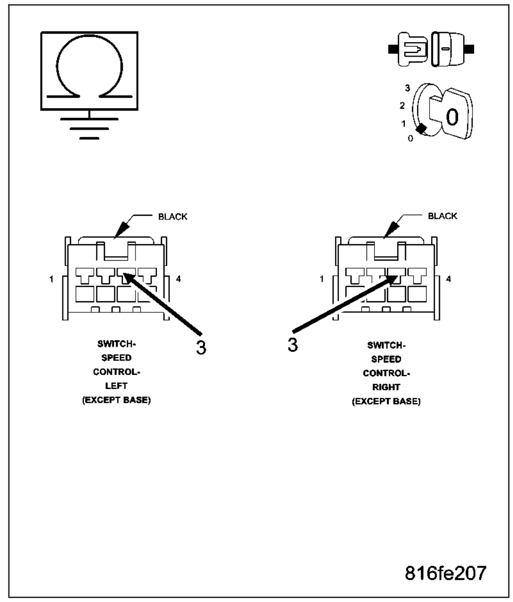
Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the S/C Switch #1 Signal circuit.



**Is the voltage above 1.0 volt?**

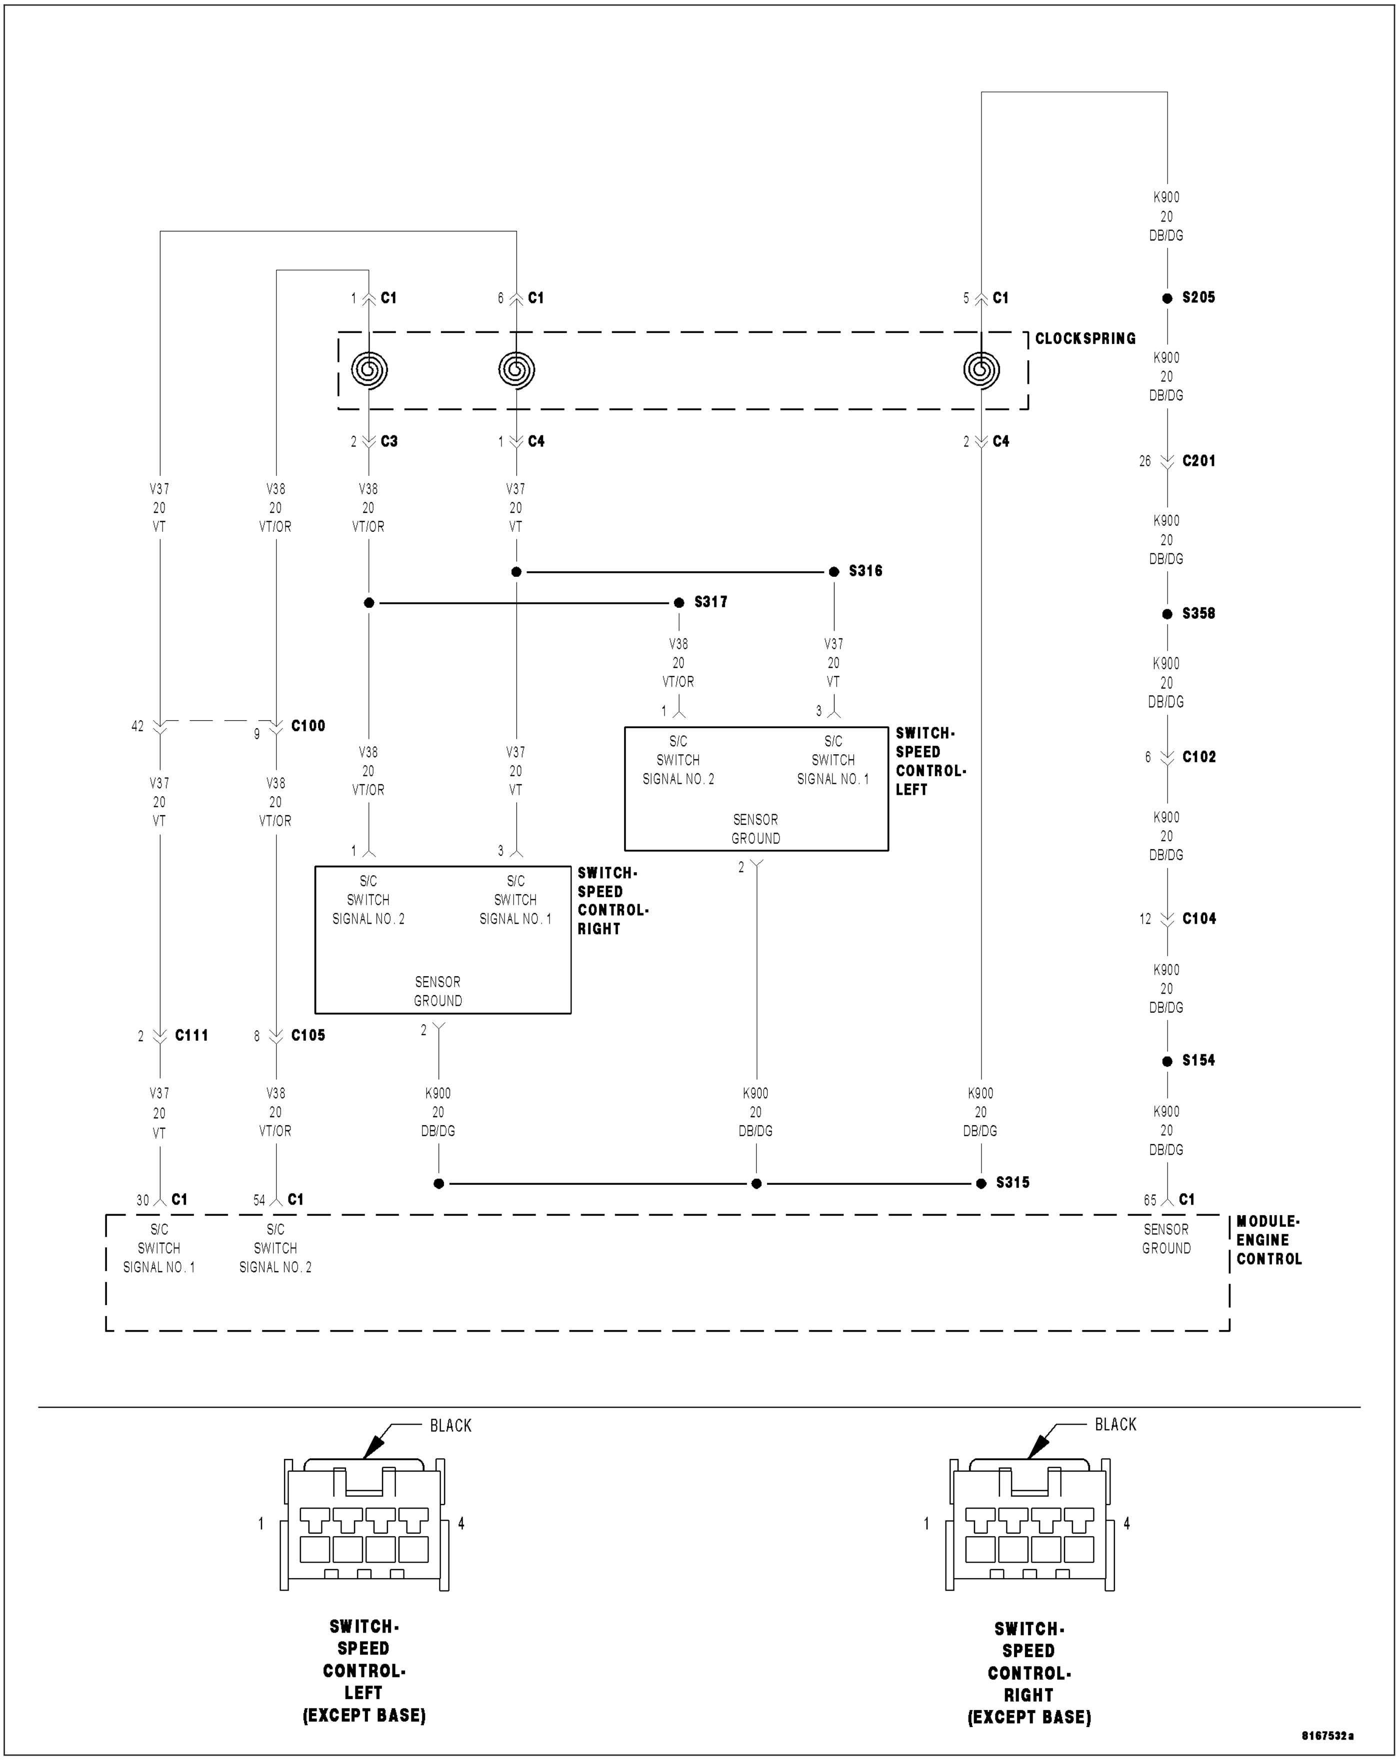
**Yes** >> Repair the S/C Switch #1 Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0564-S/C SWITCH #1 SIGNAL CIRCUIT STUCK SWITCH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The S/C Switch #1 Signal indicates that a switch is pressed for more than 1 minute.

| Possible Causes |
|---|
| ECM - S/C SIGNAL CIRCUIT OPEN |
| ECM - S/C SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| ECM - SENSOR GROUND OPEN |
| S/C SWITCH SIGNAL CIRCUIT OPEN |
| S/C SWITCH SIGNAL CIRCUIT OPEN |
| S/C SWITCH SIGNAL CIRCUIT SHORT TO GROUND |
| S/C SWITCH SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| SENSOR GROUND OPEN |
| SPEED CONTROL SWITCHES |

## Diagnostic Test

### 1. VERIFY S/C SWITCH SIGNAL CIRCUIT VOLTAGE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

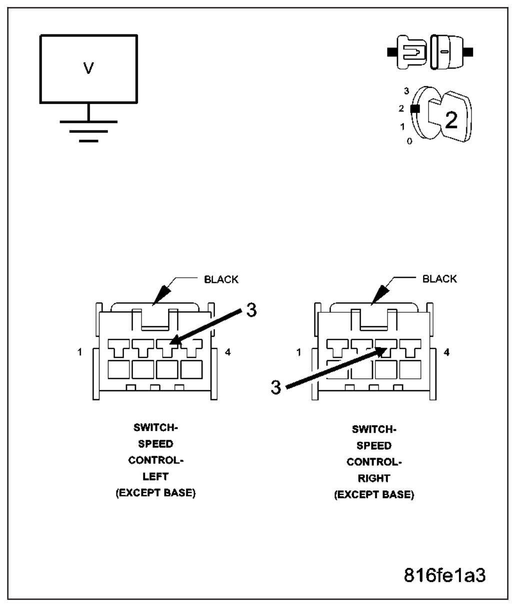
**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition off.

Disconnect the harness connectors from both S/C Switches.

Turn the ignition on.

Measure the voltage of the S/C Switch #1 Signal circuit at both S/C Switch harness connectors.



**Select the appropriate voltage reading.**

**4.5 to 5.5 volts at both connectors.**
Go To 2

**4.5 to 5.5 volts at only one connector.**
Repair the S/C Switch Signal circuit that measured below 4.5 volts for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Below 4.5 volts at both connectors.**
Go To 4

**Above 5.5 volts for either measurement.**
Go To 6

## 2. SENSOR GROUND OPEN

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

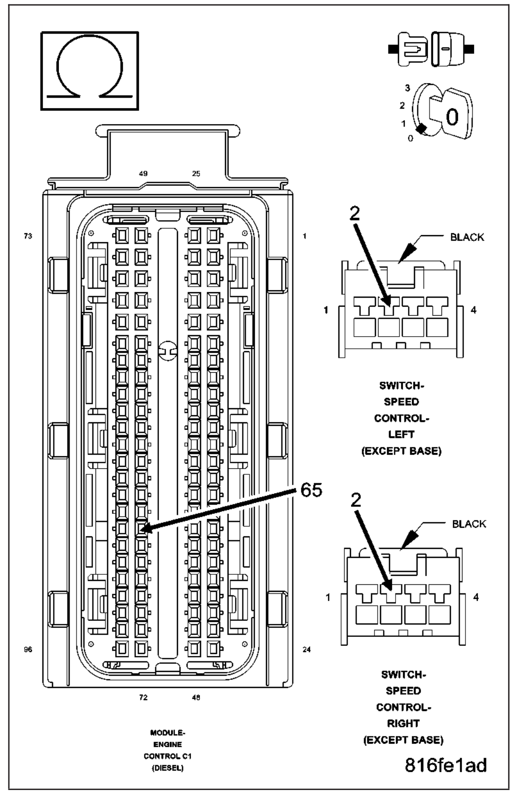
Measure the resistance of the Sensor Ground circuit between each S/C Switch harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 3

**No** >> Repair the Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 3. ECM - SENSOR GROUND OPEN

Turn the ignition off.

Disconnect one of the S/C Switch harness connectors.

With the scan tool, read the S/C Switch Voltage.

While monitoring the scan tool, connect a jumper wire between the S/C Switch #1 Signal circuit and the Sensor Ground circuit in the S/C Switch harness connector.

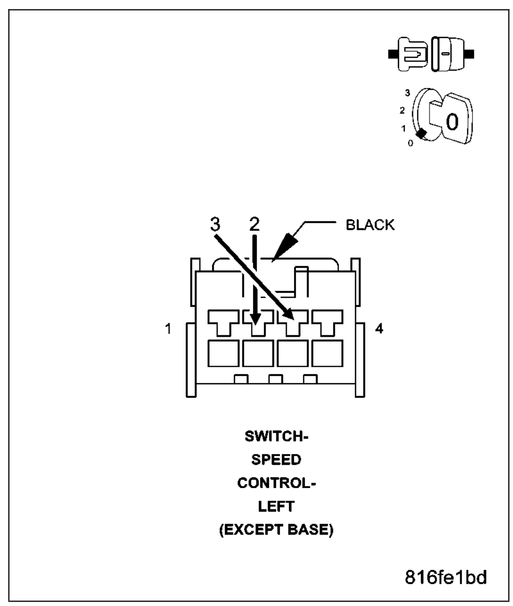
**Does the scan tool display below 0.1 volt with the jumper wire connected?**

**Yes** >> Replace the Speed Control Switches.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 4. S/C SWITCH #1 SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

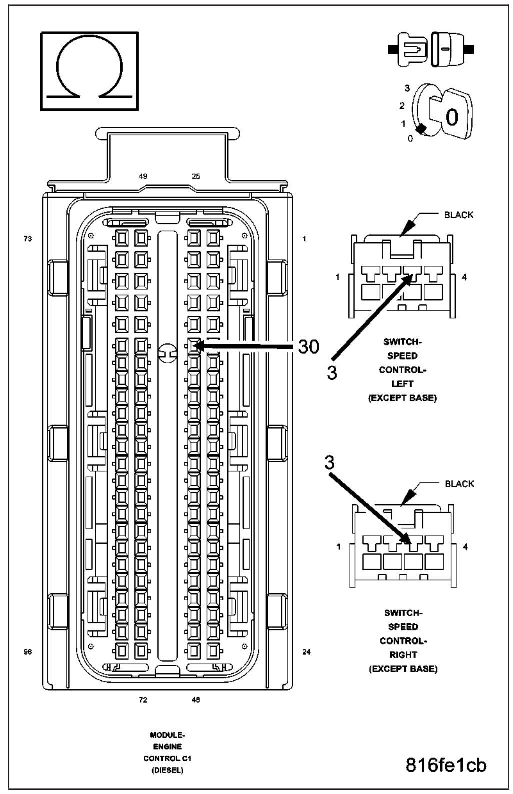
Measure the resistance between the S/C Switch #1 Signal circuit between both S/C Switch harness connectors and the ECM harness connector.

**Is the resistance below 10.0 ohms for both measurements?**

**Yes** >> Go To 5

**No** >> Repair the S/C Switch #1 Signal circuit that measured above 10.0 ohms for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 5. S/C SWITCH #1 SIGNAL CIRCUIT SHORT TO GROUND

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the S/C Switch #1 Signal circuit.

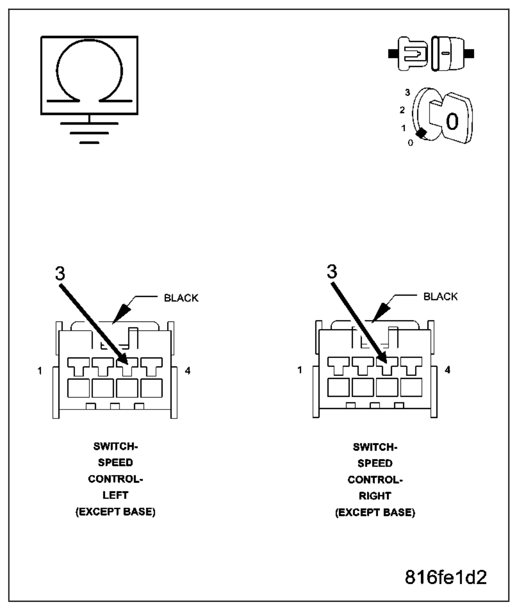
**Is the resistance above 1000 ohms?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the S/C Switch #1 Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 6. S/C SWITCH #1 SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

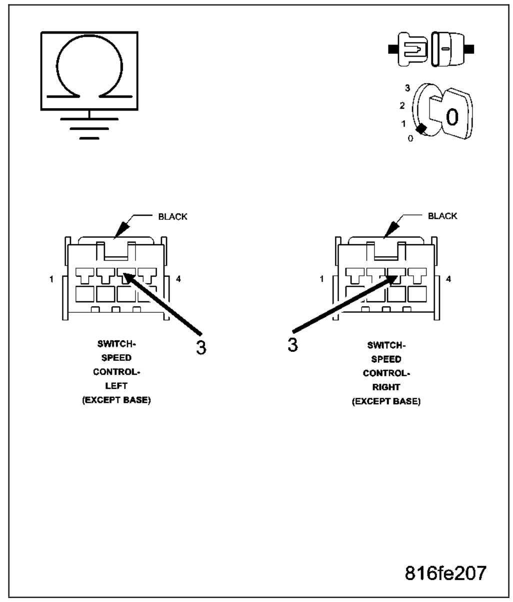
Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the S/C Switch #1 Signal circuit.



**Is the voltage above 1.0 volt?**

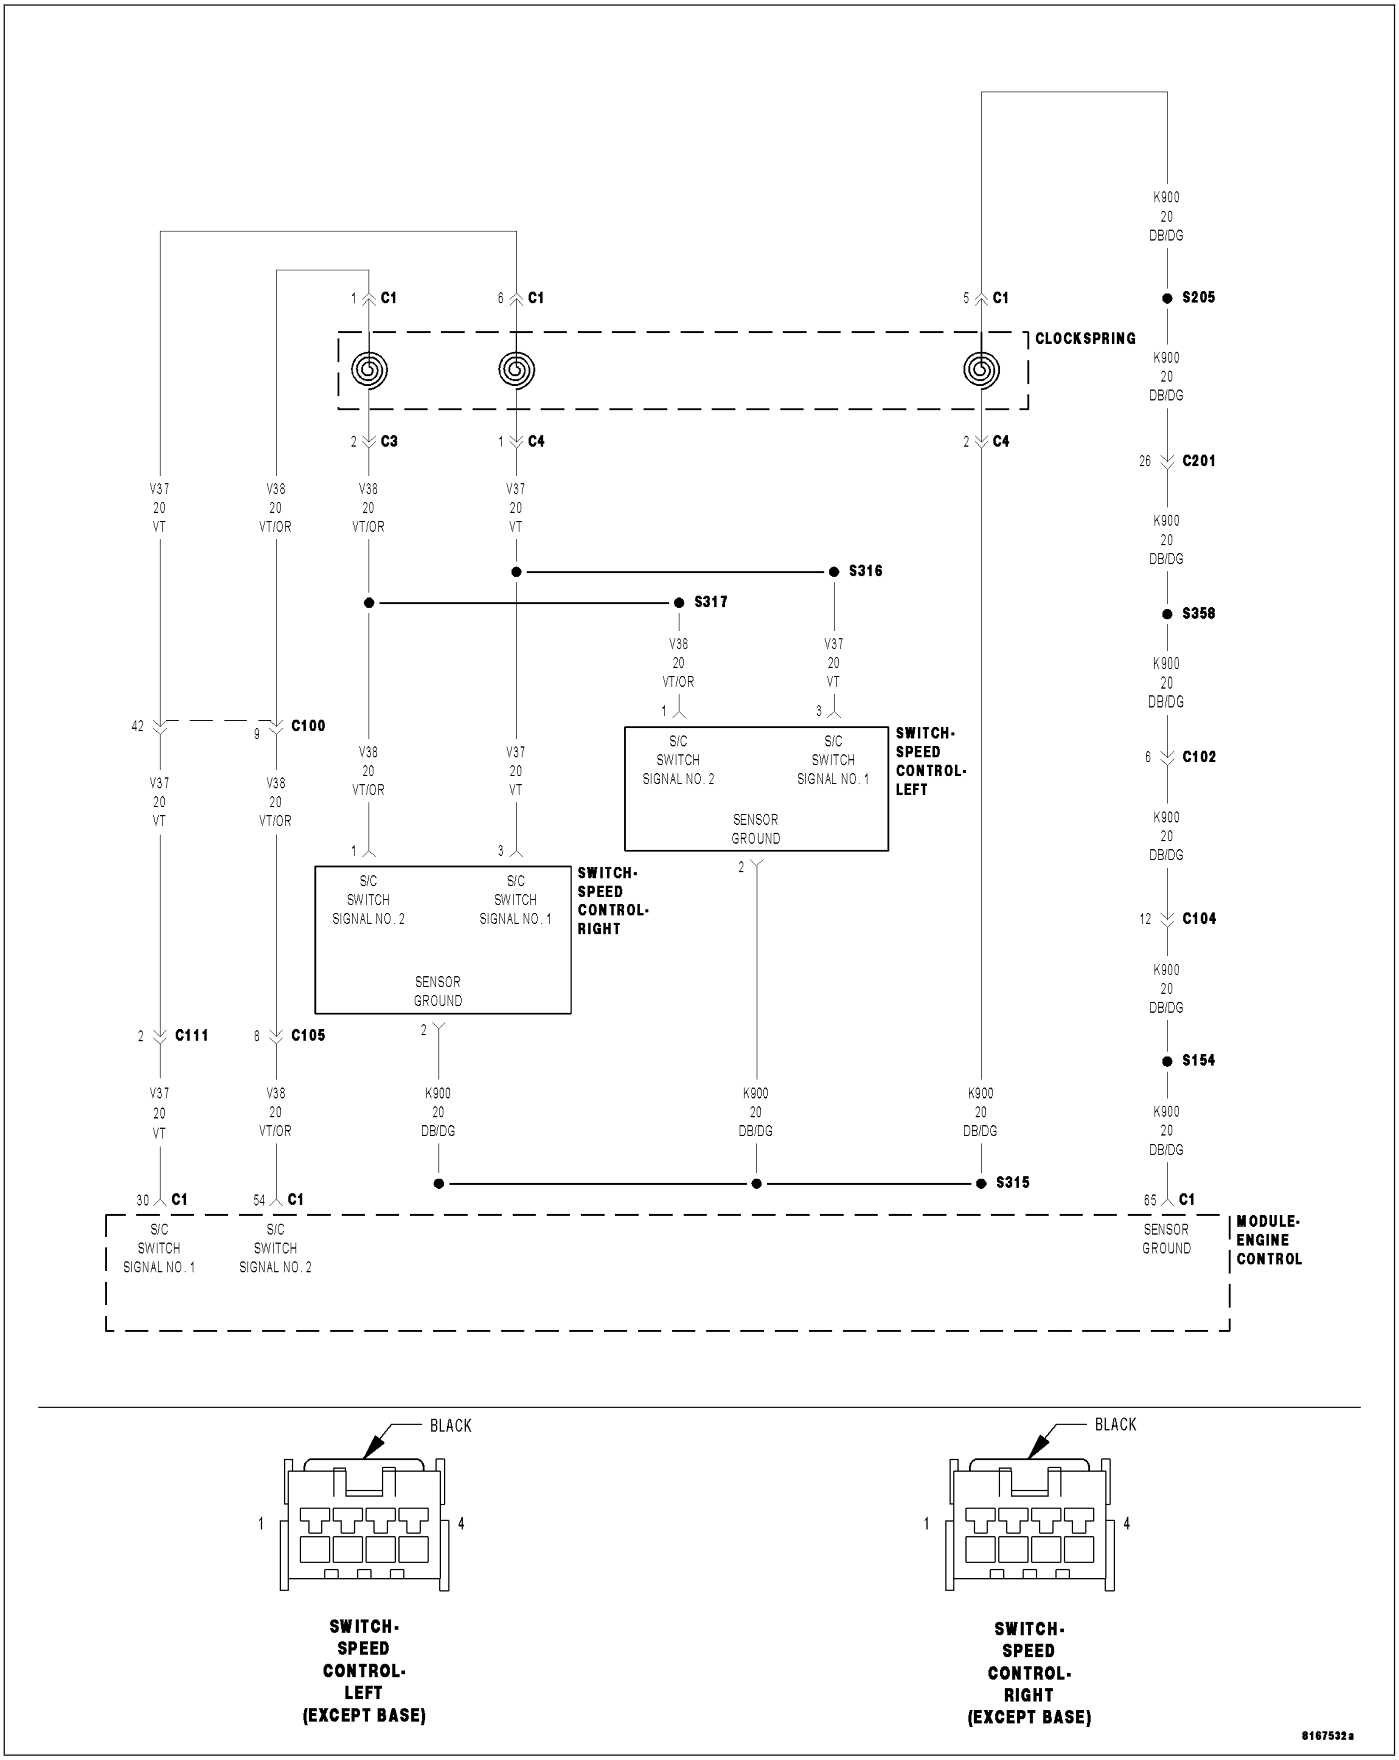
**Yes** >> Repair the S/C Switch #1 Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0585-S/C SWITCH PLAUSIBILITY BETWEEN SWITCH #1 AND #2



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects a discrepency between S/C Switch #1 and S/C Switch #2 signals for 10.0 seconds.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| HIGH RESISTANCE IN THE S/C SWITCH SIGNAL CIRCUIT |
| HIGH RESISTANCE IN THE S/C SWITCH GROUND CIRCUIT |
| S/C SWITCHES |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Test drive the vehicle and activate the Speed Control.

At some point during the test drive, press each of the S/C Switch buttons.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

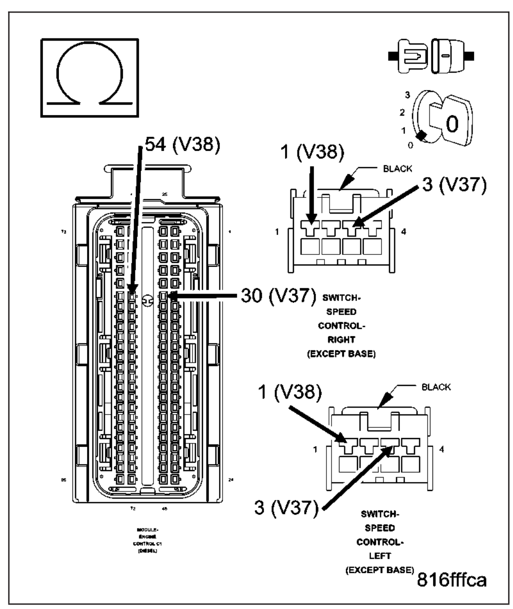
### 2. HIGH RESISTANCE IN THE S/C SWITCH SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance of the S/C Switch #1 Signal circuit and the S/C Switch #2 Signal circuit between each S/C Switch harness connector and the ECM harness connector.



**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 3

**No** >> Repair the S/C Switch Signal circuit(s) for high resistance.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

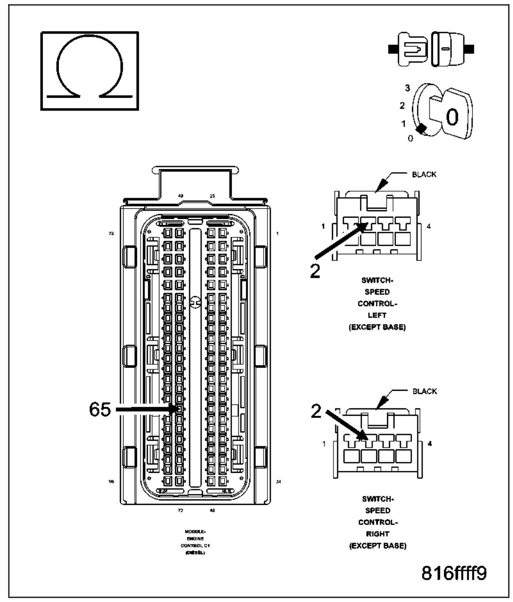
## 3. HIGH RESISTANCE IN THE SENSOR GROUND CIRCUIT

Turn the ignition off.

Disconnect the S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance of the Sensor Ground circuit between each S/C Switch harness connector and the ECM harness connector.



**Is the resistance below 10.0 ohms for both measurements?**

**Yes** >> Go To 4

**No** >> Repair the S/C Switch Ground circuit for high resistance.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. S/C SWITCHES

Turn the ignition off.

Replace the S/C Switches.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Test drive the vehicle and activate the Speed Control.

At some point during the test drive, press each of the S/C Switch buttons.

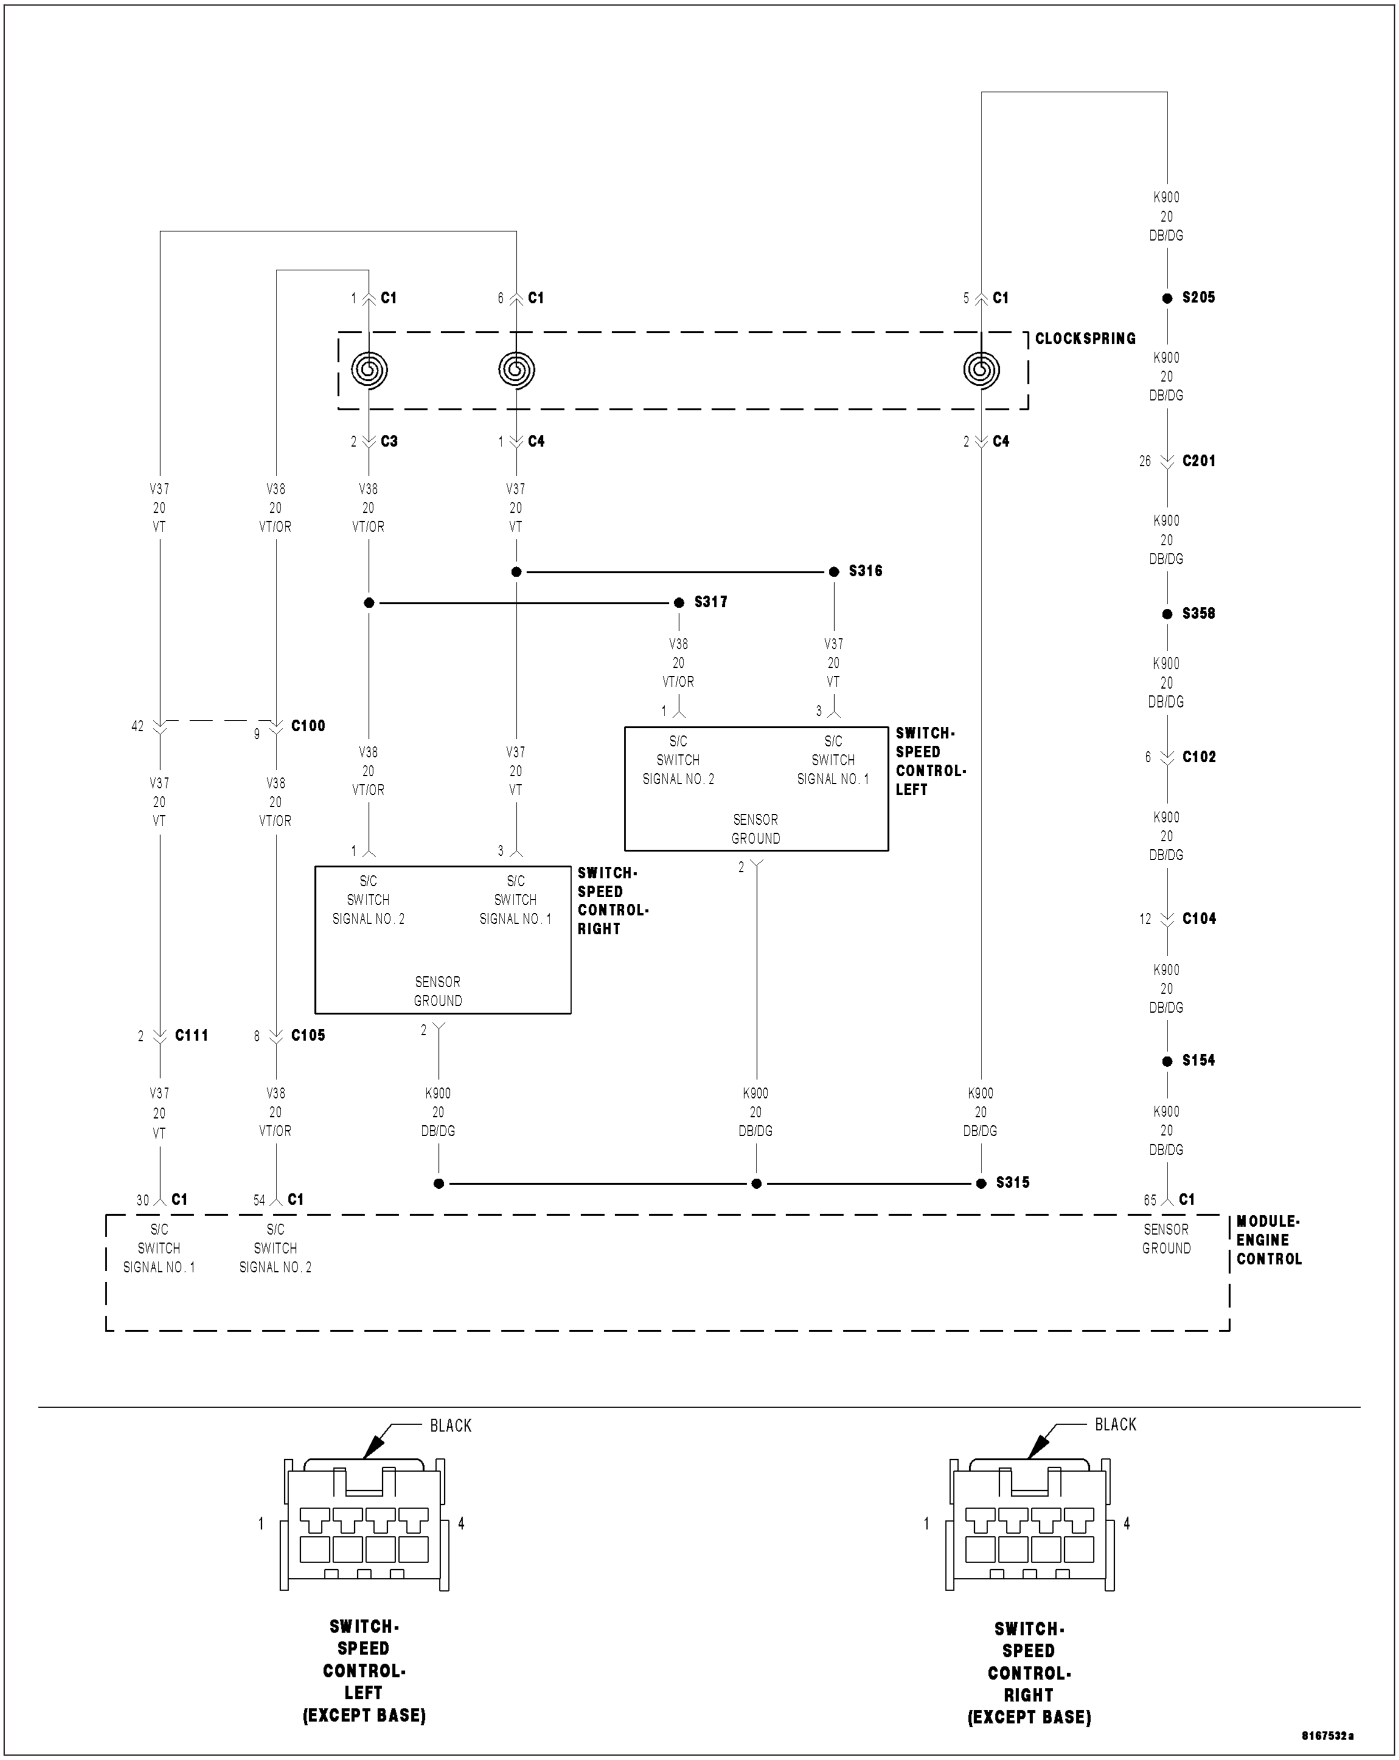
Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0589-S/C SWITCH #2 SIGNAL CIRCUIT PLAUSIBILITY



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition switch on and no other S/C Switch DTC's present.
- **Set Condition:**
  The S/C Switch #2 signal voltage is not within a valid switch signal range.

| Possible Causes |
|---|
| ECM - S/C SIGNAL CIRCUIT OPEN |
| ECM - S/C SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| ECM - SENSOR GROUND OPEN |
| S/C SWITCH SIGNAL CIRCUIT OPEN |
| S/C SWITCH SIGNAL CIRCUIT OPEN |
| S/C SWITCH SIGNAL CIRCUIT SHORT TO GROUND |
| S/C SWITCH SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| S/C SWITCH SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| SENSOR GROUND OPEN |
| SPEED CONTROL SWITCHES |

## Diagnostic Test

### 1. VERIFY S/C SWITCH SIGNAL CIRCUIT VOLTAGE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

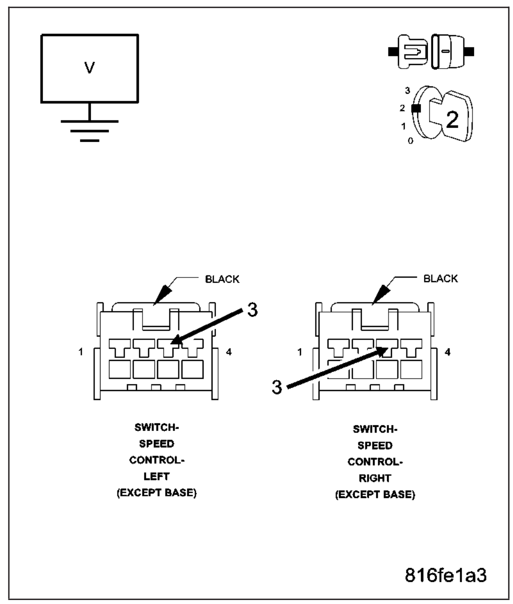
**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition off.

Disconnect the harness connectors from both S/C Switches.

Turn the ignition on.

Measure the voltage of the S/C Switch #2 Signal circuit at both S/C Switch harness connectors.



**Select the appropriate voltage reading.**

**4.5 to 5.5 volts at both connectors.**
Go To 2

**4.5 to 5.5 volts at only one connector.**
Repair the S/C Switch Signal circuit that measured below 4.5 volts for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Below 4.5 volts at both connectors.**
Go To 4

**Above 5.5 volts for either measurement.**
Go To 6

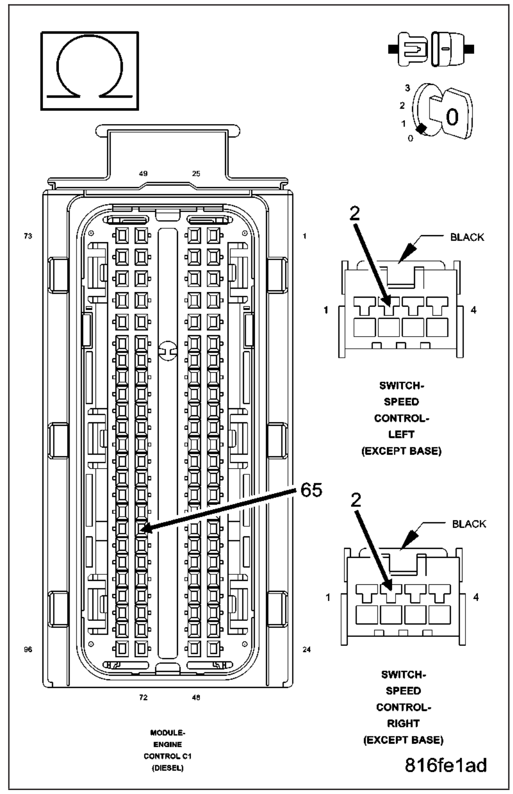
## 2. SENSOR GROUND OPEN

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance of the Sensor Ground circuit between each S/C Switch harness connector and the ECM harness connector.



**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 3

**No** >> Repair the Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

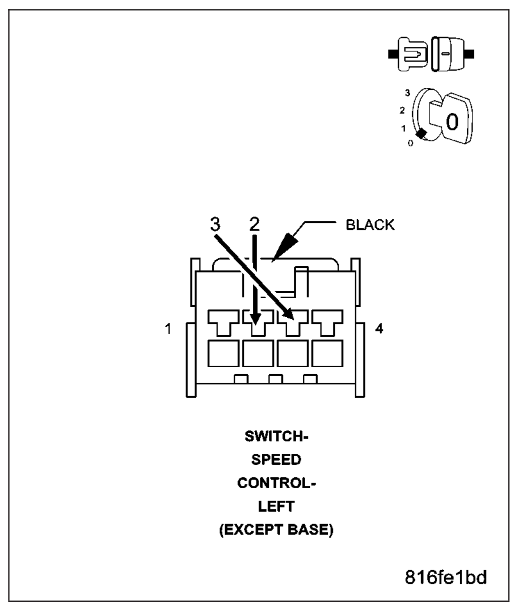
## 3. ECM - SENSOR GROUND OPEN

Turn the ignition off.

Disconnect one of the S/C Switch harness connectors.

With the scan tool, read the S/C Switch Voltage.

While monitoring the scan tool, connect a jumper wire between the S/C Switch #2 Signal circuit and the Sensor Ground circuit in the S/C Switch harness connector.



**Does the scan tool display below 0.1 volt with the jumper wire connected?**

**Yes** >> Replace the Speed Control Switches.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. S/C SWITCH #2 SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

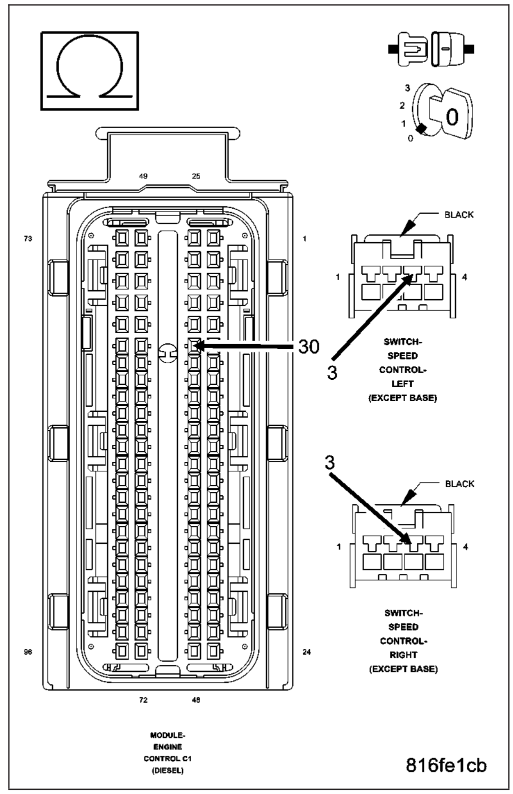
Measure the resistance between the S/C Switch #2 Signal circuit between both S/C Switch harness connectors and the ECM harness connector.

**Is the resistance below 10.0 ohms for both measurements?**

**Yes** >> Go To 5

**No** >> Repair the S/C Switch #2 Signal circuit that measured above 10.0 ohms for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 5. S/C SWITCH #2 SIGNAL CIRCUIT SHORT TO GROUND

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the S/C Switch #2 Signal circuit.

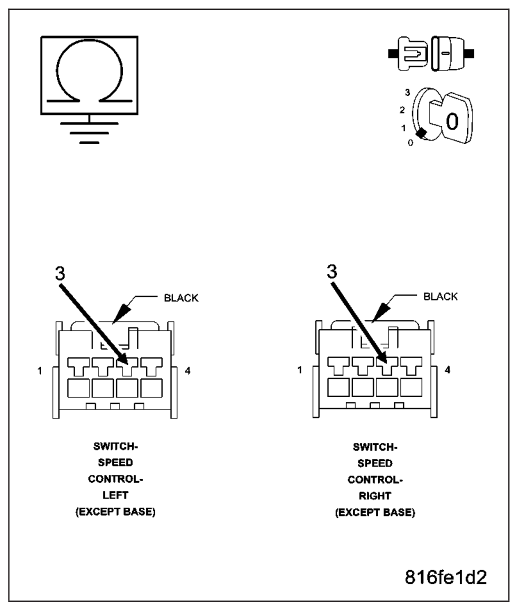
**Is the resistance above 1000 ohms?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the S/C Switch #2 Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 6. S/C SWITCH #2 SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

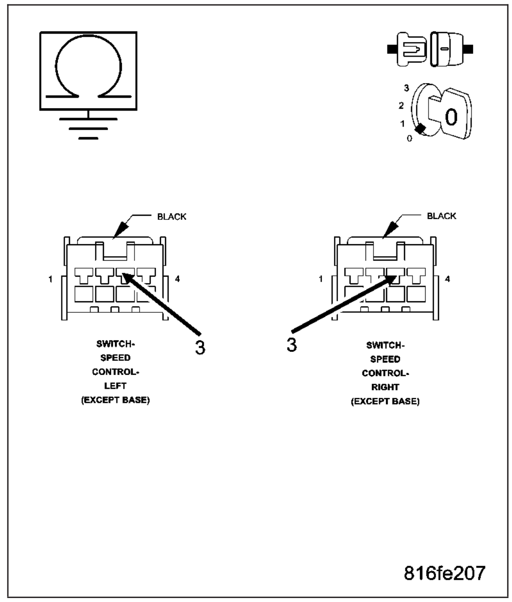
Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the S/C Switch #2 Signal circuit.



**Is the voltage above 1.0 volt?**

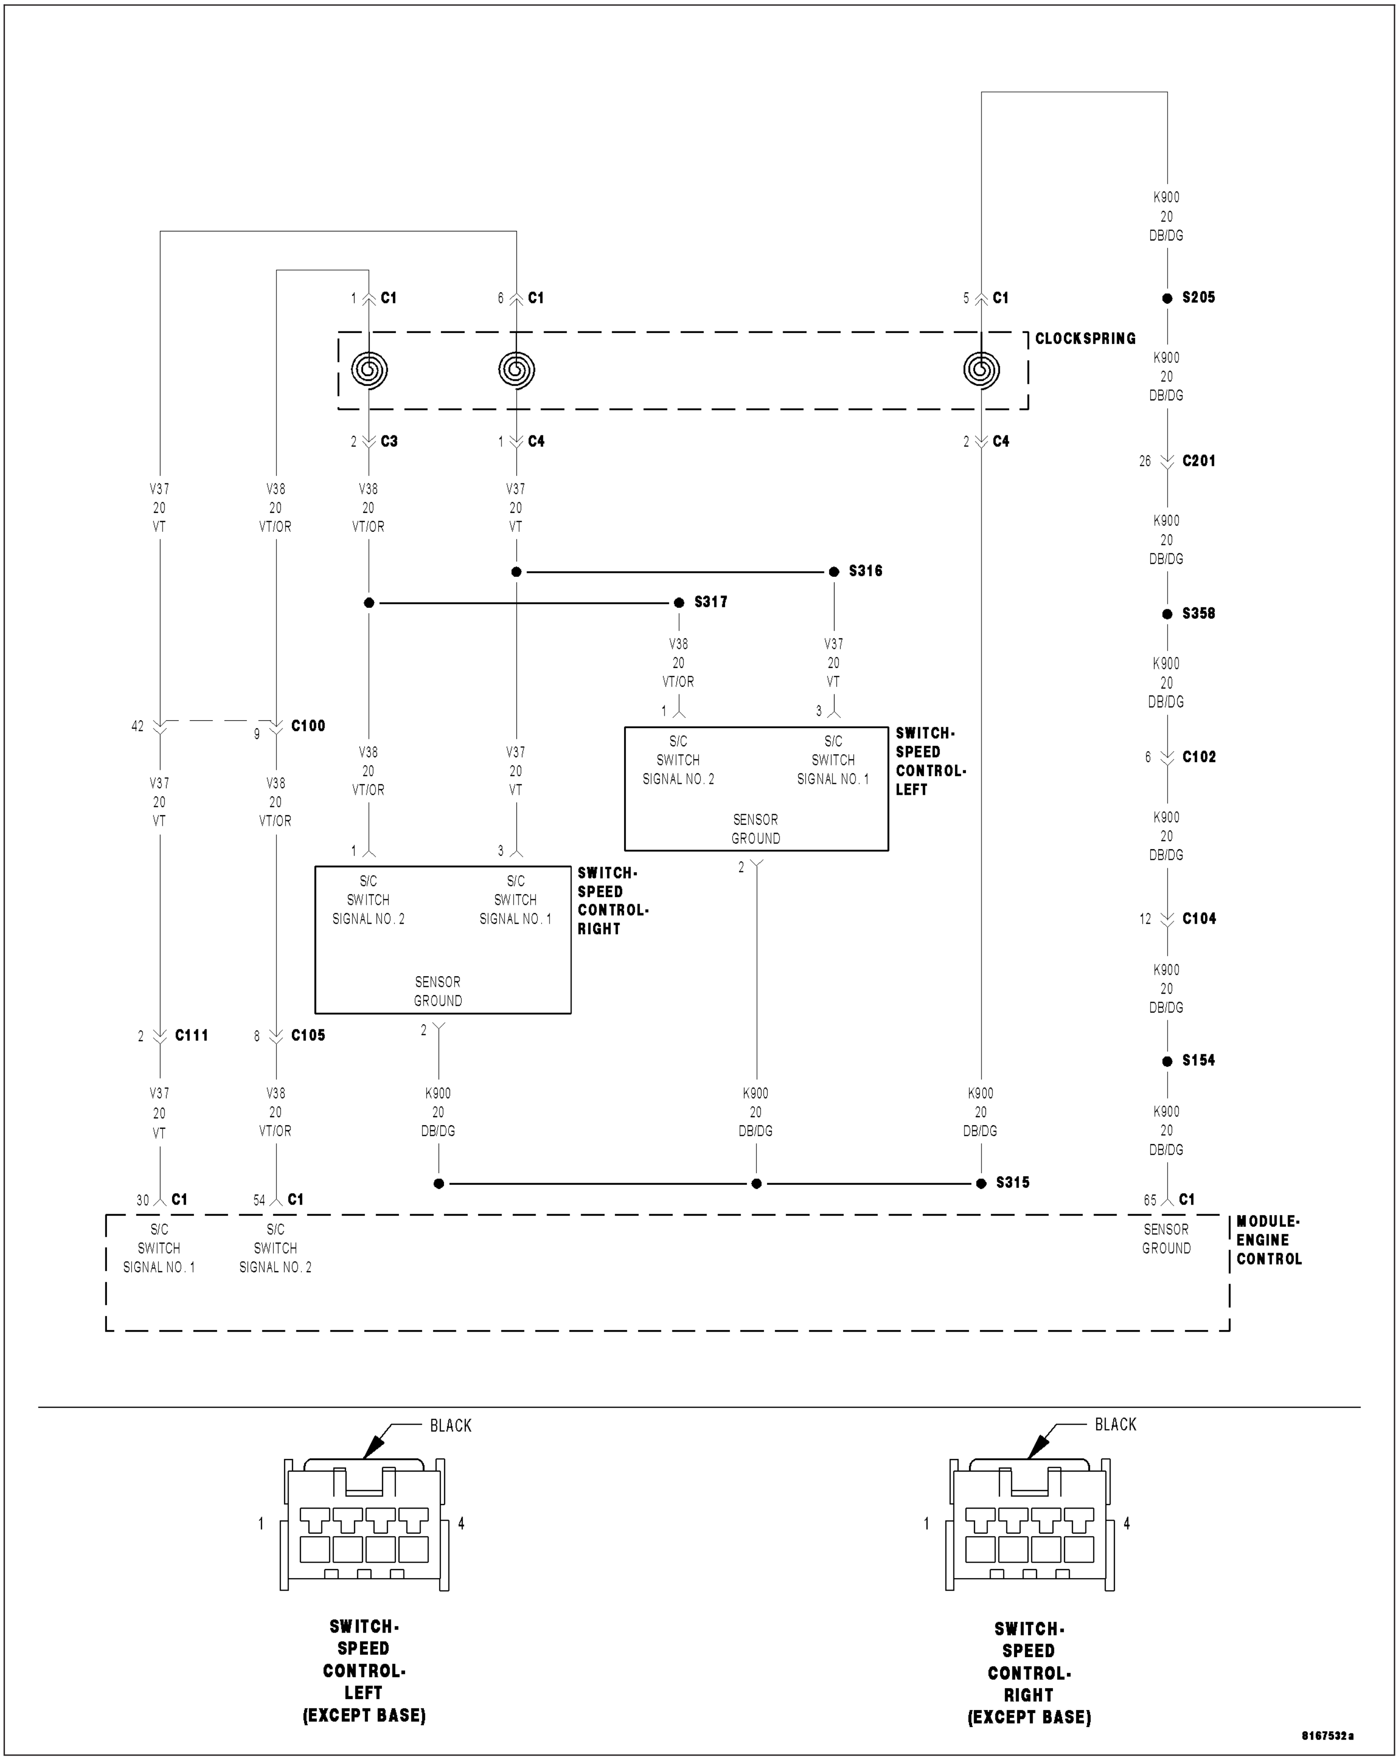
**Yes** >> Repair the S/C Switch #2 Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0589-S/C SWITCH #2 SIGNAL CIRCUIT VOLTAGE TOO HIGH



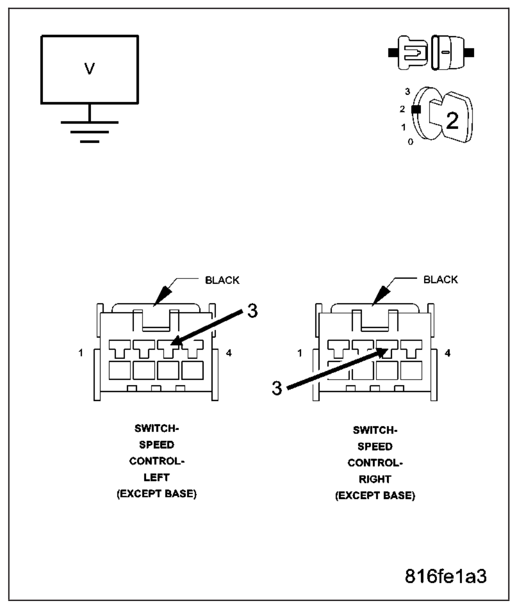
For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The S/C Switch #2 Signal is above 4.80 volts for 1.0 second.

| Possible Causes |
|---|
| ECM - S/C SIGNAL CIRCUIT OPEN |
| ECM - S/C SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| ECM - SENSOR GROUND OPEN |
| S/C SWITCH SIGNAL CIRCUIT OPEN |
| S/C SWITCH SIGNAL CIRCUIT OPEN |
| S/C SWITCH SIGNAL CIRCUIT SHORT TO GROUND |
| S/C SWITCH SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| S/C SWITCH SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| SENSOR GROUND OPEN |
| SPEED CONTROL SWITCHES |

## Diagnostic Test

### 1. VERIFY S/C SWITCH SIGNAL CIRCUIT VOLTAGE



**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition off.

Disconnect the harness connectors from both S/C Switches.

Turn the ignition on.

Measure the voltage of the S/C Switch #2 Signal circuit at both S/C Switch harness connectors.

**Select the appropriate voltage reading.**

**4.5 to 5.5 volts at both connectors.**
Go To 2

**4.5 to 5.5 volts at only one connector.**
Repair the S/C Switch Signal circuit that measured below 4.5 volts for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Below 4.5 volts at both connectors.**
Go To 4

**Above 5.5 volts for either measurement.**
Go To 6

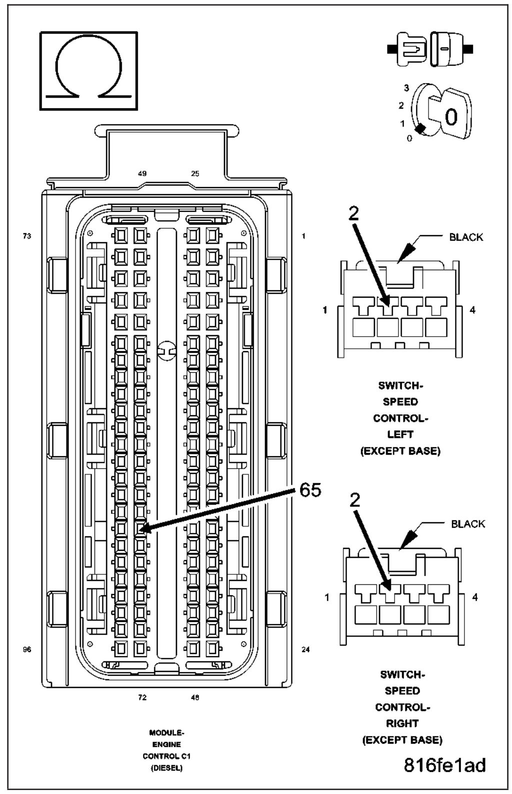
## 2. SENSOR GROUND OPEN

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance of the Sensor Ground circuit between each S/C Switch harness connector and the ECM harness connector.



**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 3

**No** >> Repair the Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

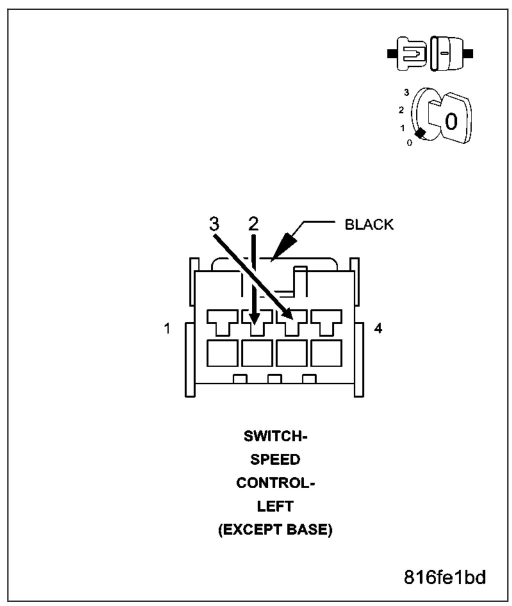
## 3. ECM - SENSOR GROUND OPEN

Turn the ignition off.

Disconnect one of the S/C Switch harness connectors.

With the scan tool, read the S/C Switch Voltage.

While monitoring the scan tool, connect a jumper wire between the S/C Switch #2 Signal circuit and the Sensor Ground circuit in the S/C Switch harness connector.



**Does the scan tool display below 0.1 volt with the jumper wire connected?**

**Yes** >> Replace the Speed Control Switches.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. S/C SWITCH #2 SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

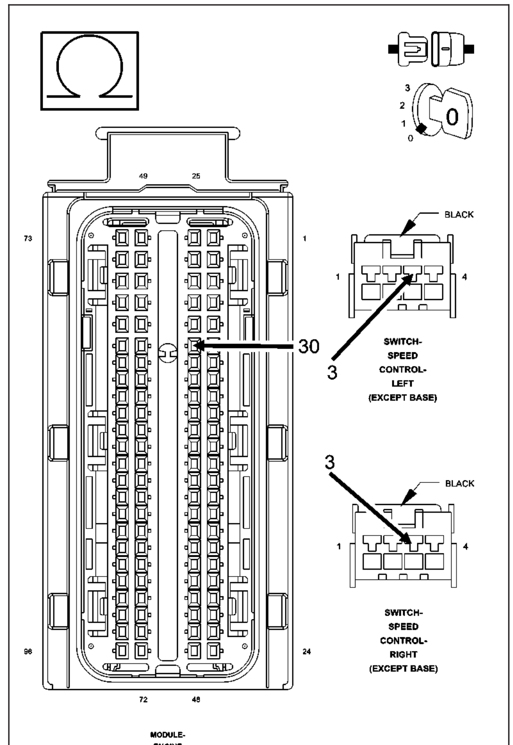
Measure the resistance between the S/C Switch #2 Signal circuit between both S/C Switch harness connectors and the ECM harness connector.

**Is the resistance below 10.0 ohms for both measurements?**

**Yes** >> Go To 5

**No** >> Repair the S/C Switch #2 Signal circuit that measured above 10.0 ohms for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



816fe1cb

## 5. S/C SWITCH #2 SIGNAL CIRCUIT SHORT TO GROUND

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the S/C Switch #2 Signal circuit.

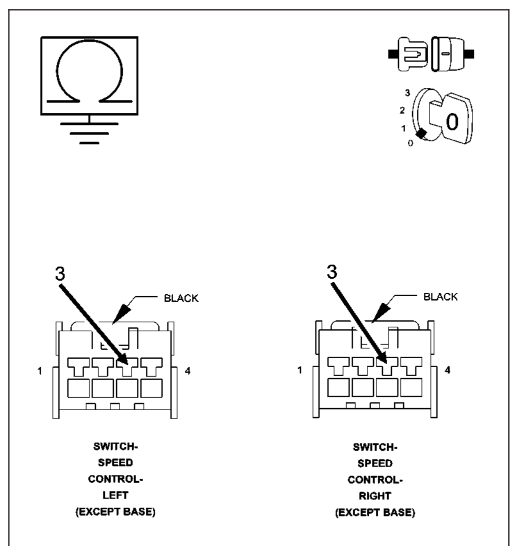
**Is the resistance above 1000 ohms?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

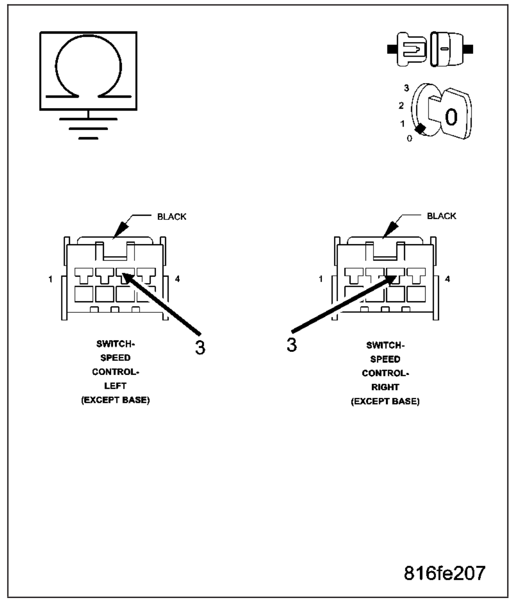
**No** >> Repair the S/C Switch #2 Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



816fe1d2

## 6. S/C SWITCH #2 SIGNAL CIRCUIT SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the S/C Switch #2 Signal circuit.

**Is the voltage above 1.0 volt?**

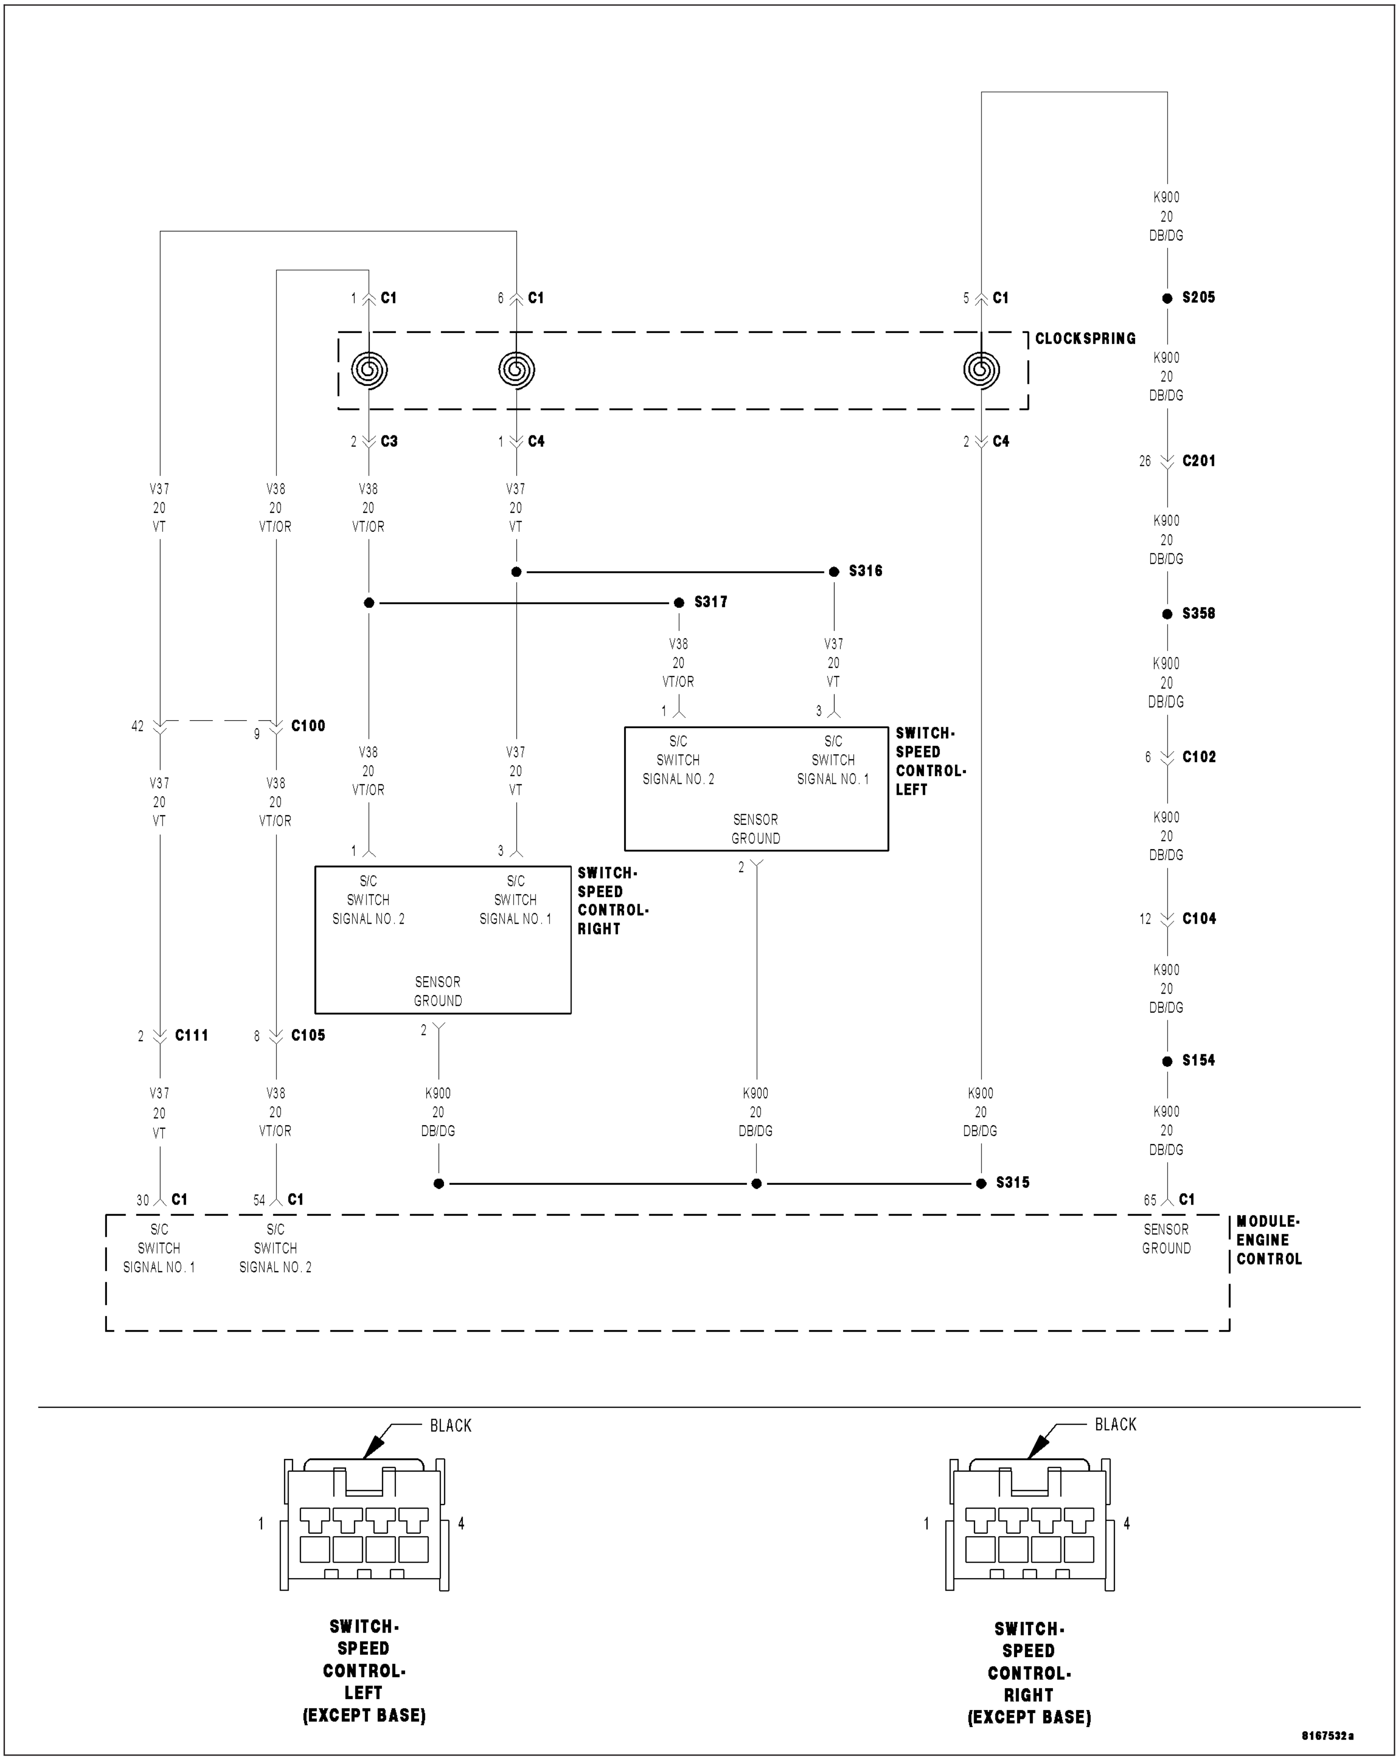
**Yes** >> Repair the S/C Switch #2 Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0589-S/C SWITCH #2 SIGNAL CIRCUIT VOLTAGE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The S/C Switch #2 Signal is below 0.60 volt for 1.0 second.

| Possible Causes |
|---|
| ECM - S/C SIGNAL CIRCUIT OPEN |
| ECM - S/C SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| ECM - SENSOR GROUND OPEN |
| S/C SWITCH SIGNAL CIRCUIT OPEN |
| S/C SWITCH SIGNAL CIRCUIT OPEN |
| S/C SWITCH SIGNAL CIRCUIT SHORT TO GROUND |
| S/C SWITCH SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| S/C SWITCH SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| SENSOR GROUND OPEN |
| SPEED CONTROL SWITCHES |

## Diagnostic Test

### 1. VERIFY S/C SWITCH SIGNAL CIRCUIT VOLTAGE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the DRB at the same time the DTC is displayed.**

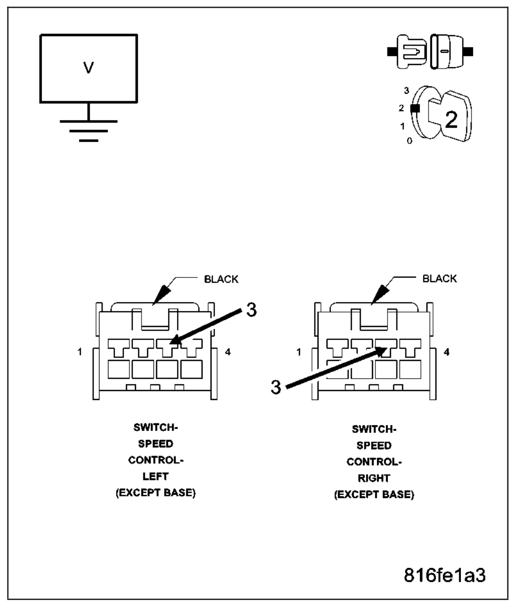
**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition off.

Disconnect the harness connectors from both S/C Switches.

Turn the ignition on.

Measure the voltage of the S/C Switch #2 Signal circuit at both S/C Switch harness connectors.



**Select the appropriate voltage reading.**

**4.5 to 5.5 volts at both connectors.**
Go To 2

**4.5 to 5.5 volts at only one connector.**
Repair the S/C Switch Signal circuit that measured below 4.5 volts for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Below 4.5 volts at both connectors.**
Go To 4

**Above 5.5 volts for either measurement.**
Go To 6

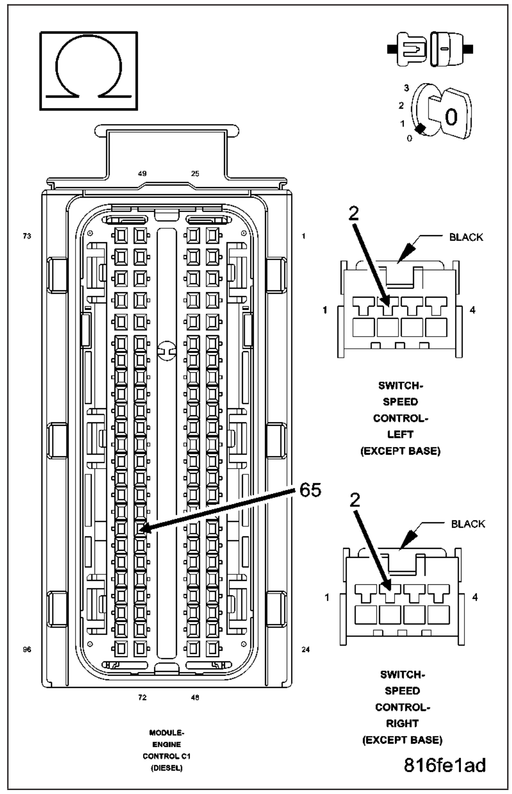
## 2. SENSOR GROUND OPEN

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance of the Sensor Ground circuit between each S/C Switch harness connector and the ECM harness connector.



**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 3

**No** >> Repair the Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

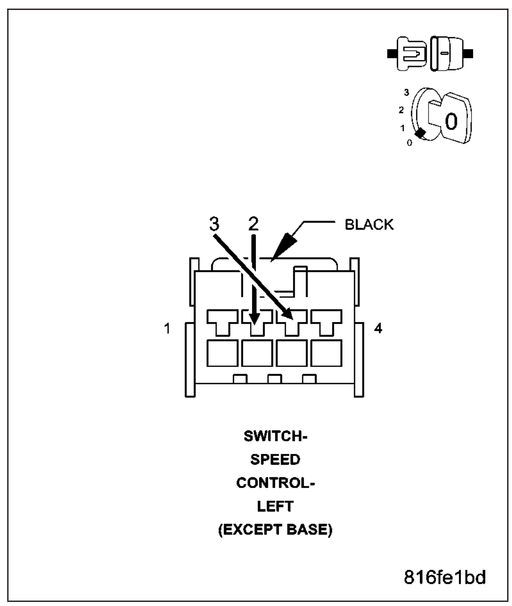
## 3. ECM - SENSOR GROUND OPEN

Turn the ignition off.

Disconnect one of the S/C Switch harness connectors.

With the scan tool, read the S/C Switch Voltage.

While monitoring the scan tool, connect a jumper wire between the S/C Switch #2 Signal circuit and the Sensor Ground circuit in the S/C Switch harness connector.



**Does the scan tool display below 0.1 volt with the jumper wire connected?**

**Yes** >> Replace the Speed Control Switches.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

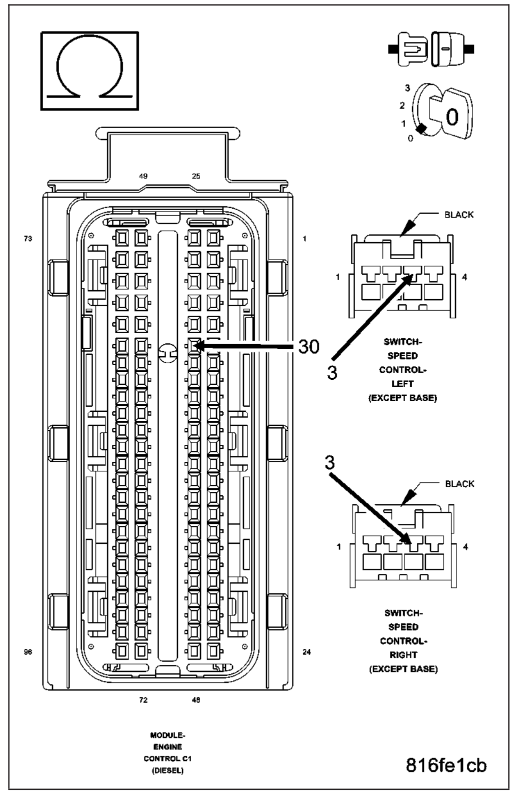
## 4. S/C SWITCH #2 SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance between the S/C Switch #2 Signal circuit between both S/C Switch harness connectors and the ECM harness connector.



**Is the resistance below 10.0 ohms for both measurements?**

**Yes** >> Go To 5

**No** >> Repair the S/C Switch #2 Signal circuit that measured above 10.0 ohms for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

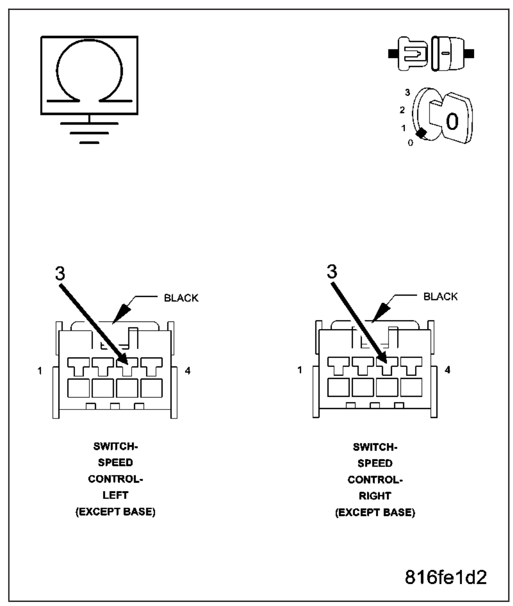
## 5. S/C SWITCH #2 SIGNAL CIRCUIT SHORT TO GROUND

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the S/C Switch #2 Signal circuit.



**Is the resistance above 1000 ohms?**

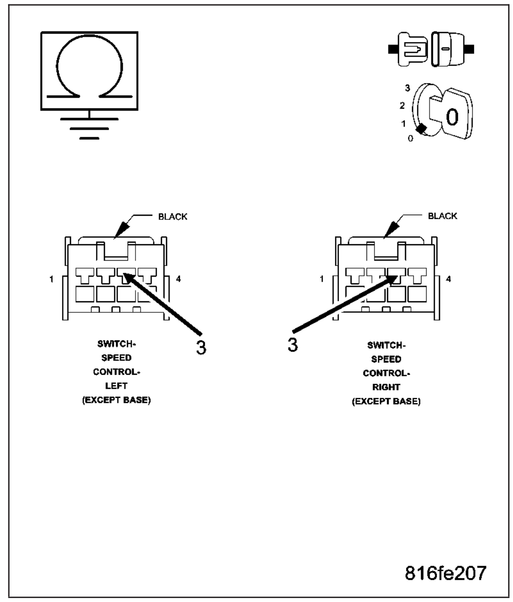
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the S/C Switch #2 Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. S/C SWITCH #2 SIGNAL CIRCUIT SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the S/C Switch #2 Signal circuit.

**Is the voltage above 1.0 volt?**

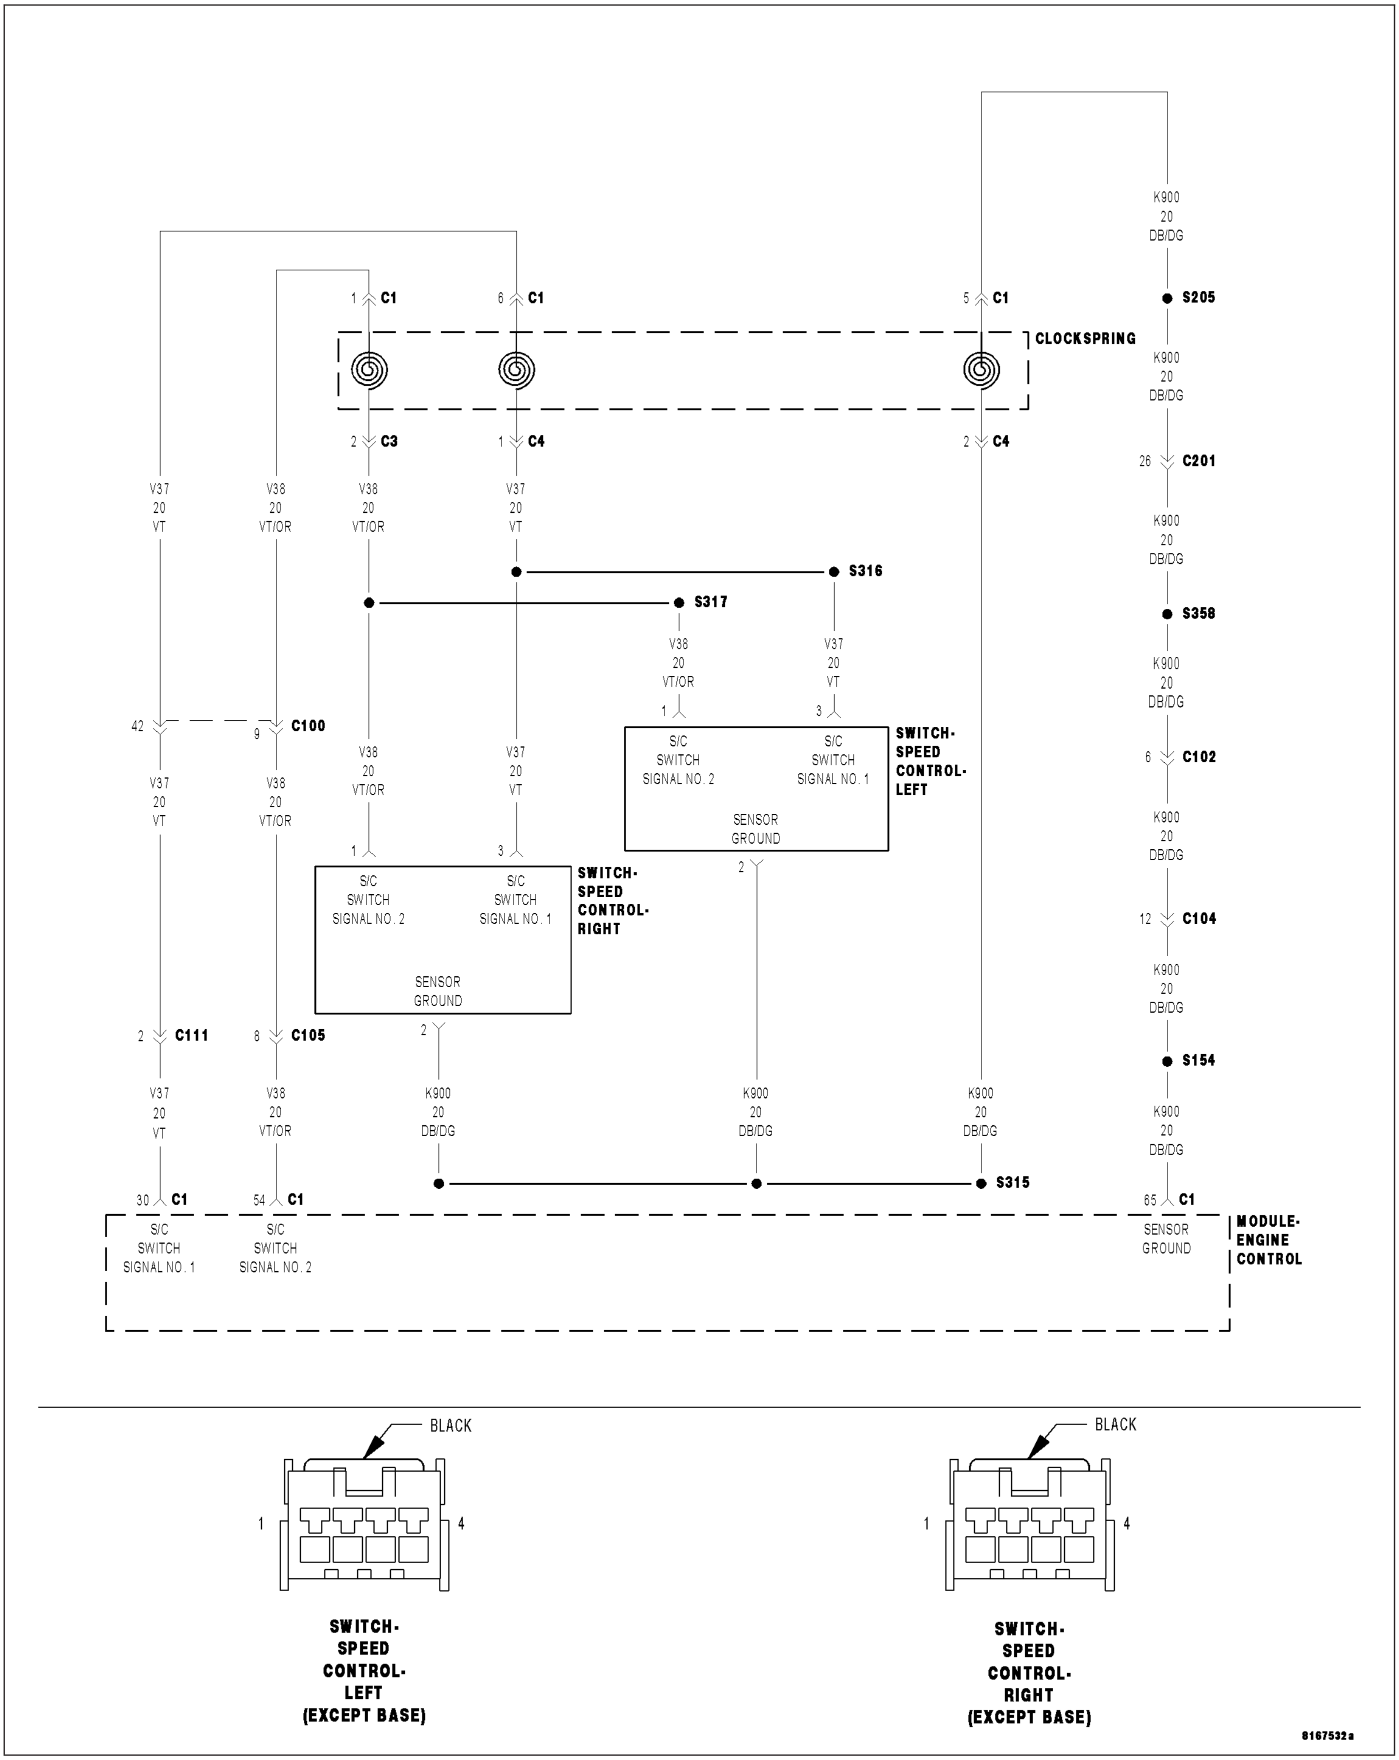
**Yes** >> Repair the S/C Switch #2 Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0589-S/C SWITCH #2 SIGNAL CIRCUIT STUCK SWITCH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The S/C Switch #2 Signal indicates that a switch is pressed for more than 1 minute.

| Possible Causes |
|---|
| ECM - S/C SIGNAL CIRCUIT OPEN |
| ECM - S/C SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| ECM - SENSOR GROUND OPEN |
| S/C SWITCH SIGNAL CIRCUIT OPEN |
| S/C SWITCH SIGNAL CIRCUIT OPEN |
| S/C SWITCH SIGNAL CIRCUIT SHORT TO GROUND |
| S/C SWITCH SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| S/C SWITCH SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| SENSOR GROUND OPEN |
| SPEED CONTROL SWITCHES |

## Diagnostic Test

### 1. VERIFY S/C SWITCH SIGNAL CIRCUIT VOLTAGE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

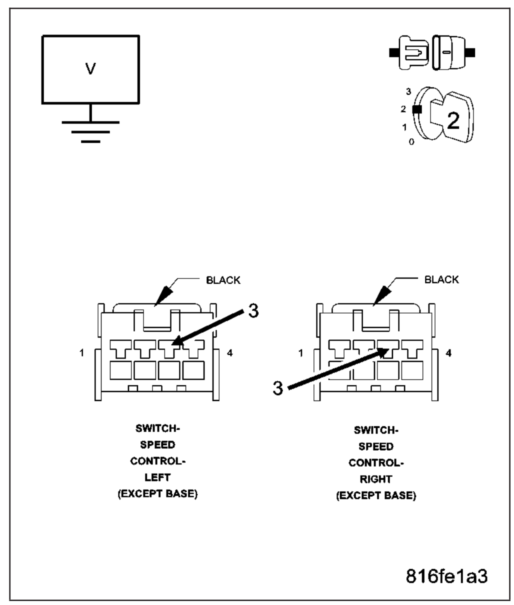
**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition off.

Disconnect the harness connectors from both S/C Switches.

Turn the ignition on.

Measure the voltage of the S/C Switch #2 Signal circuit at both S/C Switch harness connectors.



**Select the appropriate voltage reading.**

**4.5 to 5.5 volts at both connectors.**
Go To 2

**4.5 to 5.5 volts at only one connector.**
Repair the S/C Switch Signal circuit that measured below 4.5 volts for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**Below 4.5 volts at both connectors.**
Go To 4

**Above 5.5 volts for either measurement.**
Go To 6

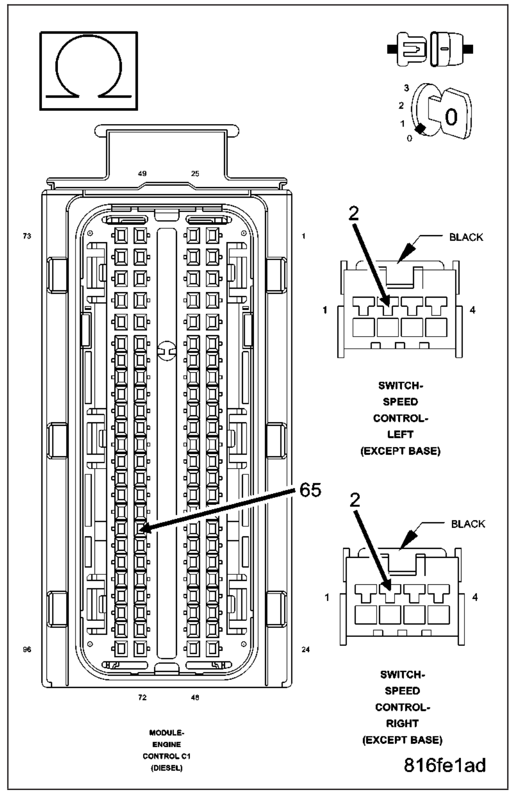
## 2. SENSOR GROUND OPEN

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance of the Sensor Ground circuit between each S/C Switch harness connector and the ECM harness connector.



**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 3

**No** >> Repair the Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

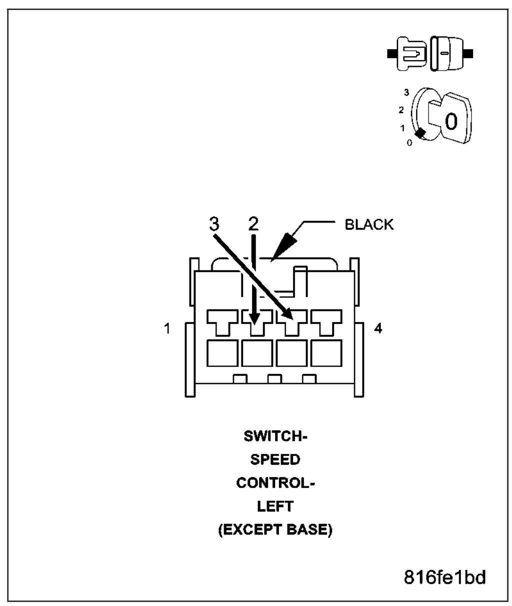
## 3. ECM - SENSOR GROUND OPEN

Turn the ignition off.

Disconnect one of the S/C Switch harness connectors.

With the scan tool, read the S/C Switch Voltage.

While monitoring the scan tool, connect a jumper wire between the S/C Switch #2 Signal circuit and the Sensor Ground circuit in the S/C Switch harness connector.



**Does the scan tool display below 0.1 volt with the jumper wire connected?**

**Yes** >> Replace the Speed Control Switches.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. S/C SWITCH #2 SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

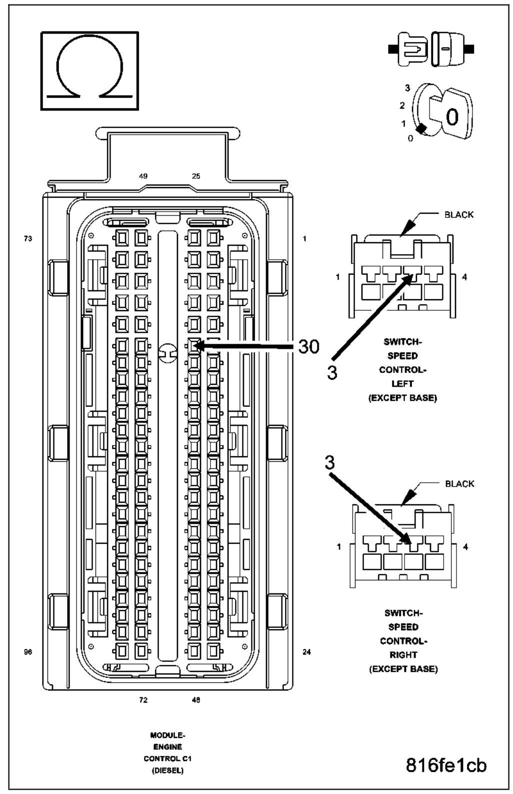
Measure the resistance between the S/C Switch #2 Signal circuit between both S/C Switch harness connectors and the ECM harness connector.

**Is the resistance below 10.0 ohms for both measurements?**

**Yes** >> Go To 5

**No** >> Repair the S/C Switch #2 Signal circuit that measured above 10.0 ohms for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 5. S/C SWITCH #2 SIGNAL CIRCUIT SHORT TO GROUND

Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the S/C Switch #2 Signal circuit.

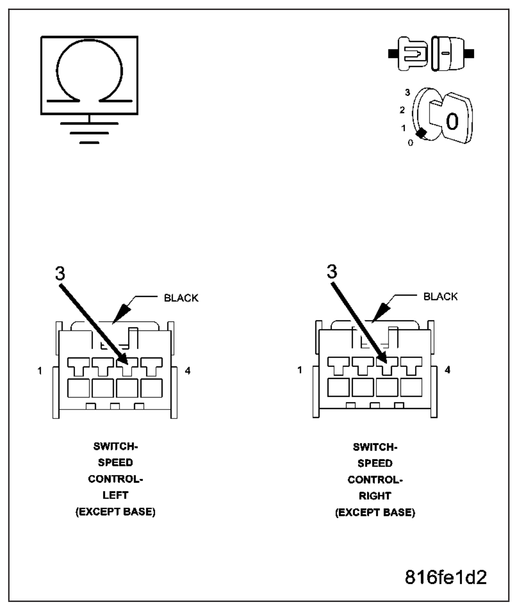
**Is the resistance above 1000 ohms?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

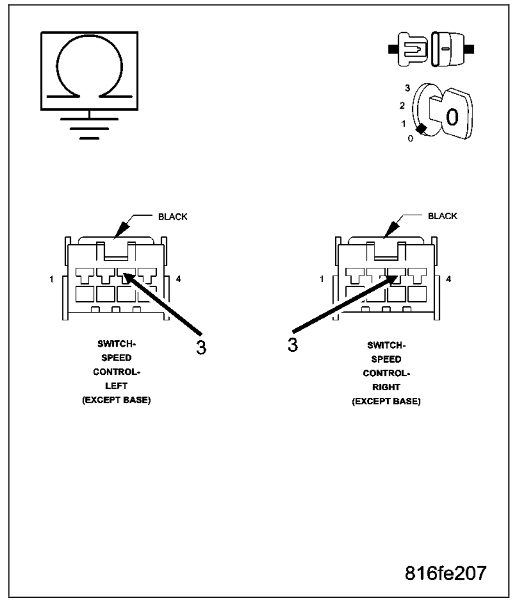
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the S/C Switch #2 Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 6. S/C SWITCH #2 SIGNAL CIRCUIT SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect both S/C Switch harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the S/C Switch #2 Signal circuit.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the S/C Switch #2 Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0600-ECM COMMUNICATION ERROR

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects an internal failure.

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. ENGINE CONTROL MODULE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: If there are other DTC's set with this DTC repair other DTC's before continuing with this diagnostic procedure.**

**NOTE: This code can be caused by an intermittent problem in the wiring and connectors to the Engine Control Module. Inspect the Engine Control Module harness connector and associated wiring for signs of poor terminal contact.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## P0602-ECM INVALID CODE WORD

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects an internal failure.

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. ENGINE CONTROL MODULE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: If there are other DTC's set with this DTC repair other DTC's before continuing with this diagnostic procedure.**

**NOTE: This code can be caused by an intermittent problem in the wiring and connectors to the Engine Control Module. Inspect the Engine Control Module harness connector and associated wiring for signs of poor terminal contact.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## P0606-ECM DEVIATION ERROR

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects an internal failure.

| Possible Causes |
| --- |
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. ENGINE CONTROL MODULE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: If there are other DTC's set with this DTC repair other DTC's before continuing with this diagnostic procedure.**

**NOTE: This code can be caused by an intermittent problem in the wiring and connectors to the Engine Control Module. Inspect the Engine Control Module harness connector and associated wiring for signs of poor terminal contact.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle. With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## P0606-ECM CHECKSUM ERROR

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects an internal failure.

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. ENGINE CONTROL MODULE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: If there are other DTC's set with this DTC repair other DTC's before continuing with this diagnostic procedure.**

**NOTE: This code can be caused by an intermittent problem in the wiring and connectors to the Engine Control Module. Inspect the Engine Control Module harness connector and associated wiring for signs of poor terminal contact.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle. With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## P0606-ECM INTERNAL ERROR

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects an internal failure.

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. ENGINE CONTROL MODULE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: If there are other DTC's set with this DTC repair other DTC's before continuing with this diagnostic procedure.**

**NOTE: This code can be caused by an intermittent problem in the wiring and connectors to the Engine Control Module. Inspect the Engine Control Module harness connector and associated wiring for signs of poor terminal contact.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## P0610-AUTOMATIC TRANSMISSION CODED AS MANUAL TRANSMISSION

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects an automatic transmission when it has been programmed for a manual transmission.

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| VERIFY ECM PROGRAMMING |

## Diagnostic Test

### 1. VERIFY ECM PROGRAMMING

Turn the Ignition on.

With the scan tool, erase the ECM DTCs.

With the scan tool, verify that the ECM is properly coded for the options and components that the vehicle is equipped with.

**NOTE: Reprogram the ECM with correct information if necessary.**

Start and idle the engine.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0610-MANUAL TRANSMISSION CODED AS AUTOMATIC TRANSMISSION

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects an automatic transmission when it has been programmed for a manual transmission.

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| VERIFY ECM PROGRAMMING |

## Diagnostic Test

### 1. VERIFY ECM PROGRAMMING

Turn the Ignition on.

With the scan tool, erase the ECM DTCs.

With the scan tool, verify that the ECM is properly coded for the options and components that the vehicle is equipped with.

**NOTE: Reprogram the ECM with correct information if necessary.**

Start and idle the engine.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0600-ECM COMMUNICATION ERROR

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects an internal failure.

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |

### Diagnostic Test

#### 1. ENGINE CONTROL MODULE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: If there are other DTC's set with this DTC repair other DTC's before continuing with this diagnostic procedure.**

**NOTE: This code can be caused by an intermittent problem in the wiring and connectors to the Engine Control Module. Inspect the Engine Control Module harness connector and associated wiring for signs of poor terminal contact.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

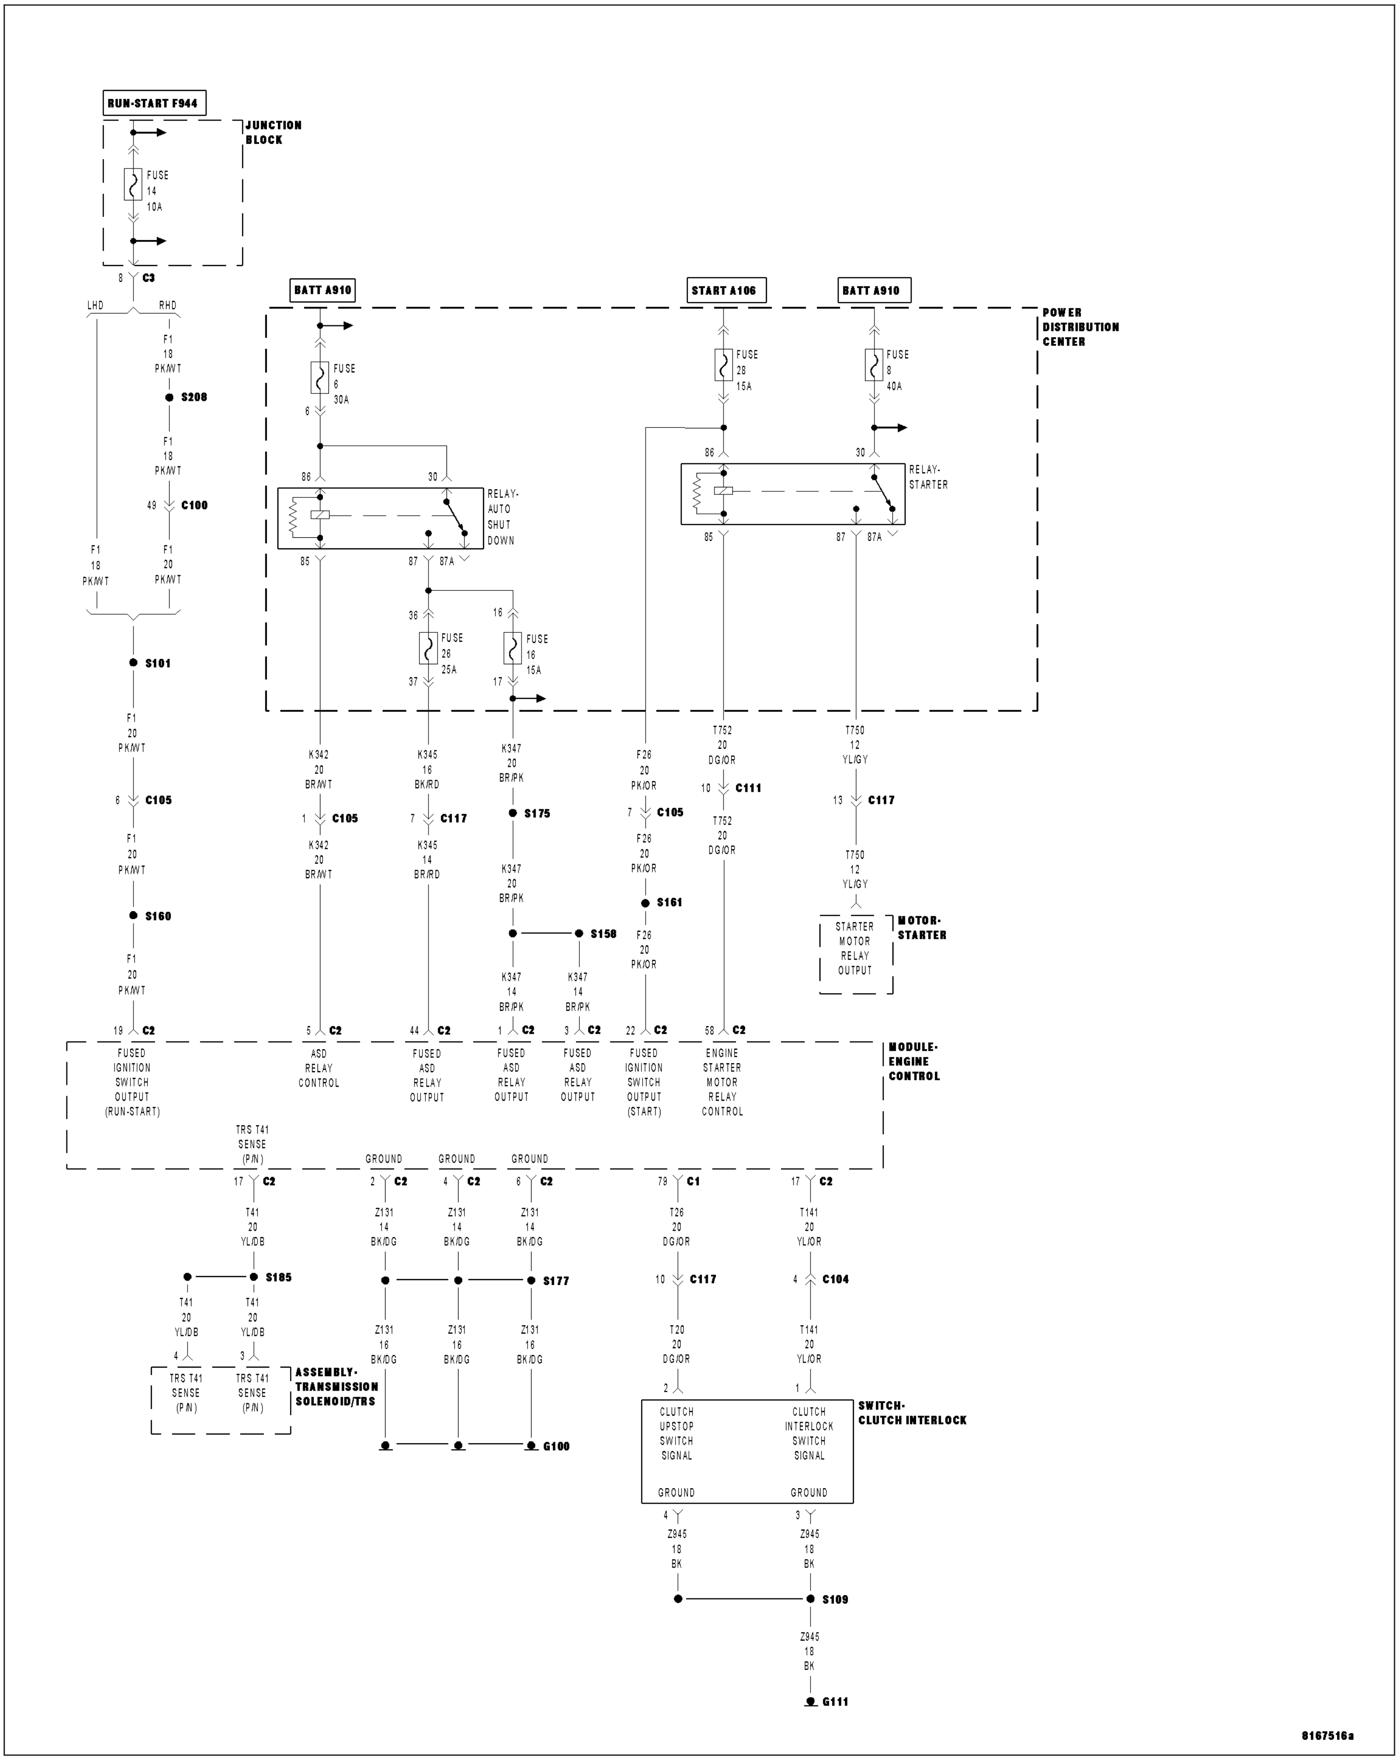
With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

# P0615-STARTER RELAY CIRCUIT EXCESSIVE CURRENT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Starter Relay command on.
- **Set Condition:**
  The ECM detects excessive current on the Starter Relay Control circuit for 0.2 seconds.

| Possible Causes |
| --- |
| INTERMITTENT CONDITION |
| STARTER RELAY |
| IGNITION SWITCH START OUTPUT OPEN |
| STARTER RELAY CONTROL CIRCUIT OPEN |
| STARTER RELAY CONTROL CIRCUIT SHORTED TO GROUND |
| STARTER RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CLEAR CODE AND CHECK IF THE DTC RESETS

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Attempt to start the engine several times, pausing for at least 10 seconds between each attempt.

Turn the ignition on.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. STARTER RELAY

Turn the ignition off.

Install a substitute relay in place of the Starter Relay.

Turn the ignition on.

With the scan tool, erase DTCs.

Attempt to start the engine several times, pausing for at least 10 seconds between each attempt.

Turn the ignition on.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 3

**No** >> Replace the Starter Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. IGNITION SWITCH START OUTPUT CIRCUIT OPEN

Turn the ignition off.

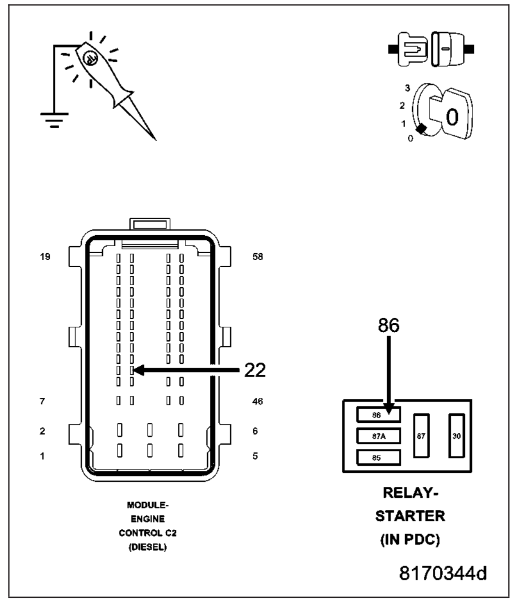
Remove the Starter Relay from the PDC.

Disconnect the ECM harness connectors.

Turn the Ignition Switch to the Start position.

Using a 12-volt test light connected to ground, check the Ignition Switch Start Output circuit at the Starter Relay connector in the PDC.

Using a 12-volt test light connected to ground, check the Ignition Switch Start Output circuit at the ECM C2 harness connector cavity 22.



**Does the test light illuminate brightly for both circuit checks?**

**Yes** >> Go To 4

**No** >> Repair the Ignition Switch Start Output circuit for an open. Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

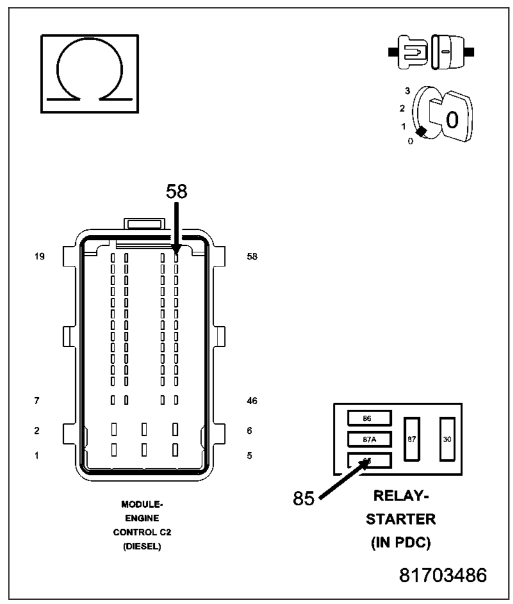
## 4. STARTER RELAY CONTROL CIRCUIT OPEN

Turn the ignition off.

Remove the Starter Relay from the PDC.

Disconnect the ECM harness connectors.

Measure the resistance of the Starter Relay Control circuit between the ECM harness connector and the PDC connector.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the Starter Relay Control circuit for an open. Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. STARTER RELAY CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Remove the Starter Relay from the PDC.

Disconnect the ECM harness connectors.

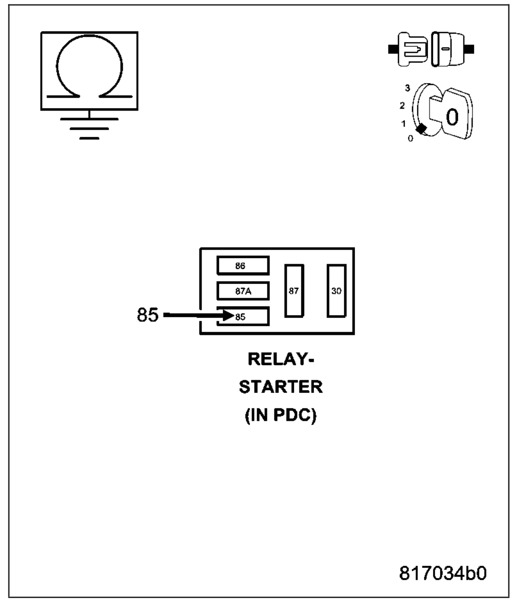
Measure the resistance between ground and the Starter Relay Control circuit.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Starter Relay Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 6. STARTER RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Remove the Starter Relay.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the Starter Relay Control circuit.

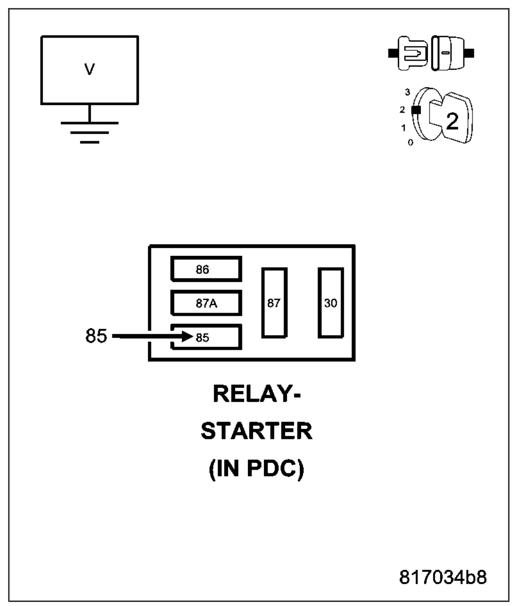
**Is the voltage below 1.0 volt?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

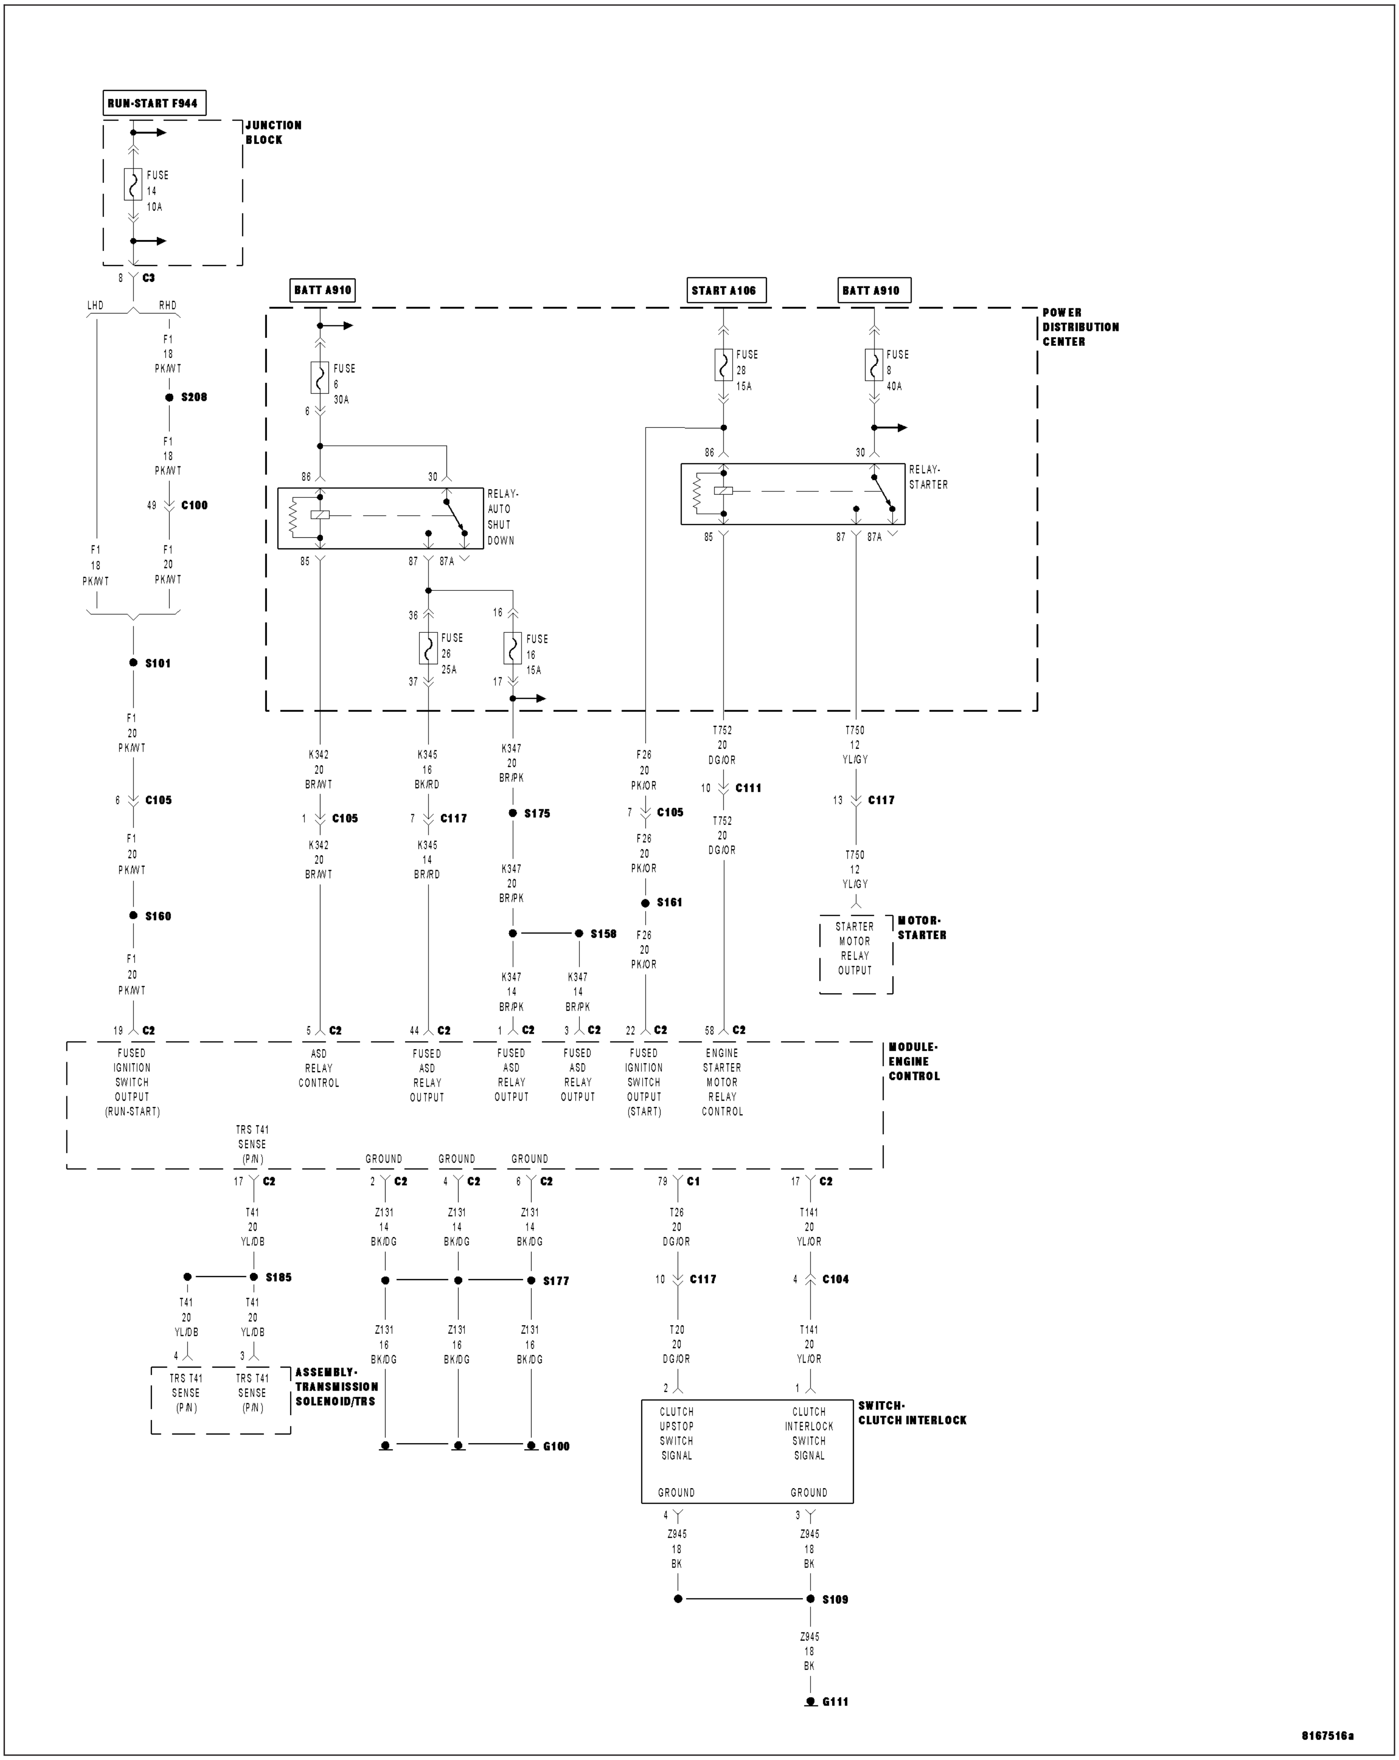
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Starter Relay Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



# P0615-STARTER RELAY CIRCUIT OPEN CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Starter Relay command off.
- **Set Condition:**
  The ECM does not detect voltage on the Starter Relay Control circuit for 0.2 second.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| STARTER RELAY |
| IGNITION SWITCH START OUTPUT OPEN |
| STARTER RELAY CONTROL CIRCUIT OPEN |
| STARTER RELAY CONTROL CIRCUIT SHORTED TO GROUND |
| STARTER RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CLEAR CODE AND CHECK IF THE DTC RESETS

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Attempt to start the engine several times, pausing for at least 10 seconds between each attempt.

Turn the ignition on.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 2. STARTER RELAY

Turn the ignition off.

Install a substitute relay in place of the Starter Relay.

Turn the ignition on.

With the scan tool, erase DTCs.

Attempt to start the engine several times, pausing for at least 10 seconds between each attempt.

Turn the ignition on.

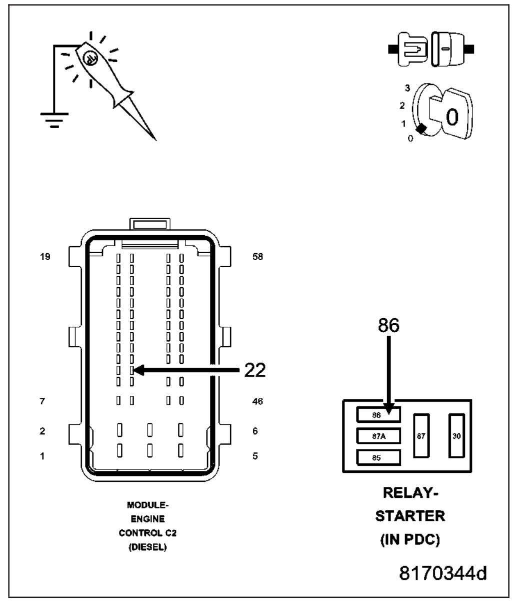
With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 3

**No** >> Replace the Starter Relay.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 3. IGNITION SWITCH START OUTPUT CIRCUIT OPEN

Turn the ignition off.

Remove the Starter Relay from the PDC.

Disconnect the ECM harness connectors.

Turn the Ignition Switch to the Start position.

Using a 12-volt test light connected to ground, check the Ignition Switch Start Output circuit at the Starter Relay connector in the PDC.

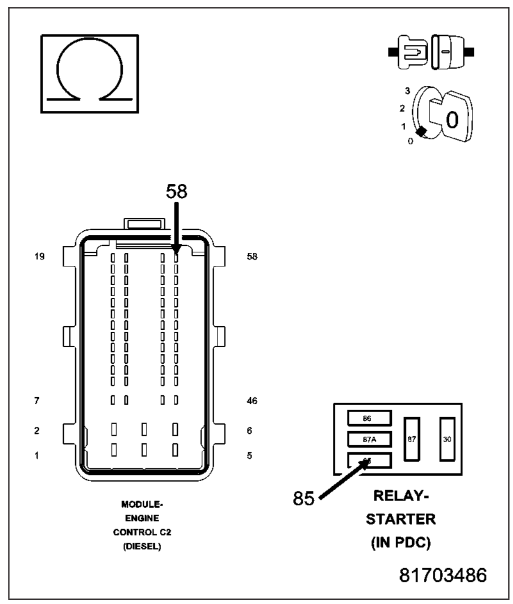
Using a 12-volt test light connected to ground, check the Ignition Switch Start Output circuit at the ECM C2 harness connector cavity 22.

**Does the test light illuminate brightly for both circuit checks?**

**Yes** >> Go To 4

**No** >> Repair the Ignition Switch Start Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



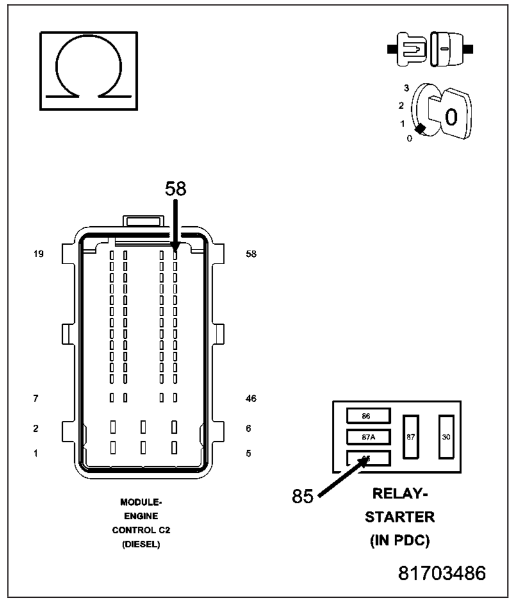
## 4. STARTER RELAY CONTROL CIRCUIT OPEN

Turn the ignition off.

Remove the Starter Relay from the PDC.

Disconnect the ECM harness connectors.

Measure the resistance of the Starter Relay Control circuit between the ECM harness connector and the PDC connector.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the Starter Relay Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

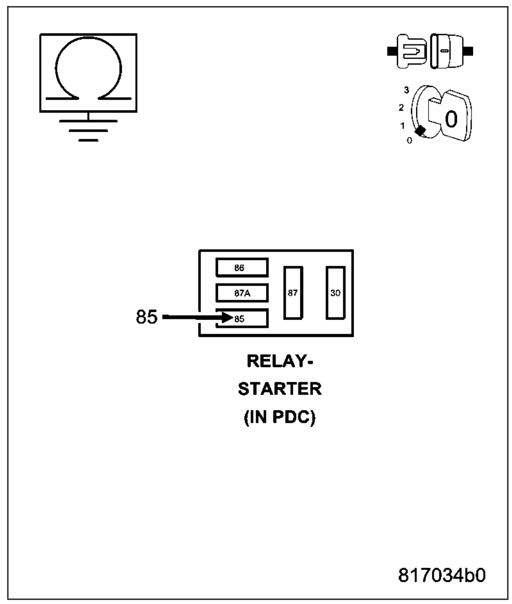
## 5. STARTER RELAY CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Remove the Starter Relay from the PDC.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Starter Relay Control circuit.



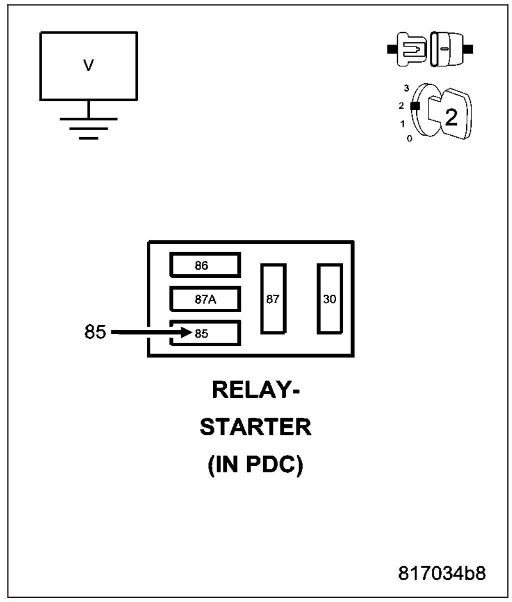
**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Starter Relay Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. STARTER RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE



Turn the ignition off.

Remove the Starter Relay.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the Starter Relay Control circuit.

**Is the voltage below 1.0 volt?**

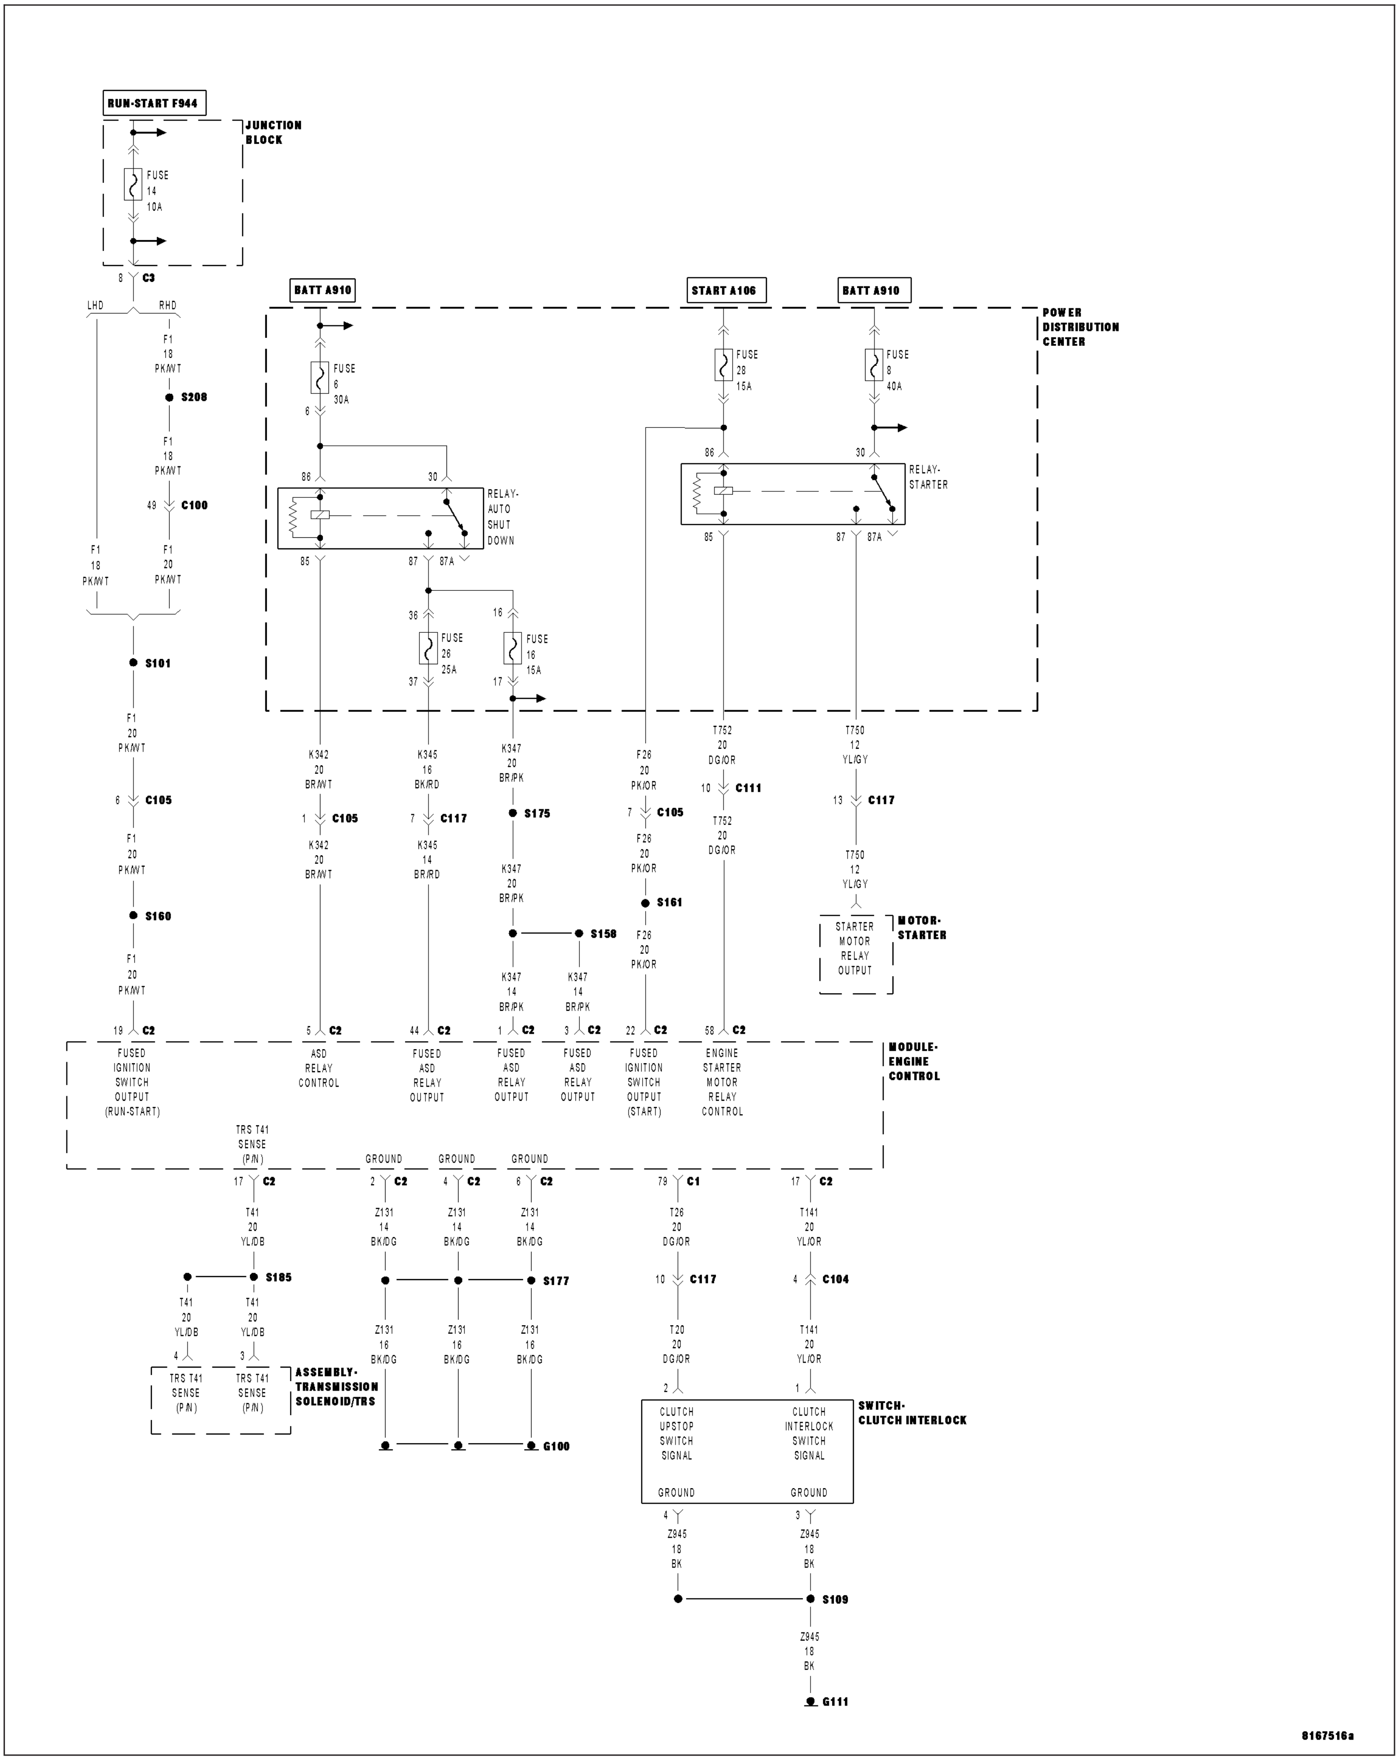
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Starter Relay Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0616-STARTER RELAY CIRCUIT SHORT TO GROUND



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Starter Relay command off.
- **Set Condition:**
  The ECM detects a short to ground on the Starter Relay Control circuit for 0.05 seconds.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| STARTER RELAY |
| IGNITION SWITCH START OUTPUT OPEN |
| STARTER RELAY CONTROL CIRCUIT OPEN |
| STARTER RELAY CONTROL CIRCUIT SHORTED TO GROUND |
| STARTER RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CLEAR CODE AND CHECK IF THE DTC RESETS

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Attempt to start the engine several times, pausing for at least 10 seconds between each attempt.

Turn the ignition on.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. STARTER RELAY

Turn the ignition off.

Install a substitute relay in place of the Starter Relay.

Turn the ignition on.

With the scan tool, erase DTCs.

Attempt to start the engine several times, pausing for at least 10 seconds between each attempt.

Turn the ignition on.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 3

**No** >> Replace the Starter Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. IGNITION SWITCH START OUTPUT CIRCUIT OPEN

Turn the ignition off.

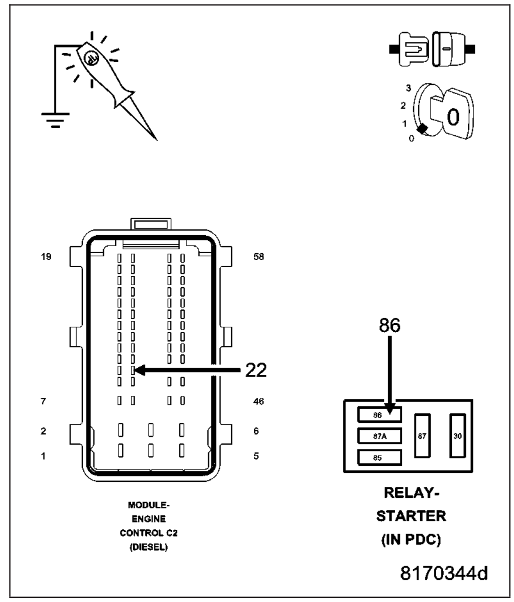
Remove the Starter Relay from the PDC.

Disconnect the ECM harness connectors.

Turn the Ignition Switch to the Start position.

Using a 12-volt test light connected to ground, check the Ignition Switch Start Output circuit at the Starter Relay connector in the PDC.

Using a 12-volt test light connected to ground, check the Ignition Switch Start Output circuit at the ECM C2 harness connector cavity 22.



**Does the test light illuminate brightly for both circuit checks?**

**Yes** >> Go To 4

**No** >> Repair the Ignition Switch Start Output circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

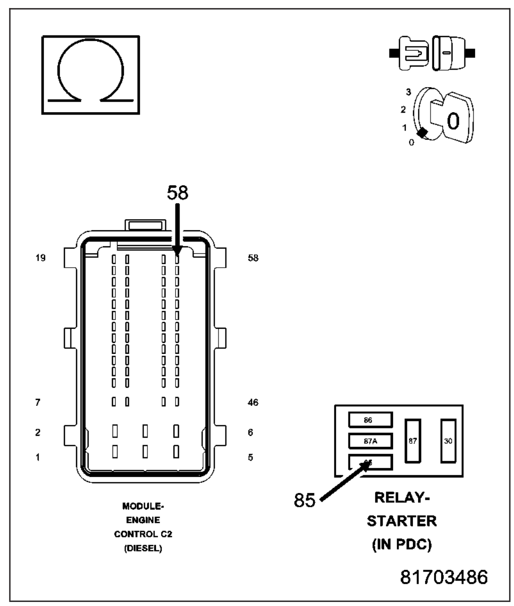
## 4. STARTER RELAY CONTROL CIRCUIT OPEN

Turn the ignition off.

Remove the Starter Relay from the PDC.

Disconnect the ECM harness connectors.

Measure the resistance of the Starter Relay Control circuit between the ECM harness connector and the PDC connector.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the Starter Relay Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. STARTER RELAY CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Remove the Starter Relay from the PDC.

Disconnect the ECM harness connectors.

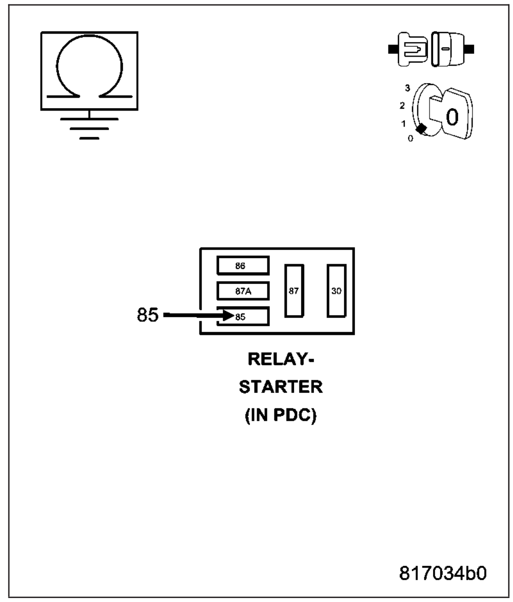
Measure the resistance between ground and the Starter Relay Control circuit.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Starter Relay Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 6. STARTER RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Remove the Starter Relay.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the Starter Relay Control circuit.

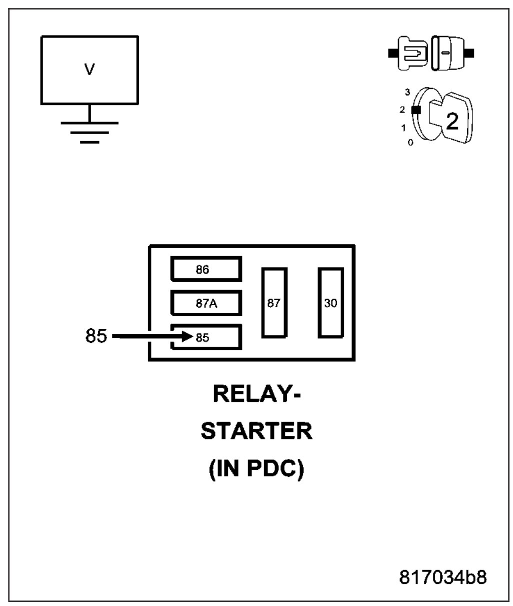
**Is the voltage below 1.0 volt?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

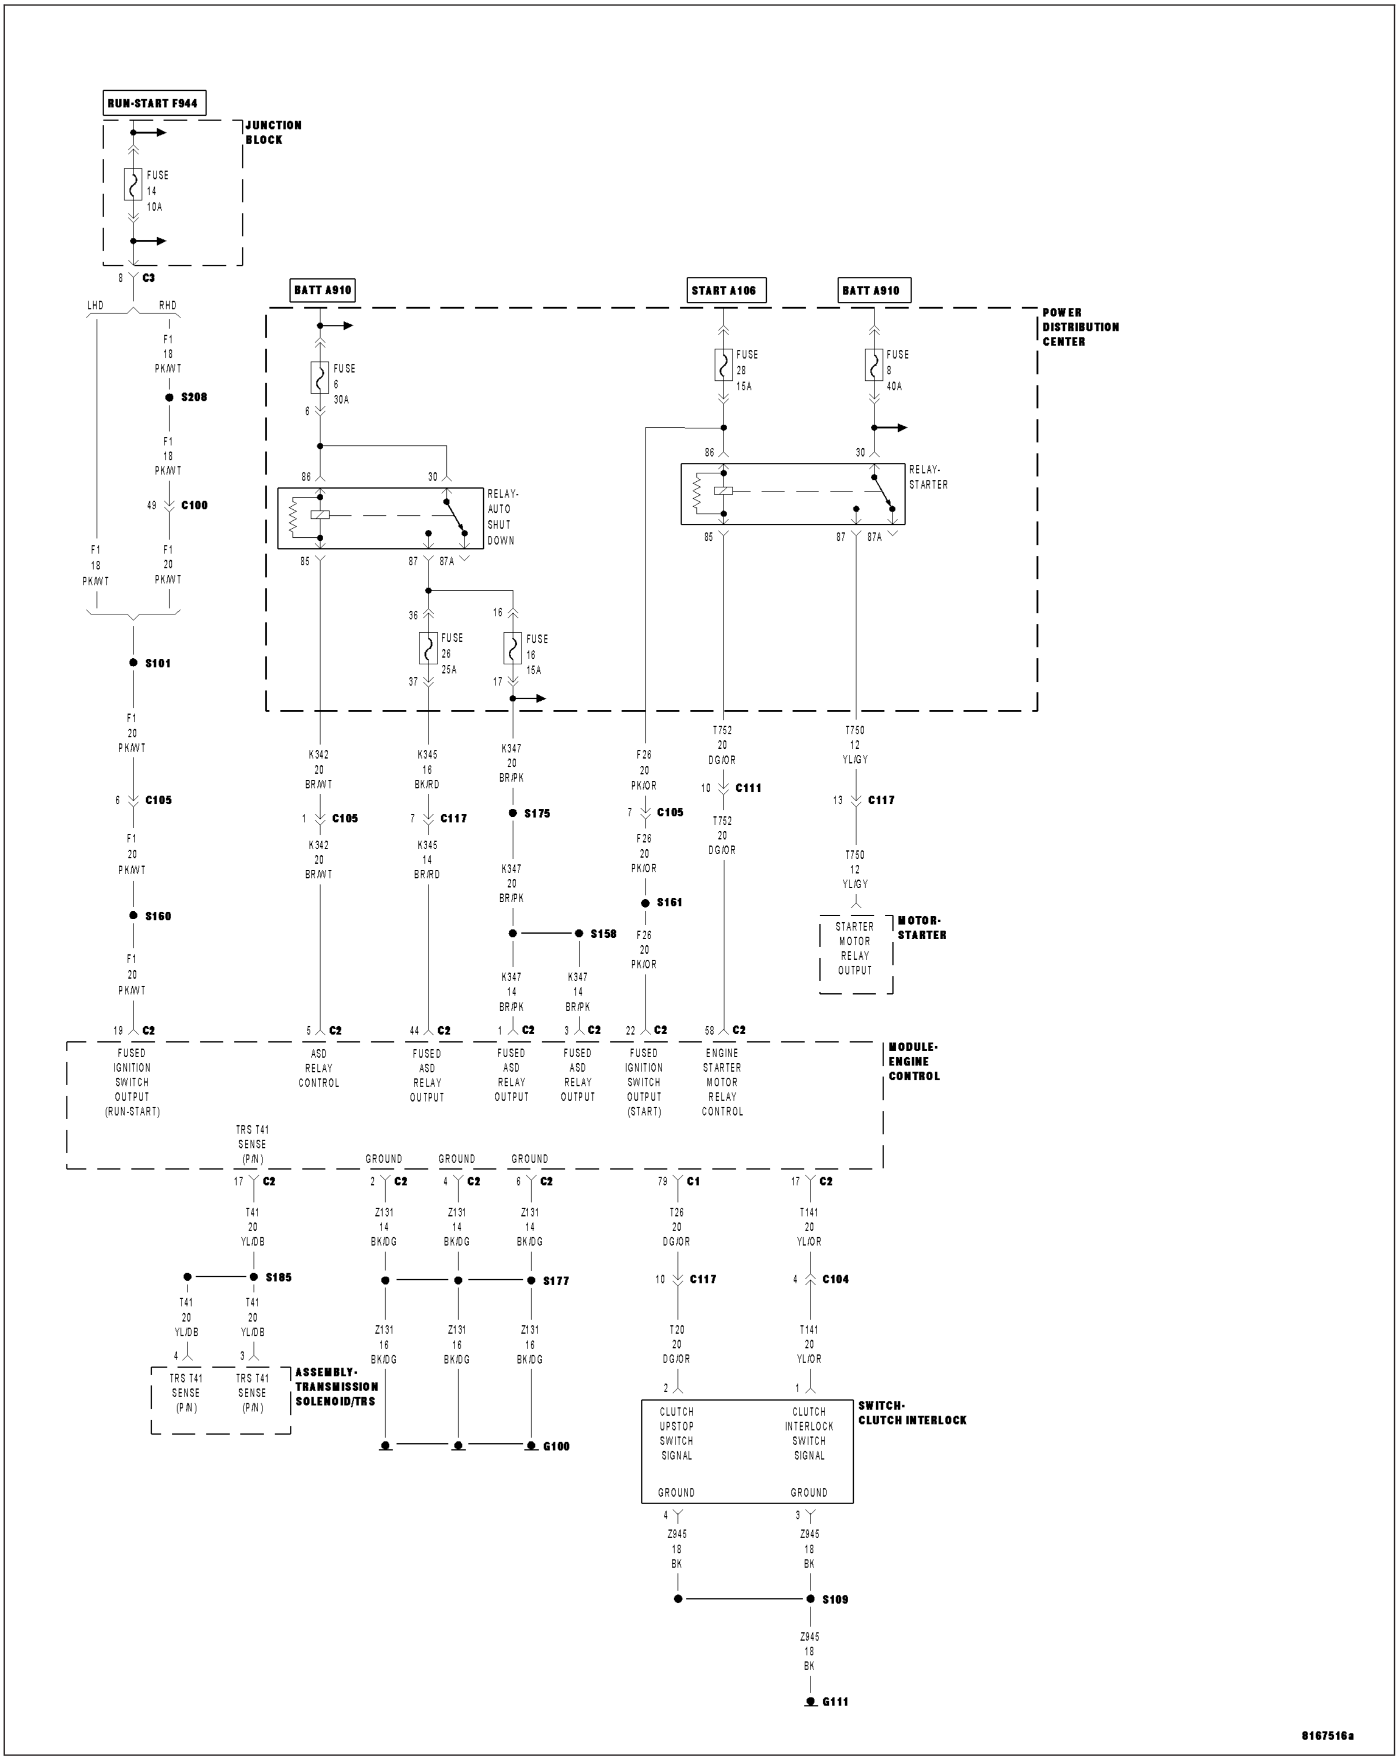
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Starter Relay Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## P0617-STARTER RELAY CIRCUIT SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Starter Relay command on.
- **Set Condition:**
  The ECM detects excessive current on the Starter Relay Control circuit for 0.2 second.

| Possible Causes |
| --- |
| INTERMITTENT CONDITION |
| STARTER RELAY |
| IGNITION SWITCH START OUTPUT OPEN |
| STARTER RELAY CONTROL CIRCUIT OPEN |
| STARTER RELAY CONTROL CIRCUIT SHORTED TO GROUND |
| STARTER RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CLEAR CODE AND CHECK IF THE DTC RESETS

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Attempt to start the engine several times, pausing for at least 10 seconds between each attempt.

Turn the ignition on.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. STARTER RELAY

Turn the ignition off.

Install a substitute relay in place of the Starter Relay.

Turn the ignition on.

With the scan tool, erase DTCs.

Attempt to start the engine several times, pausing for at least 10 seconds between each attempt.

Turn the ignition on.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 3

**No** >> Replace the Starter Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. IGNITION SWITCH START OUTPUT CIRCUIT OPEN

Turn the ignition off.

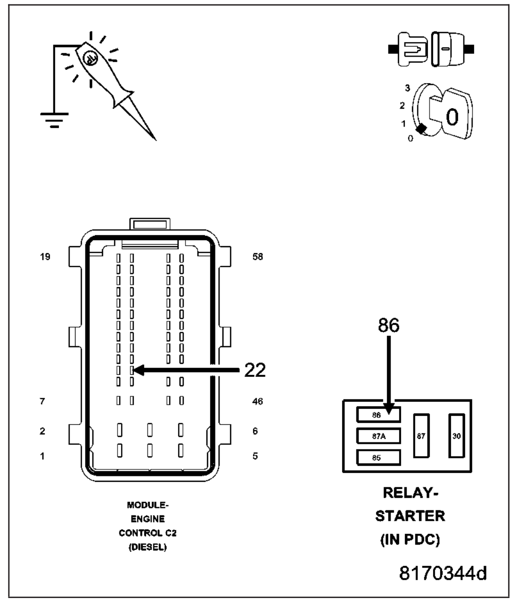
Remove the Starter Relay from the PDC.

Disconnect the ECM harness connectors.

Turn the Ignition Switch to the Start position.

Using a 12-volt test light connected to ground, check the Ignition Switch Start Output circuit at the Starter Relay connector in the PDC.

Using a 12-volt test light connected to ground, check the Ignition Switch Start Output circuit at the ECM C2 harness connector cavity 22.



**Does the test light illuminate brightly for both circuit checks?**

**Yes** >> Go To 4

**No** >> Repair the Ignition Switch Start Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

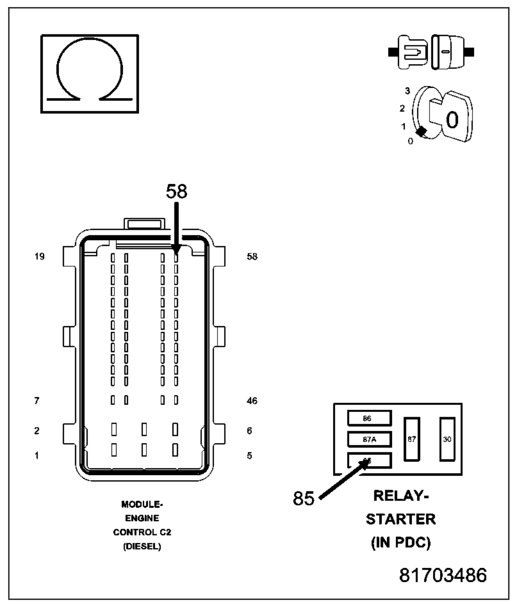
## 4. STARTER RELAY CONTROL CIRCUIT OPEN

Turn the ignition off.

Remove the Starter Relay from the PDC.

Disconnect the ECM harness connectors.

Measure the resistance of the Starter Relay Control circuit between the ECM harness connector and the PDC connector.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the Starter Relay Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

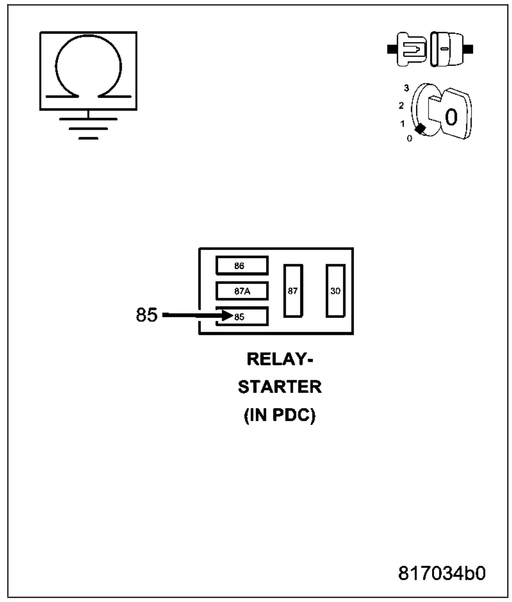
## 5. STARTER RELAY CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Remove the Starter Relay from the PDC.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Starter Relay Control circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Starter Relay Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. STARTER RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Remove the Starter Relay.

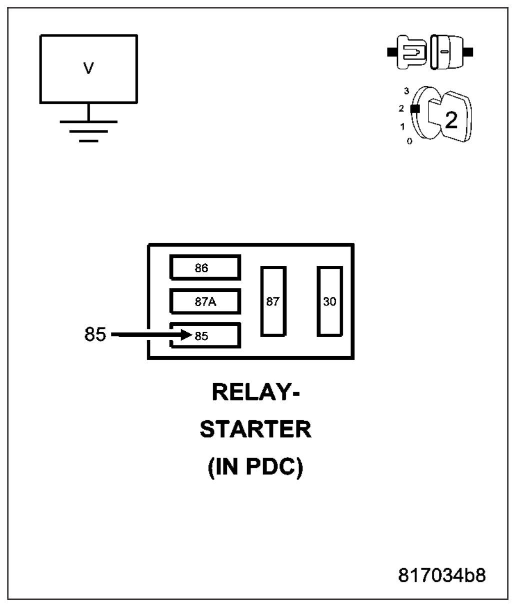
Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the Starter Relay Control circuit.



**Is the voltage below 1.0 volt?**

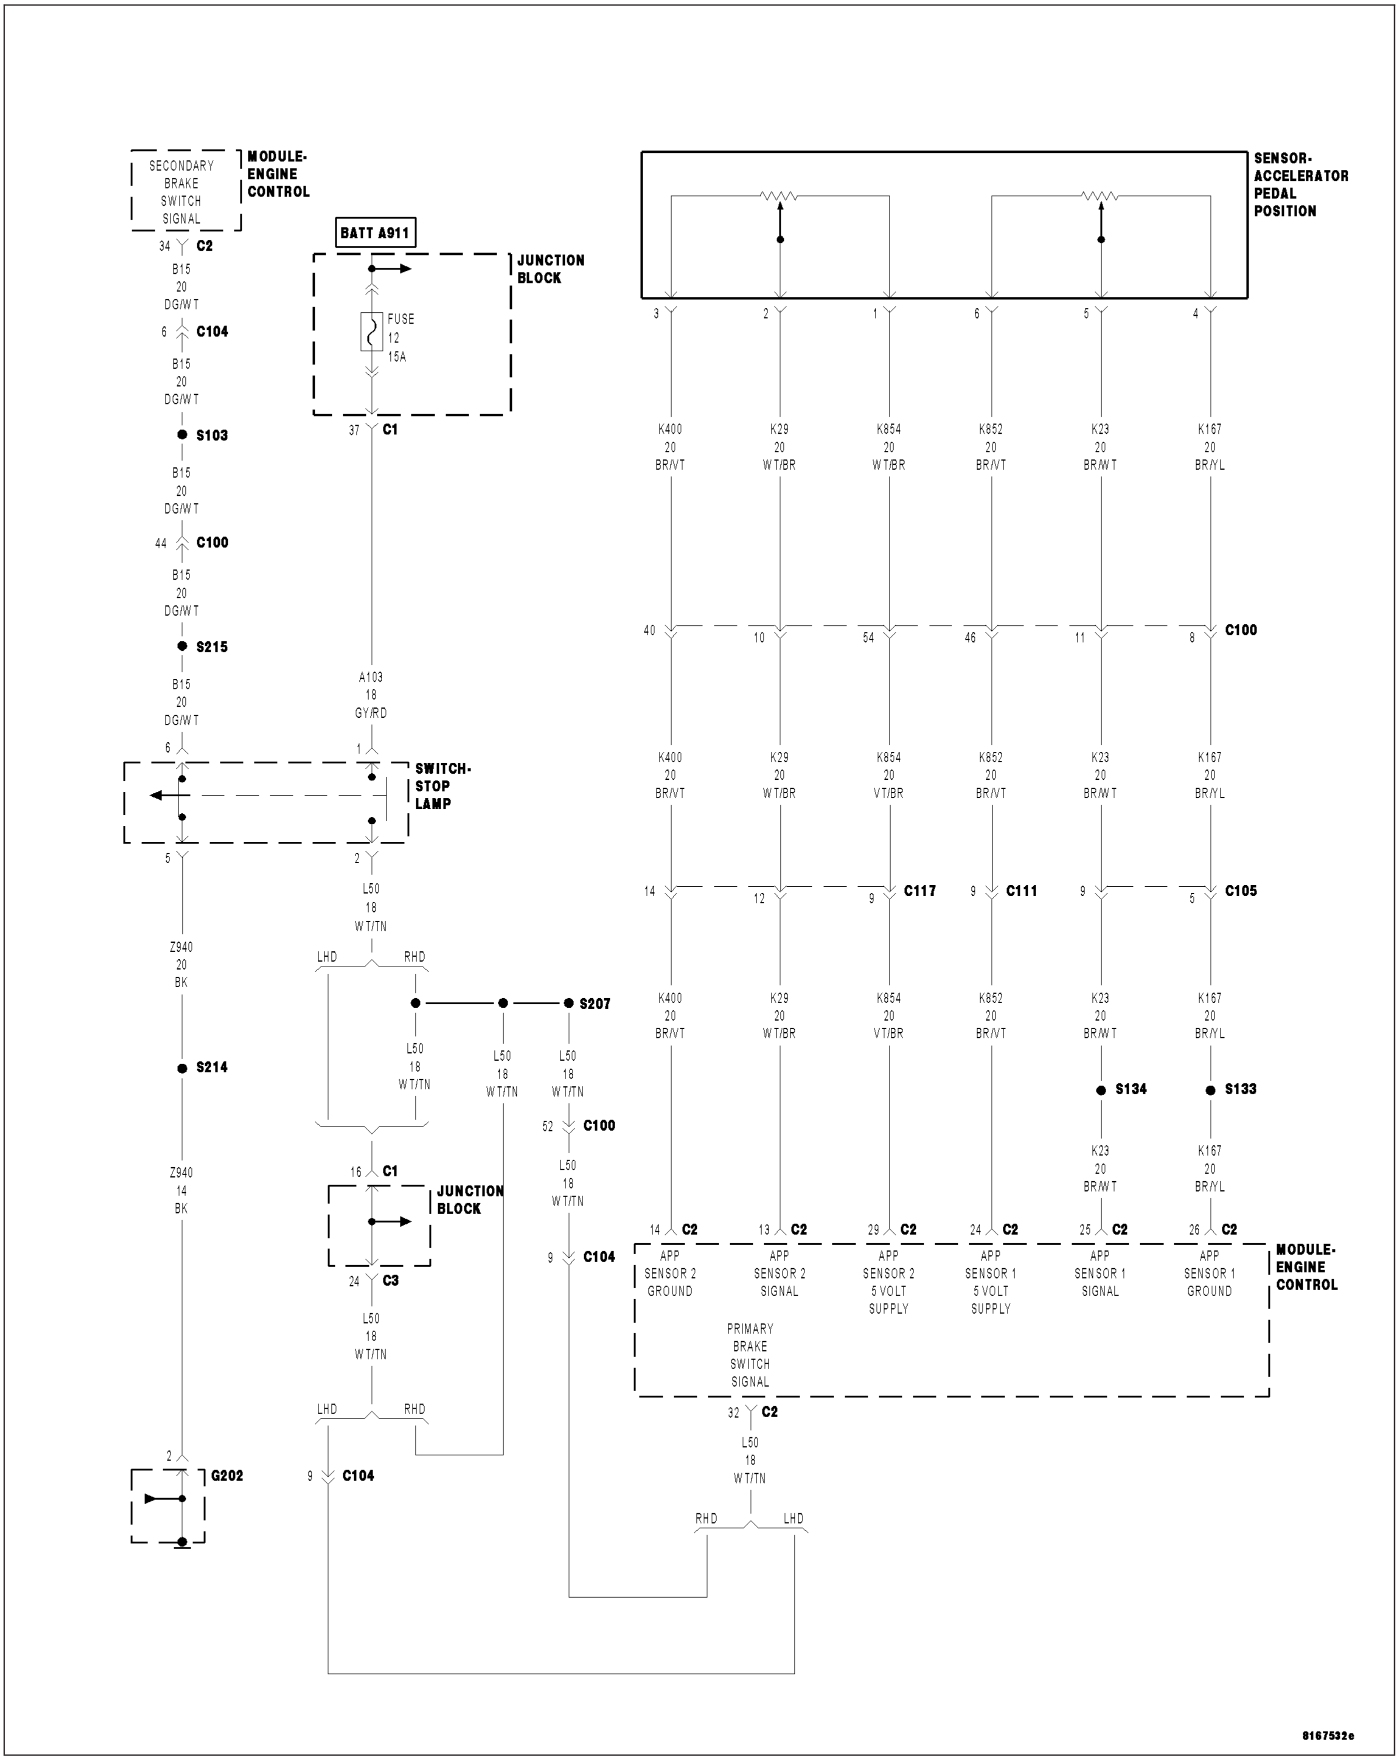
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Starter Relay Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0641-SENSOR SUPPLY 1 VOLTAGE TOO HIGH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects a short to voltage for 0.1 second on the Sensor Supply #1 circuit which supplies 5-volts to the CMP Sensor and the APP Sensor #1.

| Possible Causes |
|---|
| WIRING INSPECTION |
| APP SENSOR #1 5 VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE |
| CMP SENSOR 5 VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Turn the ignition off for 10 seconds.

Turn the ignition on.

Monitor the scan tool for ECM DTCs.

**Did this DTC reset?**

**Yes** >> Go To 2

**No** >> Go To 4

### 2. APP #1 SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the Accelerator Pedal Position Sensor harness connector.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage on the Accelerator Pedal Position Sensor #1 5-Volt Supply circuit.

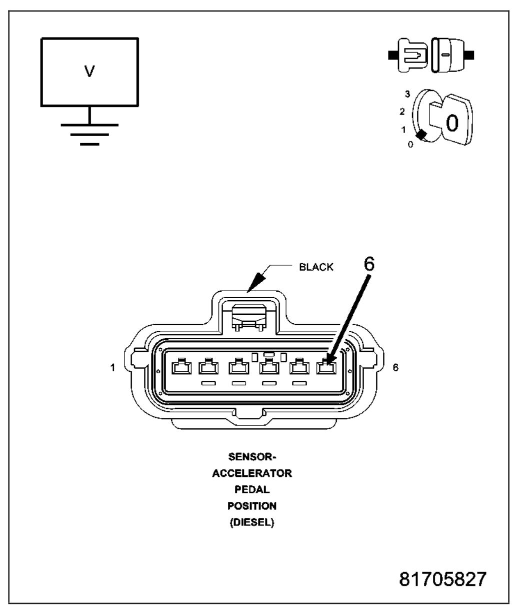
**NOTE: Remove the jumper wire and reinstall the ASD Relay.**

**Is the voltage below 1.0 volt?**

**Yes** >> Go To 3

**No** >> Repair the APP #1 5-Volt Supply circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 3. CMP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the Camshaft Position Sensor harness connector.

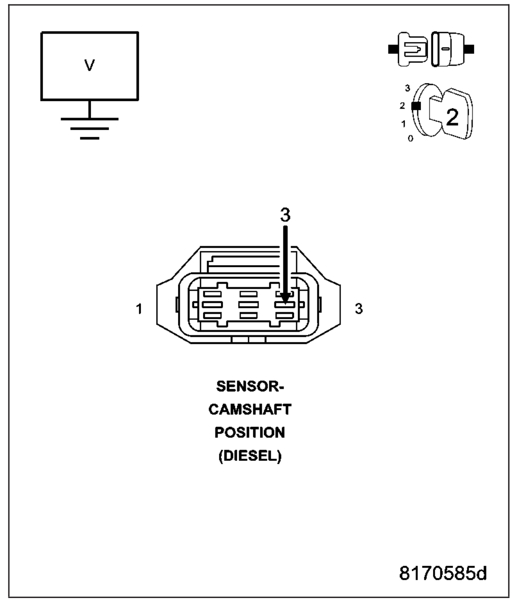
Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage on the Camshaft Position Sensor 5-Volt Supply circuit.



**NOTE: Remove the jumper wire and reinstall the ASD Relay.**

**Is the voltage below 1.0 volt?**

**Yes** >> Go To 4

**No** >> Repair the CMP Sensor 5-Volt Supply circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. WIRING INSPECTION

Turn the ignition off.

Inspect the CMP Sensor 5-Volt supply circuit between the CMP harness connector and the ECM harness connector for possible shorts to other circuits.

Inspect the APP Sensor #1 5-Volt supply circuit between the APP Sensor harness connector and the ECM harness connector for possible shorts to other circuits.

**Were any problems found?**

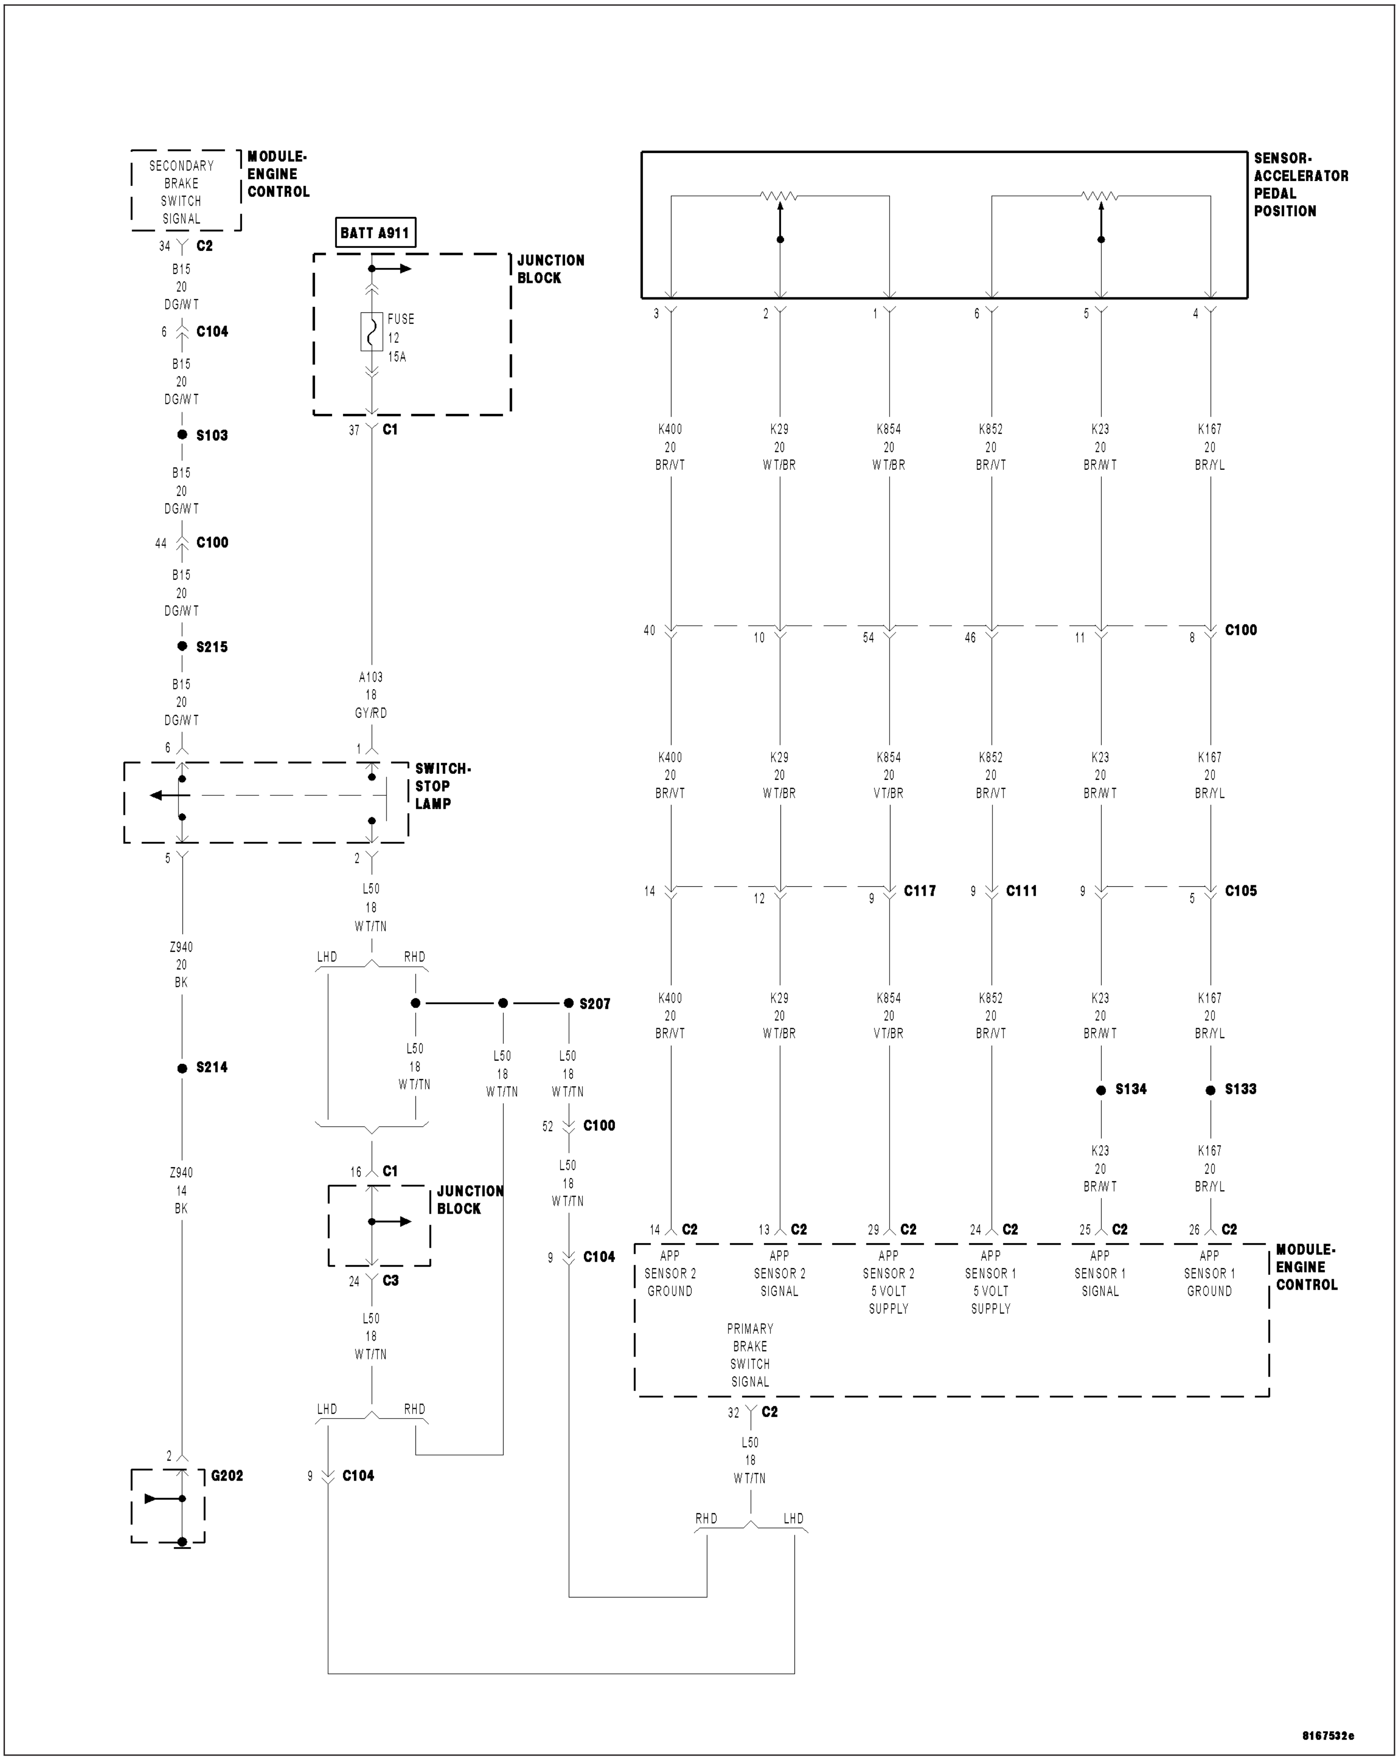
**Yes** >> Repair shorted circuit as necessary.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0641-SENSOR SUPPLY 1 VOLTAGE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects low voltage on the Sensor Supply #1 circuit which supplies 5-volts to the CMP Sensor and the APP Sensor #1.

| Possible Causes |
|---|
| WIRING INSPECTION |
| INTERMITTENT CONDITION |
| 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| ACCELERATOR PEDAL POSITION SENSOR |
| CAMSHAFT POSITION SENSOR |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CAMSHAFT POSITION SENSOR SHORTED TO GROUND

Turn the ignition off.

Disconnect the CMP Sensor harness connector.

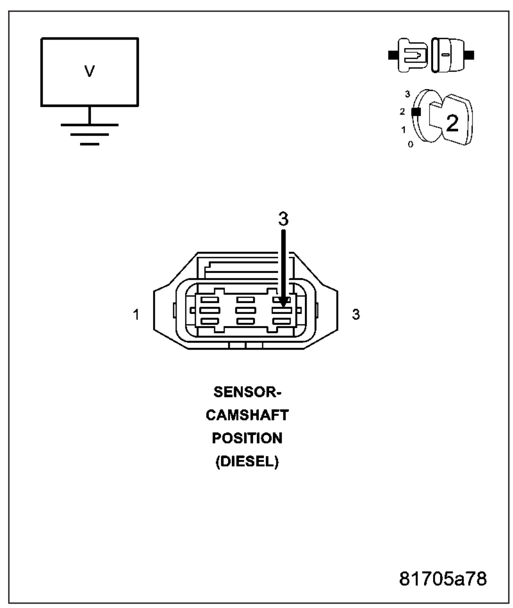
Turn the ignition on.

Measure the voltage of the CMP Sensor 5-Volt Supply circuit.

**Is the voltage above 4.6 volts?**

**Yes** >> Replace the Camshaft Position Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3



## 3. ACCELERATOR PEDAL POSITION SENSOR SHORTED TO GROUND

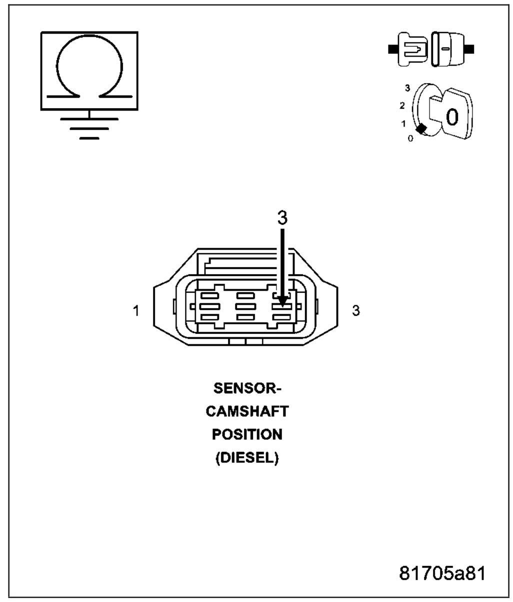
Ensure all connectors are reconnected.

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Turn the ignition on.

Measure the voltage of the APP Sensor #1 5-Volt Supply circuit.



**Is the voltage above 4.6 volts?**

**Yes** >> Replace the Accelerator Pedal Position Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

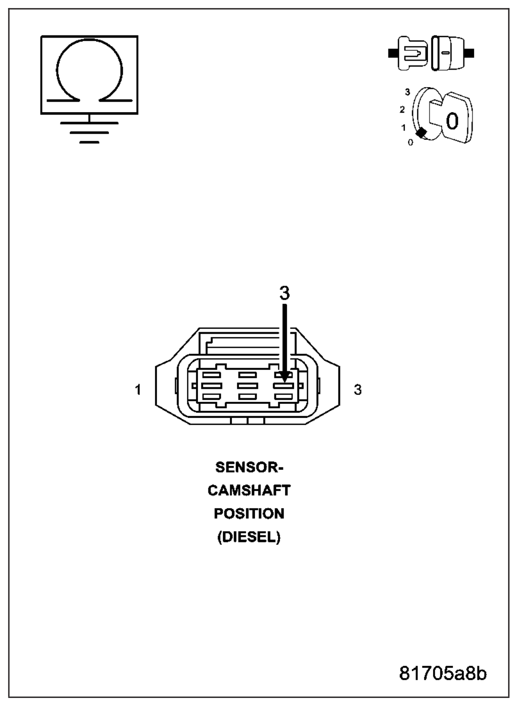
Turn the ignition off.

Disconnect the CMP Sensor harness connector.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the CMP Sensor 5-Volt Supply circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 5

**No** >> Repair the 5-Volt Supply circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. WIRING INSPECTION

Turn the ignition off.

Inspect the CMP Sensor 5-Volt supply circuit between the CMP harness connector and the ECM harness connector for possible shorts to other circuits.

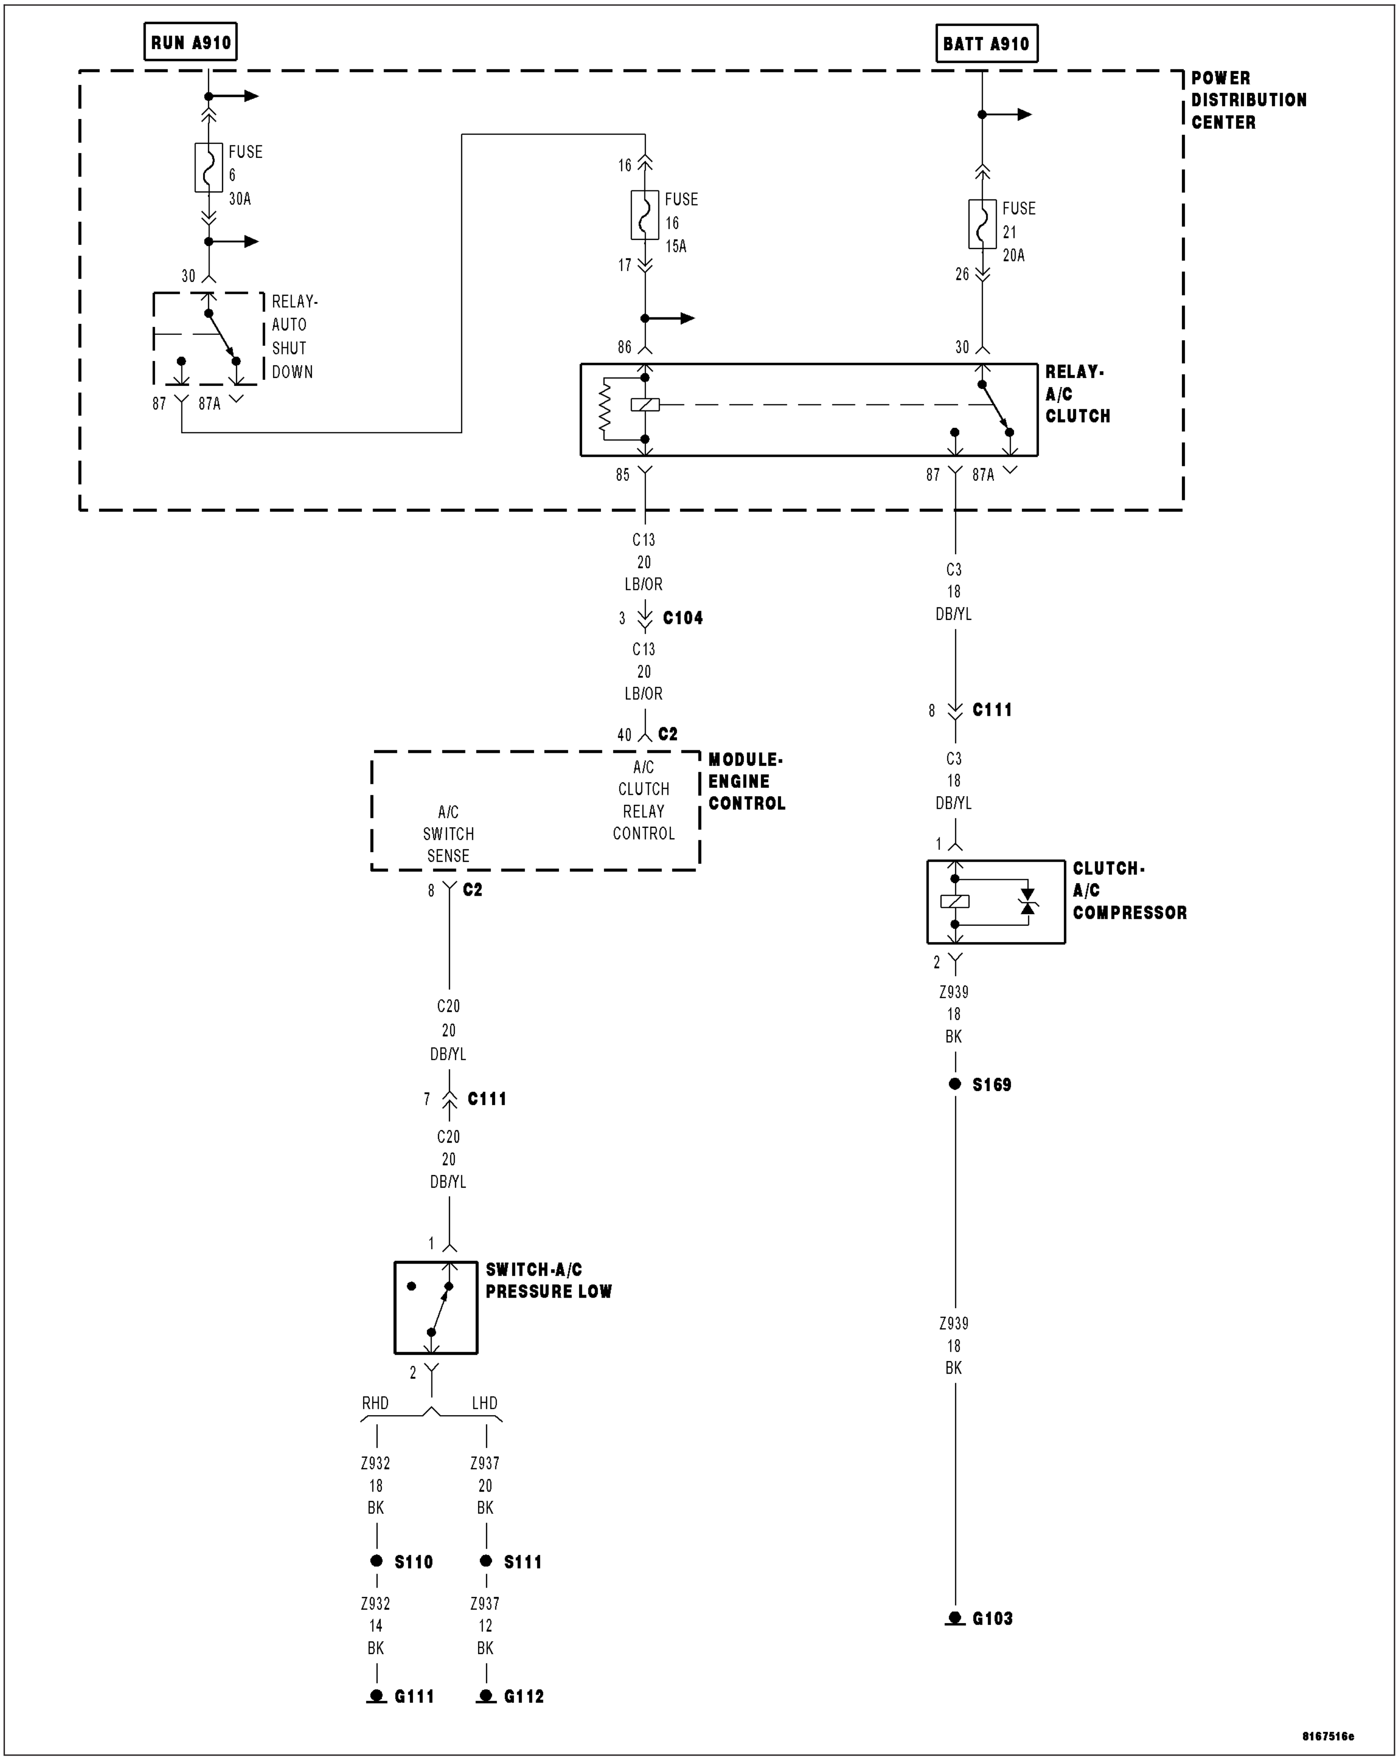
Inspect the APP Sensor #1 5-Volt supply circuit between the APP Sensor harness connector and the ECM harness connector for possible shorts to other circuits.

**Were any problems found?**

**Yes** >> Repair shorted circuit as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0645-A/C CLUTCH RELAY CIRCUIT EXCESSIVE CURRENT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM A/C Clutch Relay command on.
- **Set Condition:**
  The ECM detects excessive current on the A/C Clutch Relay Control circuit for 0.5 second.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| A/C CLUTCH RELAY |
| A/C CLUTCH RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE |
| ECM |

## Diagnostic Test

### 1. A/C CLUTCH RELAY OPERATION

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, actuate the A/C Clutch Relay.

**Is the A/C Clutch Relay clicking?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 2

### 2. A/C CLUTCH RELAY

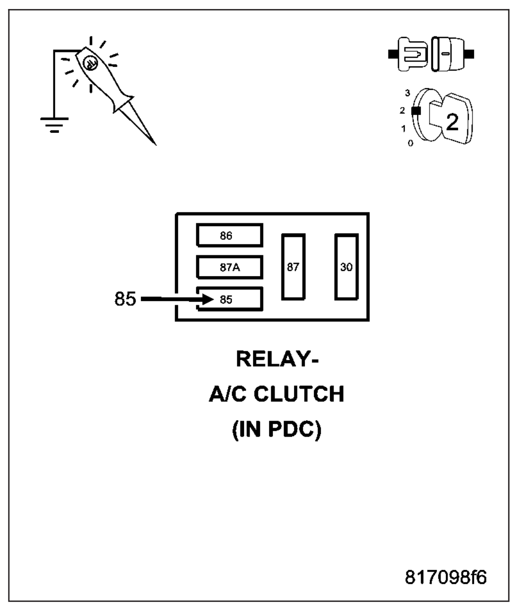
Turn the ignition off.

Remove the A/C Clutch Relay from the PDC.

Turn the ignition on.

Using a 12-volt test light connected to 12-volts, probe the A/C Clutch Relay Control circuit in the PDC.

With the scan tool, actuate the A/C Clutch Relay.



**Does the test light cycle on and off?**

**Yes** >> Replace the A/C Clutch Relay.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. A/C CLUTCH RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Remove the A/C Clutch Relay from the PDC.

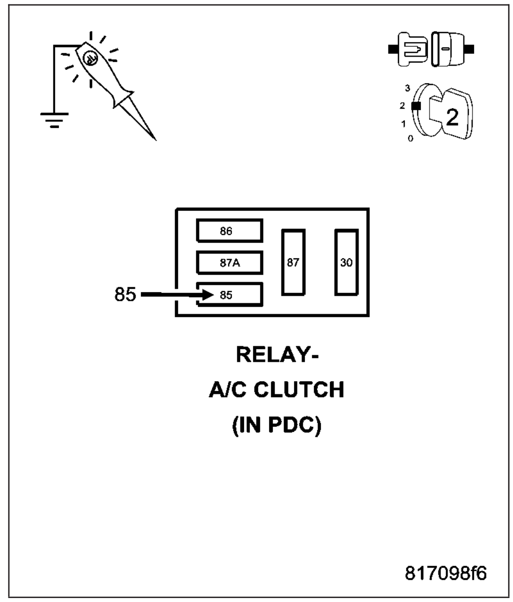
Disconnect the ECM harness connector.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the A/C Clutch Relay Control circuit.



**Is the voltage above 1.0 volt?**

**Yes** >> Repair the A/C Clutch Relay Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. ECM

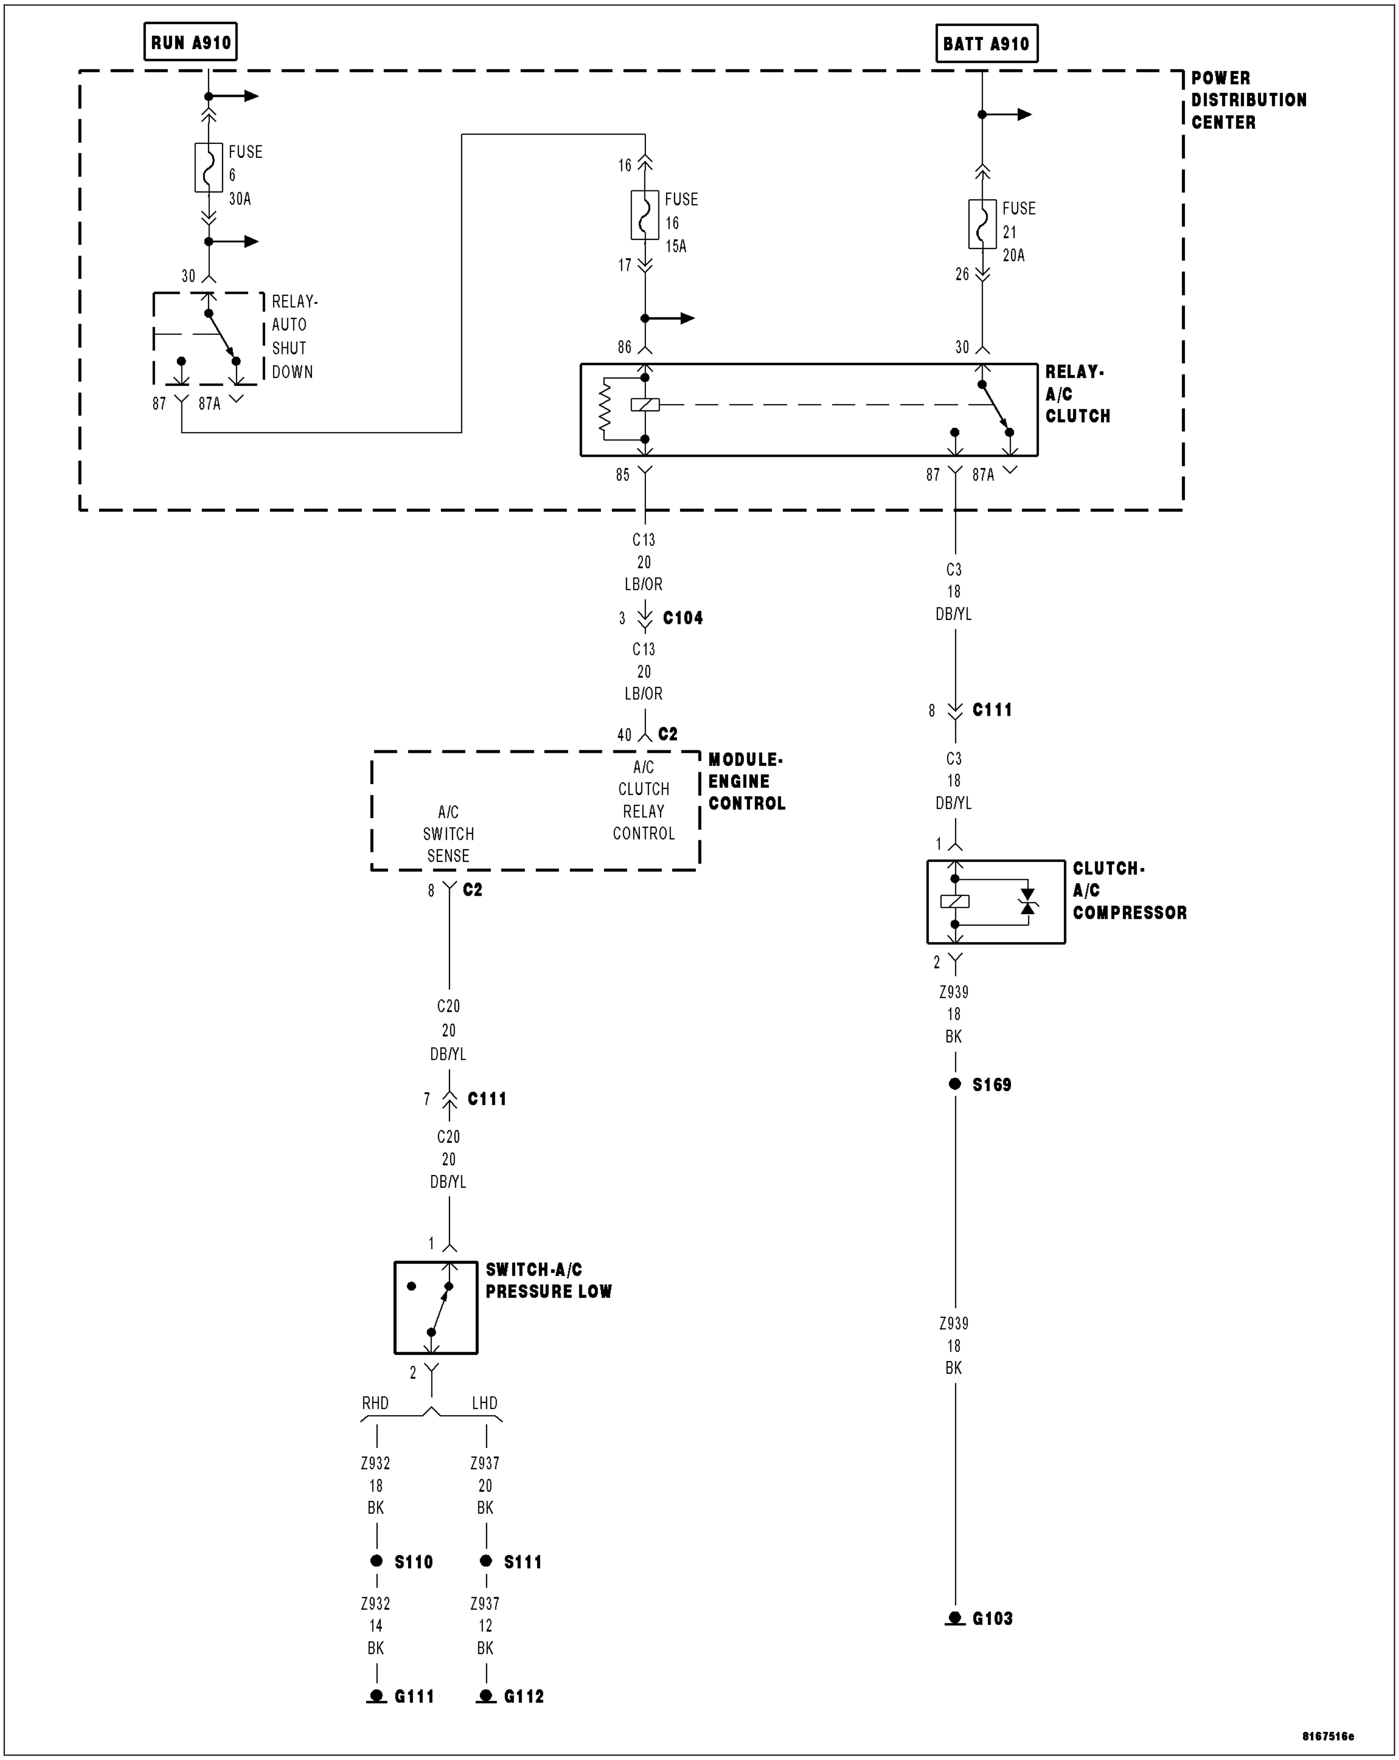
**If there are no possible causes remaining, view repair.**

**Repair**

Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0645-A/C CLUTCH RELAY CIRCUIT OPEN CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM A/C Clutch Relay command off.
- **Set Condition:**
  The ECM does not detect voltage on the A/C Clutch Relay Control circuit for 0.5 second.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| FUSED ASD RELAY OUTPUT CIRCUIT OPEN |
| A/C CLUTCH RELAY |
| A/C CLUTCH RELAY CONTROL CKT OPEN |
| A/C CLUTCH RELAY CONTROL CIRCUIT SHORT TO GROUND |
| ECM |

## Diagnostic Test

### 1. A/C CLUTCH RELAY OPERATION

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, actuate the A/C Clutch Relay.

**Is the A/C Clutch Relay clicking?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 2

### 2. FUSED ASD RELAY OUTPUT CIRCUIT OPEN

Turn the ignition off.

Remove the A/C Clutch Relay from the PDC.

Turn the ignition on.

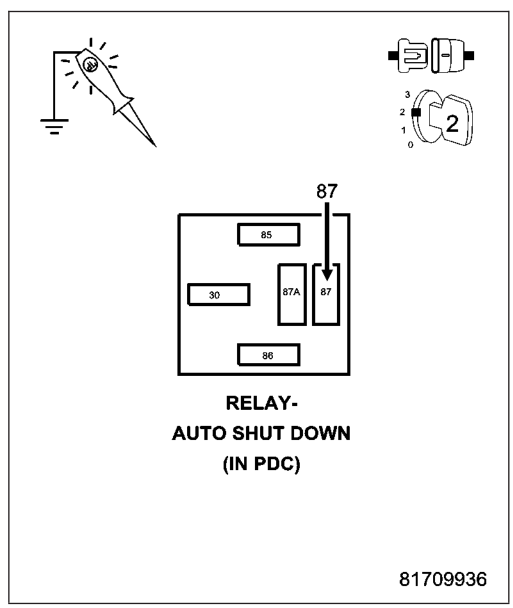
Using a 12-volt test light connected to ground, probe the Fused ASD Relay Output circuit in the PDC.

**Does the test light illuminate?**

**Yes** >> Go To 3

**No** >> Repair the Fused ASD Relay Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 3. A/C CLUTCH RELAY

Turn the ignition off.

Remove the A/C Clutch Relay from the PDC.

Turn the ignition on.

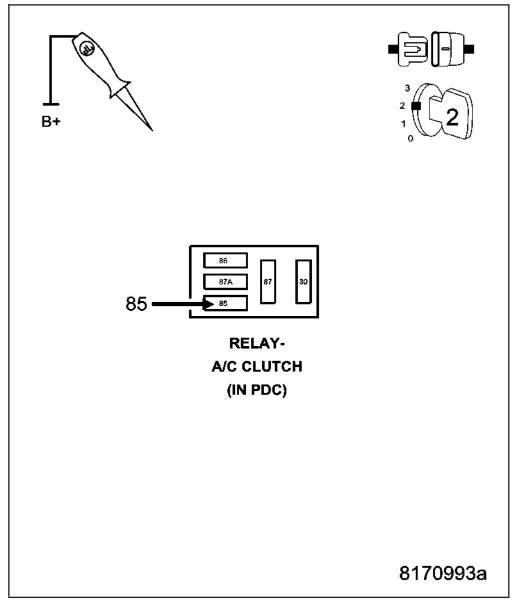
Using a 12-volt test light connected to 12-volts, probe the A/C Clutch Relay Control circuit in the PDC.

With the scan tool, actuate the A/C Clutch Relay.

**Does the test light cycle on and off?**

**Yes** >> Replace the A/C Clutch Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4



## 4. A/C CLUTCH RELAY CONTROL CIRCUIT OPEN

Turn the ignition off.

Remove the A/C Clutch Relay from the PDC.

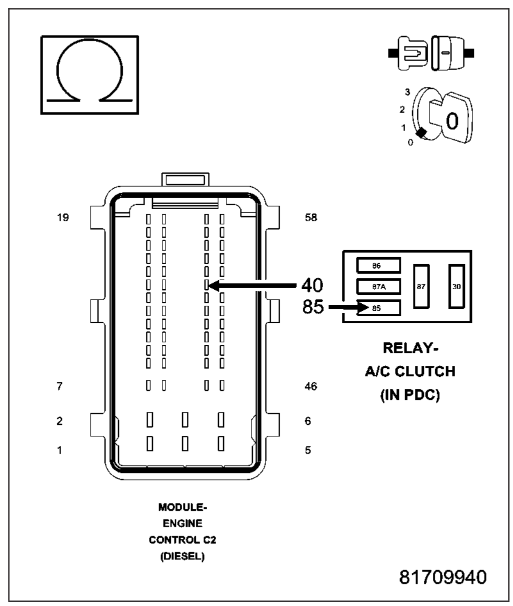
Disconnect the ECM harness connector.

Measure the resistance of the A/C Clutch Relay Control circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the A/C Clutch Relay Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



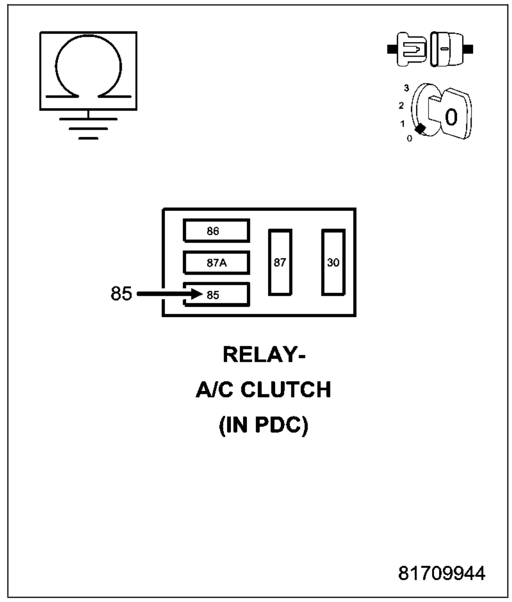
## 5. A/C CLUTCH RELAY CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Remove the A/C Clutch Relay from the PDC.

Disconnect the ECM harness connector.

Measure the resistance between ground and the A/C Clutch Relay Control circuit.



**Is the resistance below 1000 ohms?**

**Yes** >> Repair the A/C Clutch Relay Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. ECM

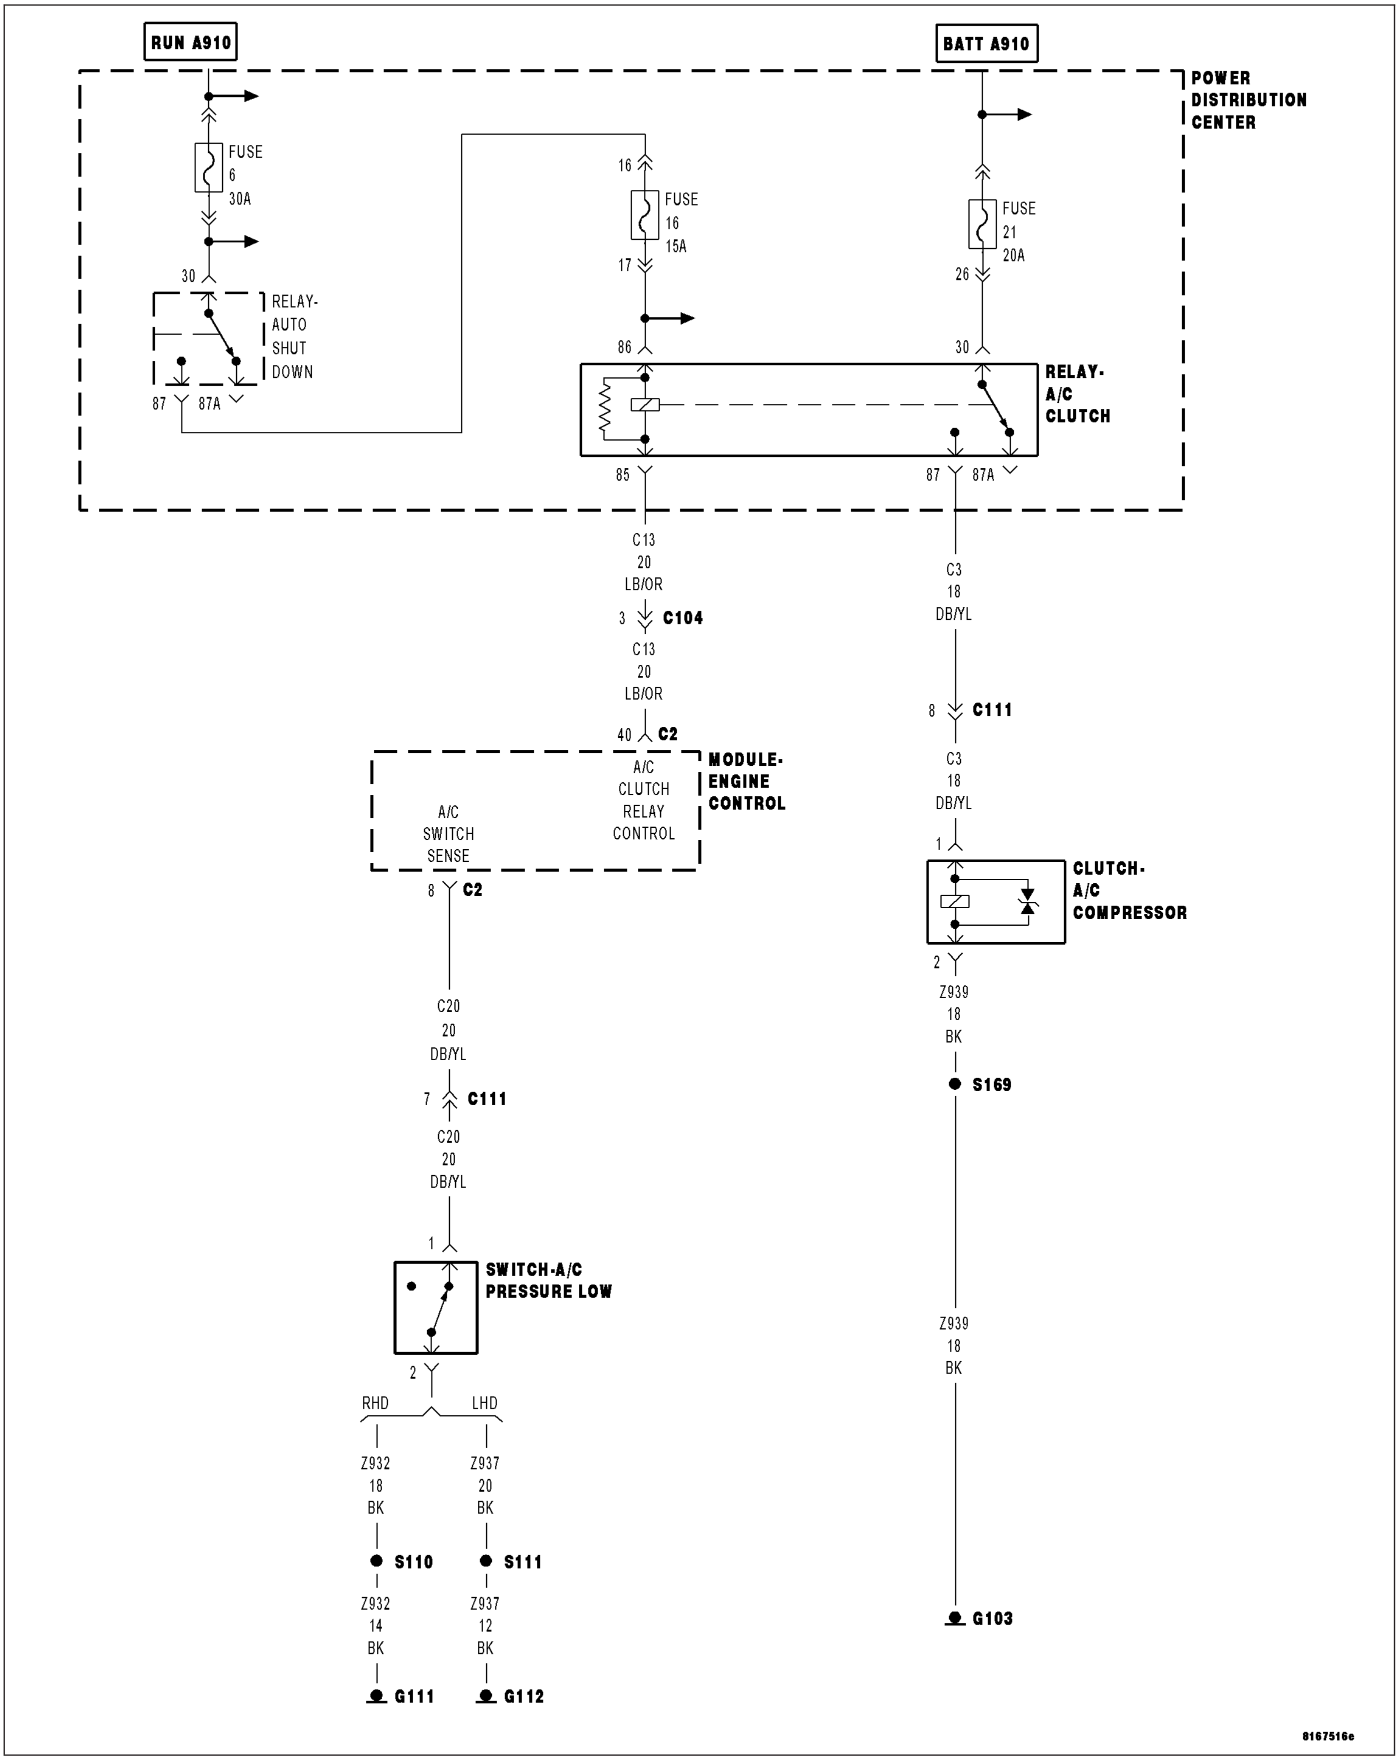
**If there are no possible causes remaining, view repair.**

**Repair**

Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0645-A/C CLUTCH RELAY CIRCUIT SHORT TO GROUND



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM A/C Clutch Relay command off.
- **Set Condition:**
  The ECM does not detect voltage on the A/C Clutch Relay Control circuit for 0.5 second.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| FUSED ASD RELAY OUTPUT CIRCUIT OPEN |
| A/C CLUTCH RELAY |
| A/C CLUTCH RELAY CONTROL CKT OPEN |
| A/C CLUTCH RELAY CONTROL CIRCUIT SHORT TO GROUND |
| ECM |

## Diagnostic Test

### 1. A/C CLUTCH RELAY OPERATION

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, actuate the A/C Clutch Relay.

**Is the A/C Clutch Relay clicking?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 2

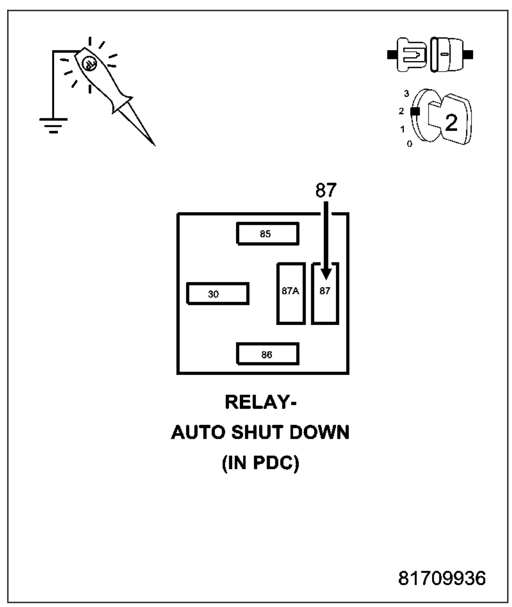
### 2. FUSED ASD RELAY OUTPUT CIRCUIT OPEN

Turn the ignition off.

Remove the A/C Clutch Relay from the PDC.

Turn the ignition on.

Using a 12-volt test light connected to ground, probe the Fused ASD Relay Output circuit in the PDC.



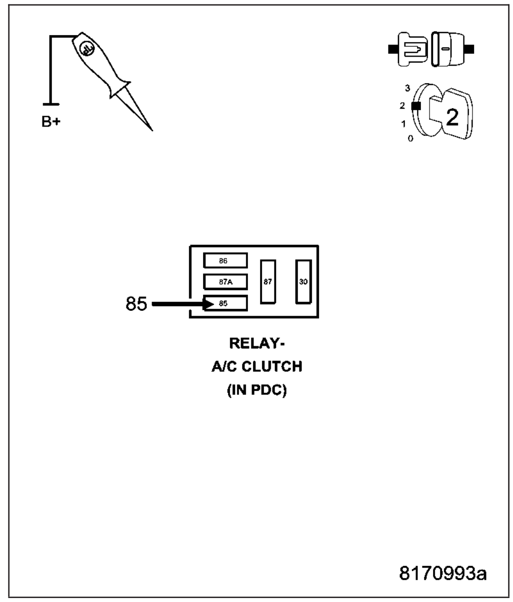
**Does the test light illuminate?**

**Yes** >> Go To 3

**No** >> Repair the Fused ASD Relay Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. A/C CLUTCH RELAY



Turn the ignition off.

Remove the A/C Clutch Relay from the PDC.

Turn the ignition on.

Using a 12-volt test light connected to 12-volts, probe the A/C Clutch Relay Control circuit in the PDC.

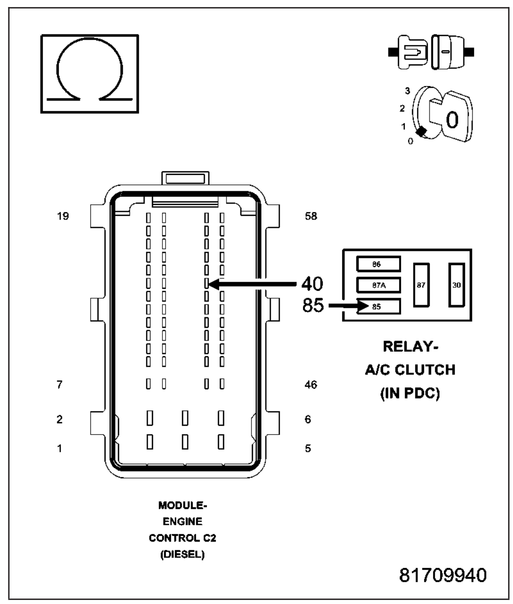
With the scan tool, actuate the A/C Clutch Relay.

**Does the test light cycle on and off?**

**Yes** >> Replace the A/C Clutch Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. A/C CLUTCH RELAY CONTROL CIRCUIT OPEN



Turn the ignition off.

Remove the A/C Clutch Relay from the PDC.

Disconnect the ECM harness connector.

Measure the resistance of the A/C Clutch Relay Control circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the A/C Clutch Relay Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

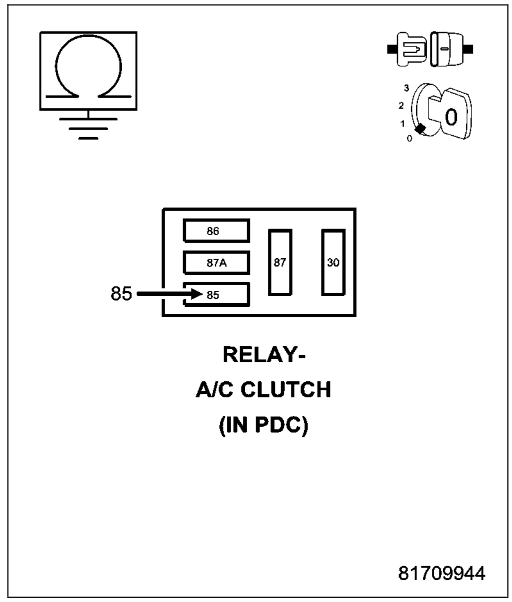
## 5. A/C CLUTCH RELAY CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Remove the A/C Clutch Relay from the PDC.

Disconnect the ECM harness connector.

Measure the resistance between ground and the A/C Clutch Relay Control circuit.



**Is the resistance below 1000 ohms?**

**Yes** >> Repair the A/C Clutch Relay Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. ECM

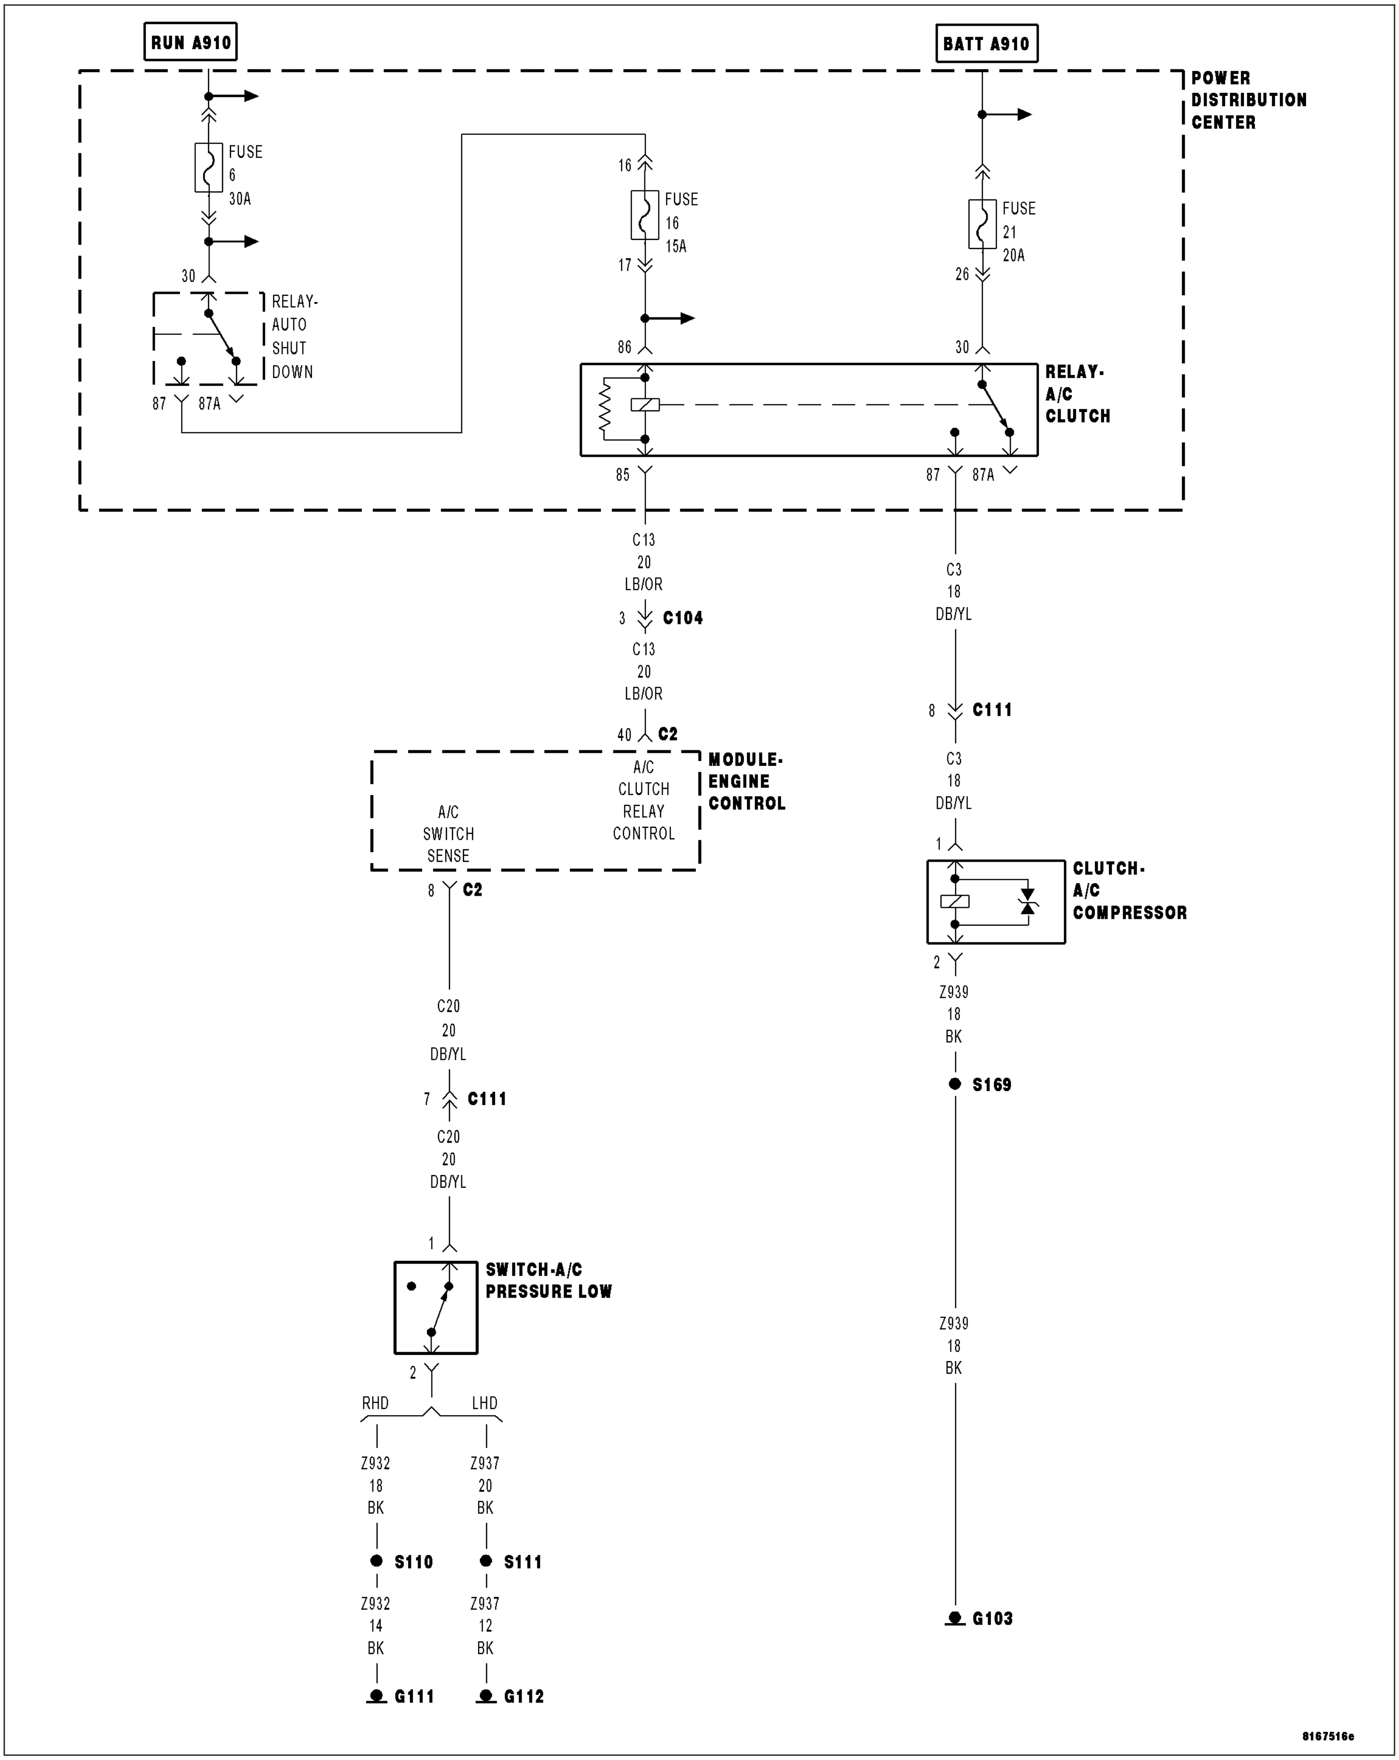
**If there are no possible causes remaining, view repair.**

**Repair**

Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0645-A/C CLUTCH RELAY SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM A/C Clutch Relay command on.
- **Set Condition:**
  The ECM detects a short to voltage on the A/C Clutch Relay Control circuit for 0.5 second.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| A/C CLUTCH RELAY |
| A/C CLUTCH RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE |
| ECM |

## Diagnostic Test

### 1. A/C CLUTCH RELAY OPERATION

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, actuate the A/C Clutch Relay.

**Is the A/C Clutch Relay clicking?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 2

### 2. A/C CLUTCH RELAY

Turn the ignition off.

Remove the A/C Clutch Relay from the PDC.

Turn the ignition on.

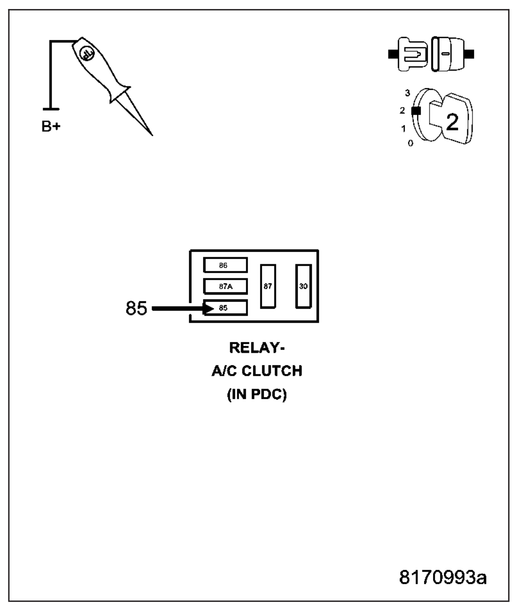
Using a 12-volt test light connected to 12-volts, probe the A/C Clutch Relay Control circuit in the PDC.

With the scan tool, actuate the A/C Clutch Relay.

**Does the test light cycle on and off?**

**Yes** >> Replace the A/C Clutch Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3



## 3. A/C CLUTCH RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.
Remove the A/C Clutch Relay from the PDC.
Disconnect the ECM harness connector.
Remove the ASD Relay from the PDC.
Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.
Turn the ignition on.
Measure the voltage of the A/C Clutch Relay Control circuit.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the A/C Clutch Relay Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

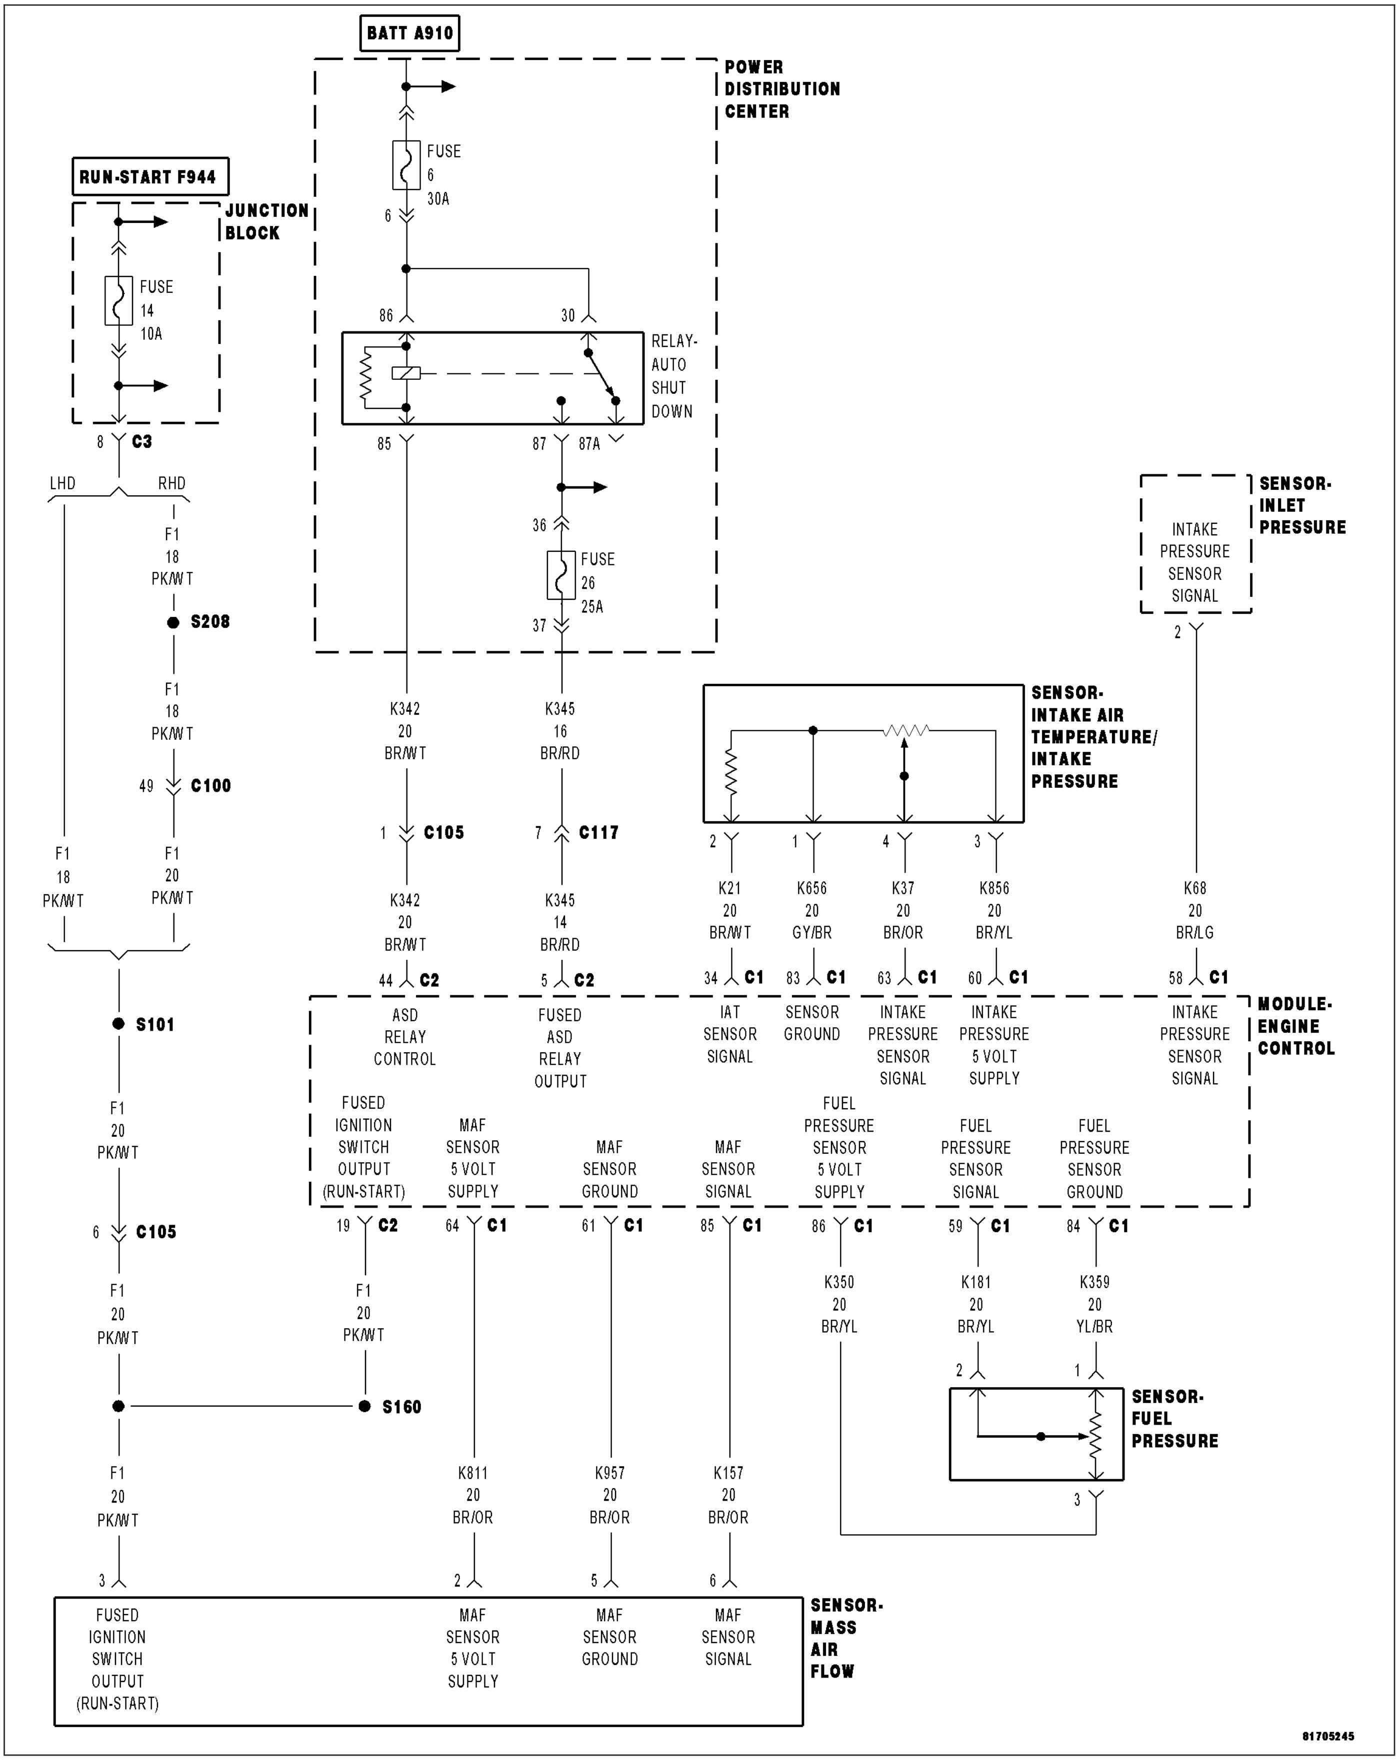
## 4. ECM

**If there are no possible causes remaining, view repair.**

**Repair**

Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0651-SENSOR SUPPLY 2 VOLTAGE TOO HIGH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects a short to voltage for 0.1 second on the Sensor Supply #2 circuit which supplies 5-volts to the MAF Sensor, Fuel Pressure Sensor and Boost Pressure Sensor.

| Possible Causes |
|---|
| WIRING INSPECTION |
| INTERMITTENT CONDITION |
| BOOST PRESSURE SENSOR 5 VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE |
| FUEL PRESSURE SENSOR 5 VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE |
| MAF SENSOR |
| MAF SENSOR 5 VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Turn the ignition off for 10 seconds.

Turn the ignition on.

Monitor the scan tool for ECM DTCs.

**Did this DTC reset?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. FUEL PRESSURE SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the Fuel Pressure Sensor harness connector.

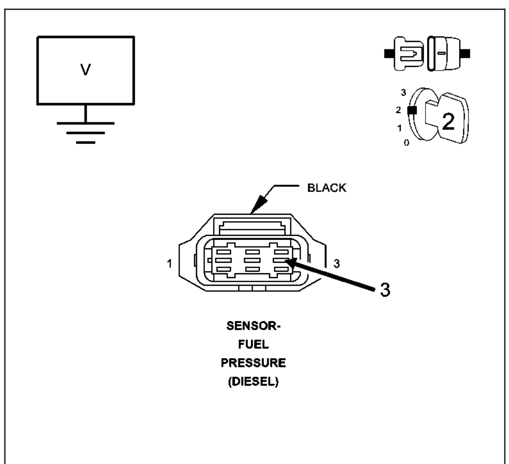
Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage on the Fuel Pressure Sensor 5-Volt Supply circuit.



81706bb9

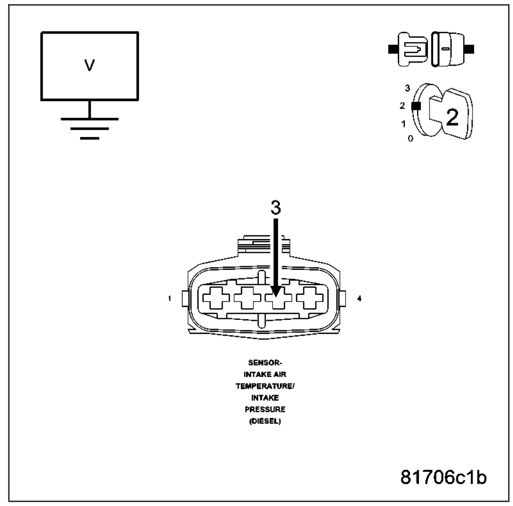
**NOTE: Remove the jumper wire and reinstall the ASD Relay.**

**Is the voltage below 1.0 volt?**

**Yes** >> Go To 3

**No** >> Repair the Fuel Pressure Sensor 5-Volt Supply circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. BOOST PRESSURE SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the Boost Pressure Sensor harness connector.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage on the Boost Pressure Sensor 5-Volt Supply circuit.

**NOTE: Remove the jumper wire and reinstall the ASD Relay.**

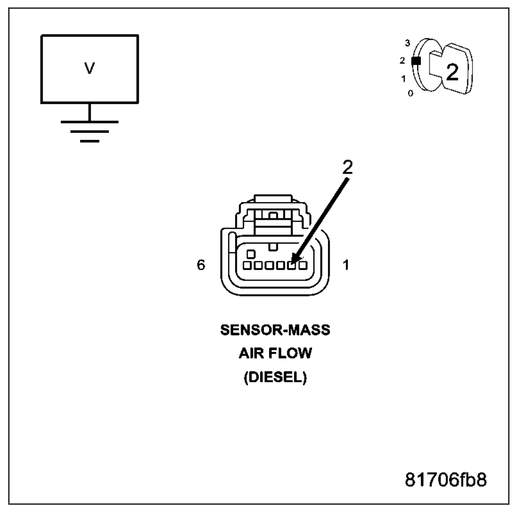
**Is the voltage below 1.0 volt?**

**Yes** >> Go To 4

**No** >> Repair the Boost Pressure Sensor 5-Volt Supply circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. MAF SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE



Turn the ignition on.

While back probing the MAF Sensor harness connector, measure the voltage of the MAF Sensor 5-Volt Supply circuit.

**Is the voltage below 5.5 volts?**

**Yes** >> Go To 6

**No** >> Go To 5

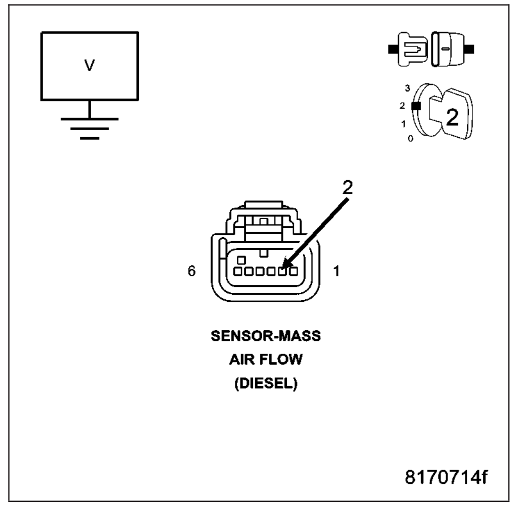
## 5. MAF SENSOR

Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Turn the ignition on.

Measure the voltage on the MAF Sensor 5-Volt Supply circuit at the MAF Sensor harness connector.



**Is the voltage below 5.5 volt?**

**Yes** >> Replace the MAF Sensor
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. WIRING INSPECTION

Turn the ignition off.

Inspect the Boost Pressure Sensor 5-Volt supply circuit between the Boost Pressure Sensor harness connector and the ECM harness connector for possible shorts to other circuits.

Inspect the Fuel Pressure Sensor 5-Volt supply circuit between the Fuel Pressure Sensor harness connector and the ECM harness connector for possible shorts to other circuits.

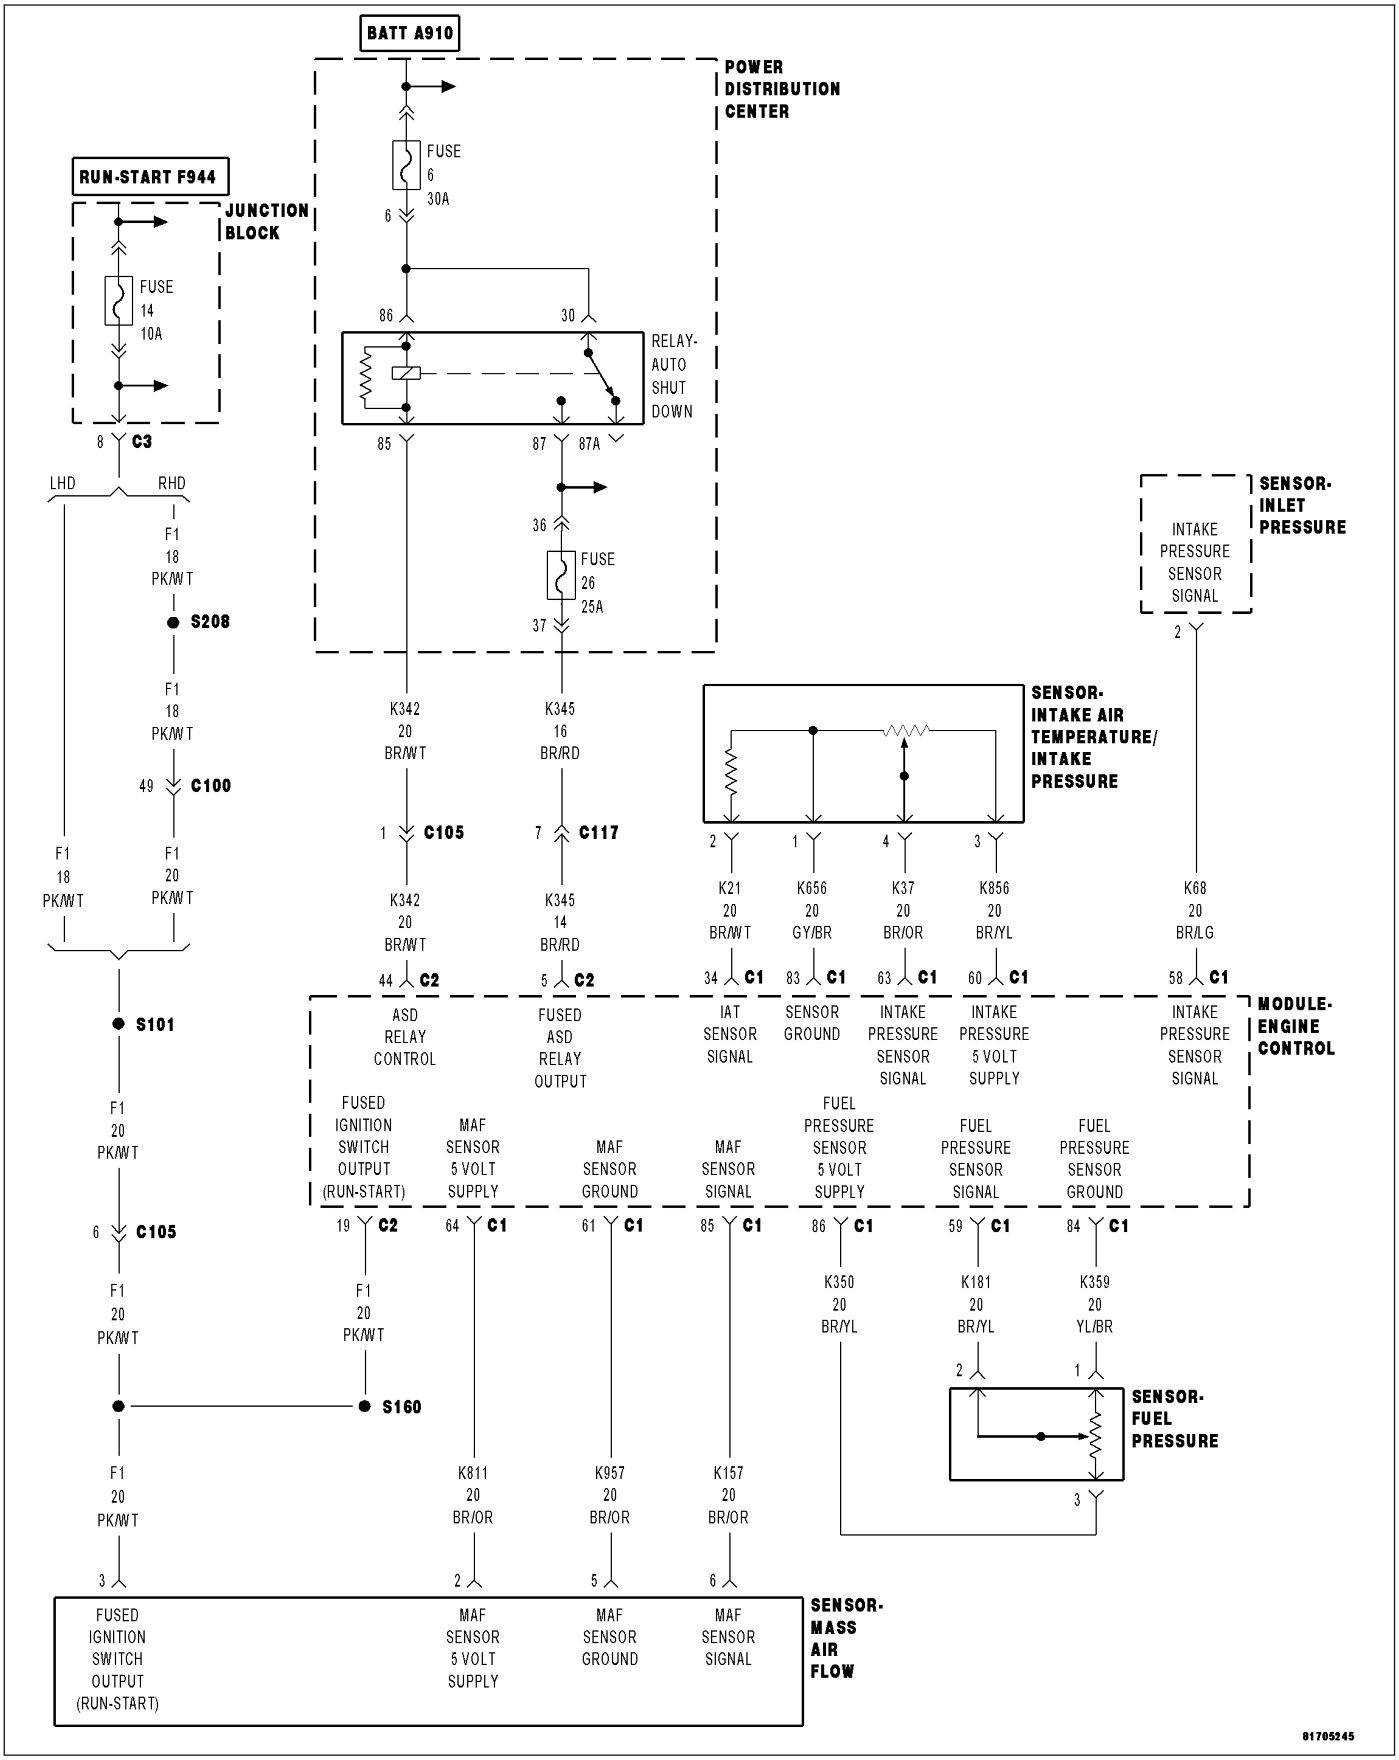
Inspect the MAF Sensor 5-Volt supply circuit between the MAF Sensor harness connector and the ECM harness connector for possible shorts to other circuits.

**Were any problems found?**

**Yes** >> Repair shorted circuit as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0651-SENSOR SUPPLY 2 VOLTAGE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects a low voltage for 0.1 second on the Sensor Supply #2 circuit which supplies 5-volts to the MAF Sensor, Fuel Pressure Sensor and Boost Pressure Sensor.

| Possible Causes |
|---|
| WIRING INSPECTION |
| INTERMITTENT CONDITION |
| 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| BOOST PRESSURE SENSOR |
| FUEL PRESSURE SENSOR |
| MAF SENSOR |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Turn the ignition off for 10 seconds.

Turn the ignition on.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

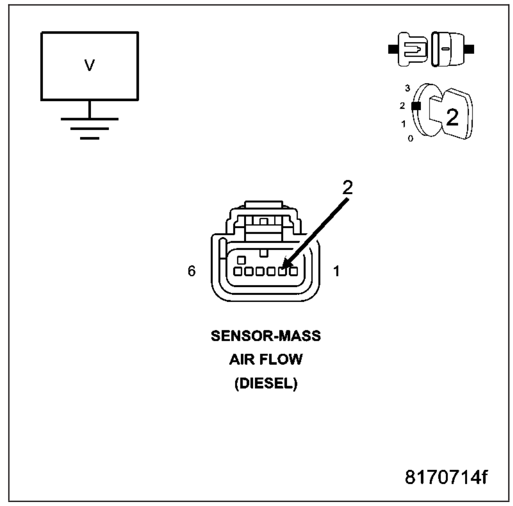
## 2. MASS AIR FLOW SENSOR SHORTED TO GROUND

Turn the ignition off.

Disconnect the MAF Sensor harness connector.

Turn the ignition on.

Measure the voltage of the MAF Sensor 5-Volt Supply circuit.



**Is the voltage above 4.6 volts?**

**Yes** >> Replace the Mass Air Flow Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

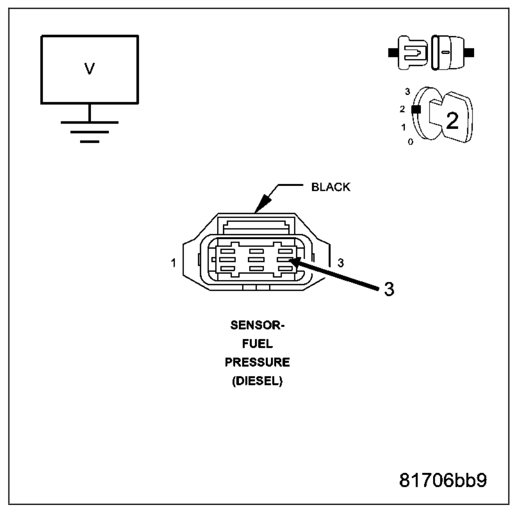
## 3. FUEL PRESSURE SENSOR SHORTED TO GROUND

Turn the ignition off.

Disconnect the Fuel Pressure Sensor harness connector.

Turn the ignition on.

Measure the voltage of the Fuel Pressure Sensor 5-Volt Supply circuit.

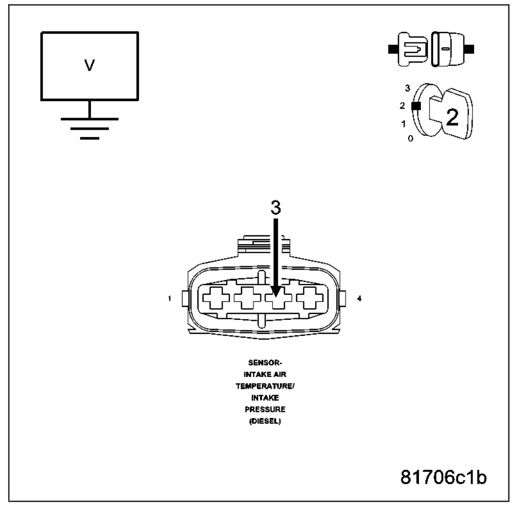


**Is the voltage above 4.6 volts?**

**Yes** >> Replace the Fuel Pressure Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. BOOST PRESSURE SENSOR SHORTED TO GROUND



Ensure all connectors are reconnected.

Turn the ignition off.

Disconnect the Boost Pressure Sensor harness connector.

Turn the ignition on.

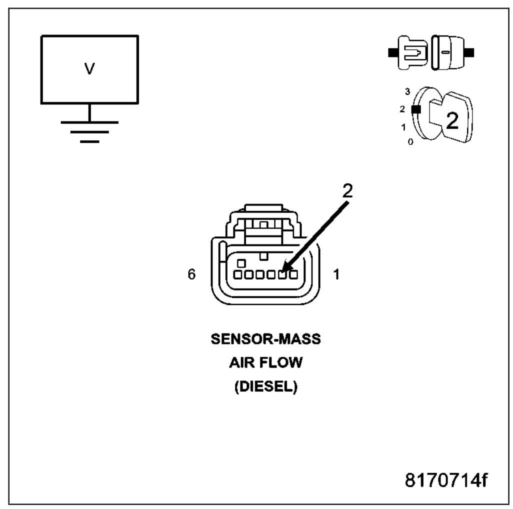
Measure the voltage of the Boost Pressure Sensor 5-Volt Supply circuit.

**Is the voltage above 4.6 volts?**

**Yes** >> Replace the Boost Pressure Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND



Turn the ignition off.

Disconnect the Boost Pressure Sensor harness connector.

Disconnect the Fuel Pressure Sensor harness connector.

Disconnect the Mass Air Flow Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Mass Air Flow Sensor 5-Volt Supply circuit.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the 5-Volt Supply circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. WIRING INSPECTION

Turn the ignition off.

Inspect the Boost Pressure Sensor 5-Volt supply circuit between the Boost Pressure Sensor harness connector and the ECM harness connector for possible shorts to other circuits.

Inspect the Mass Air Flow Sensor #1 5-Volt supply circuit between the Mass Air Flow Sensor harness connector and the ECM harness connector for possible shorts to other circuits.

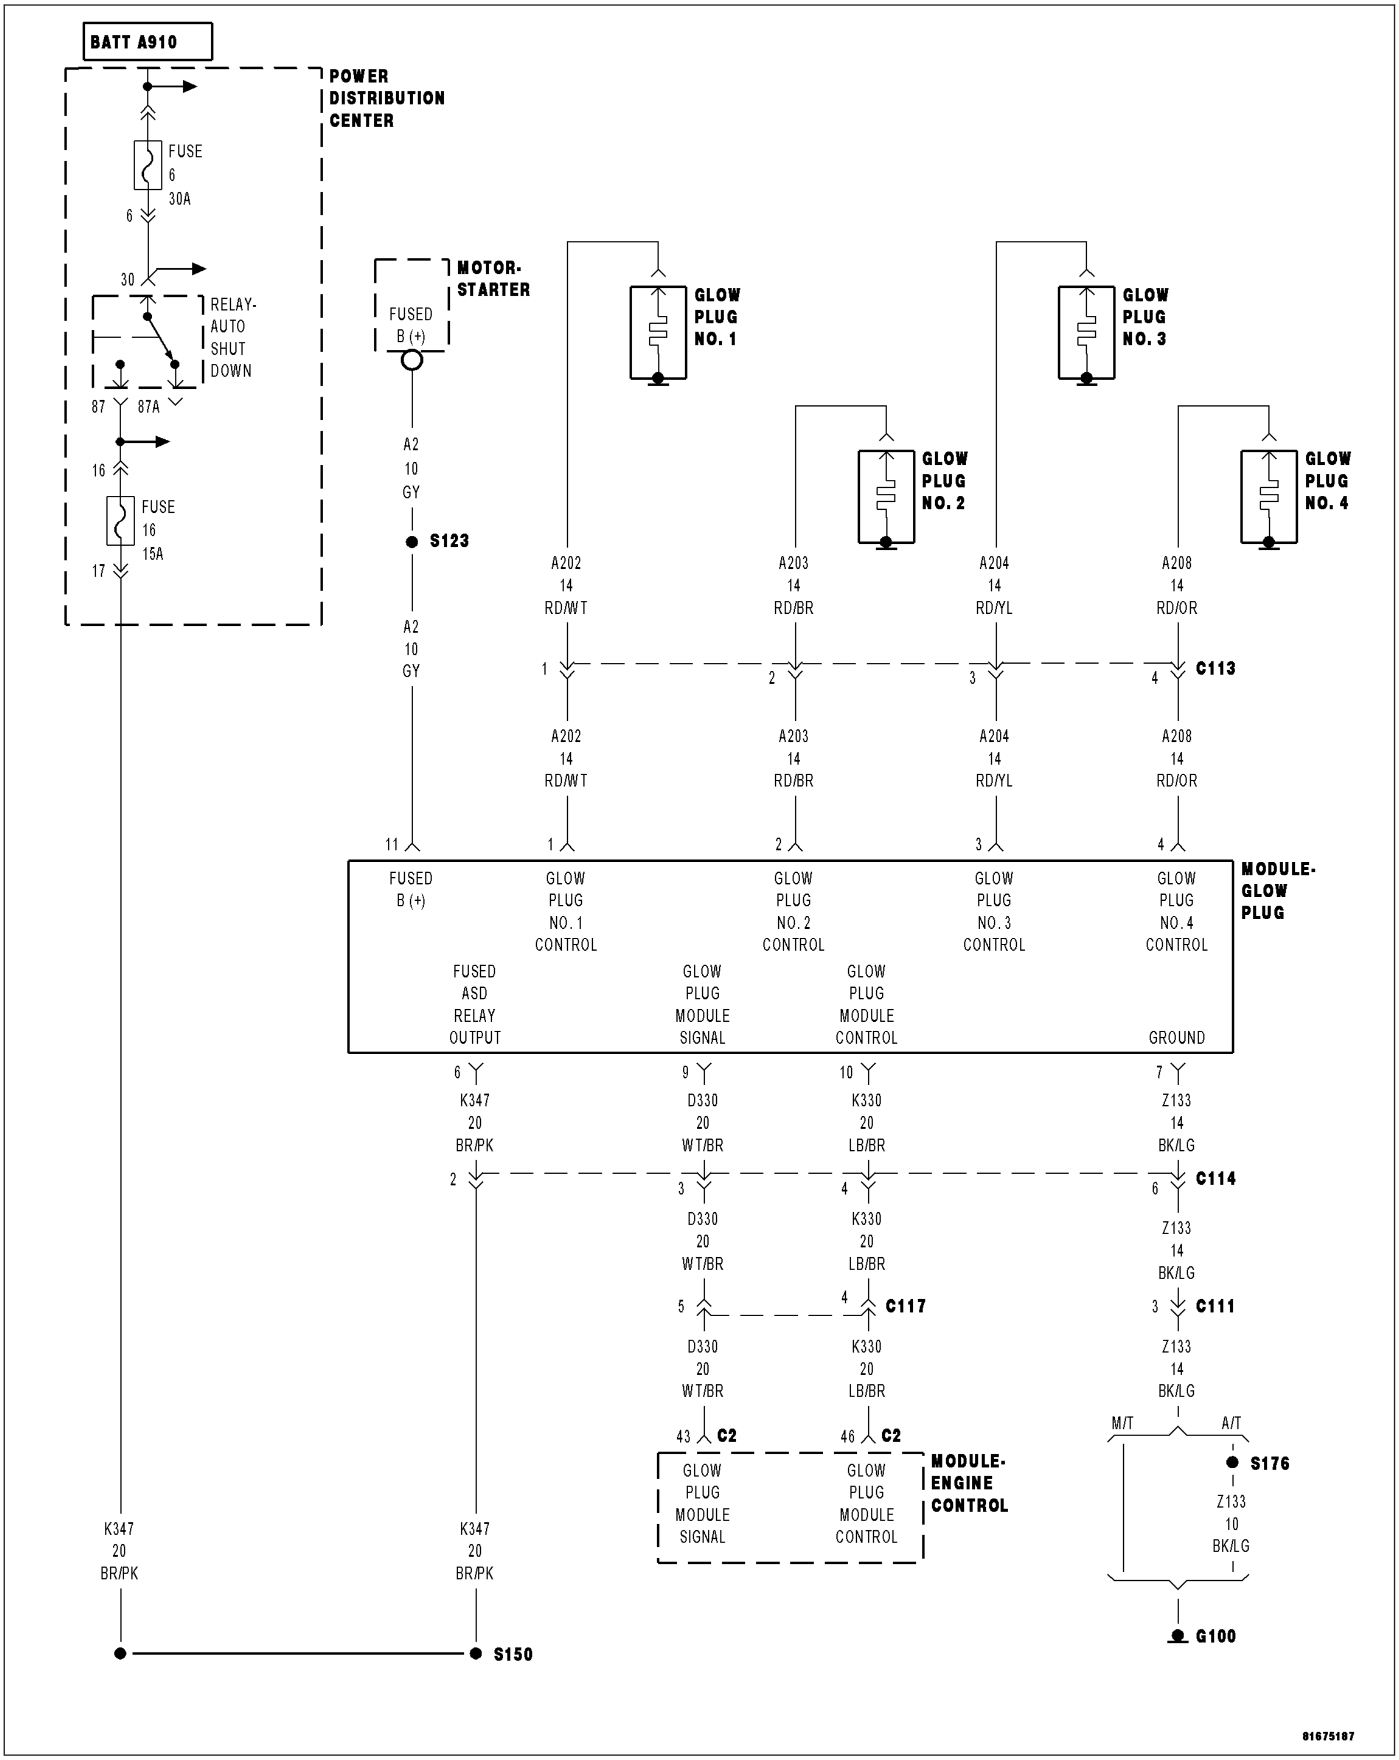
Inspect the Fuel Pressure Sensor 5-Volt supply circuit between the Fuel Pressure Sensor harness connector and the ECM harness connector for possible shorts to other circuits.

**Were any problems found?**

**Yes** >> Repair shorted circuit as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0670-GLOW PLUG CONTROLLER CIRCUIT MALFUNCTION



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects a malfunction on the Glow Plug Module Signal or Glow Plug Module Control circuit.

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| GLOW PLUG MODULE |
| GLOW PLUG MODULE SIGNAL/CONTROL CIRCUIT OPEN |
| GLOW PLUG MODULE SIGNAL/CONTROL CIRCUIT SHORTED TO GROUND |
| GLOW PLUG MODULE SIGNAL/CONTROL CIRCUIT SHORTED TO VOLTAGE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

Turn the ignition on and wait at least 90 seconds.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. GLOW PLUG MODULE SIG/CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the Glow Plug Module harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance of the Glow Plug Module Signal circuit.

Measure the resistance of the Glow Plug Module Control circuit.

**Is the resistance below 10.0 ohms for both measurements?**

**Yes** >> Go To 3

**No** >> Repair the Glow Plug Module circuit(s) that measured above 10.0 ohms for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. GLOW PLUG MODULE SIG/CONTROLCIRCUIT SHORTED TO GROUND

Turn the ignition off.
Disconnect the Glow Plug Module harness connectors.
Disconnect the ECM harness connectors.
Measure the resistance between ground and the Glow Plug Module Signal circuit.
Measure the resistance between ground and the Glow Plug Module Control circuit.

**Is the resistance above 1000 ohms for both measurements?**

**Yes** >> Go To 4

**No** >> Repair the Glow Plug Module circuit(s) that measured below 1000 ohms for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. GLOW PLUG MODULE SIG/CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.
Disconnect the Glow Plug Module harness connectors.
Disconnect the ECM harness connectors.
Remove the ASD Relay.
Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.
Measure the voltage of the Glow Plug Module Signal circuit.
Measure the voltage of the Glow Plug Module Control circuit.

**Is the voltage below 1.0 volt for both measurements?**

**Yes** >> Go To 5

**No** >> Repair the Glow Plug Module circuit(s) that measured above 1.0 volt for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. GLOW PLUG CONTROL MODULE

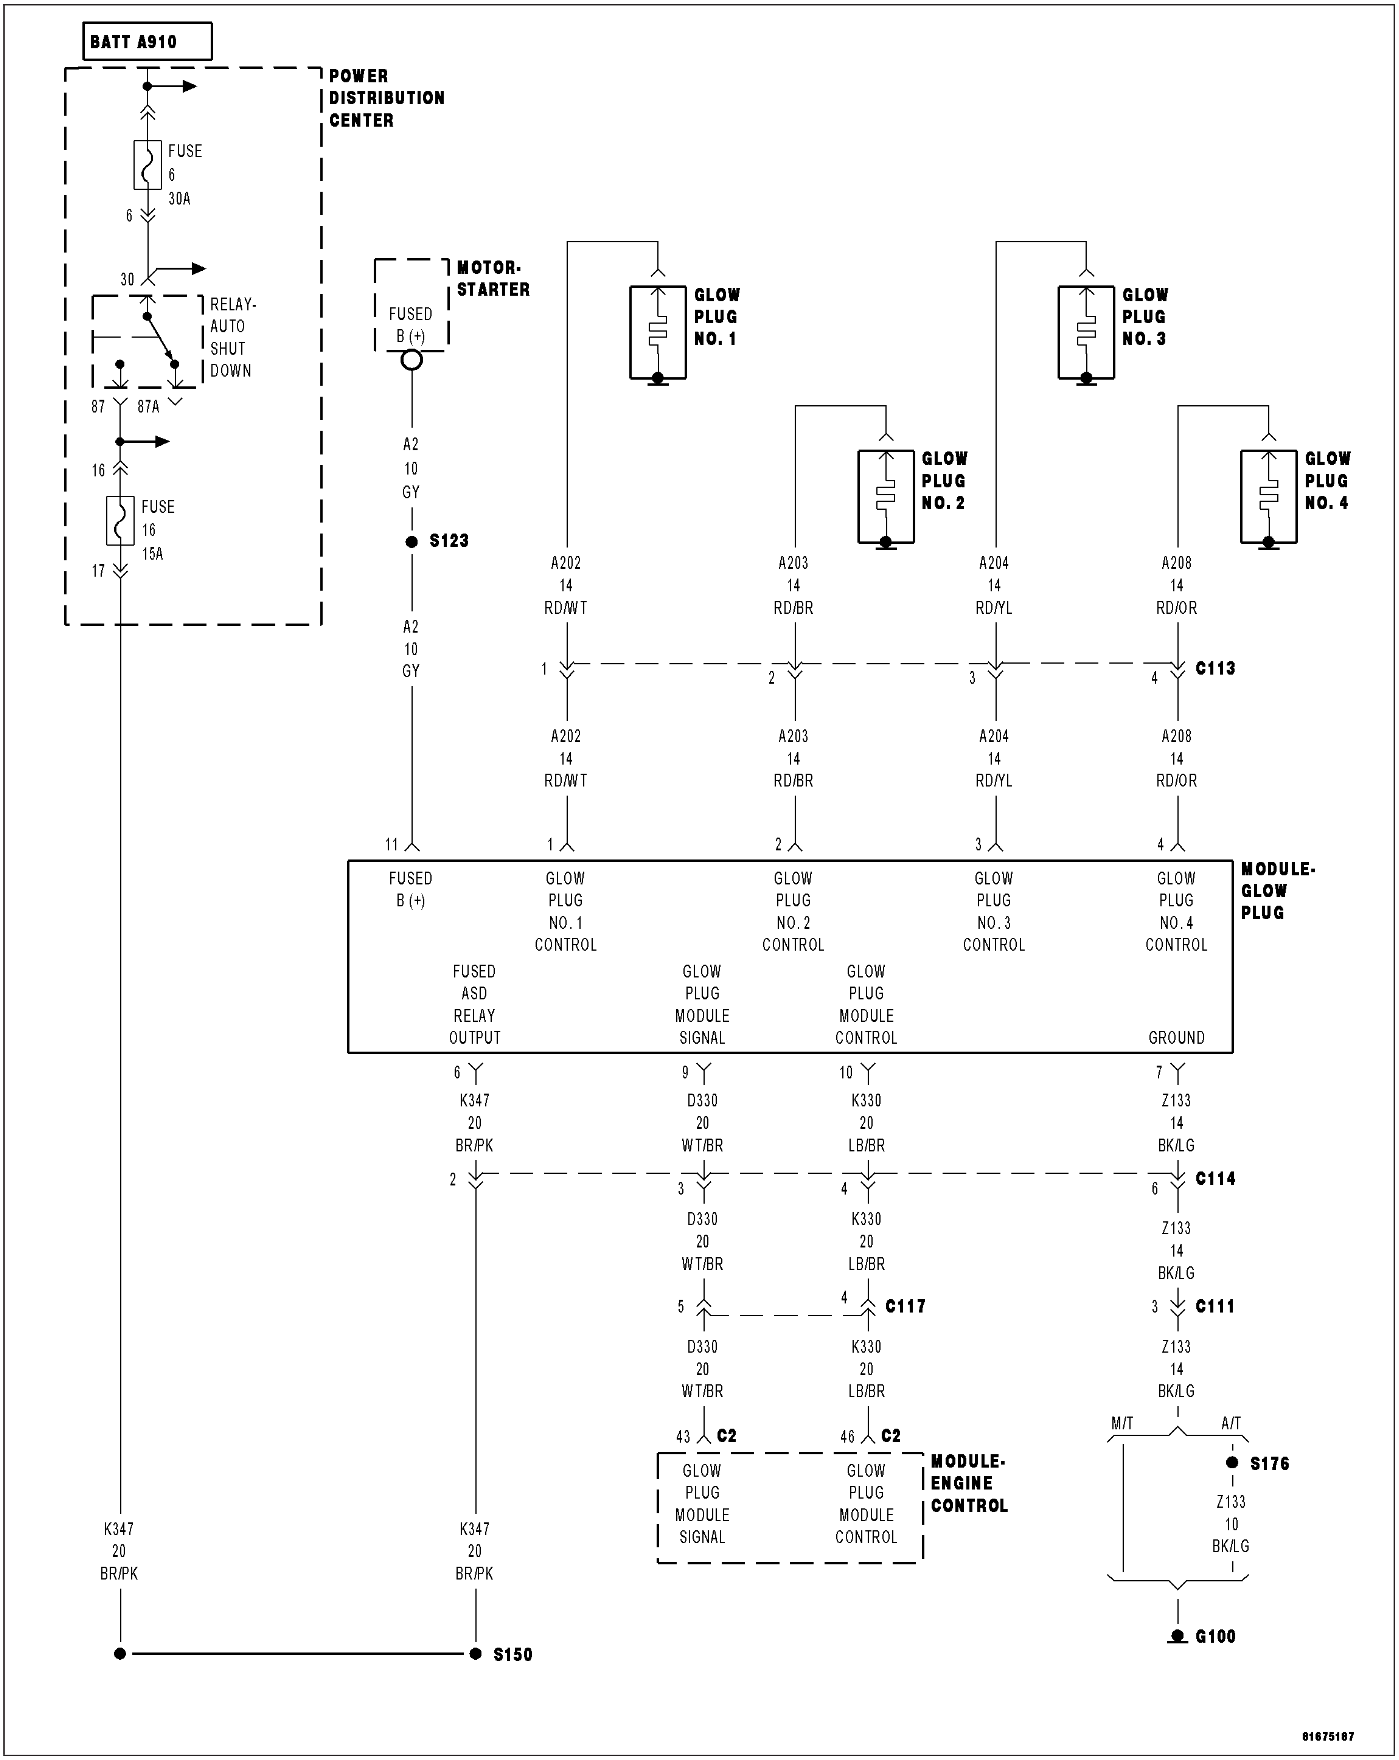
Turn the ignition off.
Replace the Glow Plug Module in accordance with the Service Information.
Reconnect all connectors.
Turn the ignition on.
With the scan tool, erase ECM DTCs.
Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.
With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P0671-GLOW PLUG 1 PLUG SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the Glow Plug Module Glow Plug command on.
- **Set Condition:**
  The ECM detects a short circuit on a Glow Plug Control circuit.

| Possible Causes |
|---|
| GLOW PLUG |
| GLOW PLUG CONTROL CIRCUIT OPEN |
| GLOW PLUG CONTROL CIRCUIT SHORTED TO GROUND |
| GLOW PLUG CONTROL CIRCUIT SHORTED TO VOLTAGE |
| GLOW PLUG MODULE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several ignition cycles leaving the ignition on for at least 10 seconds then off for 10 seconds.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. GLOW PLUG CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect each Glow Plug harness connector.

Disconnect the Glow Plug Module harness connector.

Measure the resistance of each Glow Plug Control circuit.

**Is the resistance below 10.0 ohms for each circuit?**

**Yes** >> Go To 3

**No** >> Repair the appropriate Glow Plug Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. GLOW PLUG CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.
Disconnect each Glow Plug harness connector.
Disconnect the Glow Plug Module harness connector.
Measure the resistance between ground and each Glow Plug Control circuit.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the appropriate Glow Plug Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. GLOW PLUG CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.
Disconnect each Glow Plug harness connector.
Disconnect the Glow Plug Module harness connector.
Turn the ignition on.
Measure the voltage of each Glow Plug Control circuit.

**Is the voltage below 1.0 volt for each circuit?**

**Yes** >> Go To 5

**No** >> Repair the appropriate Glow Plug Control circuit for a short to voltage
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. GLOW PLUG

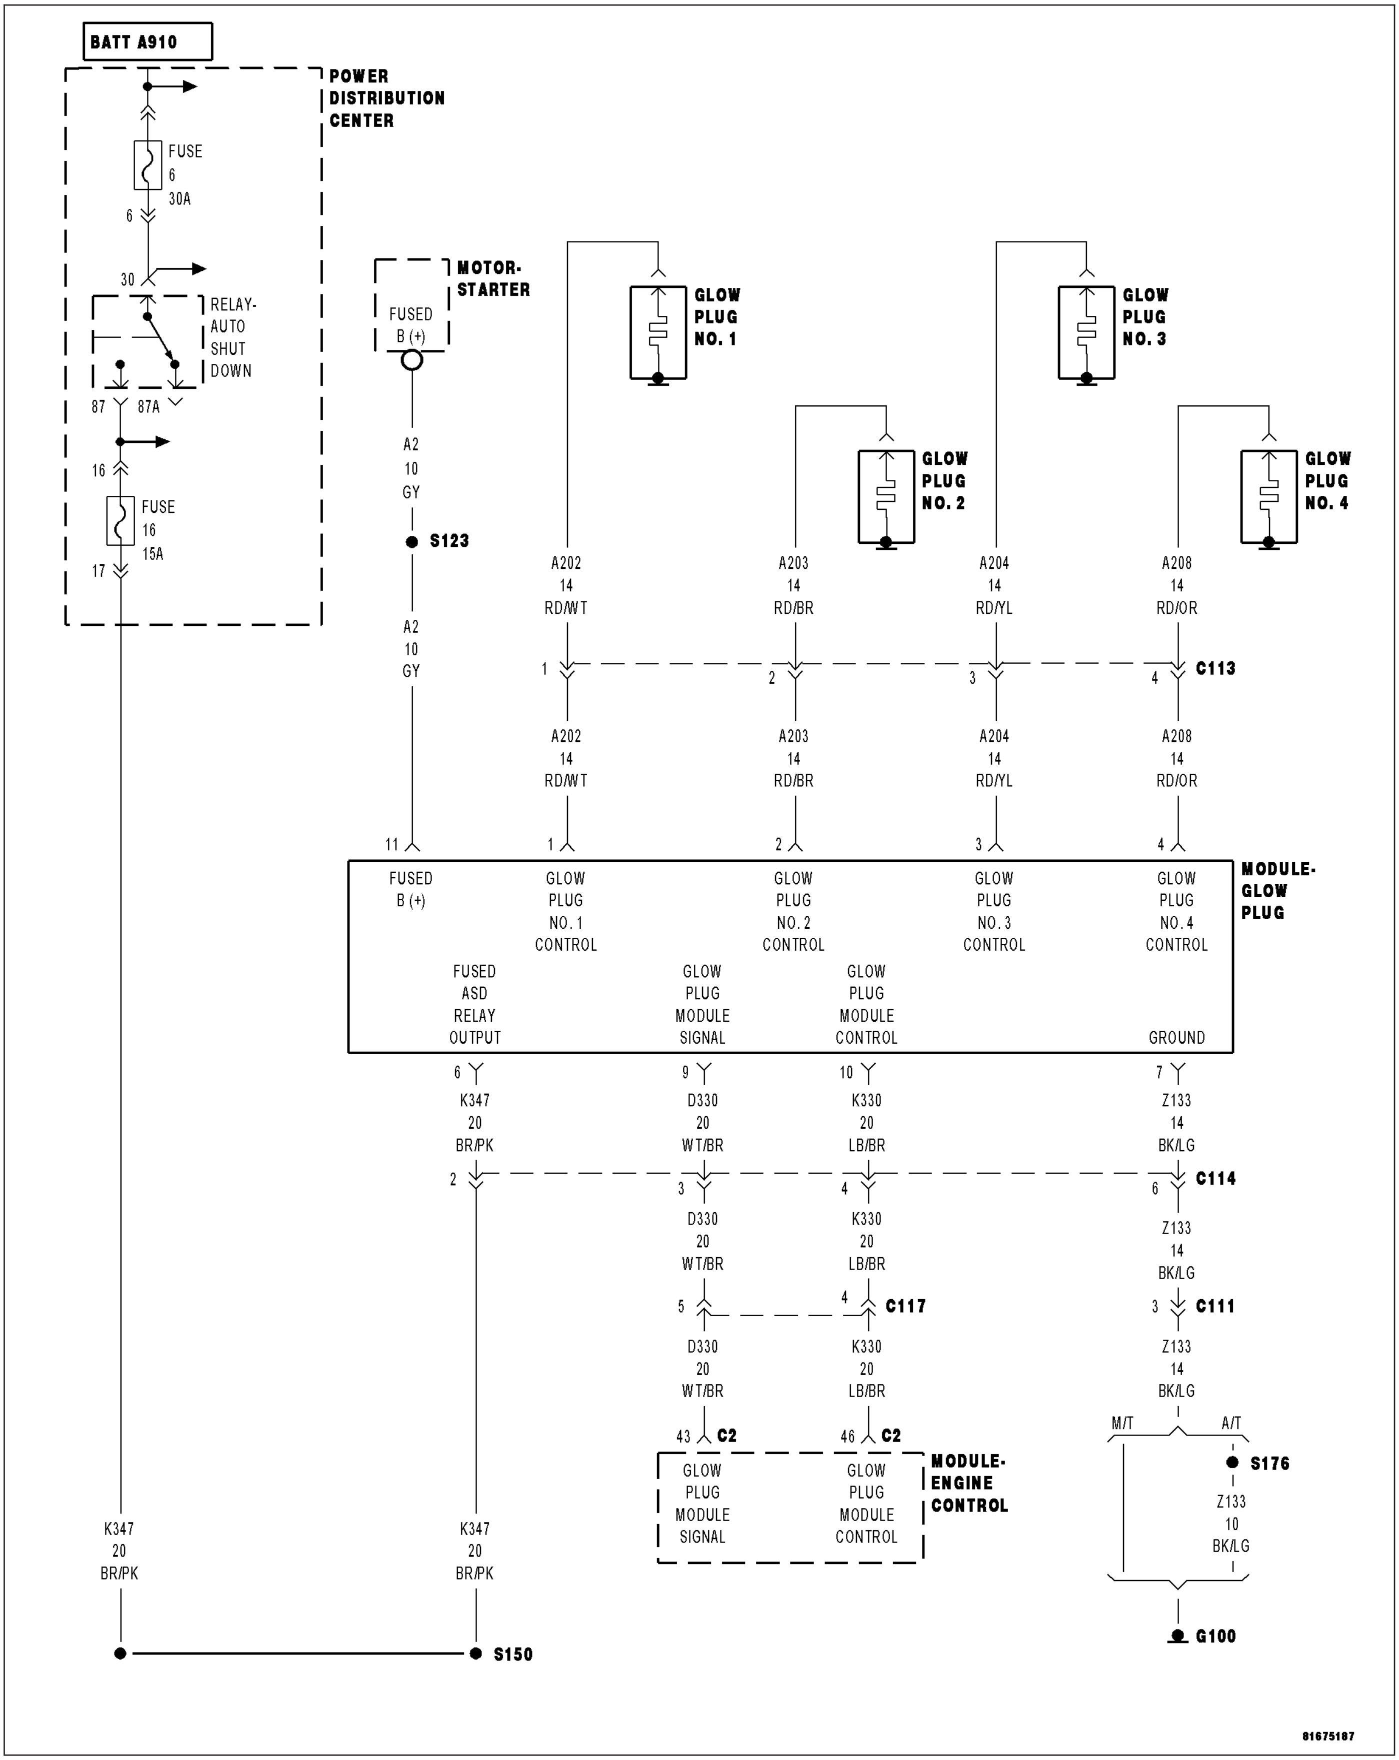
Turn the ignition off.
With the scan tool, erase ECM DTCs.
Refer to the Service Information and perform the Glow Plug Test on each Glow plug.

**Did each Glow Plug pass the test?**

**Yes** >> Replace the Glow Plug Module.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the appropriate Glow Plug in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0671-GLOW PLUG 1 PLUG FAILURE



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the Glow Plug Module Glow Plug command on.
- **Set Condition:**
  The ECM detects a malfunction with a Glow Plug or a Glow Plug Control circuit.

| Possible Causes |
|---|
| GLOW PLUG |
| GLOW PLUG CONTROL CIRCUIT OPEN |
| GLOW PLUG CONTROL CIRCUIT SHORTED TO GROUND |
| GLOW PLUG CONTROL CIRCUIT SHORTED TO VOLTAGE |
| GLOW PLUG MODULE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several ignition cycles leaving the ignition on for at least 10 seconds then off for 10 seconds.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. GLOW PLUG CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect each Glow Plug harness connector.

Disconnect the Glow Plug Module harness connector.

Measure the resistance of each Glow Plug Control circuit.

**Is the resistance below 10.0 ohms for each circuit?**

**Yes** >> Go To 3

**No** >> Repair the appropriate Glow Plug Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. GLOW PLUG CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect each Glow Plug harness connector.

Disconnect the Glow Plug Module harness connector.

Measure the resistance between ground and each Glow Plug Control circuit.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the appropriate Glow Plug Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. GLOW PLUG CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect each Glow Plug harness connector.

Disconnect the Glow Plug Module harness connector.

Turn the ignition on.

Measure the voltage of each Glow Plug Control circuit.

**Is the voltage below 1.0 volt for each circuit?**

**Yes** >> Go To 5

**No** >> Repair the appropriate Glow Plug Control circuit for a short to voltage
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. GLOW PLUG

Turn the ignition off.

With the scan tool, erase ECM DTCs.

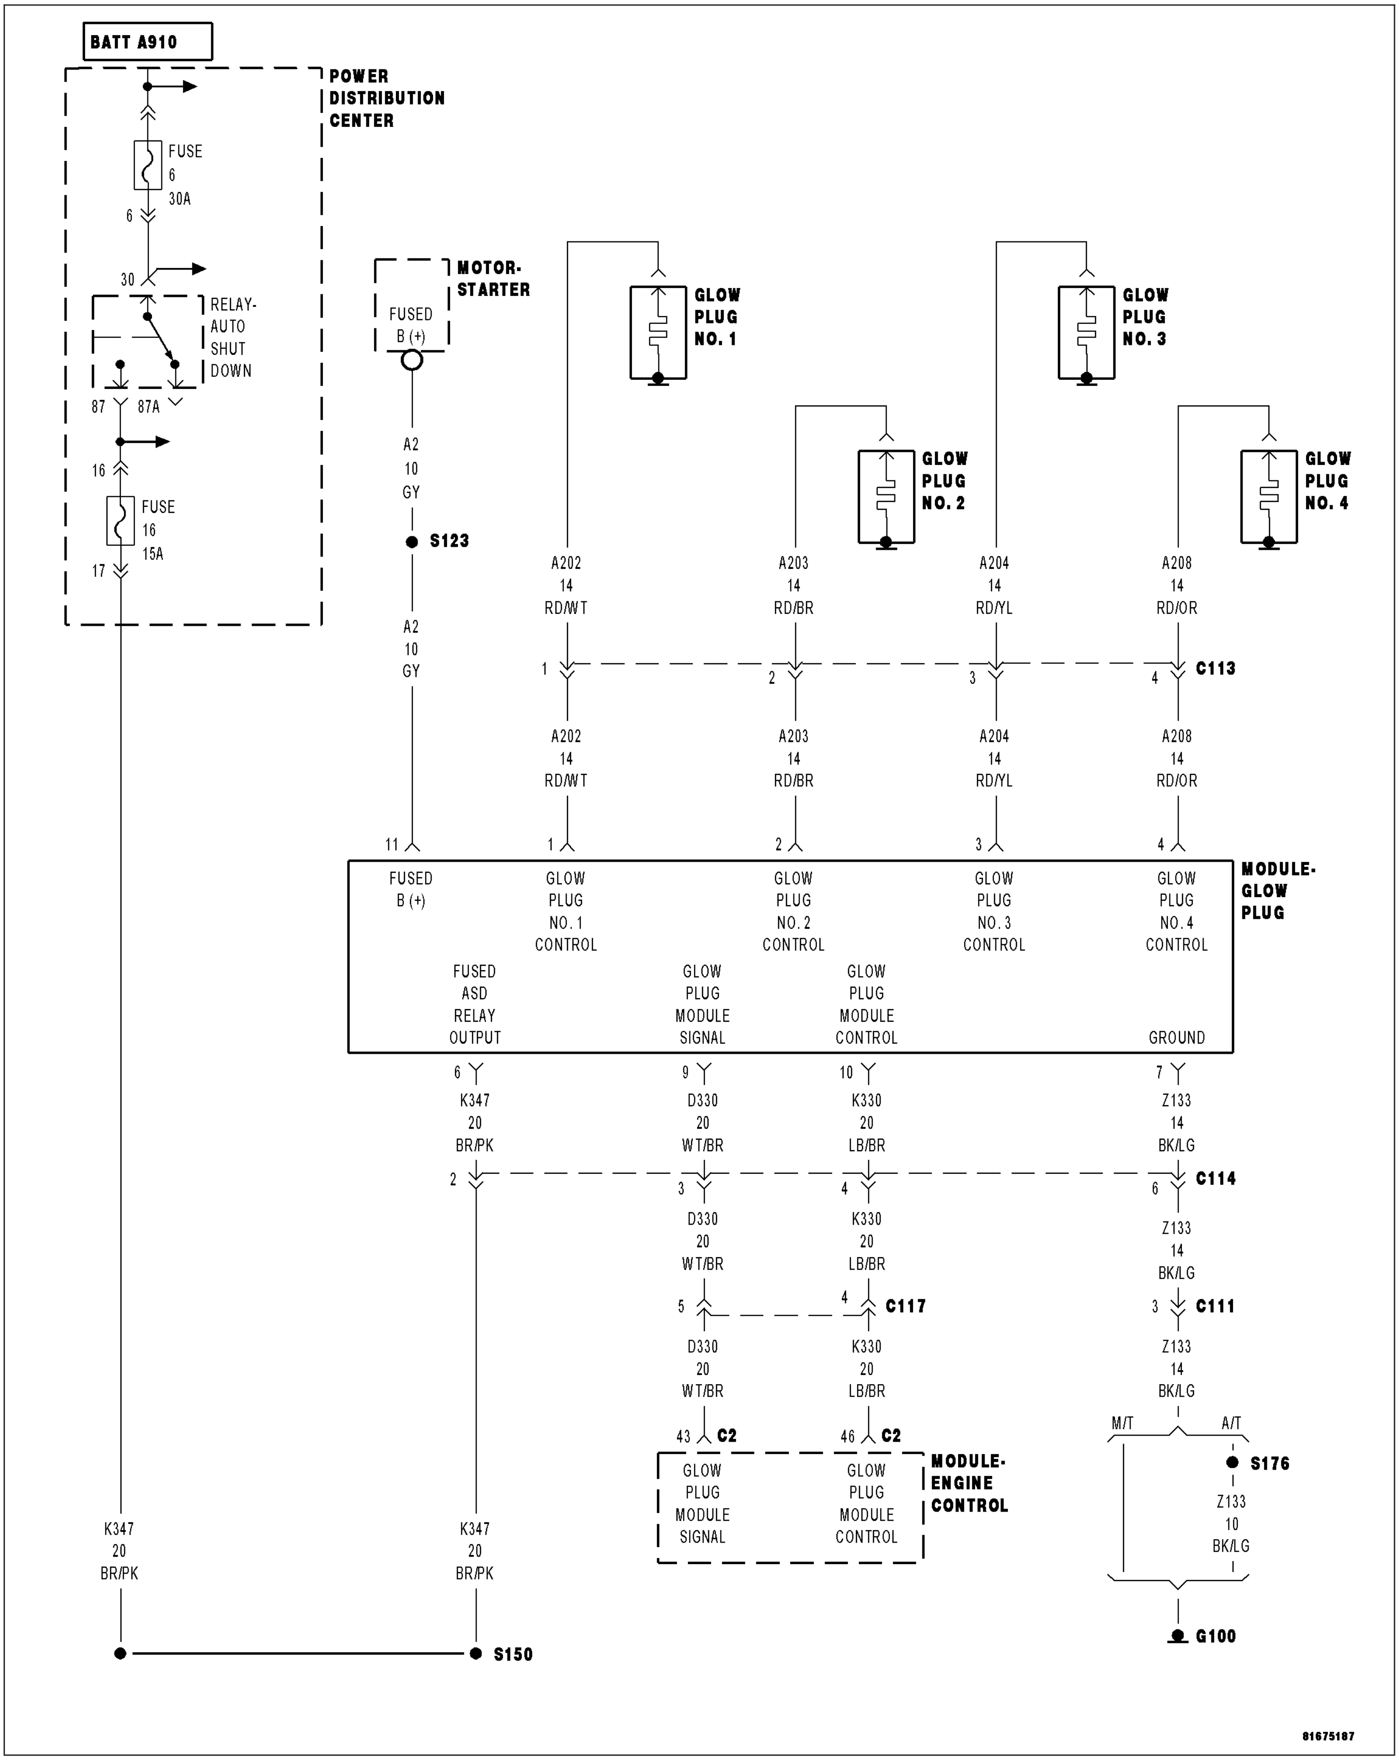
Refer to the Service Information and perform the Glow Plug Test on each Glow plug.

**Did each Glow Plug pass the test?**

**Yes** >> Replace the Glow Plug Module.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the appropriate Glow Plug in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0672-GLOW PLUG 2 PLUG FAILURE



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the Glow Plug Module Glow Plug command on.
- **Set Condition:**
  The ECM detects a malfunction with a Glow Plug or a Glow Plug Control circuit.

| Possible Causes |
|---|
| GLOW PLUG |
| GLOW PLUG CONTROL CIRCUIT OPEN |
| GLOW PLUG CONTROL CIRCUIT SHORTED TO GROUND |
| GLOW PLUG CONTROL CIRCUIT SHORTED TO VOLTAGE |
| GLOW PLUG MODULE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several ignition cycles leaving the ignition on for at least 10 seconds then off for 10 seconds.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. GLOW PLUG CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect each Glow Plug harness connector.

Disconnect the Glow Plug Module harness connector.

Measure the resistance of each Glow Plug Control circuit.

**Is the resistance below 10.0 ohms for each circuit?**

**Yes** >> Go To 3

**No** >> Repair the appropriate Glow Plug Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. GLOW PLUG CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.
Disconnect each Glow Plug harness connector.
Disconnect the Glow Plug Module harness connector.
Measure the resistance between ground and each Glow Plug Control circuit.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the appropriate Glow Plug Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. GLOW PLUG CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.
Disconnect each Glow Plug harness connector.
Disconnect the Glow Plug Module harness connector.
Turn the ignition on.
Measure the voltage of each Glow Plug Control circuit.

**Is the voltage below 1.0 volt for each circuit?**

**Yes** >> Go To 5

**No** >> Repair the appropriate Glow Plug Control circuit for a short to voltage
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. GLOW PLUG

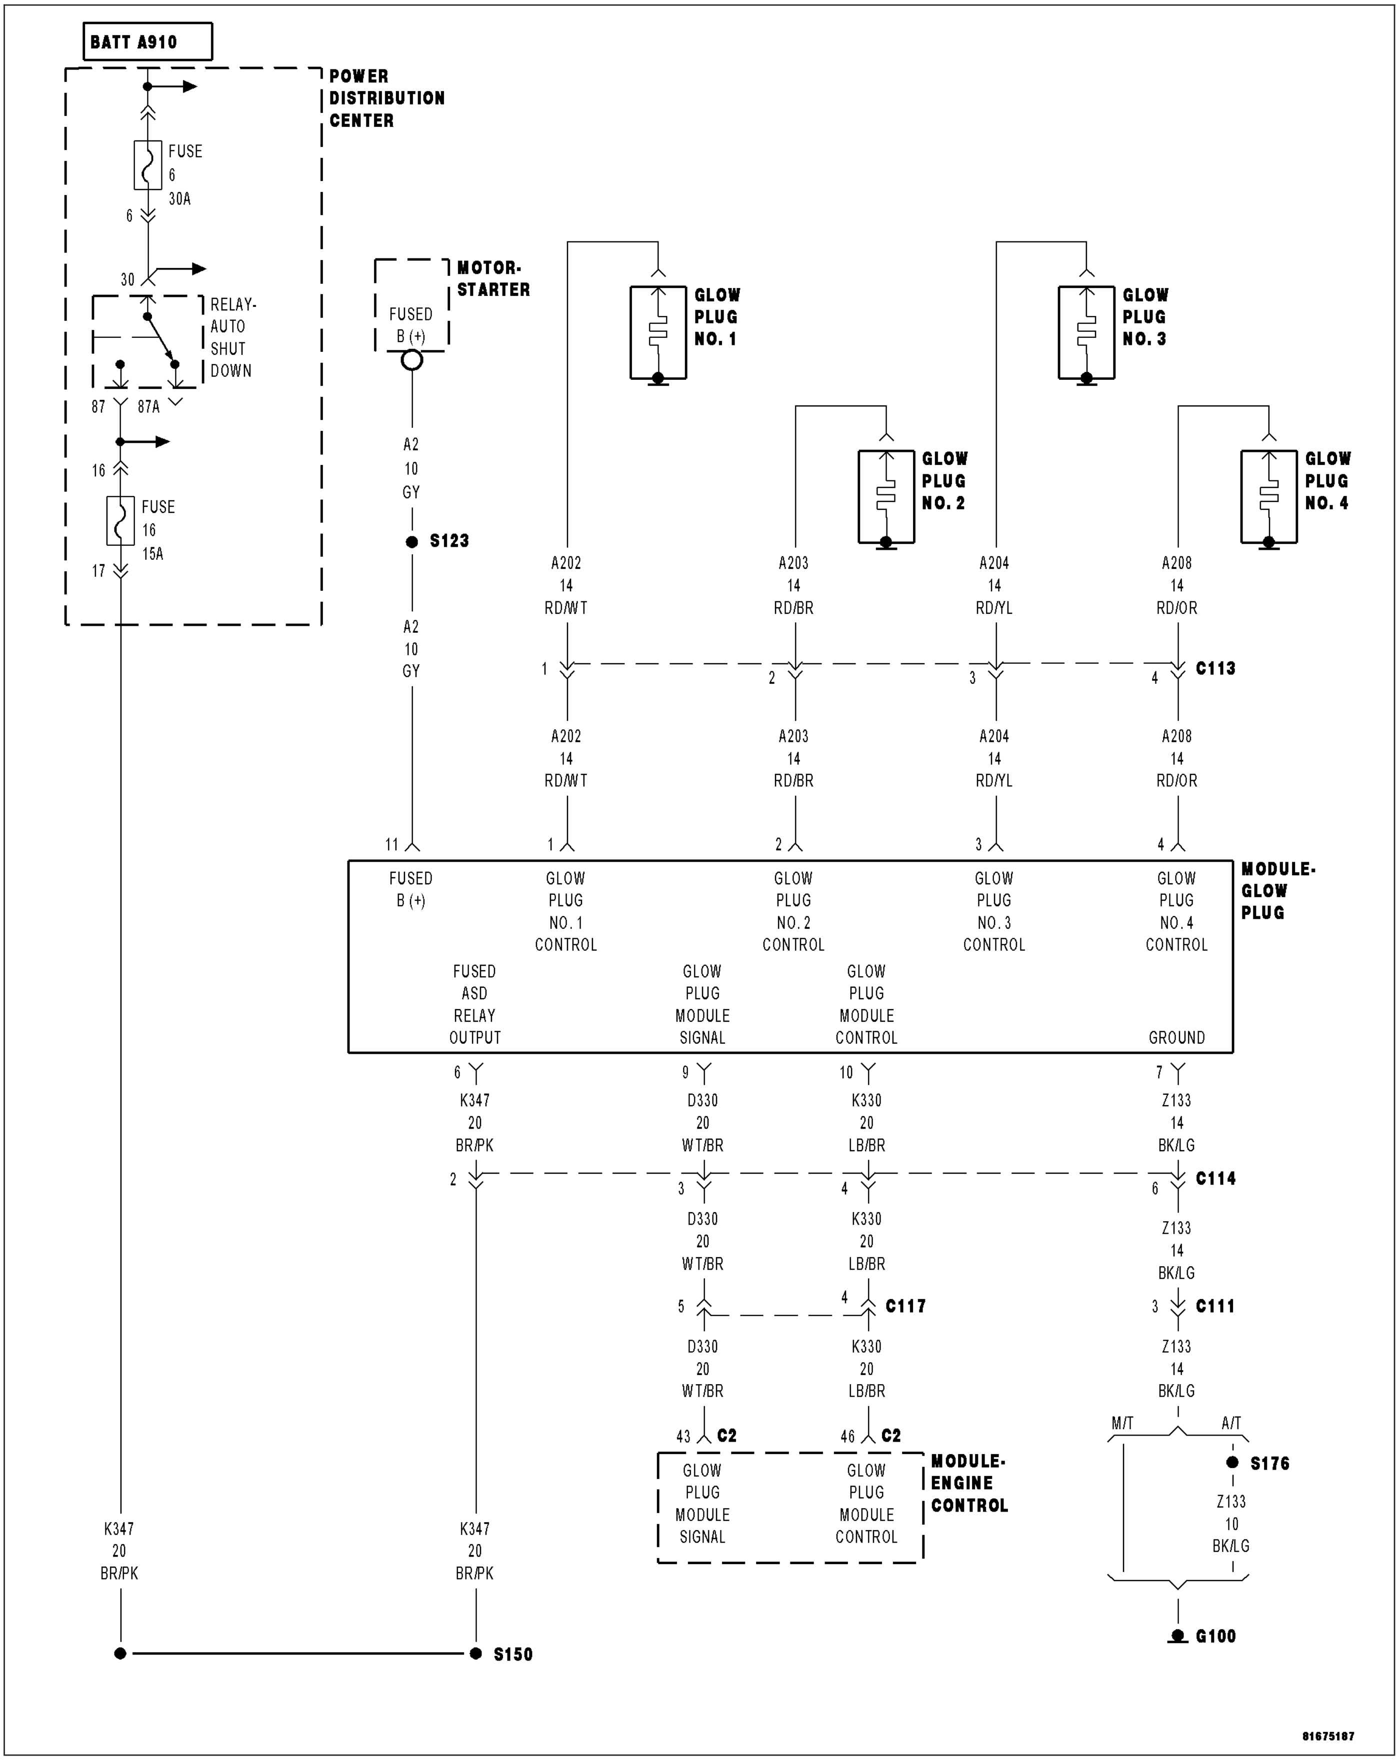
Turn the ignition off.
With the scan tool, erase ECM DTCs.
Refer to the Service Information and perform the Glow Plug Test on each Glow plug.

**Did each Glow Plug pass the test?**

**Yes** >> Replace the Glow Plug Module.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the appropriate Glow Plug in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0672-GLOW PLUG 2 PLUG SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the Glow Plug Module Glow Plug command on.
- **Set Condition:**
  The ECM detects a short circuit on a Glow Plug Control circuit.

| Possible Causes |
|---|
| GLOW PLUG |
| GLOW PLUG CONTROL CIRCUIT OPEN |
| GLOW PLUG CONTROL CIRCUIT SHORTED TO GROUND |
| GLOW PLUG CONTROL CIRCUIT SHORTED TO VOLTAGE |
| GLOW PLUG MODULE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several ignition cycles leaving the ignition on for at least 10 seconds then off for 10 seconds.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. GLOW PLUG CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect each Glow Plug harness connector.

Disconnect the Glow Plug Module harness connector.

Measure the resistance of each Glow Plug Control circuit.

**Is the resistance below 10.0 ohms for each circuit?**

**Yes** >> Go To 3

**No** >> Repair the appropriate Glow Plug Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. GLOW PLUG CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect each Glow Plug harness connector.

Disconnect the Glow Plug Module harness connector.

Measure the resistance between ground and each Glow Plug Control circuit.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the appropriate Glow Plug Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. GLOW PLUG CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect each Glow Plug harness connector.

Disconnect the Glow Plug Module harness connector.

Turn the ignition on.

Measure the voltage of each Glow Plug Control circuit.

**Is the voltage below 1.0 volt for each circuit?**

**Yes** >> Go To 5

**No** >> Repair the appropriate Glow Plug Control circuit for a short to voltage
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. GLOW PLUG

Turn the ignition off.

With the scan tool, erase ECM DTCs.

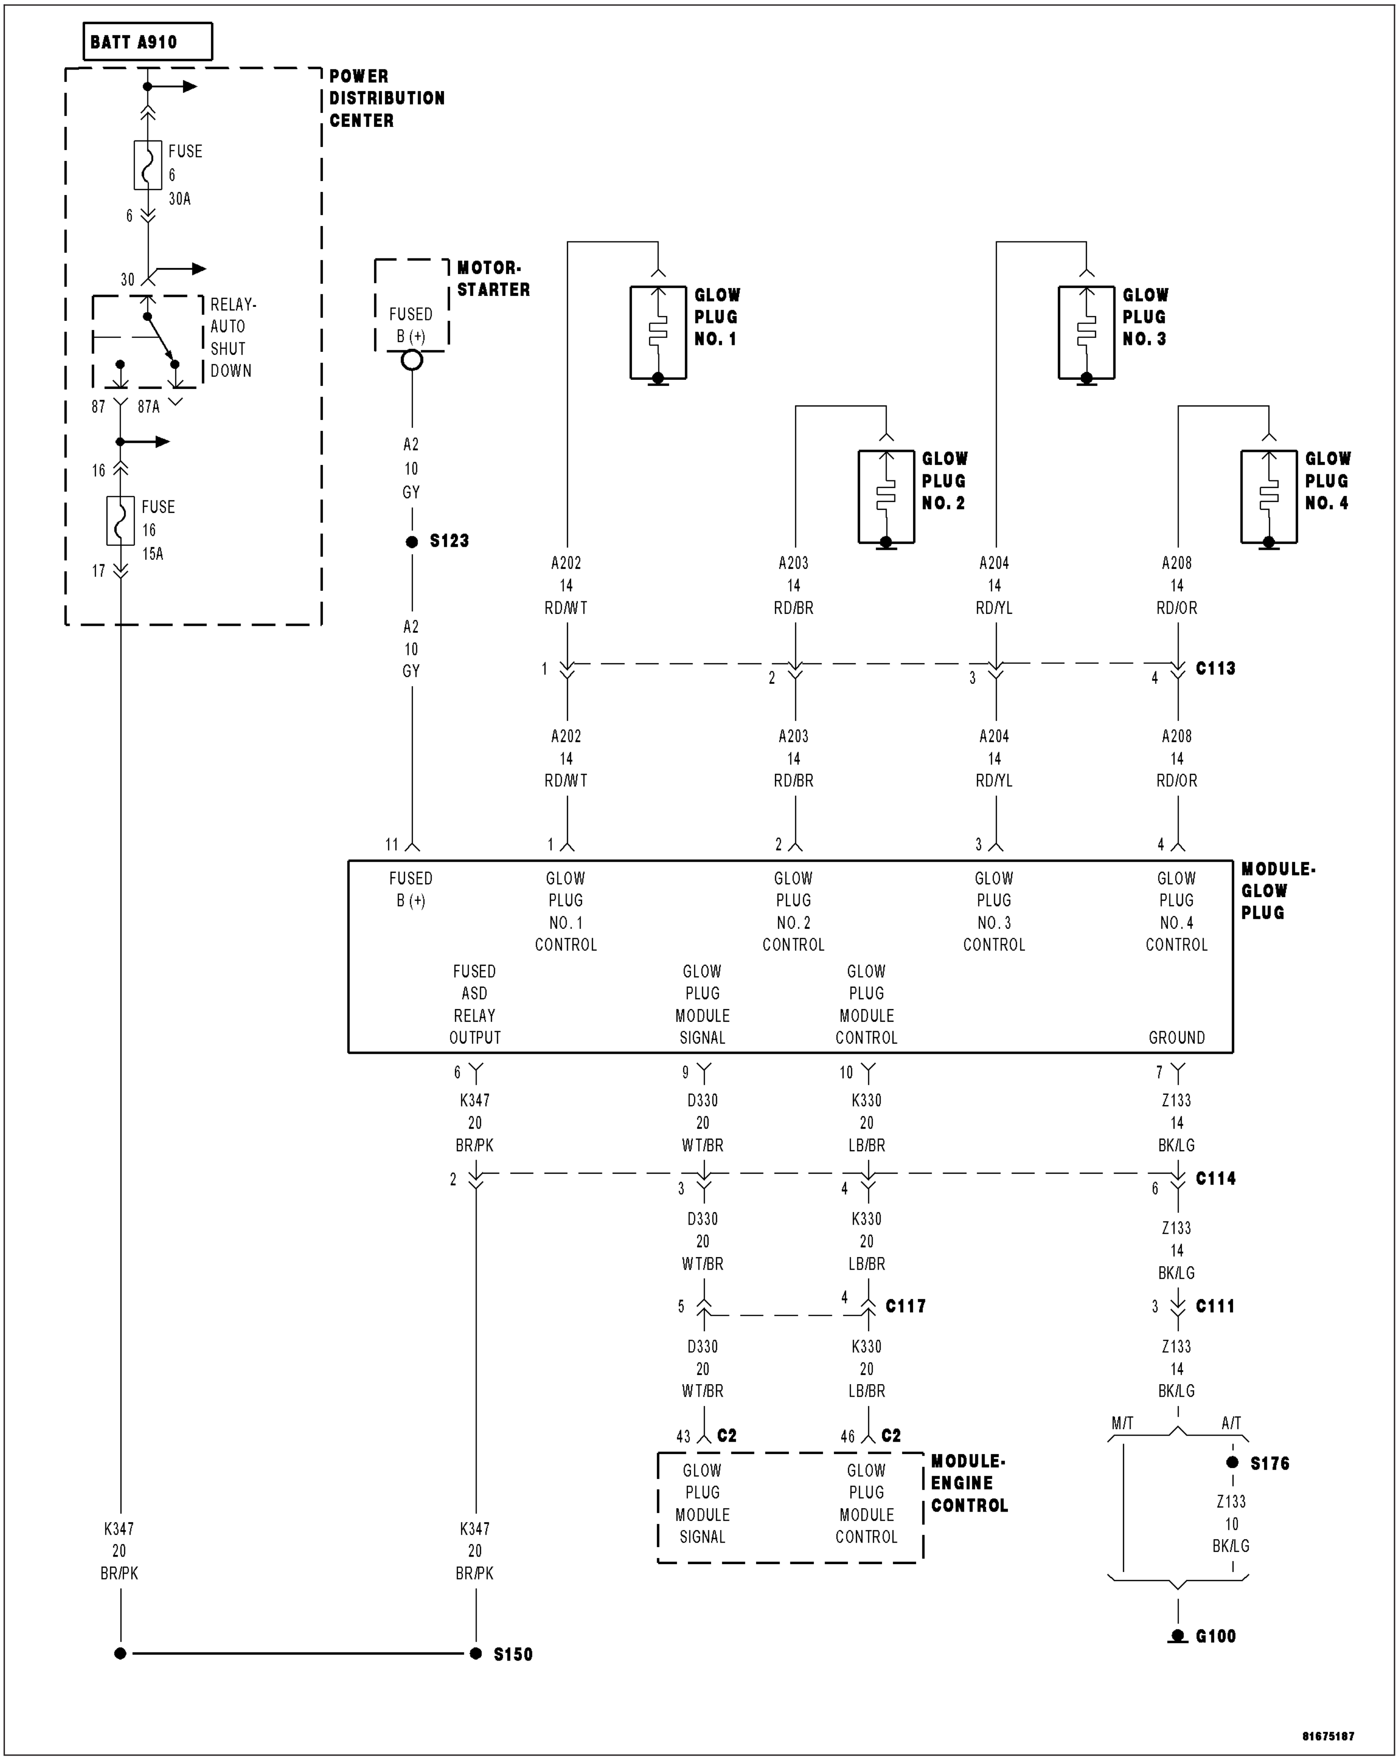
Refer to the Service Information and perform the Glow Plug Test on each Glow plug.

**Did each Glow Plug pass the test?**

**Yes** >> Replace the Glow Plug Module.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the appropriate Glow Plug in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0673-GLOW PLUG 3 PLUG FAILURE



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the Glow Plug Module Glow Plug command on.
- **Set Condition:**
  The ECM detects a malfunction with a Glow Plug or a Glow Plug Control circuit.

| Possible Causes |
|---|
| GLOW PLUG |
| GLOW PLUG CONTROL CIRCUIT OPEN |
| GLOW PLUG CONTROL CIRCUIT SHORTED TO GROUND |
| GLOW PLUG CONTROL CIRCUIT SHORTED TO VOLTAGE |
| GLOW PLUG MODULE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several ignition cycles leaving the ignition on for at least 10 seconds then off for 10 seconds.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. GLOW PLUG CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect each Glow Plug harness connector.

Disconnect the Glow Plug Module harness connector.

Measure the resistance of each Glow Plug Control circuit.

**Is the resistance below 10.0 ohms for each circuit?**

**Yes** >> Go To 3

**No** >> Repair the appropriate Glow Plug Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. GLOW PLUG CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect each Glow Plug harness connector.

Disconnect the Glow Plug Module harness connector.

Measure the resistance between ground and each Glow Plug Control circuit.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the appropriate Glow Plug Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. GLOW PLUG CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect each Glow Plug harness connector.

Disconnect the Glow Plug Module harness connector.

Turn the ignition on.

Measure the voltage of each Glow Plug Control circuit.

**Is the voltage below 1.0 volt for each circuit?**

**Yes** >> Go To 5

**No** >> Repair the appropriate Glow Plug Control circuit for a short to voltage
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. GLOW PLUG

Turn the ignition off.

With the scan tool, erase ECM DTCs.

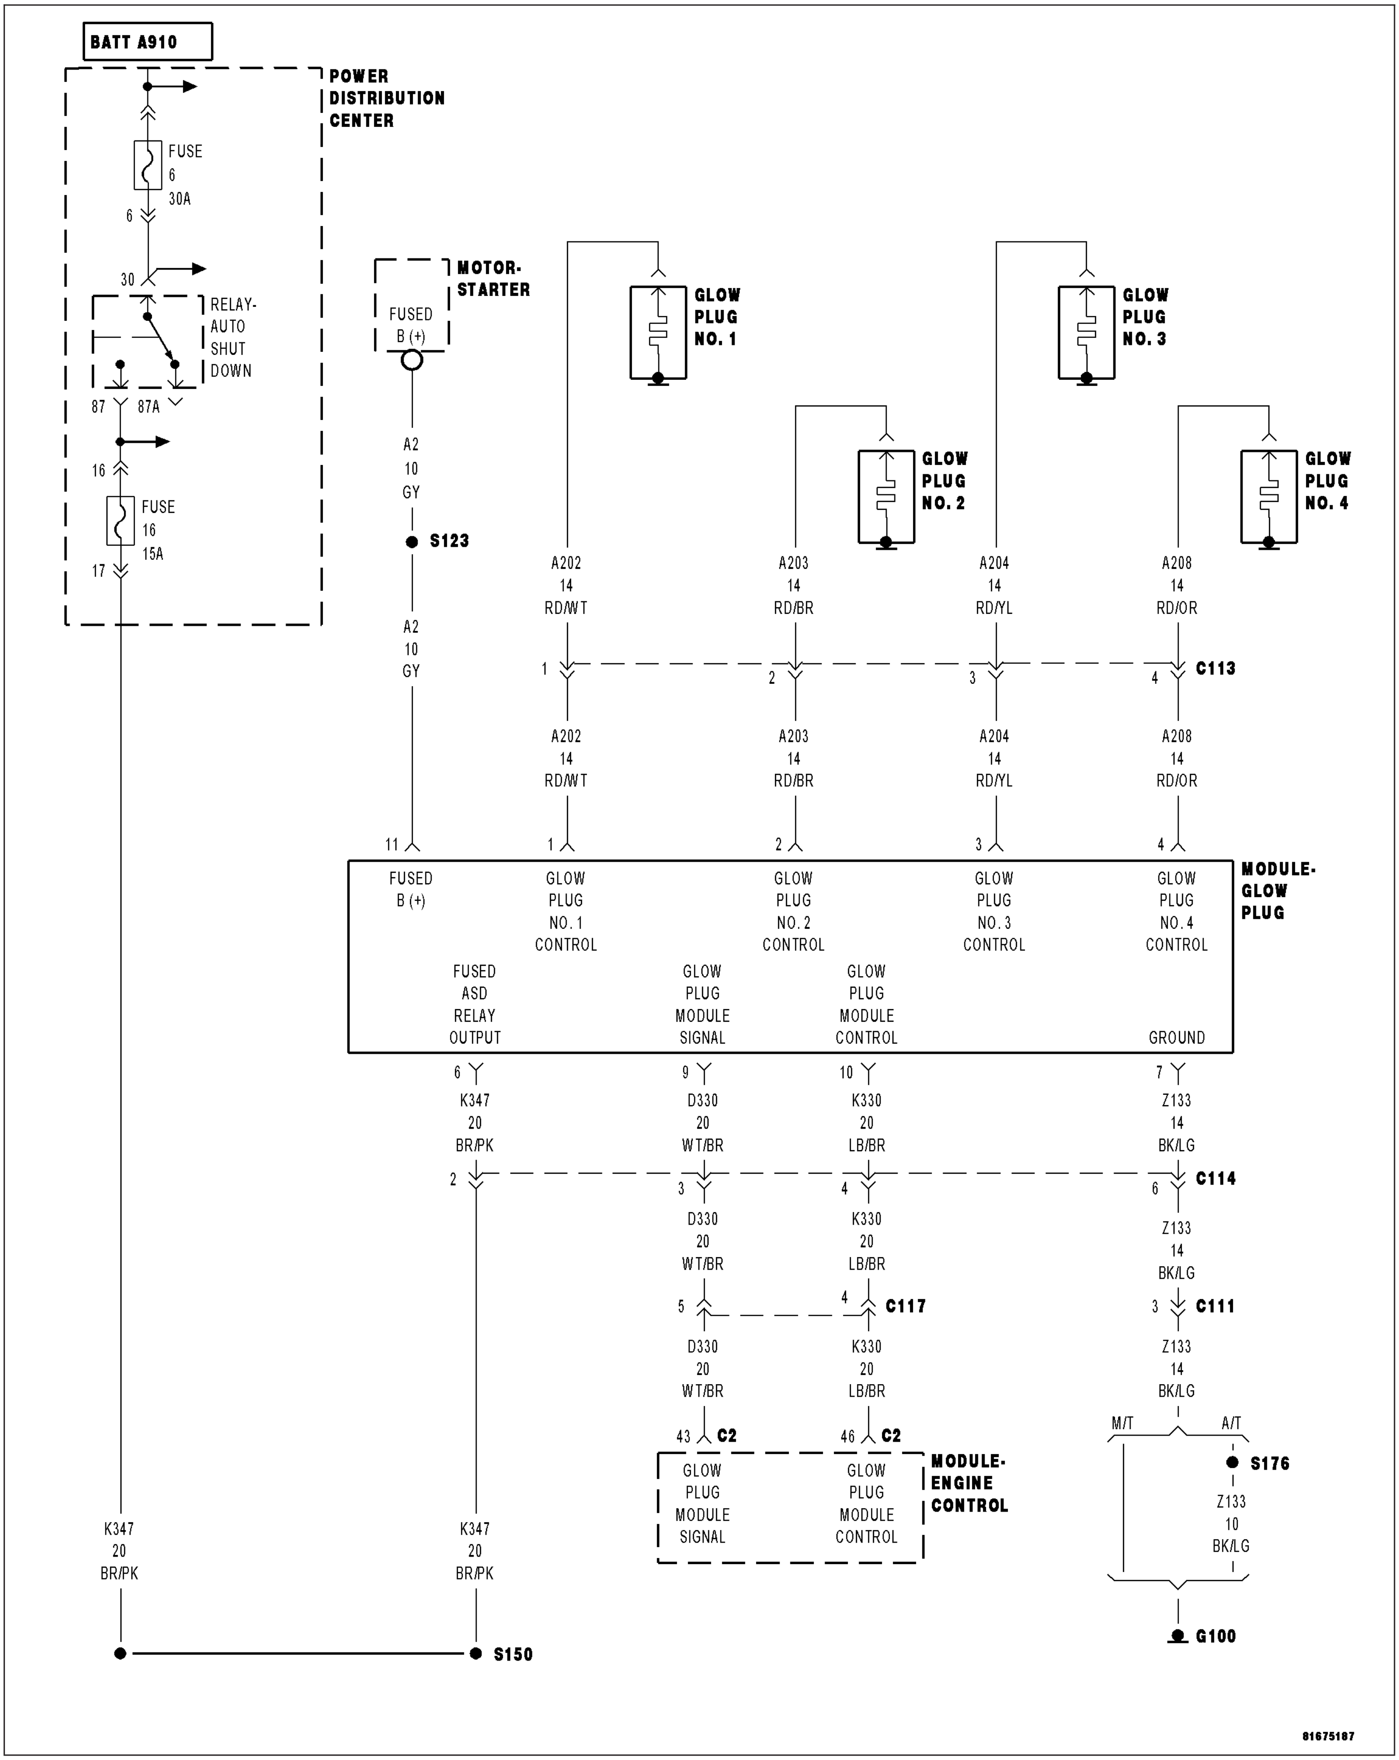
Refer to the Service Information and perform the Glow Plug Test on each Glow plug.

**Did each Glow Plug pass the test?**

**Yes** >> Replace the Glow Plug Module.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the appropriate Glow Plug in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0673-GLOW PLUG 3 SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the Glow Plug Module Glow Plug command on.
- **Set Condition:**
  The ECM detects a short circuit on a Glow Plug Control circuit.

| Possible Causes |
|---|
| GLOW PLUG |
| GLOW PLUG CONTROL CIRCUIT OPEN |
| GLOW PLUG CONTROL CIRCUIT SHORTED TO GROUND |
| GLOW PLUG CONTROL CIRCUIT SHORTED TO VOLTAGE |
| GLOW PLUG MODULE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several ignition cycles leaving the ignition on for at least 10 seconds then off for 10 seconds.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. GLOW PLUG CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect each Glow Plug harness connector.

Disconnect the Glow Plug Module harness connector.

Measure the resistance of each Glow Plug Control circuit.

**Is the resistance below 10.0 ohms for each circuit?**

**Yes** >> Go To 3

**No** >> Repair the appropriate Glow Plug Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. GLOW PLUG CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.
Disconnect each Glow Plug harness connector.
Disconnect the Glow Plug Module harness connector.
Measure the resistance between ground and each Glow Plug Control circuit.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the appropriate Glow Plug Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. GLOW PLUG CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.
Disconnect each Glow Plug harness connector.
Disconnect the Glow Plug Module harness connector.
Turn the ignition on.
Measure the voltage of each Glow Plug Control circuit.

**Is the voltage below 1.0 volt for each circuit?**

**Yes** >> Go To 5

**No** >> Repair the appropriate Glow Plug Control circuit for a short to voltage
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. GLOW PLUG

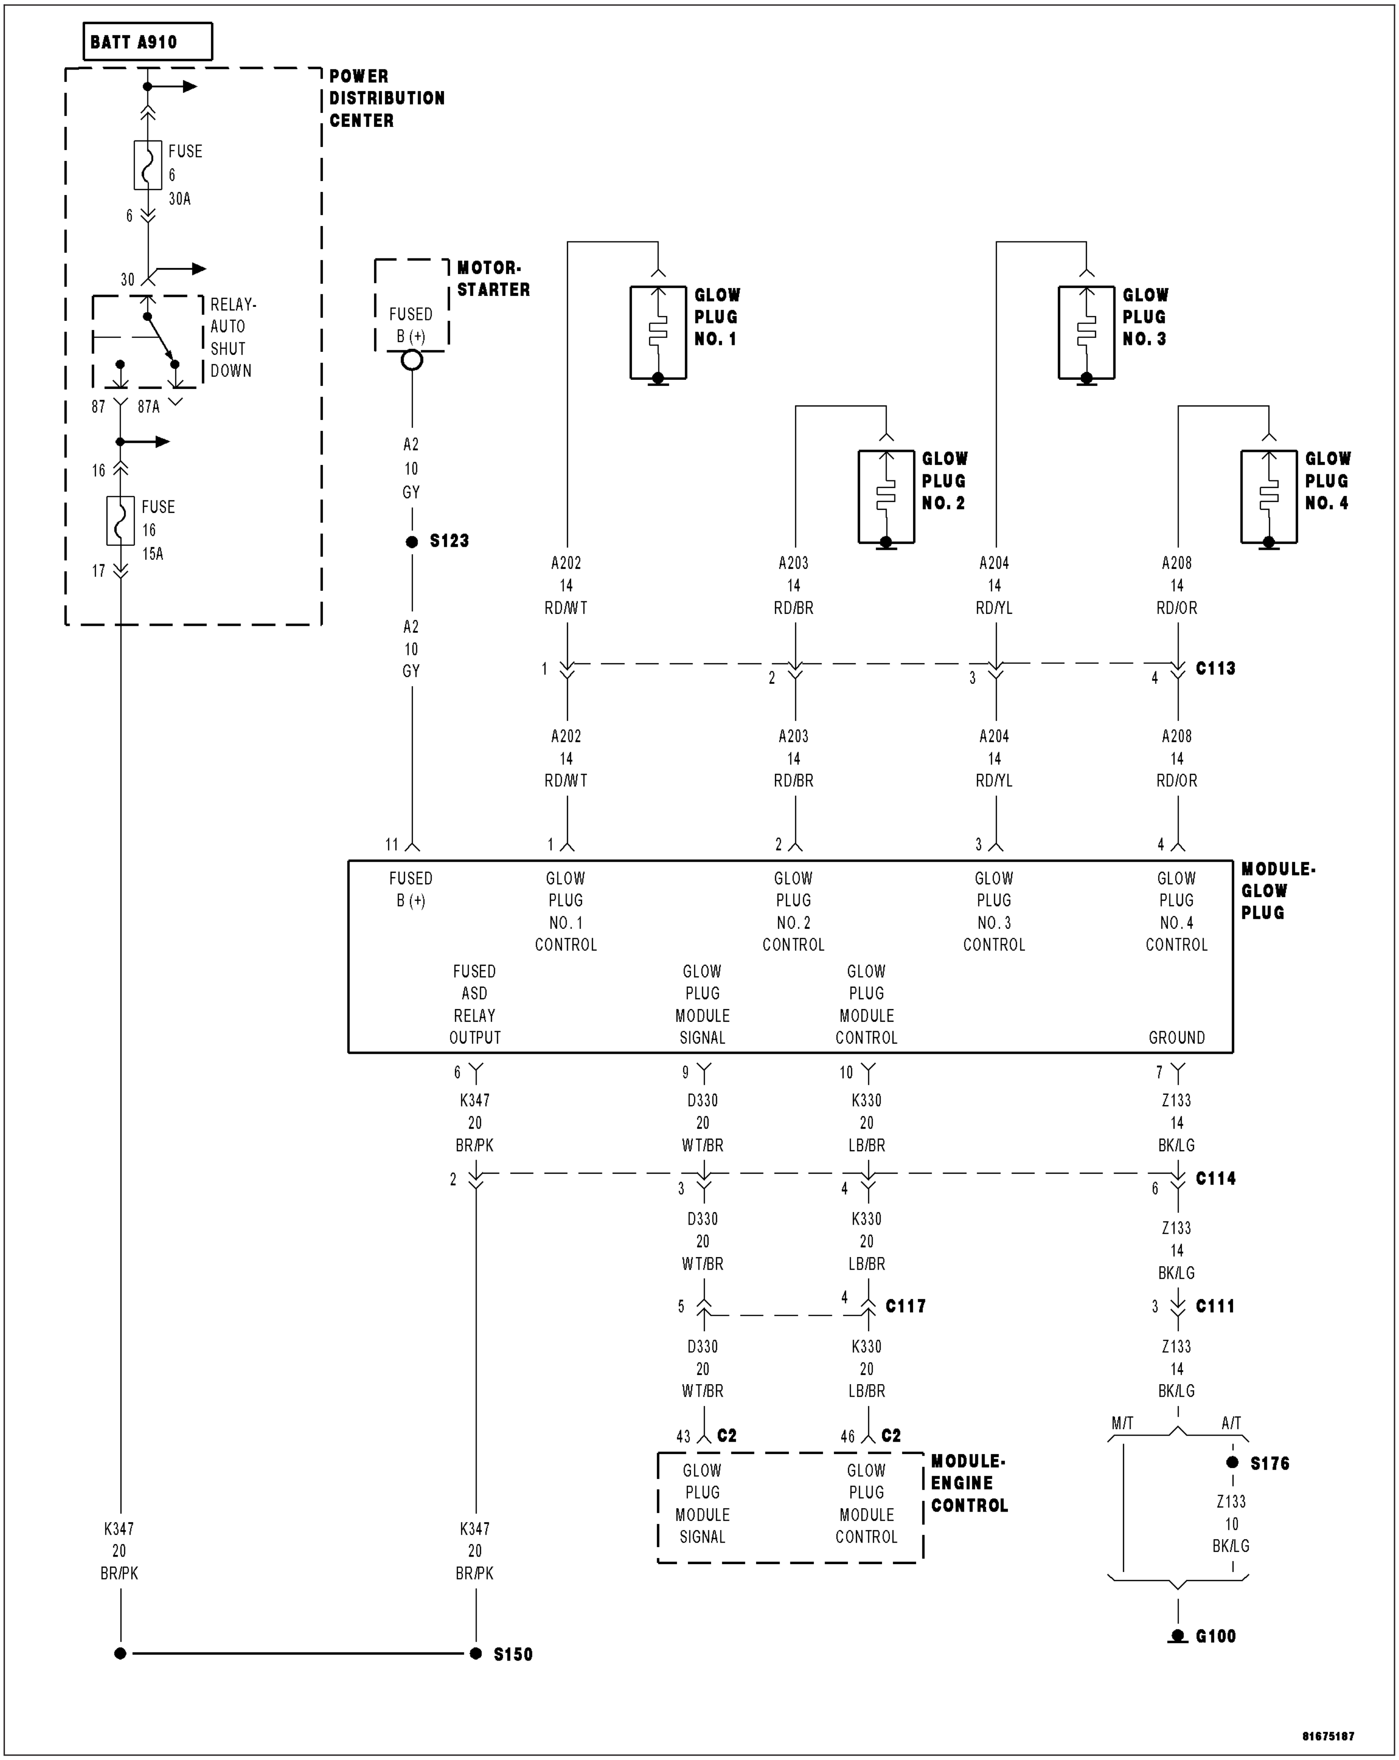
Turn the ignition off.
With the scan tool, erase ECM DTCs.
Refer to the Service Information and perform the Glow Plug Test on each Glow plug.

**Did each Glow Plug pass the test?**

**Yes** >> Replace the Glow Plug Module.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the appropriate Glow Plug in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0674-GLOW PLUG 4 SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the Glow Plug Module Glow Plug command on.
- **Set Condition:**
  The ECM detects a short circuit on a Glow Plug Control circuit.

| Possible Causes |
|---|
| GLOW PLUG |
| GLOW PLUG CONTROL CIRCUIT OPEN |
| GLOW PLUG CONTROL CIRCUIT SHORTED TO GROUND |
| GLOW PLUG CONTROL CIRCUIT SHORTED TO VOLTAGE |
| GLOW PLUG MODULE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several ignition cycles leaving the ignition on for at least 10 seconds then off for 10 seconds.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. GLOW PLUG CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect each Glow Plug harness connector.

Disconnect the Glow Plug Module harness connector.

Measure the resistance of each Glow Plug Control circuit.

**Is the resistance below 10.0 ohms for each circuit?**

**Yes** >> Go To 3

**No** >> Repair the appropriate Glow Plug Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. GLOW PLUG CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.
Disconnect each Glow Plug harness connector.
Disconnect the Glow Plug Module harness connector.
Measure the resistance between ground and each Glow Plug Control circuit.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the appropriate Glow Plug Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. GLOW PLUG CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.
Disconnect each Glow Plug harness connector.
Disconnect the Glow Plug Module harness connector.
Turn the ignition on.
Measure the voltage of each Glow Plug Control circuit.

**Is the voltage below 1.0 volt for each circuit?**

**Yes** >> Go To 5

**No** >> Repair the appropriate Glow Plug Control circuit for a short to voltage
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. GLOW PLUG

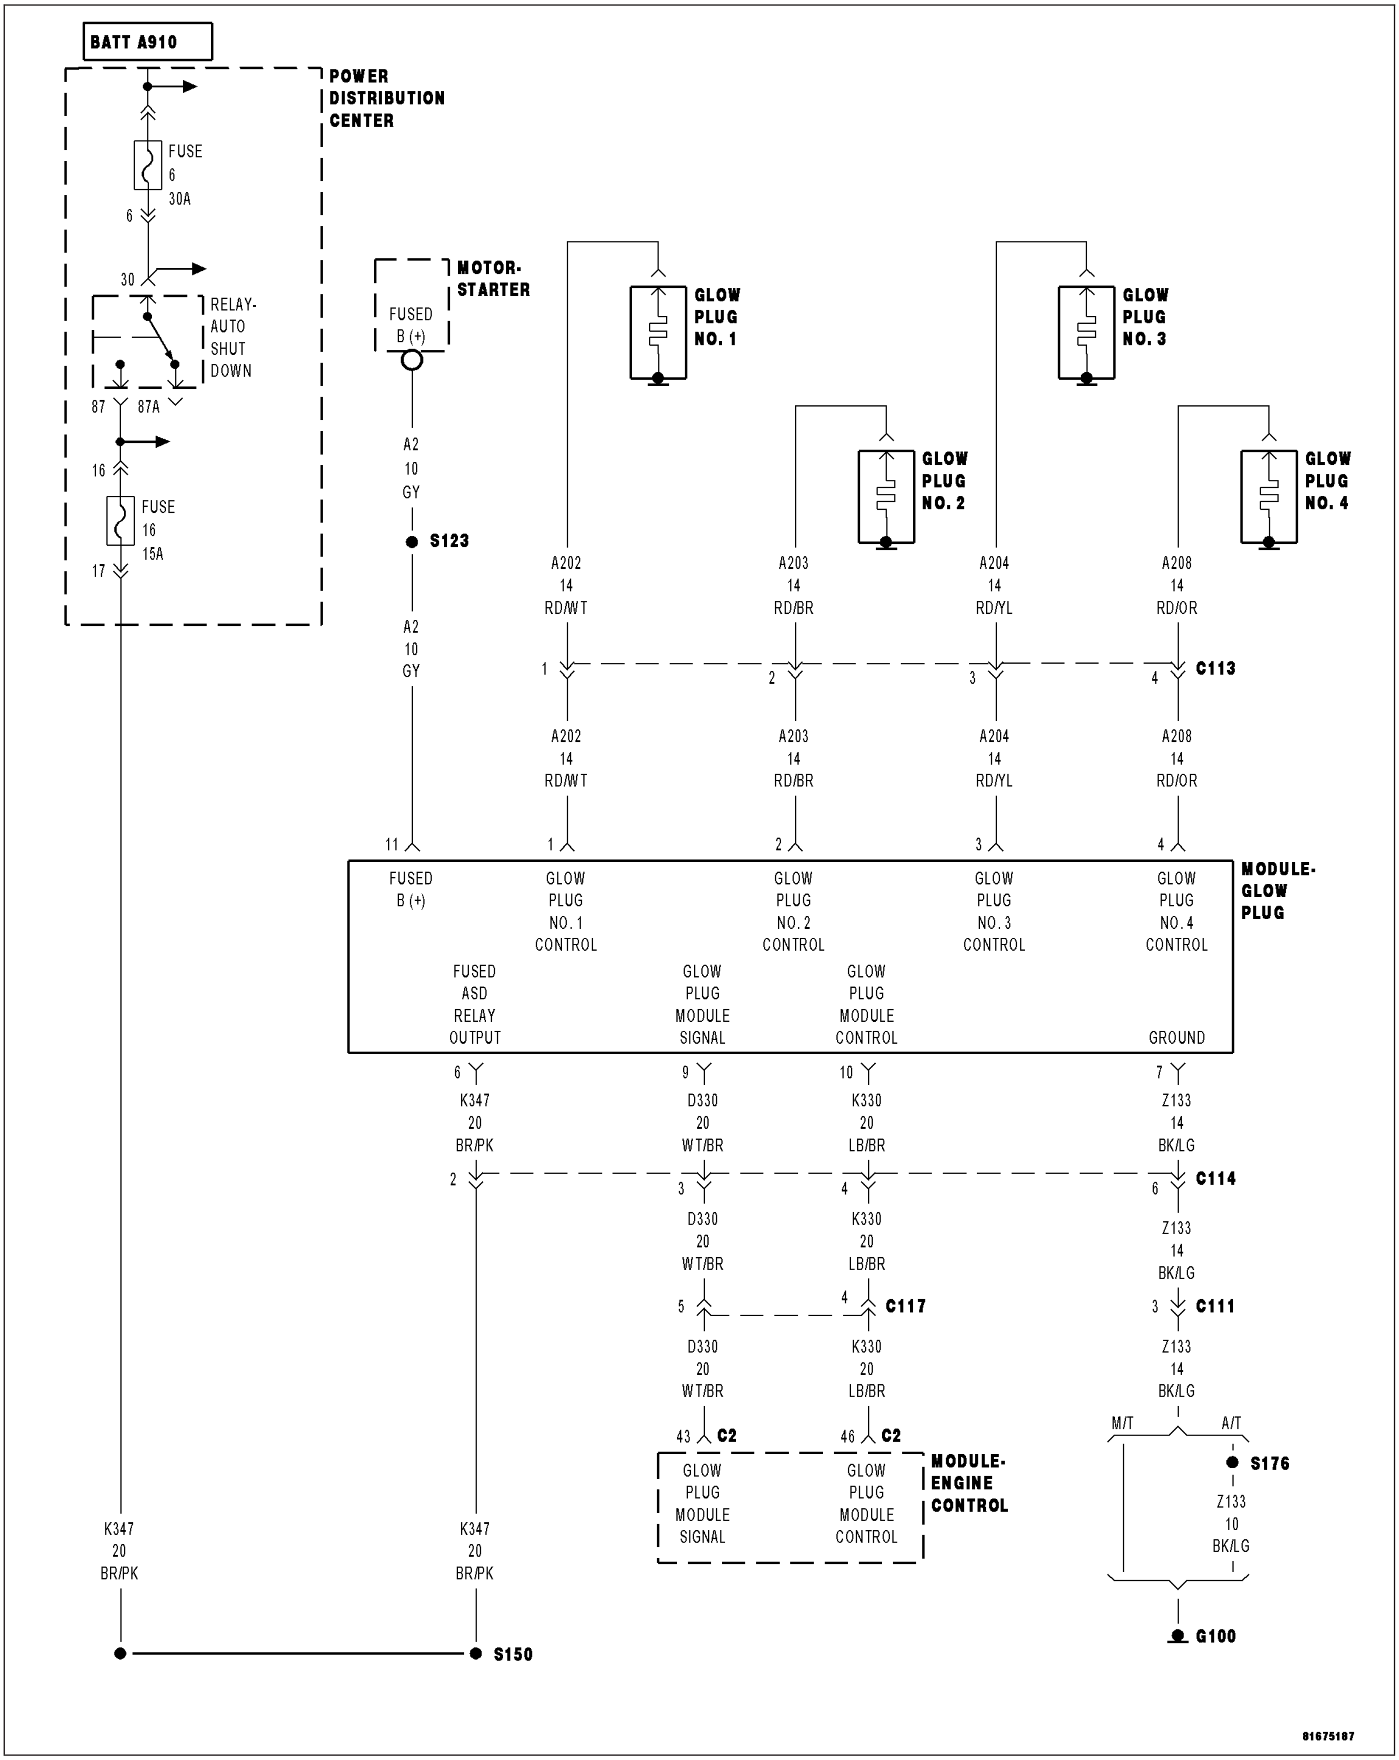
Turn the ignition off.
With the scan tool, erase ECM DTCs.
Refer to the Service Information and perform the Glow Plug Test on each Glow plug.

**Did each Glow Plug pass the test?**

**Yes** >> Replace the Glow Plug Module.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the appropriate Glow Plug in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0674-GLOW PLUG 4 PLUG FAILURE



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the Glow Plug Module Glow Plug command on.
- **Set Condition:**
  The ECM detects a malfunction with a Glow Plug or a Glow Plug Control circuit.

| Possible Causes |
|---|
| GLOW PLUG |
| GLOW PLUG CONTROL CIRCUIT OPEN |
| GLOW PLUG CONTROL CIRCUIT SHORTED TO GROUND |
| GLOW PLUG CONTROL CIRCUIT SHORTED TO VOLTAGE |
| GLOW PLUG MODULE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several ignition cycles leaving the ignition on for at least 10 seconds then off for 10 seconds.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. GLOW PLUG CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect each Glow Plug harness connector.

Disconnect the Glow Plug Module harness connector.

Measure the resistance of each Glow Plug Control circuit.

**Is the resistance below 10.0 ohms for each circuit?**

**Yes** >> Go To 3

**No** >> Repair the appropriate Glow Plug Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. GLOW PLUG CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.
Disconnect each Glow Plug harness connector.
Disconnect the Glow Plug Module harness connector.
Measure the resistance between ground and each Glow Plug Control circuit.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the appropriate Glow Plug Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. GLOW PLUG CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.
Disconnect each Glow Plug harness connector.
Disconnect the Glow Plug Module harness connector.
Turn the ignition on.
Measure the voltage of each Glow Plug Control circuit.

**Is the voltage below 1.0 volt for each circuit?**

**Yes** >> Go To 5

**No** >> Repair the appropriate Glow Plug Control circuit for a short to voltage
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. GLOW PLUG

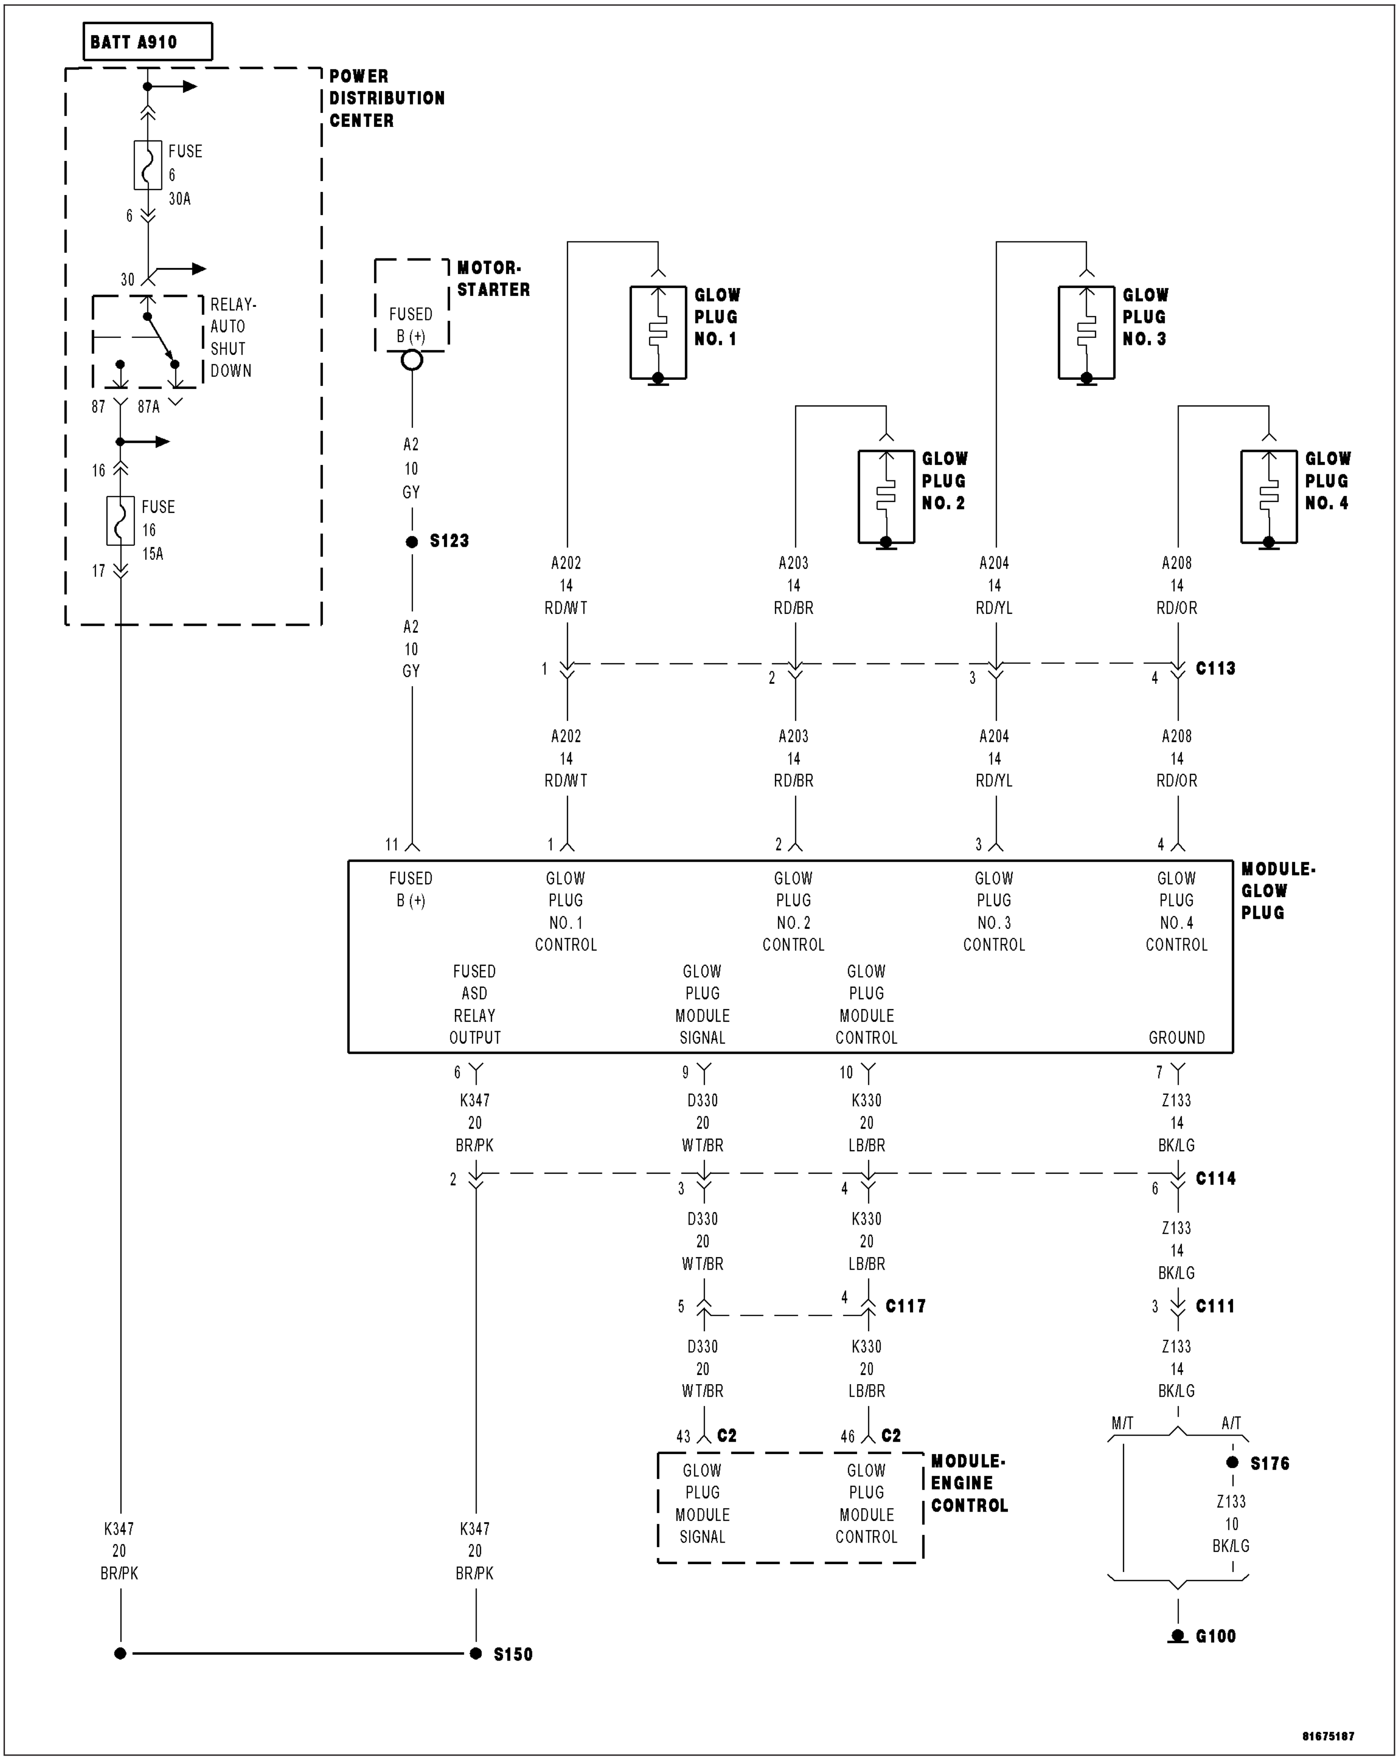
Turn the ignition off.
With the scan tool, erase ECM DTCs.
Refer to the Service Information and perform the Glow Plug Test on each Glow plug.

**Did each Glow Plug pass the test?**

**Yes** >> Replace the Glow Plug Module.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the appropriate Glow Plug in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0683-GLOW PLUG MODULE SIGNAL CIRCUIT MALFUNCTION



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects a malfunction on the Glow Plug Module Signal or Glow Plug Module Control circuit.

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| GLOW PLUG MODULE |
| GLOW PLUG MODULE SIGNAL/CONTROL CIRCUIT OPEN |
| GLOW PLUG MODULE SIGNAL/CONTROL CIRCUIT SHORTED TO GROUND |
| GLOW PLUG MODULE SIGNAL/CONTROL CIRCUIT SHORTED TO VOLTAGE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

Turn the ignition on and wait at least 90 seconds.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. GLOW PLUG MODULE SIG/CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the Glow Plug Module harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance of the Glow Plug Module Signal circuit.

Measure the resistance of the Glow Plug Module Control circuit.

**Is the resistance below 10.0 ohms for both measurements?**

**Yes** >> Go To 3

**No** >> Repair the Glow Plug Module circuit(s) that measured above 10.0 ohms for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. GLOW PLUG MODULE SIG/CONTROLCIRCUIT SHORTED TO GROUND

Turn the ignition off.
Disconnect the Glow Plug Module harness connectors.
Disconnect the ECM harness connectors.
Measure the resistance between ground and the Glow Plug Module Signal circuit.
Measure the resistance between ground and the Glow Plug Module Control circuit.

**Is the resistance above 1000 ohms for both measurements?**

**Yes** >> Go To 4

**No** >> Repair the Glow Plug Module circuit(s) that measured below 1000 ohms for a short to ground. Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. GLOW PLUG MODULE SIG/CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.
Disconnect the Glow Plug Module harness connectors.
Disconnect the ECM harness connectors.
Remove the ASD Relay.
Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.
Measure the voltage of the Glow Plug Module Signal circuit.
Measure the voltage of the Glow Plug Module Control circuit.

**Is the voltage below 1.0 volt for both measurements?**

**Yes** >> Go To 5

**No** >> Repair the Glow Plug Module circuit(s) that measured above 1.0 volt for a short to voltage. Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. GLOW PLUG CONTROL MODULE

Turn the ignition off.
Replace the Glow Plug Module in accordance with the Service Information.
Reconnect all connectors.
Turn the ignition on.
With the scan tool, erase ECM DTCs.
Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.
With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information. Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P0685-ASD RELAY CONTROL CIRCUIT SHUTS OFF TOO EARLY

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  During after-run.
- **Set Condition:**
  The internal ECM timer determines that the ASD Relay has shut off before the AFTER-RUN mode of operation has been completed.

| Possible Causes |
|---|
| CHECK FOR OTHER DTCS |
| INTERMITTENT CONDITION |
| SUBSTITUTE ASD RELAY |
| ASD RELAY CONTROL CIRCUIT OPEN INTERMITTENTLY |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR OTHER DTCS

Turn the ignition on.

With the scan tool, check for additional DTCs.

**Are other DTCs present?**

**Yes** >> Refer to the Symptom List for diagnosis of the other DTCs before continuing.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

### 2. CLEAR CODE AND CHECK IF THE DTC RESETS

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several ignition key cycles, pausing for at least 20 seconds between each cycle.

Turn the ignition on.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 3. ASD RELAY

Turn the ignition off.
Install a substitute relay in place of the ASD Relay.
Turn the ignition on.
With the scan tool, erase ECM DTCs.
Perform several ignition key cycles, pausing for at least 10 seconds between each cycle.
Turn the ignition on.
With the scan tool, read ECM DTCs.

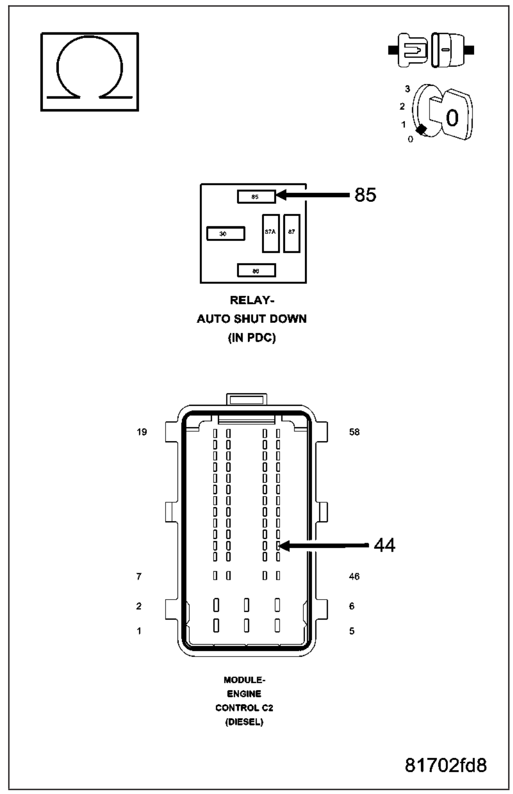
**Did this DTC set again?**

**Yes** >> Go To 4

**No** >> Replace the ASD Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. ASD RELAY CONTROL CIRCUIT OPEN INTERMITTENTLY

Turn the ignition off.
Remove the ASD Relay from the PDC.
Disconnect the ECM harness connectors.
Measure the resistance of the ASD Relay Control circuit while wiggling the wiring harness and connectors between the ECM and the PDC.



**Was the resistance above 10.0 ohms at any time while wiggling the wiring harness and connectors?**

**Yes** >> Repair the ASD Relay Control circuit for an intermittent open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P0685-ASD RELAY CONTROL CIRCUIT SHUTS OFF TOO LATE

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  During after-run.
- **Set Condition:**
  The internal ECM timer determines that the ASD Relay did not shut off after the AFTER-RUN mode of operation has been completed.

| Possible Causes |
|---|
| CHECK FOR OTHER DTCS |
| INTERMITTENT CONDITION |
| SUBSTITUTE ASD RELAY |
| ASD RELAY CONTROL CIRCUIT OPEN INTERMITTENTLY |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR OTHER DTCS

Turn the ignition on.

With the scan tool, check for additional DTCs.

**Are other DTCs present?**

**Yes** >> Refer to the Symptom List for diagnosis of the other DTCs before continuing.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

### 2. CLEAR CODE AND CHECK IF THE DTC RESETS

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several ignition key cycles, pausing for at least 20 seconds between each cycle.

Turn the ignition on.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 3. ASD RELAY

Turn the ignition off.
Install a substitute relay in place of the ASD Relay.
Turn the ignition on.
With the scan tool, erase ECM DTCs.
Perform several ignition key cycles, pausing for at least 10 seconds between each cycle.
Turn the ignition on.
With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 4

**No** >> Replace the ASD Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

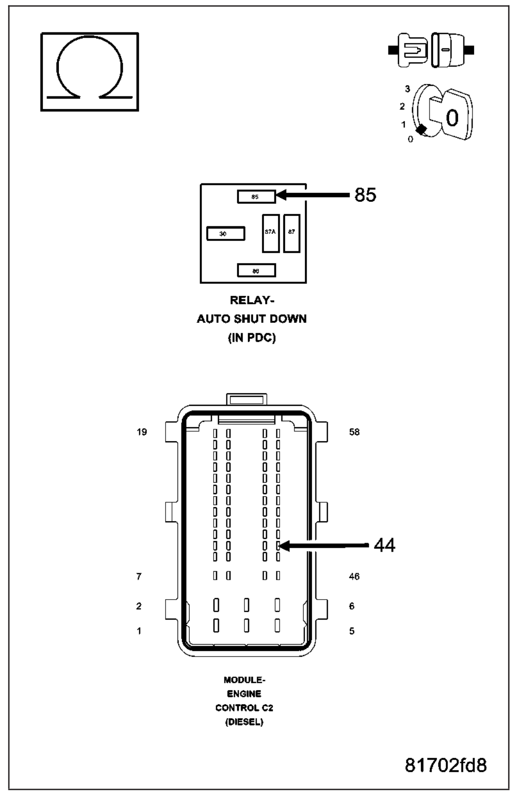
## 4. ASD RELAY CONTROL CIRCUIT OPEN INTERMITTENTLY

Turn the ignition off.
Remove the ASD Relay from the PDC.
Disconnect the ECM harness connectors.
Measure the resistance of the ASD Relay Control circuit while wiggling the wiring harness and connectors between the ECM and the PDC.

**Was the resistance above 10.0 ohms at any time while wiggling the wiring harness and connectors?**

**Yes** >> Repair the ASD Relay Control circuit for an intermittent open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



# P0686-ECM VOLTAGE ERROR LOW

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on or the engine running.
- **Set Condition:**
  The ECM detects low battery voltage.

| Possible Causes |
| --- |
| CHECKING ECM POWER AND GROUNDS |
| ECM |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

**NOTE: This DTC may be caused by a charging system problem. Refer to the Service Information and verify proper charging system operation before continuing.**

Test drive the vehicle.

Turn the ignition on.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECK POWER AND GROUNDS

Refer to the symptom list and perform the Checking the ECM Power and Ground test.

**Were any problem found with the ECM powers and grounds?**

**Yes** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0687-ECM VOLTAGE ERROR HIGH

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on or the engine running.
- **Set Condition:**
  The ECM detects high battery voltage.

| Possible Causes |
|---|
| CHECKING ECM POWER AND GROUNDS |
| ECM |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

**NOTE: This DTC may be caused by a charging system problem. Refer to the Service Information and verify proper charging system operation before continuing.**

Test drive the vehicle.

Turn the ignition on.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECK POWER AND GROUNDS

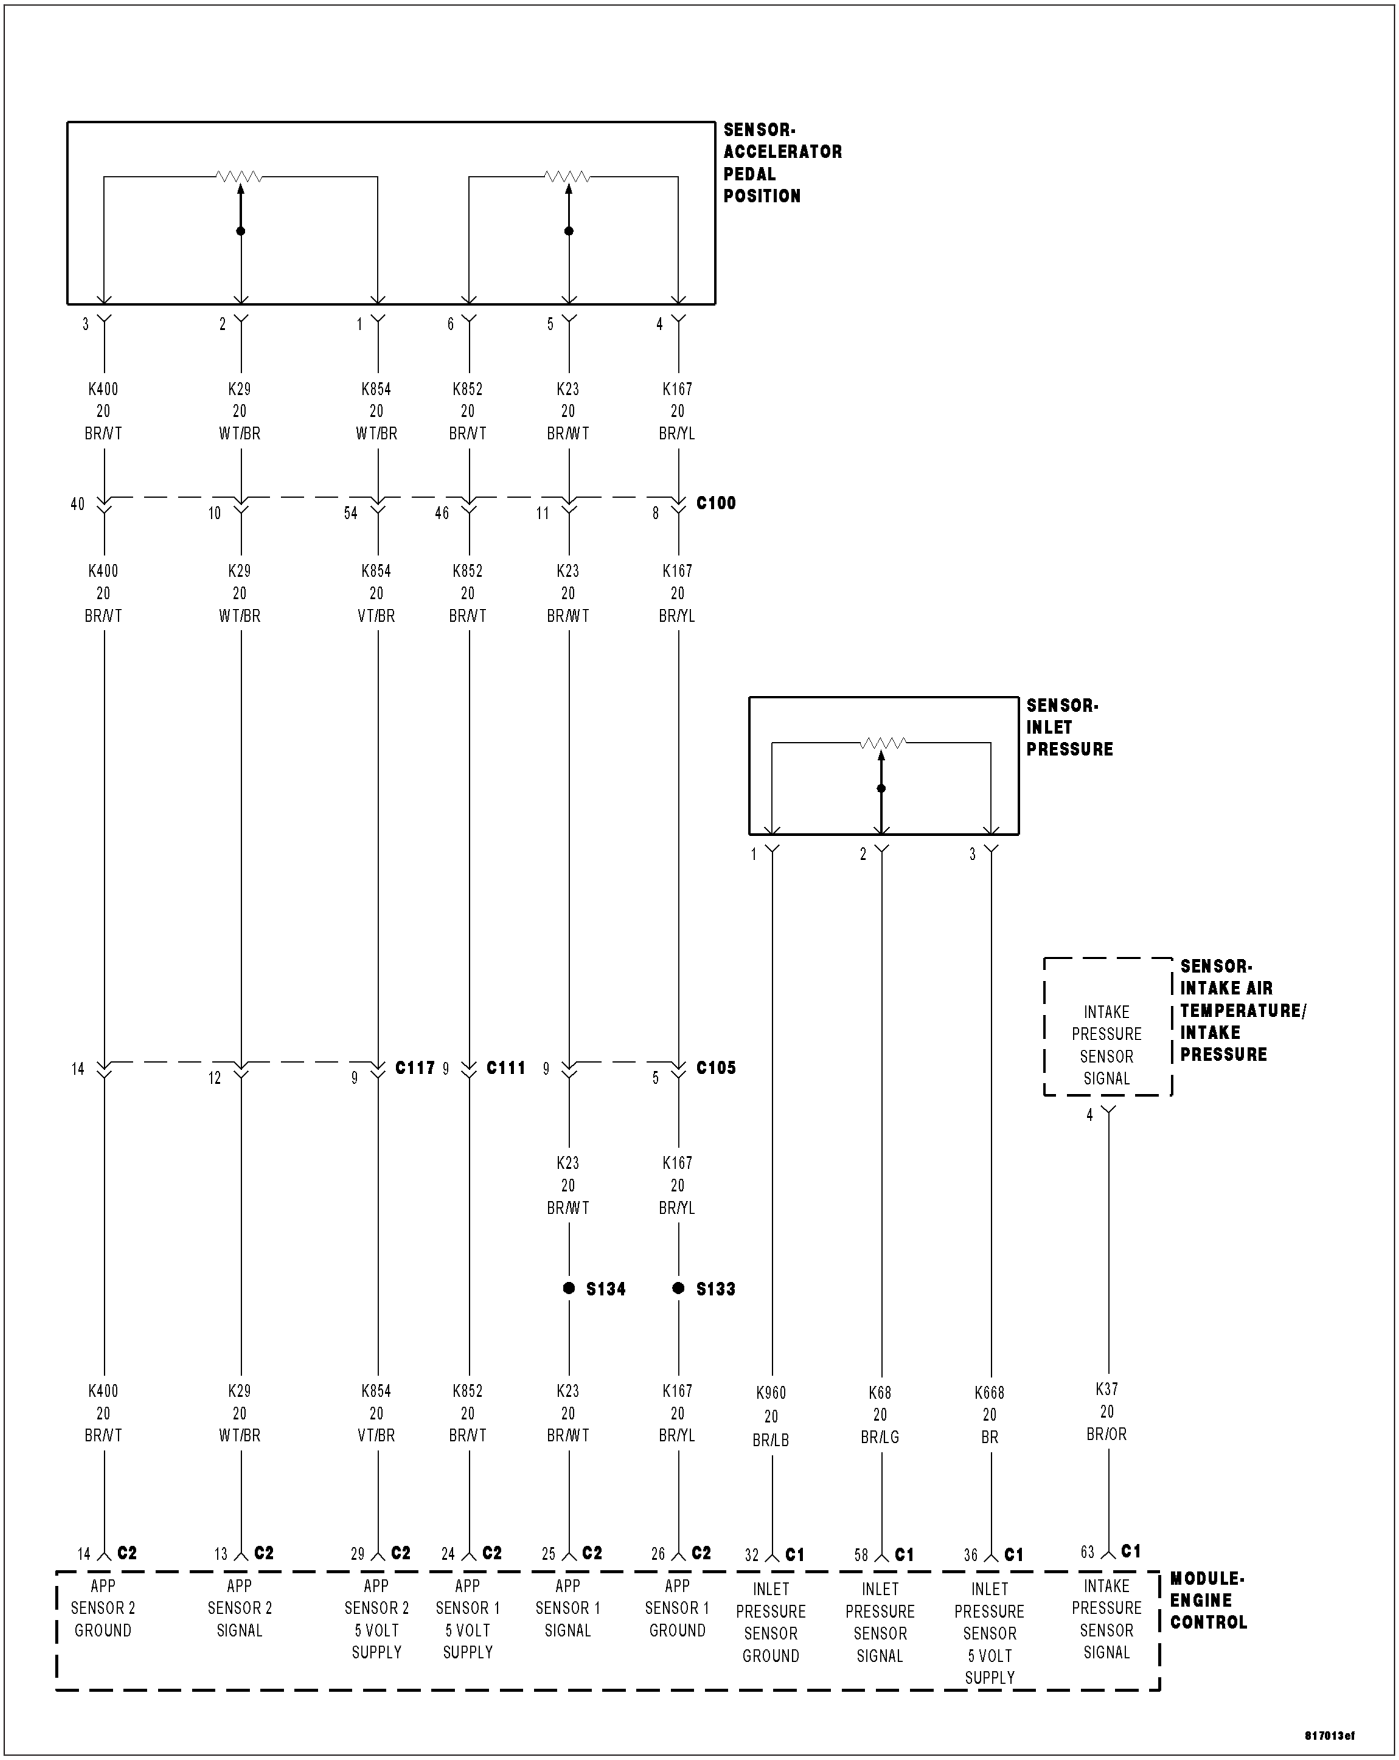
Refer to the symptom list and perform the Checking the ECM Power and Ground test.

**Were any problem found with the ECM powers and grounds?**

**Yes** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0697-SENSOR SUPPLY 3 VOLTAGE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects low voltage for 0.1 second on the Sensor Supply #3 circuit which supplies 5-volts to the Inlet Pressure Sensor and the APP Sensor #2.

| Possible Causes |
|---|
| WIRING INSPECTION |
| INTERMITTENT CONDITION |
| 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| ACCELERATOR PEDAL POSITION SENSOR |
| INLET PRESSURE SENSOR |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Turn the ignition off for 10 seconds.

Turn the ignition on.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. ACCELERATOR PEDAL POSITION SENSOR SHORTED TO GROUND

Ensure all connectors are reconnected.

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Turn the ignition on.

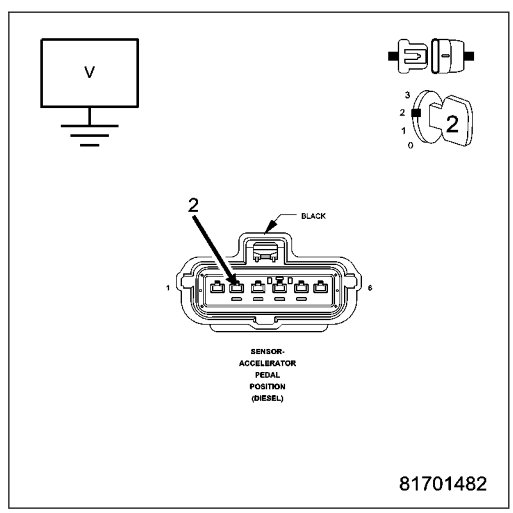
Measure the voltage of the APP Sensor #2 5-Volt Supply circuit.

**Is the voltage below 4.6 volts?**

**Yes** >> Replace the Accelerator Pedal Position Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3



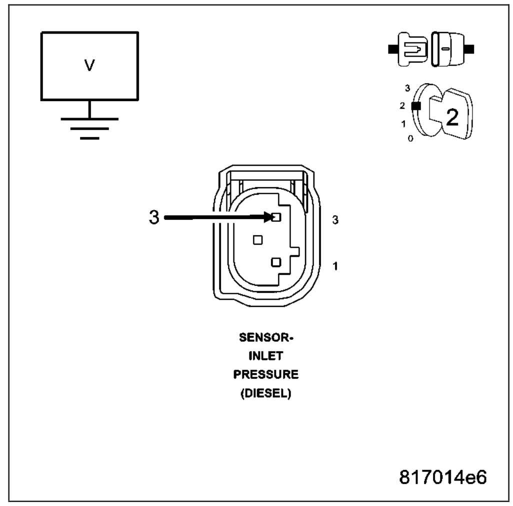
## 3. INLET PRESSURE SENSOR SHORTED TO GROUND

Turn the ignition off.

Disconnect the Inlet Pressure Sensor harness connector.

Turn the ignition on.

Measure the voltage of the Inlet Pressure Sensor 5-Volt Supply circuit.



**Is the voltage below 4.6 volts?**

**Yes** >> Replace the Inlet Pressure Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

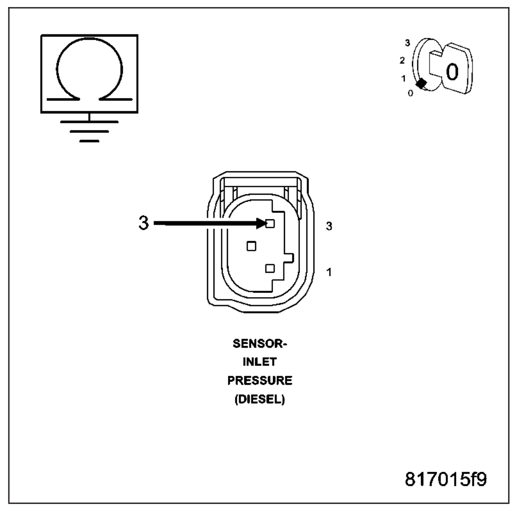
Turn the ignition off.

Disconnect the Inlet Pressure Sensor harness connector.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Inlet Pressure Sensor 5-Volt Supply circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 5

**No** >> Repair the 5-Volt Supply circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. WIRING INSPECTION

Turn the ignition off.

Inspect the Inlet Pressure Sensor 5-Volt supply circuit between the Inlet Pressure Sensor harness connector and the ECM harness connector for possible shorts to other circuits.

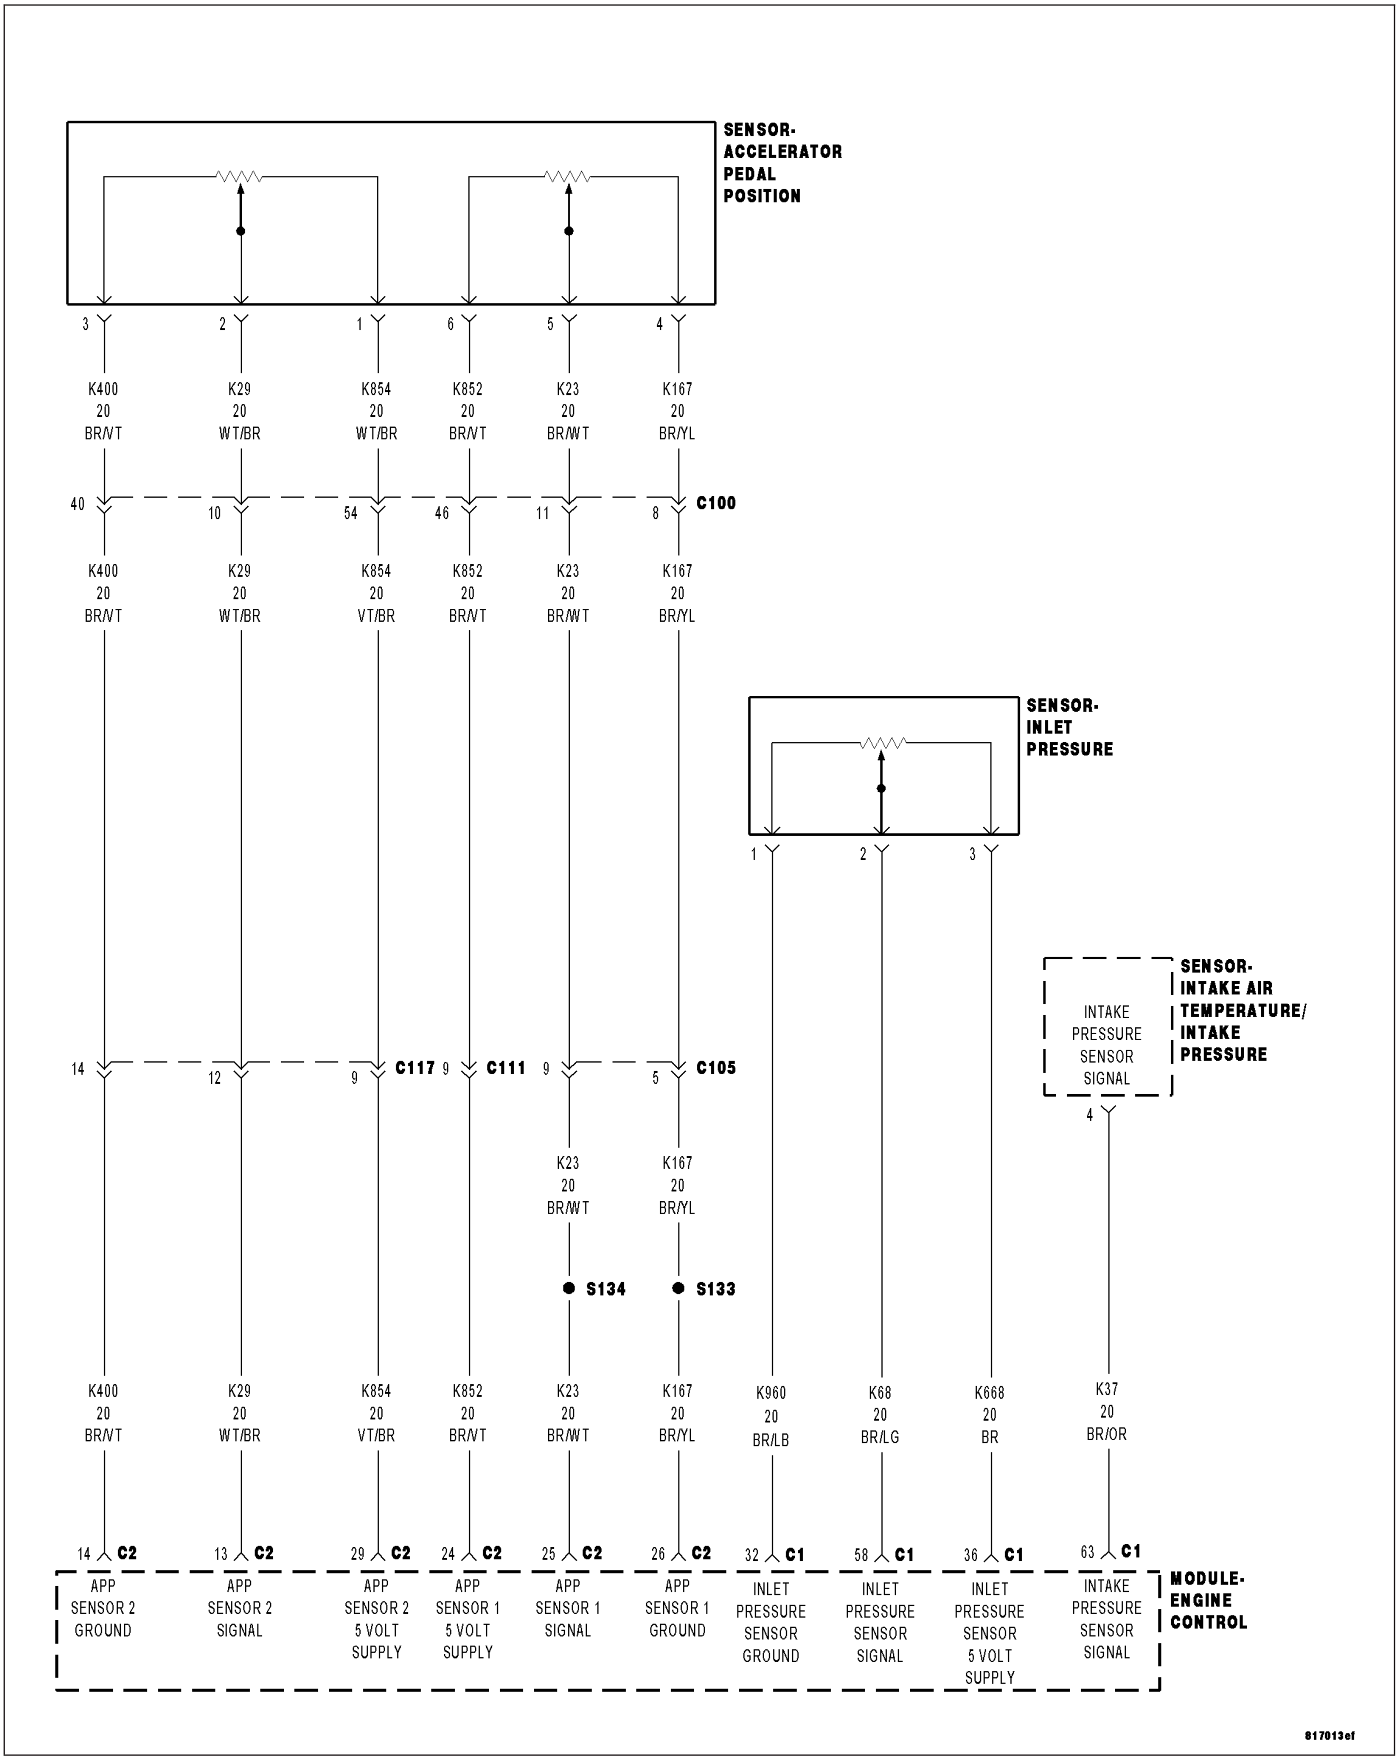
Inspect the APP Sensor #1 5-Volt supply circuit between the APP Sensor harness connector and the ECM harness connector for possible shorts to other circuits.

**Were any problems found?**

**Yes** >> Repair shorted circuit as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0697-SENSOR SUPPLY 3 VOLTAGE TOO HIGH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects a short to voltage for 0.1 second on the Sensor Supply #3 circuit which supplies 5-volts to the Inlet Pressure Sensor and the APP Sensor #2.

| Possible Causes |
|---|
| WIRING INSPECTION |
| INTERMITTENT CONDITION |
| APP SENSOR #2 5 VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE |
| INLET PRESSURE SENSOR 5 VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Turn the ignition off for 10 seconds.

Turn the ignition on.

Monitor the scan tool for ECM DTCs.

**Did this DTC reset?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. APP #2 SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the Accelerator Pedal Position Sensor harness connector.

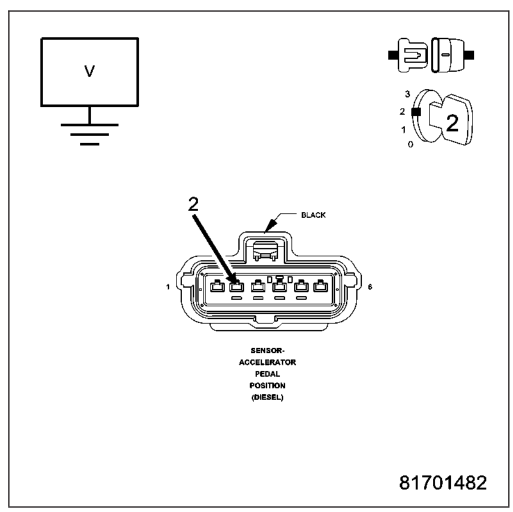
Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage on the Accelerator Pedal Position Sensor #2 5-Volt Supply circuit.



**NOTE: Remove the jumper wire and reinstall the ASD Relay.**

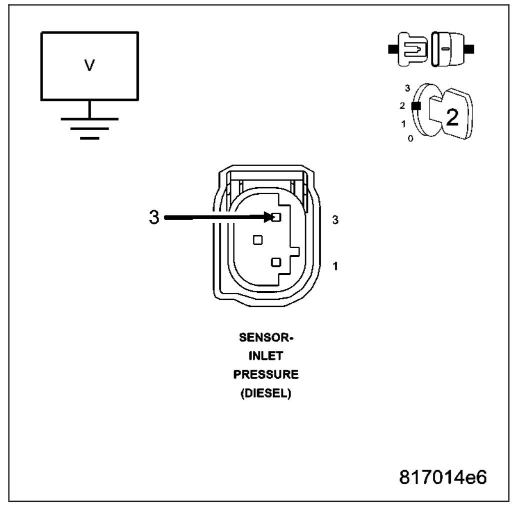
**Is the voltage below 1.0 volt?**

**Yes** >> Go To 3

**No** >> Repair the APP #2 5-Volt Supply circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. INLET PRESSURE SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the Inlet Pressure Sensor harness connector.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage on the Inlet Pressure Sensor 5-Volt Supply circuit.

**NOTE: Remove the jumper wire and reinstall the ASD Relay.**

**Is the voltage below 1.0 volt?**

**Yes** >> Go To 4

**No** >> Repair the Inlet Pressure Sensor 5-Volt Supply circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. WIRING INSPECTION

Turn the ignition off.

Inspect the Inlet Pressure Sensor 5-Volt supply circuit between the Inlet Pressure Sensor harness connector and the ECM harness connector for possible shorts to other circuits.

Inspect the APP Sensor #2 5-Volt supply circuit between the APP Sensor harness connector and the ECM harness connector for possible shorts to other circuits.

**Were any problems found?**

**Yes** >> Repair shorted circuit as necessary.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P0700-TCM DTC

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM recieves a CAN Bus message indicating the presence of a DTC in the TCM.

| Possible Causes |
|---|
| VERIFY CURRENT DTC |

## Diagnostic Test

### 1. VERIFY CURRENT DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: This code was set in the ECM by the Transmission Control Module to indicate a transmission fault. Diagnosis of transmission faults should be done using the Transmission Diagnostic Information.**

**NOTE: When repairs have been completed, the ECM and TCM must have codes cleared.**

Turn the ignition on.

With the scan tool, erase ECM DTCs only.

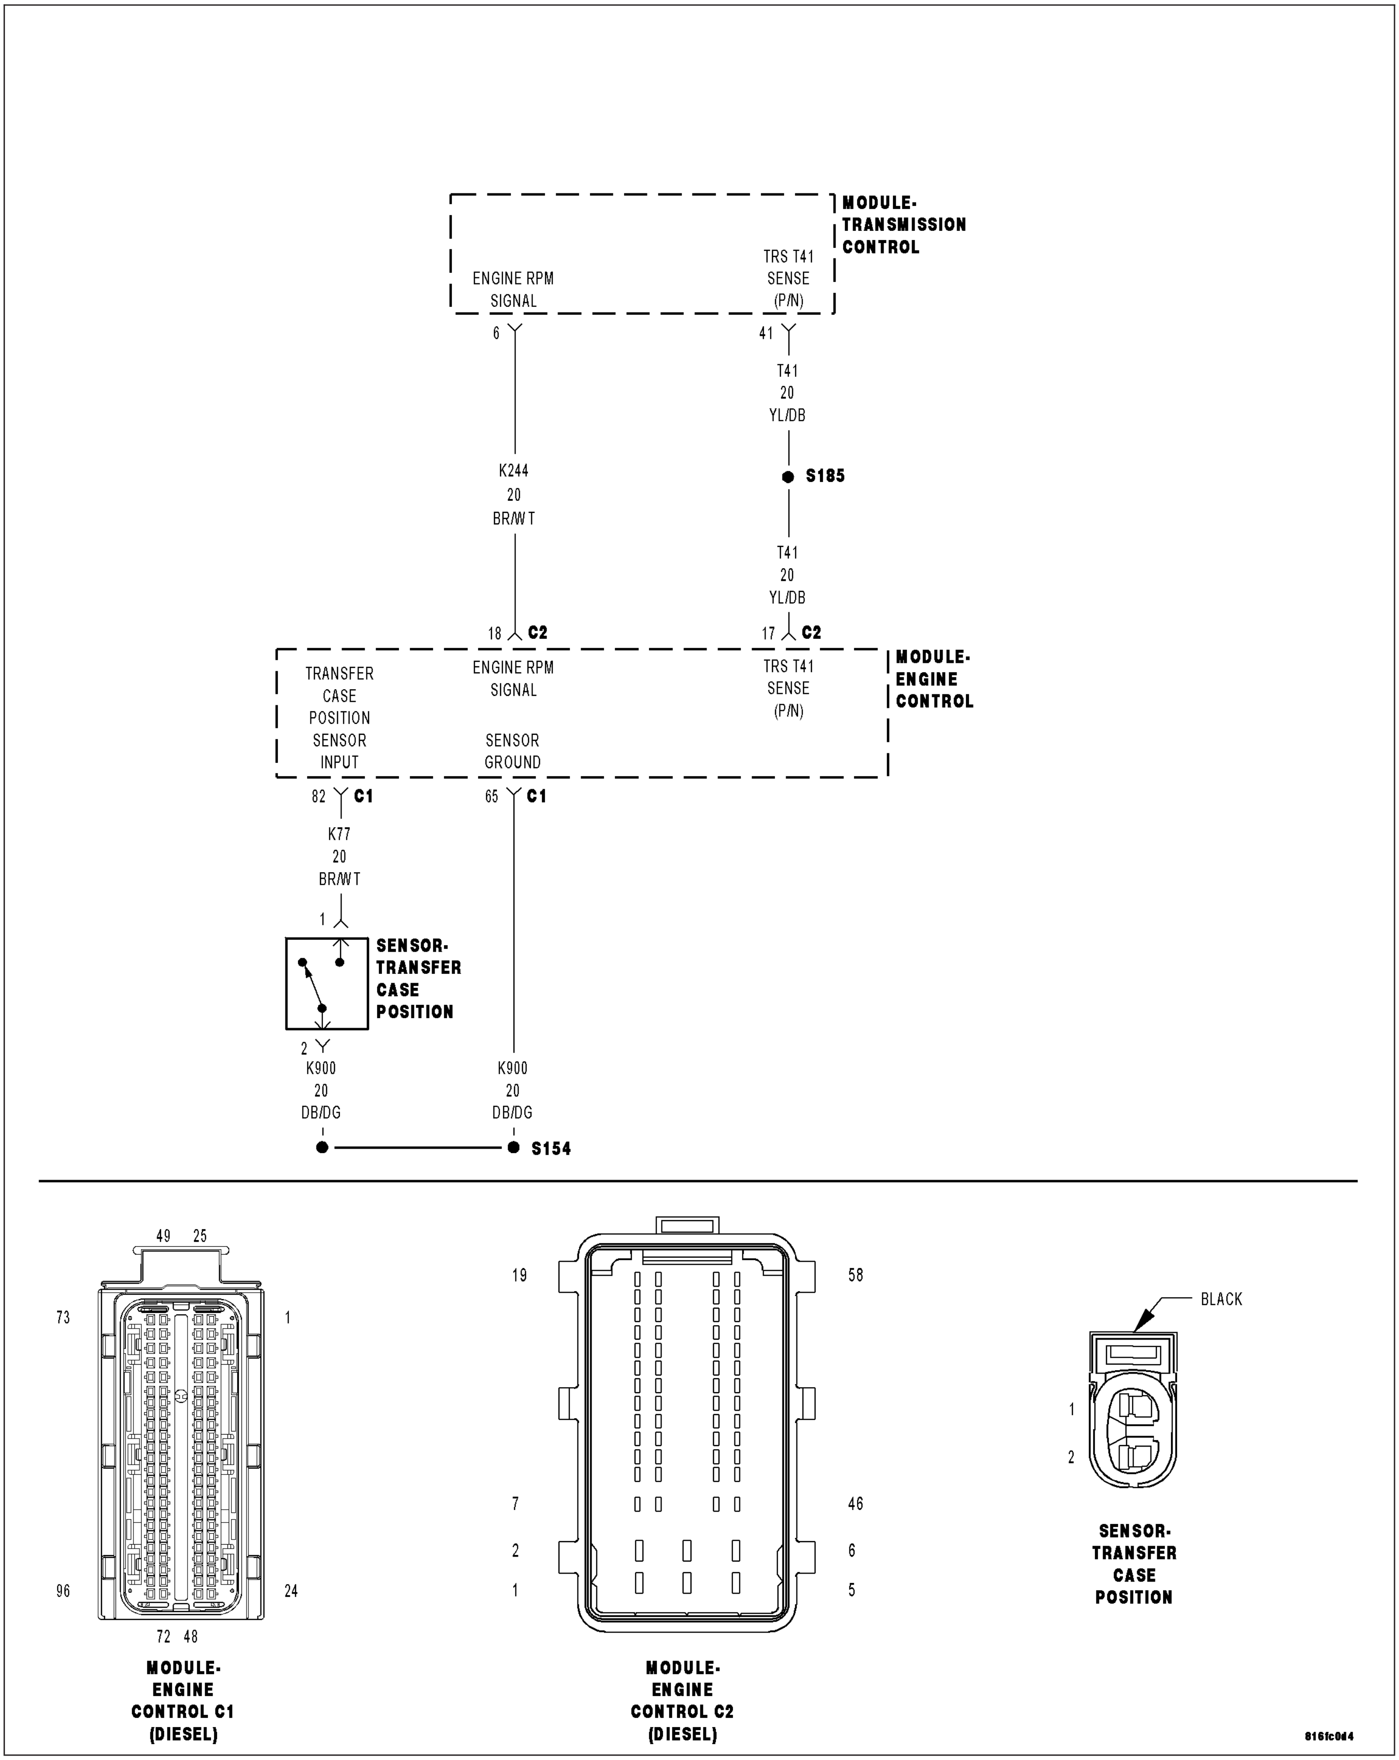
With the scan tool, read ECM DTCs.

**Are there any TCM DTCs present in the ECM?**

**Yes** >> Refer to Transmission Diagnostic Information for the related symptom(s).
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P0836-TRANSFER CASE POSITION SENSOR PLAUSIBILITY



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on. No other T-Case Position Sensor DTC's present.
- **Set Condition:**
  The ECM detects a voltage signal from the transfer case switch that does not fall into a valid switch position voltage range.

| Possible Causes |
|---|
| TRANSFER CASE POSITION SENSOR |
| INTERMITTENT WIRING AND CONNECTORS |
| TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT OPEN |
| TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO GROUND |
| TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO VOLTAGE |
| TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO SENSOR GROUND CIRCUIT |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECKING FOR CURRENT DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: The vehicle speedometer must be operational for the result of this test to be valid.**

With the scan tool, record and erase DTCs.

Start the engine and cycle the Transfer Case through all positions.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 2

**No** >> Go To 7

### 2. TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO VOLTAGE

Turn the ignition off to the lock position.

Disconnect the ECM harness connectors.

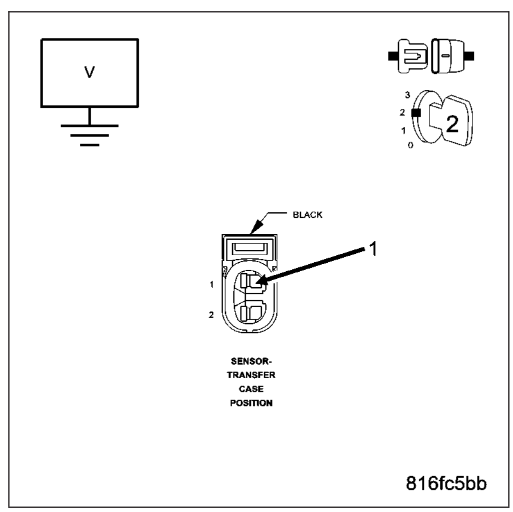
Disconnect the Transfer Case Position Sensor harness connector.

Remove the ASD Relay.

Connect a jumper wire between cavities 30 and 87 of the ASD Relay connector in the PDC.

Turn the ignition on.

Measure the voltage of the Transfer Case Position Sensor Signal circuit.



**Is the voltage above 1.0 volt?**

**Yes** >> Repair the Transfer Case Position Sensor Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off to the lock position.

Disconnect the ECM harness connectors.

Disconnect the Transfer Case Position Sensor harness connector.

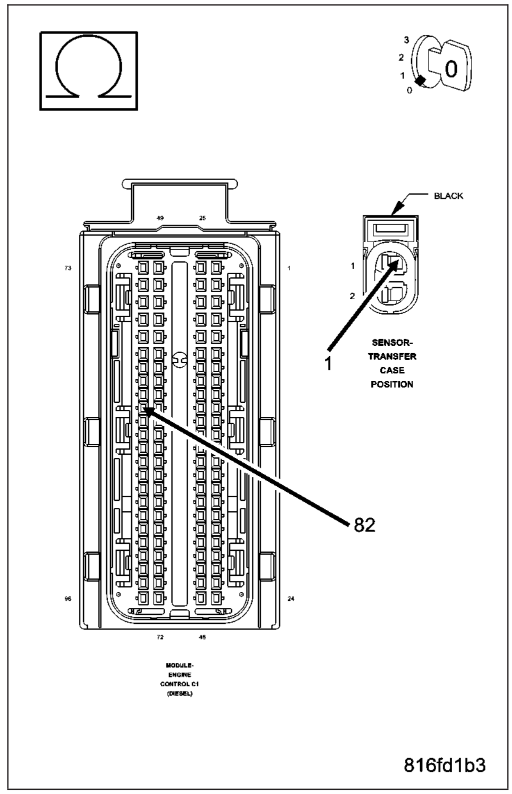
Measure the resistance of the Transfer Case Position Sensor Signal circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Transfer Case Position Sensor Signal circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 4. TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO GROUND

Turn the ignition off to the lock position.

Disconnect the ECM harness connectors.

Disconnect the Transfer Case Position Sensor harness connector.

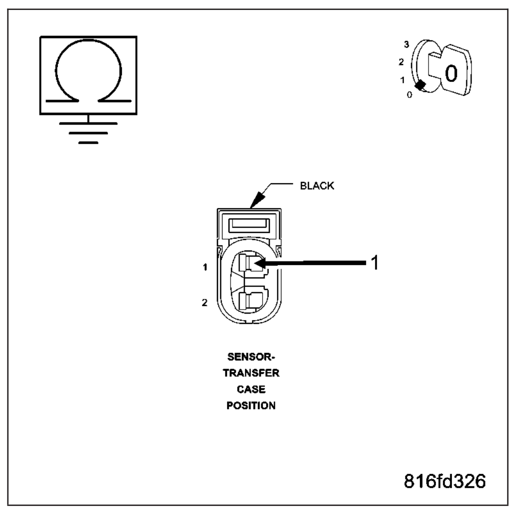
Measure the resistance between ground and the Transfer Case Position Sensor Signal circuit.

**Is the resistance below 1000.0 ohms?**

**Yes** >> Repair the Transfer Case Position Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5



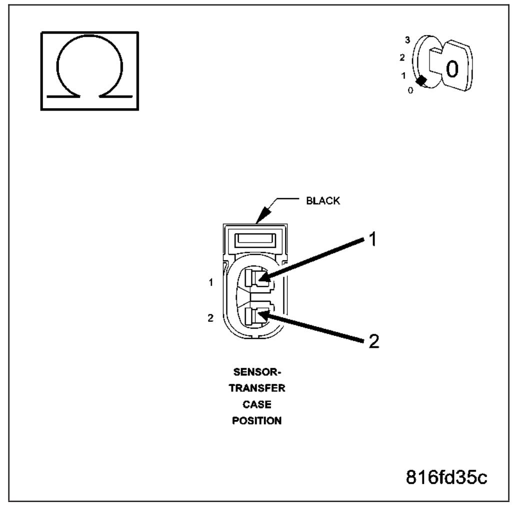
## 5. TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO SENSOR RETURN CIRCUIT

Turn the ignition off to the lock position.

Disconnect the ECM harness connectors.

Disconnect the Transfer Case Position Sensor harness connector.

Measure the resistance between the Transfer Case Position Sensor circuit and the Sensor Ground circuit.



**Is the resistance below 1000.0 ohms?**

**Yes** >> Repair the Transfer Case Position Sensor Signal circuit for a short to the Sensor Ground circuit.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. TRANSFER CASE POSITION SENSOR

Reconnect the ECM harness connectors.

Reconnect the Transfer Case Position Sensor harness connector.

Turn the ignition on.

With the scan tool read the T-case Sensor

Observe the T-case volts on the scan tool while moving the transfer case selector lever in each of the transfer case positions.

**NOTE: When shifting the transfer case selector to each position, the Sensor voltage should result in the following voltages: 2WD 2.64 - 2.80, 4WD Part Time 1.96 - 2.12, 4WD Full Time 1.39 - 1.55, Neutral 0.80 - 0.96, 4WD Low 0.21 - 0.37,**

**Does each position provide the correct voltage?**

**Yes** >> Replace and program the ECM in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Transfer Case Position Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. INTERMITTENT WIRING AND CONNECTORS

The conditions necessary to set this DTC are not present at this time.

Using the schematics as a guide, inspect the wiring and connectors specific to this circuit.

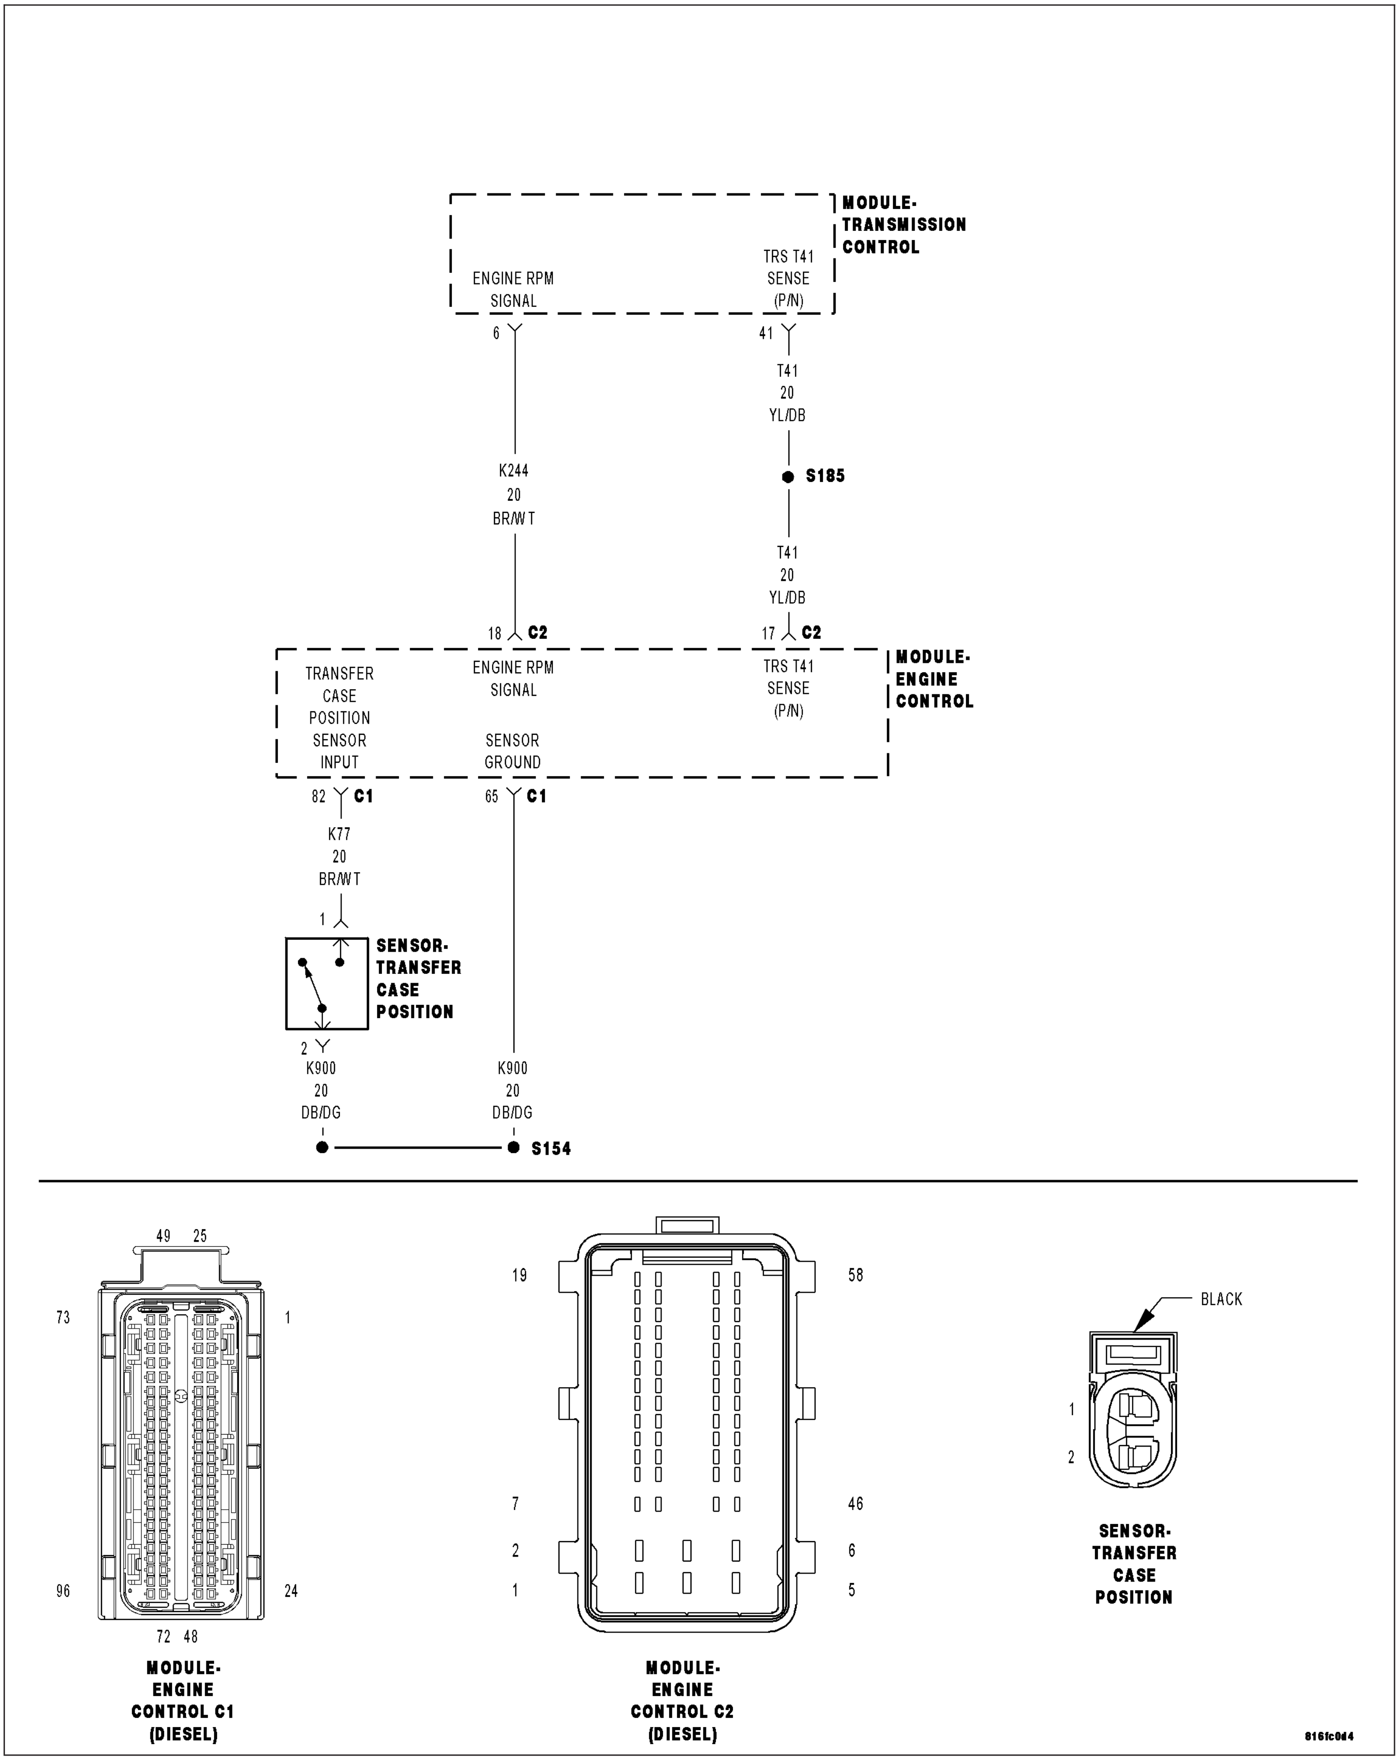
Wiggle the wiring while checking for shorts and open circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P0836-TRANSFER CASE POSITION SIGNAL VOLTAGE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on. No other T-Case Position Sensor DTC's present.
- **Set Condition:**
  The Transfer Case Position Sensor Signal is below 0.14 for 0.5 second.

| Possible Causes |
|---|
| TRANSFER CASE POSITION SENSOR |
| INTERMITTENT WIRING AND CONNECTORS |
| TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT OPEN |
| TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO GROUND |
| TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO VOLTAGE |
| TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO SENSOR GROUND CIRCUIT |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECKING FOR CURRENT DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the DRB at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: The vehicle speedometer must be operational for the result of this test to be valid.**

With the DRBIII®, record and erase DTCs.

Start the engine and cycle the Transfer Case through all positions.

With the DRBIII®, read the ECM DTCs.

**Does the DRBIII® display this DTC?**

**Yes** >> Go To 2

**No** >> Go To 7

### 2. TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO VOLTAGE

Turn the ignition off to the lock position.

Disconnect the ECM harness connectors.

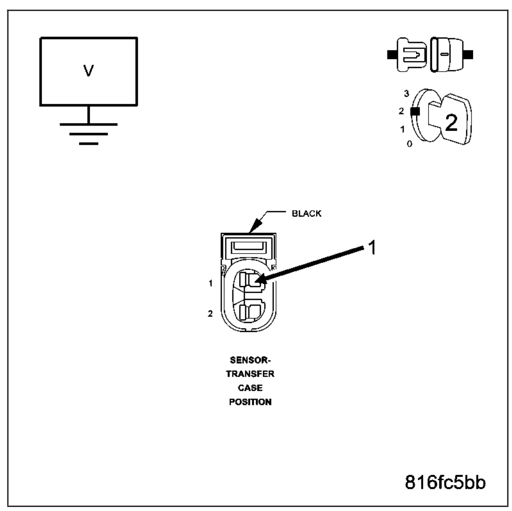
Disconnect the Transfer Case Position Sensor harness connector.

Remove the ASD Relay.

Connect a jumper wire between cavities 30 and 87 of the ASD Relay connector in the PDC.

Turn the ignition on.

Measure the voltage of the Transfer Case Position Sensor Signal circuit.



**Is the voltage above 1.0 volt?**

**Yes** >> Repair the Transfer Case Position Sensor Signal circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off to the lock position.

Disconnect the ECM harness connectors.

Disconnect the Transfer Case Position Sensor harness connector.

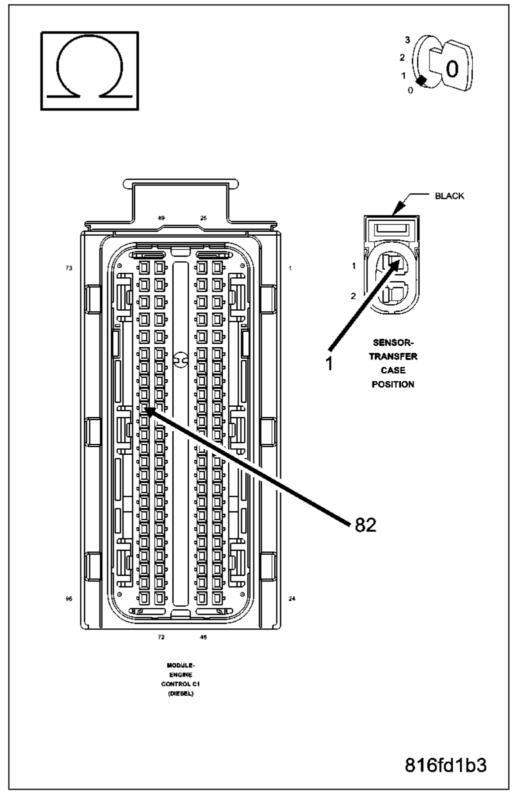
Measure the resistance of the Transfer Case Position Sensor Signal circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Transfer Case Position Sensor Signal circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 4. TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO GROUND

Turn the ignition off to the lock position.

Disconnect the ECM harness connectors.

Disconnect the Transfer Case Position Sensor harness connector.

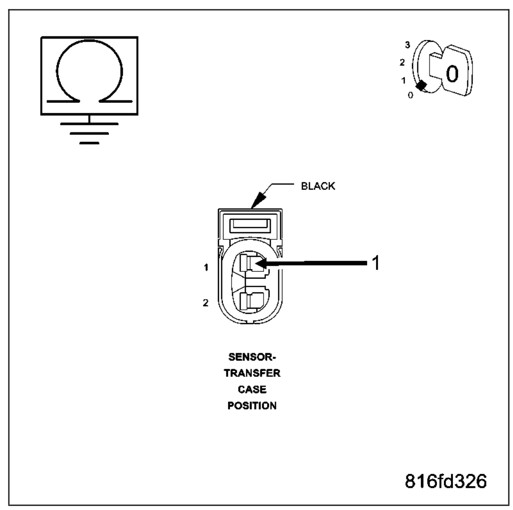
Measure the resistance between ground and the Transfer Case Position Sensor Signal circuit.

**Is the resistance below 1000.0 ohms?**

**Yes** >> Repair the Transfer Case Position Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5



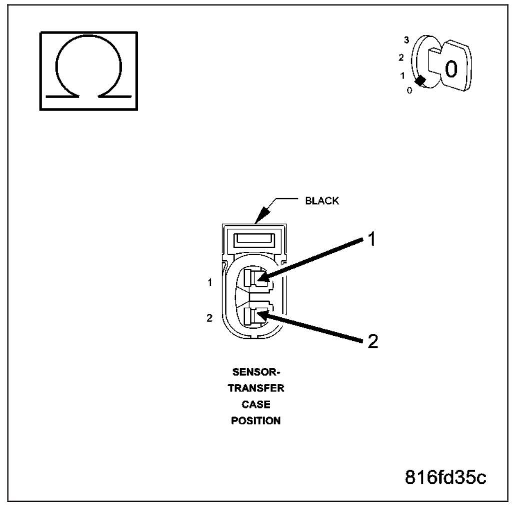
## 5. TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO SENSOR RETURN CIRCUIT

Turn the ignition off to the lock position.

Disconnect the ECM harness connectors.

Disconnect the Transfer Case Position Sensor harness connector.

Measure the resistance between the Transfer Case Position Sensor circuit and the Sensor Ground circuit.



**Is the resistance below 1000.0 ohms?**

**Yes** >> Repair the Transfer Case Position Sensor Signal circuit for a short to the Sensor Ground circuit.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. TRANSFER CASE POSITION SENSOR

Reconnect the ECM harness connectors.

Reconnect the Transfer Case Position Sensor harness connector.

Turn the ignition on.

With the DRBIII® read the T-case Sensor

Observe the T-case volts on the DRB while moving the transfer case selector lever in each of the transfer case positions.

**NOTE: When shifting the transfer case selector to each position, the Sensor voltage should result in the following voltages: 2WD 2.64 - 2.80, 4WD Part Time 1.96 - 2.12, 4WD Full Time 1.39 - 1.55, Neutral 0.80 - 0.96, 4WD Low 0.21 - 0.37,**

**Does each position provide the correct voltage?**

**Yes** >> Replace and program the ECM in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Transfer Case Position Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. INTERMITTENT WIRING AND CONNECTORS

The conditions necessary to set this DTC are not present at this time.

Using the schematics as a guide, inspect the wiring and connectors specific to this circuit.

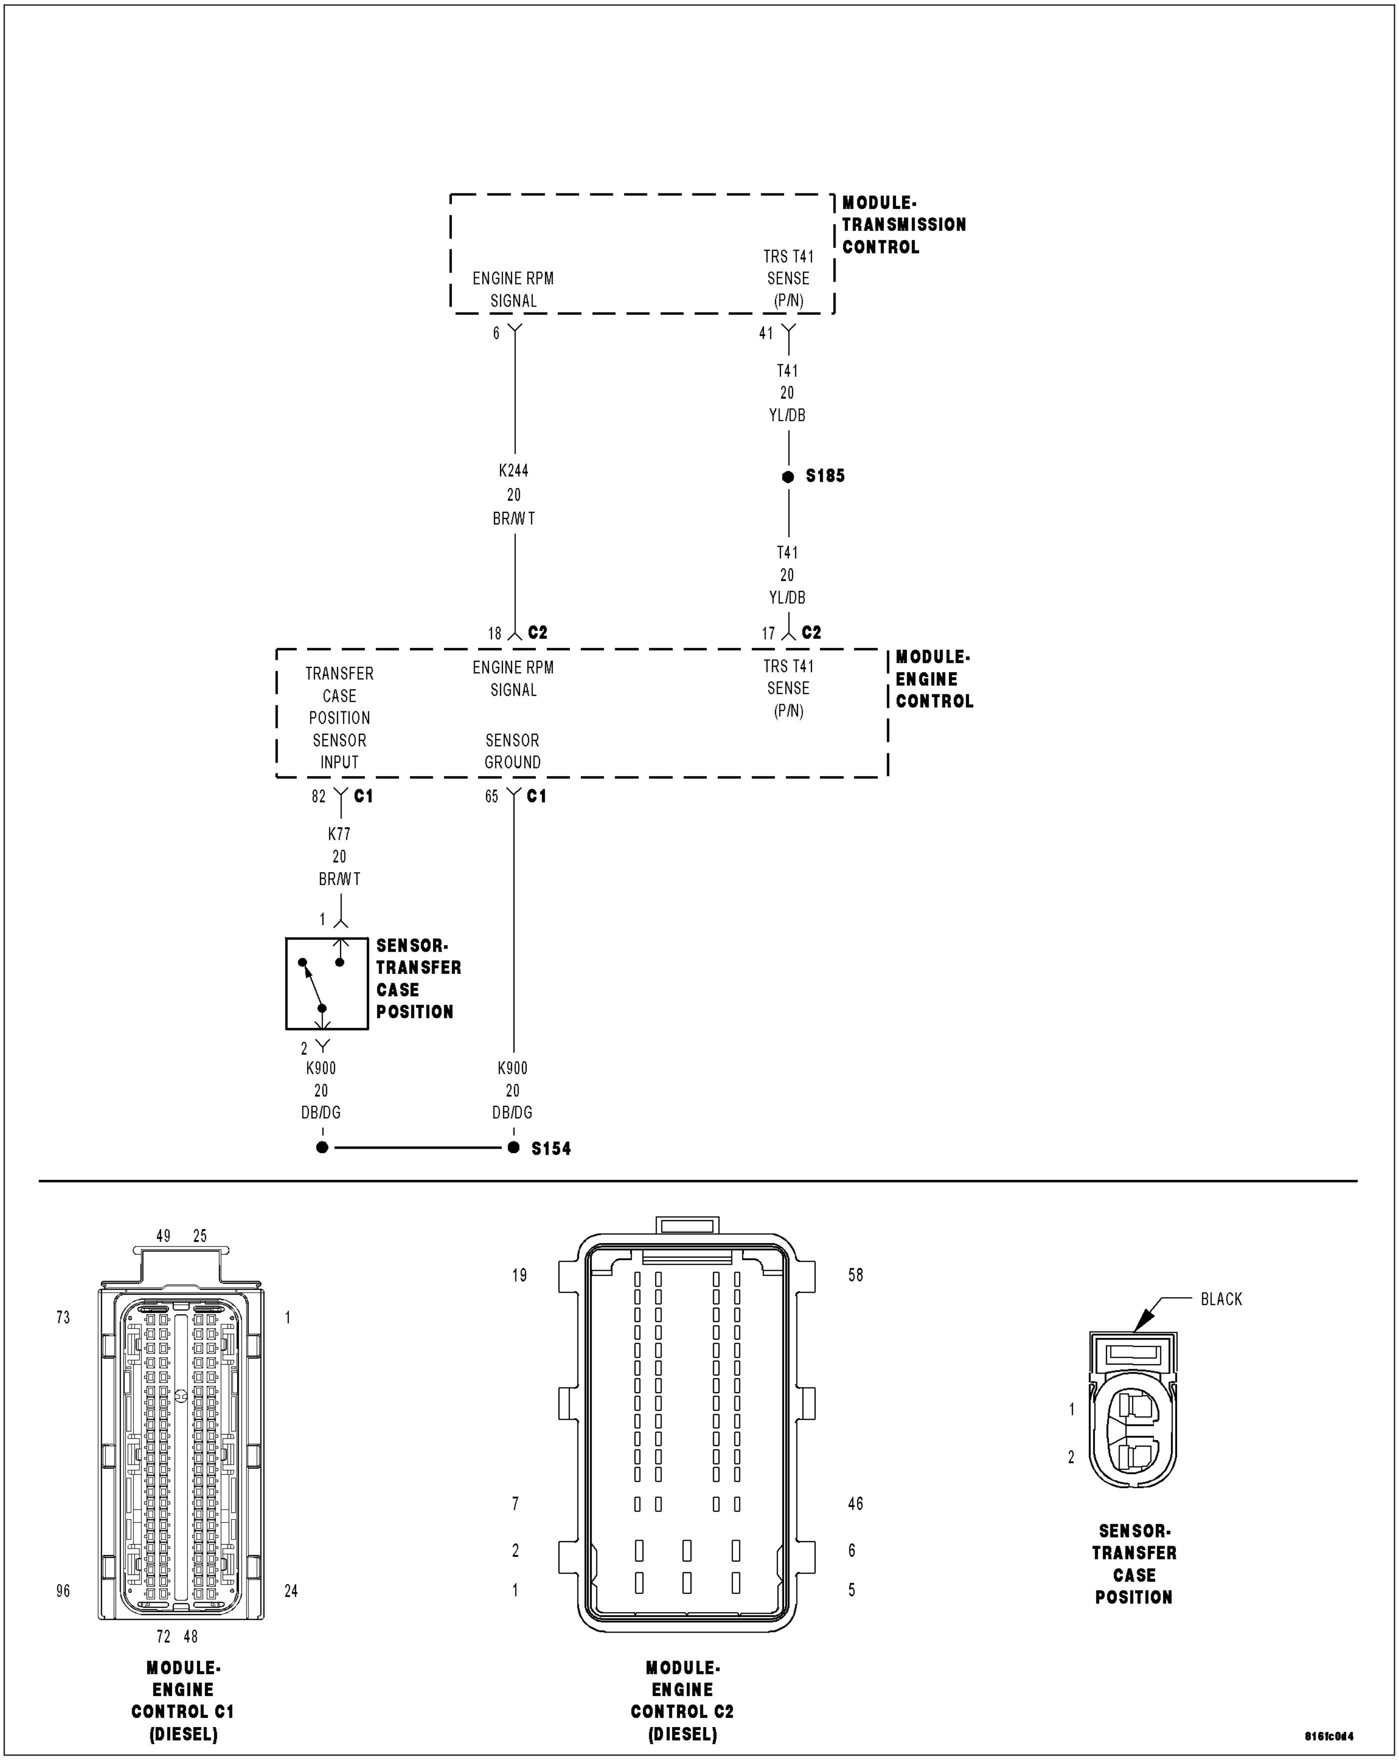
Wiggle the wiring while checking for shorts and open circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

# P0836-TRANSFER CASE POSITION SENSOR PLAUSIBILITY



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on. No other T-Case Position Sensor DTC's present.
- **Set Condition:**
  The ECM detects a voltage signal from the transfer case switch that does not fall into a valid switch position voltage range.

| Possible Causes |
|---|
| TRANSFER CASE POSITION SENSOR |
| INTERMITTENT WIRING AND CONNECTORS |
| TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT OPEN |
| TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO GROUND |
| TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO VOLTAGE |
| TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO SENSOR GROUND CIRCUIT |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECKING FOR CURRENT DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the DRB at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: The vehicle speedometer must be operational for the result of this test to be valid.**

With the scan tool, record and erase DTCs.

Start the engine and cycle the Transfer Case through all positions.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 2

**No** >> Go To 7

### 2. TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO VOLTAGE

Turn the ignition off to the lock position.

Disconnect the ECM harness connectors.

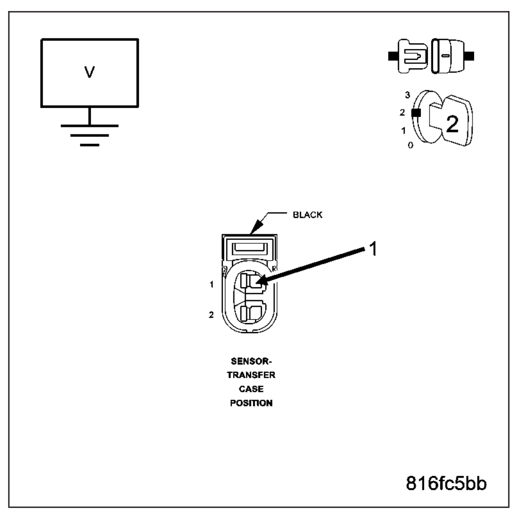
Disconnect the Transfer Case Position Sensor harness connector.

Remove the ASD Relay.

Connect a jumper wire between cavities 30 and 87 of the ASD Relay connector in the PDC.

Turn the ignition on.

Measure the voltage of the Transfer Case Position Sensor Signal circuit.



**Is the voltage above 1.0 volt?**

**Yes** >> Repair the Transfer Case Position Sensor Signal circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off to the lock position.

Disconnect the ECM harness connectors.

Disconnect the Transfer Case Position Sensor harness connector.

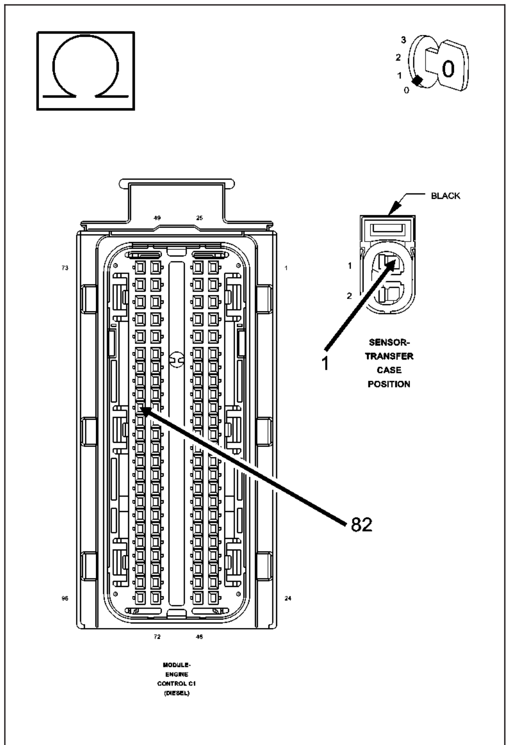
Measure the resistance of the Transfer Case Position Sensor Signal circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Transfer Case Position Sensor Signal circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



816fd1b3

## 4. TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO GROUND

Turn the ignition off to the lock position.

Disconnect the ECM harness connectors.

Disconnect the Transfer Case Position Sensor harness connector.

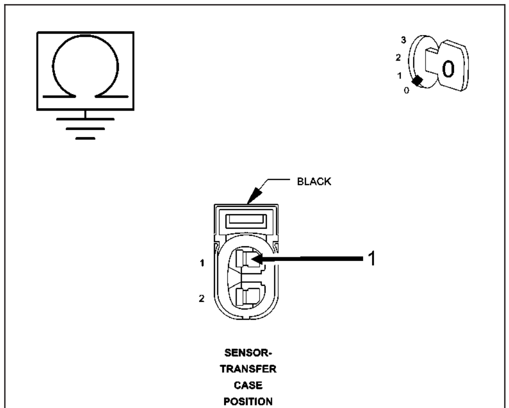
Measure the resistance between ground and the Transfer Case Position Sensor Signal circuit.

**Is the resistance below 1000.0 ohms?**

**Yes** >> Repair the Transfer Case Position Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5



816fd326

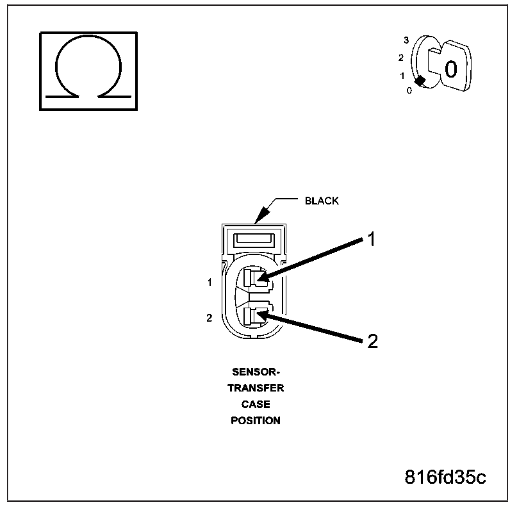
## 5. TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO SENSOR RETURN CIRCUIT

Turn the ignition off to the lock position.

Disconnect the ECM harness connectors.

Disconnect the Transfer Case Position Sensor harness connector.

Measure the resistance between the Transfer Case Position Sensor circuit and the Sensor Ground circuit.



**Is the resistance below 1000.0 ohms?**

**Yes** >> Repair the Transfer Case Position Sensor Signal circuit for a short to the Sensor Ground circuit.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. TRANSFER CASE POSITION SENSOR

Reconnect the ECM harness connectors.

Reconnect the Transfer Case Position Sensor harness connector.

Turn the ignition on.

Use the scan tool to read the T-case Sensor voltage.

Observe the T-case volts on the scan tool while moving the transfer case selector lever in each of the transfer case positions.

**NOTE: When shifting the transfer case selector to each position, the Sensor voltage should result in the following voltages: 2WD 2.64 - 2.80, 4WD Part Time 1.96 - 2.12, 4WD Full Time 1.39 - 1.55, Neutral 0.80 - 0.96, 4WD Low 0.21 - 0.37,**

**Does each position provide the correct voltage?**

**Yes** >> Replace and program the ECM in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Transfer Case Position Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. INTERMITTENT WIRING AND CONNECTORS

The conditions necessary to set this DTC are not present at this time.

Using the schematics as a guide, inspect the wiring and connectors specific to this circuit.

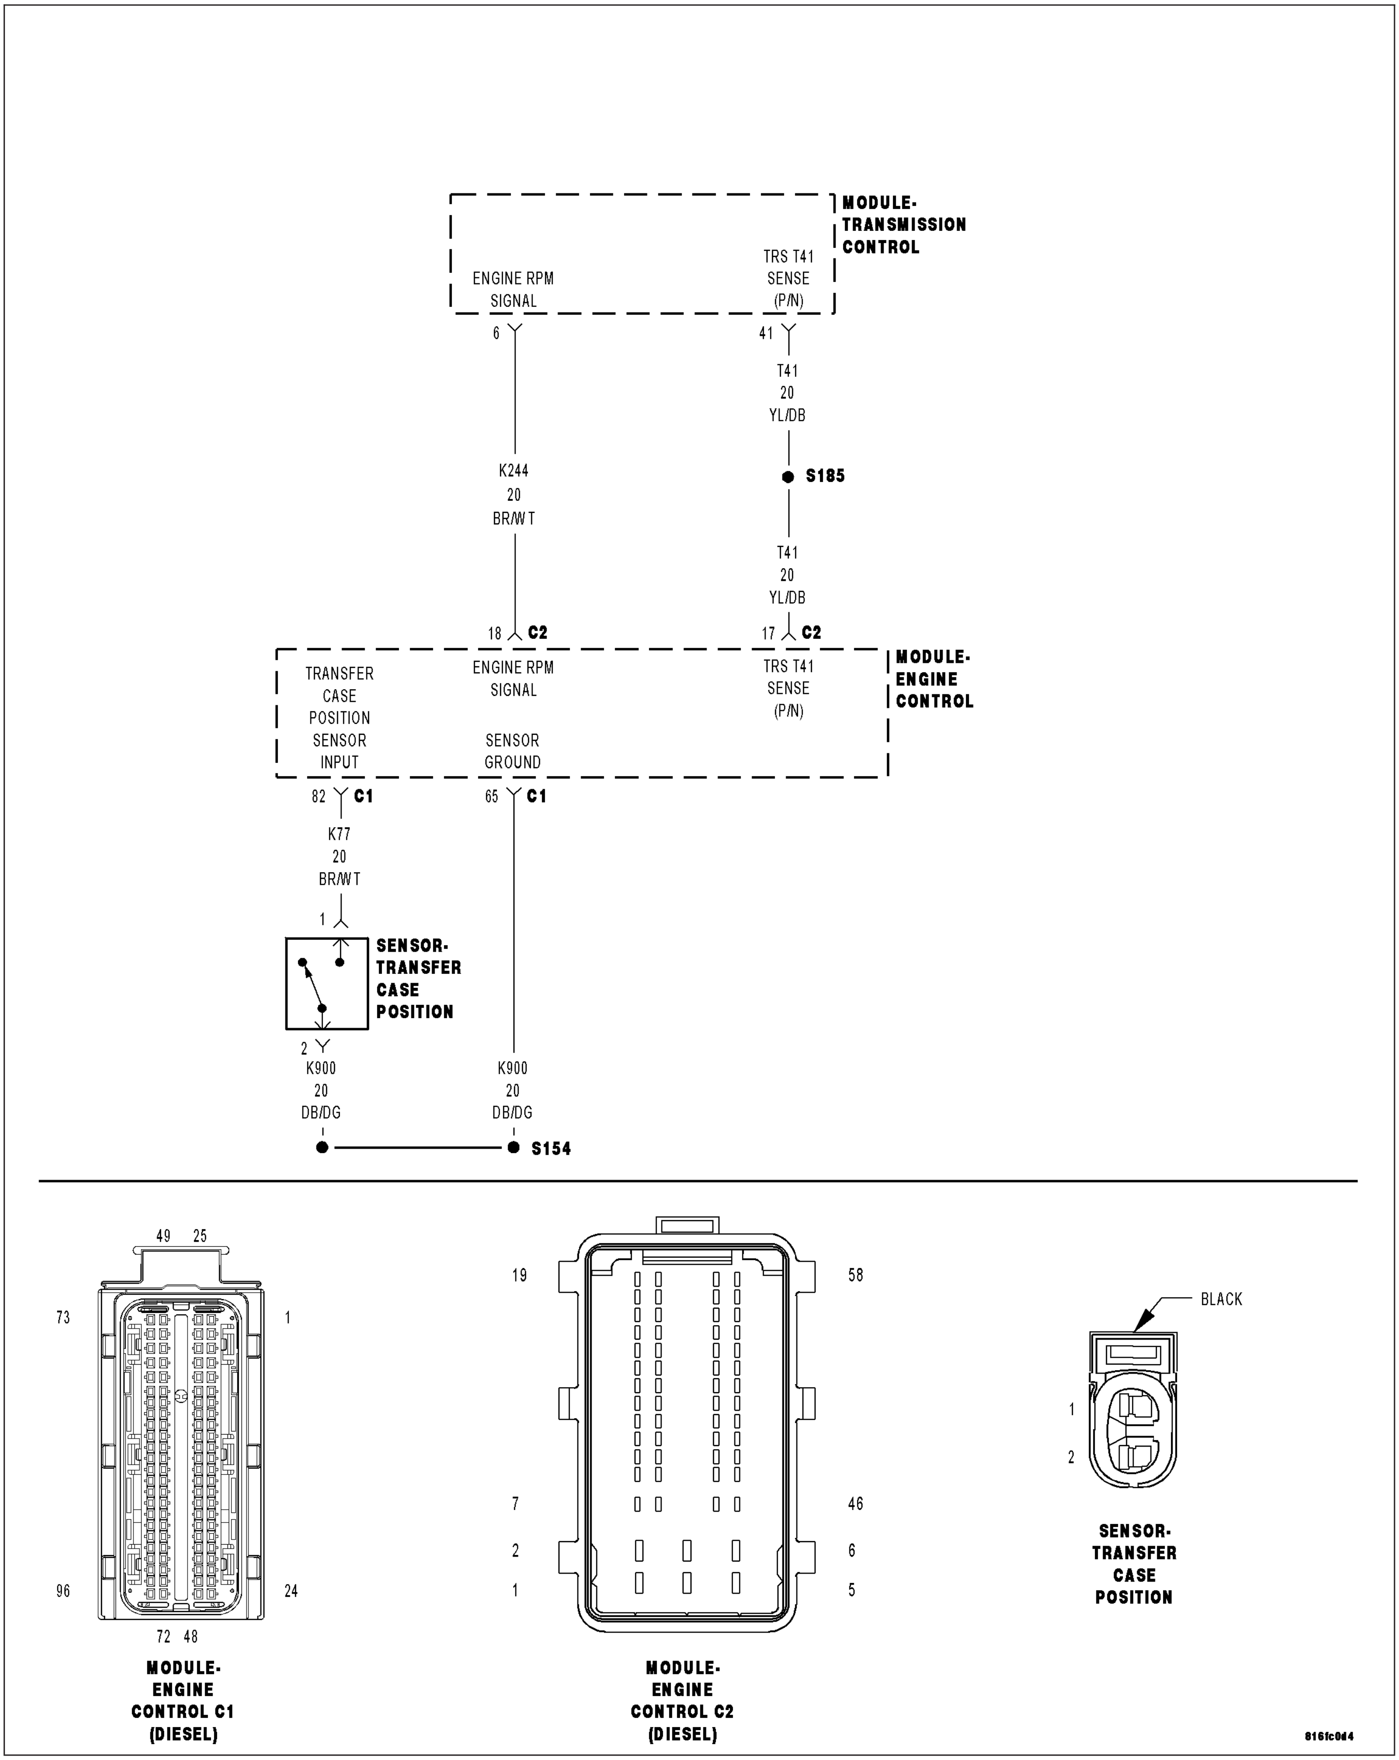
Wiggle the wiring while checking for shorts and open circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P0836-TRANSFER CASE POSITION SENSOR SIGNAL VOLTAGE TOO HIGH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on. No other T-Case Position Sensor DTC's present.
- **Set Condition:**
  The Transfer Case Position Sensor Signal is above 4.8 volts for 0.5 second.

| Possible Causes |
|---|
| TRANSFER CASE POSITION SENSOR |
| INTERMITTENT WIRING AND CONNECTORS |
| TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT OPEN |
| TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO GROUND |
| TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO VOLTAGE |
| TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO SENSOR GROUND CIRCUIT |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECKING FOR CURRENT DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the DRB at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: The vehicle speedometer must be operational for the result of this test to be valid.**

With the scan tool, record and erase DTCs.

Start the engine and cycle the Transfer Case through all positions.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 2

**No** >> Go To 7

### 2. TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO VOLTAGE

Turn the ignition off to the lock position.

Disconnect the ECM harness connectors.

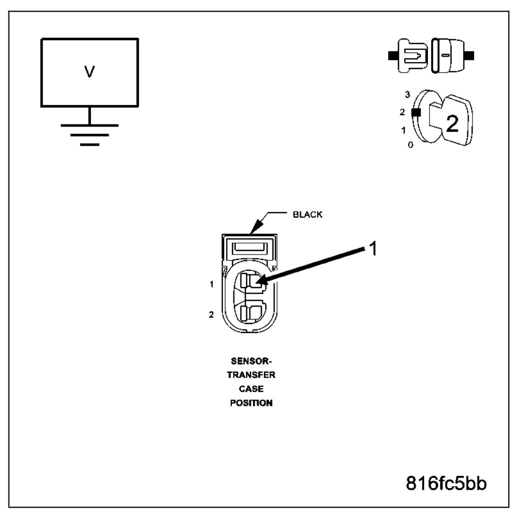
Disconnect the Transfer Case Position Sensor harness connector.

Remove the ASD Relay.

Connect a jumper wire between cavities 30 and 87 of the ASD Relay connector in the PDC.

Turn the ignition on.

Measure the voltage of the Transfer Case Position Sensor Signal circuit.



**Is the voltage above 1.0 volt?**

**Yes** >> Repair the Transfer Case Position Sensor Signal circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

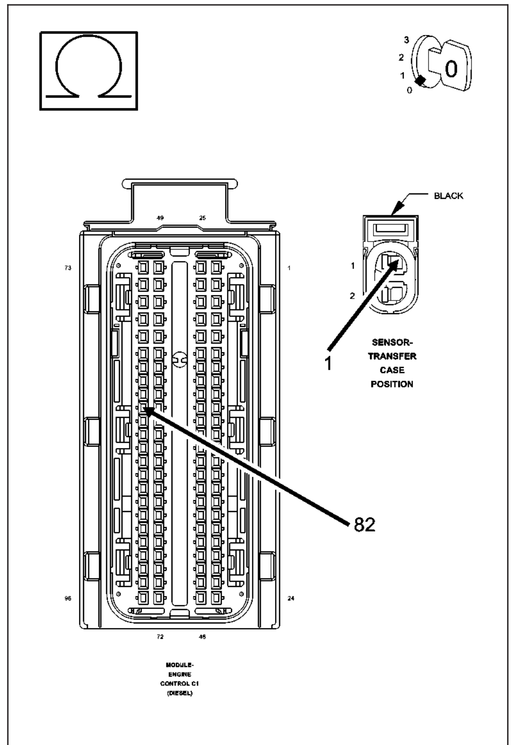
## 3. TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off to the lock position.

Disconnect the ECM harness connectors.

Disconnect the Transfer Case Position Sensor harness connector.

Measure the resistance of the Transfer Case Position Sensor Signal circuit.



816fd1b3

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Transfer Case Position Sensor Signal circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

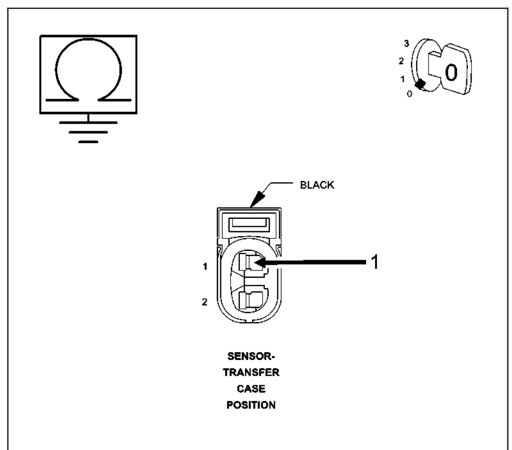
## 4. TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO GROUND

Turn the ignition off to the lock position.

Disconnect the ECM harness connectors.

Disconnect the Transfer Case Position Sensor harness connector.

Measure the resistance between ground and the Transfer Case Position Sensor Signal circuit.



816fd326

**Is the resistance below 1000.0 ohms?**

**Yes** >> Repair the Transfer Case Position Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

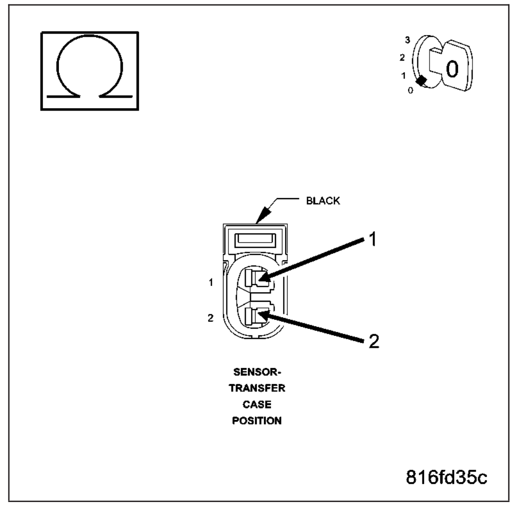
## 5. TRANSFER CASE POSITION SENSOR SIGNAL CIRCUIT SHORT TO SENSOR RETURN CIRCUIT

Turn the ignition off to the lock position.

Disconnect the ECM harness connectors.

Disconnect the Transfer Case Position Sensor harness connector.

Measure the resistance between the Transfer Case Position Sensor circuit and the Sensor Ground circuit.



**Is the resistance below 1000.0 ohms?**

**Yes** >> Repair the Transfer Case Position Sensor Signal circuit for a short to the Sensor Ground circuit.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. TRANSFER CASE POSITION SENSOR

Turn the ignition on.

With the scan tool read the T-case Sensor

Observe the T-case volts on the scan tool while moving the transfer case selector lever in each of the transfer case positions.

**NOTE: When shifting the transfer case selector to each position, the Sensor voltage should result in the following voltages: 2WD 2.64 - 2.80, 4WD Part Time 1.96 - 2.12, 4WD Full Time 1.39 - 1.55, Neutral 0.80 - 0.96, 4WD Low 0.21 - 0.37,**

**Does each position provide the correct voltage?**

**Yes** >> Replace and program the ECM in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Transfer Case Position Sensor.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. INTERMITTENT WIRING AND CONNECTORS

The conditions necessary to set this DTC are not present at this time.

Using the schematics as a guide, inspect the wiring and connectors specific to this circuit.

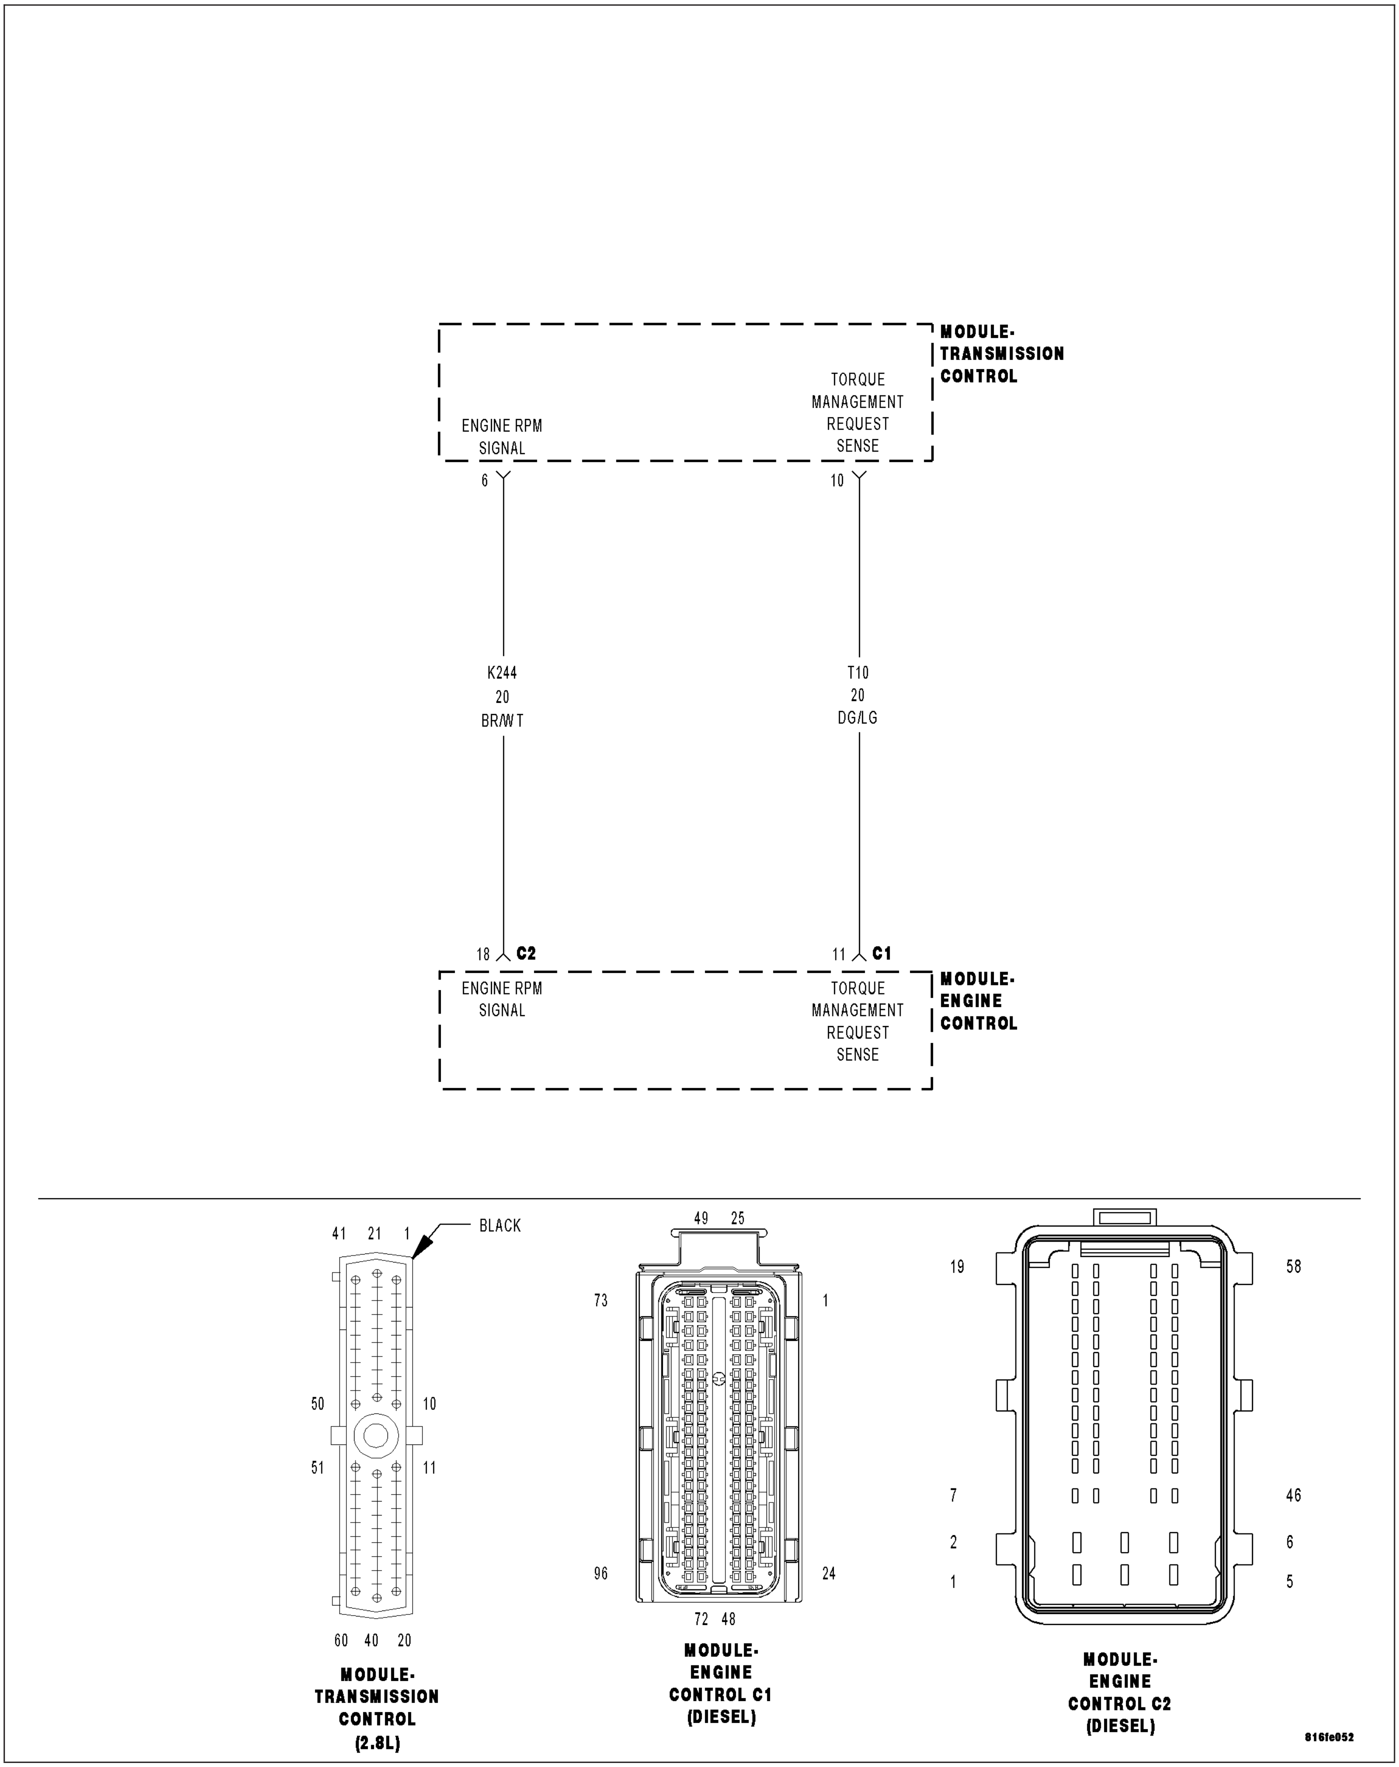
Wiggle the wiring while checking for shorts and open circuits.

**Were there any problems found?**

**Yes** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P0864-TCM TORQUE REDUCTION SIGNAL ERROR



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM detects a malfunction on the Torque Management Request Signal circuit.

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| TORQUE MANAGEMENT REQUEST SIGNAL CIRCUIT OPEN |
| TORQUE MANAGEMENT REQUEST SIGNAL CIRCUIT SHORTED TO GROUND |
| TORQUE MANAGEMENT REQUEST SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| TRANSMISSION CONTROL MODULE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECKING THE TORQUE MANAGEMENT REQUEST SIGNAL

Turn the ignition off.

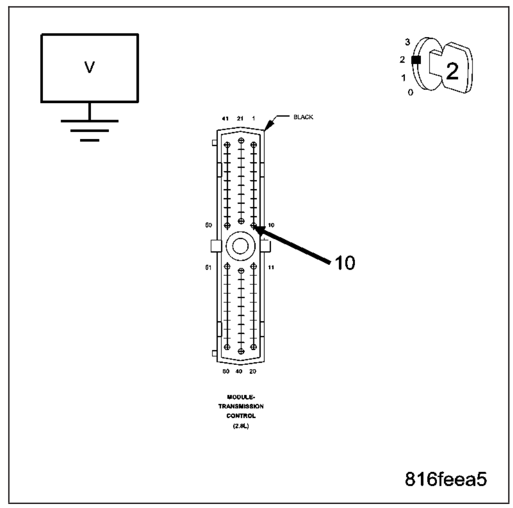
Disconnect the TCM harness connectors.

Turn the ignition on.

Measure the voltage of the Torque Management Request Signal circuit at the TCM harness connector.

While monitoring the voltmeter wiggle the Torque Management Signal wiring and connectors between the ECM and TCM harness connectors.

**Is the voltage steady between 4.5 and 5.5 volts while wiggling the wiring and connectors?**



**Yes** >> Go To 2

**No** >> Go To 3

### 2. TRANSMISSION CONTROL MODULE

Turn the ignition off.

Reconnect all connectors.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Test drive the vehicle.

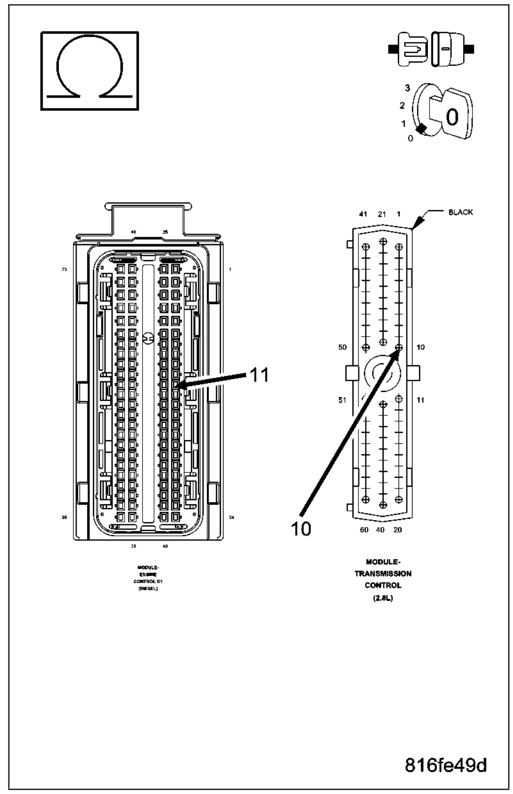
With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Transmission Control Module in accordance with the Service Information. Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## 3. TORQUE MANAGEMENT REQUEST SIGNAL CIRCUIT OPEN



Turn the ignition off.

Disconnect the TCM harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance of the Torque Management Request Signal circuit.

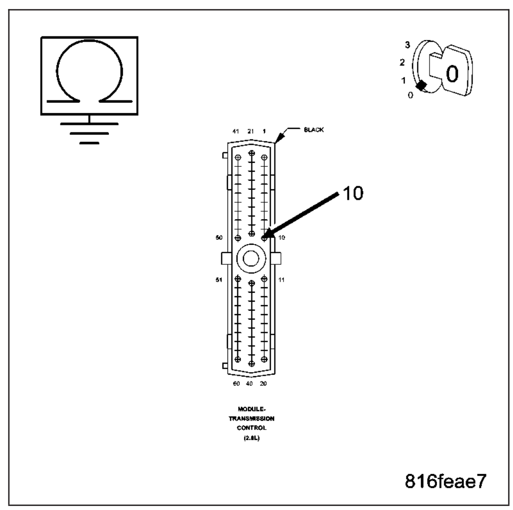
**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Torque Management Request Signal circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. TORQUE MANAGEMENT REQUEST SIGNAL CIRCUIT SHORTED TO GROUND



Turn the ignition off.

Disconnect the TCM harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Torque Management Request Signal circuit.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 5

**No** >> Repair the Torque Management Request Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. TORQUE MANAGEMENT REQUEST SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

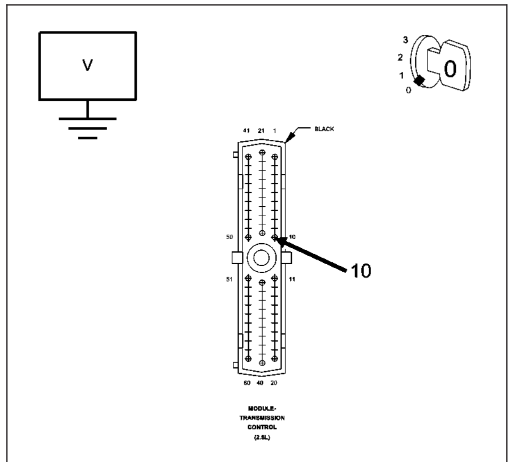
Disconnect the TCM harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Measure the voltage of the Torque Management Request Signal circuit.



816fec20

**Is the voltage below 1.0 volt?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Torque Management Request Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P1001-IGNITION KEY OFF TIMER PERFORMANCE - TOO FAST

For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
| --- |
| BODY CONTROL MODULE |
| BODY CONTROL MODULE POWER AND GROUNDS |
| CHECKING FOR OTHER DTCS |
| CHECKING THE ECT OPERATION |
| IGNITION SWITCH |
| INTERMITTENT CONDITION |

### Diagnostic Test

#### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several ignition on key cycles turning the ignition off for 10 seconds between cycles.

Turn the ignition on.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

#### 2. CHECKING FOR OTHER DTCS

Turn the ignition on.

Does the scan tool display all FCM and BCM DTC's.

**NOTE: Any ECM communication related DTC's in the FCM or BCM must be diagnosed and corrected before continuing to diagnose this DTC.**

**Are there any ECM communication related DTC's in the FCM or BCM?**

**Yes** >> Refer to the Symptom List and repair communication DTC's before continuing.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. CHECKING THE ECT OPERATION

Refer to symptom Checking the ECT Sensor and verify proper ECT Sensor operation.

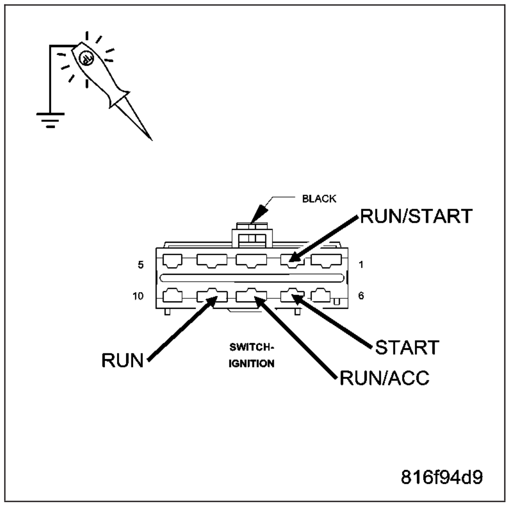
**Is the ECT Sensor operating correctly?**

**Yes** >> Go To 4

**No** >> Repair or replace as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. IGNITION SWITCH

Refer to the Wiring Information and verify proper ignition switch operation. Turn the ignition key to each position and verifying correct voltage output by back probing the corresponding ignition switch harness connector cavity.



**Is the Ignition Switch functioning properly?**

**Yes** >> Go To 5

**No** >> Repair or replace Ignition Switch, wiring or connectors as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. VERIFY THAT THE BCM IS ACTIVE ON THE BUS

With the scan tool, select ECU View.

Verify that the BCM is active on the bus.

**Is the BCM active on the bus?**

**Yes** >> The condition that caused the code to set is not present at this time. Using the wiring diagram/schematic as a guide, inspect the wiring for chafed, pierced, pinched, and partially broken wires and the wiring harness connectors for broken, bent, pushed out, and corroded terminals.
Perform BODY VERIFICATION TEST – VER 1. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE).

**No** >> (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for No Response related diagnostic procedures.

## P1002-IGNITION KEY OFF TIMER PERFORMANCE - TOO SLOW

For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| BODY CONTROL MODULE |
| BODY CONTROL MODULE POWER AND GROUNDS |
| CHECKING FOR OTHER DTCS |
| CHECKING THE ECT OPERATION |
| IGNITION SWITCH |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several ignition on key cycles turning the ignition off for 10 seconds between cycles.

Turn the ignition on.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

Turn the ignition on.

Does the scan tool display all FCM and BCM DTC’s.

**NOTE: Any ECM communication related DTC’s in the FCM or BCM must be diagnosed and corrected before continuing to diagnose this DTC.**

**Are there any ECM communication related DTC’s in the FCM or BCM?**

**Yes** >> Refer to the Symptom List and repair communication DTC’s before continuing.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. CHECKING THE ECT OPERATION

Refer to symptom Checking the ECT Sensor and verify proper ECT Sensor operation.

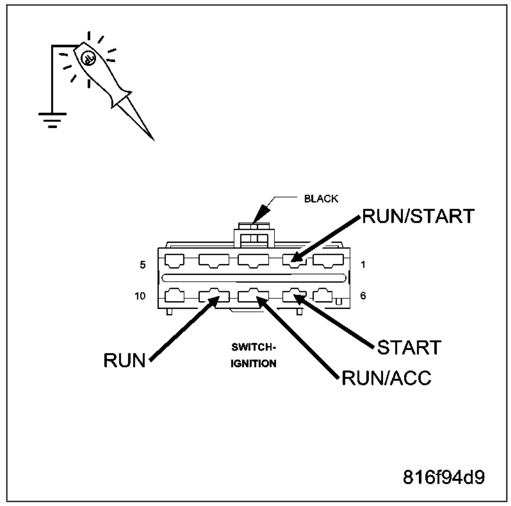
**Is the ECT Sensor operating correctly?**

**Yes** >> Go To 4

**No** >> Repair or replace as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. IGNITION SWITCH

Refer to the Wiring Information and verify proper ignition switch operation. Turn the ignition key to each position and verifying correct voltage output at each ignition switch harness connector cavity.



**Is the Ignition Switch functioning properly?**

**Yes** >> Go To 5

**No** >> Repair or replace Ignition Switch, wiring or connectors as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. VERIFY THAT THE BCM IS ACTIVE ON THE BUS

With the scan tool, select ECU View.

Verify that the BCM is active on the bus.

**Is the BCM active on the bus?**

**Yes** >> The condition that caused the code to set is not present at this time. Using the wiring diagram/schematic as a guide, inspect the wiring for chafed, pierced, pinched, and partially broken wires and the wiring harness connectors for broken, bent, pushed out, and corroded terminals.
Perform BODY VERIFICATION TEST – VER 1. (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - STANDARD PROCEDURE).

**No** >> (Refer to 8 - ELECTRICAL/ELECTRONIC CONTROL MODULES - DIAGNOSIS AND TESTING) for No Response related diagnostic procedures.

## P1101-ACM CRASH SIGNAL RECIEVED

For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
| --- |
| ACM WIRING FAULT |

## Diagnostic Test

### 1. CLEAR DTC

**NOTE: This DTC indicates that the vehicle safety system has deployed the airbag(s).**

Turn the ignition on.

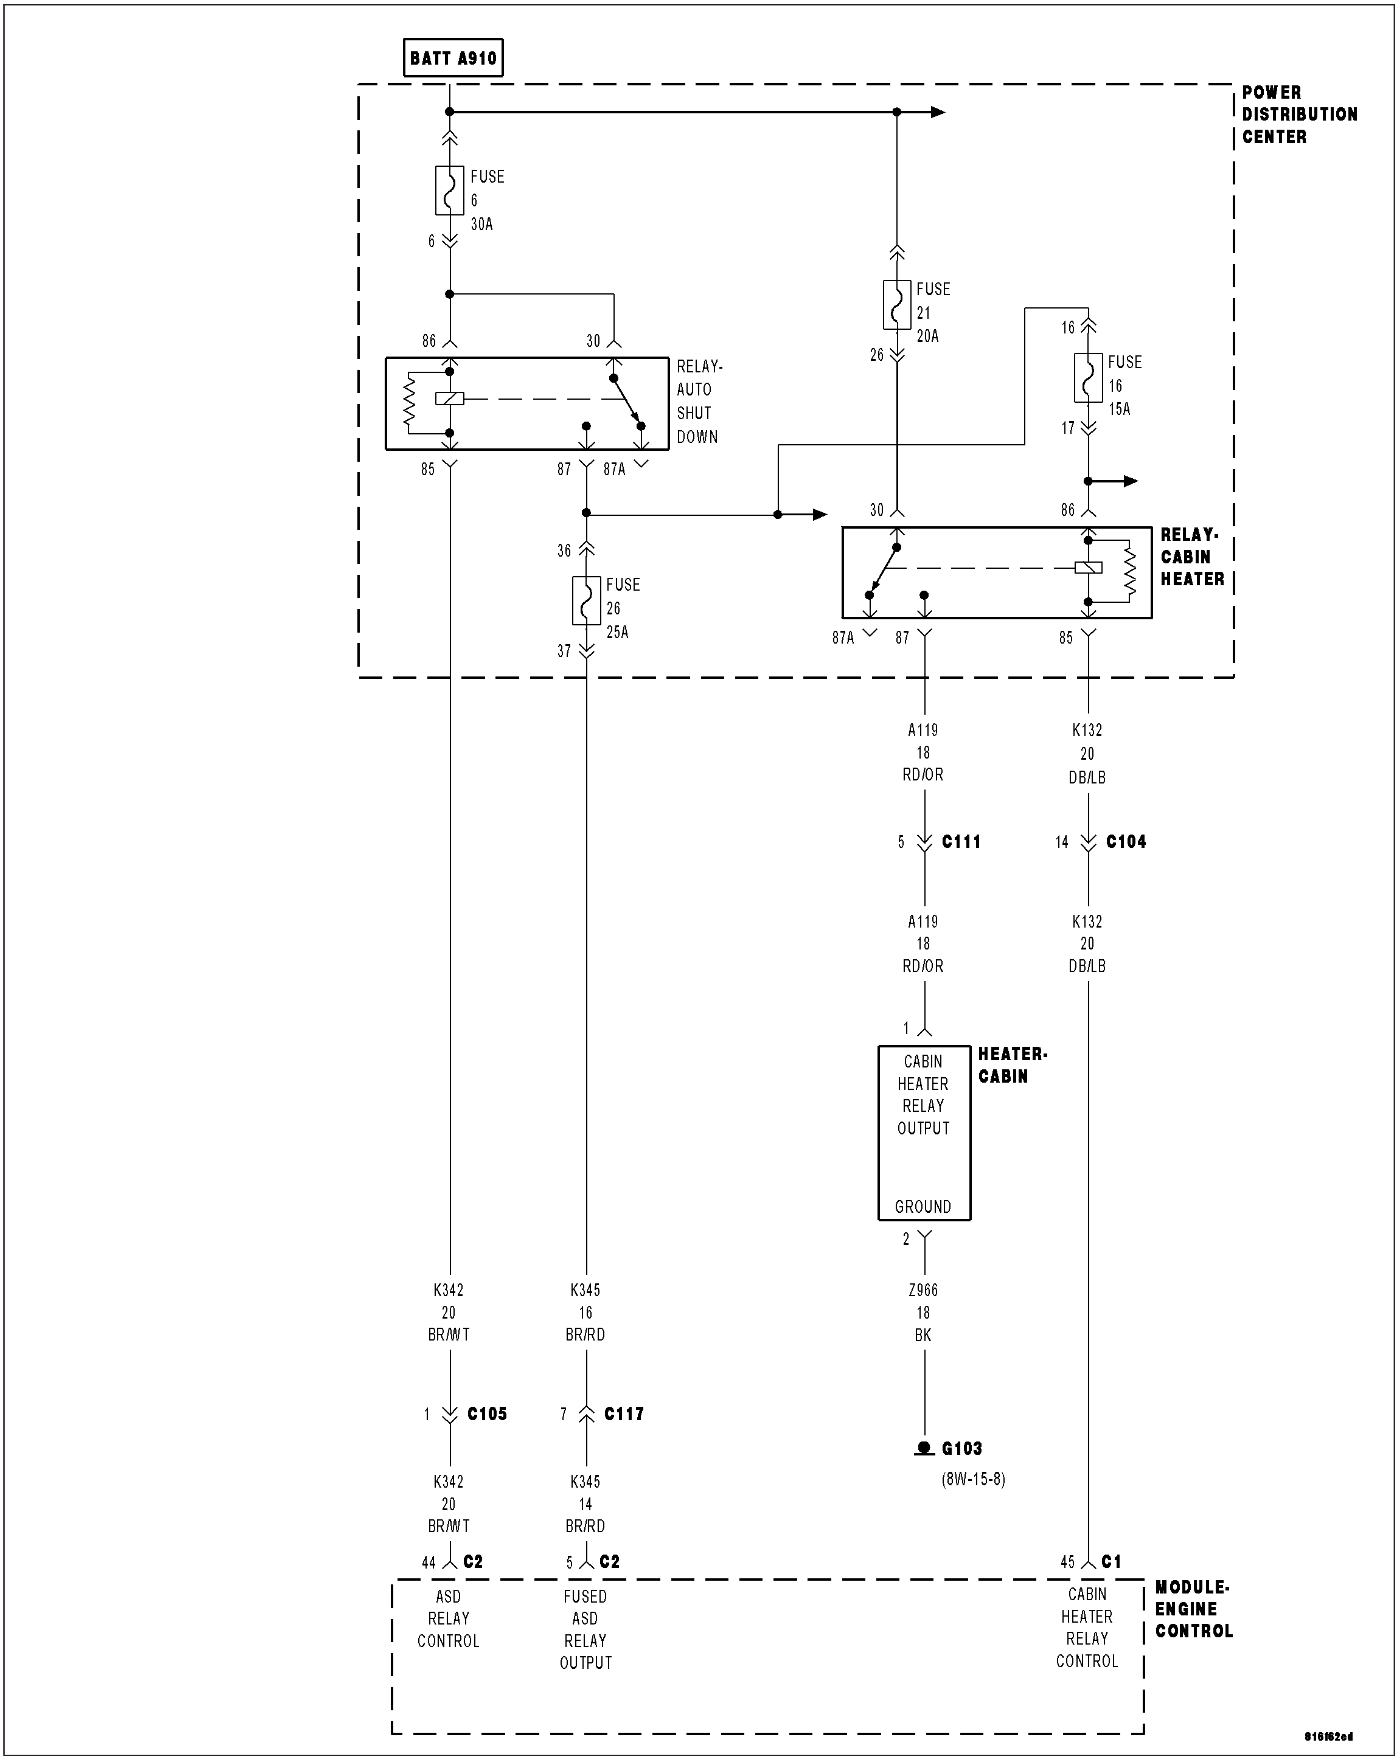
With the scan tool, erase ECM DTCs.

**NOTE: If this DTC sets again inspect the ACM Signal circuit between the ECM harness connector and the ACM harness connector for an intermittent short to ground.**

**View repair.**

**Yes** >> Test complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P1102-VISCOUS/CABIN HEATER RELAY EXCESSIVE CURRENT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Viscous/Cabin Heater Relay command on.
- **Set Condition:**
  The ECM detects excessive current on the Viscous/Cabin Heater Relay Control circuit for 0.5 second.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| CABIN HEATER RELAY |
| CABIN HEATER RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE |
| CABIN HEATER RELAY CONTROL CIRCUIT SHORTED TO GROUND |
| CABIN HEATER RELAY CONTROL CIRCUIT OPEN |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CABIN HEATER RELAY CLICKING

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, actuate the Viscous/Cabin Heater Relay.

**Is the Cabin Heater Relay clicking?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 2

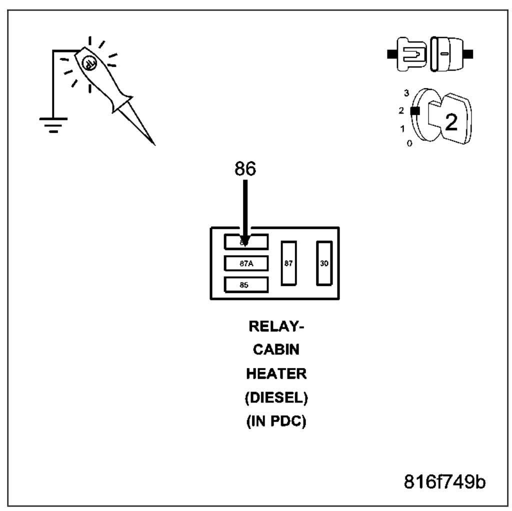
### 2. ASD RELAY OUTPUT CIRCUIT OPEN

Turn the ignition off.

Disconnect the Cabin Heater Relay from the PDC.

Turn the ignition on.

Using a 12-volt test light connected to ground, check the ASD Relay Output circuit at the Cabin Heater Relay connector in the PDC.



**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the ASD Relay Output circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. CABIN HEATER RELAY

Turn the ignition off.
Install a substitute relay in place of the Cabin Heater Relay.
Turn the ignition on.
With the scan tool, actuate the Viscous/Cabin Heater Relay for at least 20 seconds.
With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 4

**No** >> Replace the Cabin Heater Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

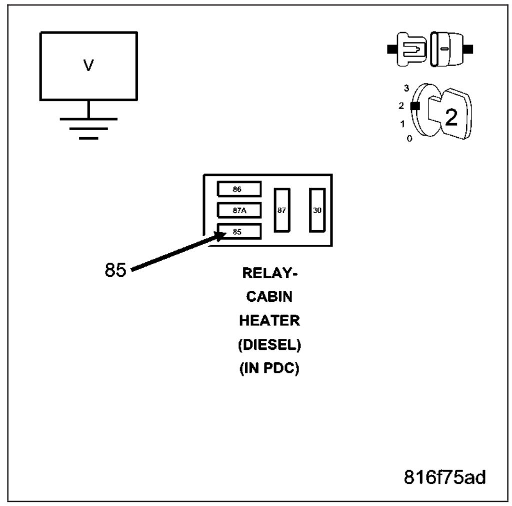
## 4. CABIN HEATER RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.
Disconnect the ECM harness connectors.
Remove the Cabin Heater Relay.
Remove the ASD Relay from the PDC.
Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector in the PDC.
Turn the ignition on.
Measure the voltage on the Cabin Heater Relay Control circuit.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the Cabin Heater Relay Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5



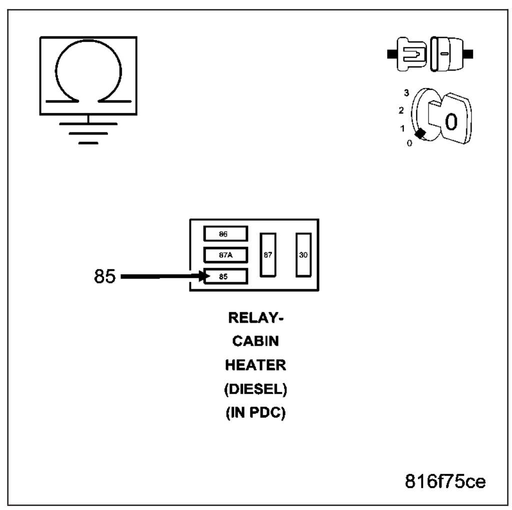
## 5. CABIN HEATER RELAY CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.
Remove the Cabin Heater Relay from the PDC.
Disconnect the ECM harness connectors.
Measure the resistance between ground and the Cabin Heater Relay Control circuit.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Cabin Heater Relay Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



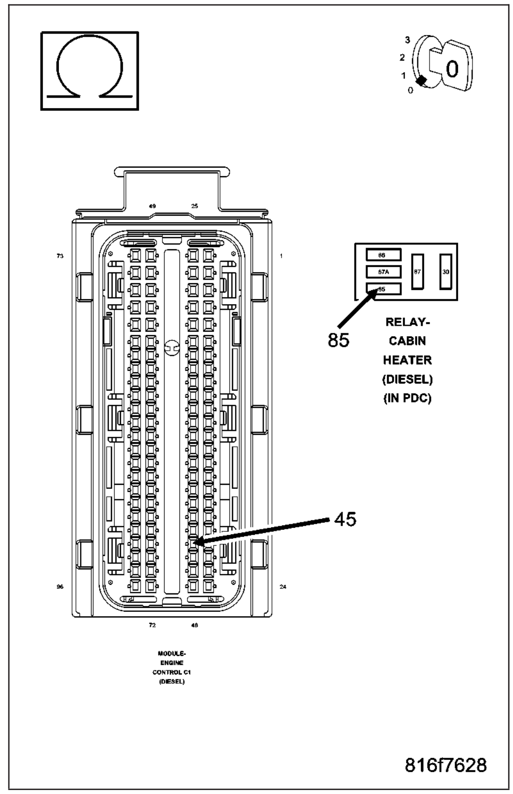
## 6. CABIN HEATER RELAY CONTROL CIRCUIT OPEN

Turn the ignition off.

Remove the Cabin Heater Relay from the PDC.

Disconnect the ECM harness connectors.

Measure the resistance of the Cabin Heater Relay Control circuit.



**Is the resistance below 10.0 ohms?**

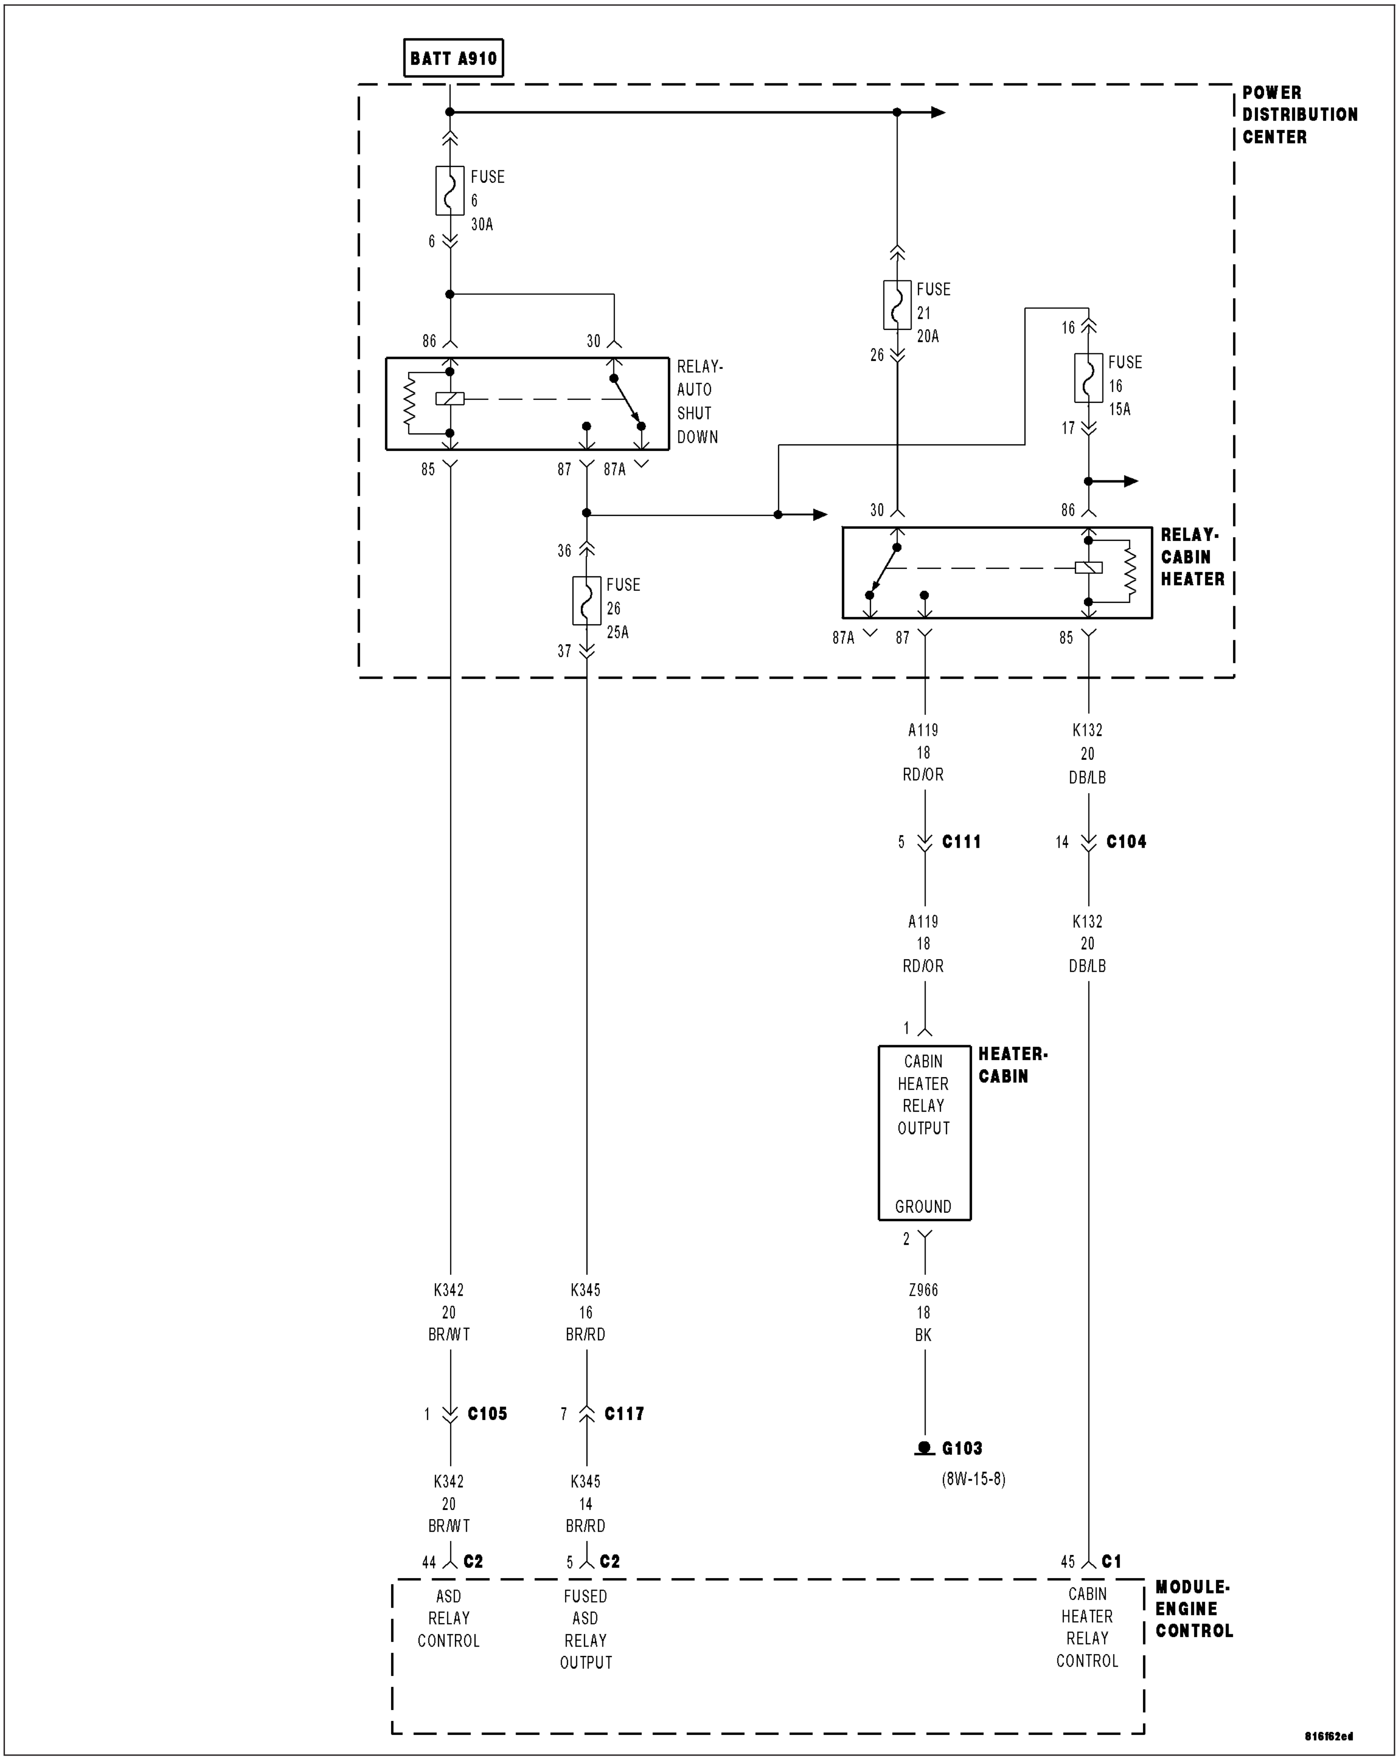
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Cabin Heater Relay Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P1102-VISCOUS/CABIN HEATER RELAY OPEN CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Viscous/Cabin Heater Relay command off.
- **Set Condition:**
  The ECM detects an open on the Viscous/Cabin Heater Relay Control circuit for 0.5 second.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| CABIN HEATER RELAY |
| CABIN HEATER RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE |
| CABIN HEATER RELAY CONTROL CIRCUIT SHORTED TO GROUND |
| CABIN HEATER RELAY CONTROL CIRCUIT OPEN |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CABIN HEATER RELAY CLICKING

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, actuate the Viscous/Cabin Heater Relay.

**Is the Cabin Heater Relay clicking?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 2

### 2. ASD RELAY OUTPUT CIRCUIT OPEN

Turn the ignition off.

Disconnect the Cabin Heater Relay from the PDC.

Turn the ignition on.

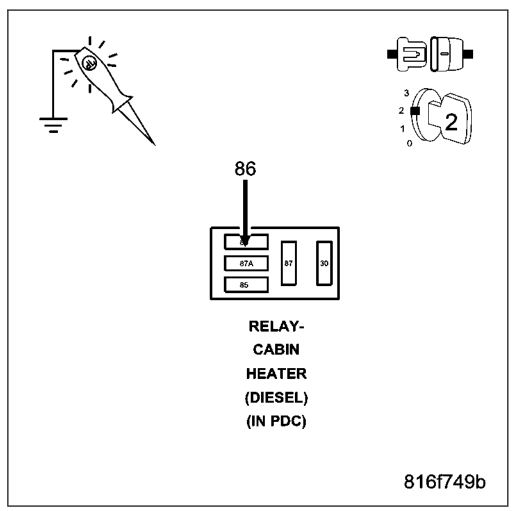
Using a 12-volt test light connected to ground, check the ASD Relay Output circuit at the Cabin Heater Relay connector in the PDC.

**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the ASD Relay Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 3. CABIN HEATER RELAY

Turn the ignition off.

Install a substitute relay in place of the Cabin Heater Relay.

Turn the ignition on.

With the scan tool, actuate the Viscous/Cabin Heater Relay for at least 20 seconds.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 4

**No** >> Replace the Cabin Heater Relay.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. CABIN HEATER RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the ECM harness connectors.

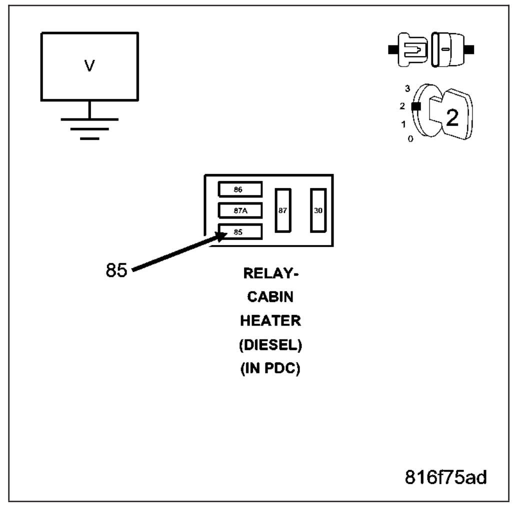
Remove the Cabin Heater Relay.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector in the PDC.

Turn the ignition on.

Measure the voltage on the Cabin Heater Relay Control circuit.



**Is the voltage above 1.0 volt?**

**Yes** >> Repair the Cabin Heater Relay Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

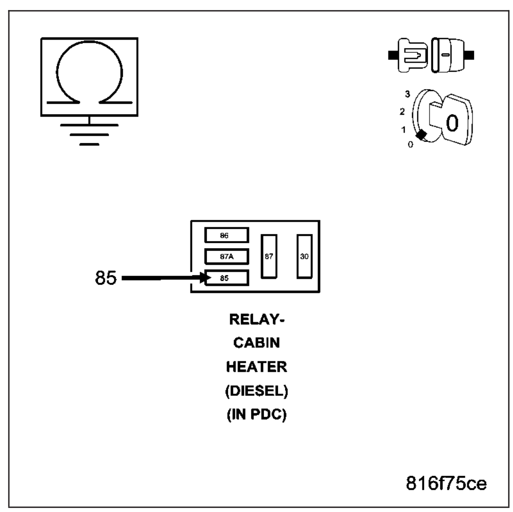
## 5. CABIN HEATER RELAY CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Remove the Cabin Heater Relay from the PDC.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Cabin Heater Relay Control circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Cabin Heater Relay Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

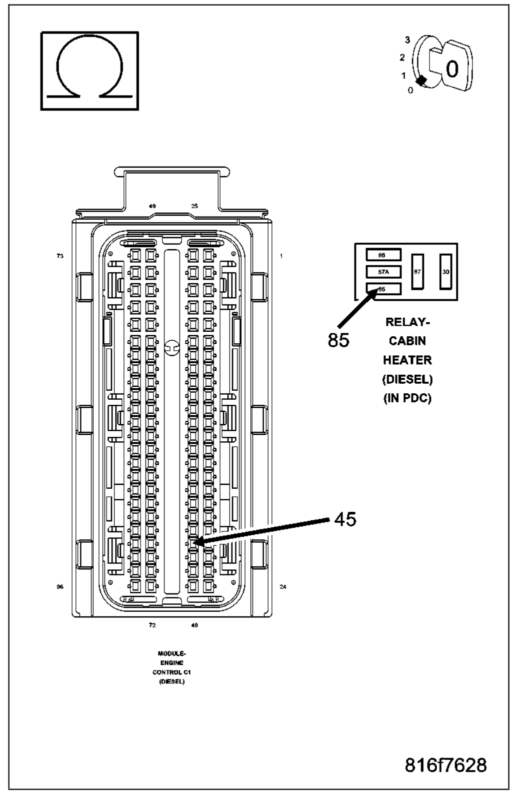
## 6. CABIN HEATER RELAY CONTROL CIRCUIT OPEN

Turn the ignition off.

Remove the Cabin Heater Relay from the PDC.

Disconnect the ECM harness connectors.

Measure the resistance of the Cabin Heater Relay Control circuit.



**Is the resistance below 10.0 ohms?**

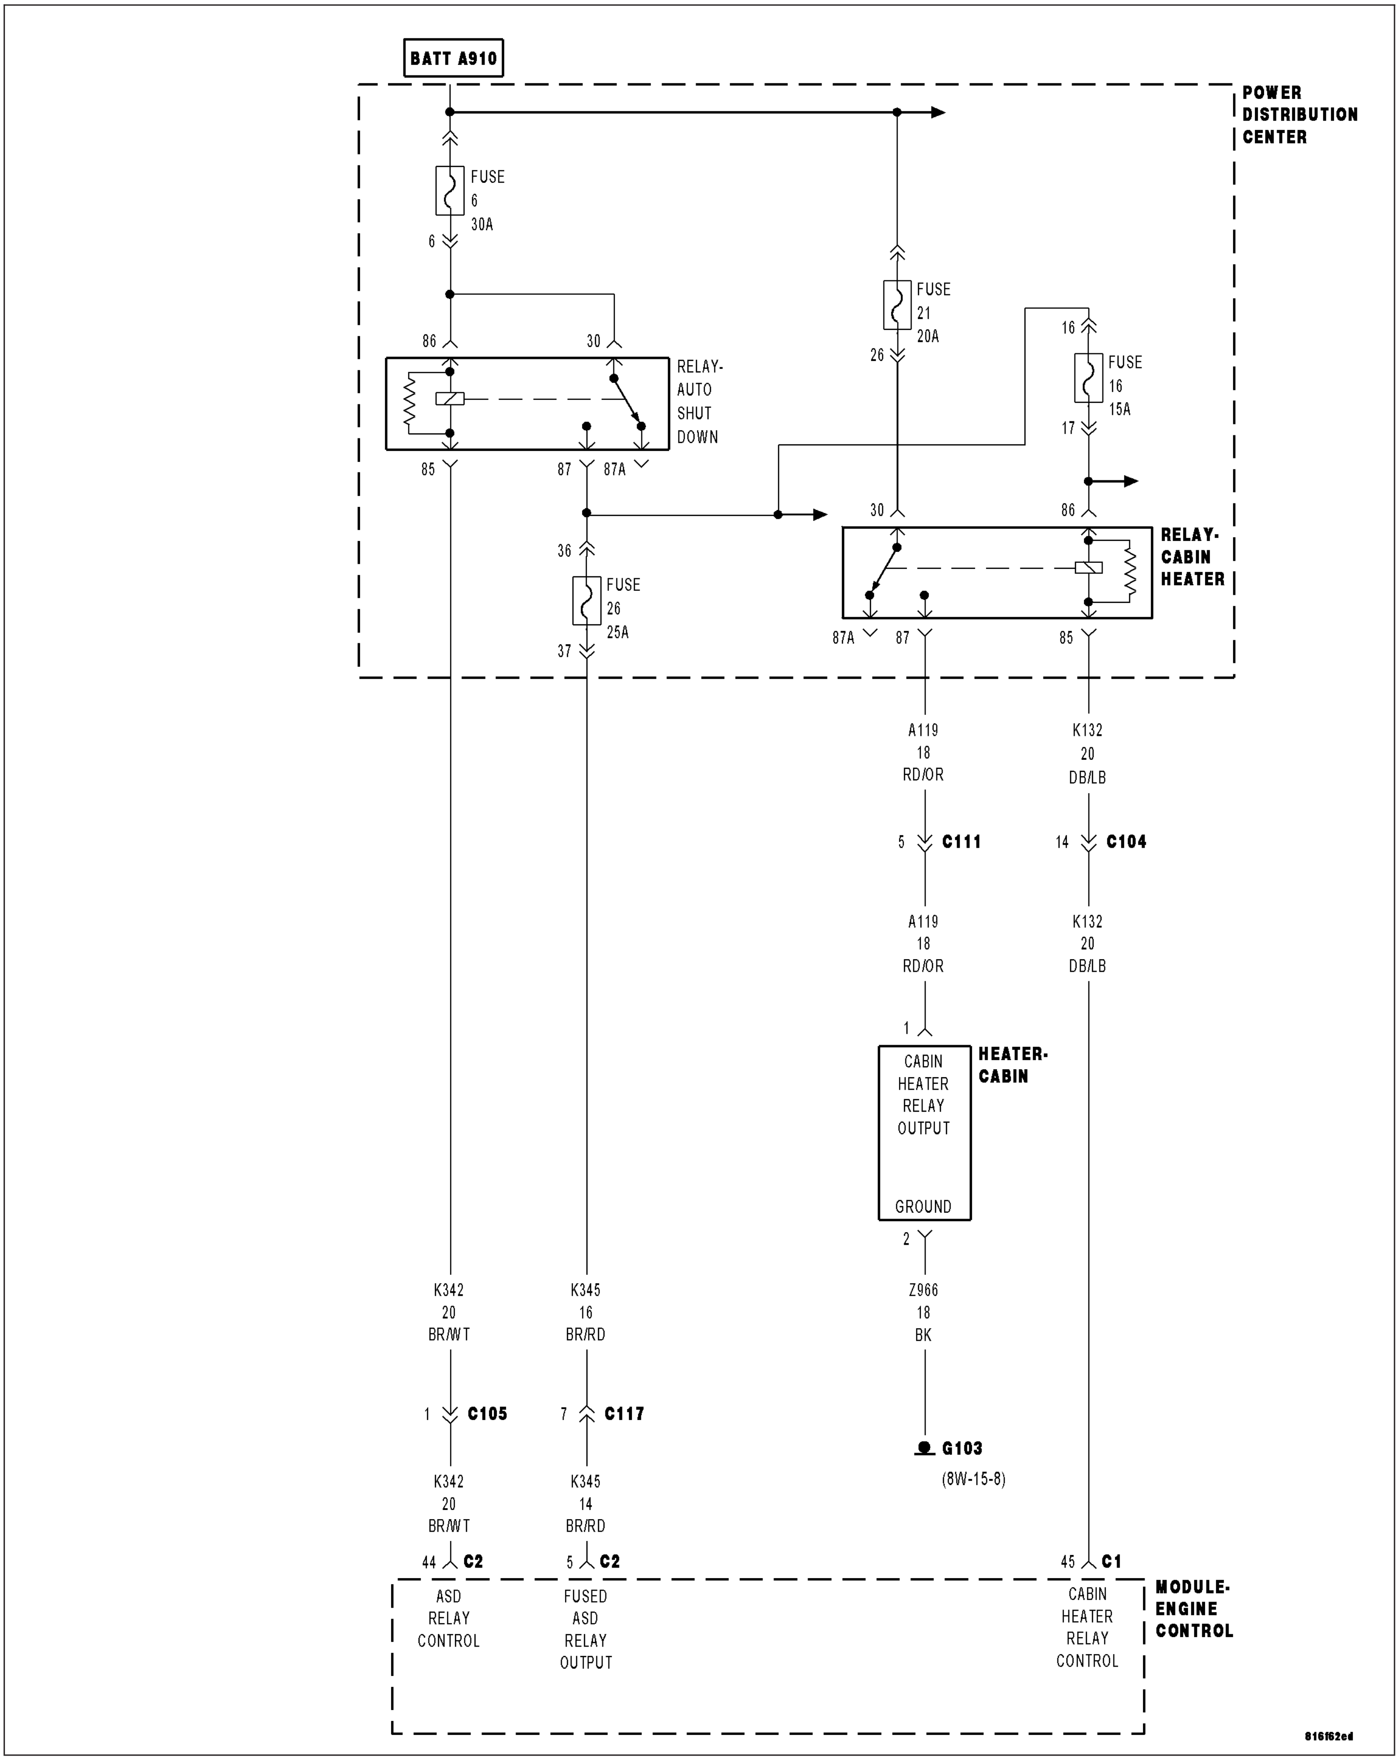
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Cabin Heater Relay Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P1102-VISCOUS/CABIN HEATER RELAY SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Viscous/Cabin Heater Relay command on.
- **Set Condition:**
  The ECM detects excessive current on the Viscous/Cabin Heater Relay Control circuit for 0.5 second.

| Possible Causes |
| --- |
| INTERMITTENT CONDITION |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| CABIN HEATER RELAY |
| CABIN HEATER RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE |
| CABIN HEATER RELAY CONTROL CIRCUIT SHORTED TO GROUND |
| CABIN HEATER RELAY CONTROL CIRCUIT OPEN |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CABIN HEATER RELAY CLICKING

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, actuate the Viscous/Cabin Heater Relay.

**Is the Cabin Heater Relay clicking?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 2

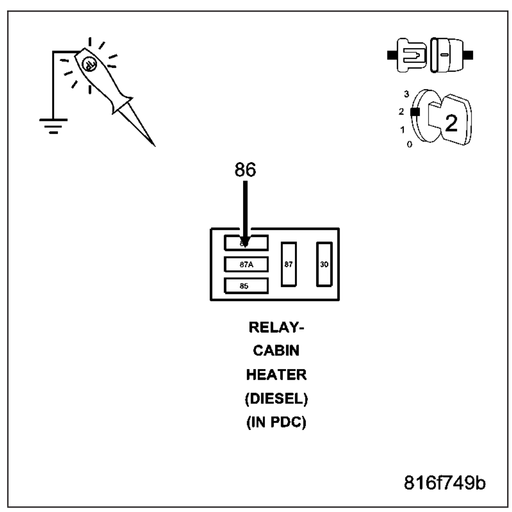
### 2. ASD RELAY OUTPUT CIRCUIT OPEN

Turn the ignition off.

Disconnect the Cabin Heater Relay from the PDC.

Turn the ignition on.

Using a 12-volt test light connected to ground, check the ASD Relay Output circuit at the Cabin Heater Relay connector in the PDC.



**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the ASD Relay Output circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. CABIN HEATER RELAY

Turn the ignition off.

Install a substitute relay in place of the Cabin Heater Relay.

Turn the ignition on.

With the scan tool, actuate the Viscous/Cabin Heater Relay for at least 20 seconds.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 4

**No** >> Replace the Cabin Heater Relay.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. CABIN HEATER RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the ECM harness connectors.

Remove the Cabin Heater Relay.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector in the PDC.

Turn the ignition on.

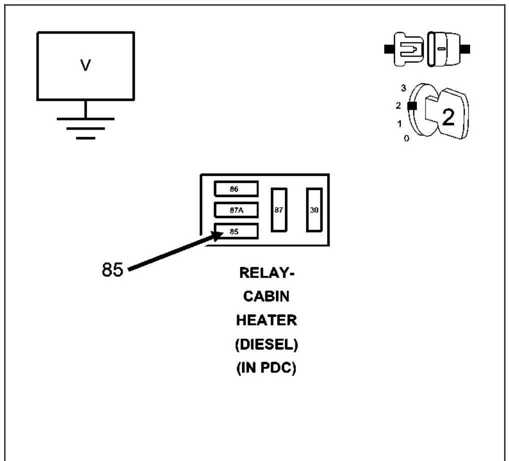
Measure the voltage on the Cabin Heater Relay Control circuit.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the Cabin Heater Relay Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5



816f75ad

## 5. CABIN HEATER RELAY CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Remove the Cabin Heater Relay from the PDC.

Disconnect the ECM harness connectors.

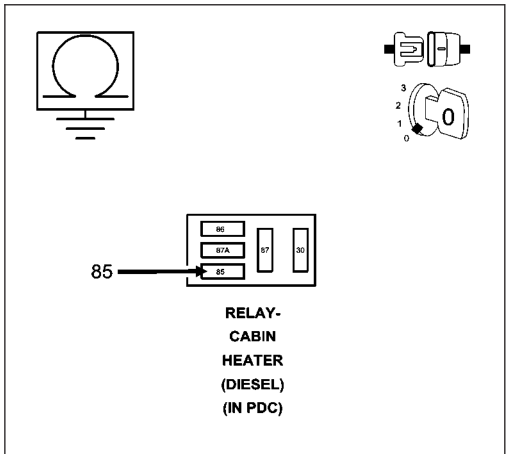
Measure the resistance between ground and the Cabin Heater Relay Control circuit.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Cabin Heater Relay Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



816f75ce

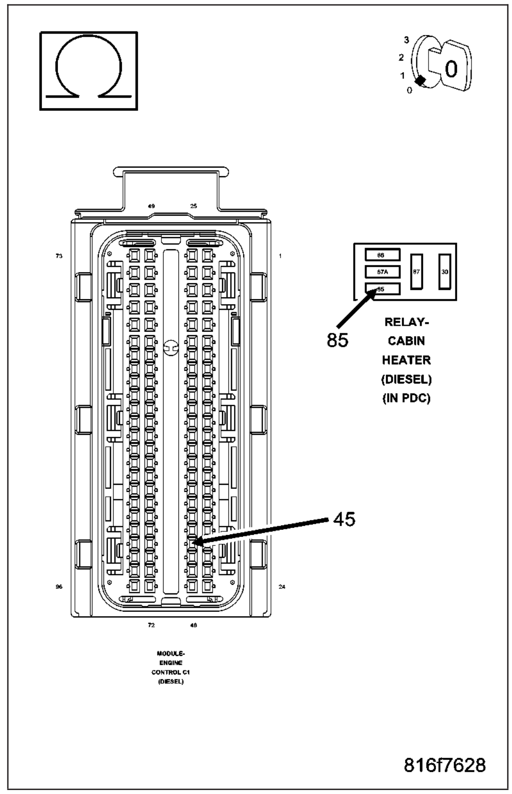
## 6. CABIN HEATER RELAY CONTROL CIRCUIT OPEN

Turn the ignition off.

Remove the Cabin Heater Relay from the PDC.

Disconnect the ECM harness connectors.

Measure the resistance of the Cabin Heater Relay Control circuit.



**Is the resistance below 10.0 ohms?**

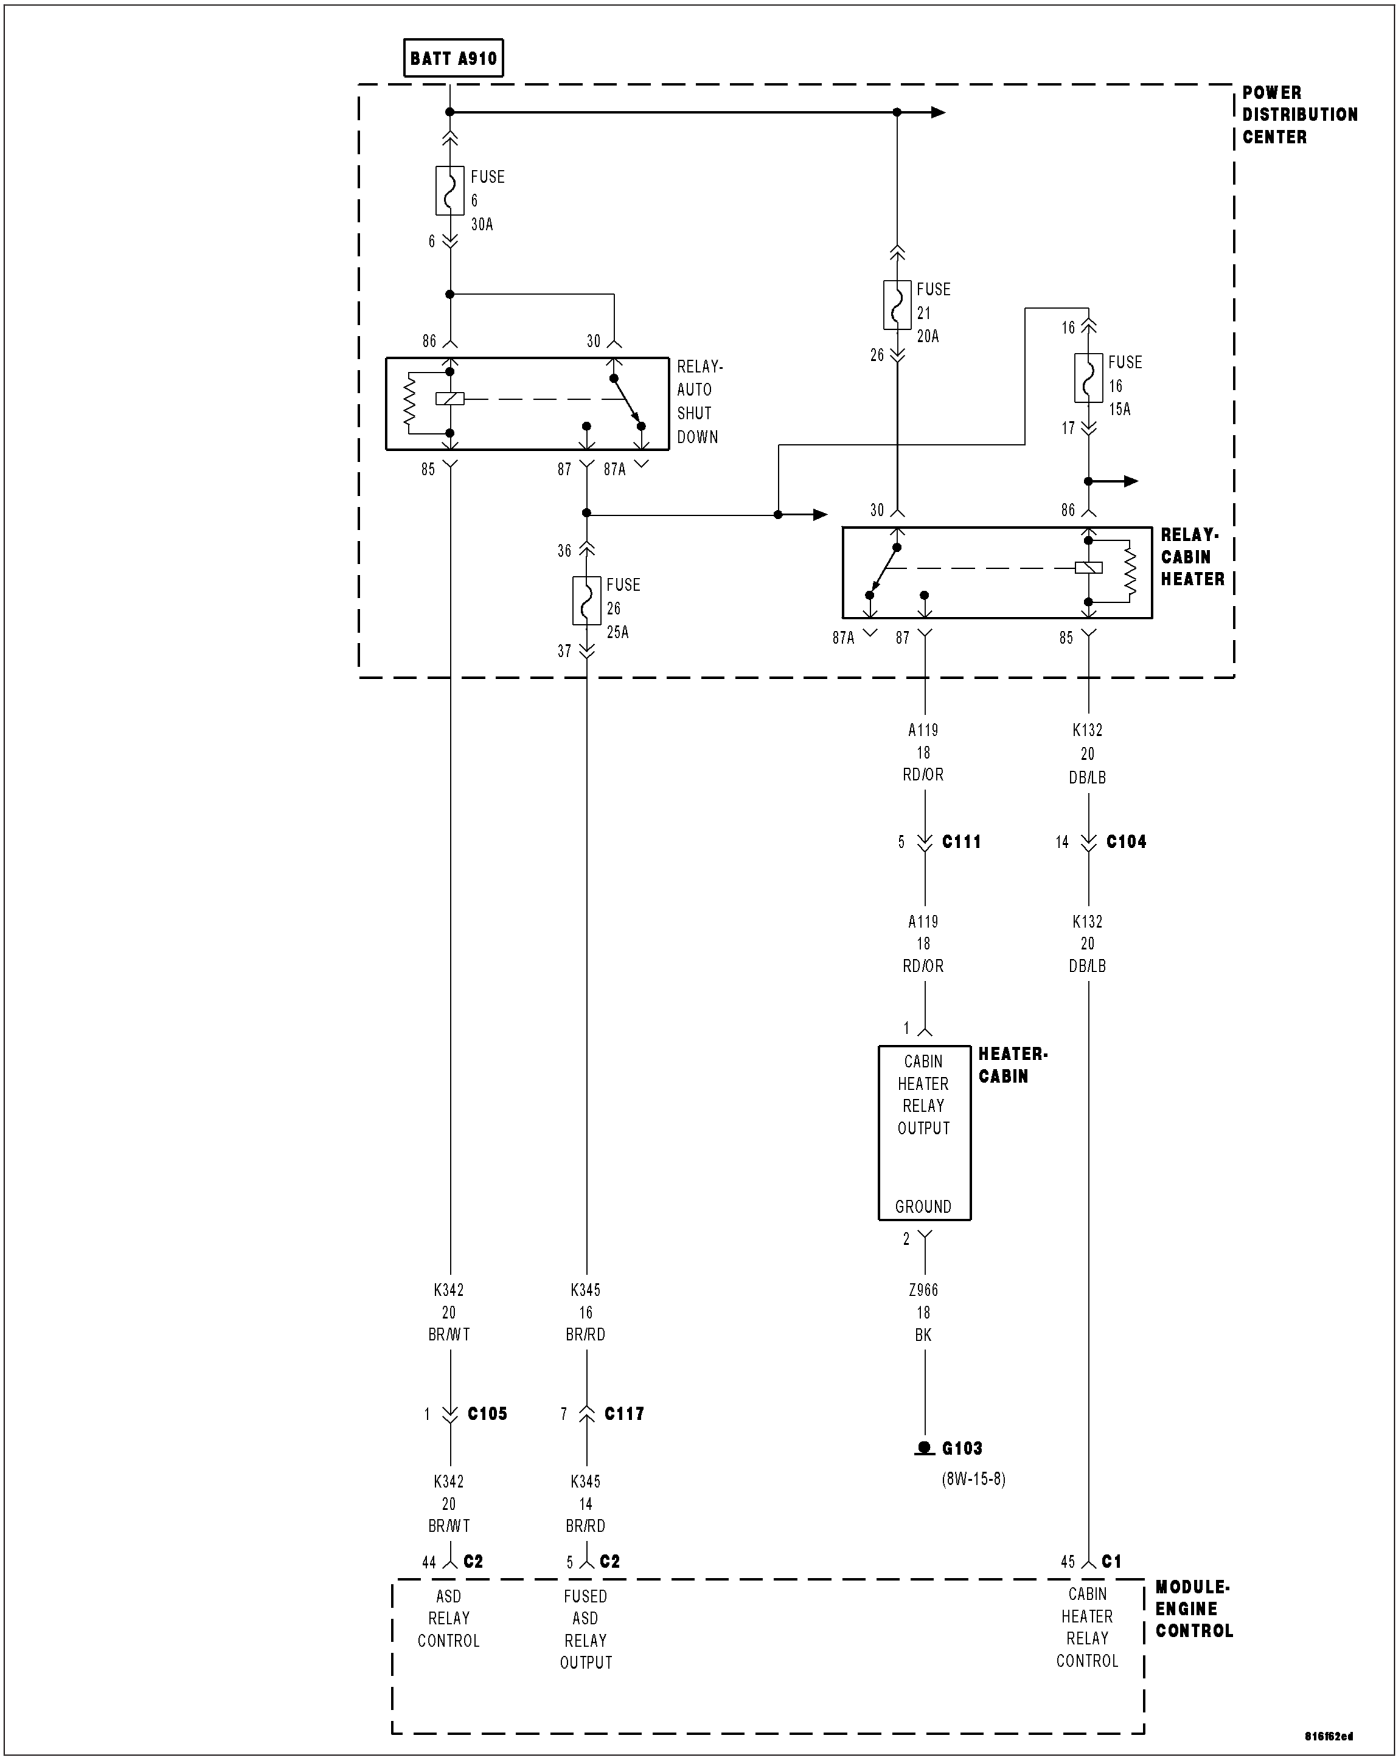
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Cabin Heater Relay Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P1102-VISCOUS/CABIN HEATER RELAY SHORT TO GROUND



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Viscous/Cabin Heater Relay command off.
- **Set Condition:**
  The ECM detects a short to ground on the Viscous/Cabin Heater Relay Control circuit for 0.5 seconds.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| CABIN HEATER RELAY |
| CABIN HEATER RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE |
| CABIN HEATER RELAY CONTROL CIRCUIT SHORTED TO GROUND |
| CABIN HEATER RELAY CONTROL CIRCUIT OPEN |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CABIN HEATER RELAY CLICKING

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, actuate the Viscous/Cabin Heater Relay.

**Is the Cabin Heater Relay clicking?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 2

### 2. ASD RELAY OUTPUT CIRCUIT OPEN

Turn the ignition off.

Disconnect the Cabin Heater Relay from the PDC.

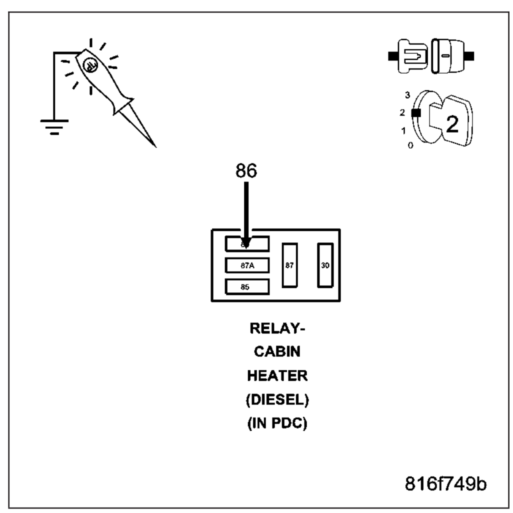
Turn the ignition on.

Using a 12-volt test light connected to ground, check the ASD Relay Output circuit at the Cabin Heater Relay connector in the PDC.

**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the ASD Relay Output circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 3. CABIN HEATER RELAY

Turn the ignition off.

Install a substitute relay in place of the Cabin Heater Relay.

Turn the ignition on.

With the scan tool, actuate the Viscous/Cabin Heater Relay for at least 20 seconds.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 4

**No** >> Replace the Cabin Heater Relay.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. CABIN HEATER RELAY CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the ECM harness connectors.

Remove the Cabin Heater Relay.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector in the PDC.

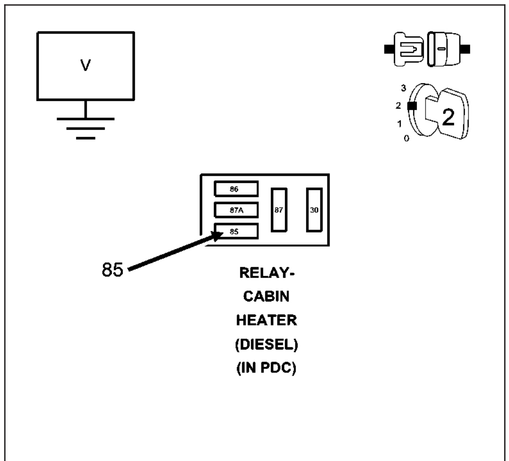
Turn the ignition on.

Measure the voltage on the Cabin Heater Relay Control circuit.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the Cabin Heater Relay Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5



816f75ad

## 5. CABIN HEATER RELAY CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Remove the Cabin Heater Relay from the PDC.

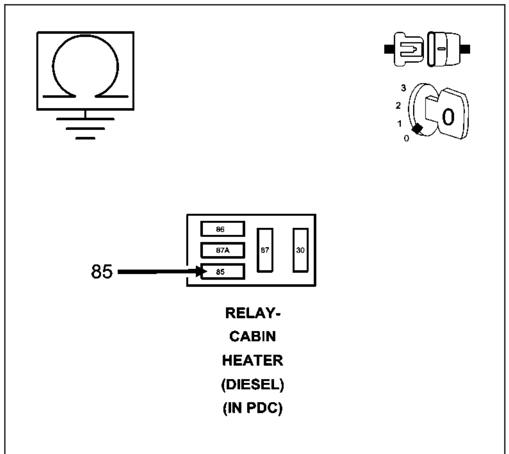
Disconnect the ECM harness connectors.

Measure the resistance between ground and the Cabin Heater Relay Control circuit.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Cabin Heater Relay Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



816f75ce

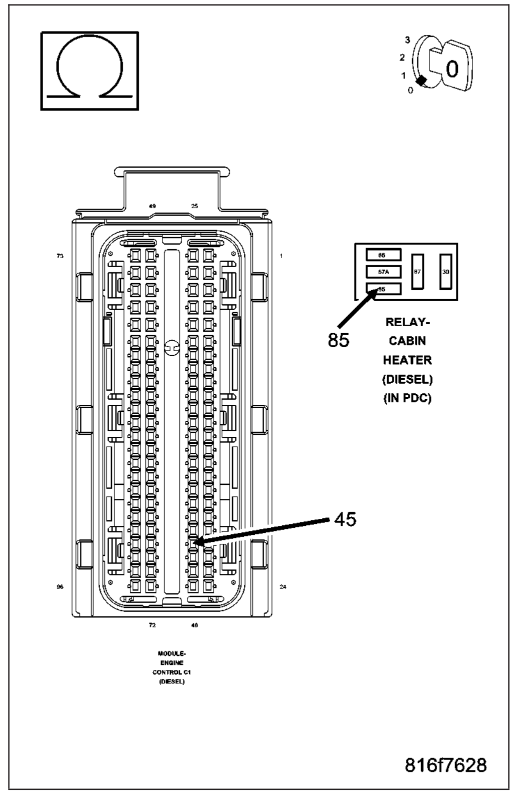
## 6. CABIN HEATER RELAY CONTROL CIRCUIT OPEN

Turn the ignition off.

Remove the Cabin Heater Relay from the PDC.

Disconnect the ECM harness connectors.

Measure the resistance of the Cabin Heater Relay Control circuit.



**Is the resistance below 10.0 ohms?**

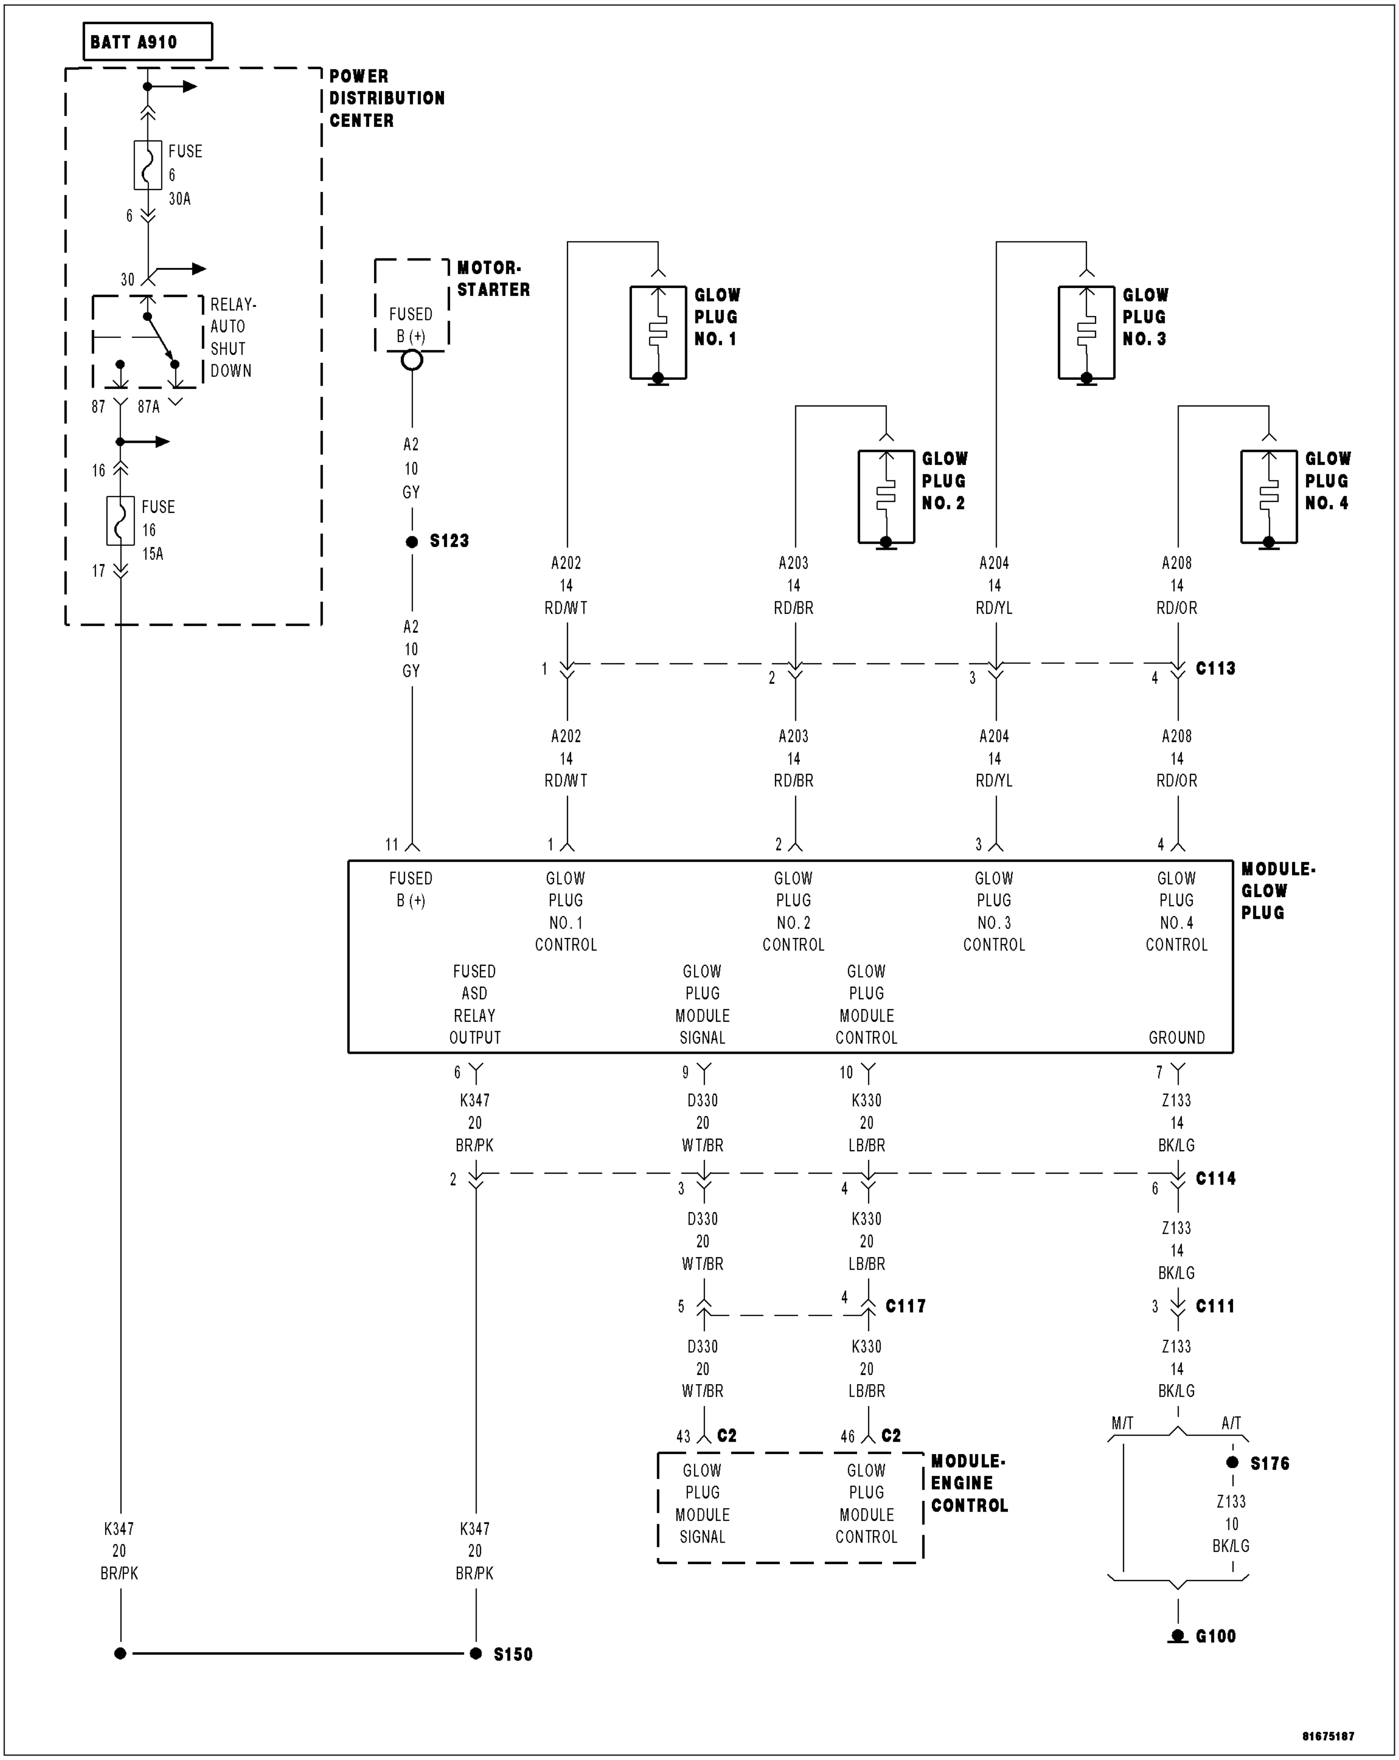
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Cabin Heater Relay Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P1131-GLOW PLUG MODULE VOLTAGE SUPPLY



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| BATTERY SUPPLY CIRCUIT OPEN |
| GROUND CIRCUIT OPEN |
| INTERMITTENT CONDITION |
| GLOW PLUG CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Turn the ignition off for 10 seconds.

Turn the ignition on.

Monitor the scan tool for ECM DTCs.

Repeat this test several times.

**Did this DTC set again?**

**Yes** >> Go To 2

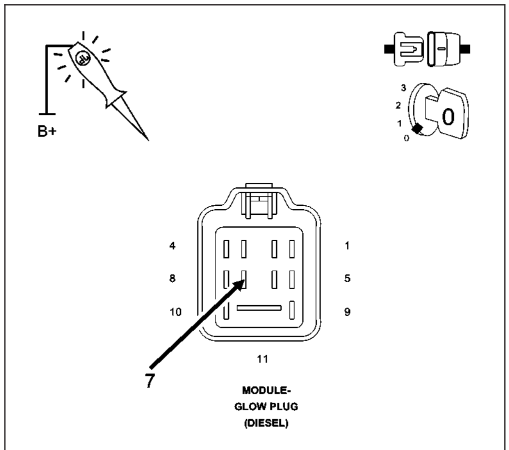
**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. GROUND CIRCUIT OPEN

Turn the ignition off.

Disconnect the Glow Plug Control Module harness connector.

Using a 12-volt test light connected to 12-volts, check the Ground circuit at the Glow Plug Control Module harness connector.



816f4647

**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the Glow Plug Control Module Ground circuit for an open.

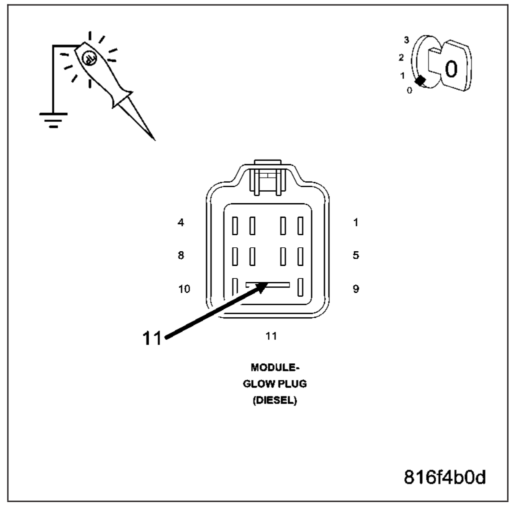
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. BATTERY SUPPLY CIRCUIT OPEN

Turn the ignition off.

Disconnect the Glow Plug Control Module harness connector.

Using a 12-volt test light connected to ground, check the Battery Supply circuit at the Glow Plug Control Module harness connector.



**Does the test light illuminate brightly?**

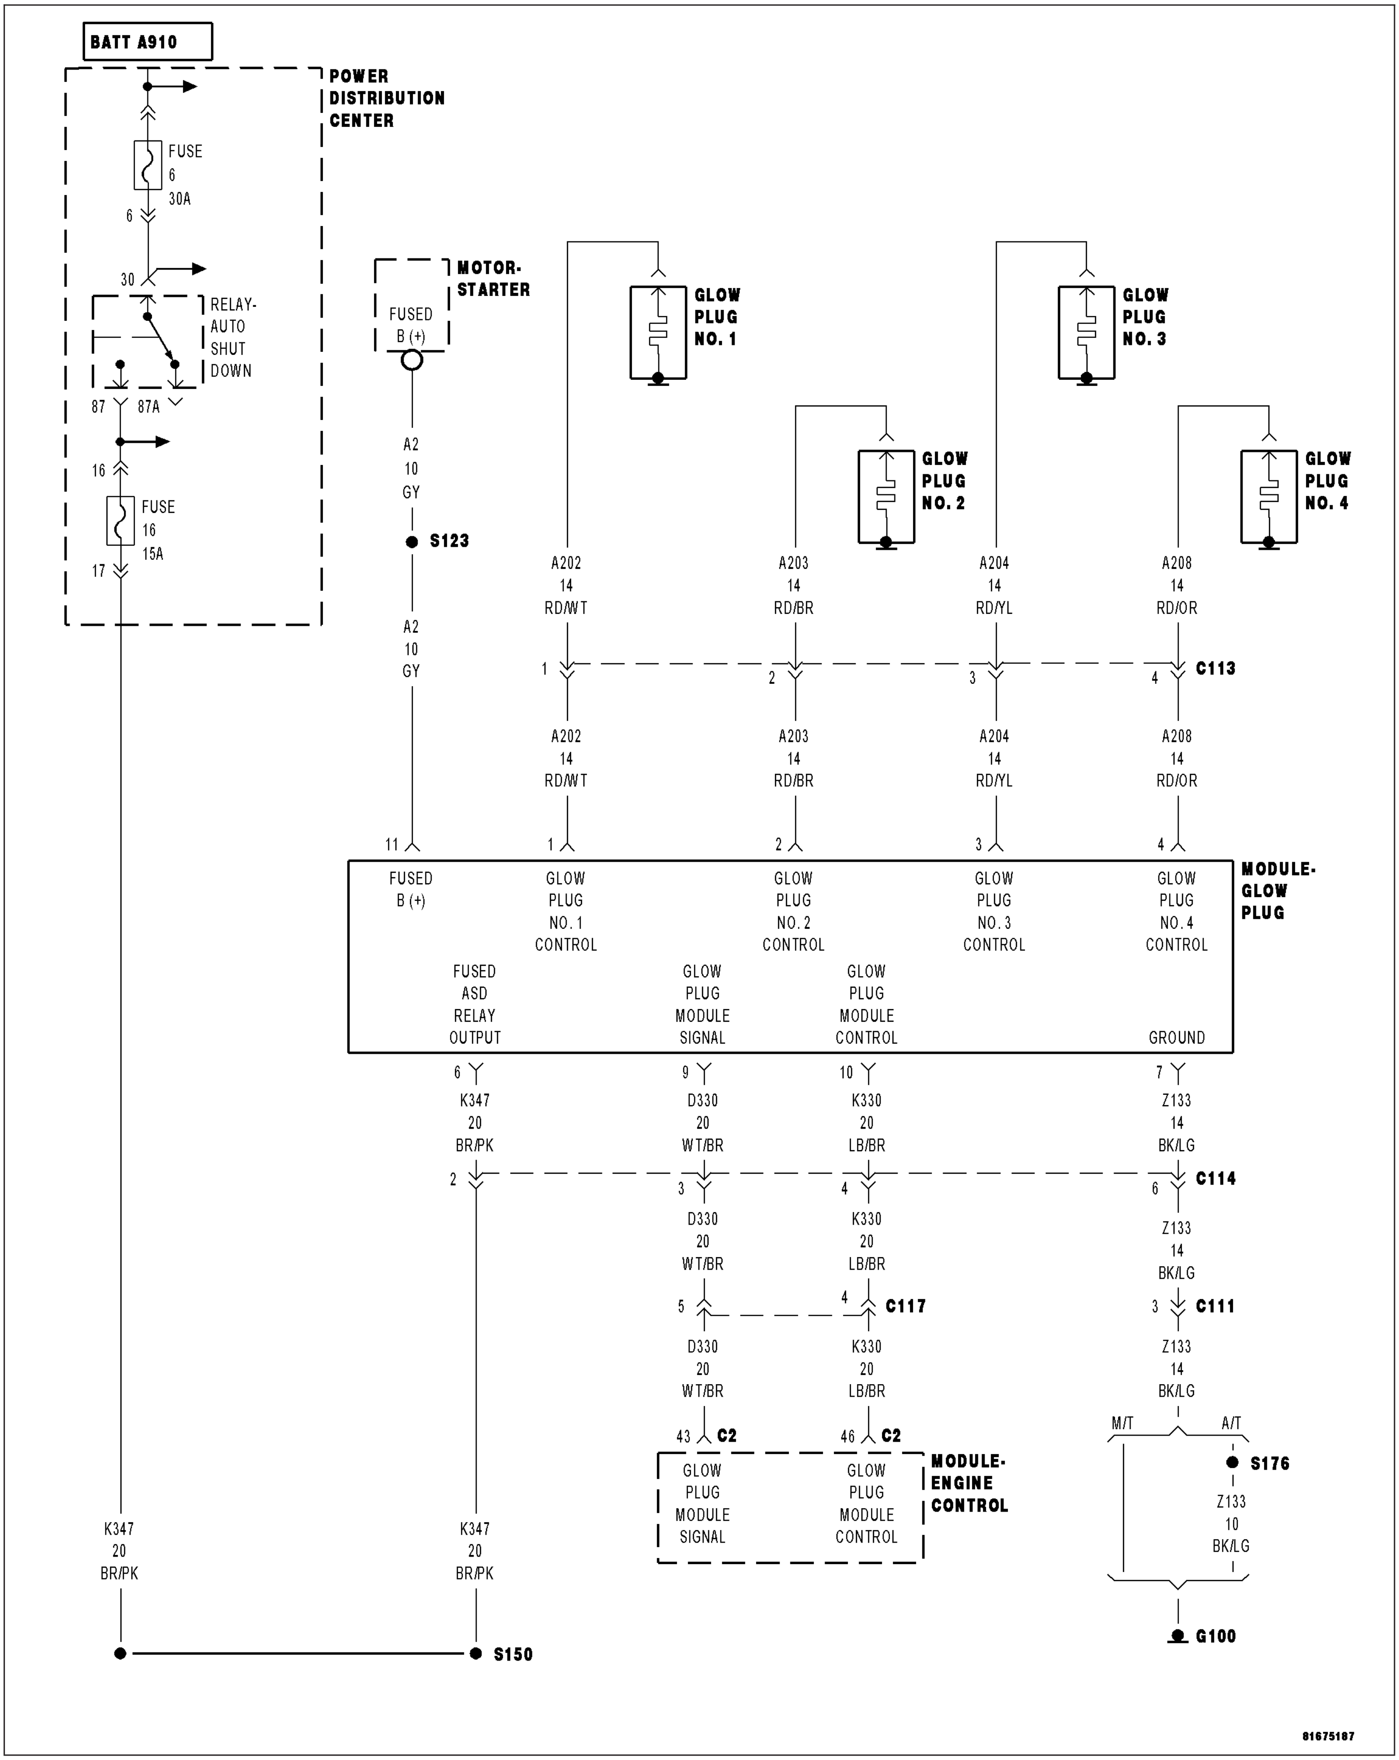
**Yes** >> Replace the Glow Plug Control Module.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Glow Plug Control Module Battery Supply circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P1131-GLOW PLUG MODULE INTERNAL FAULT



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| BATTERY SUPPLY CIRCUIT OPEN |
| GROUND CIRCUIT OPEN |
| INTERMITTENT CONDITION |
| GLOW PLUG CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Turn the ignition off for 10 seconds.

Turn the ignition on.

Monitor the scan tool for ECM DTCs.

Repeat this test several times.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. GROUND CIRCUIT OPEN

Turn the ignition off.

Disconnect the Glow Plug Control Module harness connector.

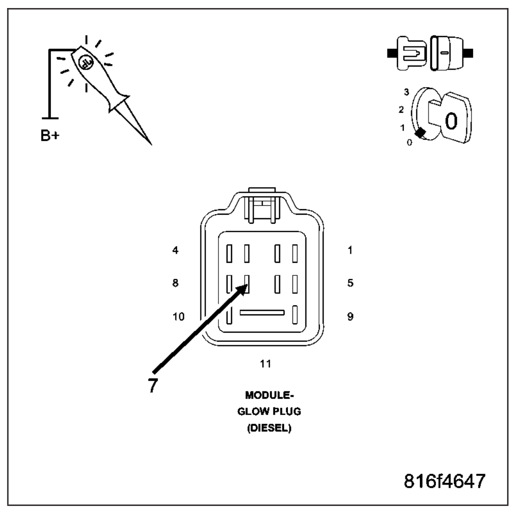
Using a 12-volt test light connected to 12-volts, check the Ground circuit at the Glow Plug Control Module harness connector.

**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the Glow Plug Control Module Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

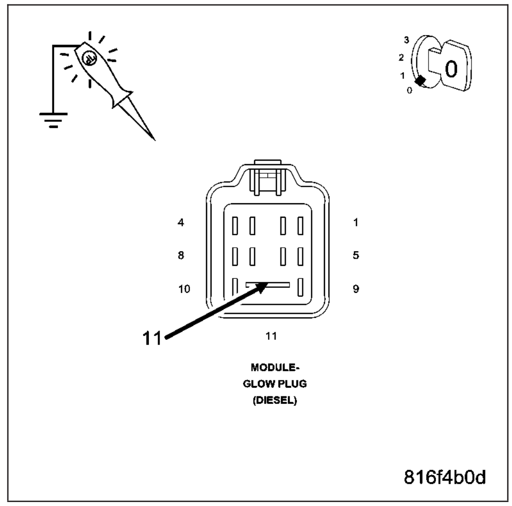


## 3. BATTERY SUPPLY CIRCUIT OPEN

Turn the ignition off.

Disconnect the Glow Plug Control Module harness connector.

Using a 12-volt test light connected to ground, check the Battery Supply circuit at the Glow Plug Control Module harness connector.



**Does the test light illuminate brightly?**

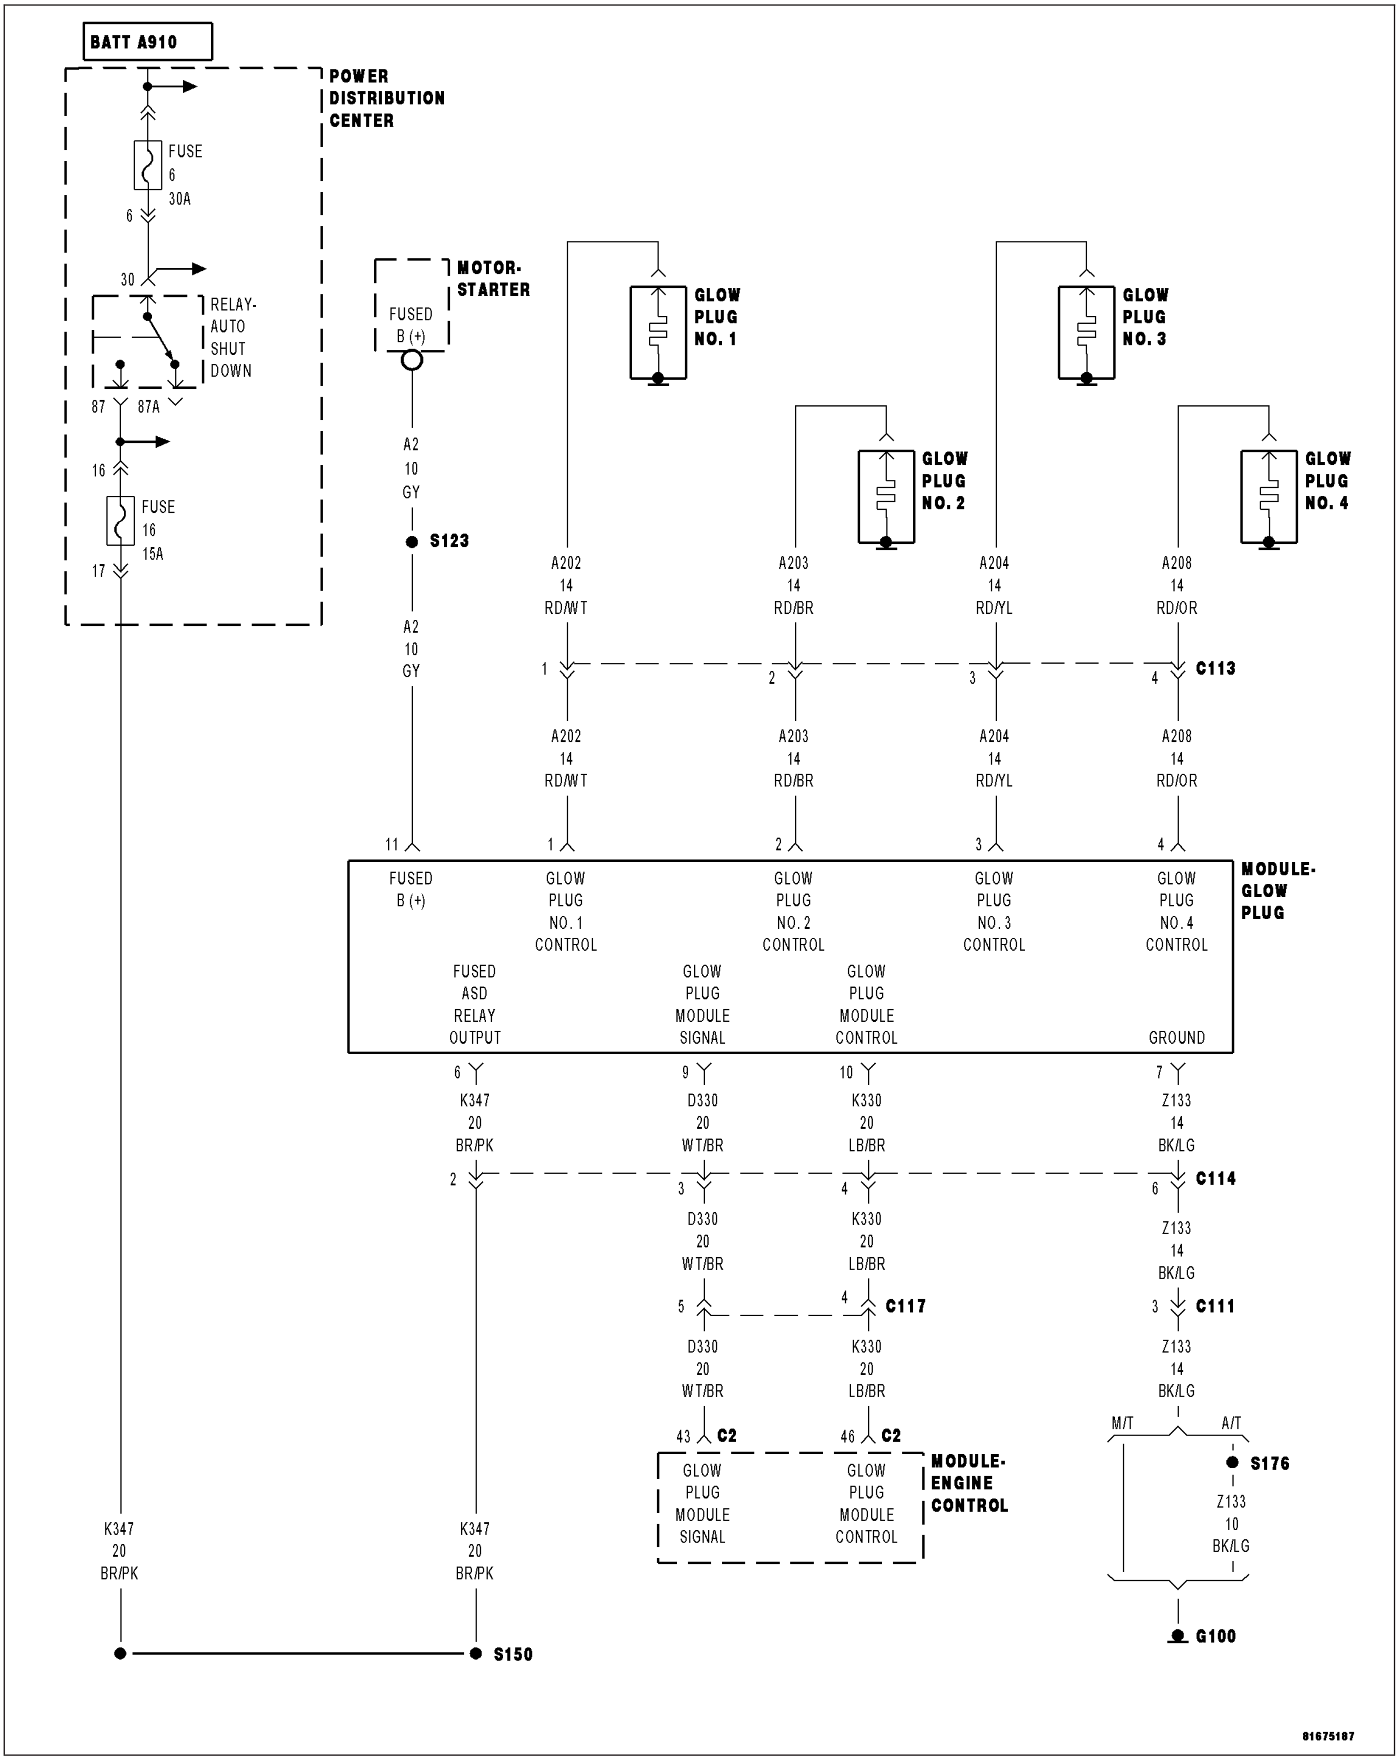
**Yes** >> Replace the Glow Plug Control Module.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Glow Plug Control Module Battery Supply circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P1135-GLOW PLUG MODULE CONTROL CIRCUIT EXCESSIVE CURRENT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the Glow Plug Module command on.
- **Set Condition:**
  The ECM detects excessive current on the Glow Plug Module Control circuit.

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| GLOW PLUG MODULE |
| GLOW PLUG MODULE CONTROL CIRCUIT OPEN |
| GLOW PLUG MODULE CONTROL CIRCUIT SHORTED TO GROUND |
| GLOW PLUG MODULE CONTROL CIRCUIT SHORTED TO VOLTAGE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

Turn the ignition on and wait at least 90 seconds.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

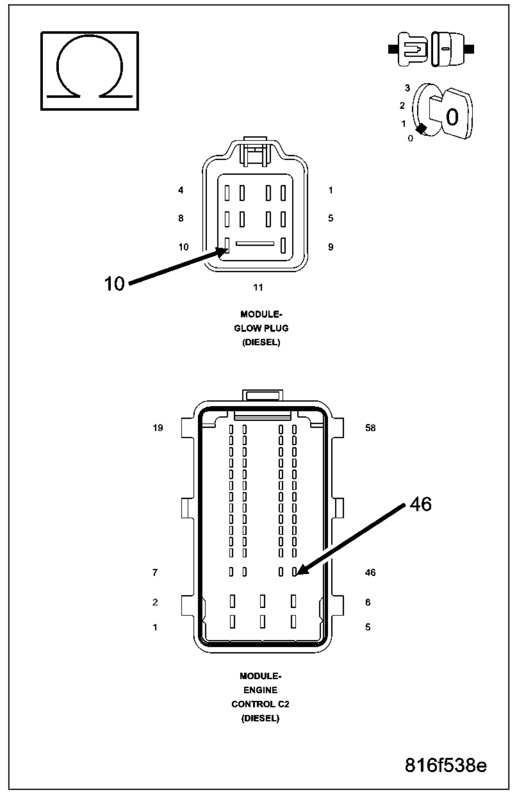
## 2. GLOW PLUG MODULE CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the Glow Plug Module harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance of the Glow Plug Module Control circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 3

**No** >> Repair the Glow Plug Module Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

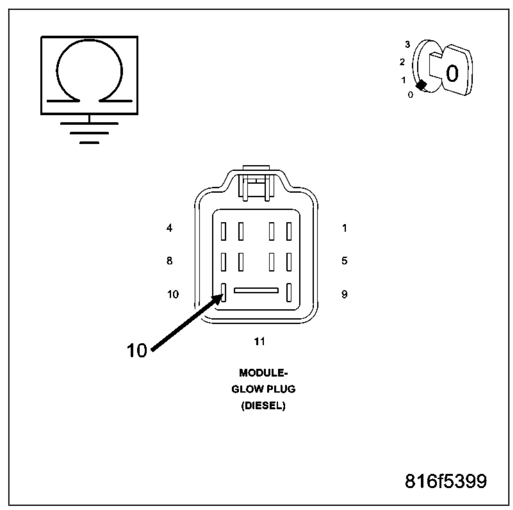
## 3. GLOW PLUG MODULE CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the Glow Plug Module harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Glow Plug Module Control circuit.



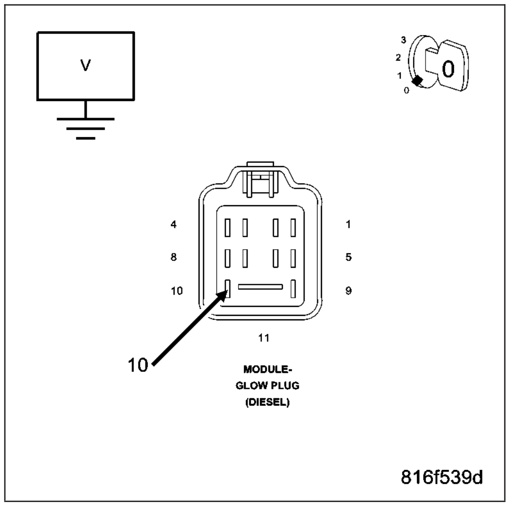
**Is the resistance above 1000 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Glow Plug Module Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. GLOW PLUG MODULE CONTROL CIRCUIT SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the Glow Plug Module harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Measure the voltage of the Glow Plug Module Control circuit.

**Is the voltage below 1.0 volt?**

**Yes** >> Go To 5

**No** >> Repair the Glow Plug Module Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. GLOW PLUG CONTROL MODULE

Turn the ignition off.

Replace the Glow Plug Module in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

With the scan tool, read the ECM DTCs.

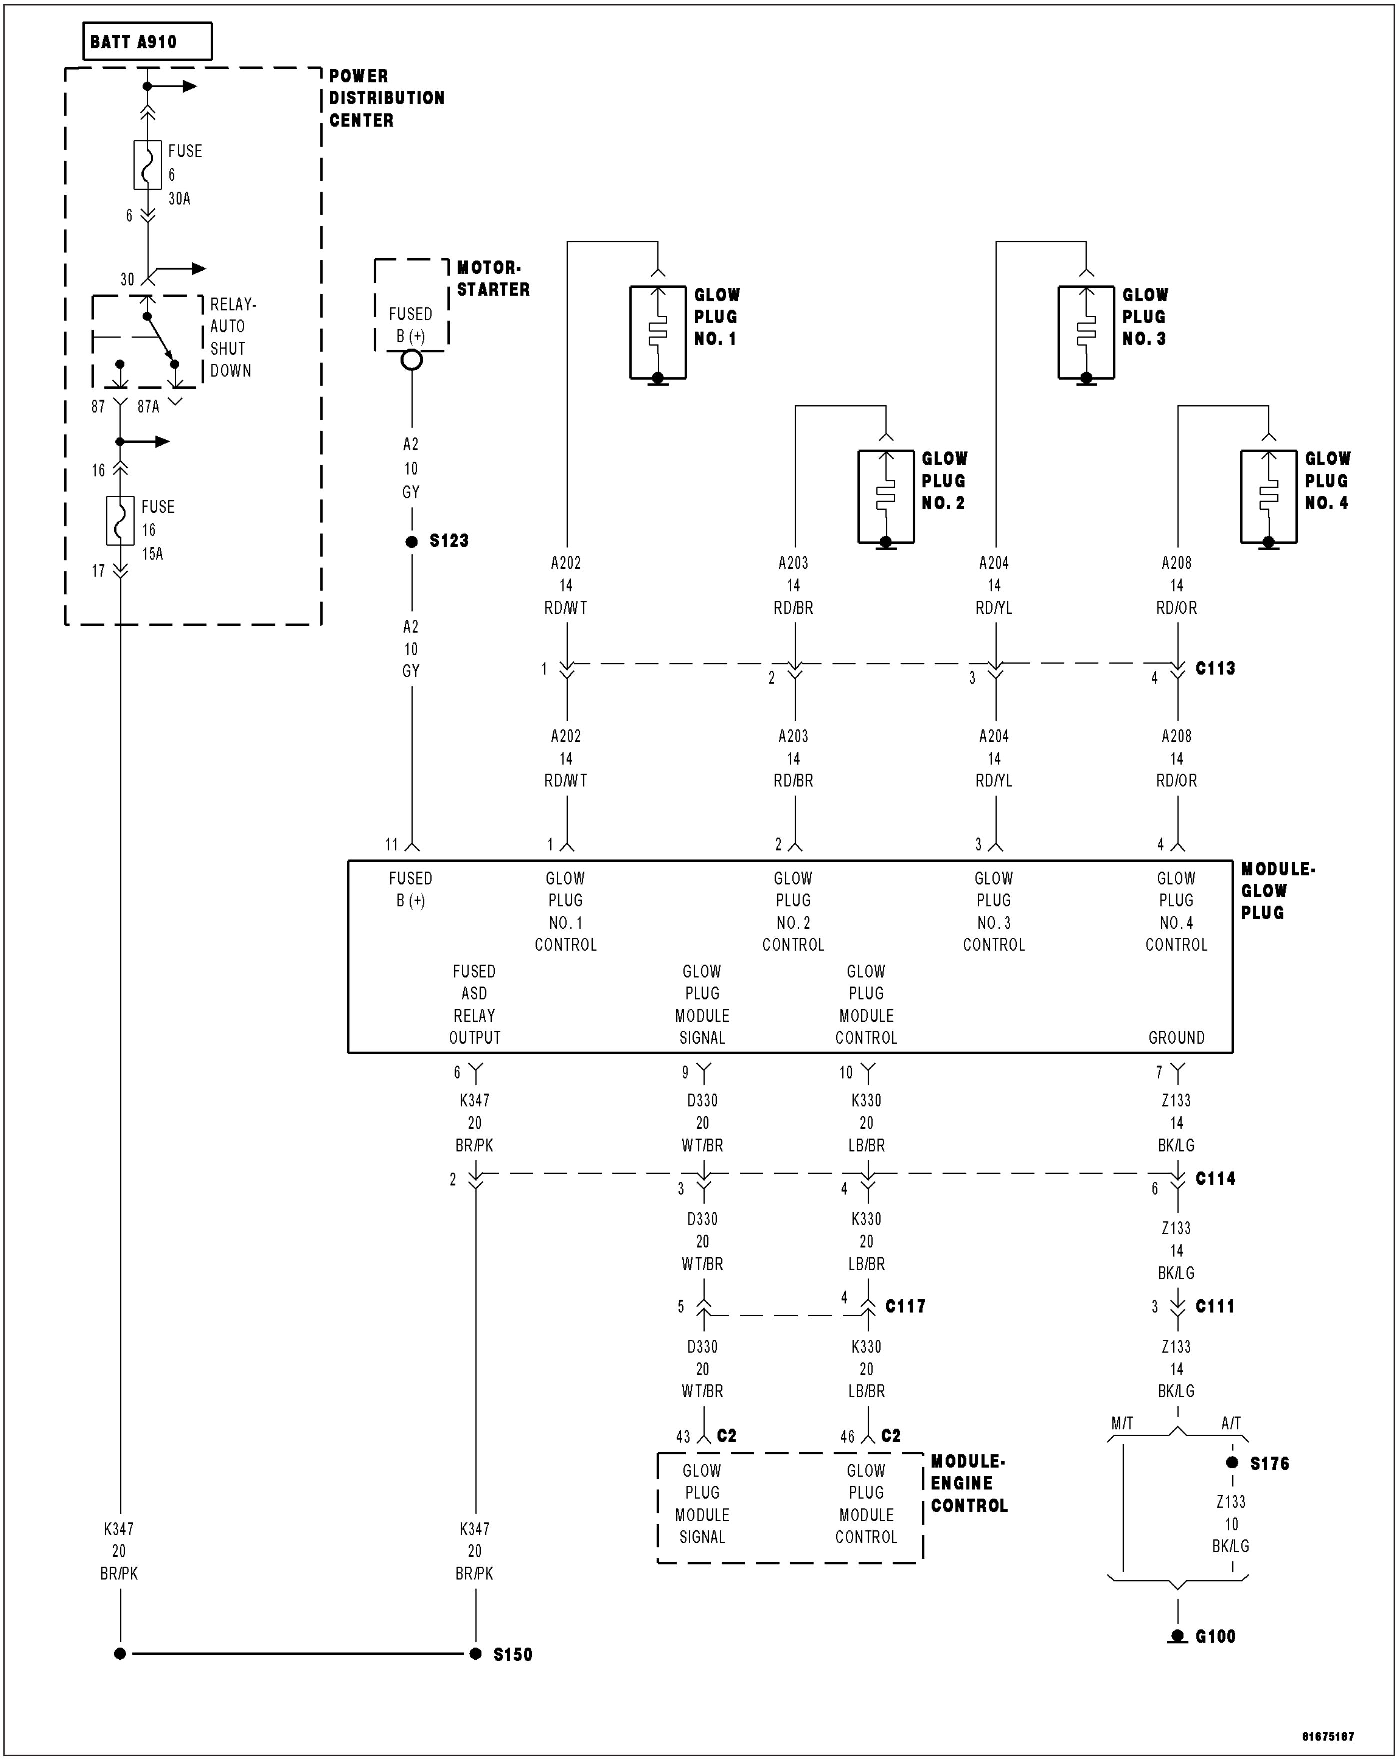
**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

# P1135-GLOW PLUG MODULE CONTROL CIRCUIT OPEN CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the Glow Plug Module command off.
- **Set Condition:**
  The ECM does not detect voltage on the Glow Plug Module Control circuit.

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| GLOW PLUG MODULE |
| GLOW PLUG MODULE CONTROL CIRCUIT OPEN |
| GLOW PLUG MODULE CONTROL CIRCUIT SHORTED TO GROUND |
| GLOW PLUG MODULE CONTROL CIRCUIT SHORTED TO VOLTAGE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

Turn the ignition on and wait at least 90 seconds.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

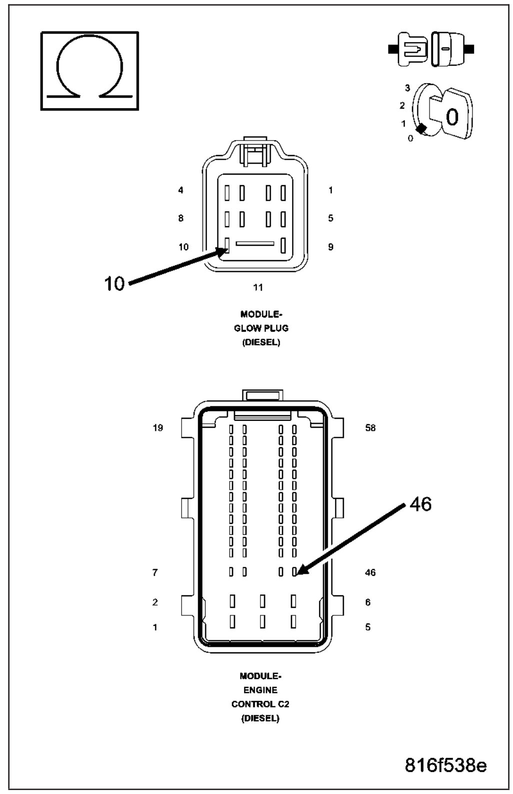
## 2. GLOW PLUG MODULE CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the Glow Plug Module harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance of the Glow Plug Module Control circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 3

**No** >> Repair the Glow Plug Module Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

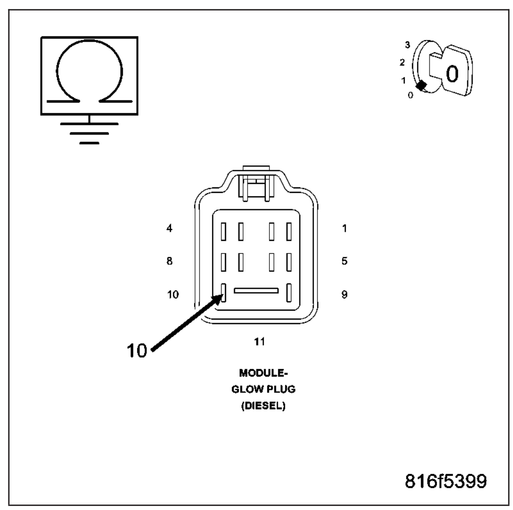
## 3. GLOW PLUG MODULE CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the Glow Plug Module harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Glow Plug Module Control circuit.



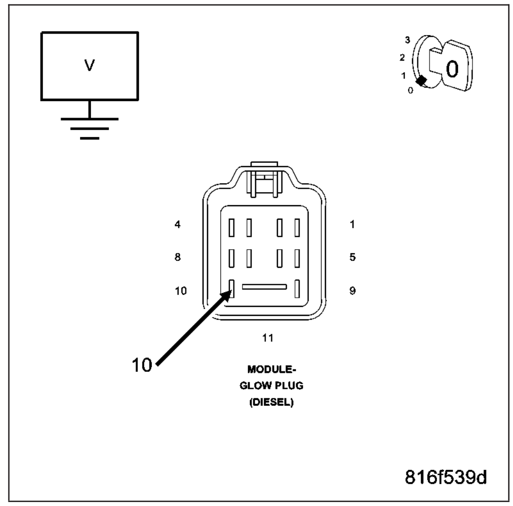
**Is the resistance above 1000 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Glow Plug Module Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. GLOW PLUG MODULE CONTROL CIRCUIT SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the Glow Plug Module harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Measure the voltage of the Glow Plug Module Control circuit.

**Is the voltage below 1.0 volt?**

**Yes** >> Go To 5

**No** >> Repair the Glow Plug Module Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. GLOW PLUG CONTROL MODULE

Turn the ignition off.

Replace the Glow Plug Module in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

With the scan tool, read the ECM DTCs.

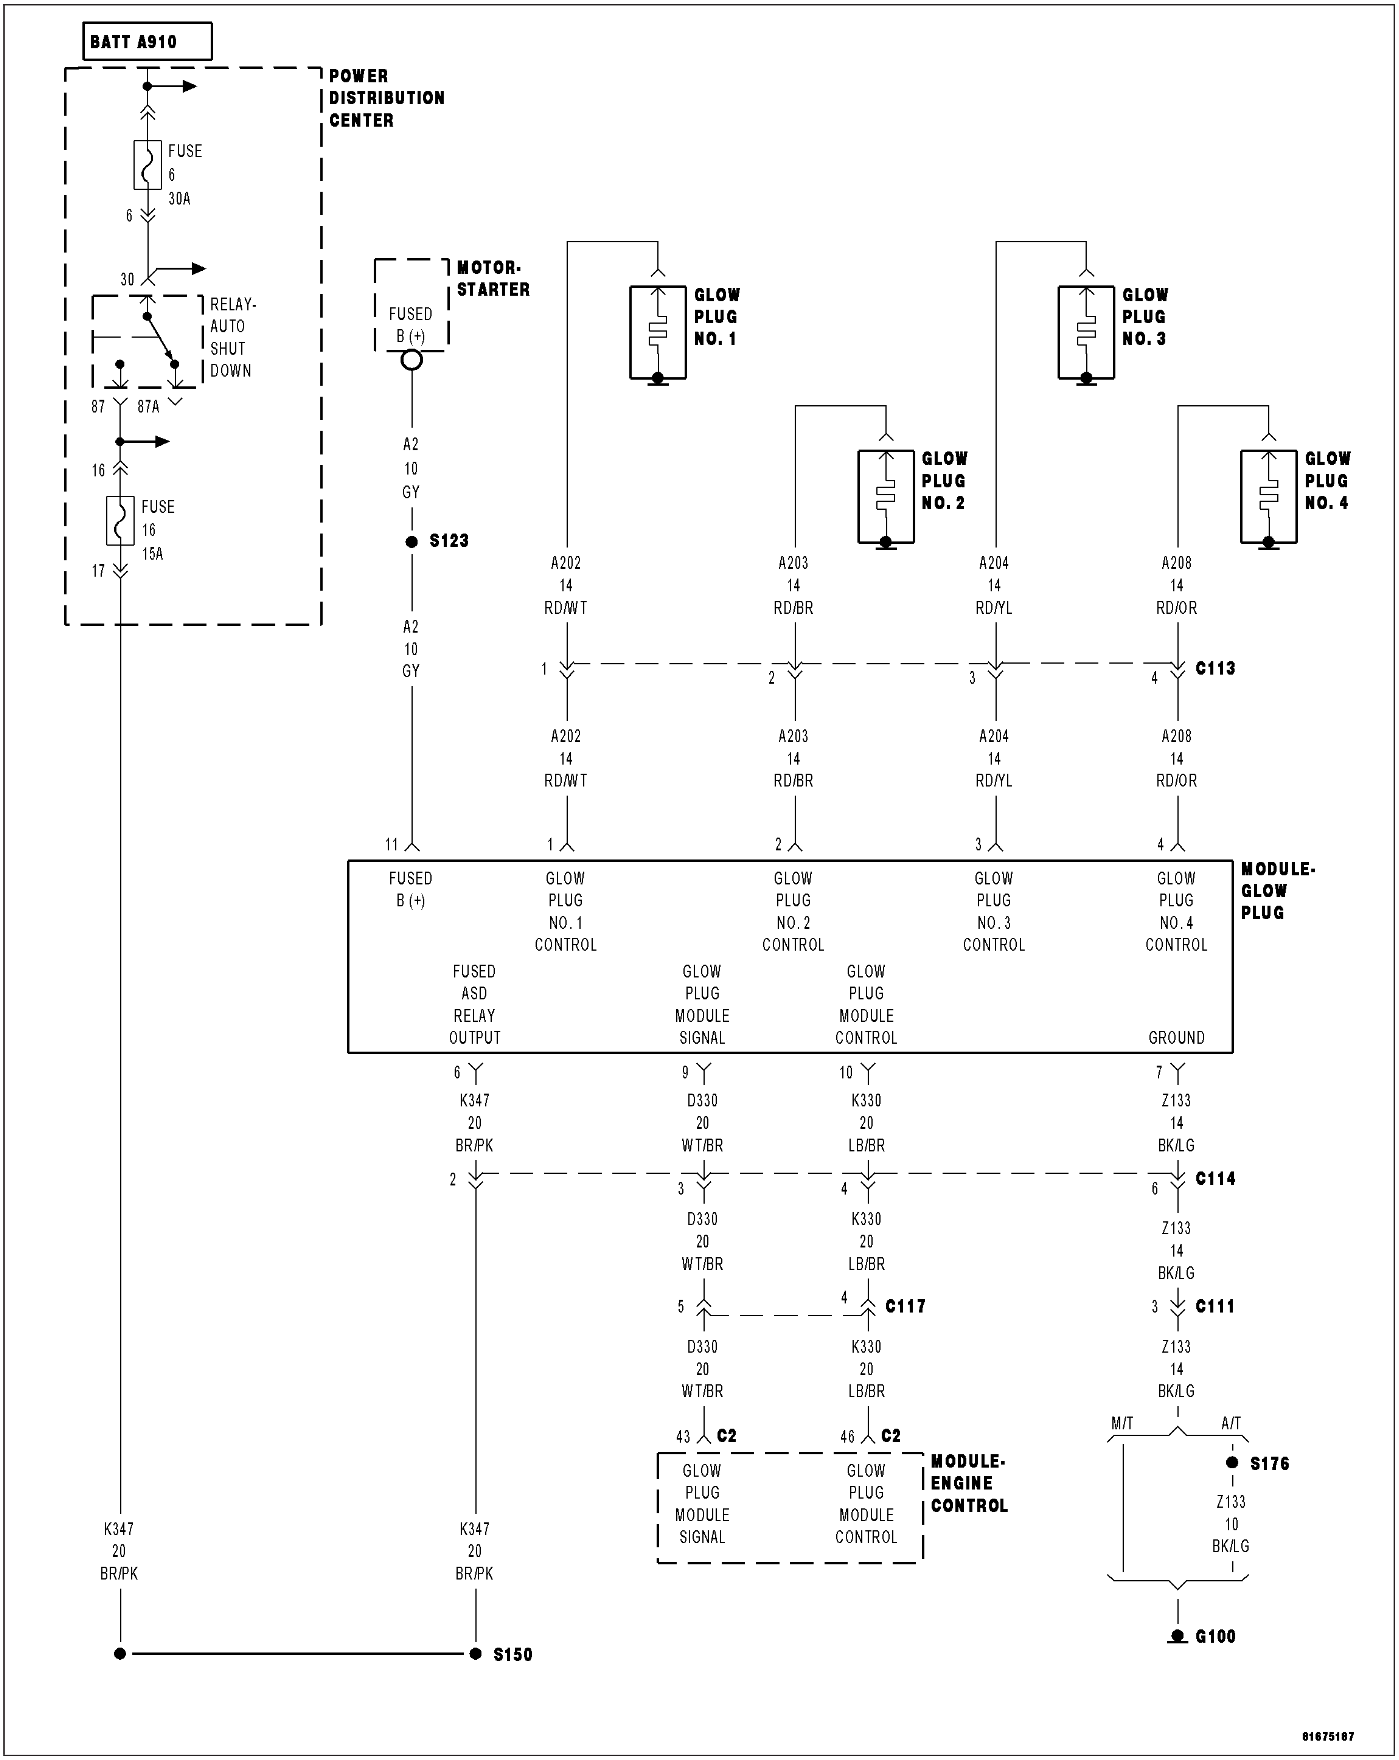
**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P1135-GLOW PLUG MODULE CONTROL CIRCUIT SHORTED TO GROUND



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the Glow Plug Module command off.
- **Set Condition:**
  The ECM detects a short to ground on the Glow Plug Module Control circuit.

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| GLOW PLUG MODULE |
| GLOW PLUG MODULE CONTROL CIRCUIT OPEN |
| GLOW PLUG MODULE CONTROL CIRCUIT SHORTED TO GROUND |
| GLOW PLUG MODULE CONTROL CIRCUIT SHORTED TO VOLTAGE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

Turn the ignition on and wait at least 90 seconds.

With the DRB, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 2. GLOW PLUG MODULE CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the Glow Plug Module harness connectors.

Disconnect the ECM harness connectors.

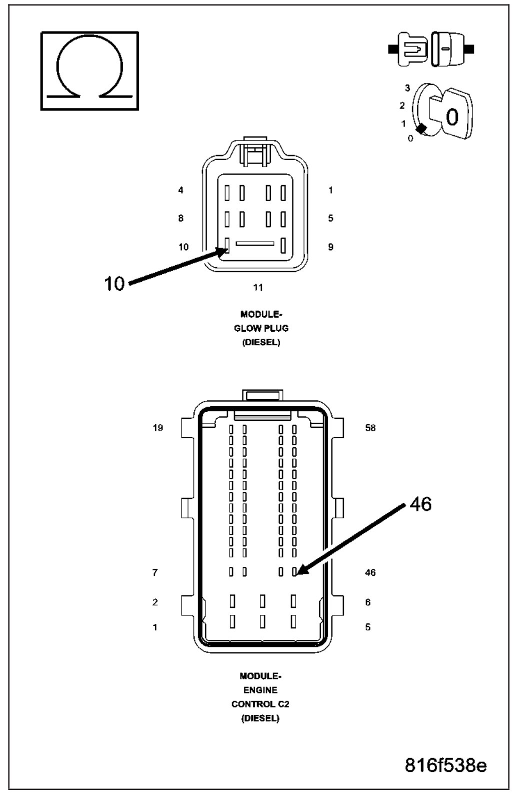
Measure the resistance of the Glow Plug Module Control circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 3

**No** >> Repair the Glow Plug Module Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 3. GLOW PLUG MODULE CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the Glow Plug Module harness connectors.

Disconnect the ECM harness connectors.

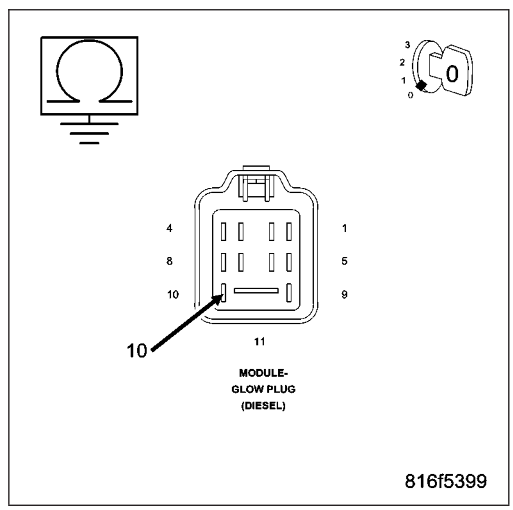
Measure the resistance between ground and the Glow Plug Module Control circuit.

**Is the resistance above 1000 ohms?**

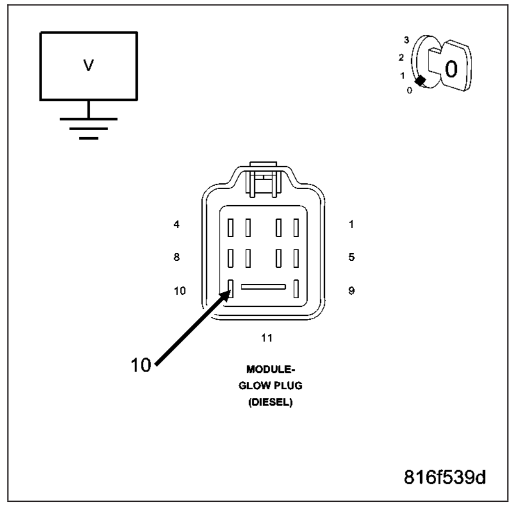
**Yes** >> Go To 4

**No** >> Repair the Glow Plug Module Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 4. GLOW PLUG MODULE CONTROL CIRCUIT SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the Glow Plug Module harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Measure the voltage of the Glow Plug Module Control circuit.

**Is the voltage below 1.0 volt?**

**Yes** >> Go To 5

**No** >> Repair the Glow Plug Module Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. GLOW PLUG CONTROL MODULE

Turn the ignition off.

Replace the Glow Plug Module in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

With the scan tool, read the ECM DTCs.

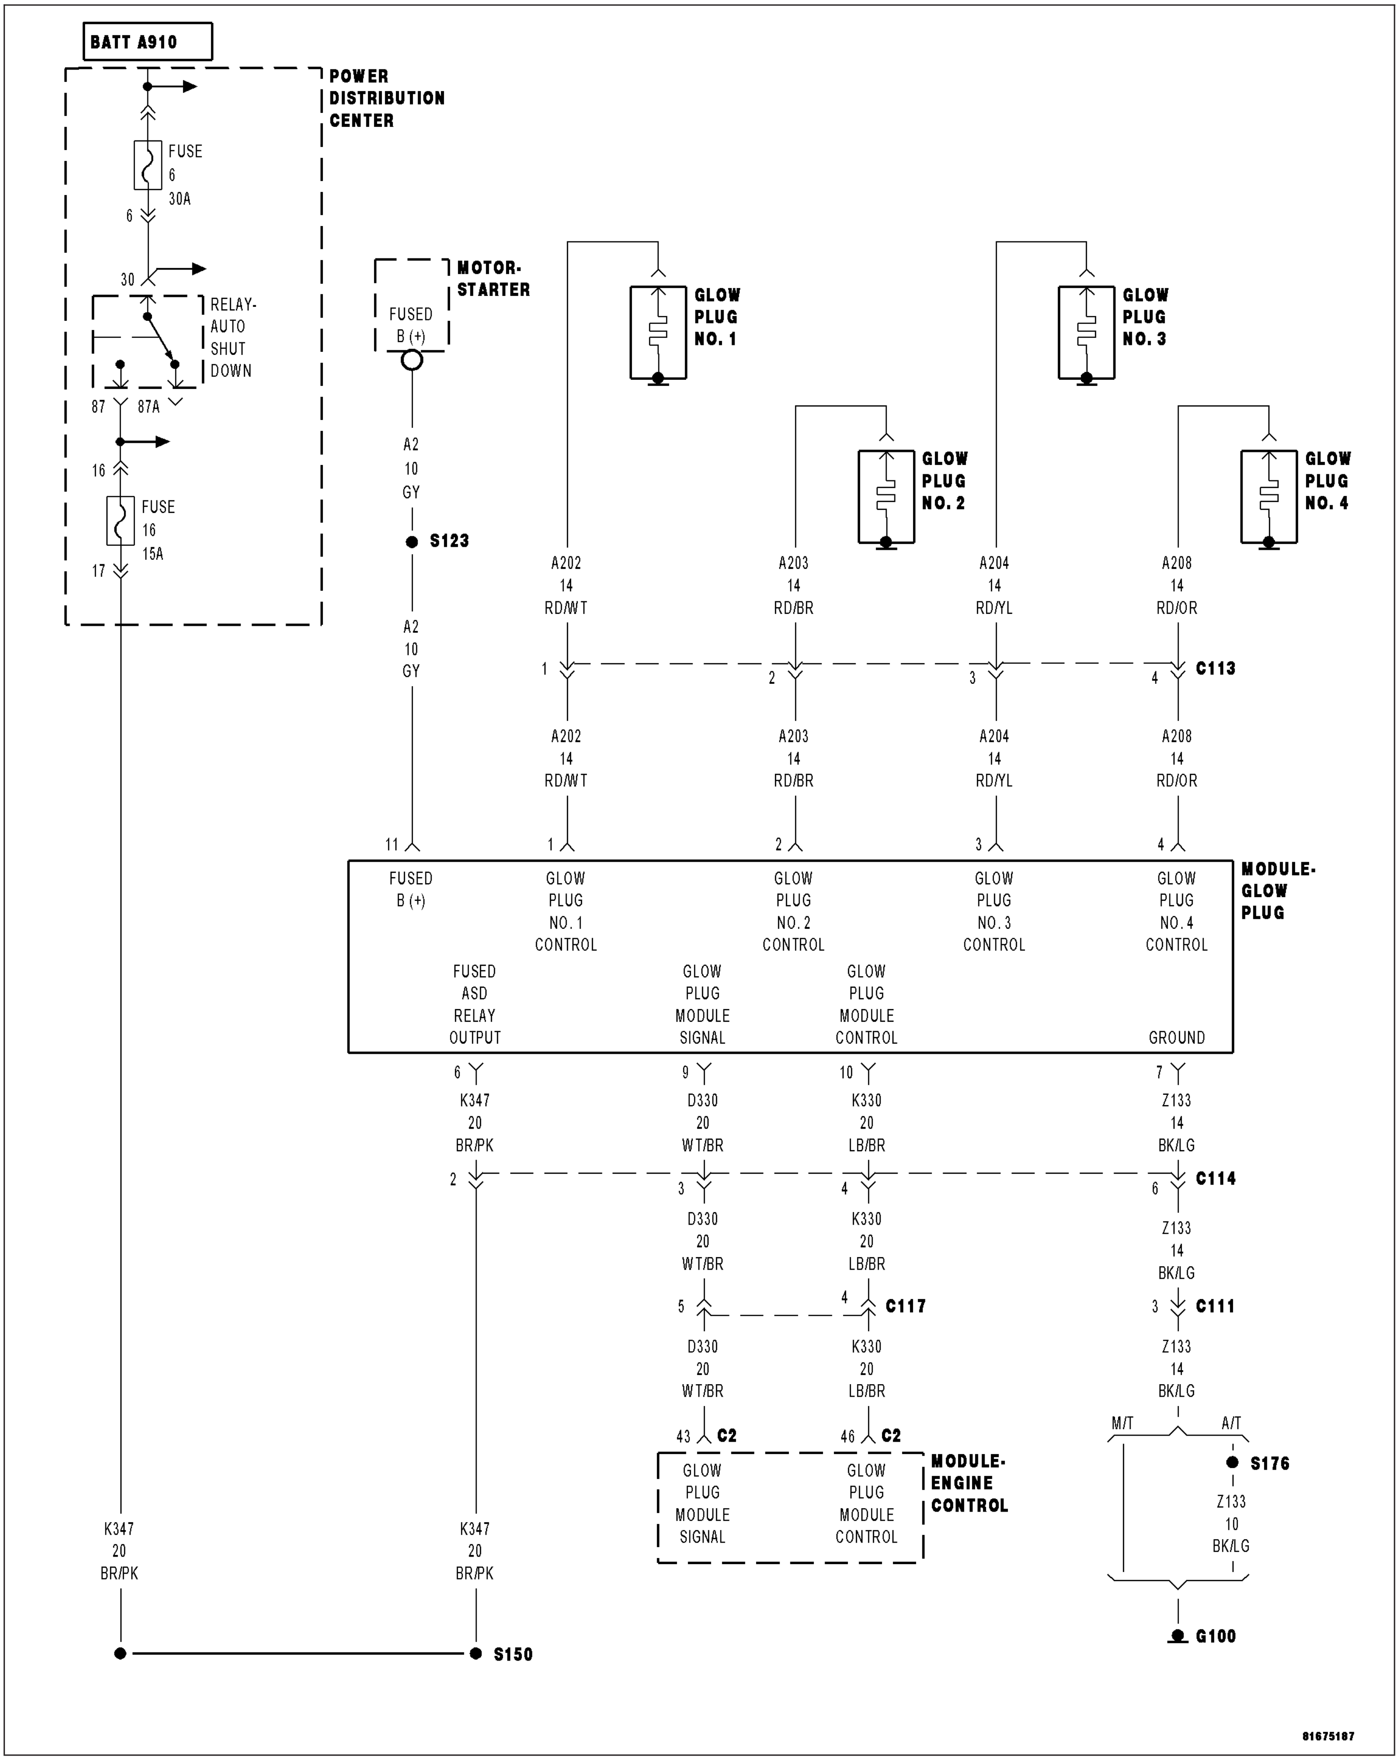
**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P1135-GLOW PLUG MODULE CONTROL CIRCUIT SHORTED TO VOLTAGE



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the Glow Plug Module command on.
- **Set Condition:**
  The ECM detects a short to voltage on the Glow Plug Module Control circuit.

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| GLOW PLUG MODULE |
| GLOW PLUG MODULE CONTROL CIRCUIT OPEN |
| GLOW PLUG MODULE CONTROL CIRCUIT SHORTED TO GROUND |
| GLOW PLUG MODULE CONTROL CIRCUIT SHORTED TO VOLTAGE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

Turn the ignition on and wait at least 90 seconds.

With the DRB, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

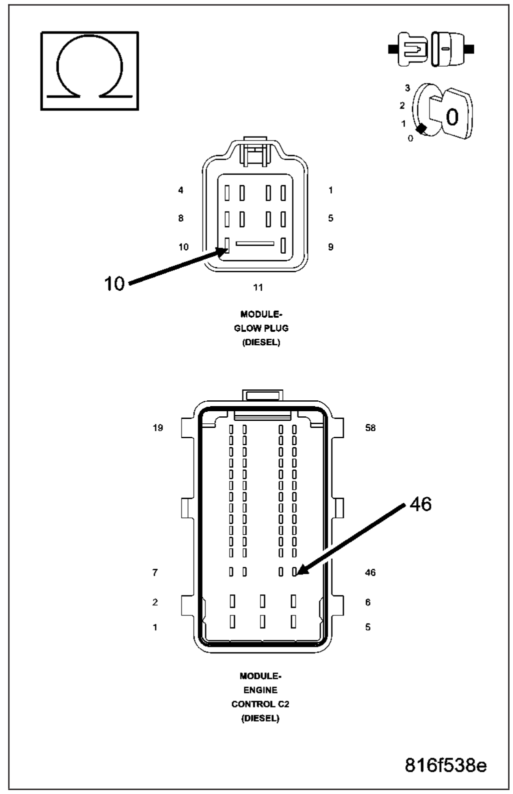
## 2. GLOW PLUG MODULE CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the Glow Plug Module harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance of the Glow Plug Module Control circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 3

**No** >> Repair the Glow Plug Module Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

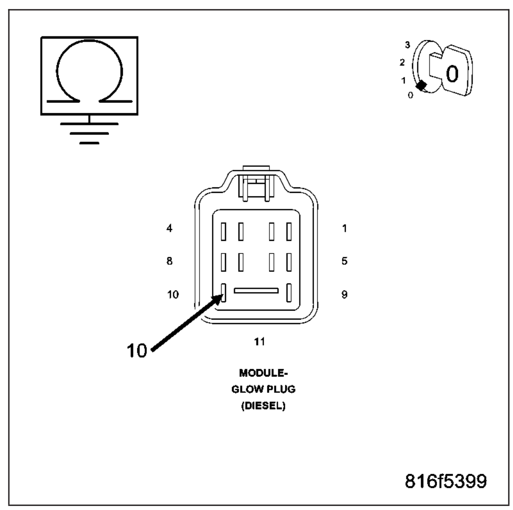
## 3. GLOW PLUG MODULE CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the Glow Plug Module harness connectors.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Glow Plug Module Control circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Glow Plug Module Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. GLOW PLUG MODULE CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

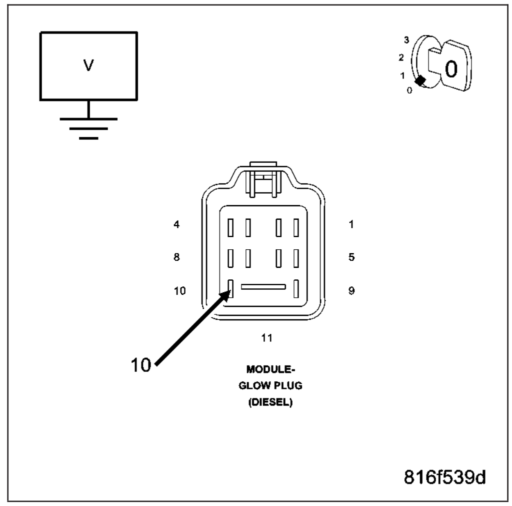
Disconnect the Glow Plug Module harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Measure the voltage of the Glow Plug Module Control circuit.



**Is the voltage below 1.0 volt?**

**Yes** >> Go To 5

**No** >> Repair the Glow Plug Module Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. GLOW PLUG CONTROL MODULE

Turn the ignition off.

Replace the Glow Plug Module in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P0600-ECM RECOVERY

For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. ENGINE CONTROL MODULE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: If there are other DTC's set with this DTC repair other DTC's before continuing with this diagnostic procedure.**

**NOTE: This code can be caused by an intermittent problem in the wiring and connectors to the Engine Control Module. Inspect the Engine Control Module harness connector and associated wiring for signs of poor terminal contact.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

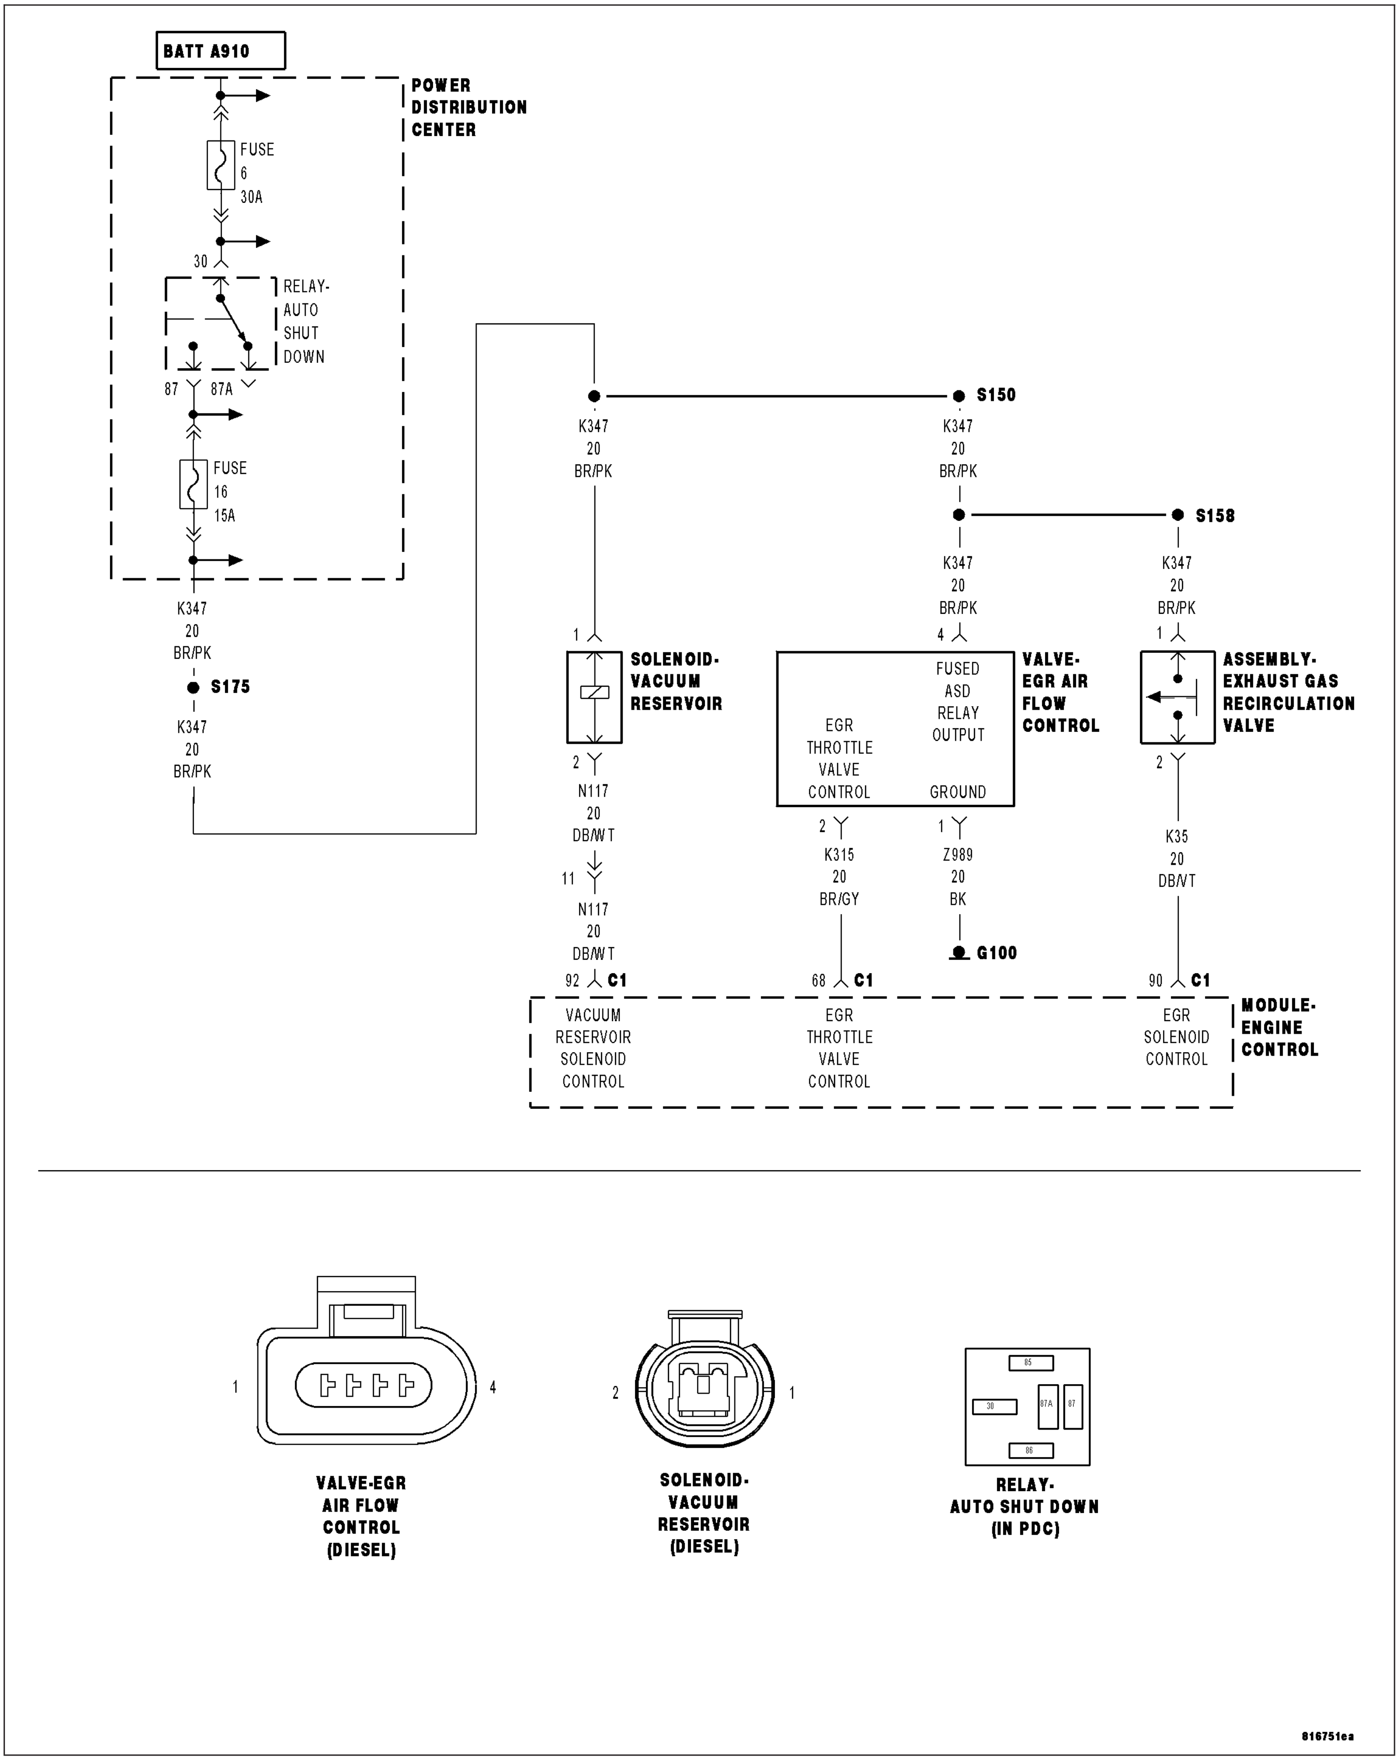
With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

# P1140-VACUUM RESERVOIR SOLENOID OPEN CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Vacuum Reservoir Solenoid command off.
- **Set Condition:**
  The ECM does not detect voltage on the Vacuum Reservoir Solenoid Control circuit.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| VR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND |
| VR SOLENOID CONTROL CIRCUIT OPEN |
| VACUUM RESERVOIR SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Start the engine several times, turning the ignition off for at least 10 seconds between engine run cycles.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

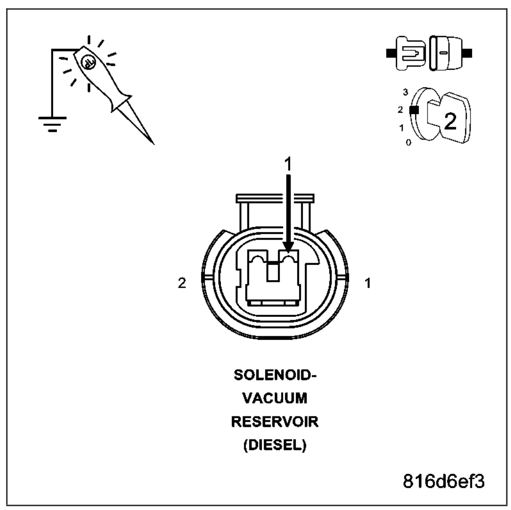
### 2. ASD OUTPUT CKT OPEN

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Turn the ignition on.

Using a 12-volt test light connected to ground, check the ASD Relay Output circuit at the Vacuum Reservoir Solenoid harness connector.

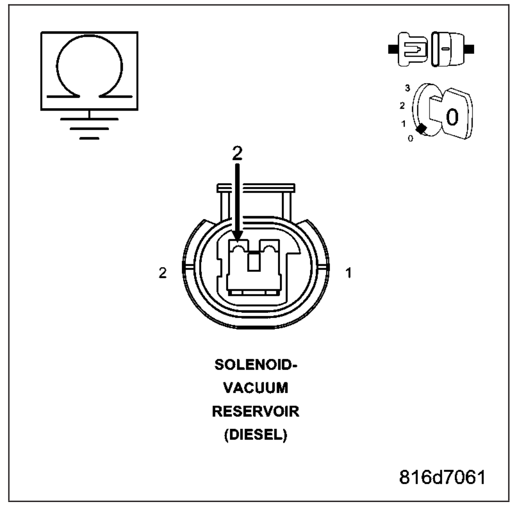


**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the ASD Relay Output circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. VACUUM RESERVOIR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND



Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Vacuum Reservoir Solenoid Control circuit.

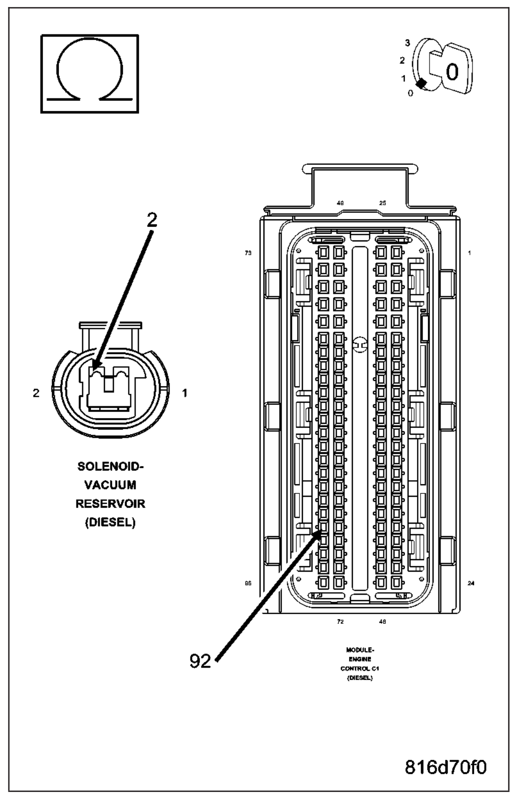
**Is the resistance above 1000 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Vacuum Reservoir Solenoid Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. VACUUM RESERVOIR SOLENOID CONTROL CIRCUIT OPEN



Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Vacuum Reservoir Solenoid Control circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the Vacuum reservoir Solenoid Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. VACUUM RESERVOIR SOLENOID

Turn the ignition off.

Install a substitute Vacuum Reservoir Solenoid in place of the vehicle's Vacuum Reservoir Solenoid.

**NOTE: Ensure the ECM and Vacuum Reservoir Solenoid harness connectors are connected.**

Turn the ignition on.

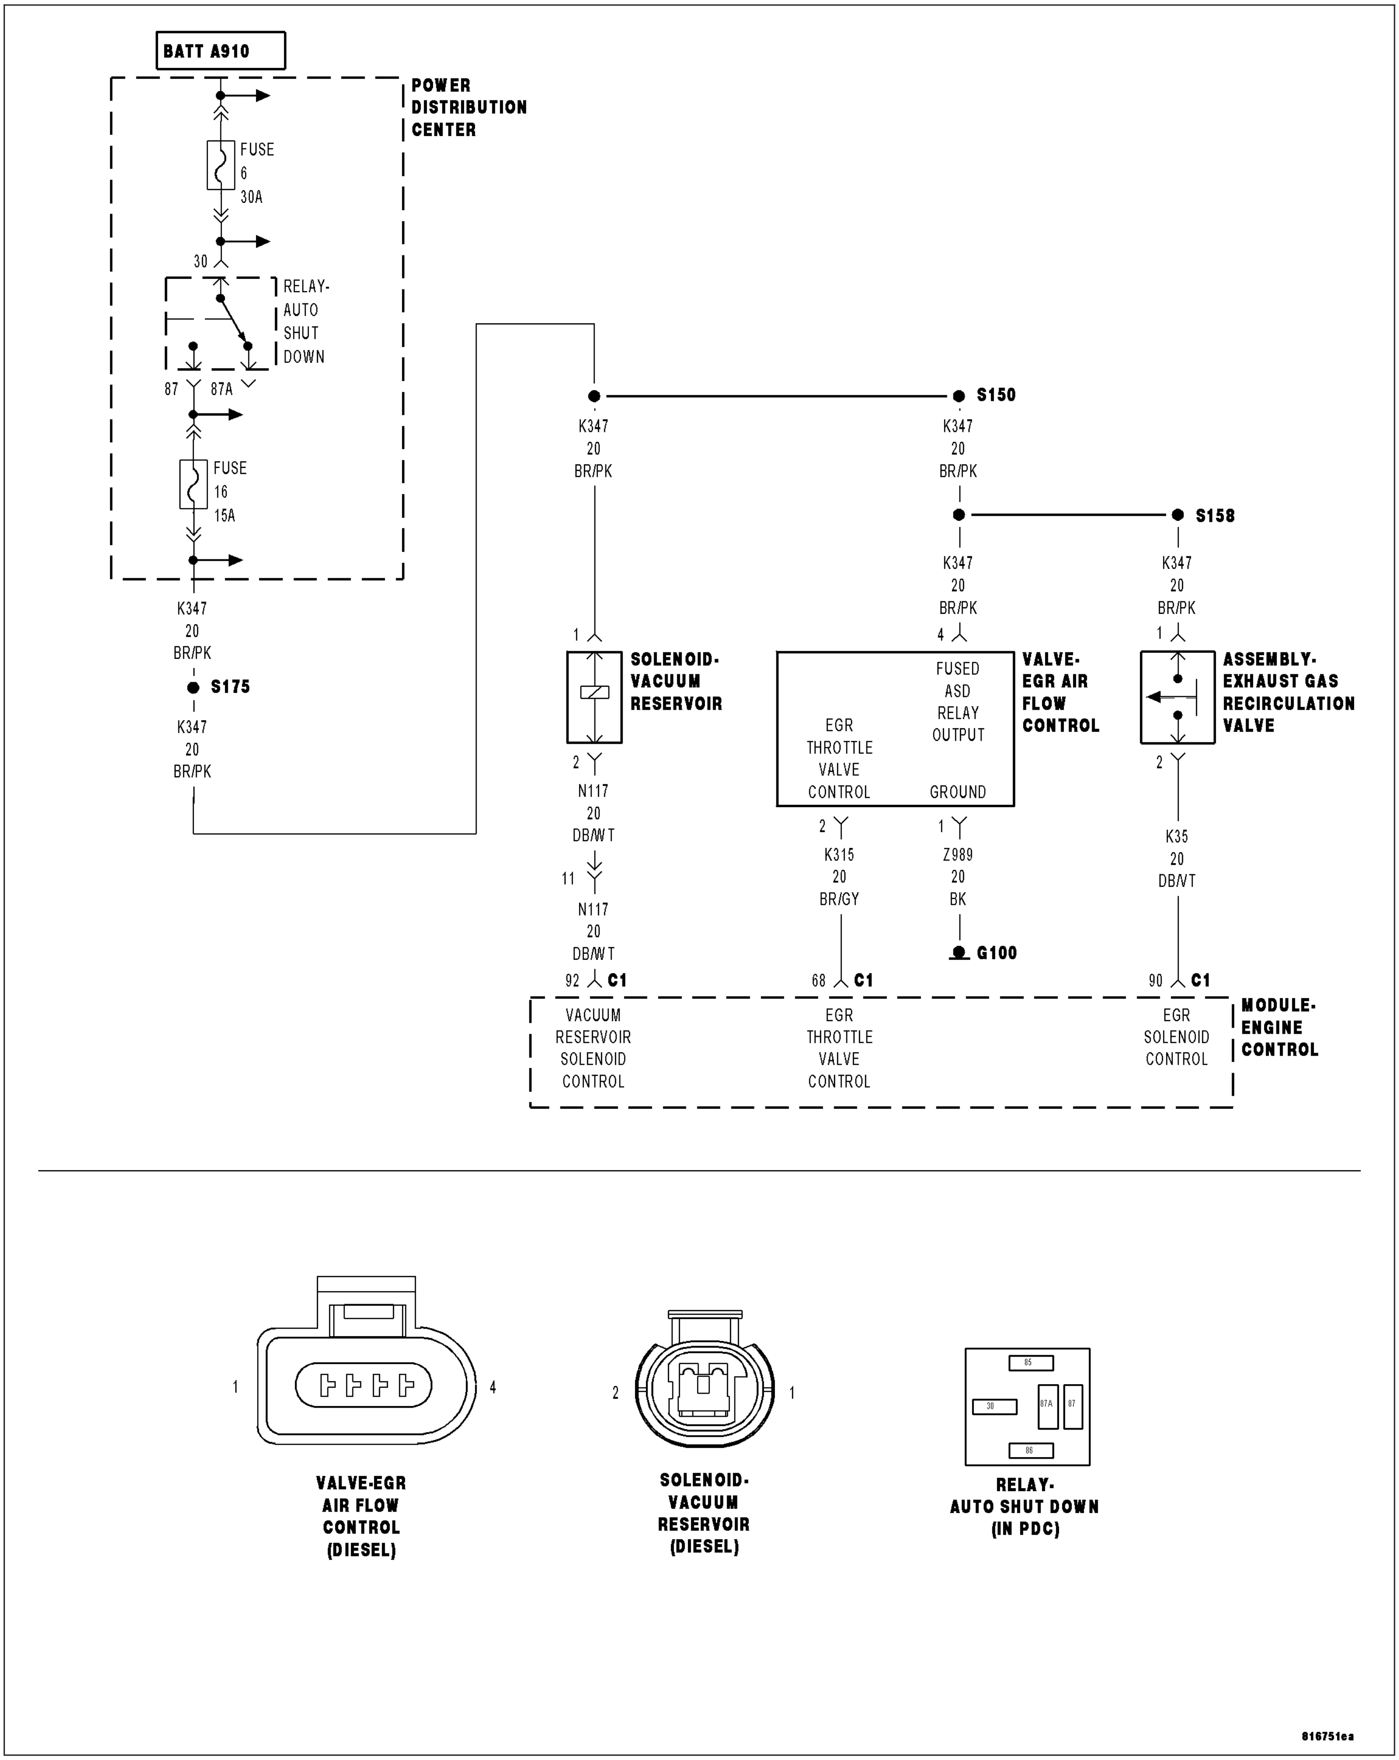
With the scan tool, check for this DTC to set again.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Vacuum Reservoir Solenoid.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P1140-VACUUM RESERVOIR SOLENOID SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Vacuum Reservoir Solenoid command on.
- **Set Condition:**
  The ECM detects excessive current on the Vacuum Reservoir Solenoid Control circuit.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| VACUUM RESERVOIR SOLENOID |
| VR SOLENOID CONTROL SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE - INTERNAL SHORT TO VOLTAGE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Start the engine several times, turning the ignition off for at least 10 seconds between engine run cycles.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. VR SOLENOID CONTROL SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

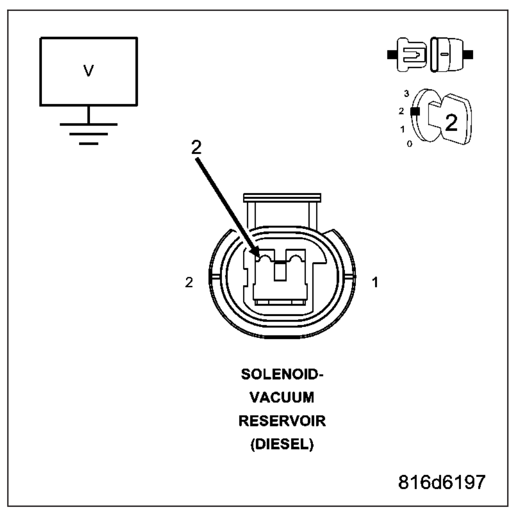
Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the Vacuum Reservoir Solenoid Control circuit.



**Is the voltage below 1.0 volt?**

**Yes** >> Go To 3

**No** >> Repair the Vacuum Reservoir Solenoid Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. VR SOLENOID

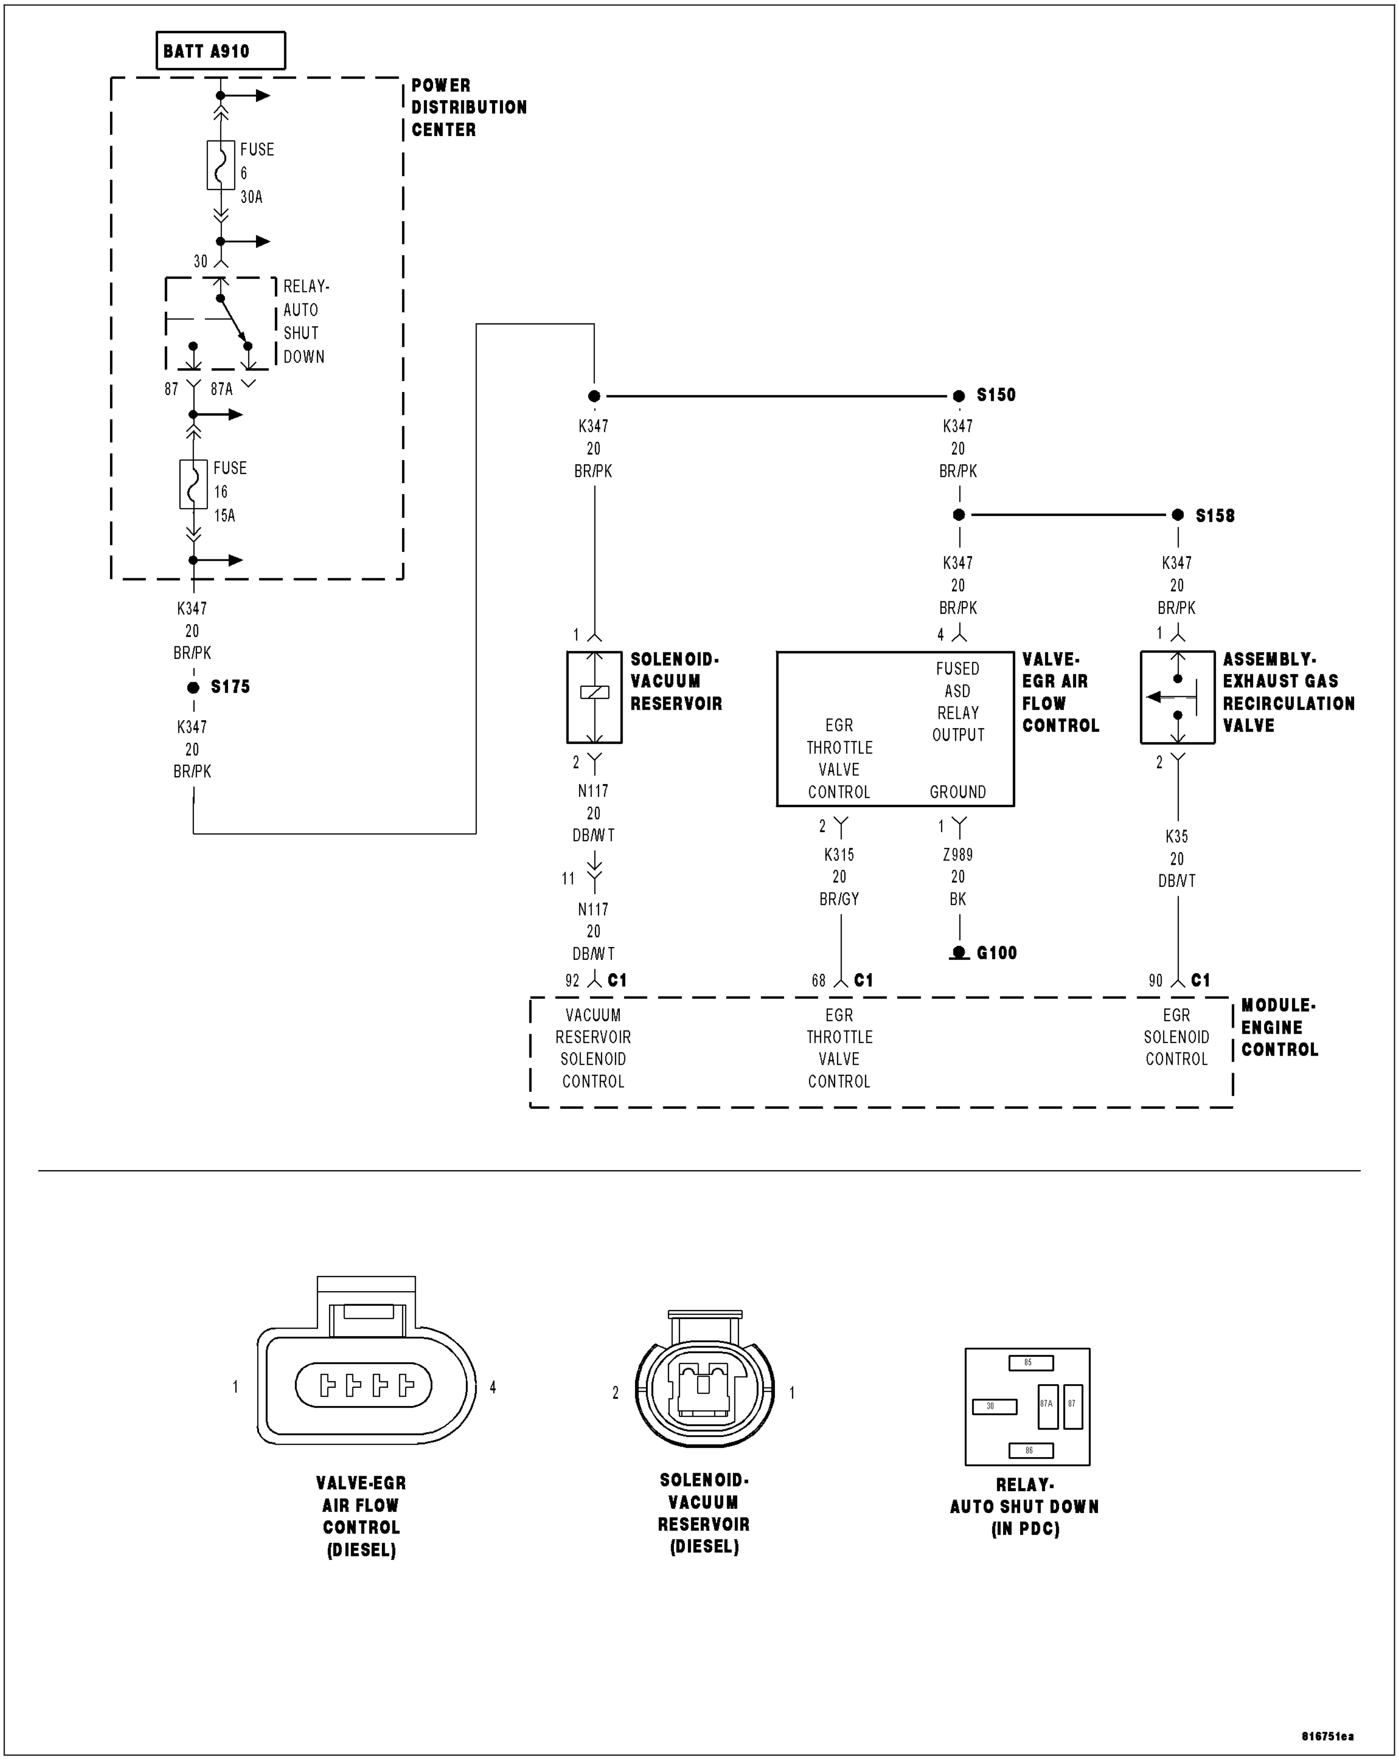
Turn the ignition off.
Disconnect the Vacuum Reservoir Solenoid harness connector.
Turn the ignition on.
With the scan tool, erase ECM DTCs.
Monitor the scan tool for ECM DTCs.

**Does the scan tool display P1250 VACUUM RESERVOIR SOLENOID OPEN CIRCUIT?**

**Yes** >> Replace the Vacuum Reservoir Solenoid.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P1140-VACUUM RESERVOIR SOLENOID CIRCUIT SHORT TO GROUND



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Vacuum Reservoir Solenoid command off.
- **Set Condition:**
  The ECM detects a short to ground on the Vacuum Reservoir Solenoid Control circuit.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| VR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND |
| VR SOLENOID CONTROL CIRCUIT OPEN |
| VACUUM RESERVOIR SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Start the engine several times, turning the ignition off for at least 10 seconds between engine run cycles.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

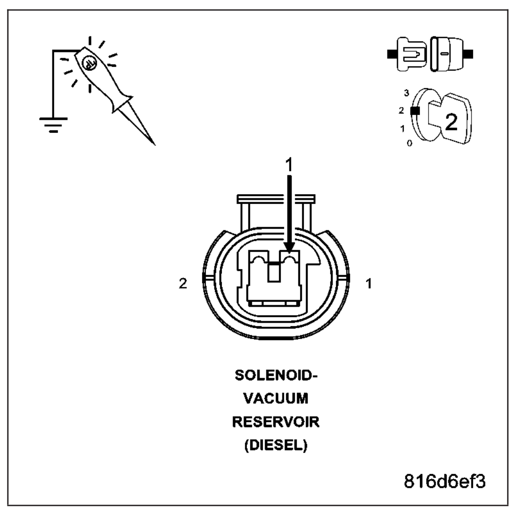
### 2. ASD OUTPUT CKT OPEN

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Turn the ignition on.

Using a 12-volt test light connected to ground, check the ASD Relay Output circuit at the Vacuum Reservoir Solenoid harness connector.



**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the ASD Relay Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

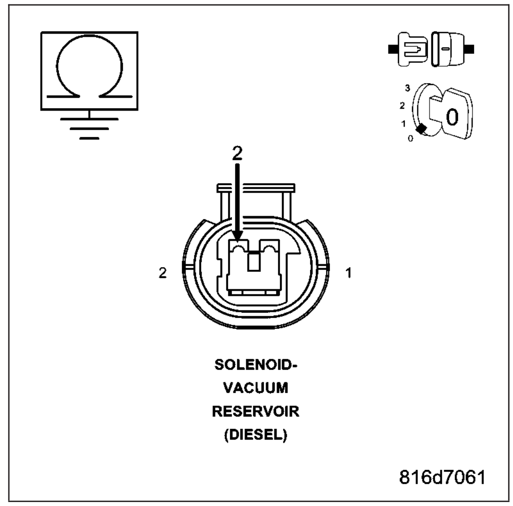
## 3. VACUUM RESERVOIR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Vacuum Reservoir Solenoid Control circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Vacuum Reservoir Solenoid Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

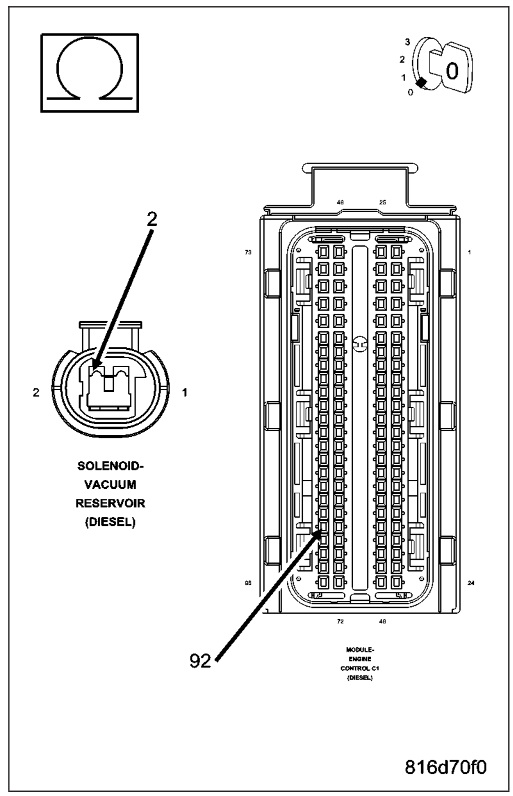
## 4. VACUUM RESERVOIR SOLENOID CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Vacuum Reservoir Solenoid Control circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the Vacuum reservoir Solenoid Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. VACUUM RESERVOIR SOLENOID

Turn the ignition off.

Install a substitute Vacuum Reservoir Solenoid in place of the vehicle's Vacuum Reservoir Solenoid.

**NOTE: Ensure the ECM and Vacuum Reservoir Solenoid harness connectors are connected.**

Turn the ignition on.

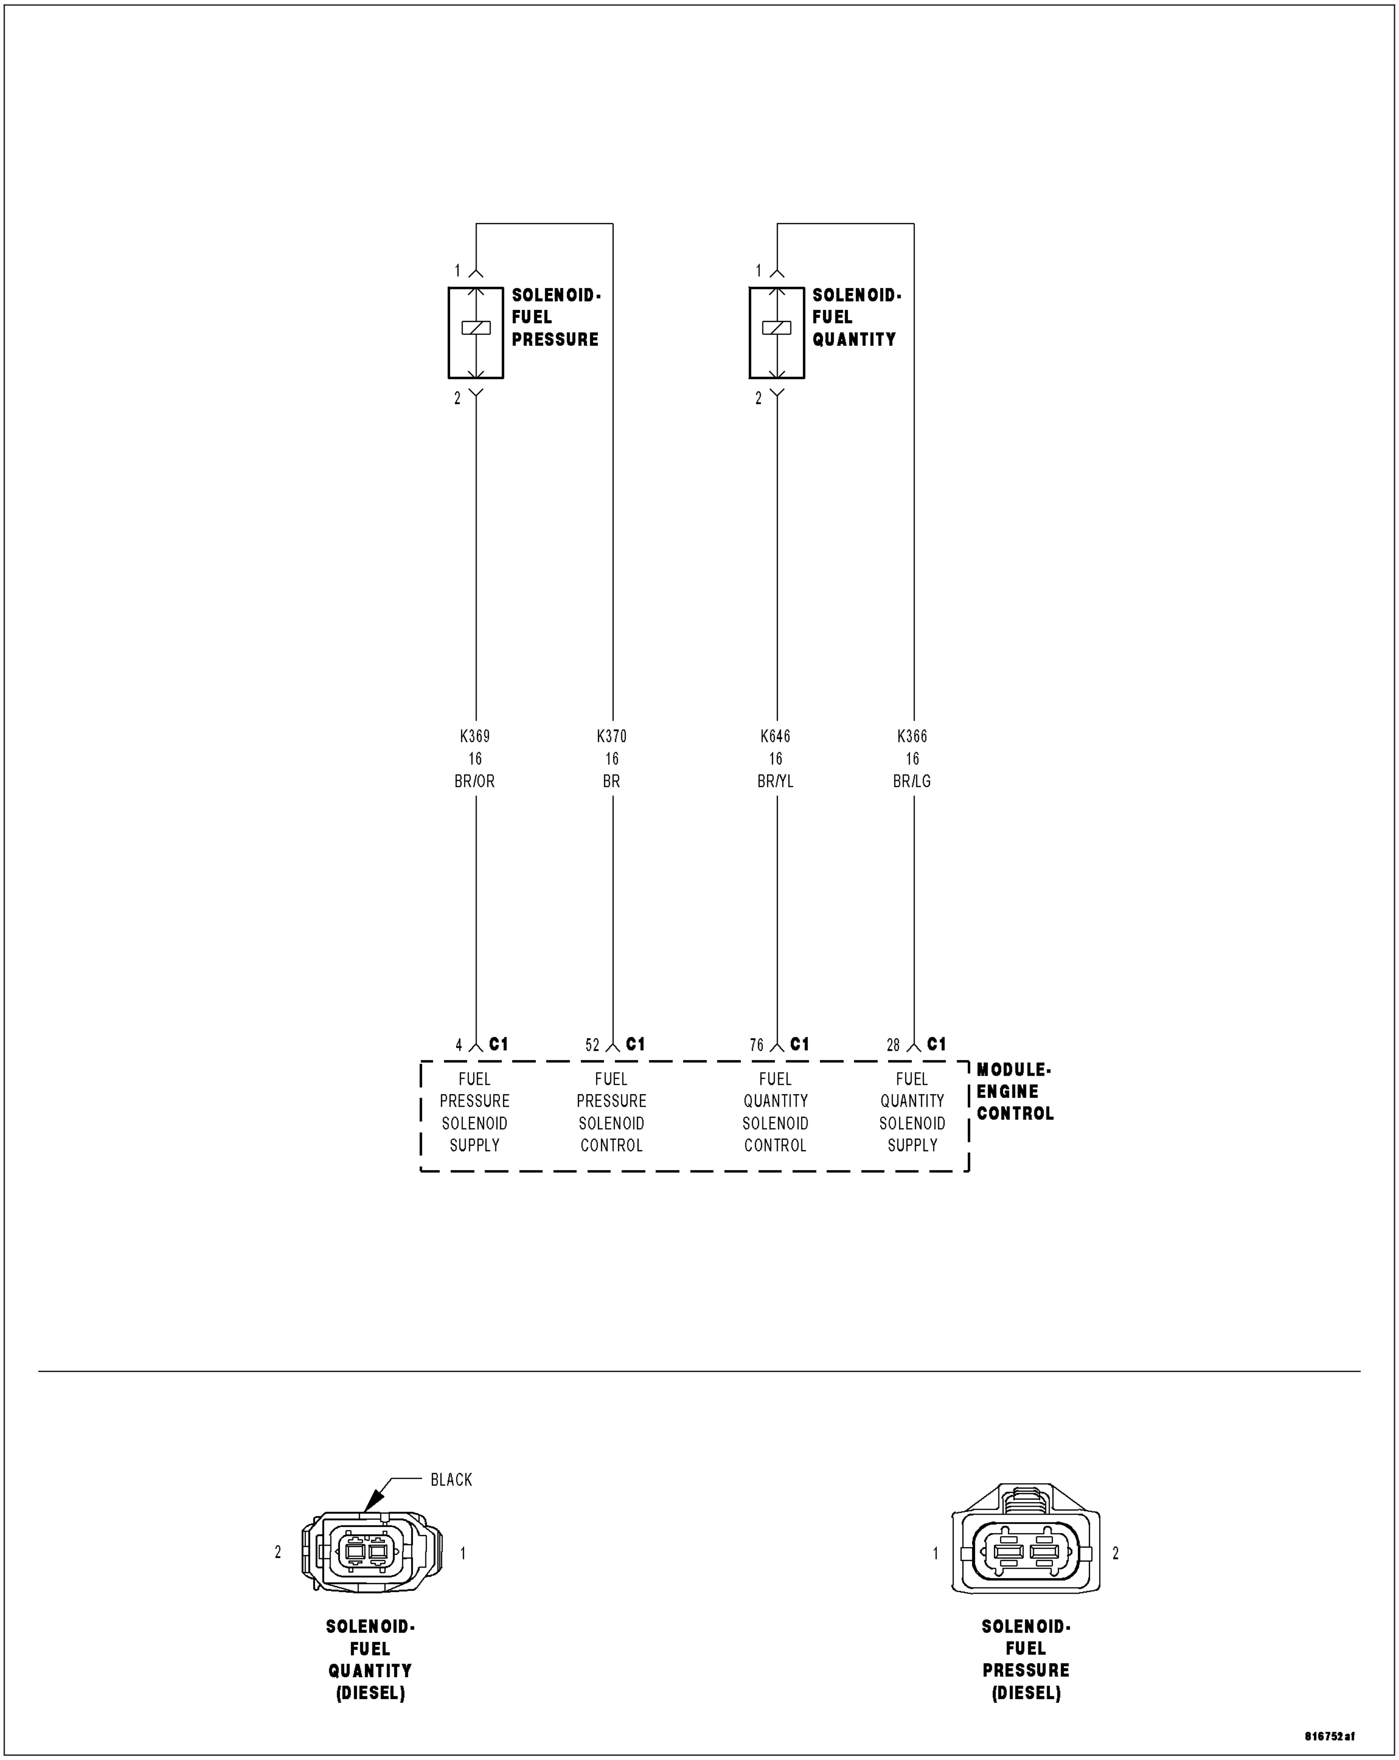
With the scan tool, check for this DTC to set again.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Vacuum Reservoir Solenoid.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P1142-FUEL PRESSURE SOLENOID OPEN CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Fuel Pressure Solenoid command off.
- **Set Condition:**
  The ECM does not detect voltage on the Fuel Pressure Solenoid Control circuit for 0.28 second.

| Possible Causes |
|---|
| FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO GROUND |
| FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE |
| FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TOGETHER |
| FUEL PRESSURE SOLENOID OPEN CIRCUIT(S) |
| INTERMITTENT CONDITION |
| FUEL PRESSURE SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the DRB at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the DRB, erase ECM DTCs.

Start the engine several times, turning the ignition off for at least 30 seconds between each run cycle.

Monitor the DRB for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

## 3. FUEL PRESSURE SOLENOID CIRCUIT(S) OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Pressure Solenoid harness connector.

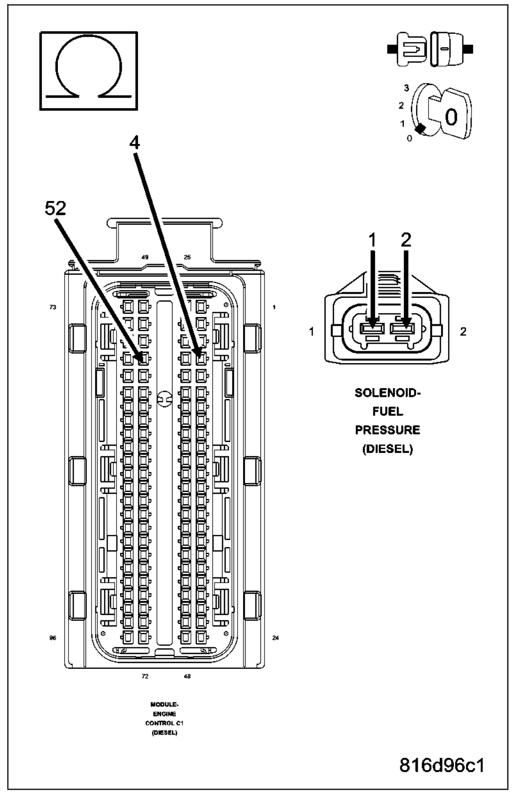
Measure the resistance of each of the Fuel Pressure Solenoid circuits between the ECM harness connector and the Fuel Pressure Solenoid harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 4

**No** >> Repair the circuit(s) that measured above 10.0 ohms for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 4. FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Pressure Solenoid harness connector.

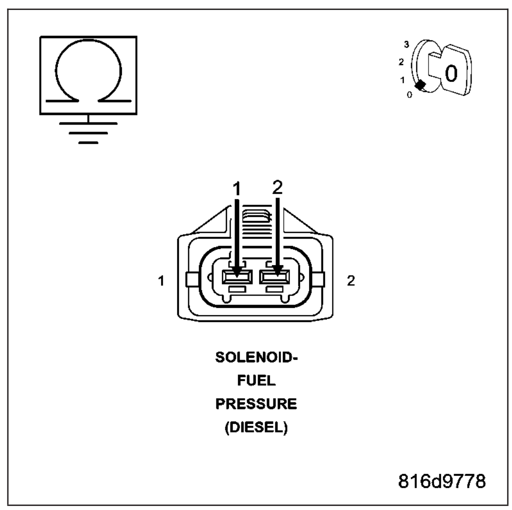
Measure the resistance between ground and each of the Fuel Pressure Solenoid circuits.

**Is the resistance above 1000 ohms for each measurement?**

**Yes** >> Go To 5

**No** >> Repair the circuit(s) that measured below 1000 ohms for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



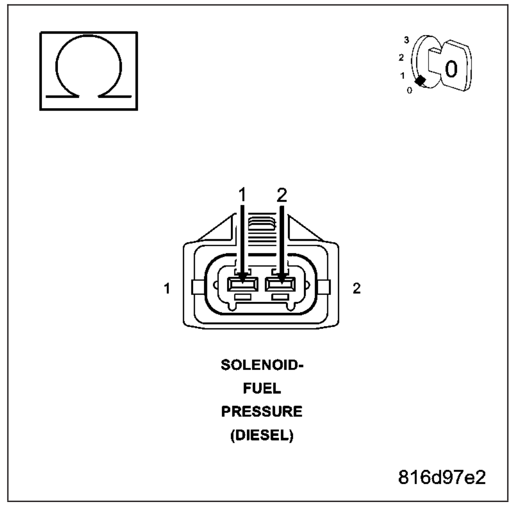
## 5. FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Pressure Solenoid harness connector.

Measure the resistance between the Fuel Pressure Solenoid circuits.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Fuel Pressure Solenoid circuits for a short together.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the ECM harness connectors.

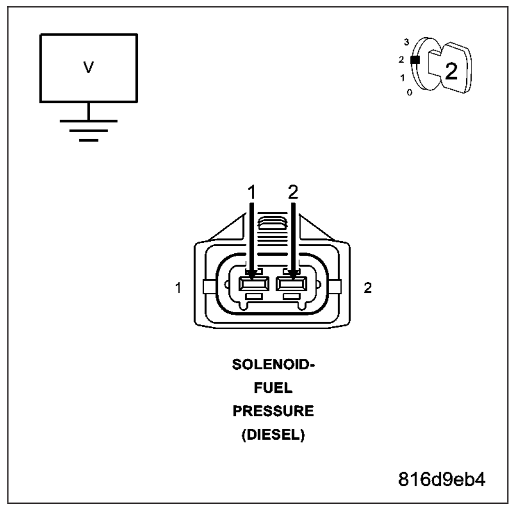
Disconnect the Fuel Pressure Solenoid harness connector.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage each of the Fuel Pressure Solenoid circuits.



**Is the voltage below 1.0 volt for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the circuit(s) that measured above 1.0 volts for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. FUEL PRESSURE SOLENOID

Turn the ignition off.

Disconnect the Fuel Pressure Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P2294-FUEL PRESSURE SOLENOID OPEN CIRCUIT.**

Turn the ignition off.

Connect a jumper wire between cavity 1 and cavity 2 of the Fuel Pressure Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

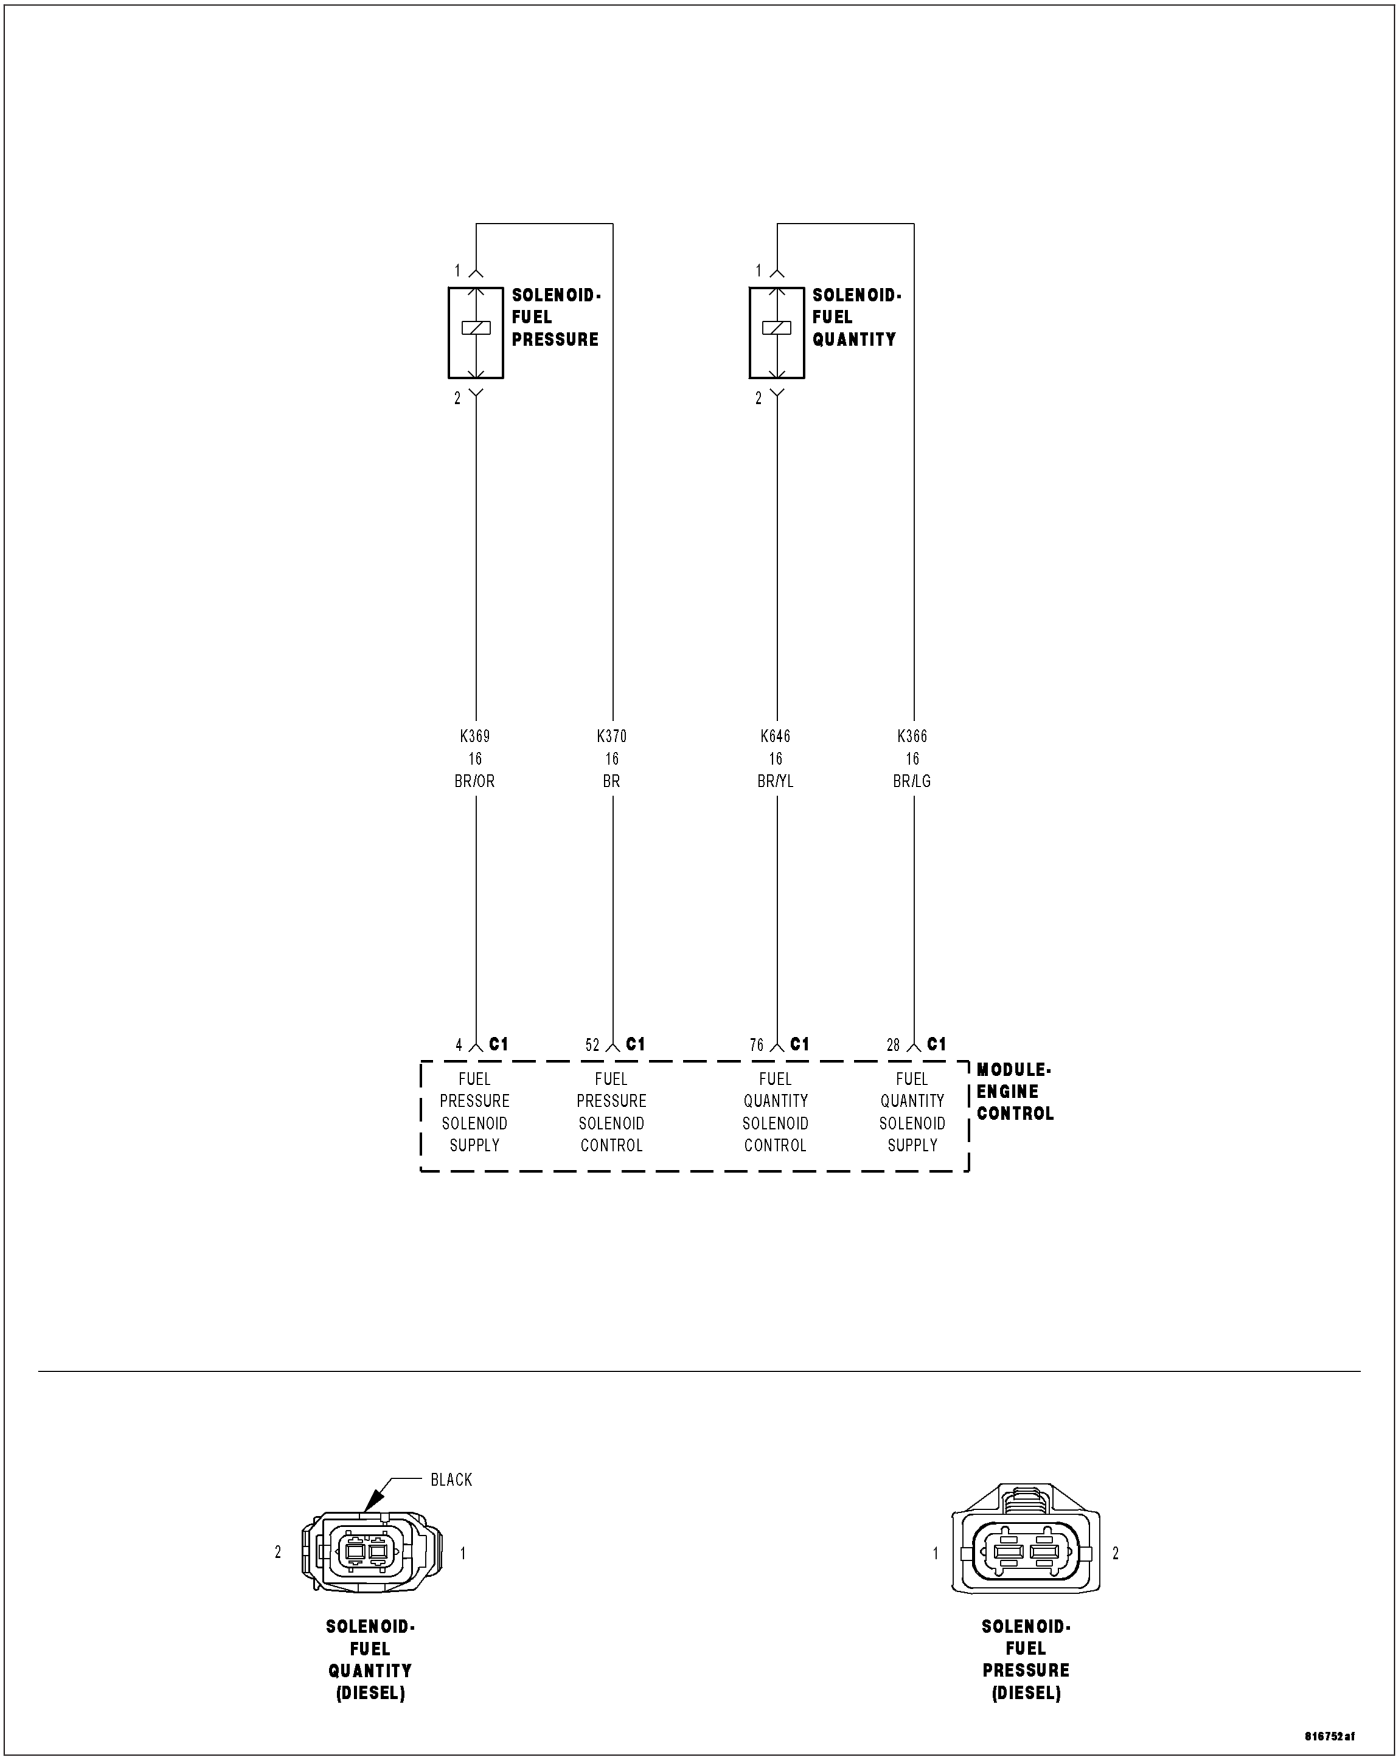
**NOTE: The scan tool should display P2296-FUEL PRESSURE SOLENOID SHORT CIRCUIT.**

**Does the scan tool display the appropriate DTC for each condition?**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P1142-FUEL PRESSURE SOLENOID SHORT TO GROUND



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Fuel Pressure Solenoid command off.
- **Set Condition:**
  The ECM detects a short to ground on the Fuel Pressure Solenoid Control circuit.

| Possible Causes |
|---|
| FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO GROUND |
| FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE |
| FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TOGETHER |
| FUEL PRESSURE SOLENOID OPEN CIRCUIT(S) |
| INTERMITTENT CONDITION |
| FUEL PRESSURE SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Start the engine several times, turning the ignition off for at least 30 seconds between each run cycle.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

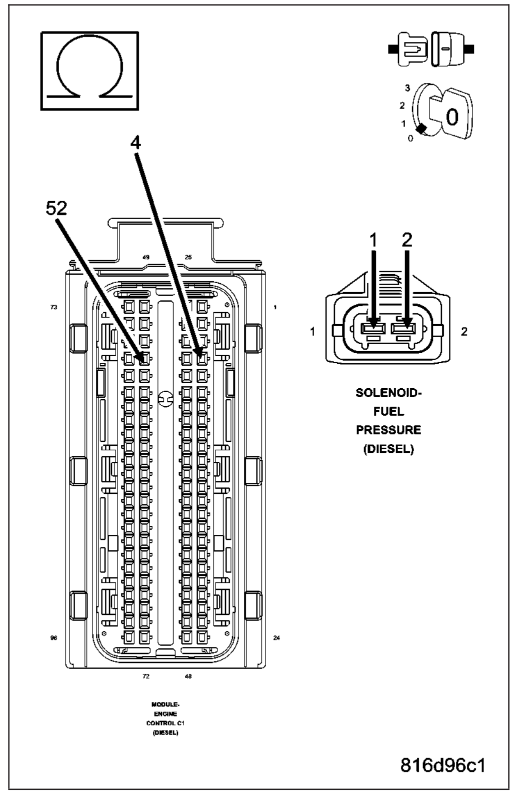
## 3. FUEL PRESSURE SOLENOID CIRCUIT(S) OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Pressure Solenoid harness connector.

Measure the resistance of each of the Fuel Pressure Solenoid circuits between the ECM harness connector and the Fuel Pressure Solenoid harness connector.



**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 4

**No** >> Repair the circuit(s) that measured above 10.0 ohms for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

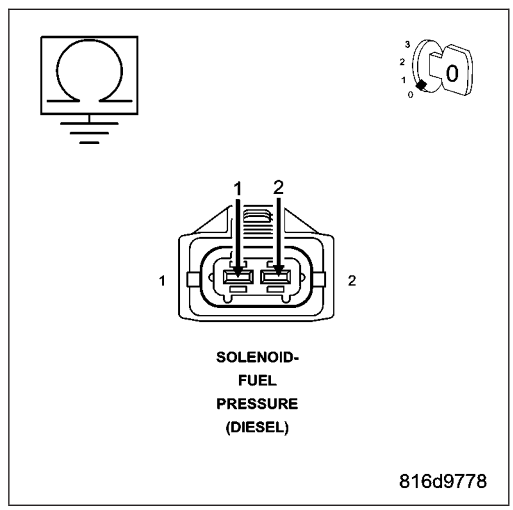
## 4. FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Pressure Solenoid harness connector.

Measure the resistance between ground and each of the Fuel Pressure Solenoid circuits.



**Is the resistance above 1000 ohms for each measurement?**

**Yes** >> Go To 5

**No** >> Repair the circuit(s) that measured below 1000 ohms for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

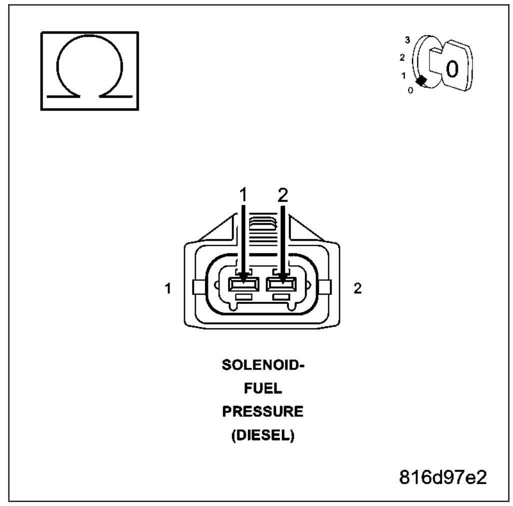
## 5. FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Pressure Solenoid harness connector.

Measure the resistance between the Fuel Pressure Solenoid circuits.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Fuel Pressure Solenoid circuits for a short together.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the ECM harness connectors.

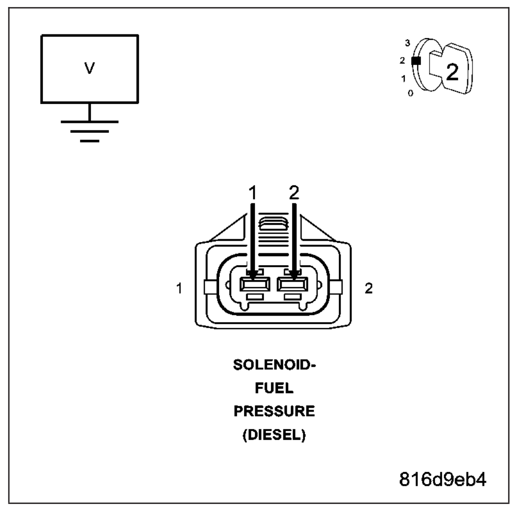
Disconnect the Fuel Pressure Solenoid harness connector.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage each of the Fuel Pressure Solenoid circuits.



**Is the voltage below 1.0 volt for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the circuit(s) that measured above 1.0 volts for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. FUEL PRESSURE SOLENOID

Turn the ignition off.

Disconnect the Fuel Pressure Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P2294-FUEL PRESSURE SOLENOID OPEN CIRCUIT.**

Turn the ignition off.

Connect a jumper wire between cavity 1 and cavity 2 of the Fuel Pressure Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

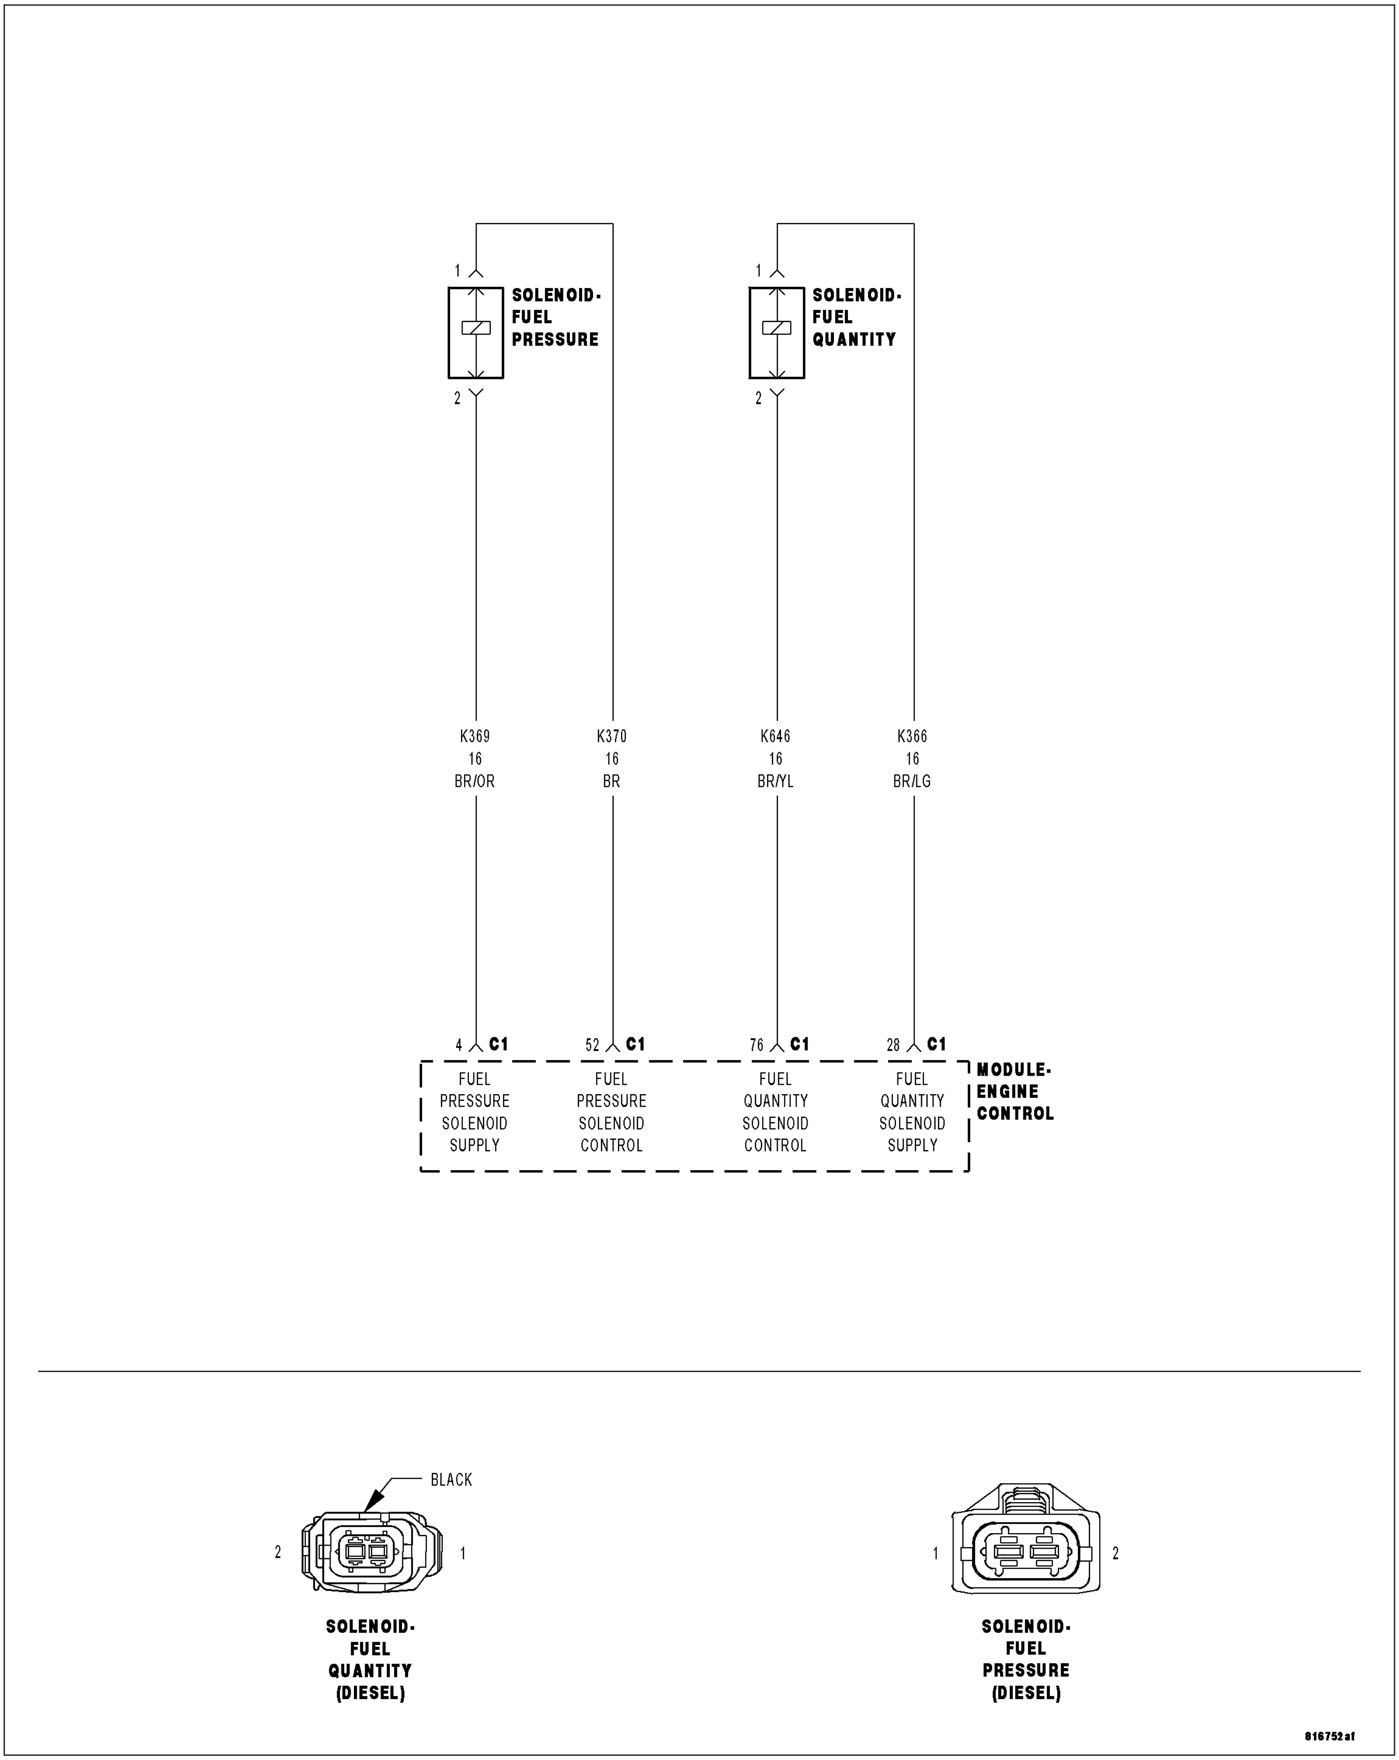
**NOTE: The scan tool should display P2296-FUEL PRESSURE SOLENOID SHORT CIRCUIT.**

**Does the DRB display the appropriate DTC for each condition?**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P1142-FUEL PRESSURE SOLENOID SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Fuel Pressure Solenoid command on.
- **Set Condition:**
  The ECM detects excessive current on the Fuel Pressure Solenoid Control circuit for 0.28 second.

| Possible Causes |
| --- |
| FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO GROUND |
| FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE |
| FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TOGETHER |
| FUEL PRESSURE SOLENOID OPEN CIRCUIT(S) |
| INTERMITTENT CONDITION |
| FUEL PRESSURE SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Start the engine several times, turning the ignition off for at least 30 seconds between each run cycle.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

## 3. FUEL PRESSURE SOLENOID CIRCUIT(S) OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Pressure Solenoid harness connector.

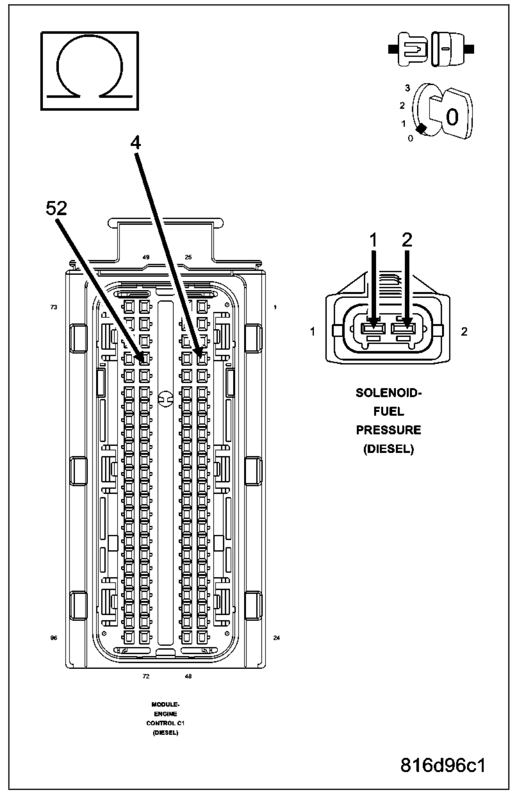
Measure the resistance of each of the Fuel Pressure Solenoid circuits between the ECM harness connector and the Fuel Pressure Solenoid harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 4

**No** >> Repair the circuit(s) that measured above 10.0 ohms for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 4. FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Pressure Solenoid harness connector.

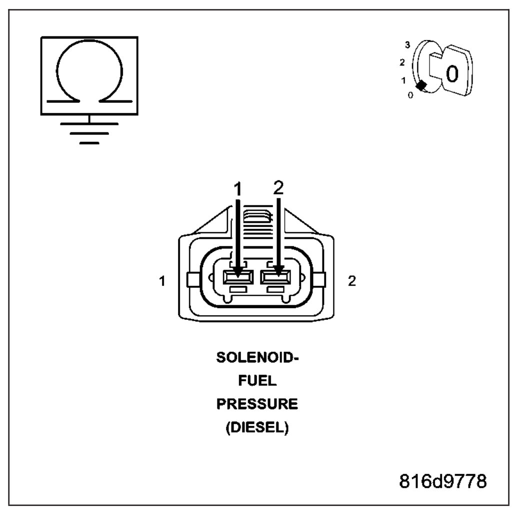
Measure the resistance between ground and each of the Fuel Pressure Solenoid circuits.

**Is the resistance above 1000 ohms for each measurement?**

**Yes** >> Go To 5

**No** >> Repair the circuit(s) that measured below 1000 ohms for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



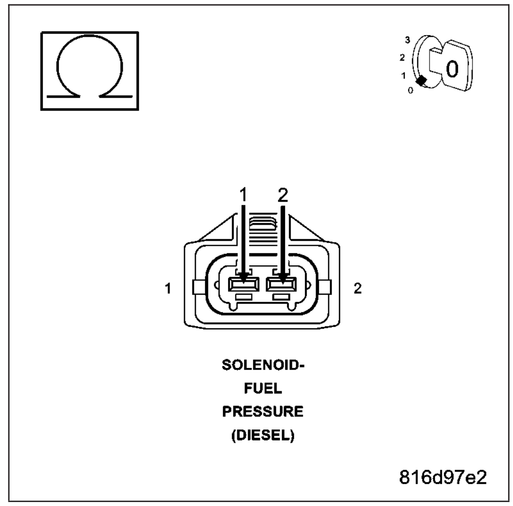
## 5. FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Pressure Solenoid harness connector.

Measure the resistance between the Fuel Pressure Solenoid circuits.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Fuel Pressure Solenoid circuits for a short together.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the ECM harness connectors.

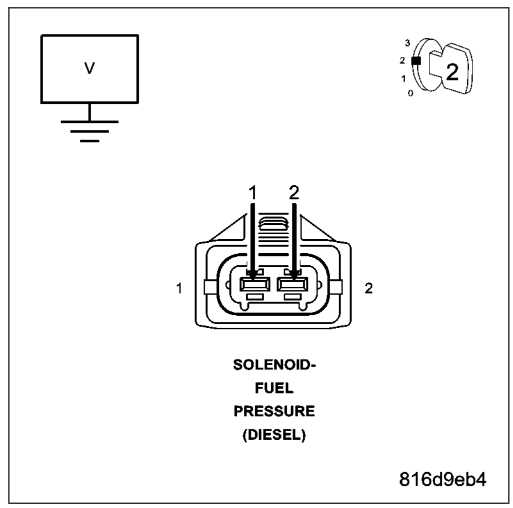
Disconnect the Fuel Pressure Solenoid harness connector.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage each of the Fuel Pressure Solenoid circuits.



**Is the voltage below 1.0 volt for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the circuit(s) that measured above 1.0 volts for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. FUEL PRESSURE SOLENOID

Turn the ignition off.

Disconnect the Fuel Pressure Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P2294-FUEL PRESSURE SOLENOID OPEN CIRCUIT.**

Turn the ignition off.

Connect a jumper wire between cavity 1 and cavity 2 of the Fuel Pressure Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P2296-FUEL PRESSURE SOLENOID SHORT CIRCUIT.**

**Does the scan tool display the appropriate DTC for each condition?**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P1143-FUEL RAIL PRESSURE MALFUNCTION POSITIVE PRESSURE DEVIATION

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM determines that the fuel rail pressure is too high for a given engine speed/load.

| Possible Causes |
|---|
| AIR IN FUEL SYSTEM |
| FUEL DELIVERY SYSTEM CONCERNS |
| FUEL INJECTOR(S) |
| FUEL PRESSURE SOLENOID |
| FUEL PUMP |
| FUEL SYSTEM CONTAMINATION |
| FUEL SYSTEM LEAK |

## Diagnostic Test

### 1. CHECKING FOR OTHER ECM DTCS

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the scan tool, read the ECM DTCs.

**Are there any other DTCs present?**

**Yes** >> Refer to symptom list for problems related to the DTC other than this DTC.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

### 2. CURRENT DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: Refer to the Service Information and perform the Air Bleed Procedure before continuing diagnosis.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

**NOTE: Driving the vehicle up and down steep hills or rapid cornering with a low fuel level can cause this DTC to set. Verify with customer if Low Fuel Light was illuminated when fault occurred.**

Test drive the vehicle under various load and speed conditions to attempt to duplicate the fault.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 3. FUEL SYSTEM LEAK

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Inspect the entire fuel system for leakage.

**Is there any evidence of leakage?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL SYSTEM CONTAMINATION

**NOTE: Mixing any other fuels such as gasoline or kerosine can cause this DTC to set.**

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Refer to the Service Information and inspect the fuel system for contamination.

**Is the fuel contaminated?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. ATTEMPT TO START ENGINE

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine.

**Does the engine start and idle?**

**Yes** >> Go To 6

**No** >> Go To 11

## 6. CHECKING FOR AIR IN FUEL SYSTEM

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: If there is air in the fuel system, the Actual Fuel Pressure will oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint?**

**Yes** >> Refer to the Service Information to purge air from the fuel system.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 7

## 7. FUEL PRESSURE SOLENOID

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: A sticking Fuel Pressure Solenoid is indicated by Actual Fuel Pressure gradually dropping below the Fuel Pressure Setpoint then suddenly increasing (spiking) above the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure gradually decrease then suddenly increase (spike) above the Fuel Pressure**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 8

## 8. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 9

## 9. FUEL INJECTOR(S)

**NOTE: An injector that sticks open can cause this DTC. A sticking injector will cause the engine to missfire and emit excessive black smoke from the exhaust system.**

Start and idle the engine.

**Does the engine exhibit the symptoms described in the above note?**

**Yes** >> Using the Service Information, remove and inspect the Fuel Injectors for signs of damage or debris that may cause the injector to stick. Sticking injectors may cause the combustion chamber to become black and oil soaked. Replace Injector(s) as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 10

## 10. FUEL PRESSURE SOLENOID

Turn the ignition off.

Replace the Fuel Pressure Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## 11. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 12

## 12. FUEL PRESSURE SOLENOID

Turn the ignition off.
Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase the ECM DTCs.
Attempt to start and test drive the vehicle.
With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Go To 13

**No** >> Test Complete.

## 13. FUEL QUANTITY SOLENOID

Turn the ignition off.
Replace the Fuel Quantity Solenoid in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase the ECM DTCs.
Attempt to start and test drive the vehicle.
With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P1144-FUEL RAIL PRESSURE MALFUNCTION POSITIVE VOLUME DEVIATION

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM determines that the fuel rail volume is too high for a given engine speed/load.

| Possible Causes |
|---|
| AIR IN FUEL SYSTEM |
| FUEL DELIVERY SYSTEM CONCERNS |
| FUEL INJECTOR(S) |
| FUEL PRESSURE SOLENOID |
| FUEL PUMP |
| FUEL SYSTEM CONTAMINATION |
| FUEL SYSTEM LEAK |

### Diagnostic Test

#### 1. CHECKING FOR OTHER ECM DTCS

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the scan tool, read the ECM DTCs.

**Are there any other DTCs present?**

**Yes** >> Refer to symptom list for problems related to the DTC other than this DTC.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

#### 2. CURRENT DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: Refer to the Service Information and perform the Air Bleed Procedure before continuing diagnosis.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

**NOTE: Driving the vehicle up and down steep hills or rapid cornering with a low fuel level can cause this DTC to set. Verify with customer if Low Fuel Light was illuminated when fault occurred.**

Test drive the vehicle under various load and speed conditions to attempt to duplicate the fault.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 3. FUEL SYSTEM LEAK

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Inspect the entire fuel system for leakage.

**Is there any evidence of leakage?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL SYSTEM CONTAMINATION

**NOTE: Mixing any other fuels such as gasoline or kerosine can cause this DTC to set.**

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Refer to the Service Information and inspect the fuel system for contamination.

**Is the fuel contaminated?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. ATTEMPT TO START ENGINE

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine.

**Does the engine start and idle?**

**Yes** >> Go To 6

**No** >> Go To 11

## 6. CHECKING FOR AIR IN FUEL SYSTEM

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: If there is air in the fuel system, the Actual Fuel Pressure will oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint?**

**Yes** >> Refer to the Service Information to purge air from the fuel system.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 7

## 7. FUEL PRESSURE SOLENOID

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: A sticking Fuel Pressure Solenoid is indicated by Actual Fuel Pressure gradually dropping below the Fuel Pressure Setpoint then suddenly increasing (spiking) above the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure gradually decrease then suddenly increase (spike) above the Fuel Pressure**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 8

## 8. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 9

## 9. FUEL INJECTOR(S)

**NOTE: An injector that sticks open can cause this DTC. A sticking injector will cause the engine to missfire and emit excessive black smoke from the exhaust system.**

Start and idle the engine.

**Does the engine exhibit the symptoms described in the above note?**

**Yes** >> Using the Service Information, remove and inspect the Fuel Injectors for signs of damage or debris that may cause the injector to stick. Sticking injectors may cause the combustion chamber to become black and oil soaked. Replace Injector(s) as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 10

## 10. FUEL PRESSURE SOLENOID

Turn the ignition off.

Replace the Fuel Pressure Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## 11. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 12

## 12. FUEL PRESSURE SOLENOID

Turn the ignition off.
Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase the ECM DTCs.
Attempt to start and test drive the vehicle.
With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Go To 13

**No** >> Test Complete.

## 13. FUEL QUANTITY SOLENOID

Turn the ignition off.
Replace the Fuel Quantity Solenoid in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase the ECM DTCs.
Attempt to start and test drive the vehicle.
With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P1145– FUEL RAIL PRESSURE MALFUNCTION NEGATIVE PRESSURE DEVIATION

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM determines that the fuel rail pressure is too low for a given engine speed/load.

| Possible Causes |
|---|
| AIR IN FUEL SYSTEM |
| FUEL DELIVERY SYSTEM CONCERNS |
| FUEL INJECTOR(S) |
| FUEL PRESSURE SOLENOID |
| FUEL PUMP |
| FUEL SYSTEM CONTAMINATION |
| FUEL SYSTEM LEAK |

### Diagnostic Test

#### 1. CHECKING FOR OTHER ECM DTCS

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the scan tool, read the ECM DTCs.

**Are there any other DTCs present?**

**Yes** >> Refer to symptom list for problems related to the DTC other than this DTC.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

#### 2. CURRENT DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: Refer to the Service Information and perform the Air Bleed Procedure before continuing diagnosis.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

**NOTE: Driving the vehicle up and down steep hills or rapid cornering with a low fuel level can cause this DTC to set. Verify with customer if Low Fuel Light was illuminated when fault occurred.**

Test drive the vehicle under various load and speed conditions to attempt to duplicate the fault.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 3. FUEL SYSTEM LEAK

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Inspect the entire fuel system for leakage.

**Is there any evidence of leakage?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL SYSTEM CONTAMINATION

**NOTE: Mixing any other fuels such as gasoline or kerosene kerosine can cause this DTC to set.**

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Refer to the Service Information and inspect the fuel system for contamination.

**Is the fuel contaminated?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. ATTEMPT TO START ENGINE

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine.

**Does the engine start and idle?**

**Yes** >> Go To 6

**No** >> Go To 11

## 6. CHECKING FOR AIR IN FUEL SYSTEM

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: If there is air in the fuel system, the Actual Fuel Pressure will oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint?**

**Yes** >> Refer to the Service Information to purge air from the fuel system.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 7

## 7. FUEL PRESSURE SOLENOID

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: A sticking Fuel Pressure Solenoid is indicated by Actual Fuel Pressure gradually dropping below the Fuel Pressure Setpoint then suddenly increasing (spiking) above the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure gradually decrease then suddenly increase (spike) above the Fuel Pressure**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 8

## 8. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 9

## 9. FUEL INJECTOR(S)

**NOTE: An injector that sticks open can cause this DTC. A sticking injector will cause the engine to misfire and emit excessive black smoke from the exhaust system.**

Start and idle the engine.

**Does the engine exhibit the symptoms described in the above note?**

**Yes** >> Using the Service Information, remove and inspect the Fuel Injectors for signs of damage or debris that may cause the injector to stick. Sticking injectors may cause the combustion chamber to become black and oil soaked. Replace Injector(s) as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 10

## 10. FUEL PRESSURE SOLENOID

Turn the ignition off.

Replace the Fuel Pressure Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## 11. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 12

## 12. FUEL PRESSURE SOLENOID

Turn the ignition off.

Replace the Fuel Pressure Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Go To 13

**No** >> Test Complete.

## 13. FUEL QUANTITY SOLENOID

Turn the ignition off.

Replace the Fuel Quantity Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P1148-FUEL RAIL PRESSURE MALFUNCTION PRESSURE DROP IN OVERRUN

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM determines that the fuel rail pressure is incorrect at engine shutdown.

| Possible Causes |
| --- |
| AIR IN FUEL SYSTEM |
| FUEL DELIVERY SYSTEM CONCERNS |
| FUEL INJECTOR(S) |
| FUEL PRESSURE SOLENOID |
| FUEL PUMP |
| FUEL SYSTEM CONTAMINATION |
| FUEL SYSTEM LEAK |

## Diagnostic Test

### 1. CHECKING FOR OTHER ECM DTCS

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the scan tool, read the ECM DTCs.

**Are there any other DTCs present?**

**Yes** >> Refer to symptom list for problems related to the DTC other than this DTC.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

### 2. CURRENT DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: Refer to the Service Information and perform the Air Bleed Procedure before continuing diagnosis.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

**NOTE: Driving the vehicle up and down steep hills or rapid cornering with a low fuel level can cause this DTC to set. Verify with customer if Low Fuel Light was illuminated when fault occurred.**

Test drive the vehicle under various load and speed conditions to attempt to duplicate the fault.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 3. FUEL SYSTEM LEAK

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Inspect the entire fuel system for leakage.

**Is there any evidence of leakage?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL SYSTEM CONTAMINATION

**NOTE: Mixing any other fuels such as gasoline or kerosine can cause this DTC to set.**

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Refer to the Service Information and inspect the fuel system for contamination.

**Is the fuel contaminated?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. ATTEMPT TO START ENGINE

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine.

**Does the engine start and idle?**

**Yes** >> Go To 6

**No** >> Go To 11

## 6. CHECKING FOR AIR IN FUEL SYSTEM

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: If there is air in the fuel system, the Actual Fuel Pressure will oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint?**

**Yes** >> Refer to the Service Information to purge air from the fuel system.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 7

## 7. FUEL PRESSURE SOLENOID

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: A sticking Fuel Pressure Solenoid is indicated by Actual Fuel Pressure gradually dropping below the Fuel Pressure Setpoint then suddenly increasing (spiking) above the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure gradually decrease then suddenly increase (spike) above the Fuel Pressure**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 8

## 8. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 9

## 9. FUEL INJECTOR(S)

**NOTE: An injector that sticks open can cause this DTC. A sticking injector will cause the engine to missfire and emit excessive black smoke from the exhaust system.**

Start and idle the engine.

**Does the engine exhibit the symptoms described in the above note?**

**Yes** >> Using the Service Information, remove and inspect the Fuel Injectors for signs of damage or debris that may cause the injector to stick. Sticking injectors may cause the combustion chamber to become black and oil soaked. Replace Injector(s) as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 10

## 10. FUEL PRESSURE SOLENOID

Turn the ignition off.

Replace the Fuel Pressure Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## 11. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 12

## 12. FUEL PRESSURE SOLENOID

Turn the ignition off.

Replace the Fuel Pressure Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Go To 13

**No** >> Test Complete.

## 13. FUEL QUANTITY SOLENOID

Turn the ignition off.

Replace the Fuel Quantity Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P1151-FUEL RAIL PRESSURE MALFUNCTION MAXIMUM POSITIVE DEVIATION

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM determines that the fuel rail pressure is too high for a given engine speed/load.

| Possible Causes |
|---|
| AIR IN FUEL SYSTEM |
| FUEL DELIVERY SYSTEM CONCERNS |
| FUEL INJECTOR(S) |
| FUEL PRESSURE SOLENOID |
| FUEL PUMP |
| FUEL SYSTEM CONTAMINATION |
| FUEL SYSTEM LEAK |

## Diagnostic Test

### 1. CHECKING FOR OTHER ECM DTCS

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the scan tool, read the ECM DTCs.

**Are there any other DTCs present?**

**Yes** >> Refer to symptom list for problems related to the DTC other than this DTC.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

### 2. CURRENT DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: Refer to the Service Information and perform the Air Bleed Procedure before continuing diagnosis.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

**NOTE: Driving the vehicle up and down steep hills or rapid cornering with a low fuel level can cause this DTC to set. Verify with customer if Low Fuel Light was illuminated when fault occurred.**

Test drive the vehicle under various load and speed conditions to attempt to duplicate the fault.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 3. FUEL SYSTEM LEAK

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Inspect the entire fuel system for leakage.

**Is there any evidence of leakage?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL SYSTEM CONTAMINATION

**NOTE: Mixing any other fuels such as gasoline or kerosine can cause this DTC to set.**

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Refer to the Service Information and inspect the fuel system for contamination.

**Is the fuel contaminated?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. ATTEMPT TO START ENGINE

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine.

**Does the engine start and idle?**

**Yes** >> Go To 6

**No** >> Go To 11

## 6. CHECKING FOR AIR IN FUEL SYSTEM

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: If there is air in the fuel system, the Actual Fuel Pressure will oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint?**

**Yes** >> Refer to the Service Information to purge air from the fuel system.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 7

## 7. FUEL PRESSURE SOLENOID

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: A sticking Fuel Pressure Solenoid is indicated by Actual Fuel Pressure gradually dropping below the Fuel Pressure Setpoint then suddenly increasing (spiking) above the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure gradually decrease then suddenly increase (spike) above the Fuel Pressure**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 8

## 8. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 9

## 9. FUEL INJECTOR(S)

**NOTE: An injector that sticks open can cause this DTC. A sticking injector will cause the engine to misfire and emit excessive black smoke from the exhaust system.**

Start and idle the engine.

**Does the engine exhibit the symptoms described in the above note?**

**Yes** >> Using the Service Information, remove and inspect the Fuel Injectors for signs of damage or debris that may cause the injector to stick. Sticking injectors may cause the combustion chamber to become black and oil soaked. Replace Injector(s) as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 10

## 10. FUEL PRESSURE SOLENOID

Turn the ignition off.

Replace the Fuel Pressure Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## 11. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 12

## 12. FUEL PRESSURE SOLENOID

Turn the ignition off.

Replace the Fuel Pressure Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Go To 13

**No** >> Test Complete.

## 13. FUEL QUANTITY SOLENOID

Turn the ignition off.

Replace the Fuel Quantity Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P1152-FUEL RAIL PRESSURE MALFUNCTION POSITIVE DEV FUEL PRESS SOL SETPOINT

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM determines that the fuel rail pressure is too high for a given engine speed/load.

| Possible Causes |
|---|
| AIR IN FUEL SYSTEM |
| FUEL DELIVERY SYSTEM CONCERNS |
| FUEL INJECTOR(S) |
| FUEL PRESSURE SOLENOID |
| FUEL PUMP |
| FUEL SYSTEM CONTAMINATION |
| FUEL SYSTEM LEAK |

### Diagnostic Test

#### 1. CHECKING FOR OTHER ECM DTCS

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the scan tool, read the ECM DTCs.

**Are there any other DTCs present?**

**Yes** >> Refer to symptom list for problems related to the DTC other than this DTC.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

#### 2. CURRENT DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: Refer to the Service Information and perform the Air Bleed Procedure before continuing diagnosis.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

**NOTE: Driving the vehicle up and down steep hills or rapid cornering with a low fuel level can cause this DTC to set. Verify with customer if Low Fuel Light was illuminated when fault occurred.**

Test drive the vehicle under various load and speed conditions to attempt to duplicate the fault.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 3. FUEL SYSTEM LEAK

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Inspect the entire fuel system for leakage.

**Is there any evidence of leakage?**

**Yes** >> Repair as necessary in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL SYSTEM CONTAMINATION

**NOTE: Mixing any other fuels such as gasoline or kerosine can cause this DTC to set.**

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Refer to the Service Information and inspect the fuel system for contamination.

**Is the fuel contaminated?**

**Yes** >> Repair as necessary in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. ATTEMPT TO START ENGINE

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine.

**Does the engine start and idle?**

**Yes** >> Go To 6

**No** >> Go To 11

## 6. CHECKING FOR AIR IN FUEL SYSTEM

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: If there is air in the fuel system, the Actual Fuel Pressure will oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint?**

**Yes** >> Refer to the Service Information to purge air from the fuel system.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 7

## 7. FUEL PRESSURE SOLENOID

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: A sticking Fuel Pressure Solenoid is indicated by Actual Fuel Pressure gradually dropping below the Fuel Pressure Setpoint then suddenly increasing (spiking) above the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure gradually decrease then suddenly increase (spike) above the Fuel Pressure**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 8

## 8. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 9

## 9. FUEL INJECTOR(S)

**NOTE: An injector that sticks open can cause this DTC. A sticking injector will cause the engine to misfire and emit excessive black smoke from the exhaust system.**

Start and idle the engine.

**Does the engine exhibit the symptoms described in the above note?**

**Yes** >> Using the Service Information, remove and inspect the Fuel Injectors for signs of damage or debris that may cause the injector to stick. Sticking injectors may cause the combustion chamber to become black and oil soaked. Replace Injector(s) as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 10

## 10. FUEL PRESSURE SOLENOID

Turn the ignition off.
Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase the ECM DTCs.
Attempt to start and test drive the vehicle.
With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## 11. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 12

## 12. FUEL PRESSURE SOLENOID

Turn the ignition off.
Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase the ECM DTCs.
Attempt to start and test drive the vehicle.
With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Go To 13

**No** >> Test Complete.

## 13. FUEL QUANTITY SOLENOID

Turn the ignition off.
Replace the Fuel Quantity Solenoid in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase the ECM DTCs.
Attempt to start and test drive the vehicle.
With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

# P1153-FUEL RAIL PRESSURE MALFUNCTION NEGATIVE DEV FUEL PRESS SOL SETPOINT

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM determines that the fuel rail pressure is too low for a given engine speed/load.

| Possible Causes |
|---|
| AIR IN FUEL SYSTEM |
| FUEL DELIVERY SYSTEM CONCERNS |
| FUEL INJECTOR(S) |
| FUEL PRESSURE SOLENOID |
| FUEL PUMP |
| FUEL SYSTEM CONTAMINATION |
| FUEL SYSTEM LEAK |

## Diagnostic Test

### 1. CHECKING FOR OTHER ECM DTCS

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the scan tool, read the ECM DTCs.

**Are there any other DTCs present?**

**Yes** >> Refer to symptom list for problems related to the DTC other than this DTC.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

### 2. CURRENT DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: Refer to the Service Information and perform the Air Bleed Procedure before continuing diagnosis.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

**NOTE: Driving the vehicle up and down steep hills or rapid cornering with a low fuel level can cause this DTC to set. Verify with customer if Low Fuel Light was illuminated when fault occurred.**

Test drive the vehicle under various load and speed conditions to attempt to duplicate the fault.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 3. FUEL SYSTEM LEAK

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Inspect the entire fuel system for leakage.

**Is there any evidence of leakage?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL SYSTEM CONTAMINATION

**NOTE: Mixing any other fuels such as gasoline or kerosine can cause this DTC to set.**

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Refer to the Service Information and inspect the fuel system for contamination.

**Is the fuel contaminated?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. ATTEMPT TO START ENGINE

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine.

**Does the engine start and idle?**

**Yes** >> Go To 6

**No** >> Go To 11

## 6. CHECKING FOR AIR IN FUEL SYSTEM

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: If there is air in the fuel system, the Actual Fuel Pressure will oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint?**

**Yes** >> Refer to the Service Information to purge air from the fuel system.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 7

## 7. FUEL PRESSURE SOLENOID

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: A sticking Fuel Pressure Solenoid is indicated by Actual Fuel Pressure gradually dropping below the Fuel Pressure Setpoint then suddenly increasing (spiking) above the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure gradually decrease then suddenly increase (spike) above the Fuel Pressure**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 8

## 8. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 9

## 9. FUEL INJECTOR(S)

**NOTE: An injector that sticks open can cause this DTC. A sticking injector will cause the engine to misfire and emit excessive black smoke from the exhaust system.**

Start and idle the engine.

**Does the engine exhibit the symptoms described in the above note?**

**Yes** >> Using the Service Information, remove and inspect the Fuel Injectors for signs of damage or debris that may cause the injector to stick. Sticking injectors may cause the combustion chamber to become black and oil soaked. Replace Injector(s) as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 10

## 10. FUEL PRESSURE SOLENOID

Turn the ignition off.
Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase the ECM DTCs.
Attempt to start and test drive the vehicle.
With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## 11. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 12

## 12. FUEL PRESSURE SOLENOID

Turn the ignition off.
Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase the ECM DTCs.
Attempt to start and test drive the vehicle.
With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Go To 13

**No** >> Test Complete.

## 13. FUEL QUANTITY SOLENOID

Turn the ignition off.
Replace the Fuel Quantity Solenoid in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase the ECM DTCs.
Attempt to start and test drive the vehicle.
With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P1154-FUEL RAIL PRESSURE MALFUNCTION RAIL PRESSURE IS TOO LOW

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM determines that the fuel rail pressure is too low for a given engine speed/load.

| Possible Causes |
|---|
| AIR IN FUEL SYSTEM |
| FUEL DELIVERY SYSTEM CONCERNS |
| FUEL INJECTOR(S) |
| FUEL PRESSURE SOLENOID |
| FUEL PUMP |
| FUEL SYSTEM CONTAMINATION |
| FUEL SYSTEM LEAK |

### Diagnostic Test

#### 1. CHECKING FOR OTHER ECM DTCS

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the scan tool, read the ECM DTCs.

**Are there any other DTCs present?**

**Yes** >> Refer to symptom list for problems related to the DTC other than this DTC.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

#### 2. CURRENT DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: Refer to the Service Information and perform the Air Bleed Procedure before continuing diagnosis.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

**NOTE: Driving the vehicle up and down steep hills or rapid cornering with a low fuel level can cause this DTC to set. Verify with customer if Low Fuel Light was illuminated when fault occurred.**

Test drive the vehicle under various load and speed conditions to attempt to duplicate the fault.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 3. FUEL SYSTEM LEAK

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Inspect the entire fuel system for leakage.

**Is there any evidence of leakage?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL SYSTEM CONTAMINATION

**NOTE: Mixing any other fuels such as gasoline or kerosine can cause this DTC to set.**

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Refer to the Service Information and inspect the fuel system for contamination.

**Is the fuel contaminated?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. ATTEMPT TO START ENGINE

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine.

**Does the engine start and idle?**

**Yes** >> Go To 6

**No** >> Go To 11

## 6. CHECKING FOR AIR IN FUEL SYSTEM

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: If there is air in the fuel system, the Actual Fuel Pressure will oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint?**

**Yes** >> Refer to the Service Information to purge air from the fuel system.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 7

## 7. FUEL PRESSURE SOLENOID

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: A sticking Fuel Pressure Solenoid is indicated by Actual Fuel Pressure gradually dropping below the Fuel Pressure Setpoint then suddenly increasing (spiking) above the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure gradually decrease then suddenly increase (spike) above the Fuel Pressure**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 8

## 8. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 9

## 9. FUEL INJECTOR(S)

**NOTE: An injector that sticks open can cause this DTC. A sticking injector will cause the engine to misfire and emit excessive black smoke from the exhaust system.**
Start and idle the engine.

**Does the engine exhibit the symptoms described in the above note?**

**Yes** >> Using the Service Information, remove and inspect the Fuel Injectors for signs of damage or debris that may cause the injector to stick. Sticking injectors may cause the combustion chamber to become black and oil soaked. Replace Injector(s) as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 10

## 10. FUEL PRESSURE SOLENOID

Turn the ignition off.

Replace the Fuel Pressure Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## 11. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 12

## 12. FUEL PRESSURE SOLENOID

Turn the ignition off.

Replace the Fuel Pressure Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Go To 13

**No** >> Test Complete.

## 13. FUEL QUANTITY SOLENOID

Turn the ignition off.

Replace the Fuel Quantity Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P1155-FUEL RAIL PRESSURE MALFUNCTION RAIL PRESSURE IS TOO HIGH

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM determines that the fuel rail pressure is too high for a given engine speed/load.

| Possible Causes |
|---|
| AIR IN FUEL SYSTEM |
| FUEL DELIVERY SYSTEM CONCERNS |
| FUEL INJECTOR(S) |
| FUEL PRESSURE SOLENOID |
| FUEL PUMP |
| FUEL SYSTEM CONTAMINATION |
| FUEL SYSTEM LEAK |

## Diagnostic Test

### 1. CHECKING FOR OTHER ECM DTCS

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the scan tool, read the ECM DTCs.

**Are there any other DTCs present?**

**Yes** >> Refer to symptom list for problems related to the DTC other than this DTC.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

### 2. CURRENT DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: Refer to the Service Information and perform the Air Bleed Procedure before continuing diagnosis.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

**NOTE: Driving the vehicle up and down steep hills or rapid cornering with a low fuel level can cause this DTC to set. Verify with customer if Low Fuel Light was illuminated when fault occurred.**

Test drive the vehicle under various load and speed conditions to attempt to duplicate the fault.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 3. FUEL SYSTEM LEAK

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Inspect the entire fuel system for leakage.

**Is there any evidence of leakage?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL SYSTEM CONTAMINATION

**NOTE: Mixing any other fuels such as gasoline or kerosine can cause this DTC to set.**

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Refer to the Service Information and inspect the fuel system for contamination.

**Is the fuel contaminated?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. ATTEMPT TO START ENGINE

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine.

**Does the engine start and idle?**

**Yes** >> Go To 6

**No** >> Go To 11

## 6. CHECKING FOR AIR IN FUEL SYSTEM

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: If there is air in the fuel system, the Actual Fuel Pressure will oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint?**

**Yes** >> Refer to the Service Information to purge air from the fuel system.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 7

## 7. FUEL PRESSURE SOLENOID

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: A sticking Fuel Pressure Solenoid is indicated by Actual Fuel Pressure gradually dropping below the Fuel Pressure Setpoint then suddenly increasing (spiking) above the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure gradually decrease then suddenly increase (spike) above the Fuel Pressure**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 8

## 8. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 9

## 9. FUEL INJECTOR(S)

**NOTE: An injector that sticks open can cause this DTC. A sticking injector will cause the engine to misfire and emit excessive black smoke from the exhaust system.**

Start and idle the engine.

**Does the engine exhibit the symptoms described in the above note?**

**Yes** >> Using the Service Information, remove and inspect the Fuel Injectors for signs of damage or debris that may cause the injector to stick. Sticking injectors may cause the combustion chamber to become black and oil soaked. Replace Injector(s) as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 10

## 10. FUEL PRESSURE SOLENOID

Turn the ignition off.

Replace the Fuel Pressure Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## 11. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 12

## 12. FUEL PRESSURE SOLENOID

Turn the ignition off.

Replace the Fuel Pressure Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Go To 13

**No** >> Test Complete.

## 13. FUEL QUANTITY SOLENOID

Turn the ignition off.

Replace the Fuel Quantity Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P1156-FUEL RAIL PRESSURE MALFUNCTION PLAUSIBILITY

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM determines that the fuel rail pressure is fluxuating out of the calibrated setpoint range.

| Possible Causes |
|---|
| AIR IN FUEL SYSTEM |
| FUEL DELIVERY SYSTEM CONCERNS |
| FUEL INJECTOR(S) |
| FUEL PRESSURE SOLENOID |
| FUEL PUMP |
| FUEL SYSTEM CONTAMINATION |
| FUEL SYSTEM LEAK |

## Diagnostic Test

### 1. CHECKING FOR OTHER ECM DTCS

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the scan tool, read the ECM DTCs.

**Are there any other DTCs present?**

**Yes** >> Refer to symptom list for problems related to the DTC other than this DTC.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

### 2. CURRENT DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: Refer to the Service Information and perform the Air Bleed Procedure before continuing diagnosis.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

**NOTE: Driving the vehicle up and down steep hills or rapid cornering with a low fuel level can cause this DTC to set. Verify with customer if Low Fuel Light was illuminated when fault occurred.**

Test drive the vehicle under various load and speed conditions to attempt to duplicate the fault.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 3. FUEL SYSTEM LEAK

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Inspect the entire fuel system for leakage.

**Is there any evidence of leakage?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL SYSTEM CONTAMINATION

**NOTE: Mixing any other fuels such as gasoline or kerosine can cause this DTC to set.**

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Refer to the Service Information and inspect the fuel system for contamination.

**Is the fuel contaminated?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. ATTEMPT TO START ENGINE

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine.

**Does the engine start and idle?**

**Yes** >> Go To 6

**No** >> Go To 11

## 6. CHECKING FOR AIR IN FUEL SYSTEM

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: If there is air in the fuel system, the Actual Fuel Pressure will oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint?**

**Yes** >> Refer to the Service Information to purge air from the fuel system.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 7

## 7. FUEL PRESSURE SOLENOID

Start the engine.

With the scan tool, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: A sticking Fuel Pressure Solenoid is indicated by Actual Fuel Pressure gradually dropping below the Fuel Pressure Setpoint then suddenly increasing (spiking) above the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure gradually decrease then suddenly increase (spike) above the Fuel Pressure**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 8

## 8. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 9

## 9. FUEL INJECTOR(S)

**NOTE: An injector that sticks open can cause this DTC. A sticking injector will cause the engine to misfire and emit excessive black smoke from the exhaust system.**

Start and idle the engine.

**Does the engine exhibit the symptoms described in the above note?**

**Yes** >> Using the Service Information, remove and inspect the Fuel Injectors for signs of damage or debris that may cause the injector to stick. Sticking injectors may cause the combustion chamber to become black and oil soaked. Replace Injector(s) as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 10

## 10. FUEL PRESSURE SOLENOID

Turn the ignition off.

Replace the Fuel Pressure Solenoid in accordance with the Service Information.

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## 11. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 12

## 12. FUEL PRESSURE SOLENOID

Turn the ignition off.
Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase the ECM DTCs.
Attempt to start and test drive the vehicle.
With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Go To 13

**No** >> Test Complete.

## 13. FUEL QUANTITY SOLENOID

Turn the ignition off.
Replace the Fuel Quantity Solenoid in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase the ECM DTCs.
Attempt to start and test drive the vehicle.
With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## P1159-IMPROPER START ATTEMPT

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  Vehicle speed is below 3 km/h.
- **Set Condition:**
  The ECM detects engine speed above 100 rpm without activating the starter relay control.

| Possible Causes |
|---|
| VERIFY ACTIVE DTC |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: This DTC indicates that engine rotation has occurred without an ignition switch Start input. This can occurred when an attempt to start the vehicle using a push start method.**

**NOTE: Consult with the customer to determine if a push start has been attempted.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P1160-IGN VOLTAGE

For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| CHECK THE ECM POWER AND GROUNDS |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. VERIFY CURRENT DTC

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECK POWER AND GROUNDS

Refer to symptom Checking the ECM Power and Grounds.

**Are the ECM Power and Ground circuits o.k.?**

**Yes** >> Replace the ECM in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P1169- ECM A/D CONVERTER ERROR

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects an internal failure.

| Possible Causes |
|---|
| CHECKING FOR INJECTOR CODES |
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECKING FOR INJECTOR CODES

Turn the ignition on.

With the scan tool, read the ECM DTCs.

**Does the scan tool display any Injector Cylinder DTC?**

**Yes** >> Repair Fuel Injector related DTC's before continuing.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

### 2. ENGINE CONTROL MODULE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: This DTC indicates an internal ECM problem.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## P1167-CAPACITOR VOLTAGE 1

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine cranking or running.
- **Set Condition:**
  The ECM detects a capacitor voltage problem during injector actuation.

| Possible Causes |
|---|
| CHECKING FOR INJECTOR CODES |
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECKING FOR INJECTOR CODES

Turn the ignition on.

With the scan tool, read the ECM DTCs.

**Does the scan tool display any Injector Cylinder DTC?**

**Yes** >> Repair Fuel Injector related DTC's before continuing.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. ENGINE CONTROL MODULE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: This DTC indicates an internal ECM problem.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

# P1167-CAPACITOR VOLTAGE 1

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine cranking or running.
- **Set Condition:**
  The ECM detects a capacitor voltage problem during injector actuation.

| Possible Causes |
|---|
| CHECKING FOR INJECTOR CODES |
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. CHECKING FOR INJECTOR CODES

Turn the ignition on.

With the scan tool, read the ECM DTCs.

**Does the scan tool display any Injector Cylinder DTC?**

**Yes** >> Repair Fuel Injector related DTC's before continuing.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 2

### 2. ENGINE CONTROL MODULE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: This DTC indicates an internal ECM problem.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

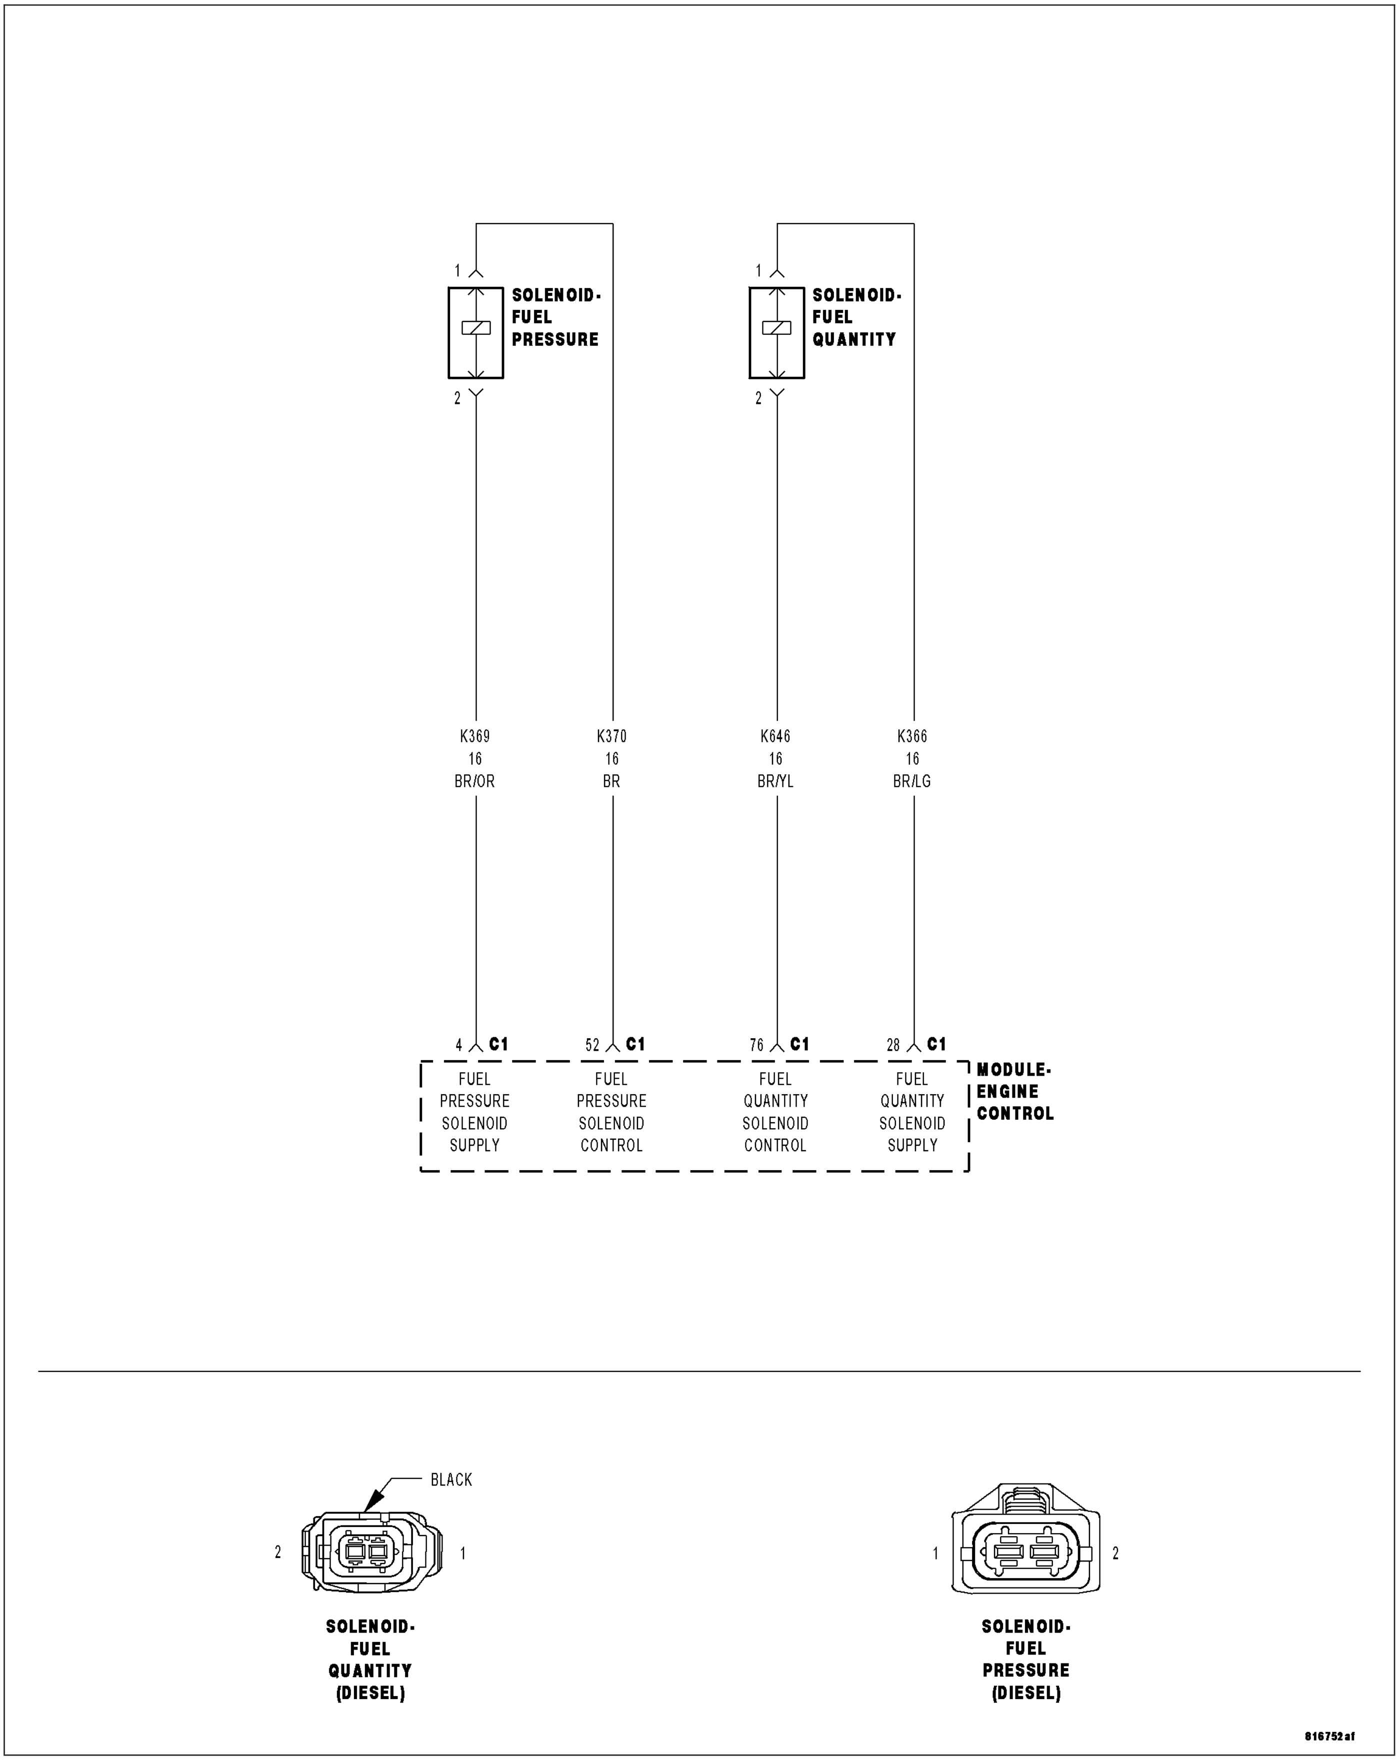
With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## P1202-FUEL SYSTEM OVER PRESSURE — STUCK REGULATOR



For the Engine circuit diagram (Refer to 9 - ENGINE - SCHEMATICS AND DIAGRAMS).

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the engine running.
- **Set Condition:**
  The ECM determines that the fuel rail pressure is too high for a given engine speed and load.

| Possible Causes |
|---|
| AIR IN FUEL SYSTEM |
| FUEL DELIVERY SYSTEM |
| FUEL INJECTOR(S) |
| FUEL PRESSURE SOLENOID |
| FUEL PUMP |
| FUEL SYSTEM CONTAMINATION |
| FUEL SYSTEM LEAK |
| INTERMITTENT DTC |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)**

## Diagnostic Test

### 1. CHECKING FOR OTHER ECM DTCS

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the scan tool, read the ECM DTCs.

**Are there any other DTCs present?**

**Yes** >> Refer to symptom list for problems related to the DTC other than this DTC.
Perform the ECM VERIFICATION TEST.

**No** >> Go To 2

### 2. CURRENT DTC

**NOTE: Refer to the Service Information and perform the Air Bleed Procedure before continuing diagnosis.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

**NOTE: Driving the vehicle up and down steep hills or rapid cornering with a low fuel level can cause this DTC to set. Verify with customer if Low Fuel Light was illuminated when fault occurred.**

Test drive the vehicle under various load and speed conditions to attempt to duplicate the fault.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 3. FUEL SYSTEM LEAK

Turn the ignition off.

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Inspect the entire fuel system for leakage.

**Is there any evidence of leakage?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

## 4. FUEL SYSTEM CONTAMINATION

**NOTE: Mixing any other fuels such as gasoline or kerosine can cause this DTC to set.**

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Inspect the fuel system for contamination.

**Is the fuel contaminated?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 5

## 5. FUEL PRESSURE SENSOR CALIBRATION

Turn the ignition on.

With the scan tool, read the Fuel Pressure Sensor volts.

**Does the scan tool display between 0.45 and 0.55 volts for the Fuel Pressure Sensor?**

**Yes** >> Go To 6

**No** >> Check the Fuel Pressure Sensor wiring and connectors for corrosion or poor terminal contact that could cause high resistance. repair as necessary. If wiring and connectors are o.k., replace the Fuel Pressure Sensor.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 6. ATTEMPT TO START ENGINE

With the scan tool, erase the ECM DTCs.

Attempt to start the engine.

**Does the engine start and idle?**

**Yes** >> Go To 7

**No** >> Go To 12

## 7. CHECKING FOR AIR IN FUEL SYSTEM

With the scan tool in Sensors, compare the Fuel Pressure Setpoint with the Actual Fuel Pressure readings.

**NOTE: If there is air in the fuel system, the Actual Fuel Pressure will oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint.**

**Does Actual Fuel Pressure oscillate more than 100 psi above and/or below the Fuel Pressure Setpoint?**

**Yes** >> Refer to the Service Information to purge air from the fuel system.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 8

## 8. FUEL PRESSURE SOLENOID

With the scan tool, compare the Fuel Pressure Setpoint with the actual Fuel Pressure.

**NOTE: A sticking Fuel Pressure Solenoid is indicated by the actual Fuel Pressure gradually dropping below the Fuel Pressure Setpoint then suddenly increasing (spiking) above the Fuel Pressure Setpoint.**

**Does the actual Fuel Pressure gradually decrease then suddenly increase (spike) above the Fuel Pressure Setpoint?**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 9

## 9. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 10

## 10. FUEL INJECTOR(S)

**NOTE: An injector that sticks open can cause this DTC. A sticking injector will cause the engine to misfire and emit excessive black smoke from the exhaust system.**

**Does the engine exhibit the symptoms described in the above note?**

**Yes** >> Using the Service Information, remove and inspect the Fuel Injectors for signs of damage or debris that may cause the injector to stick. Sticking injectors may cause the combustion chamber to become black and oil soaked. Replace Injector(s) as necessary.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 11

## 11. FUEL PRESSURE SOLENOID

Turn the ignition off.
Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase the ECM DTCs.
Attempt to start and test drive the vehicle.
With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Test Complete.

## 12. CHECKING FUEL DELIVERY SYSTEM

Refer to the appropriate Service Information and refer to Diagnosis and Testing Fuel Delivery System table.

**NOTE: The following is a list of problems that can cause fuel pressure to deviate from specification: restricted fuel filter or fuel lines, failed fuel pressure solenoid, air in fuel system, failed fuel sending unit, contaminated fuel, faulty injector.**

**Were there any problems with the Fuel Delivery System?**

**Yes** >> Repair as necessary in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 13

## 13. FUEL PRESSURE SOLENOID

Turn the ignition off.
Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase the ECM DTCs.
Attempt to start and test drive the vehicle.
With the scan tool, read the ECM DTCs.

**Does the ECM display this DTC?**

**Yes** >> Go To 14

**No** >> Test Complete.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 14. FUEL QUANTITY SOLENOID

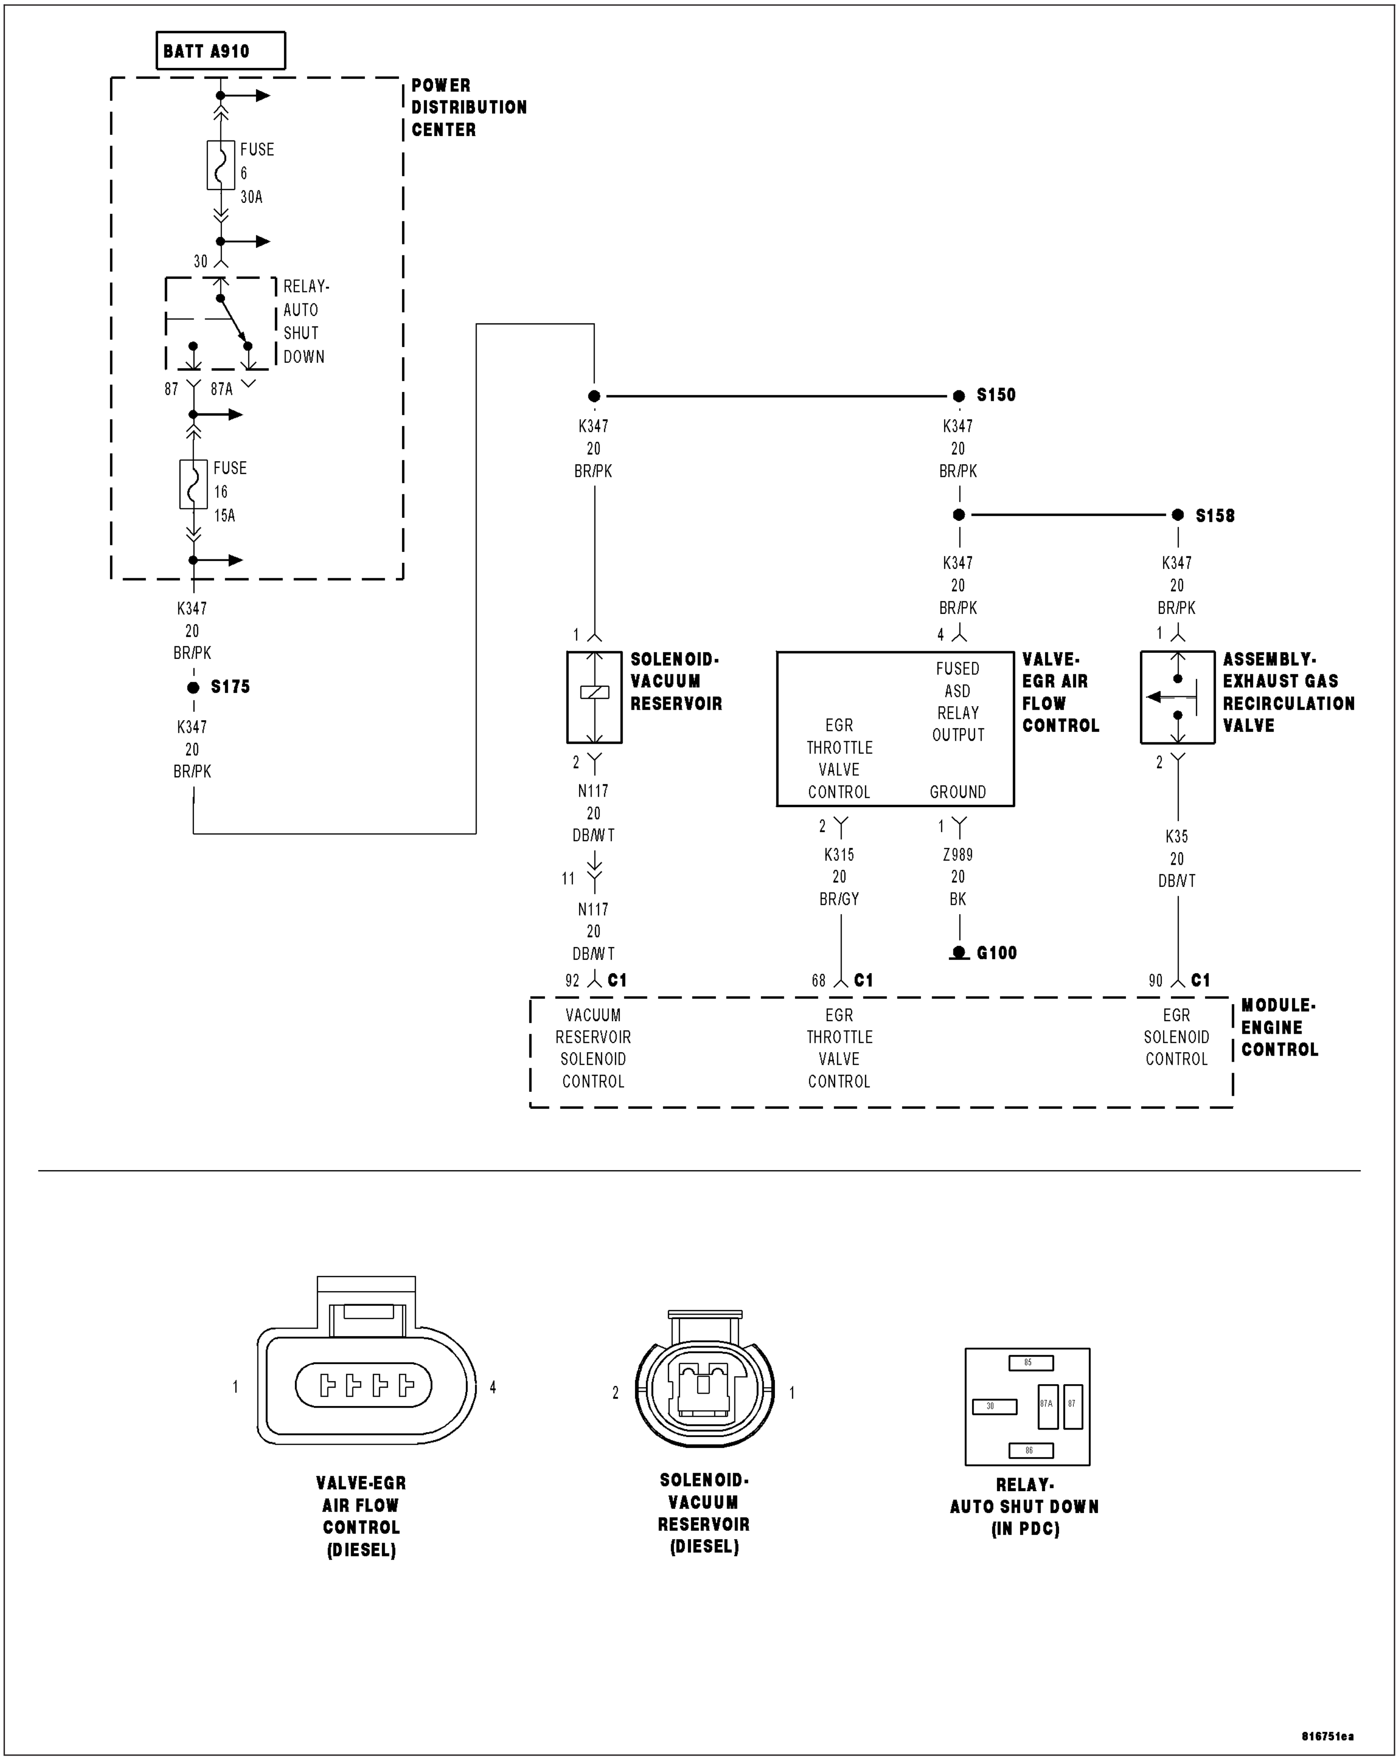
Turn the ignition off.
Replace the Fuel Quantity Solenoid in accordance with the Service Information.
Turn the ignition on.
With the scan tool, erase the ECM DTCs.
Attempt to start and test drive the vehicle.
With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace the Fuel Pump in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Test Complete.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## P1250-VACUUM RESERVOIR SOLENOID OPEN CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Vacuum Reservoir Solenoid command off.
- **Set Condition:**
  The ECM does not detect voltage on the Vacuum Reservoir Solenoid Control circuit.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| VACUUM RESERVOIR SOLENOID CONTROL SHORTED TO VOLTAGE |
| VACUUM RESERVOIR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND |
| VACUUM RESERVOIR SOLENOID CONTROL CIRCUIT OPEN |
| VACUUM RESERVOIR SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: IfINTERMITTENT CONDITIONe ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several ignition cycles, turning the ignition off for at least 10 seconds between each ignition cycle.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC’s including this DTC to set.**

**NOTE: Check the ECM for other DTC’s. If other DTC’s are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

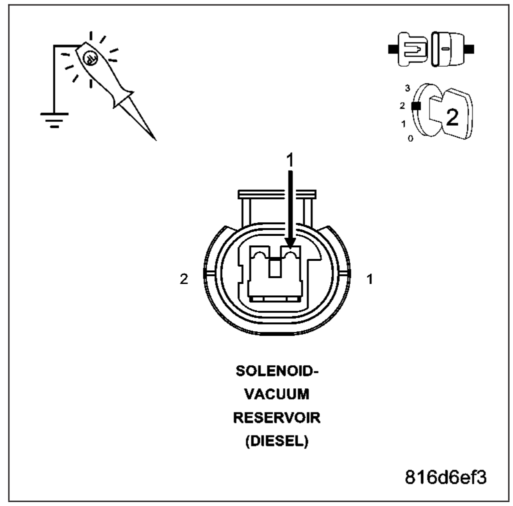
## 3. ASD OUTPUT CKT OPEN

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Turn the ignition on.

Using a 12-volt test light connected to ground, check the ASD Relay Output circuit.



**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the ASD Relay Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. VACUUM RESERVOIR SOLENOID CONTROL SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

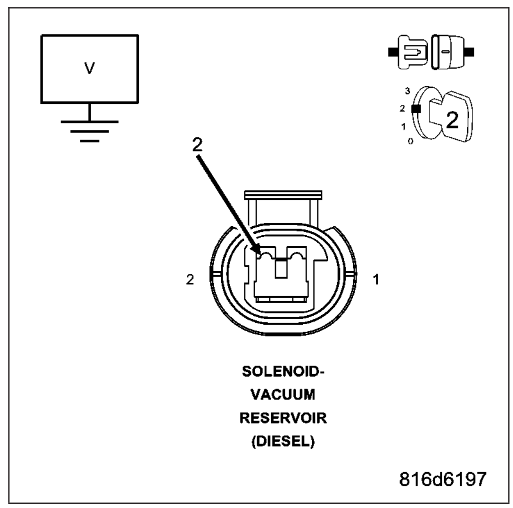
Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the Vacuum Reservoir Solenoid Control circuit.



**Is the voltage below 1.0 volt?**

**Yes** >> Go To 5

**No** >> Repair the Vacuum Reservoir Solenoid Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

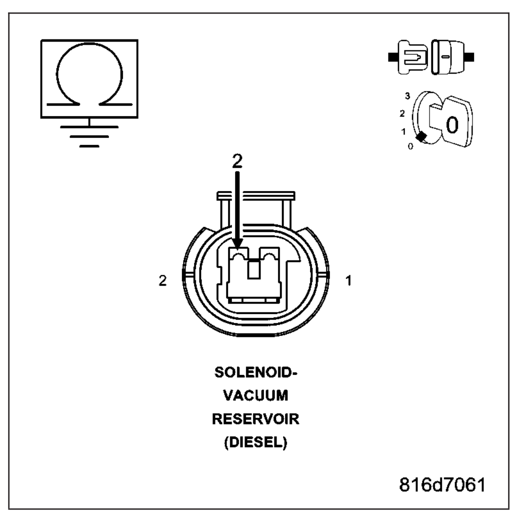
## 5. VACUUM RESERVOIR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Vacuum Reservoir Solenoid Control circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Vacuum Reservoir Solenoid Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

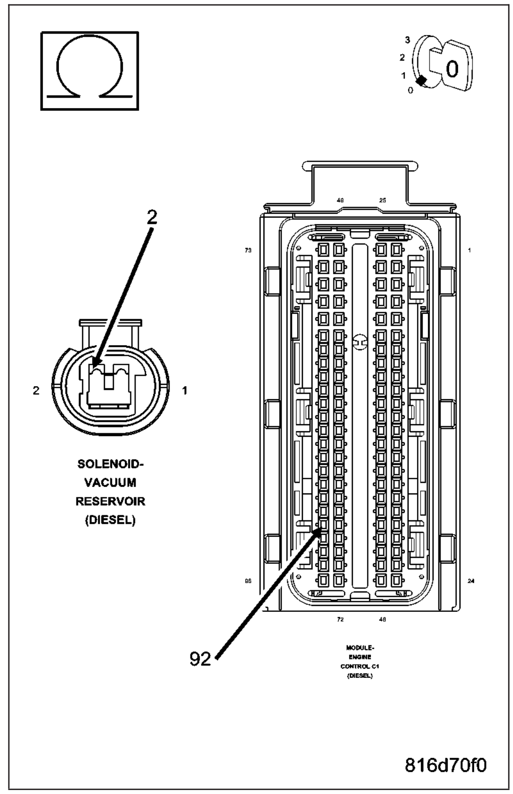
## 6. VACUUM RESERVIOR SOLENOID CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Vacuum Reservoir Solenoid Control circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the Vacuum Reservoir Solenoid Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CHECK THE VACUUM RESERVOIR SOLENOID

Turn the ignition off.

Install a substitute Vacuum Reservoir Solenoid in place of the vehicle's Vacuum reservoir Solenoid.

**NOTE: Ensure the ECM and Vacuum Reservoir Solenoid harness connectors are connected.**

Turn the ignition on.

With the scan tool, check for this DTC to set again.

**Did this DTC set again?**

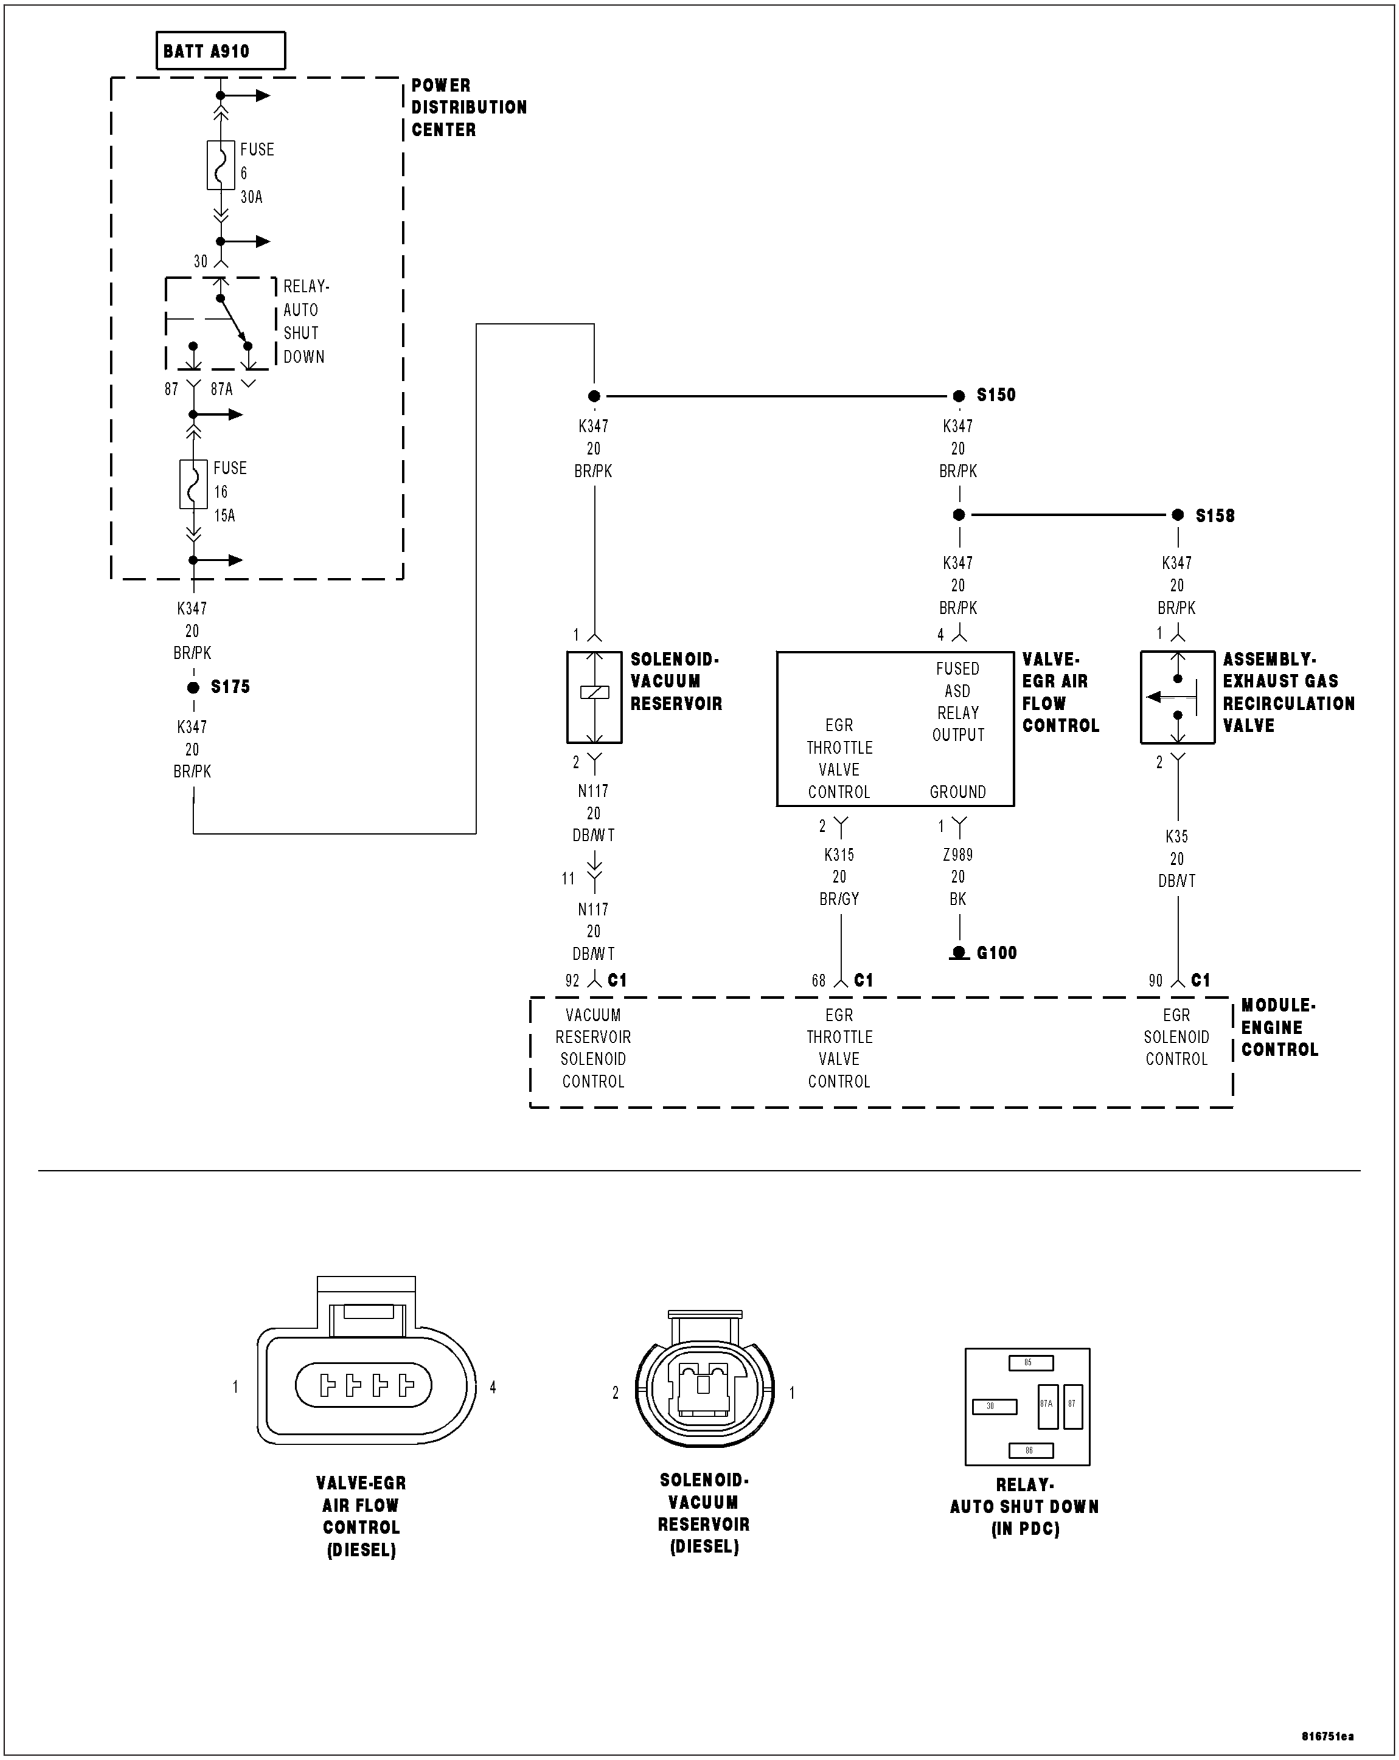
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Vacuum Reservoir Solenoid.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P1251-VACUUM RESERVOIR SOLENOID SHORT TO GROUND



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Vacuum Reservoir Solenoid command off.
- **Set Condition:**
  The ECM detects a short to ground on the Vacuum Reservoir Solenoid Control circuit.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| VACUUM RESERVOIR SOLENOID CONTROL SHORTED TO VOLTAGE |
| VACUUM RESERVOIR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND |
| VACUUM RESERVOIR SOLENOID CONTROL CIRCUIT OPEN |
| VACUUM RESERVOIR SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: IfINTERMITTENT CONDITIONe ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several ignition cycles, turning the ignition off for at least 10 seconds between each ignition cycle.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

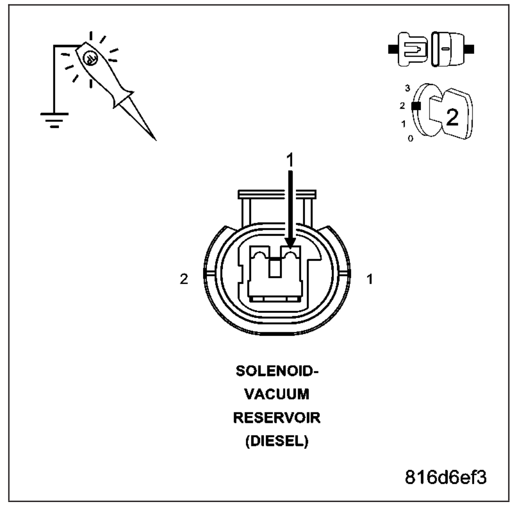
## 3. ASD OUTPUT CKT OPEN

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Turn the ignition on.

Using a 12-volt test light connected to ground, check the ASD Relay Output circuit.



**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the ASD Relay Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. VACUUM RESERVOIR SOLENOID CONTROL SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

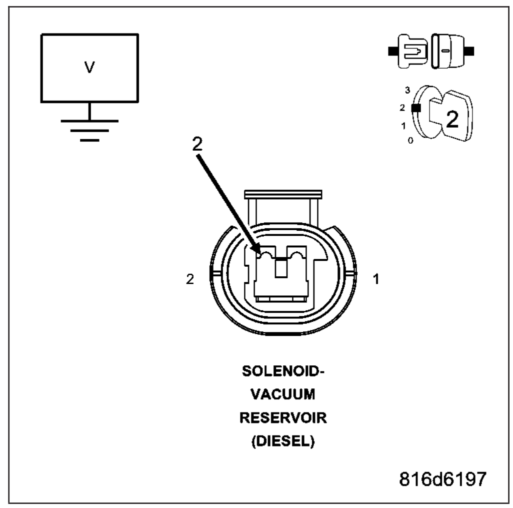
Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the Vacuum Reservoir Solenoid Control circuit.



**Is the voltage below 1.0 volt?**

**Yes** >> Go To 5

**No** >> Repair the Vacuum Reservoir Solenoid Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

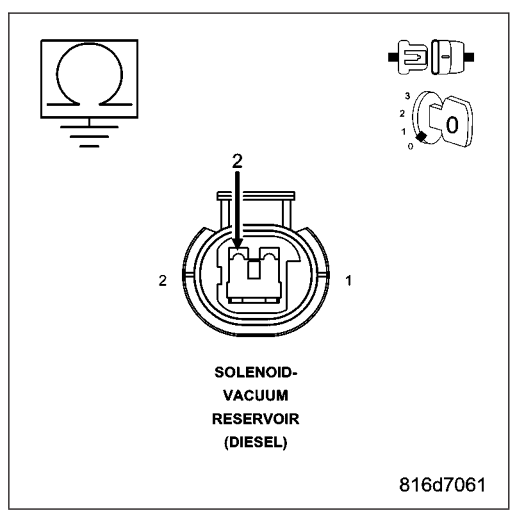
## 5. VACUUM RESERVOIR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Vacuum Reservoir Solenoid Control circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Vacuum Reservoir Solenoid Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

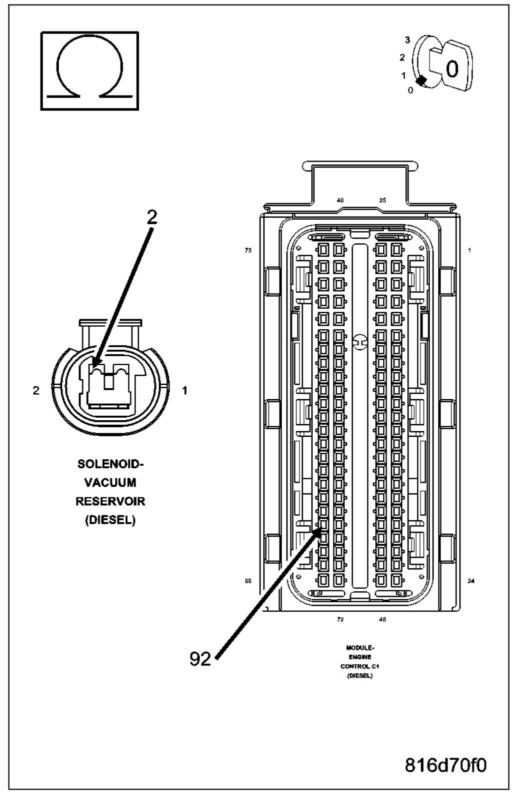
## 6. VACUUM RESERVOIR SOLENOID CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Vacuum Reservoir Solenoid Control circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the Vacuum Reservoir Solenoid Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. VACUUM RESERVOIR SOLENOID

Turn the ignition off.

Install a substitute Vacuum Reservoir Solenoid in place of the vehicle's Vacuum reservoir Solenoid.

**NOTE: Ensure the ECM and Vacuum Reservoir Solenoid harness connectors are connected.**

Turn the ignition on.

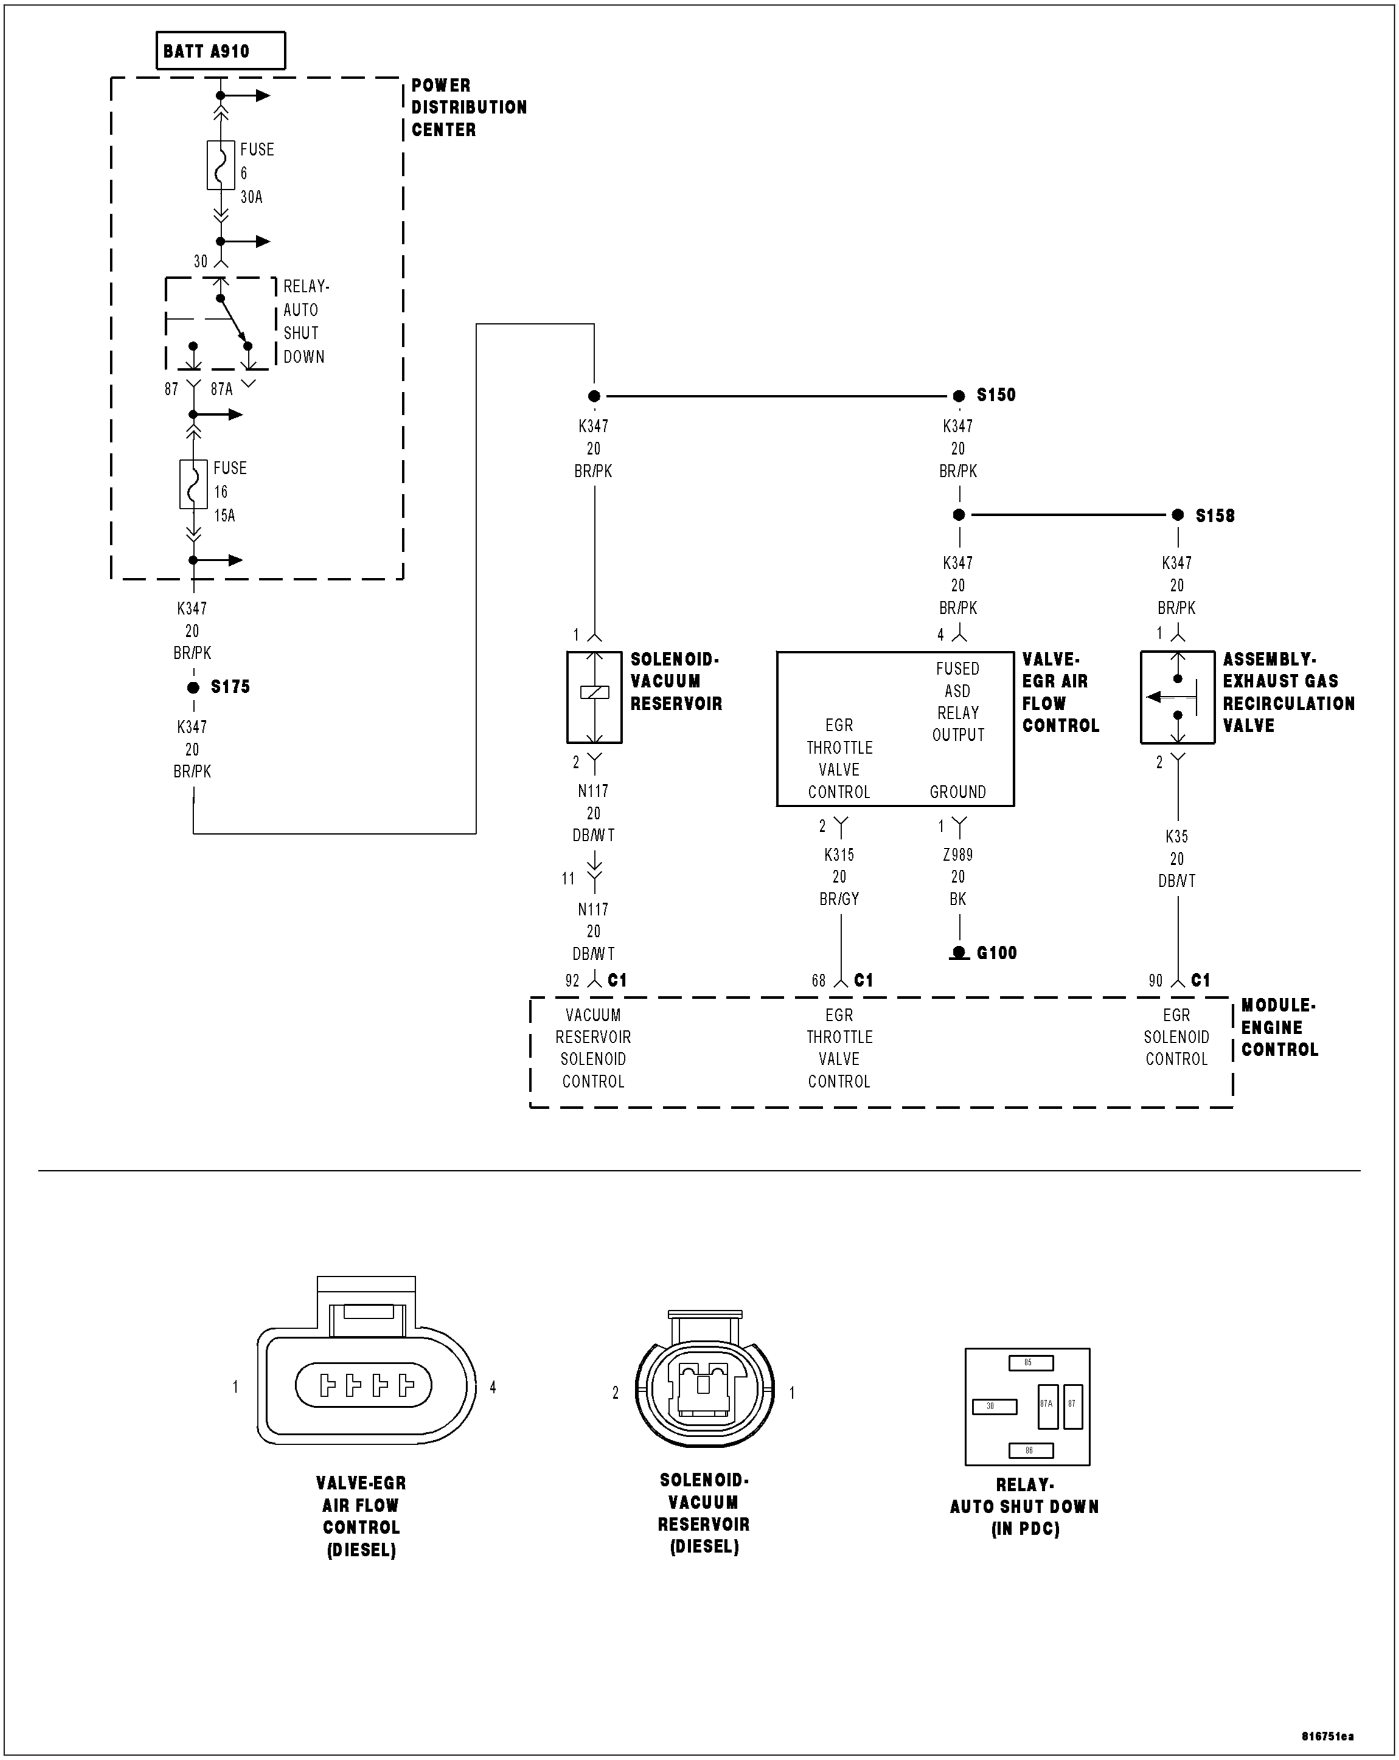
With the scan tool, check for this DTC to set again.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Vacuum Reservoir Solenoid.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P1252-VACUUM RESERVOIR SOLENOID SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Vacuum Reservoir Solenoid command on.
- **Set Condition:**
  The ECM detects a short to voltage on the Vacuum Reservoir Solenoid Control circuit.

| Possible Causes |
| --- |
| INTERMITTENT CONDITION |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| VACUUM RESERVOIR SOLENOID CONTROL SHORTED TO VOLTAGE |
| VACUUM RESERVOIR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND |
| VACUUM RESERVOIR SOLENOID CONTROL CIRCUIT OPEN |
| VACUUM RESERVOIR SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: IfINTERMITTENT CONDITIONe ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several ignition cycles, turning the ignition off for at least 10 seconds between each ignition cycle.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

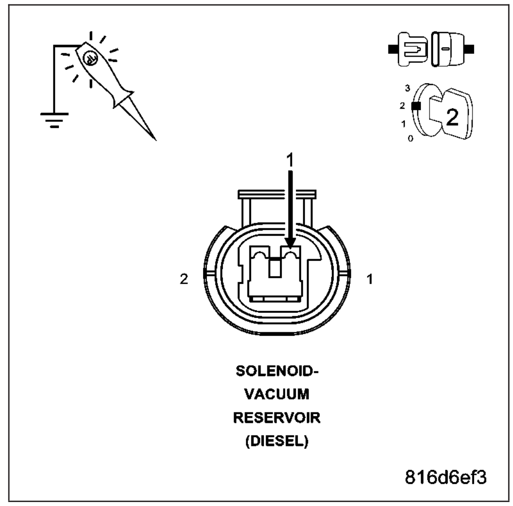
## 3. ASD OUTPUT CKT OPEN

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Turn the ignition on.

Using a 12-volt test light connected to ground, check the ASD Relay Output circuit.



**Does the test light illuminate brightly?**

**Yes** >> Go To 4

**No** >> Repair the ASD Relay Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. VACUUM RESERVOIR SOLENOID CONTROL SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

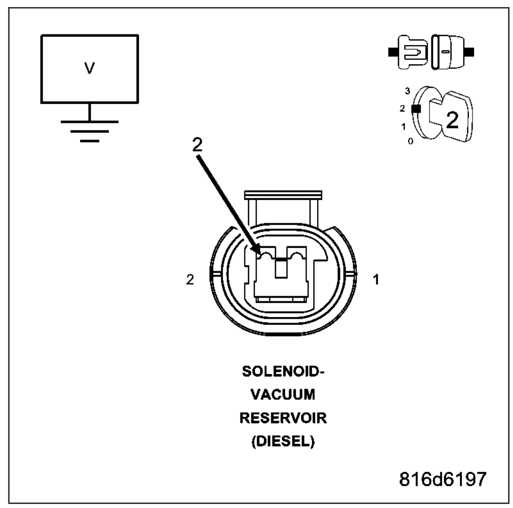
Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the Vacuum Reservoir Solenoid Control circuit.



**Is the voltage below 1.0 volt?**

**Yes** >> Go To 5

**No** >> Repair the Vacuum Reservoir Solenoid Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

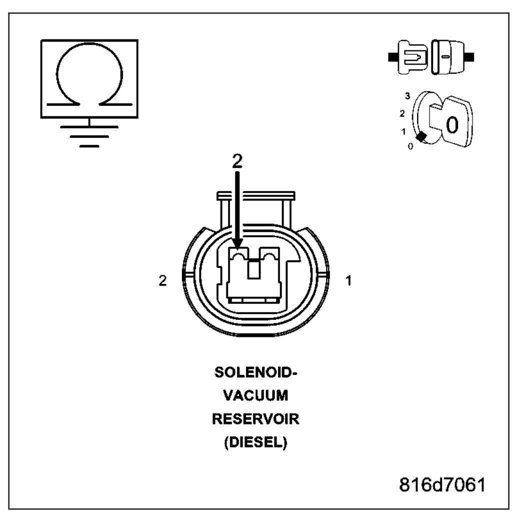
## 5. VACUUM RESERVOIR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Vacuum Reservoir Solenoid Control circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Vacuum Reservoir Solenoid Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. VACUUM RESERVOIR SOLENOID CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Disconnect the ECM harness connectors.

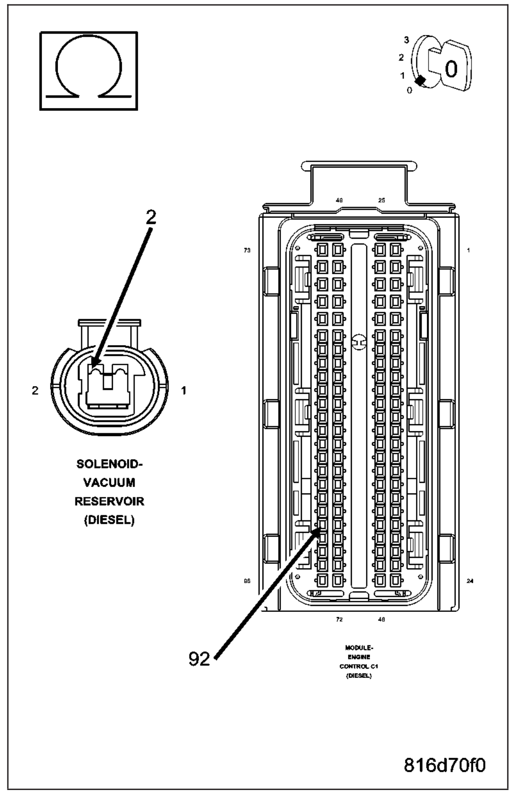
Measure the resistance of the Vacuum Reservoir Solenoid Control circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 7

**No** >> Repair the Vacuum Reservoir Solenoid Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 7. VACUUM RESERVOIR SOLENOID

Turn the ignition off.

Install a substitute Vacuum Reservoir Solenoid in place of the vehicle's Vacuum reservoir Solenoid.

**NOTE: Ensure the ECM and Vacuum Reservoir Solenoid harness connectors are connected.**

Turn the ignition on.

With the scan tool, check for this DTC to set again.

**Did this DTC set again?**

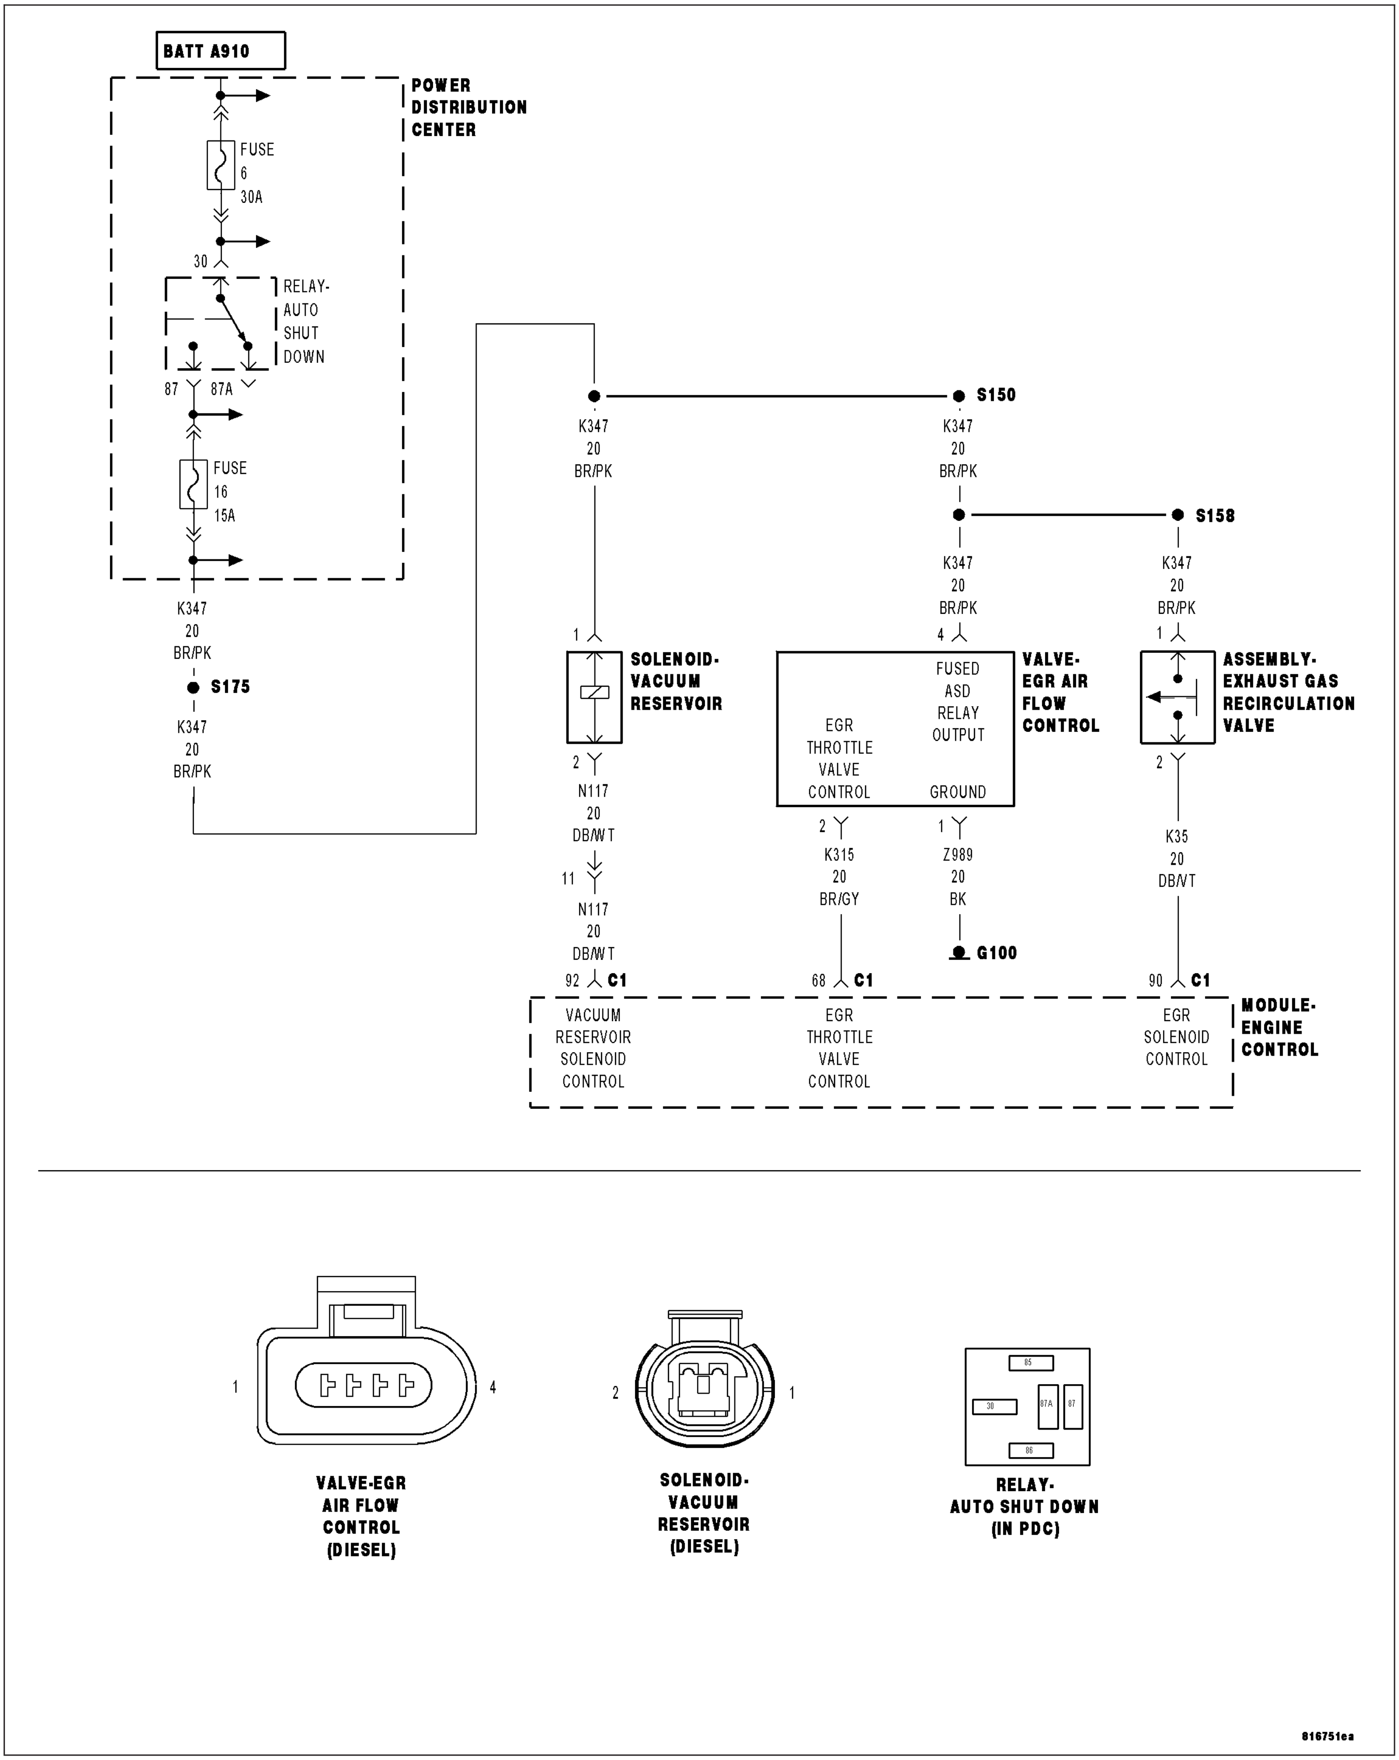
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Vacuum Reservoir Solenoid.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P2101-EGR AIR FLOW CONTROL VALVE EXCESSIVE CURRENT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM EGR Air Flow Control Valve command on.
- **Set Condition:**
  The ECM detects excessive current on the EGR Air Flow Control Valve Control circuit.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| EGR AIR FLOW CONTROL VALVE |
| EGR AIR FLOW CONTROL VALVE CONTROL SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE - INTERNAL SHORT TO VOLTAGE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Test drive the vehicle and monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. EGR AIR FLOW CONTROL VALVE

Turn the ignition off.

Disconnect the EGR Air Flow Control Valve harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

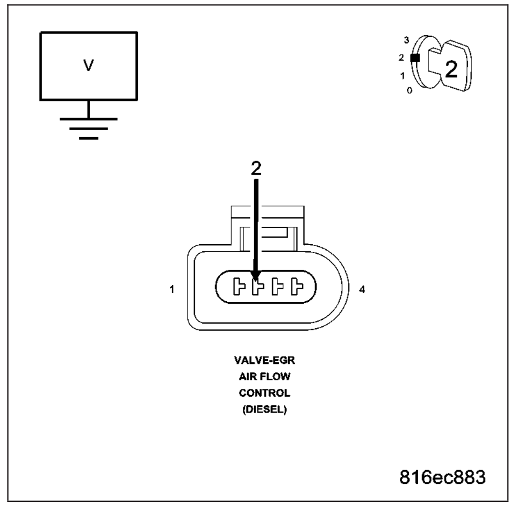
Monitor the scan tool for ECM DTCs.

**Does the scan tool display an EGR AIR FLOW CONTROL VALVE OPEN CIRCUIT dtc?**

**Yes** >> Replace the EGR Air Flow Control Valve.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. EGR AIR FLOW CONTROL VALVE SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the EGR Air Flow Control Valve harness connector.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the EGR Air Flow Control Valve Control circuit.

**Is the voltage below 1.0 volt?**

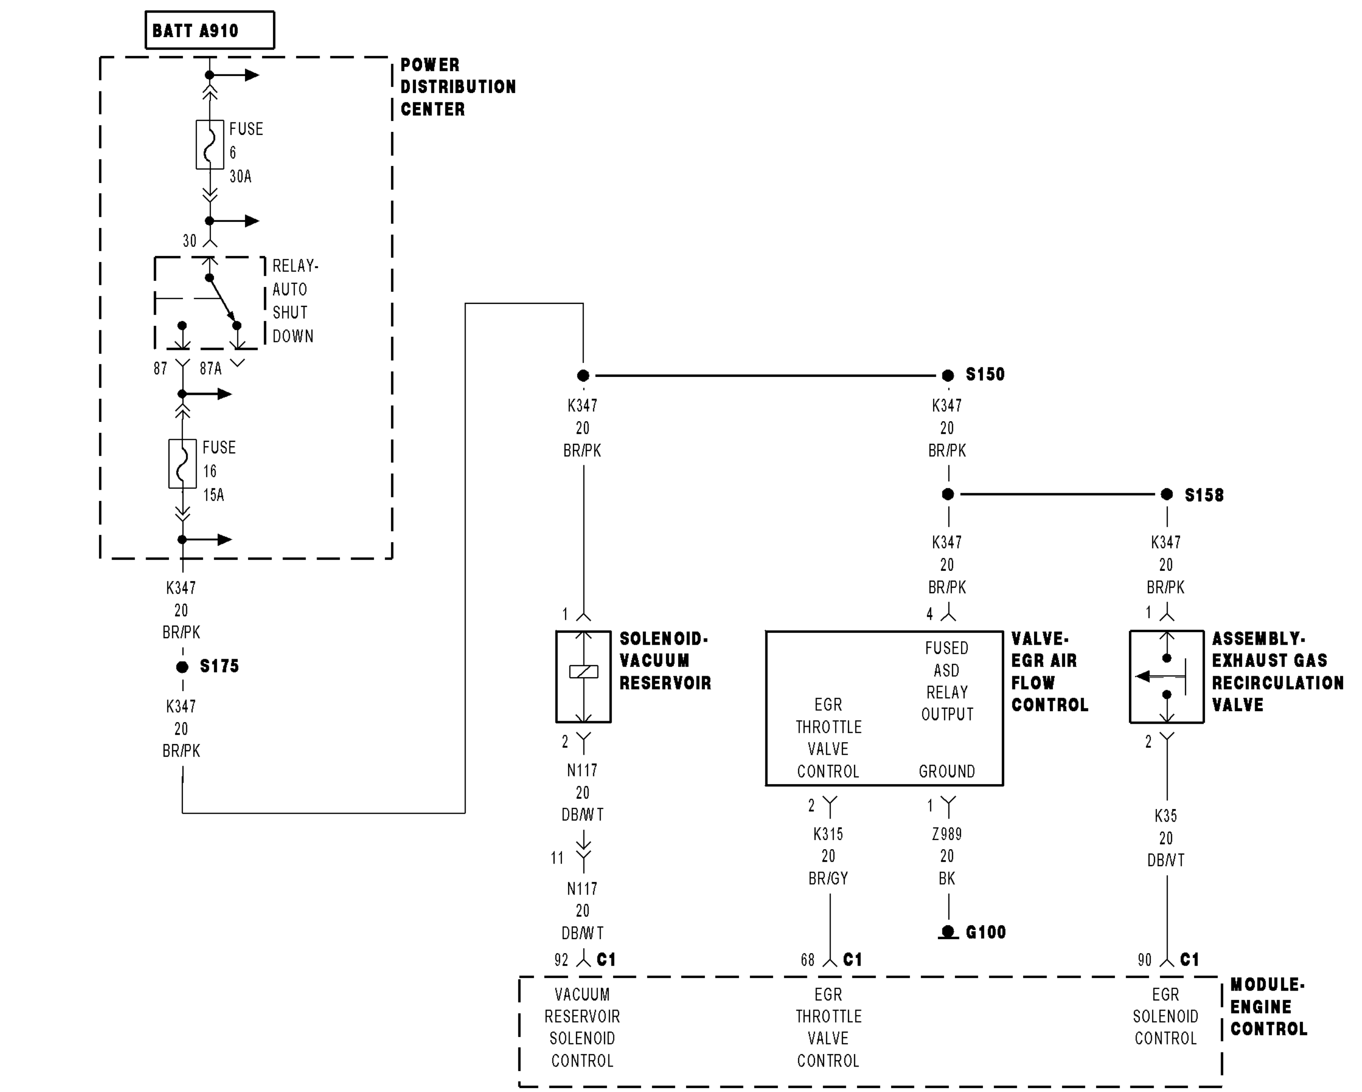
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

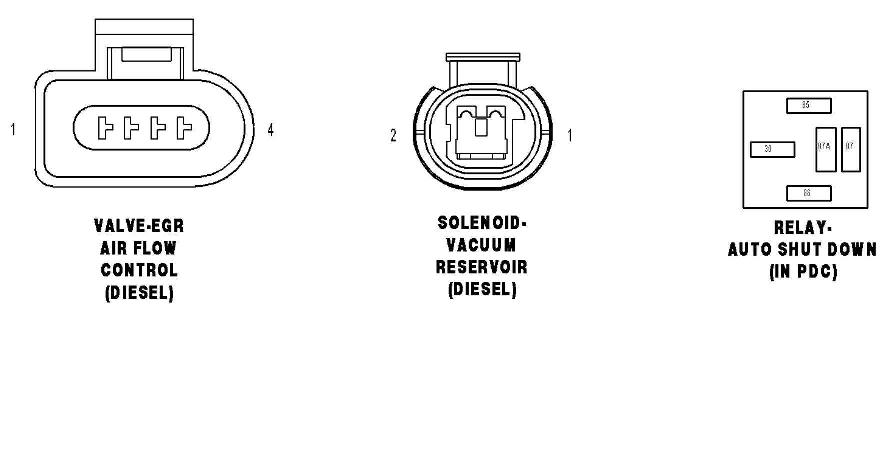
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the EGR Air Flow Control Valve Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P2101-EGR AIR FLOW CONTROL VALVE OPEN CKT





For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM EGR Air Flow Control Valve command off.
- **Set Condition:**
  The ECM does not detect voltage on the EGR Air Flow Control Valve Control circuit.

| Possible Causes |
| --- |
| INTERMITTENT CONDITION |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| EGR AIR FLOW CONTROL VALVE CIRCUIT SHORTED TO GROUND |
| EGR AIR FLOW CONTROL VALVE CIRCUIT OPEN |
| EGR AIR FLOW CONTROL VALVE |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool , erase ECM DTCs.

Test drive the vehicle.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

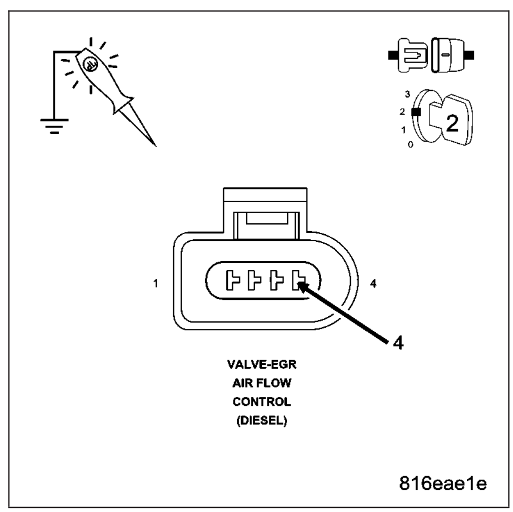
### 2. ASD OUTPUT CKT OPEN

Turn the ignition off.

Disconnect the EGR Air Flow Control Valve harness connector.

Turn the ignition on.

Using a 12-volt test light connected to ground, check the ASD Relay Output circuit.



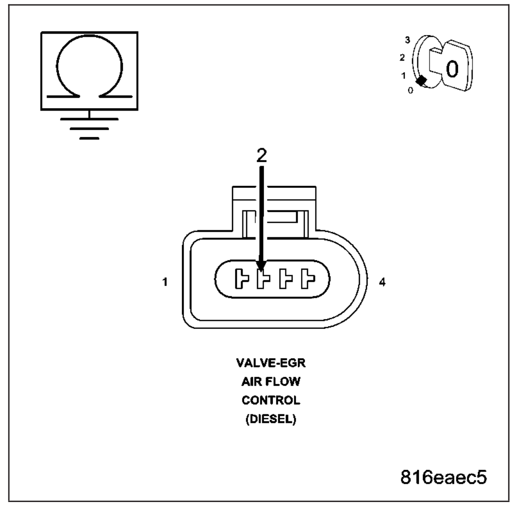
**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the ASD Relay Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. EGR AIR FLOW CONTROL VALVE SHORTED TO GROUND



Turn the ignition off.

Disconnect the EGR Air Flow Control Valve harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the EGR Air Flow Control Valve Control circuit.

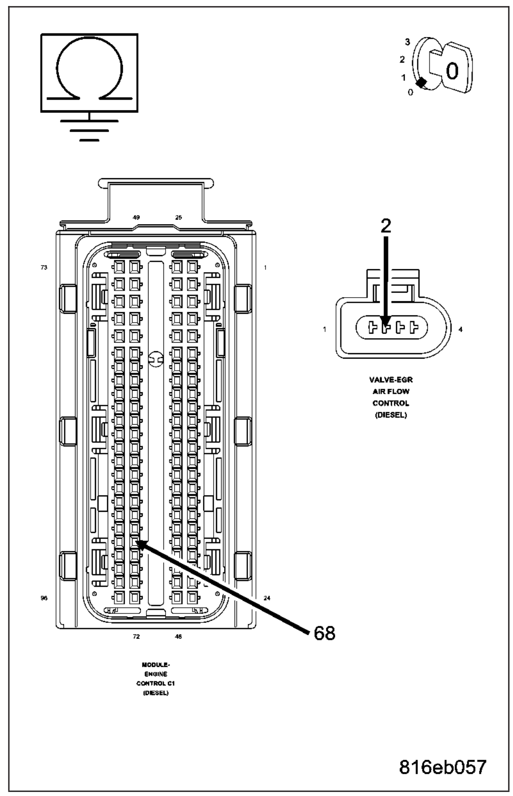
**Is the resistance above 1000 ohms?**

**Yes** >> Go To 4

**No** >> Repair the EGR Air Flow Control Valve circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. EGR AIR FLOW CONTROL VALVE CIRCUIT OPEN



Turn the ignition off.

Disconnect the EGR Air Flow Control Valve harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the EGR Air Flow Control Valve Control circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the EGR Air Flow Control Valve Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. EGR AIR FLOW CONTROL VALVE

Turn the ignition off.

Install a substitute EGR Air Flow Control Valve in place of the vehicle's EGR Air Flow Control Valve.

**NOTE: Ensure the ECM and EGR Air Flow Control Valve harness connectors are connected.**

Turn the ignition on.

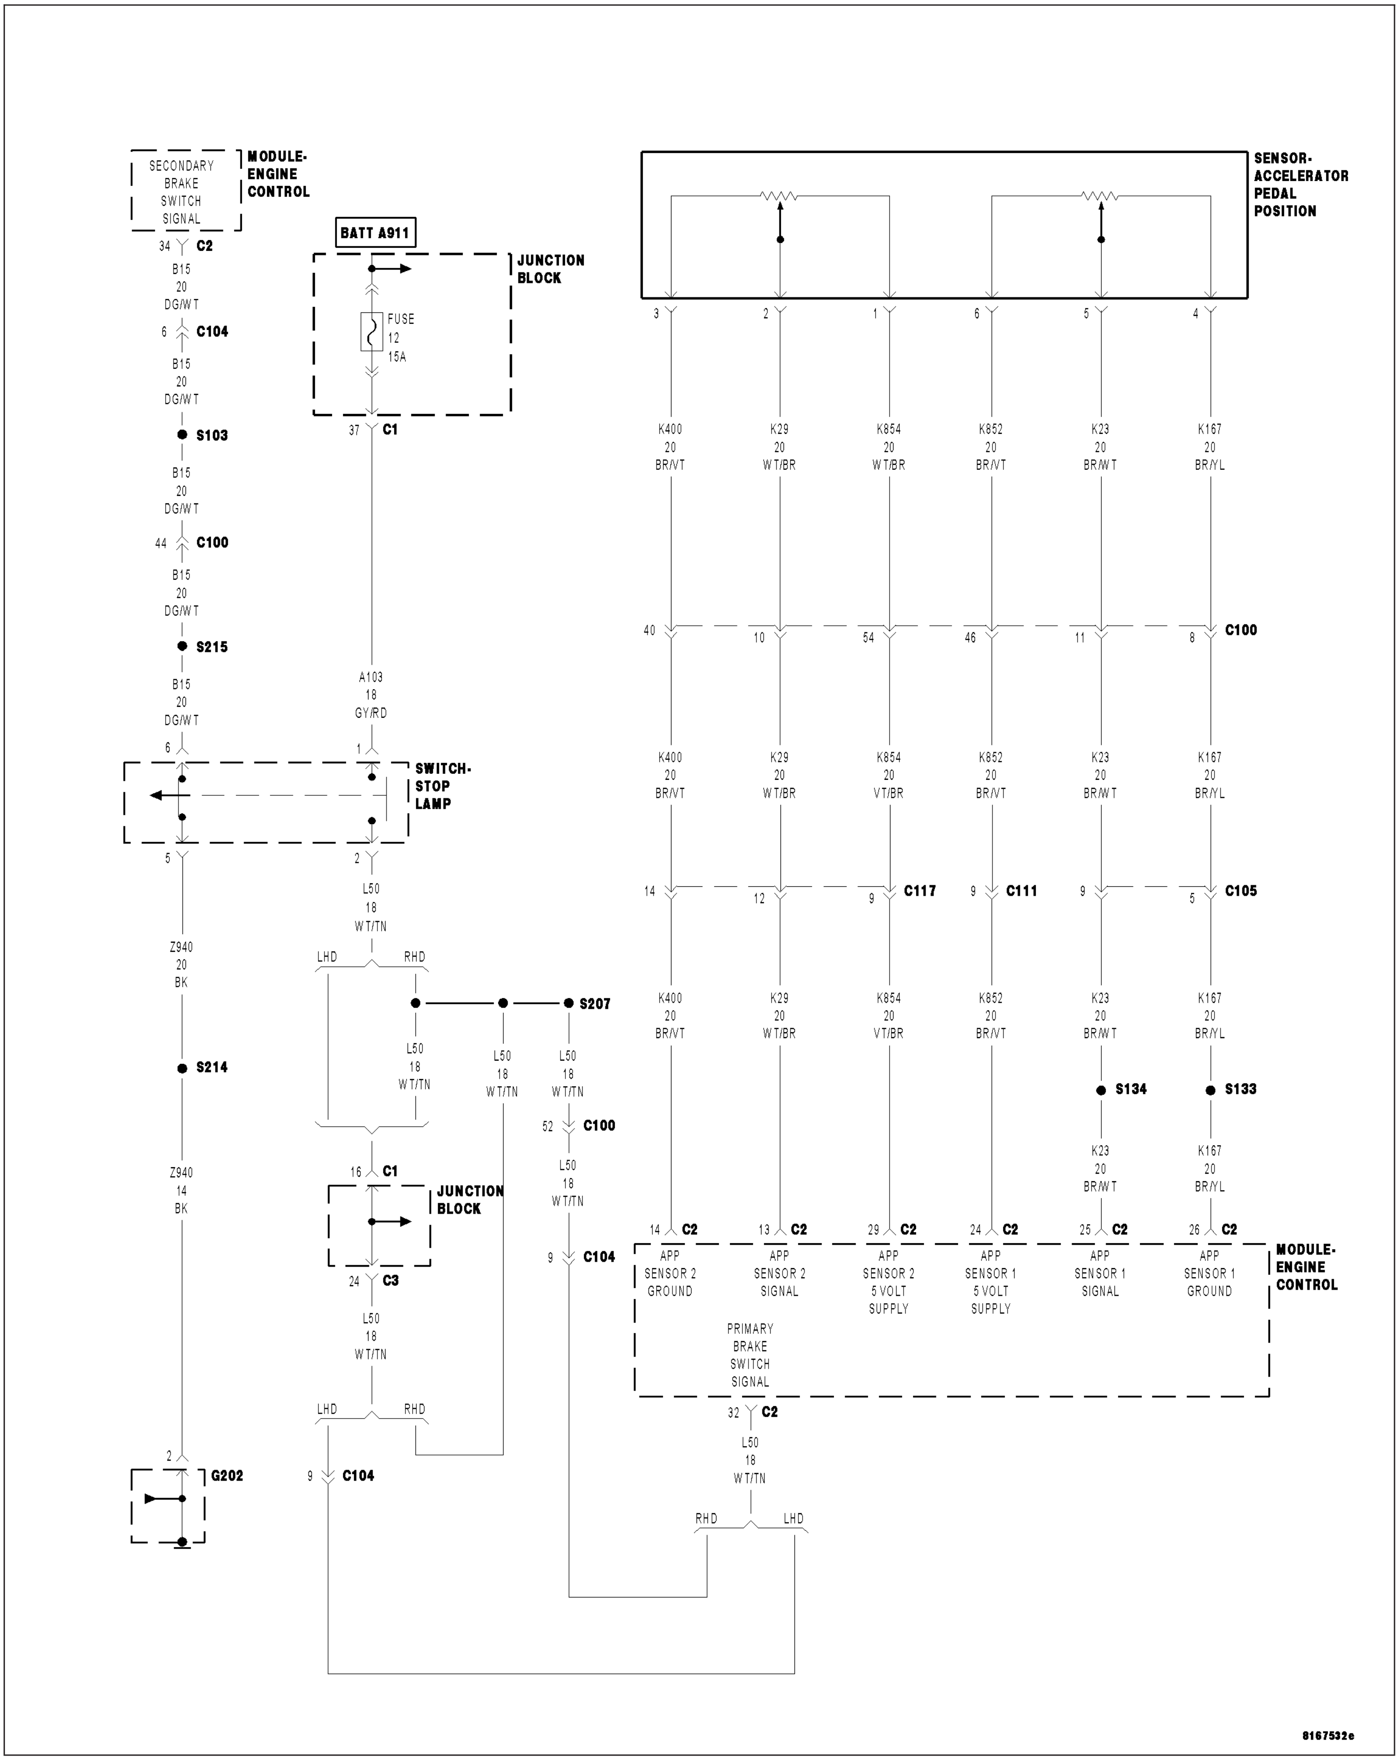
With the scan tool , check for this DTC to set again.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the EGR Air Flow Control Valve.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P2120-ACC PEDAL POSITION SENSOR 1 CKT PLAUSIBILITY



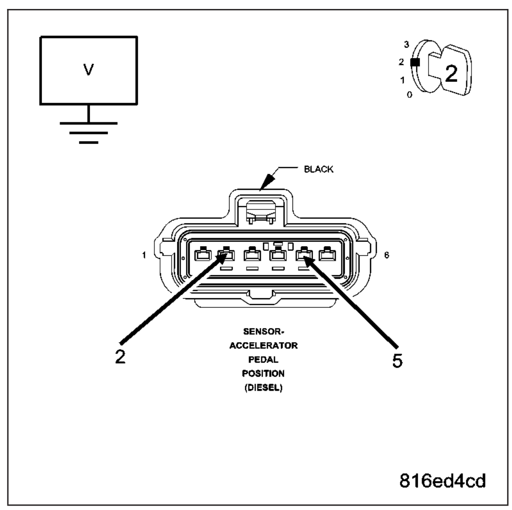
For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  APP Sensor #1 and APP Sensor #2 signals do not agree.

| Possible Causes |
|---|
| ACCELERATOR PEDAL POSITION SENSOR |
| ECM - APP SENSOR 1 5-VOLT SUPPLY CIRCUIT |
| SENSOR GROUND OPEN (APP SENSOR) |
| INTERMITTENT CONDITION |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT OPEN |
| APP SENSOR SIGNAL CIRCUIT OPEN |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO SENSOR GROUND |
| APP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| VERIFY APP SENSOR OPERATION |
| APP SENSOR SIGNAL CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE |
| ECM - SENSOR GROUND OPEN |
| APP SENSOR CIRCUIT SHORTED TO VOLTAGE |
| APP SENSOR GROUND CIRCUIT SHORTED TO VOLTAGE |
| ECM - APP SENSOR SIGNAL CIRCUIT |

## Diagnostic Test

### 1. APP SENSOR IDLE VOLTAGE



**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: The APP Sensor is a device that contains 2 separate potentiometer type sensors. Each sensor has its own 5-volt supply circuit, sensor ground circuit and signal circuit. The APP Sensor no longer incorporates a low-idle switch.**

**NOTE: The APP Sensor 2 signal should always be approximately 1/2 the voltage of the APP Sensor 1 signal.**

Inspect the APP Sensor for proper travel from the rest position to the fully depressed position.

Turn the ignition on.

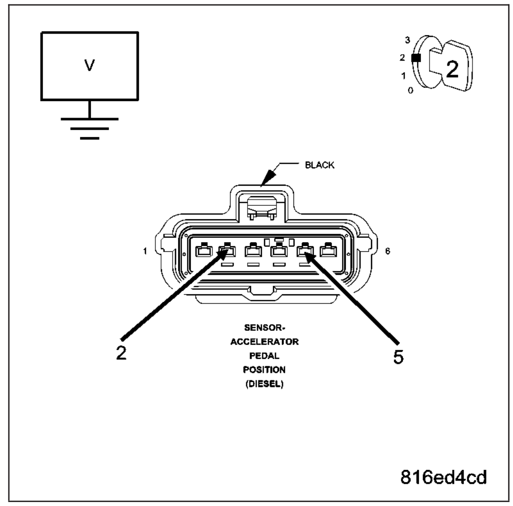
Using a voltmeter, backprobe the APP Sensor 1 and APP Sensor 2 Signal circuits at the APP Sensor harness connector with the accelerator pedal in the at rest position.

**Is the voltage between 0.42 and 0.51 volt for sensor 1 and 0.19 and 0.28 volt for sensor 2?**

**Yes** >> Go To 2

**No** >> Go To 4

## 2. APP SENSOR WIDE OPEN THROTTLE VOLTAGE



Turn the ignition on.

Fully depress the accelerator pedal.

Using a voltmeter backprobe the APP Sensor harness connector and read the voltage for APP Sensor 1 and APP Sensor 2 Signal circuits.

**Is the voltage between 4.45 and 4.75 volts for #1 and 2.15 and 2.45 volts for #2?**

**Yes** >> Go To 3

**No** >> Go To 4

## 3. VERIFY APP SENSOR OPERATION

Turn the ignition on.

With the scan tool, read the APP Sensor 1 and APP Sensor 2 percentages (%).

With the accelerator pedal in the idle position, slowly depress the accelerator pedal until the pedal is fully depressed.

**NOTE: The percentage readings for APP Sensors 1 and 2 should increase smoothly as the pedal is depressed.**

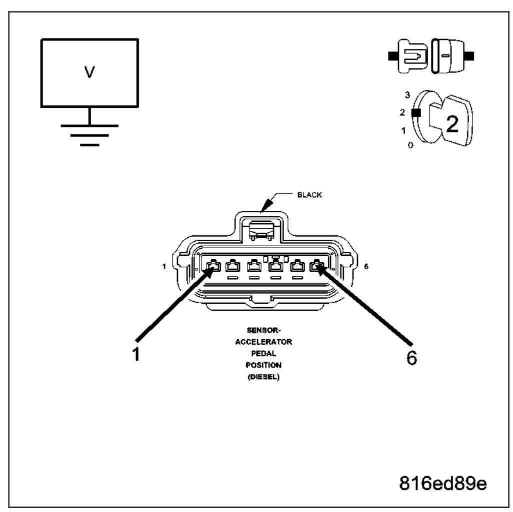
**NOTE: This test can also performed using a voltmeter by back probing each APP Sensor Signal circuit at the APP Sensor harness connector and observing the voltmeter for a smooth voltage change through the entire pedal travel.**

**Does the percentage (voltage) increase smoothly for both readings with the accelerator pedal travel?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Replace the Accelerator Pedal Position Sensor in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. VERIFY 5-VOLT SUPPLY AND SENSOR REFERENCE VOLTAGE A CIRCUITS



**NOTE: Perform the rest of this diagnostic procedure on the individual APP Sensor Potentiometer (1 or 2) that did not display the correct voltages in the previous test.**

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Turn the ignition on.

Measure the voltage of the 5-Volt Supply circuit in the APP Sensor harness connector.

**Is the voltage between 4.7 and 5.3 volts?**

**Yes** >> Go To 5

**No** >> Go To 13

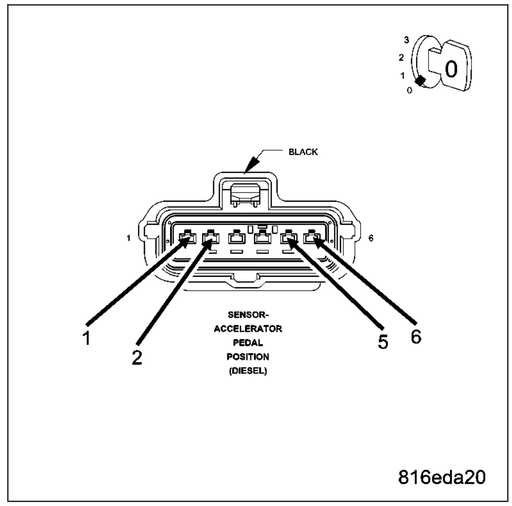
## 5. VERIFY APP SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Connect a jumper wire between APP Sensor Signal circuit and the 5-volt supply circuit at the APP Sensor harness connector.

With the scan tool, read the PEDAL OUTPUT VOLTS.



**Does the scan tool display between 4.0 and 5.5 volts?**

**Yes** >> Go To 6

**No** >> Go To 9

## 6. APP SENSOR GROUND CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the APP Sensor harness connector.

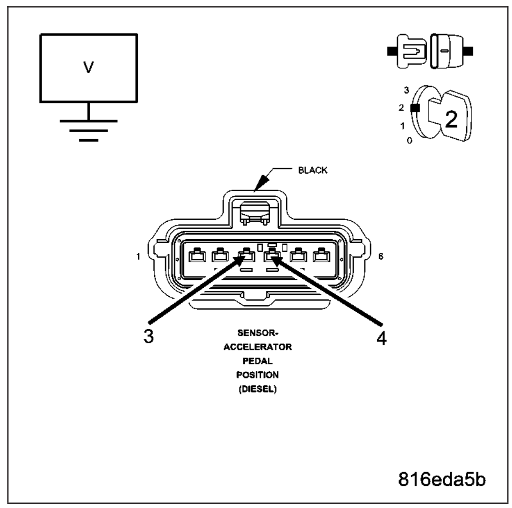
Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the APP Sensor Ground circuit.



**Is the voltage above 1.0 volt?**

**Yes** >> Repair the App Sensor Ground circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 7

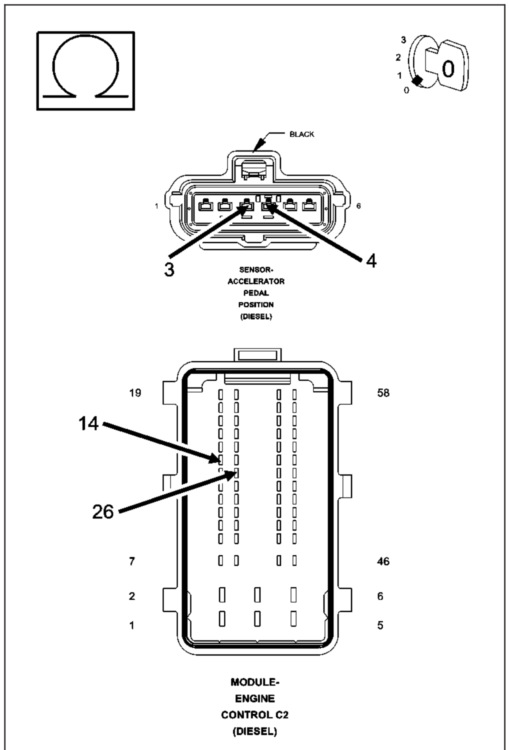
## 7. SENSOR GROUND OPEN

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Sensor Ground circuit between the APP Sensor and the ECM.



816edaa6

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 8

**No** >> Repair the APP Sensor Ground circuit for an open.

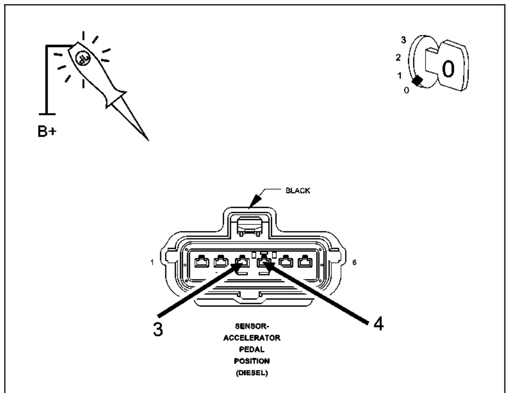
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 8. ECM - SENSOR GROUND OPEN

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Using a 12-volt test light connected to 12-volts, check the Sensor Ground circuit of the appropriate potentiometer.



816edb5c

**Does the test light illuminate brightly?**

**Yes** >> Replace the Accelerator Pedal Position Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

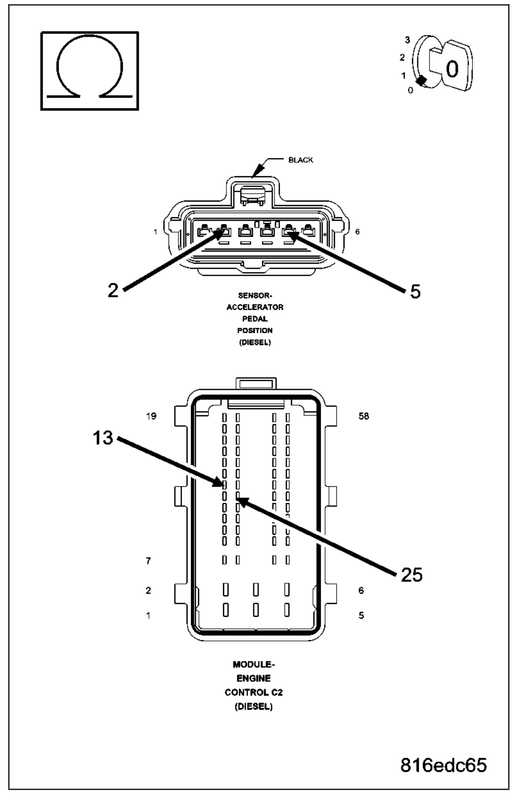
## 9. APP SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the APP Sensor Signal circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 10

**No** >> Repair the APP Sensor Signal circuit for an open

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

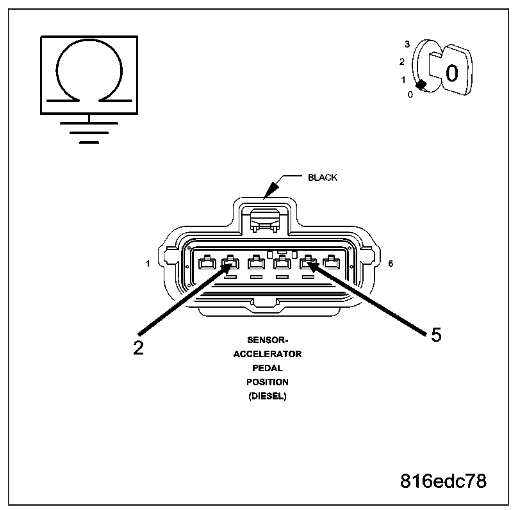
## 10. APP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the APP Sensor Signal circuit.



**Is the resistance below 1000 ohms?**

**Yes** >> Repair the APP Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 11

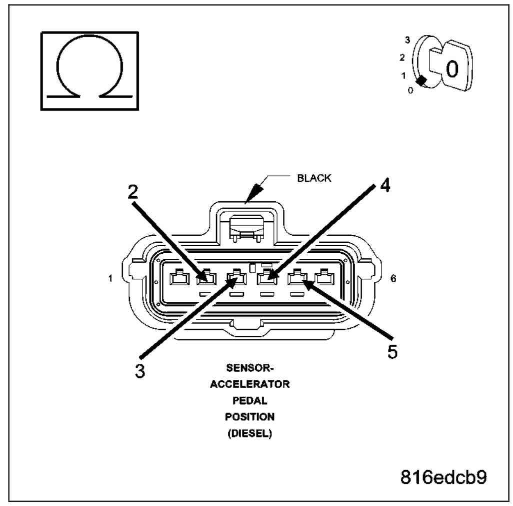
## 11. APP SENSOR SIGNAL CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between the APP Sensor Signal circuit and the Sensor Ground circuit at the APP Sensor harness connector.



**Is the resistance below 1000 ohms?**

**Yes** >> Repair the APP Sensor Signal and Sensor Ground circuits for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 12

## 12. APP SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the APP Sensor harness connector.

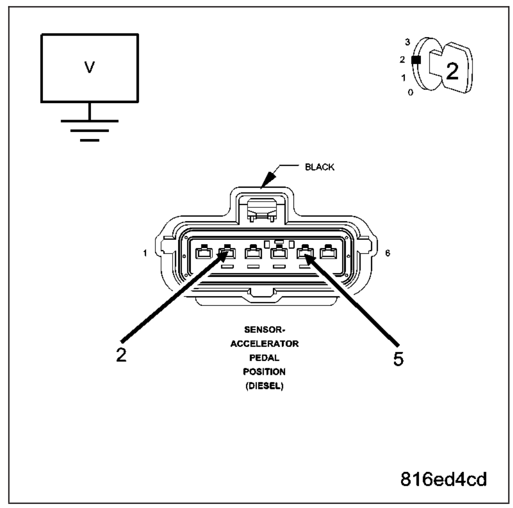
Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the APP Sensor Signal circuit.



**Is the voltage above 1.0 volt?**

**Yes** >> Repair the APP Sensor Signal circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

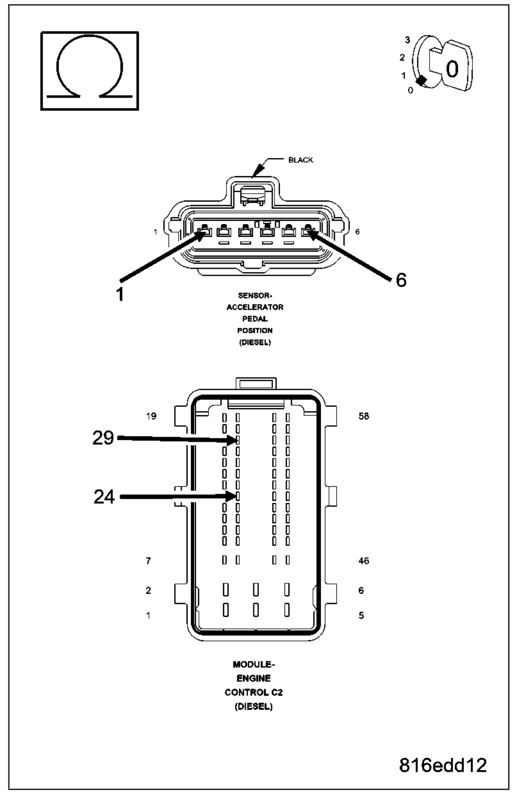
## 13. APP SENSOR 5-VOLT SUPPLY CIRCUITS OPEN

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Accelerator Pedal Position Sensor 5-volt Supply circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 14

**No** >> Repair the Accelerator Pedal Position Sensor 5-Volt Supply circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

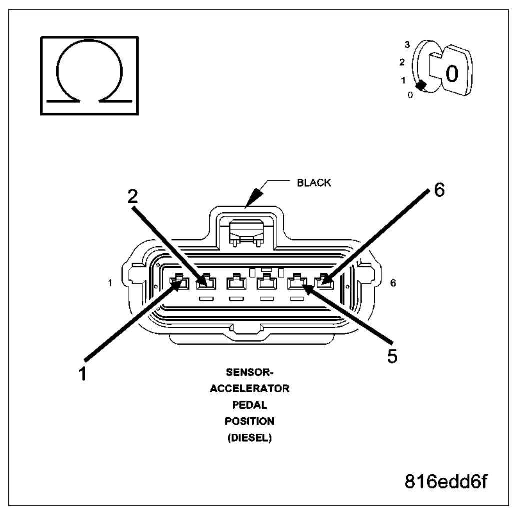
## 14. APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO SENSOR GROUND

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between the Accelerator Pedal Position Sensor 5-Volt Supply circuit and both Sensor Ground circuits in the APP Sensor harness connector.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 15

**No** >> Repair the 5-Volt Supply circuit for a short to the Sensor Ground circuit.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

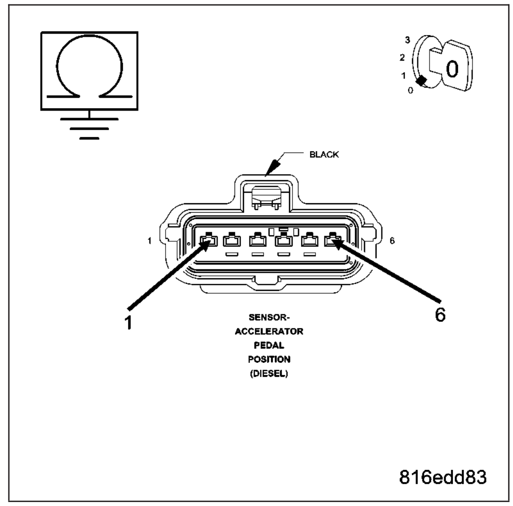
## 15. APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Accelerator Pedal Position Sensor 5-volt Supply circuit.



**Is the resistance below 1000 ohms?**

**Yes** >> Repair the Accelerator Pedal Position Sensor 5-Volt Supply circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 16

## 16. APP SENSOR 5-VOLT SUPPLY SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the APP Sensor harness connector.

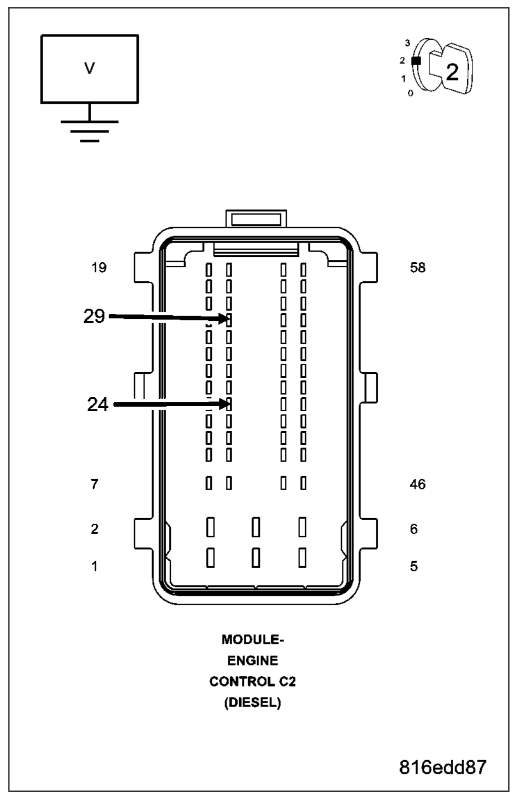
Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the Accelerator Pedal Position Sensor 5-Volt Supply circuit in the ECM harness connector.



**Is the voltage above 1.0 volt?**

**Yes** >> Repair the Accelerator Pedal Position Sensor 5-Volt Supply circuit for a short to voltage.

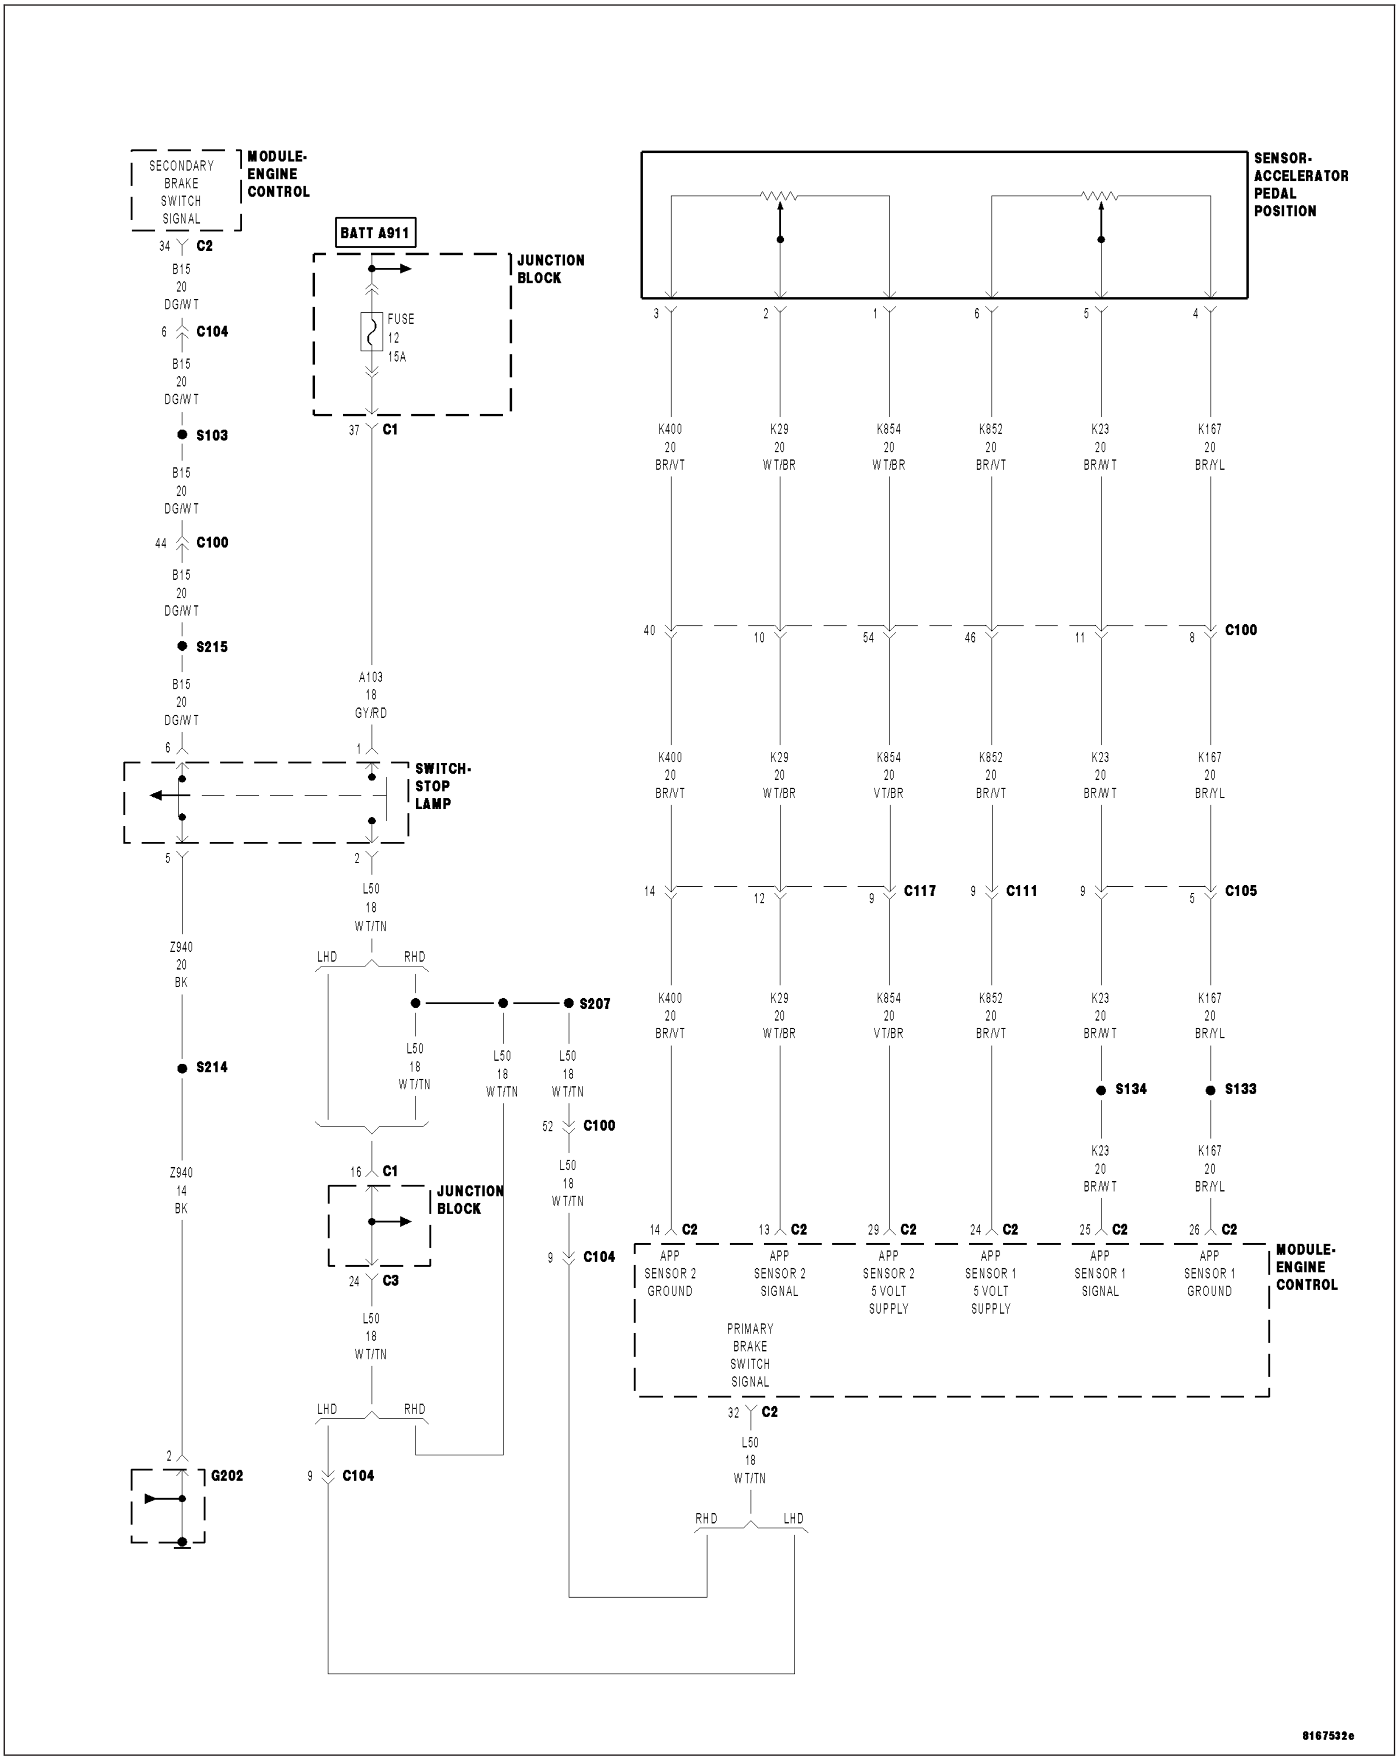
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Repair as necessary.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P2120-ACC PEDAL POSITION SENSOR 1 CIRCUIT VOLTAGE TOO HIGH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The APP Sensor #1 Signal circuit voltage is above 4.8 volts for 0.3 second.

| Possible Causes |
|---|
| ACCELERATOR PEDAL POSITION SENSOR |
| ECM - APP SENSOR 1 5-VOLT SUPPLY CIRCUIT |
| SENSOR GROUND OPEN (APP SENSOR) |
| INTERMITTENT CONDITION |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT OPEN |
| APP SENSOR SIGNAL CIRCUIT OPEN |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO SENSOR GROUND |
| APP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| VERIFY APP SENSOR OPERATION |
| APP SENSOR SIGNAL CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE |
| ECM - SENSOR GROUND OPEN |
| APP SENSOR CIRCUIT SHORTED TO VOLTAGE |
| APP SENSOR GROUND CIRCUIT SHORTED TO VOLTAGE |
| ECM - APP SENSOR SIGNAL CIRCUIT |

## Diagnostic Test

### 1. APP SENSOR IDLE VOLTAGE

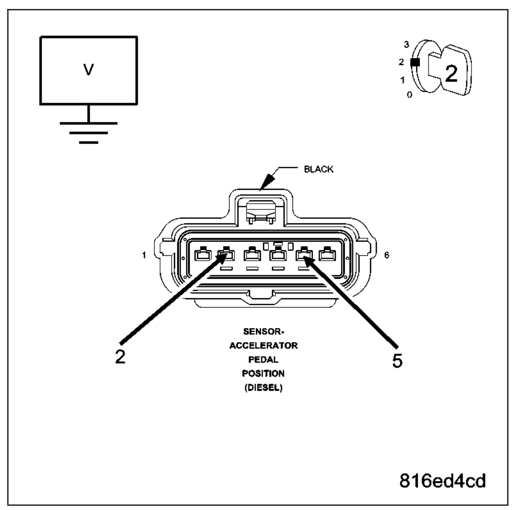
**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: The APP Sensor is a device that contains 2 separate potentiometer type sensors. Each sensor has its own 5-volt supply circuit, sensor ground circuit and signal circuit. The APP Sensor no longer incorporates a low-idle switch.**

**NOTE: The APP Sensor 2 signal should always be approximately 1/2 the voltage of the APP Sensor 1 signal.**



Inspect the APP Sensor for proper travel from the rest position to the fully depressed position.

Turn the ignition on.

Using a voltmeter, backprobe the APP Sensor 1 and APP Sensor 2 Signal circuits at the APP Sensor harness connector with the accelerator pedal in the at rest position.

**Is the voltage between 0.42 and 0.51 volt for sensor 1 and 0.19 and 0.28 volt for sensor 2?**

**Yes** >> Go To 2

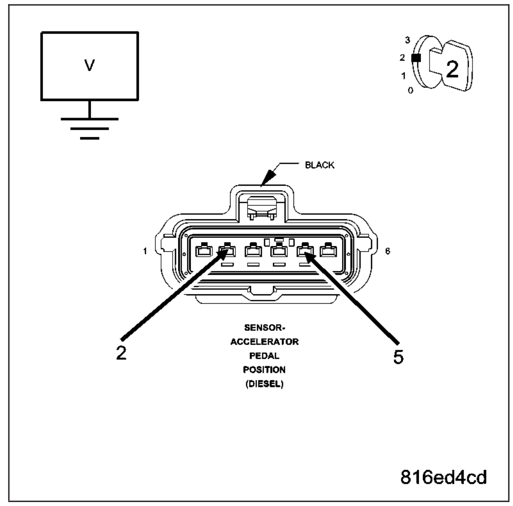
**No** >> Go To 4

## 2. APP SENSOR WIDE OPEN THROTTLE VOLTAGE

Turn the ignition on.

Fully depress the accelerator pedal.

Using a voltmeter backprobe the APP Sensor harness connector and read the voltage for APP Sensor 1 and APP Sensor 2 Signal circuits.



**Is the voltage between 4.45 and 4.75 volts for #1 and 2.15 and 2.45 volts for #2?**

**Yes** >> Go To 3

**No** >> Go To 4

## 3. VERIFY APP SENSOR OPERATION

Turn the ignition on.

With the scan tool, read the APP Sensor 1 and APP Sensor 2 percentages (%).

With the accelerator pedal in the idle position, slowly depress the accelerator pedal until the pedal is fully depressed.

**NOTE: The percentage readings for APP Sensors 1 and 2 should increase smoothly as the pedal is depressed.**

**NOTE: This test can also performed using a voltmeter by back probing each APP Sensor Signal circuit at the APP Sensor harness connector and observing the voltmeter for a smooth voltage change through the entire pedal travel.**

**Does the percentage (voltage) increase smoothly for both readings with the accelerator pedal travel?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Replace the Accelerator Pedal Position Sensor in accordance with the Service Information.
Perform ROAD TEST VERIFICATION - VER-2.

## 4. VERIFY 5-VOLT SUPPLY AND SENSOR REFERENCE VOLTAGE A CIRCUITS

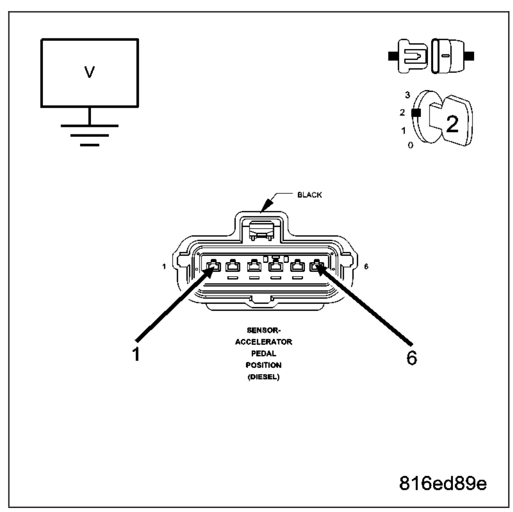
**NOTE: Perform the rest of this diagnostic procedure on the individual APP Sensor Potentiometer (1 or 2) that did not display the correct voltages in the previous test.**

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Turn the ignition on.

Measure the voltage of the 5-Volt Supply circuit in the APP Sensor harness connector.



**Is the voltage between 4.7 and 5.3 volts?**

**Yes** >> Go To 5

**No** >> Go To 13

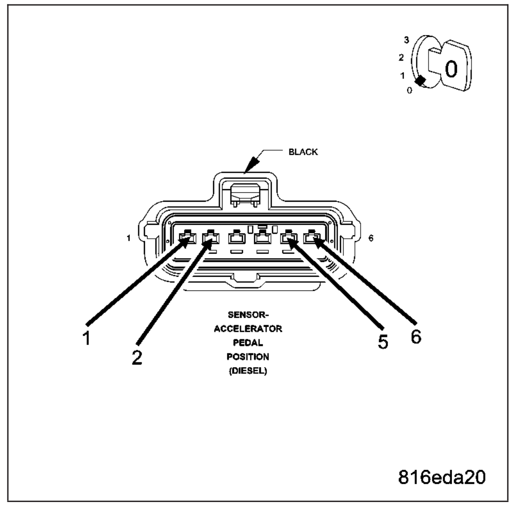
## 5. VERIFY APP SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Connect a jumper wire between APP Sensor Signal circuit and the 5-volt supply circuit at the APP Sensor harness connector.

With the scan tool, read the PEDAL OUTPUT VOLTS.



**Does the scan tool display between 4.0 and 5.5 volts?**

**Yes** >> Go To 6

**No** >> Go To 9

## 6. APP SENSOR GROUND CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the APP Sensor harness connector.

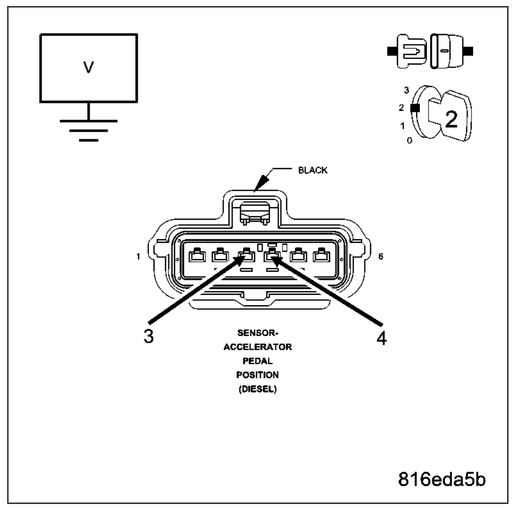
Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the APP Sensor Ground circuit.



**Is the voltage above 1.0 volt?**

**Yes** >> Repair the App Sensor Ground circuit for a short to voltage. Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Go To 7

## 7. SENSOR GROUND OPEN

Turn the ignition off.

Disconnect the APP Sensor harness connector.

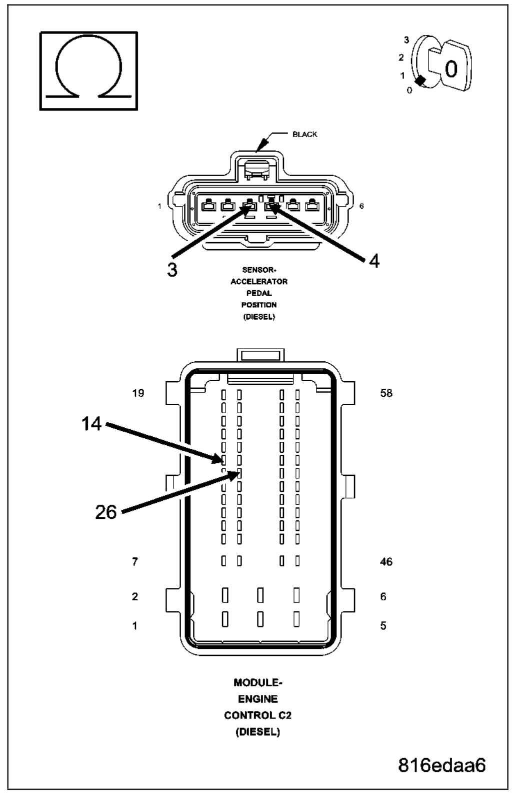
Disconnect the ECM harness connectors.

Measure the resistance of the Sensor Ground circuit between the APP Sensor and the ECM.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 8

**No** >> Repair the APP Sensor Ground circuit for an open.
Perform ROAD TEST VERIFICATION - VER-2.



## 8. ECM - SENSOR GROUND OPEN

Turn the ignition off.

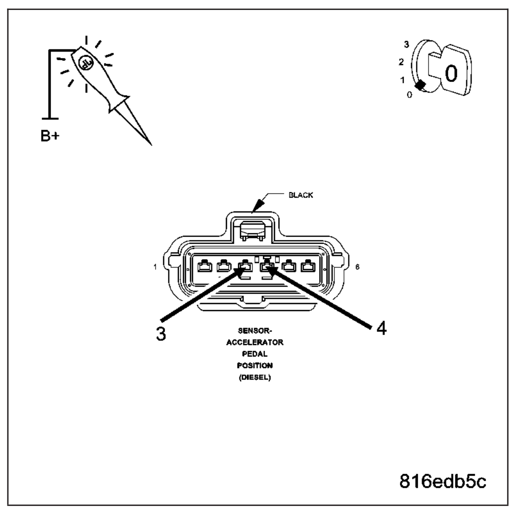
Disconnect the APP Sensor harness connector.

Using a 12-volt test light connected to 12-volts, check the Sensor Ground circuit of the appropriate potentiometer.

**Does the test light illuminate brightly?**

**Yes** >> Replace the Accelerator Pedal Position Sensor.
Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform ROAD TEST VERIFICATION - VER-2.



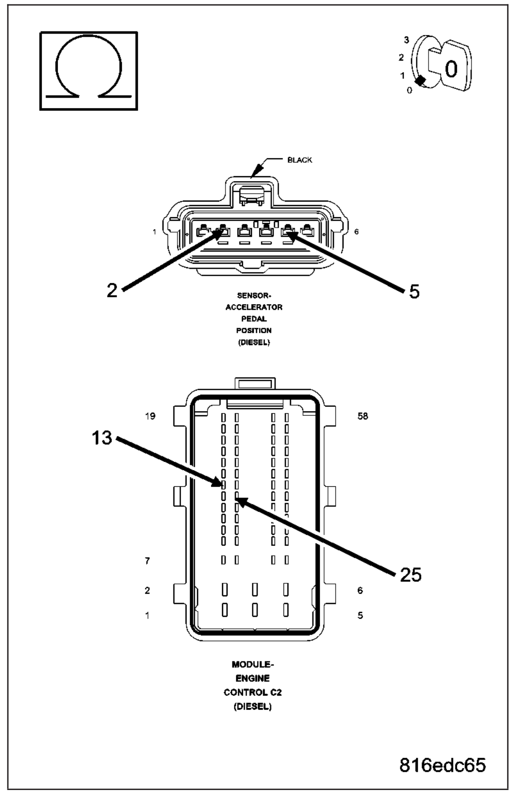
## 9. APP SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off.
Disconnect the APP Sensor harness connector.
Disconnect the ECM harness connectors.
Measure the resistance of the APP Sensor Signal circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 10

**No** >> Repair the APP Sensor Signal circuit for an open
Perform ROAD TEST VERIFICATION - VER-2.



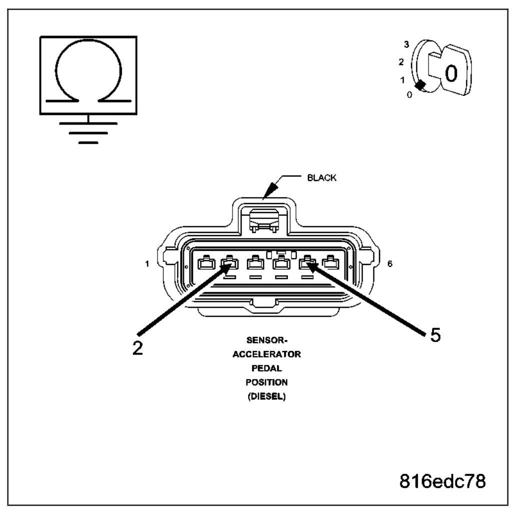
## 10. APP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.
Disconnect the APP Sensor harness connector.
Disconnect the ECM harness connectors.
Measure the resistance between ground and the APP Sensor Signal circuit.

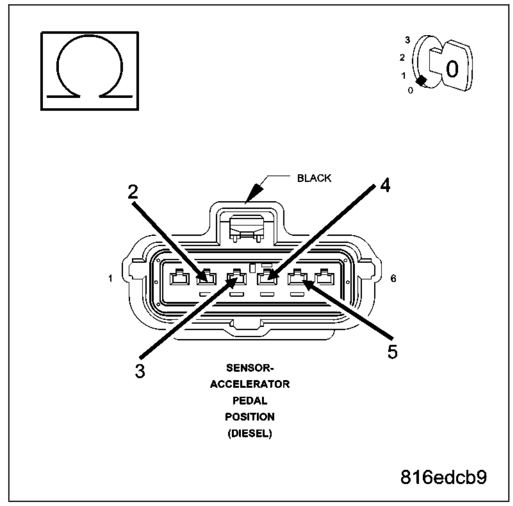
**Is the resistance below 1000 ohms?**

**Yes** >> Repair the APP Sensor Signal circuit for a short to ground.
Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Go To 11



## 11. APP SENSOR SIGNAL CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT



Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

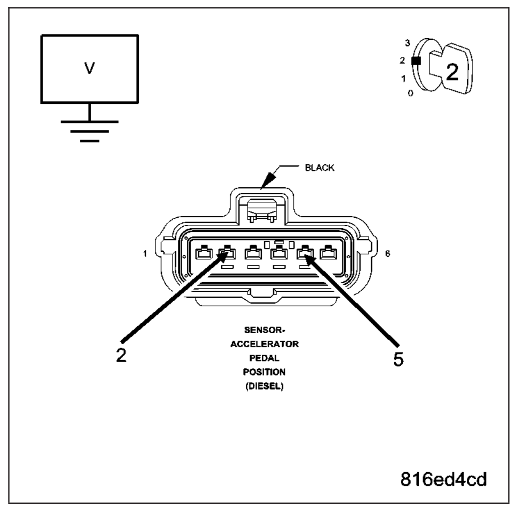
Measure the resistance between the APP Sensor Signal circuit and the Sensor Ground circuit at the APP Sensor harness connector.

**Is the resistance below 1000 ohms?**

**Yes** >> Repair the APP Sensor Signal and Sensor Ground circuits for a short together.
Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Go To 12

## 12. APP SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the APP Sensor Signal circuit.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the APP Sensor Signal circuit for a short to voltage.
Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform ROAD TEST VERIFICATION - VER-2.

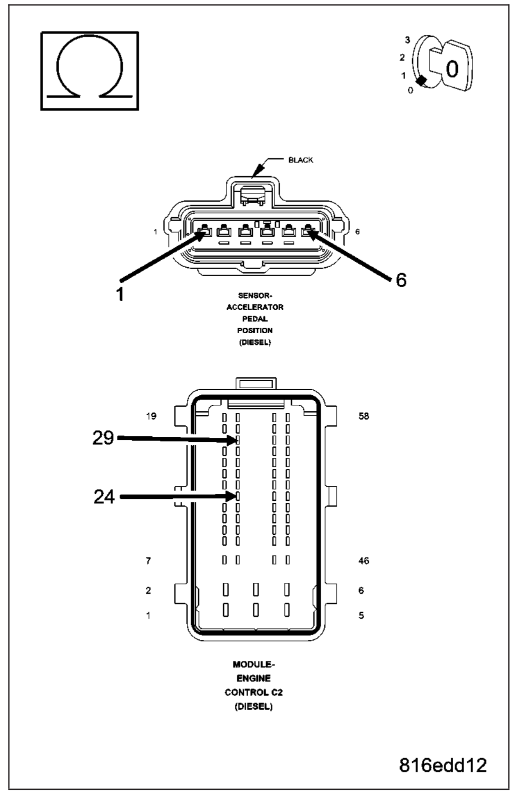
## 13. APP SENSOR 5-VOLT SUPPLY CIRCUITS OPEN

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Accelerator Pedal Position Sensor 5-volt Supply circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 14

**No** >> Repair the Accelerator Pedal Position Sensor 5-Volt Supply circuit for an open.
Perform ROAD TEST VERIFICATION - VER-2.

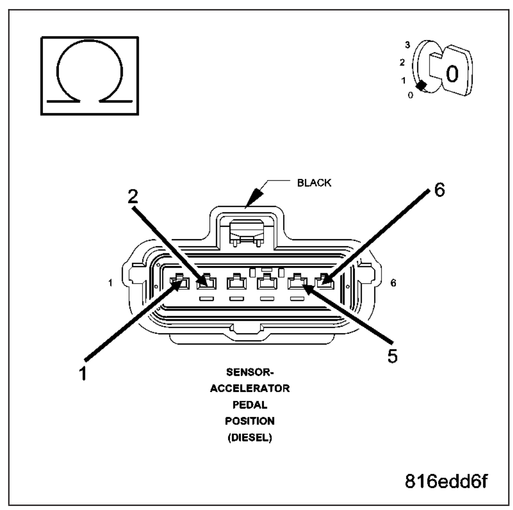
## 14. APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO SENSOR GROUND

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between the Accelerator Pedal Position Sensor 5-Volt Supply circuit and both Sensor Ground circuits in the APP Sensor harness connector.

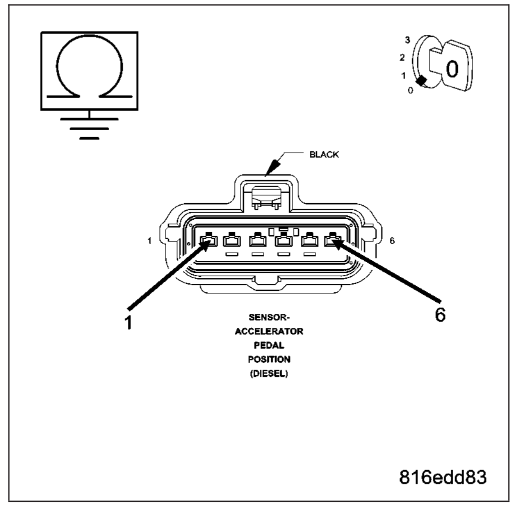


**Is the resistance above 1000 ohms?**

**Yes** >> Go To 15

**No** >> Repair the 5-Volt Supply circuit for a short to the Sensor Ground circuit.
Perform ROAD TEST VERIFICATION - VER-2.

## 15. APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND



Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Accelerator Pedal Position Sensor 5-volt Supply circuit.

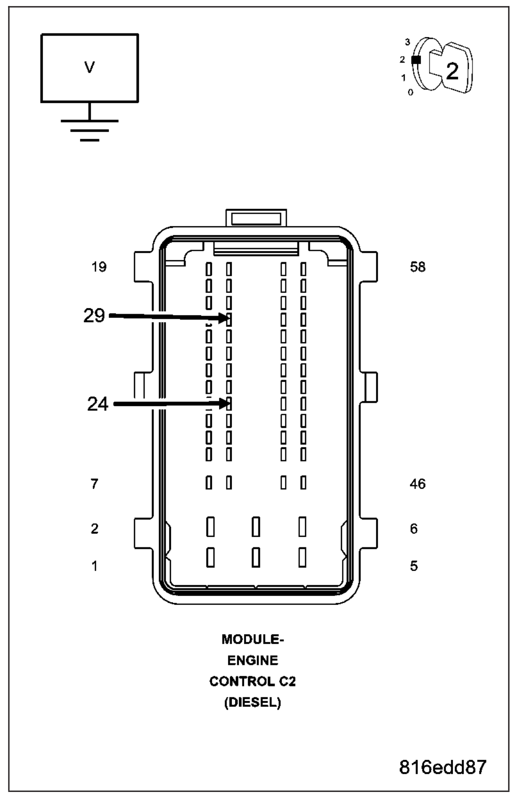
**Is the resistance below 1000 ohms?**

**Yes** >> Repair the Accelerator Pedal Position Sensor 5-Volt Supply circuit for a short to ground.

Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Go To 16

## 16. APP SENSOR 5-VOLT SUPPLY SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the Accelerator Pedal Position Sensor 5-Volt Supply circuit in the ECM harness connector.

**Is the voltage above 1.0 volt?**

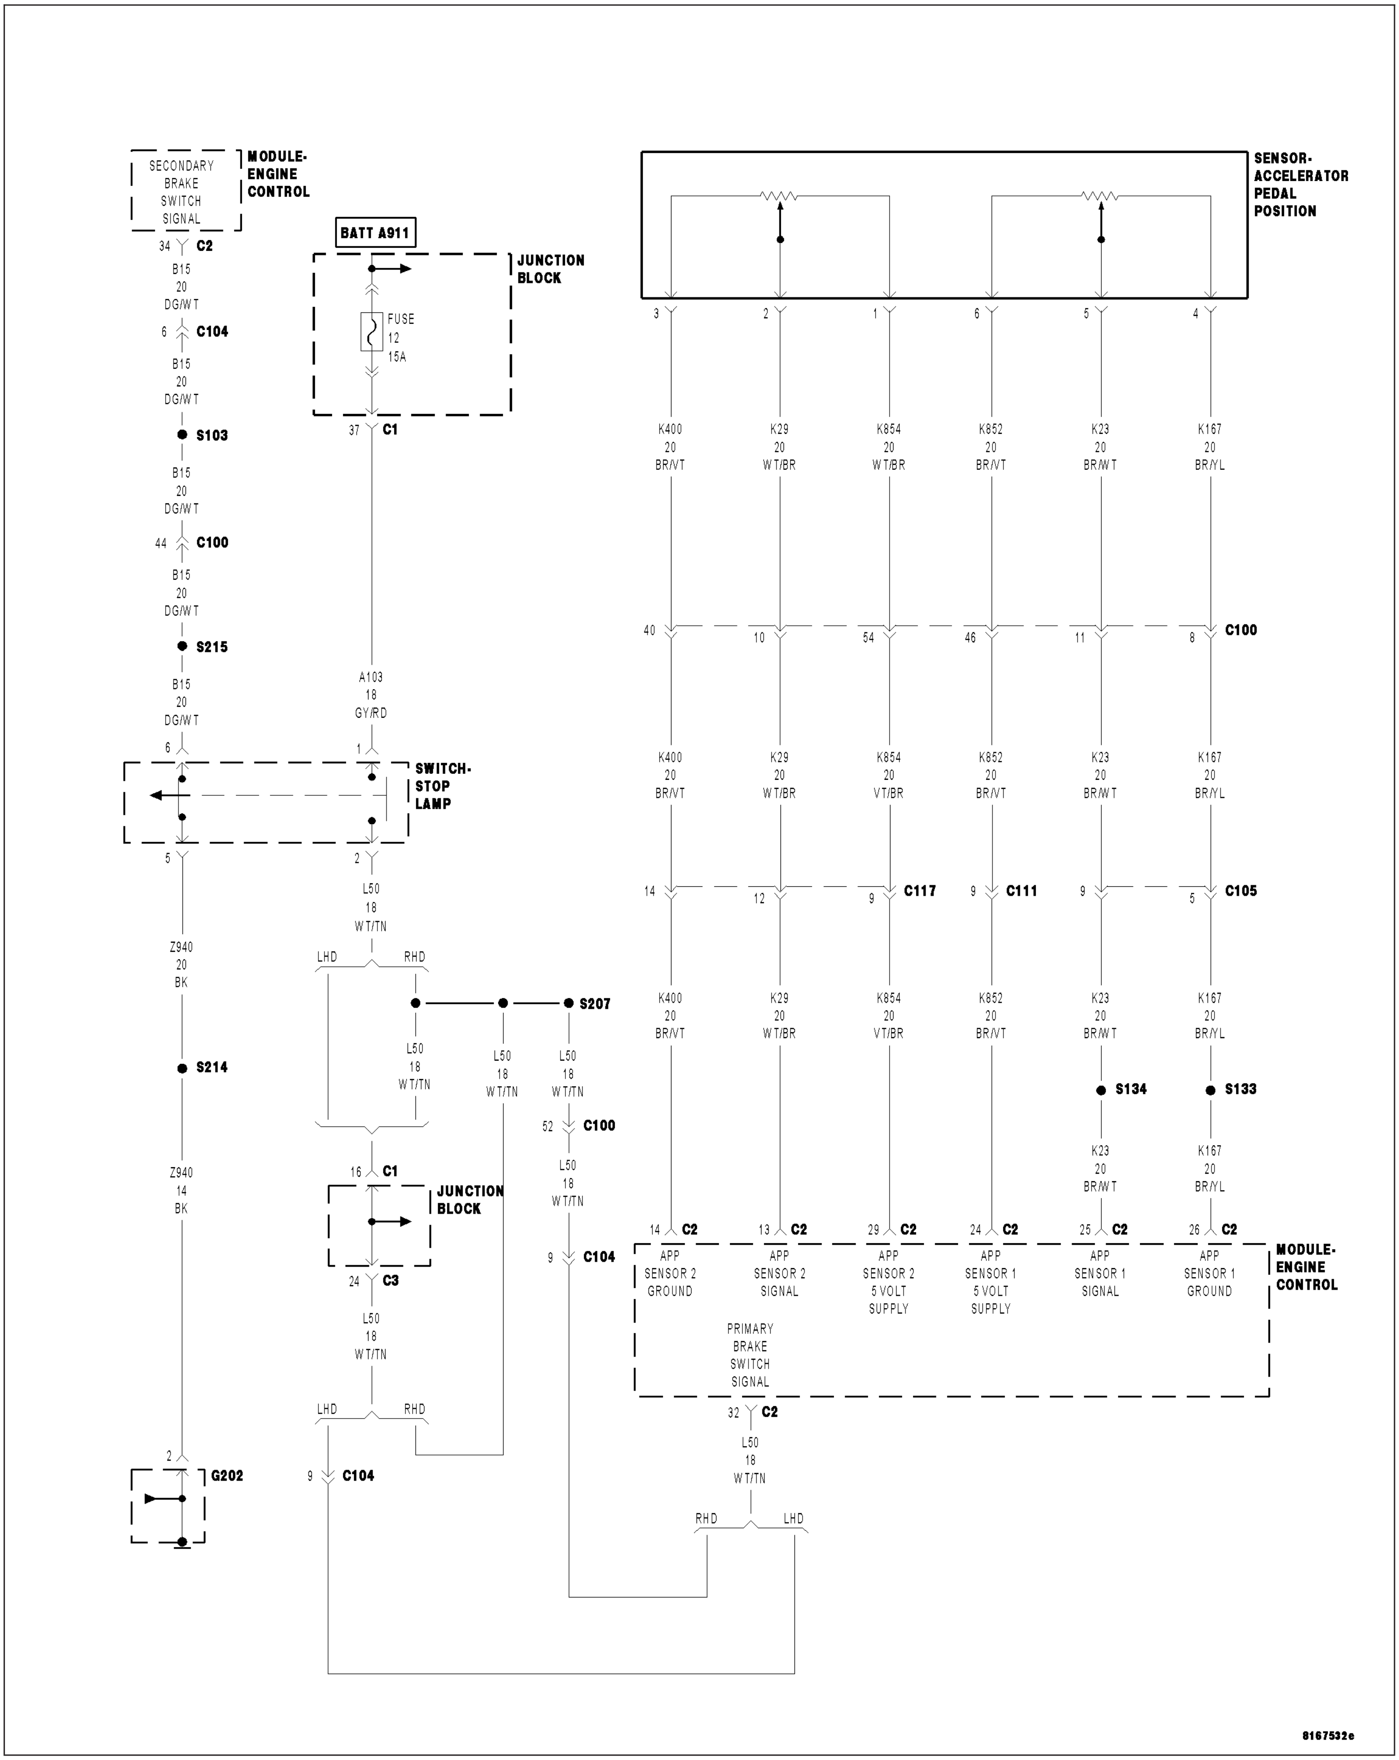
**Yes** >> Repair the Accelerator Pedal Position Sensor 5-Volt Supply circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P2120-ACC PEDAL POSITION SENSOR 1 CIRCUIT VOLTAGE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The APP Sensor #1 Signal circuit voltage is below 0.2 volt for 0.3 second.

| Possible Causes |
|---|
| ACCELERATOR PEDAL POSITION SENSOR |
| ECM - APP SENSOR 1 5-VOLT SUPPLY CIRCUIT |
| SENSOR GROUND OPEN (APP SENSOR) |
| INTERMITTENT CONDITION |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT OPEN |
| APP SENSOR SIGNAL CIRCUIT OPEN |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO SENSOR GROUND |
| APP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| VERIFY APP SENSOR OPERATION |
| APP SENSOR SIGNAL CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE |
| ECM - SENSOR GROUND OPEN |
| APP SENSOR CIRCUIT SHORTED TO VOLTAGE |
| APP SENSOR GROUND CIRCUIT SHORTED TO VOLTAGE |
| ECM - APP SENSOR SIGNAL CIRCUIT |

## Diagnostic Test

### 1. APP SENSOR IDLE VOLTAGE

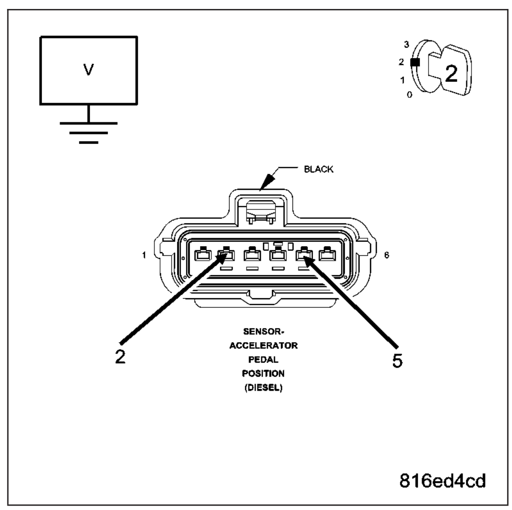
**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: The APP Sensor is a device that contains 2 separate potentiometer type sensors. Each sensor has its own 5-volt supply circuit, sensor ground circuit and signal circuit. The APP Sensor no longer incorporates a low-idle switch.**

**NOTE: The APP Sensor 2 signal should always be approximately 1/2 the voltage of the APP Sensor 1 signal.**



Inspect the APP Sensor for proper travel from the rest position to the fully depressed position.

Turn the ignition on.

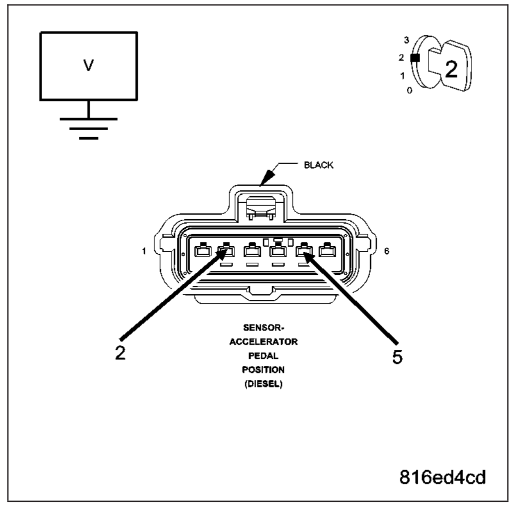
Using a voltmeter, backprobe the APP Sensor 1 and APP Sensor 2 Signal circuits at the APP Sensor harness connector with the accelerator pedal in the at rest position.

**Is the voltage between 0.42 and 0.51 volt for sensor 1 and 0.19 and 0.28 volt for sensor 2?**

**Yes** >> Go To 2

**No** >> Go To 4

## 2. APP SENSOR WIDE OPEN THROTTLE VOLTAGE



Turn the ignition on.

Fully depress the accelerator pedal.

Using a voltmeter backprobe the APP Sensor harness connector and read the voltage for APP Sensor 1 and APP Sensor 2 Signal circuits.

**Is the voltage between 4.45 and 4.75 volts for #1 and 2.15 and 2.45 volts for #2?**

**Yes** >> Go To 3

**No** >> Go To 4

## 3. VERIFY APP SENSOR OPERATION

Turn the ignition on.

With the scan tool, read the APP Sensor 1 and APP Sensor 2 percentages (%).

With the accelerator pedal in the idle position, slowly depress the accelerator pedal until the pedal is fully depressed.

**NOTE: The percentage readings for APP Sensors 1 and 2 should increase smoothly as the pedal is depressed.**

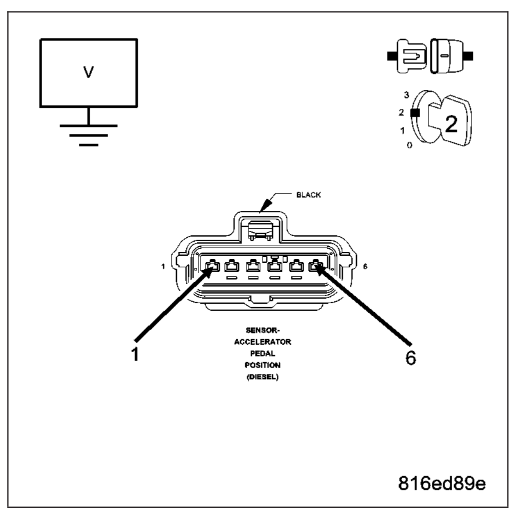
**NOTE: This test can also performed using a voltmeter by back probing each APP Sensor Signal circuit at the APP Sensor harness connector and observing the voltmeter for a smooth voltage change through the entire pedal travel.**

**Does the percentage (voltage) increase smoothly for both readings with the accelerator pedal travel?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Replace the Accelerator Pedal Position Sensor in accordance with the Service Information.
Perform ROAD TEST VERIFICATION - VER-2.

## 4. VERIFY 5-VOLT SUPPLY AND SENSOR REFERENCE VOLTAGE A CIRCUITS



**NOTE: Perform the rest of this diagnostic procedure on the individual APP Sensor Potentiometer (1 or 2) that did not display the correct voltages in the previous test.**

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Turn the ignition on.

Measure the voltage of the 5-Volt Supply circuit in the APP Sensor harness connector.

**Is the voltage between 4.7 and 5.3 volts?**

**Yes** >> Go To 5

**No** >> Go To 13

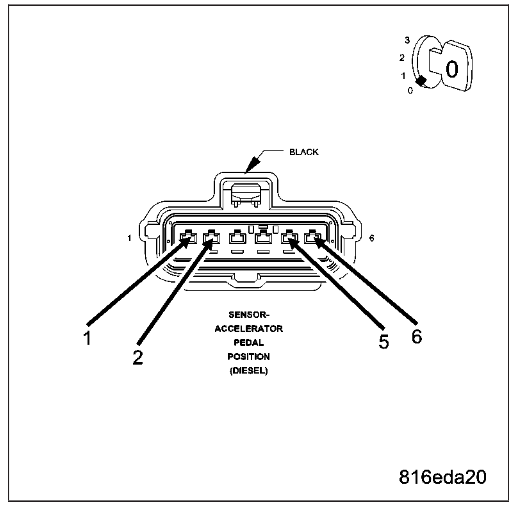
## 5. VERIFY APP SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Connect a jumper wire between APP Sensor Signal circuit and the 5-volt supply circuit at the APP Sensor harness connector.

With the scan tool, read the PEDAL OUTPUT VOLTS.



**Does the scan tool display between 4.0 and 5.5 volts?**

**Yes** >> Go To 6

**No** >> Go To 9

## 6. APP SENSOR GROUND CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the APP Sensor harness connector.

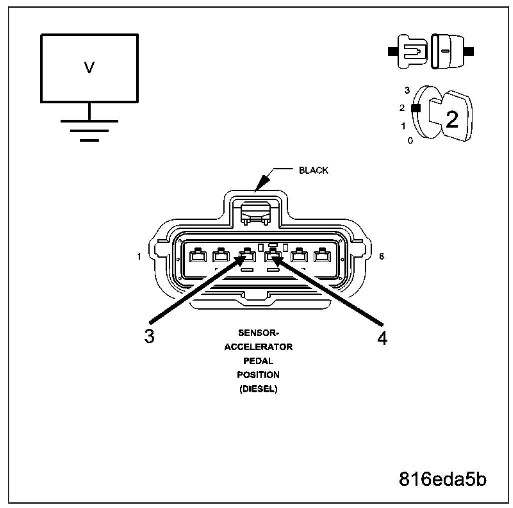
Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the APP Sensor Ground circuit.



**Is the voltage above 1.0 volt?**

**Yes** >> Repair the App Sensor Ground circuit for a short to voltage. Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Go To 7

## 7. SENSOR GROUND OPEN

Turn the ignition off.

Disconnect the APP Sensor harness connector.

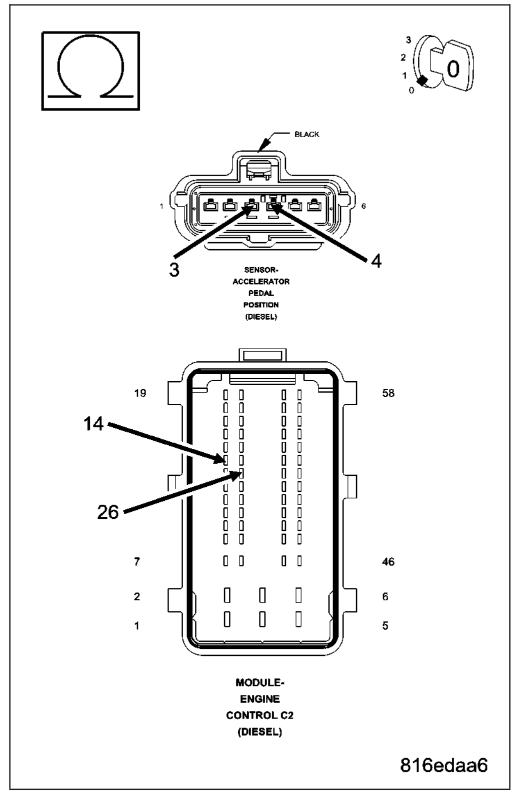
Disconnect the ECM harness connectors.

Measure the resistance of the Sensor Ground circuit between the APP Sensor and the ECM.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 8

**No** >> Repair the APP Sensor Ground circuit for an open.
Perform ROAD TEST VERIFICATION - VER-2.



## 8. ECM - SENSOR GROUND OPEN

Turn the ignition off.

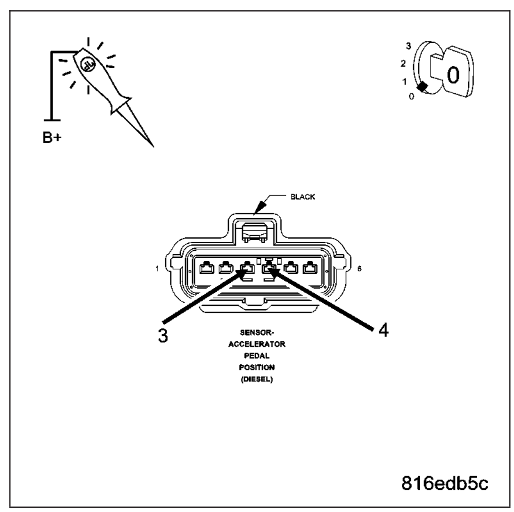
Disconnect the APP Sensor harness connector.

Using a 12-volt test light connected to 12-volts, check the Sensor Ground circuit of the appropriate potentiometer.

**Does the test light illuminate brightly?**

**Yes** >> Replace the Accelerator Pedal Position Sensor.
Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform ROAD TEST VERIFICATION - VER-2.



## 9. APP SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the APP Sensor harness connector.

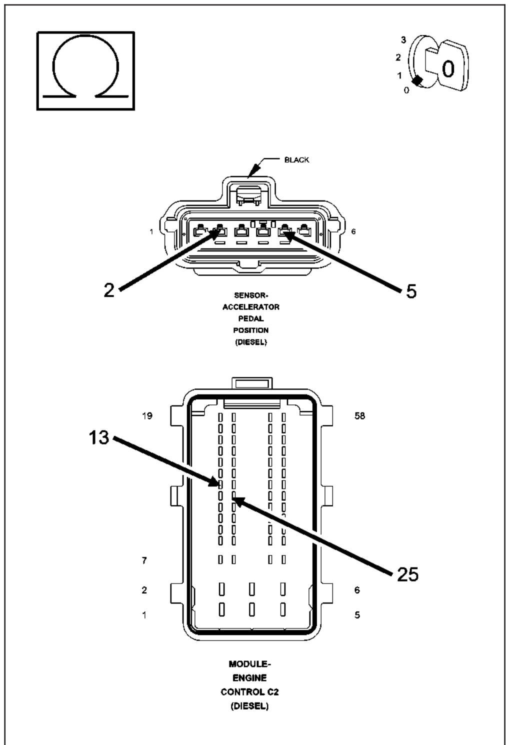
Disconnect the ECM harness connectors.

Measure the resistance of the APP Sensor Signal circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 10

**No** >> Repair the APP Sensor Signal circuit for an open
Perform ROAD TEST VERIFICATION - VER-2.



816edc65

## 10. APP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the APP Sensor harness connector.

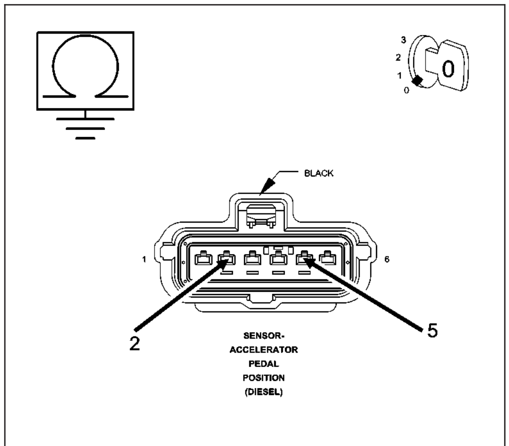
Disconnect the ECM harness connectors.

Measure the resistance between ground and the APP Sensor Signal circuit.

**Is the resistance below 1000 ohms?**

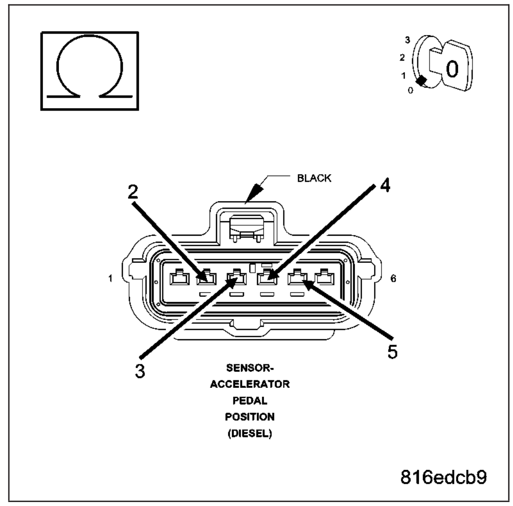
**Yes** >> Repair the APP Sensor Signal circuit for a short to ground.
Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Go To 11



816edc78

## 11. APP SENSOR SIGNAL CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT



Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

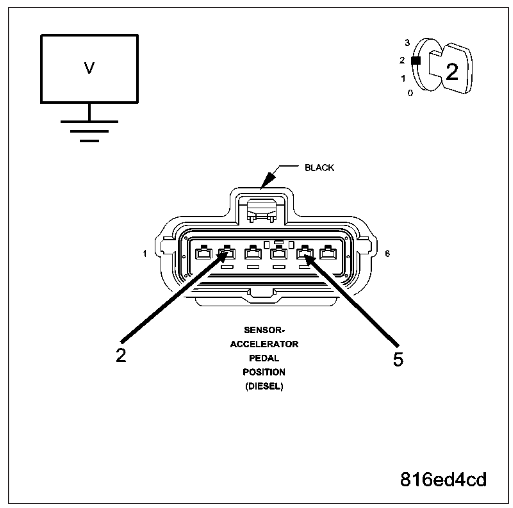
Measure the resistance between the APP Sensor Signal circuit and the Sensor Ground circuit at the APP Sensor harness connector.

**Is the resistance below 1000 ohms?**

**Yes** >> Repair the APP Sensor Signal and Sensor Ground circuits for a short together.
Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Go To 12

## 12. APP SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the APP Sensor Signal circuit.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the APP Sensor Signal circuit for a short to voltage.
Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform ROAD TEST VERIFICATION - VER-2.

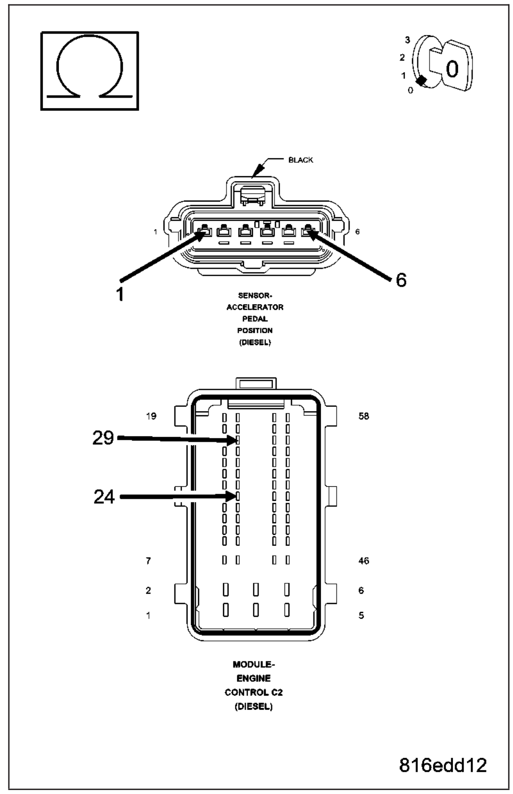
## 13. APP SENSOR 5-VOLT SUPPLY CIRCUITS OPEN

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Accelerator Pedal Position Sensor 5-volt Supply circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 14

**No** >> Repair the Accelerator Pedal Position Sensor 5-Volt Supply circuit for an open.

Perform ROAD TEST VERIFICATION - VER-2.

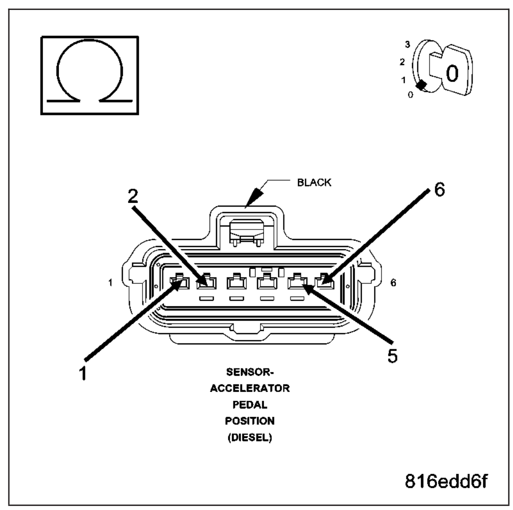
## 14. APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO SENSOR GROUND

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between the Accelerator Pedal Position Sensor 5-Volt Supply circuit and both Sensor Ground circuits in the APP Sensor harness connector.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 15

**No** >> Repair the 5-Volt Supply circuit for a short to the Sensor Ground circuit.

Perform ROAD TEST VERIFICATION - VER-2.

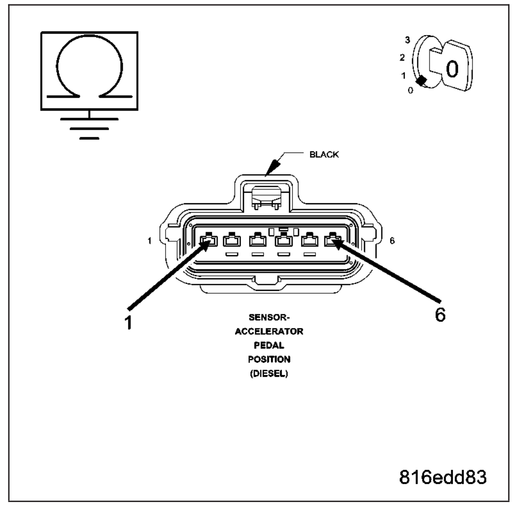
## 15. APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Accelerator Pedal Position Sensor 5-volt Supply circuit.



**Is the resistance below 1000 ohms?**

**Yes** >> Repair the Accelerator Pedal Position Sensor 5-Volt Supply circuit for a short to ground.
Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Go To 16

## 16. APP SENSOR 5-VOLT SUPPLY SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the APP Sensor harness connector.

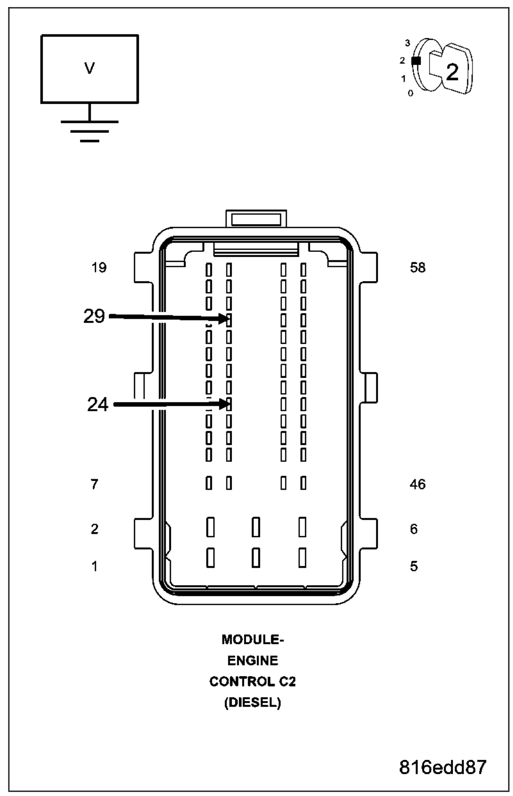
Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the Accelerator Pedal Position Sensor 5-Volt Supply circuit in the ECM harness connector.

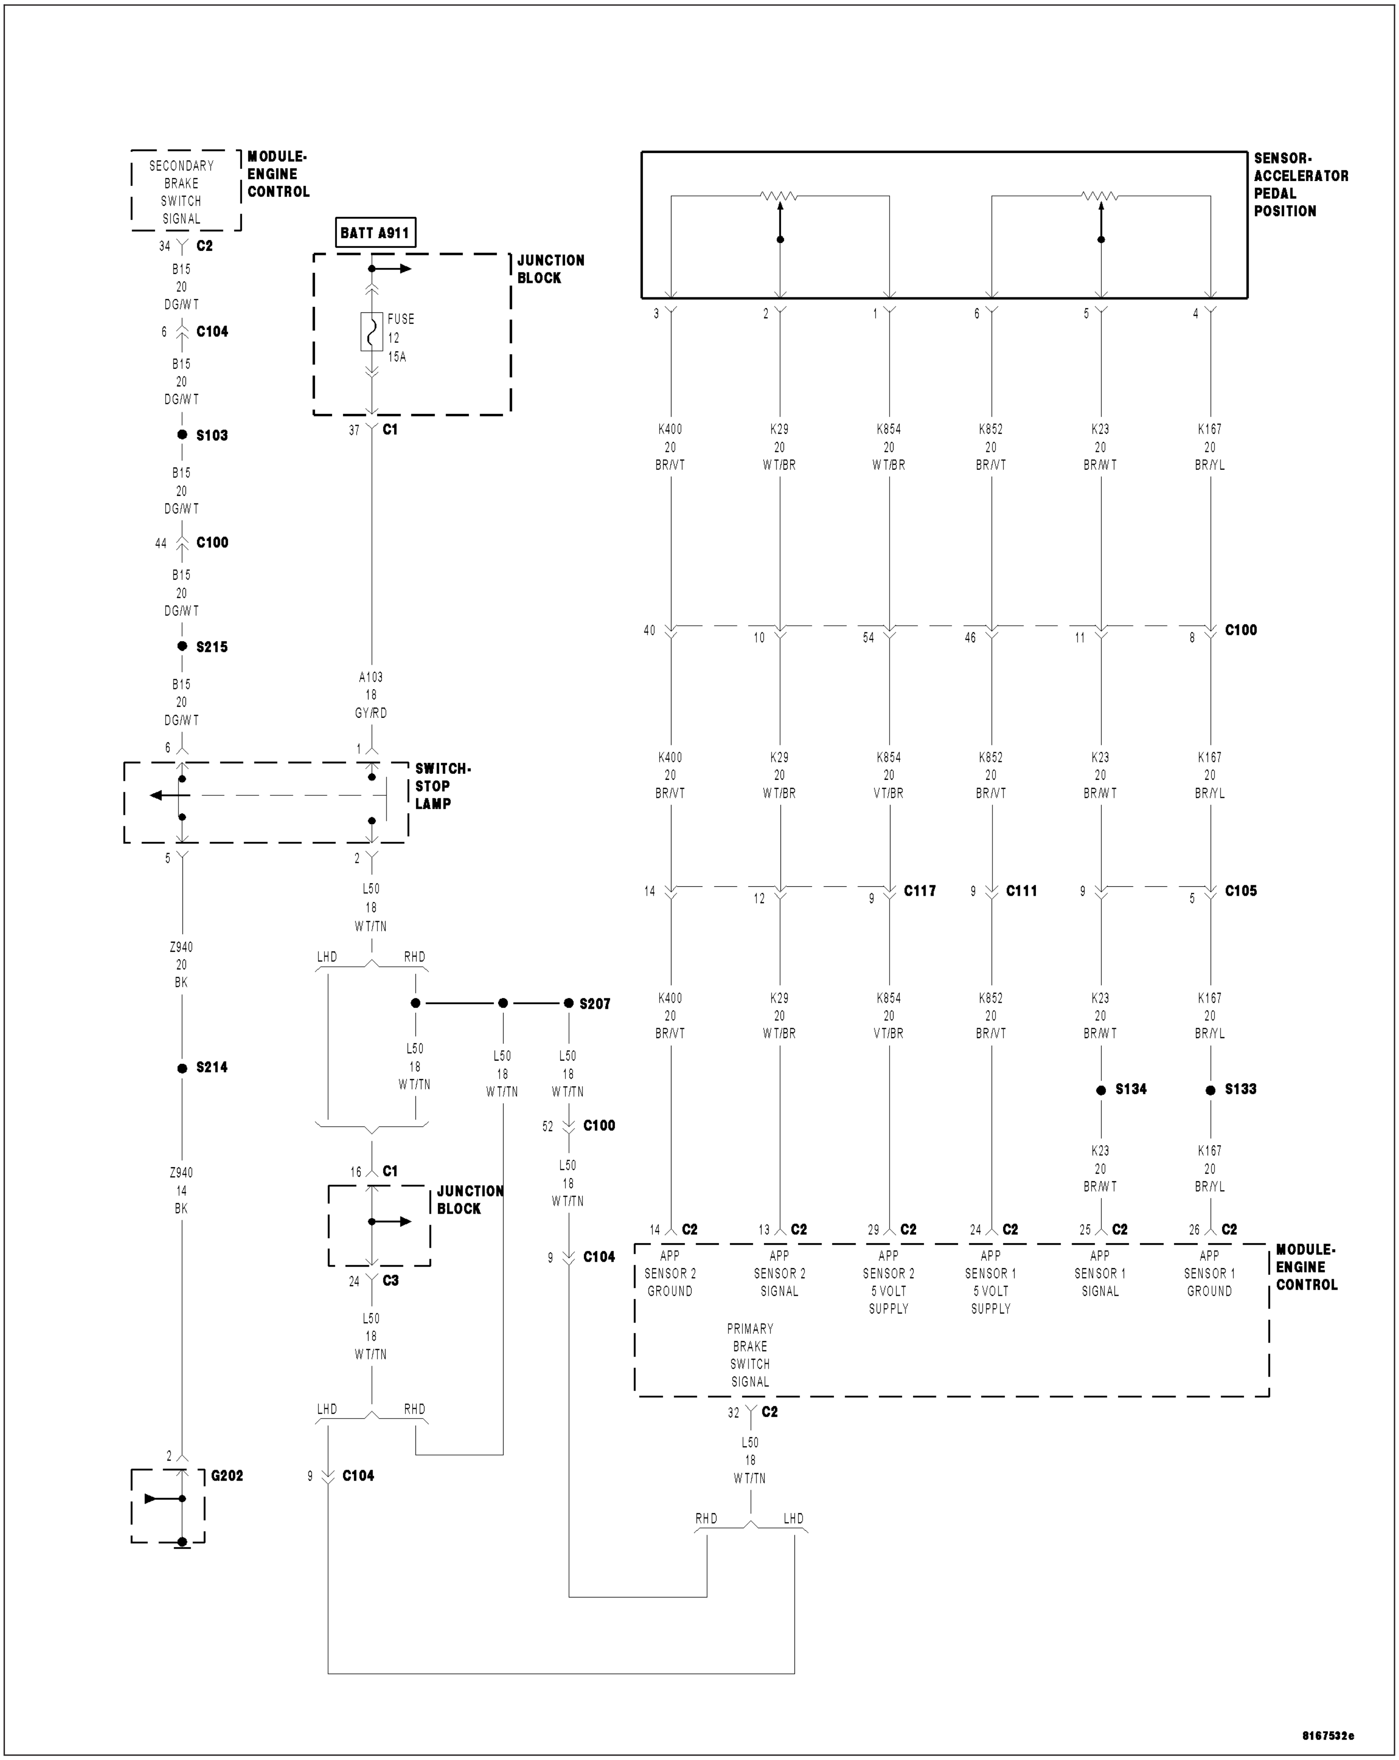


**Is the voltage above 1.0 volt?**

**Yes** >> Repair the Accelerator Pedal Position Sensor 5-Volt Supply circuit for a short to voltage.
Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P2125-ACC PEDAL POSITION SENSOR 2 CKT PLAUSIBILITY



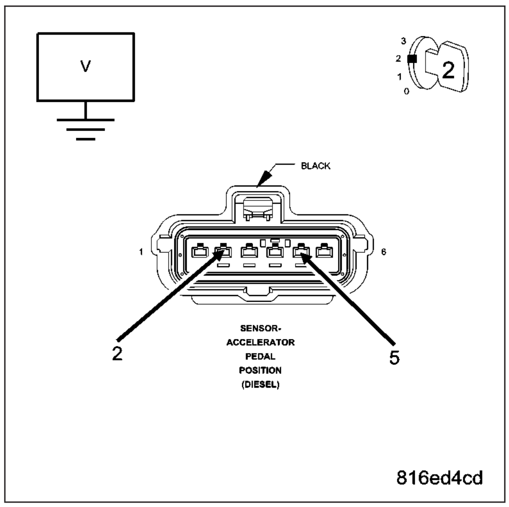
For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  APP Sensor #1 and APP Sensor #2 signals do not agree.

| Possible Causes |
|---|
| ACCELERATOR PEDAL POSITION SENSOR |
| ECM - APP SENSOR 1 5-VOLT SUPPLY CIRCUIT |
| SENSOR GROUND OPEN (APP SENSOR) |
| INTERMITTENT CONDITION |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT OPEN |
| APP SENSOR SIGNAL CIRCUIT OPEN |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO SENSOR GROUND |
| APP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| VERIFY APP SENSOR OPERATION |
| APP SENSOR SIGNAL CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE |
| ECM - SENSOR GROUND OPEN |
| APP SENSOR CIRCUIT SHORTED TO VOLTAGE |
| APP SENSOR GROUND CIRCUIT SHORTED TO VOLTAGE |
| ECM - APP SENSOR SIGNAL CIRCUIT |

## Diagnostic Test

### 1. APP SENSOR IDLE VOLTAGE



**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: The APP Sensor is a device that contains 2 separate potentiometer type sensors. Each sensor has its own 5-volt supply circuit, sensor ground circuit and signal circuit. The APP Sensor no longer incorporates a low-idle switch.**

**NOTE: The APP Sensor 2 signal should always be approximately 1/2 the voltage of the APP Sensor 1 signal.**

Inspect the APP Sensor for proper travel from the rest position to the fully depressed position.

Turn the ignition on.

Using a voltmeter, backprobe the APP Sensor 1 and APP Sensor 2 Signal circuits at the APP Sensor harness connector with the accelerator pedal in the at rest position.

**Is the voltage between 0.42 and 0.51 volt for sensor 1 and 0.19 and 0.28 volt for sensor 2?**

**Yes** >> Go To 2

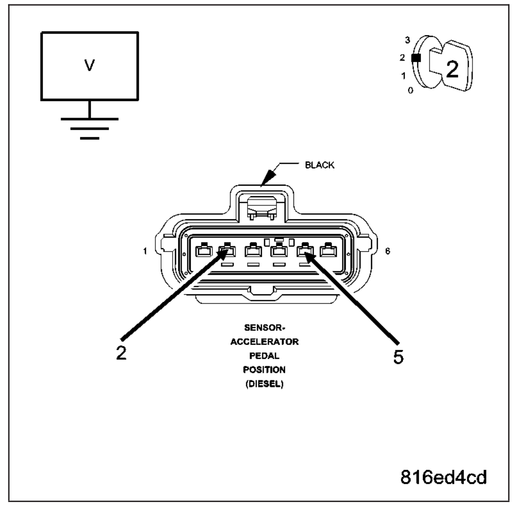
**No** >> Go To 4

## 2. APP SENSOR WIDE OPEN THROTTLE VOLTAGE

Turn the ignition on.

Fully depress the accelerator pedal.

Using a voltmeter backprobe the APP Sensor harness connector and read the voltage for APP Sensor 1 and APP Sensor 2 Signal circuits.



**Is the voltage between 4.45 and 4.75 volts for #1 and 2.15 and 2.45 volts for #2?**

**Yes** >> Go To 3

**No** >> Go To 4

## 3. VERIFY APP SENSOR OPERATION

Turn the ignition on.

With the scan tool, read the APP Sensor 1 and APP Sensor 2 percentages (%).

With the accelerator pedal in the idle position, slowly depress the accelerator pedal until the pedal is fully depressed.

**NOTE: The percentage readings for APP Sensors 1 and 2 should increase smoothly as the pedal is depressed.**

**NOTE: This test can also performed using a voltmeter by back probing each APP Sensor Signal circuit at the APP Sensor harness connector and observing the voltmeter for a smooth voltage change through the entire pedal travel.**

**Does the percentage (voltage) increase smoothly for both readings with the accelerator pedal travel?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Replace the Accelerator Pedal Position Sensor in accordance with the Service Information.

Perform ROAD TEST VERIFICATION - VER-2.

## 4. VERIFY 5-VOLT SUPPLY AND SENSOR REFERENCE VOLTAGE A CIRCUITS

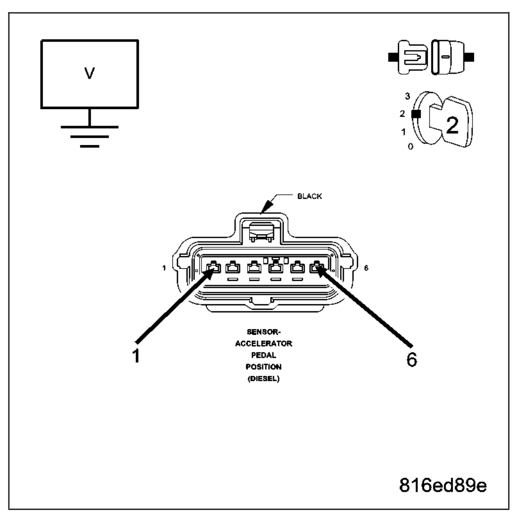
**NOTE: Perform the rest of this diagnostic procedure on the individual APP Sensor Potentiometer (1 or 2) that did not display the correct voltages in the previous test.**

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Turn the ignition on.

Measure the voltage of the 5-Volt Supply circuit in the APP Sensor harness connector.



**Is the voltage between 4.7 and 5.3 volts?**

**Yes** >> Go To 5

**No** >> Go To 13

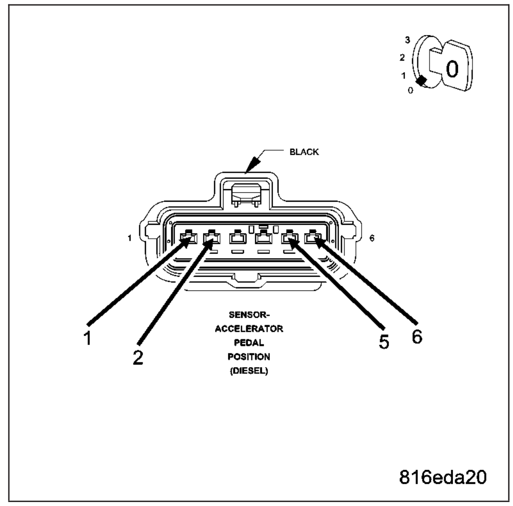
## 5. VERIFY APP SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Connect a jumper wire between APP Sensor Signal circuit and the 5-volt supply circuit at the APP Sensor harness connector.

With the scan tool, read the PEDAL OUTPUT VOLTS.



**Does the scan tool display between 4.0 and 5.5 volts?**

**Yes** >> Go To 6

**No** >> Go To 9

## 6. APP SENSOR GROUND CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the APP Sensor harness connector.

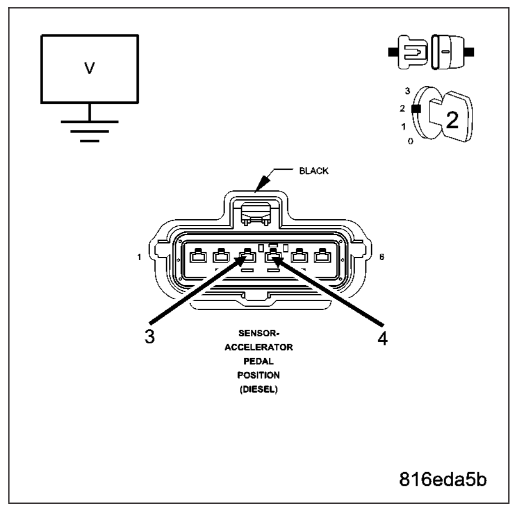
Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the APP Sensor Ground circuit.



**Is the voltage above 1.0 volt?**

**Yes** >> Repair the App Sensor Ground circuit for a short to voltage. Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Go To 7

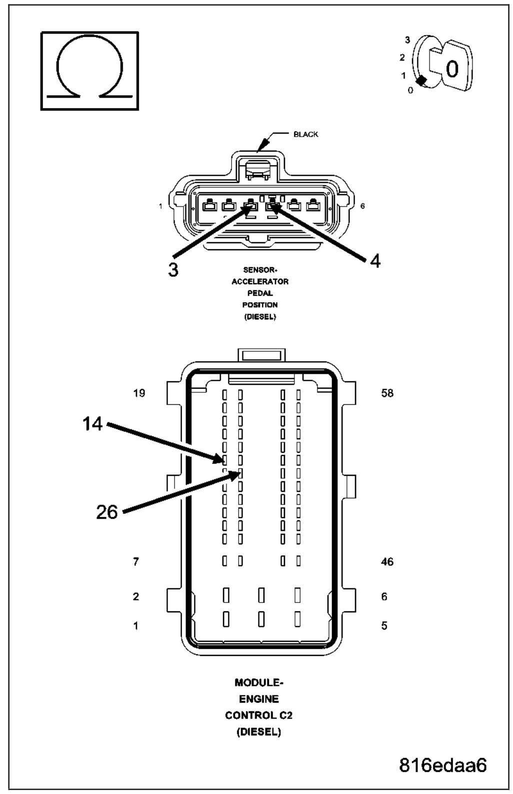
## 7. SENSOR GROUND OPEN

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Sensor Ground circuit between the APP Sensor and the ECM.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 8

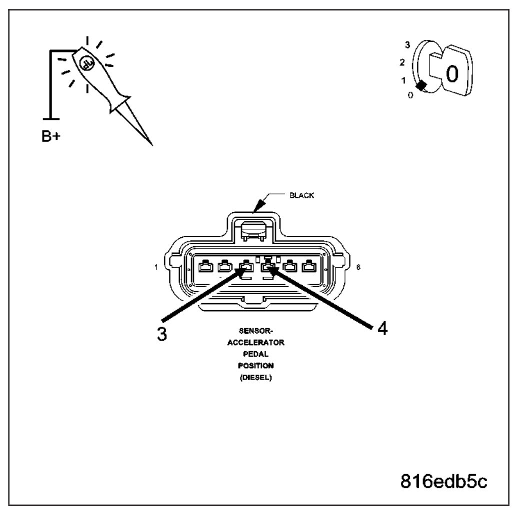
**No** >> Repair the APP Sensor Ground circuit for an open.
Perform ROAD TEST VERIFICATION - VER-2.

## 8. ECM - SENSOR GROUND OPEN

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Using a 12-volt test light connected to 12-volts, check the Sensor Ground circuit of the appropriate potentiometer.



**Does the test light illuminate brightly?**

**Yes** >> Replace the Accelerator Pedal Position Sensor.
Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform ROAD TEST VERIFICATION - VER-2.

## 9. APP SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the APP Sensor harness connector.

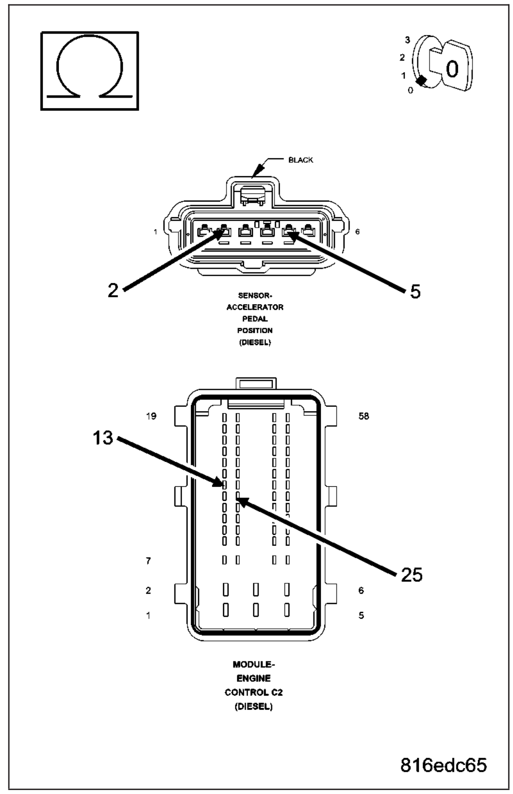
Disconnect the ECM harness connectors.

Measure the resistance of the APP Sensor Signal circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 10

**No** >> Repair the APP Sensor Signal circuit for an open Perform ROAD TEST VERIFICATION - VER-2.



## 10. APP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the APP Sensor harness connector.

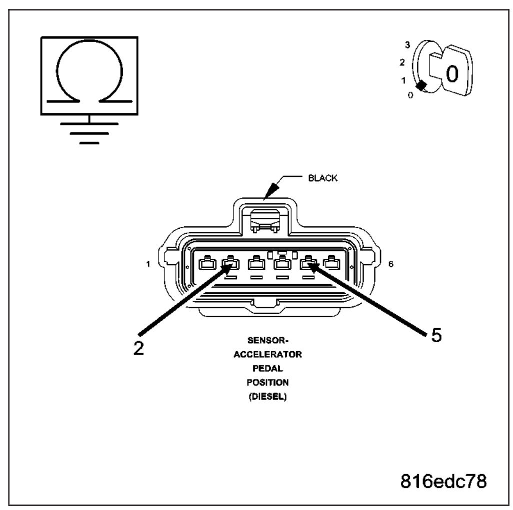
Disconnect the ECM harness connectors.

Measure the resistance between ground and the APP Sensor Signal circuit.

**Is the resistance below 1000 ohms?**

**Yes** >> Repair the APP Sensor Signal circuit for a short to ground. Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Go To 11



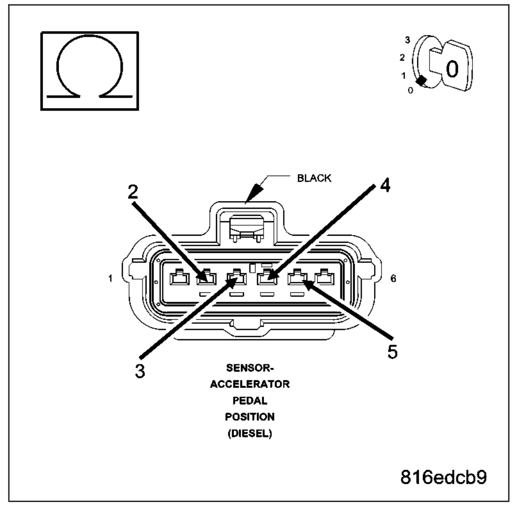
## 11. APP SENSOR SIGNAL CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between the APP Sensor Signal circuit and the Sensor Ground circuit at the APP Sensor harness connector.



**Is the resistance below 1000 ohms?**

**Yes** >> Repair the APP Sensor Signal and Sensor Ground circuits for a short together.
Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Go To 12

## 12. APP SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the APP Sensor harness connector.

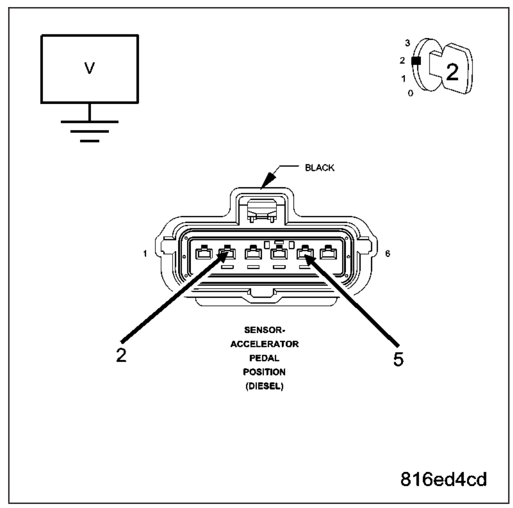
Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the APP Sensor Signal circuit.



**Is the voltage above 1.0 volt?**

**Yes** >> Repair the APP Sensor Signal circuit for a short to voltage.
Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform ROAD TEST VERIFICATION - VER-2.

## 13. APP SENSOR 5-VOLT SUPPLY CIRCUITS OPEN

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

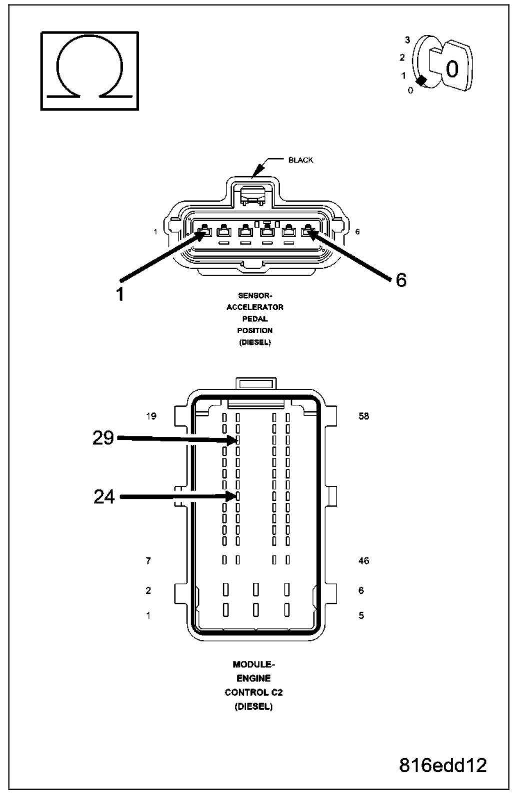
Measure the resistance of the Accelerator Pedal Position Sensor 5-volt Supply circuit.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 14

**No** >> Repair the Accelerator Pedal Position Sensor 5-Volt Supply circuit for an open.

Perform ROAD TEST VERIFICATION - VER-2.



## 14. APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO SENSOR GROUND

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

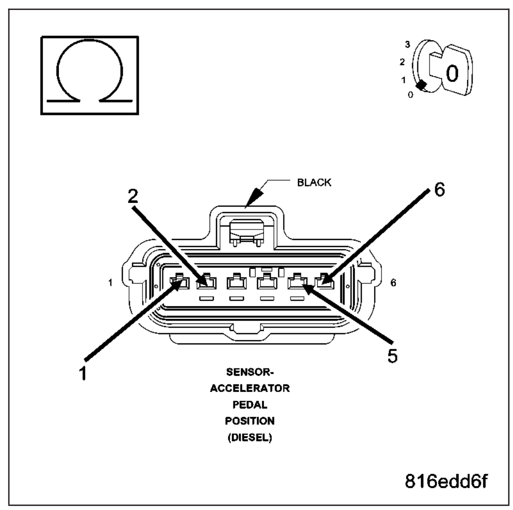
Measure the resistance between the Accelerator Pedal Position Sensor 5-Volt Supply circuit and both Sensor Ground circuits in the APP Sensor harness connector.

**Is the resistance above 1000 ohms?**

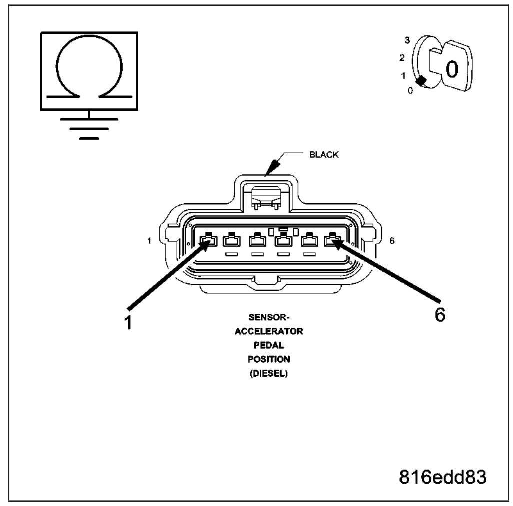
**Yes** >> Go To 15

**No** >> Repair the 5-Volt Supply circuit for a short to the Sensor Ground circuit.

Perform ROAD TEST VERIFICATION - VER-2.



## 15. APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND



Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Accelerator Pedal Position Sensor 5-volt Supply circuit.

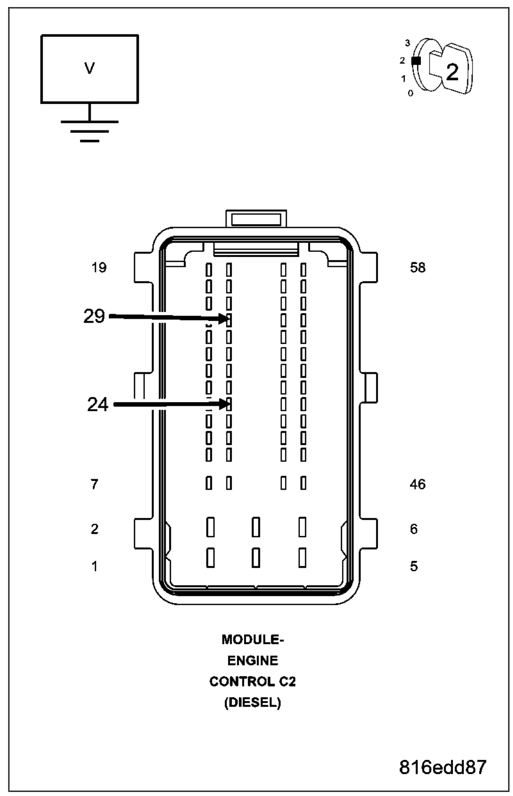
**Is the resistance below 1000 ohms?**

**Yes** >> Repair the Accelerator Pedal Position Sensor 5-Volt Supply circuit for a short to ground.

Perform ROAD TEST VERIFICATION - VER-2.

**No** >> Go To 16

## 16. APP SENSOR 5-VOLT SUPPLY SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the Accelerator Pedal Position Sensor 5-Volt Supply circuit in the ECM harness connector.

**Is the voltage above 1.0 volt?**

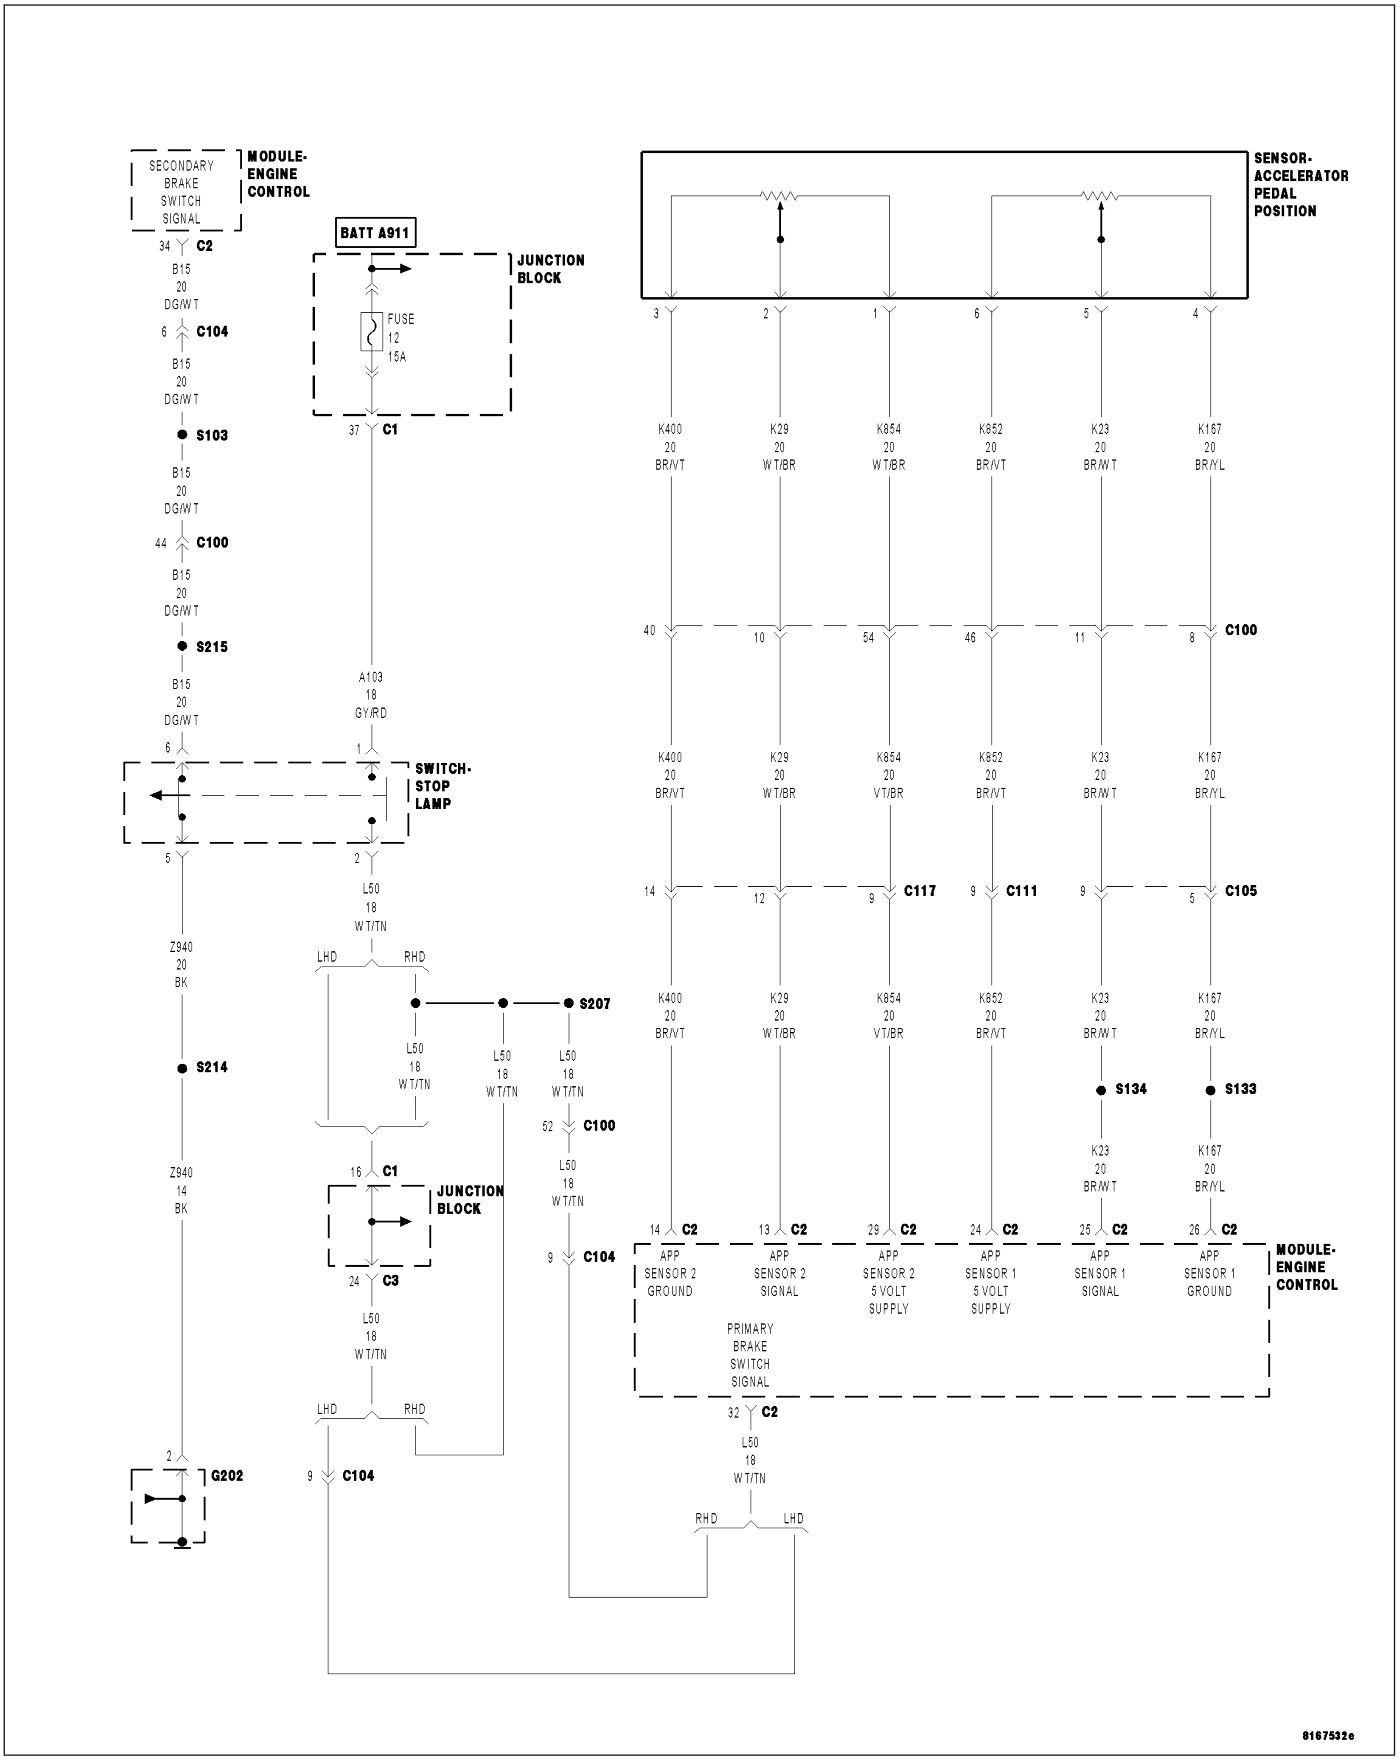
**Yes** >> Repair the Accelerator Pedal Position Sensor 5-Volt Supply circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P2125-ACC PEDAL POSITION SENSOR 2 SIGNAL VOLTAGE TOO HIGH



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The APP Sensor #2 Signal circuit voltage is above 2.5 volts for 0.3 second.

| Possible Causes |
|---|
| ACCELERATOR PEDAL POSITION SENSOR |
| ECM - APP SENSOR 1 5-VOLT SUPPLY CIRCUIT |
| SENSOR GROUND OPEN (APP SENSOR) |
| INTERMITTENT CONDITION |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT OPEN |
| APP SENSOR SIGNAL CIRCUIT OPEN |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO SENSOR GROUND |
| APP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| VERIFY APP SENSOR OPERATION |
| APP SENSOR SIGNAL CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE |
| ECM - SENSOR GROUND OPEN |
| APP SENSOR CIRCUIT SHORTED TO VOLTAGE |
| APP SENSOR GROUND CIRCUIT SHORTED TO VOLTAGE |
| ECM - APP SENSOR SIGNAL CIRCUIT |

## Diagnostic Test

### 1. APP SENSOR IDLE VOLTAGE

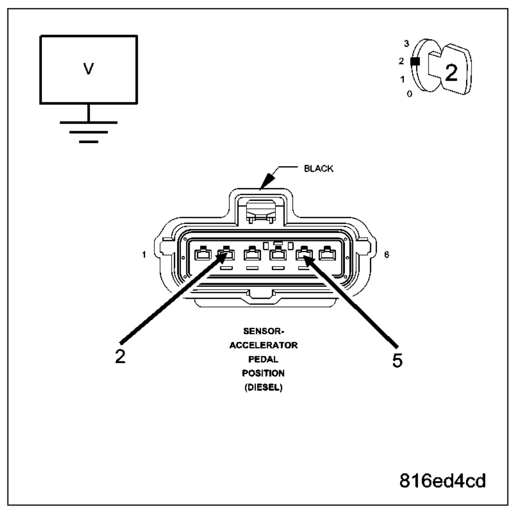
**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: The APP Sensor is a device that contains 2 separate potentiometer type sensors. Each sensor has its own 5-volt supply circuit, sensor ground circuit and signal circuit. The APP Sensor no longer incorporates a low-idle switch.**

**NOTE: The APP Sensor 2 signal should always be approximately 1/2 the voltage of the APP Sensor 1 signal.**



Inspect the APP Sensor for proper travel from the rest position to the fully depressed position.

Turn the ignition on.

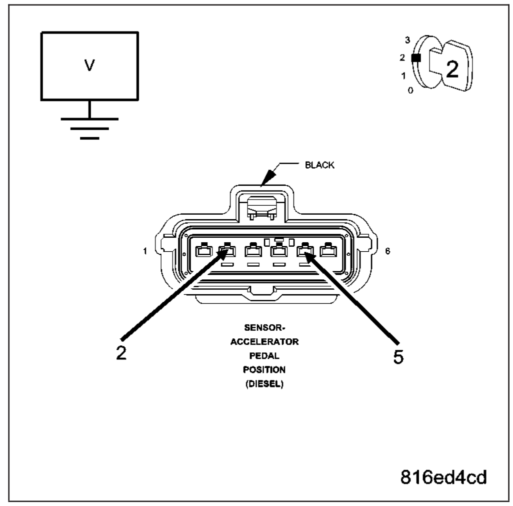
Using a voltmeter, backprobe the APP Sensor 1 and APP Sensor 2 Signal circuits at the APP Sensor harness connector with the accelerator pedal in the at rest position.

**Is the voltage between 0.42 and 0.51 volt for sensor 1 and 0.19 and 0.28 volt for sensor 2?**

**Yes** >> Go To 2

**No** >> Go To 4

## 2. APP SENSOR WIDE OPEN THROTTLE VOLTAGE



Turn the ignition on.

Fully depress the accelerator pedal.

Using a voltmeter backprobe the APP Sensor harness connector and read the voltage for APP Sensor 1 and APP Sensor 2 Signal circuits.

**Is the voltage between 4.45 and 4.75 volts for #1 and 2.15 and 2.45 volts for #2?**

**Yes** >> Go To 3

**No** >> Go To 4

## 3. VERIFY APP SENSOR OPERATION

Turn the ignition on.

With the scan tool, read the APP Sensor 1 and APP Sensor 2 percentages (%).

With the accelerator pedal in the idle position, slowly depress the accelerator pedal until the pedal is fully depressed.

**NOTE: The percentage readings for APP Sensors 1 and 2 should increase smoothly as the pedal is depressed.**

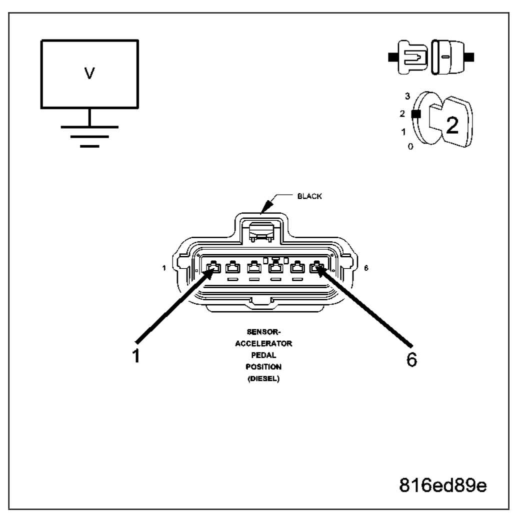
**NOTE: This test can also performed using a voltmeter by back probing each APP Sensor Signal circuit at the APP Sensor harness connector and observing the voltmeter for a smooth voltage change through the entire pedal travel.**

**Does the percentage (voltage) increase smoothly for both readings with the accelerator pedal travel?**

**Yes** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Replace the Accelerator Pedal Position Sensor in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. VERIFY 5-VOLT SUPPLY AND SENSOR REFERENCE VOLTAGE A CIRCUITS



**NOTE: Perform the rest of this diagnostic procedure on the individual APP Sensor Potentiometer (1 or 2) that did not display the correct voltages in the previous test.**

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Turn the ignition on.

Measure the voltage of the 5-Volt Supply circuit in the APP Sensor harness connector.

**Is the voltage between 4.7 and 5.3 volts?**

**Yes** >> Go To 5

**No** >> Go To 13

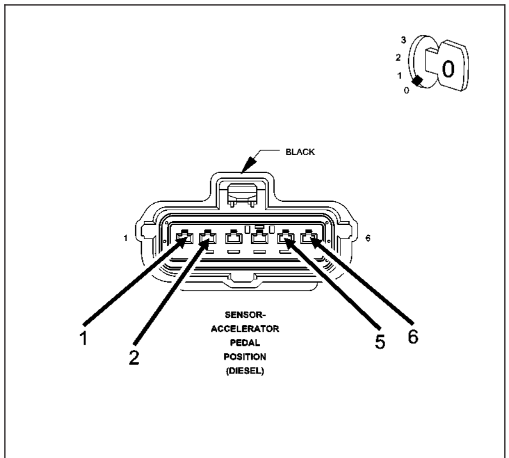
## 5. VERIFY APP SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Connect a jumper wire between APP Sensor Signal circuit and the 5-volt supply circuit at the APP Sensor harness connector.

With the scan tool, read the PEDAL OUTPUT VOLTS.



816eda20

**Does the scan tool display between 4.0 and 5.5 volts?**

**Yes** >> Go To 6

**No** >> Go To 9

## 6. APP SENSOR GROUND CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the APP Sensor harness connector.

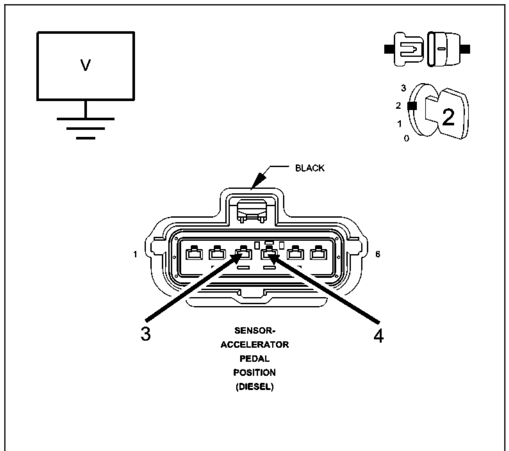
Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the APP Sensor Ground circuit.



816eda5b

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the App Sensor Ground circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 7

## 7. SENSOR GROUND OPEN

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

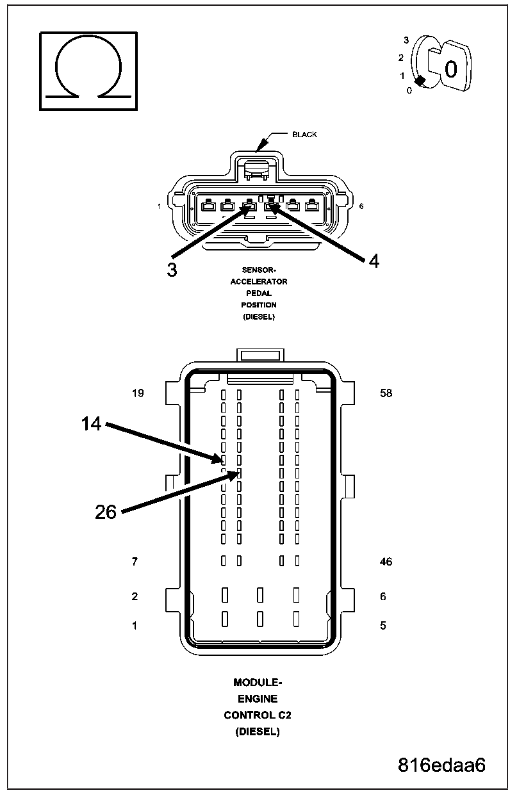
Measure the resistance of the Sensor Ground circuit between the APP Sensor and the ECM.

**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 8

**No** >> Repair the APP Sensor Ground circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 8. ECM - SENSOR GROUND OPEN

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Using a 12-volt test light connected to 12-volts, check the Sensor Ground circuit of the appropriate potentiometer.

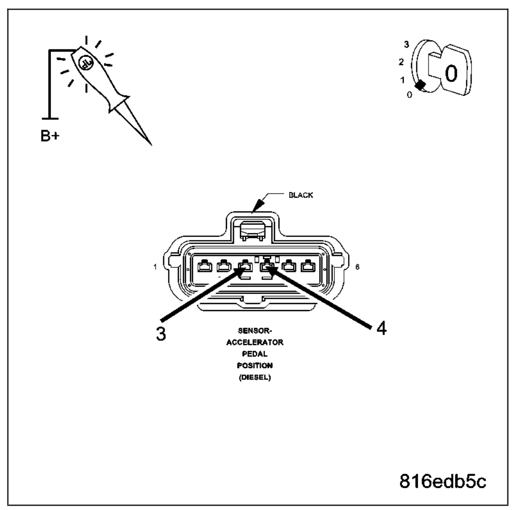
**Does the test light illuminate brightly?**

**Yes** >> Replace the Accelerator Pedal Position Sensor.

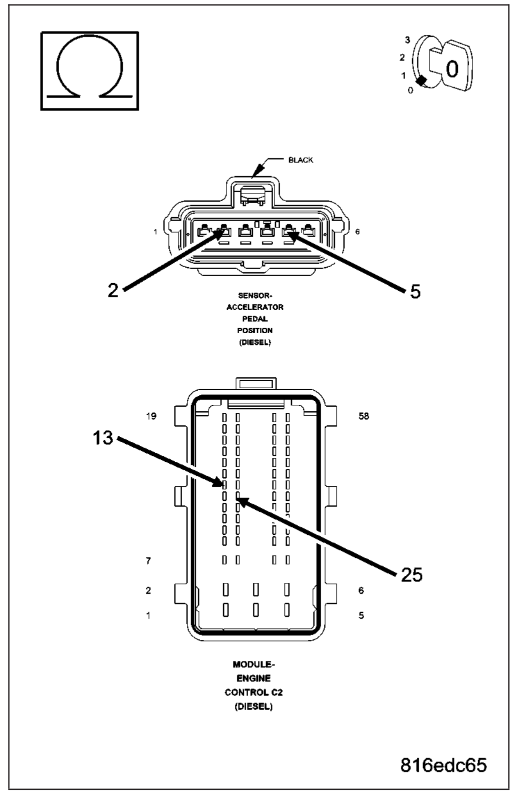
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 9. APP SENSOR SIGNAL CIRCUIT OPEN



Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the APP Sensor Signal circuit.

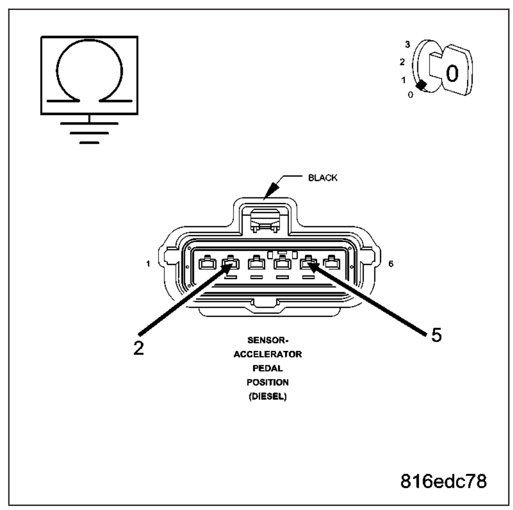
**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 10

**No** >> Repair the APP Sensor Signal circuit for an open

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 10. APP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND



Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the APP Sensor Signal circuit.

**Is the resistance below 1000 ohms?**

**Yes** >> Repair the APP Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 11

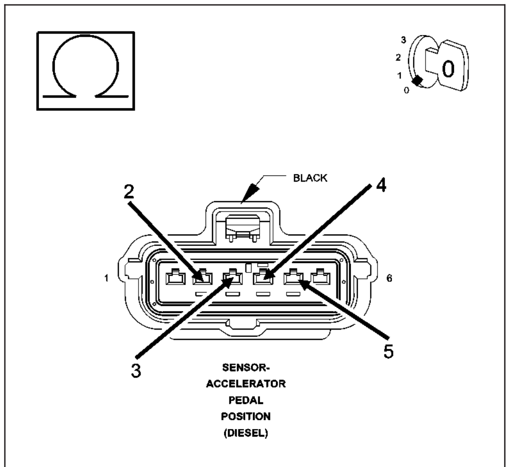
## 11. APP SENSOR SIGNAL CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between the APP Sensor Signal circuit and the Sensor Ground circuit at the APP Sensor harness connector.



816edcb9

**Is the resistance below 1000 ohms?**

**Yes** >> Repair the APP Sensor Signal and Sensor Ground circuits for a short together.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 12

## 12. APP SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the APP Sensor harness connector.

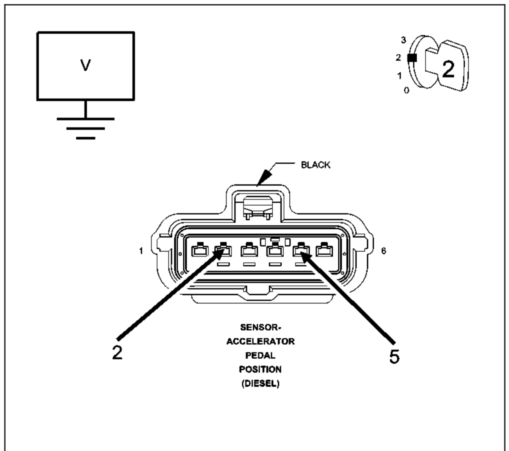
Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the APP Sensor Signal circuit.



816ed4cd

**Is the voltage above 1.0 volt?**

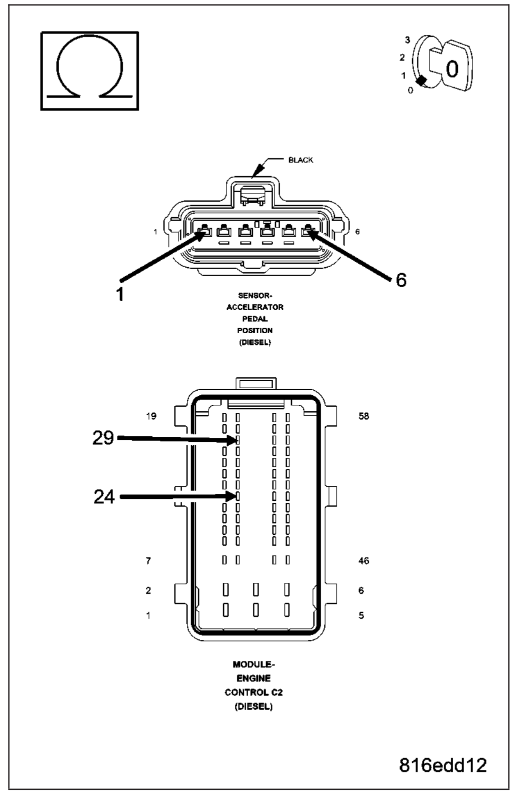
**Yes** >> Repair the APP Sensor Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 13. APP SENSOR 5-VOLT SUPPLY CIRCUITS OPEN



Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Accelerator Pedal Position Sensor 5-volt Supply circuit.

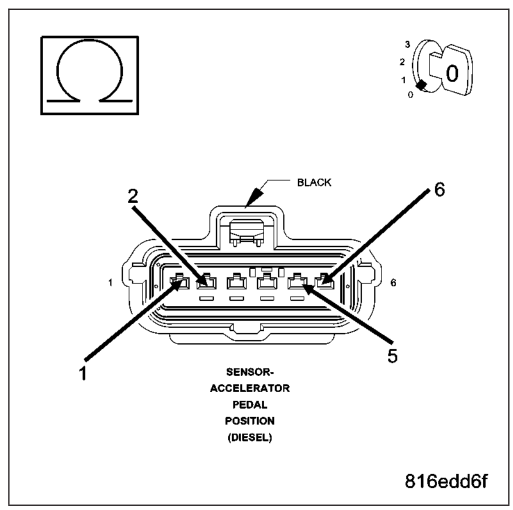
**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 14

**No** >> Repair the Accelerator Pedal Position Sensor 5-Volt Supply circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 14. APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO SENSOR GROUND



Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between the Accelerator Pedal Position Sensor 5-Volt Supply circuit and both Sensor Ground circuits in the APP Sensor harness connector.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 15

**No** >> Repair the 5-Volt Supply circuit for a short to the Sensor Ground circuit.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 15. APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

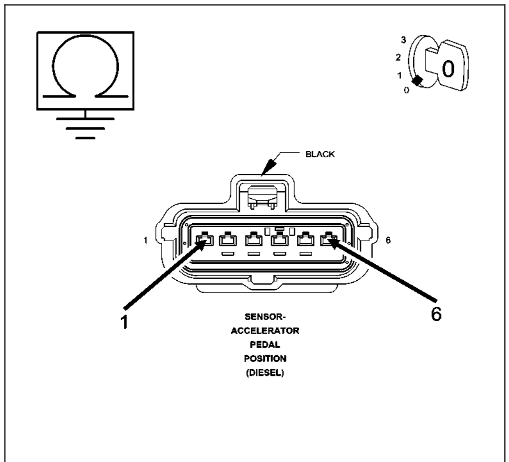
Measure the resistance between ground and the Accelerator Pedal Position Sensor 5-volt Supply circuit.

**Is the resistance below 1000 ohms?**

**Yes** >> Repair the Accelerator Pedal Position Sensor 5-Volt Supply circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 16



816edd83

## 16. APP SENSOR 5-VOLT SUPPLY SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the Accelerator Pedal Position Sensor 5-Volt Supply circuit in the ECM harness connector.

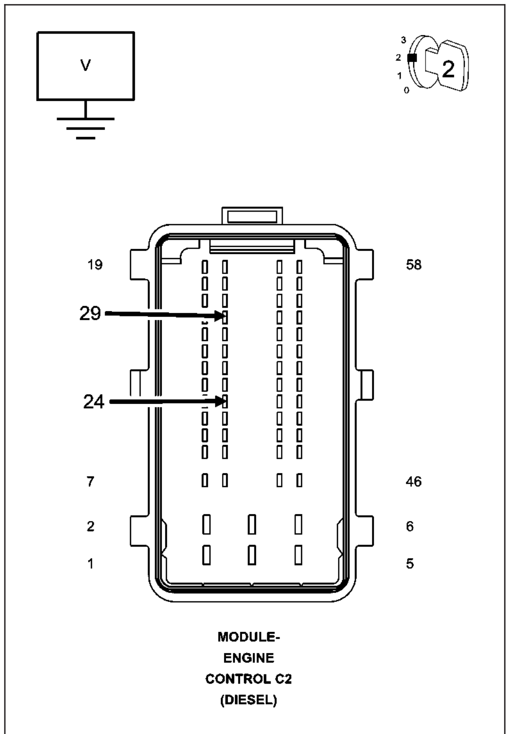
**Is the voltage above 1.0 volt?**

**Yes** >> Repair the Accelerator Pedal Position Sensor 5-Volt Supply circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

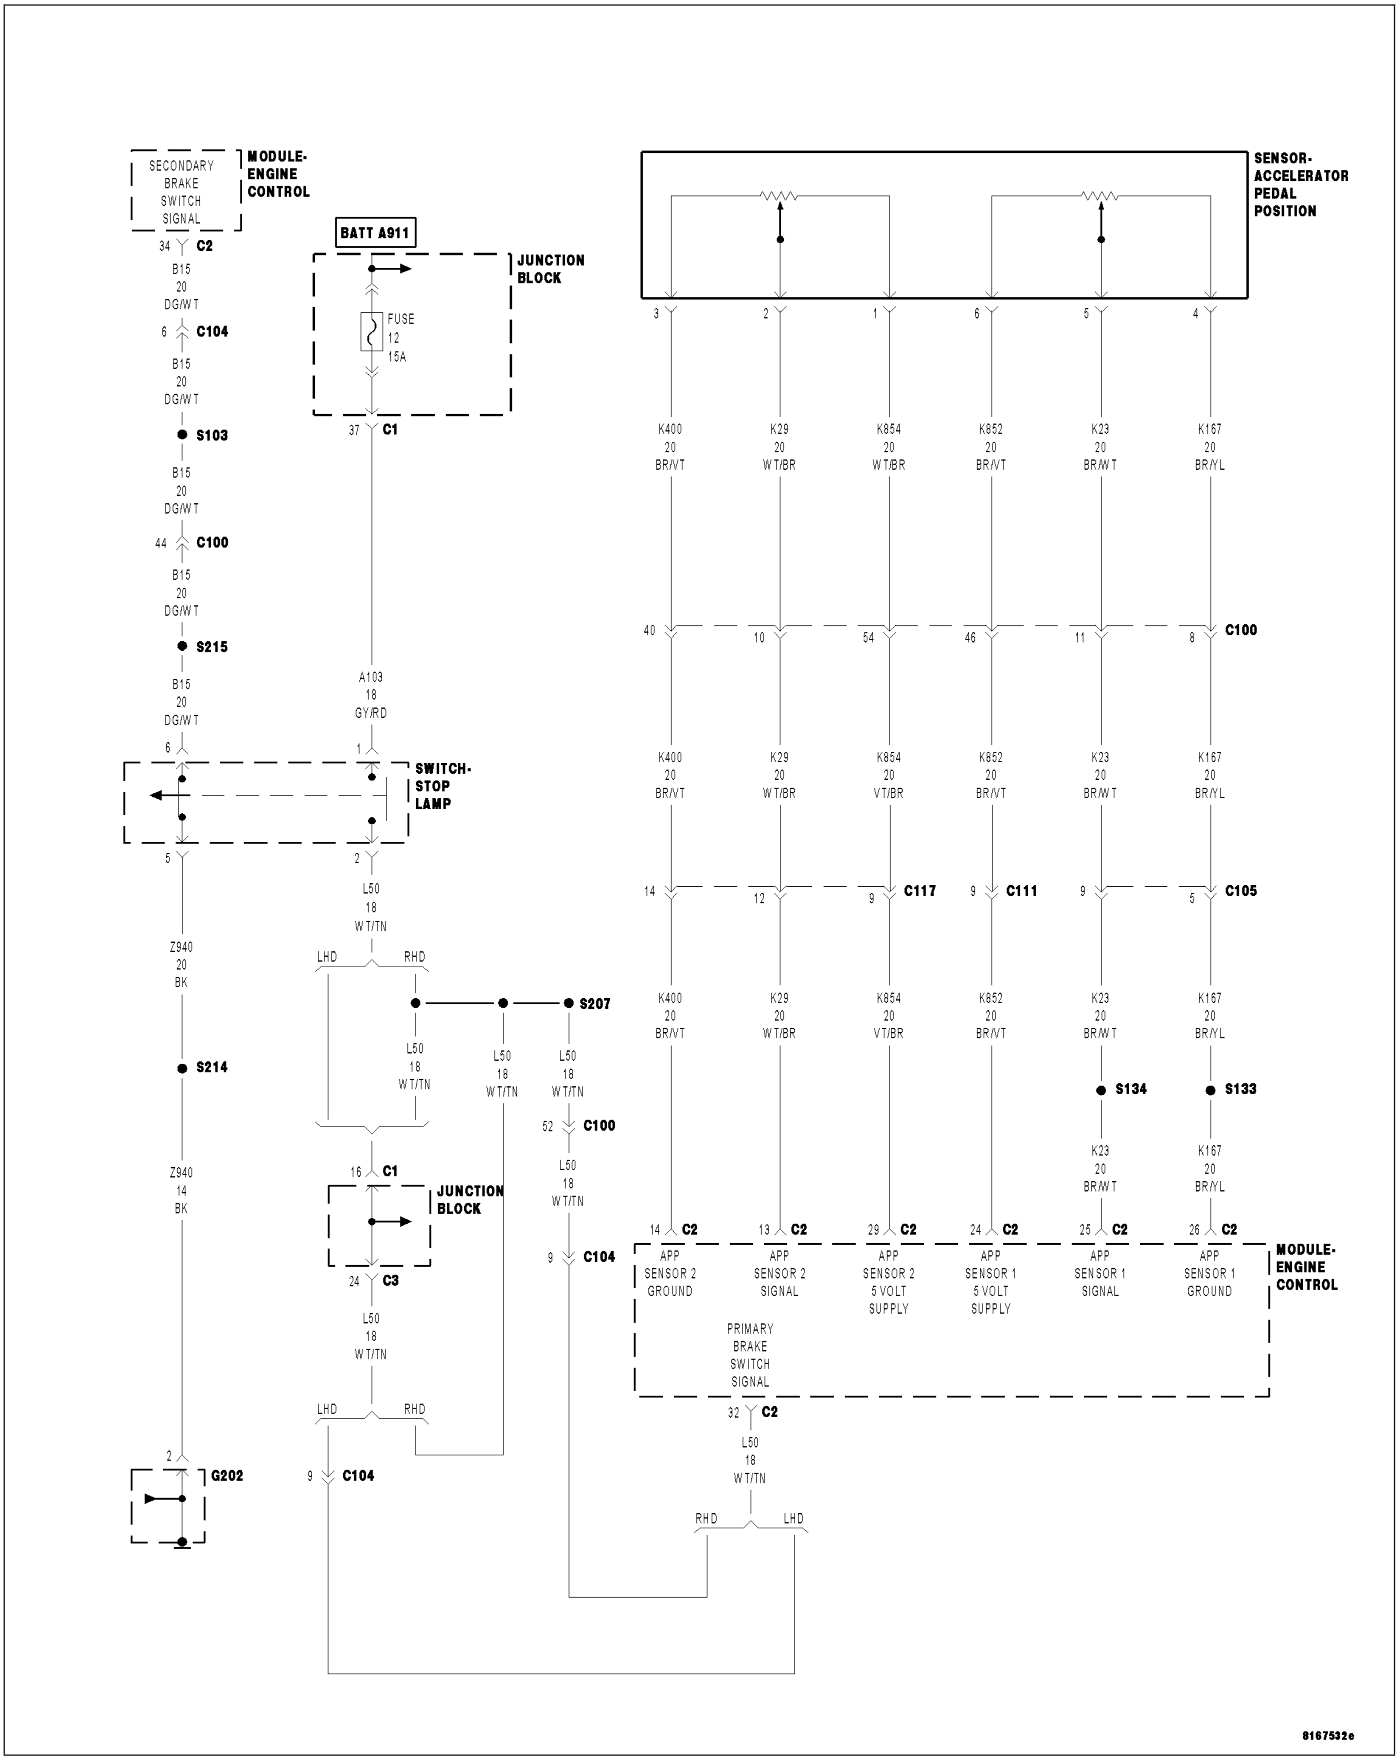
**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



816edd87

# P2125-ACC PEDAL POSITION SENSOR 2 SIGNAL VOLTAGE TOO LOW



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The APP Sensor #2 Signal circuit voltage is below 0.097 volt for 0.3 second.

| Possible Causes |
|---|
| ACCELERATOR PEDAL POSITION SENSOR |
| ECM - APP SENSOR 1 5-VOLT SUPPLY CIRCUIT |
| SENSOR GROUND OPEN (APP SENSOR) |
| INTERMITTENT CONDITION |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT OPEN |
| APP SENSOR SIGNAL CIRCUIT OPEN |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO SENSOR GROUND |
| APP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND |
| VERIFY APP SENSOR OPERATION |
| APP SENSOR SIGNAL CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT |
| APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO VOLTAGE |
| ECM - SENSOR GROUND OPEN |
| APP SENSOR CIRCUIT SHORTED TO VOLTAGE |
| APP SENSOR GROUND CIRCUIT SHORTED TO VOLTAGE |
| ECM - APP SENSOR SIGNAL CIRCUIT |

## Diagnostic Test

### 1. APP SENSOR IDLE VOLTAGE

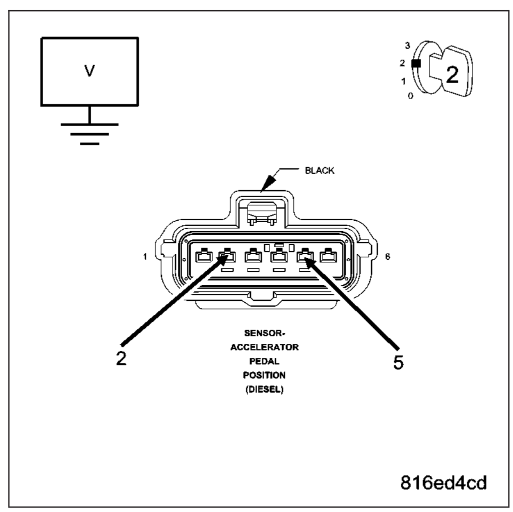
**NOTE: If DTC P0641, P0651 or P0697 is present with this DTC, diagnose DTCs P0641, P0651 or P0697 before diagnosing this DTC.**

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the DRB at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: The APP Sensor is a device that contains 2 separate potentiometer type sensors. Each sensor has its own 5-volt supply circuit, sensor ground circuit and signal circuit. The APP Sensor no longer incorporates a low-idle switch.**

**NOTE: The APP Sensor 2 signal should always be approximately 1/2 the voltage of the APP Sensor 1 signal.**



Inspect the APP Sensor for proper travel from the rest position to the fully depressed position.

Turn the ignition on.

Using a voltmeter, backprobe the APP Sensor 1 and APP Sensor 2 Signal circuits at the APP Sensor harness connector with the accelerator pedal in the at rest position.

**Is the voltage between 0.42 and 0.51 volt for sensor 1 and 0.19 and 0.28 volt for sensor 2?**

**Yes** >> Go To 2

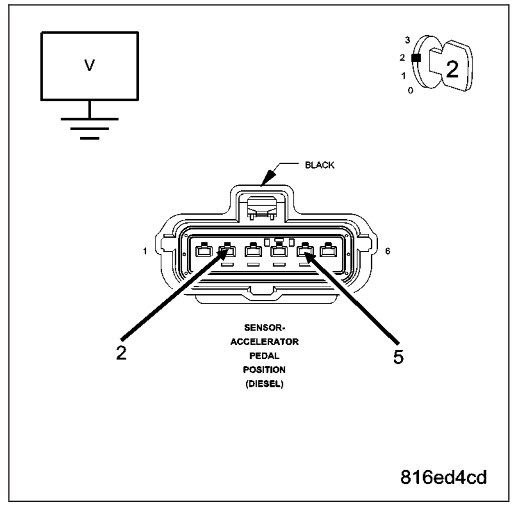
**No** >> Go To 5

## 2. APP SENSOR WIDE OPEN THROTTLE VOLTAGE

Turn the ignition on.

Fully depress the accelerator pedal.

Using a voltmeter backprobe the APP Sensor harness connector and read the voltage for APP Sensor 1 and APP Sensor 2 Signal circuits.



**Is the voltage between 4.45 and 4.75 volts for #1 and 2.15 and 2.45 volts for #2?**

**Yes** >> Go To 3

**No** >> Go To 5

## 3. VERIFY APP SENSOR OPERATION

Turn the ignition on.

With the DRB, read the APP Sensor 1 and APP Sensor 2 percentages (%).

With the accelerator pedal in the idle position, slowly depress the accelerator pedal until the pedal is fully depressed.

**NOTE: The percentage readings for APP Sensors 1 and 2 should increase smoothly as the pedal is depressed.**

**NOTE: This test can also performed using a voltmeter by back probing each APP Sensor Signal circuit at the APP Sensor harness connector and observing the voltmeter for a smooth voltage change through the entire pedal travel.**

**Does the percentage (voltage) increase smoothly for both readings with the accelerator pedal travel?**

**Yes** >> Go To 4

**No** >> Replace the Accelerator Pedal Position Sensor in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. INTERMITTENT CONDITION

**WARNING: WHEN THE ENGINE IS OPERATING, DO NOT STAND IN A DIRECT LINE WITH THE FAN. DO NOT PUT YOUR HANDS NEAR THE PULLEYS, BELTS OR FAN. DO NOT WEAR LOOSE CLOTHING.**

**NOTE: The conditions that set the DTC are not present at this time. The following list may help in identifying the intermittent condition.**

With the engine running and at normal operating temperature, monitor the DRB parameters related to the DTC while wiggling the wiring harness. Look for parameter values to change and/or a DTC to set.

Review the DTC When Monitored and Set Conditions. If possible, try to duplicate the conditions under which the DTC was set by slowly pressing and releasing the accelerator pedal several times.

Refer to any Technical Service Bulletins (TSB) that may apply.

Visually inspect the related wiring harness. Look for any chafed, pierced, pinched, or partially broken wires.

Visually inspect the related wiring harness connectors. Look for broken, bent, pushed out, or corroded terminals.

**Were any of the above conditions present?**

**Yes** >> Repair as necessary.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Test Complete.

## 5. VERIFY 5-VOLT SUPPLY AND SENSOR REFERENCE VOLTAGE A CIRCUITS

**NOTE: Perform the rest of this diagnostic procedure on the individual APP Sensor Potentiometer (1 or 2) that did not display the correct voltages in the previous test.**

Turn the ignition off.

Disconnect the APP Sensor harness connector.

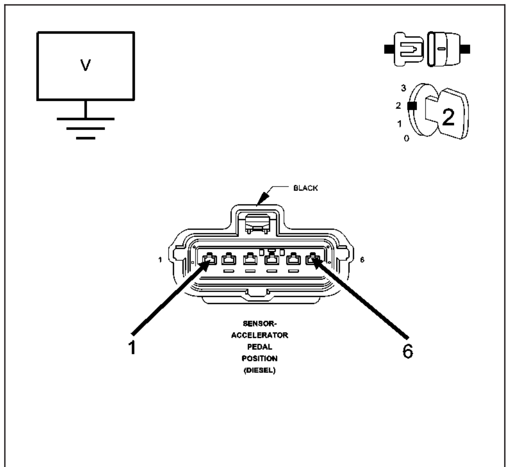
Turn the ignition on.

Measure the voltage of the 5-Volt Supply circuit in the APP Sensor harness connector.

**Is the voltage between 4.7 and 5.3 volts?**

**Yes** >> Go To 6

**No** >> Go To 14



816ed89e

## 6. VERIFY APP SIGNAL CIRCUIT

Turn the ignition off.

Disconnect the APP Sensor harness connector.

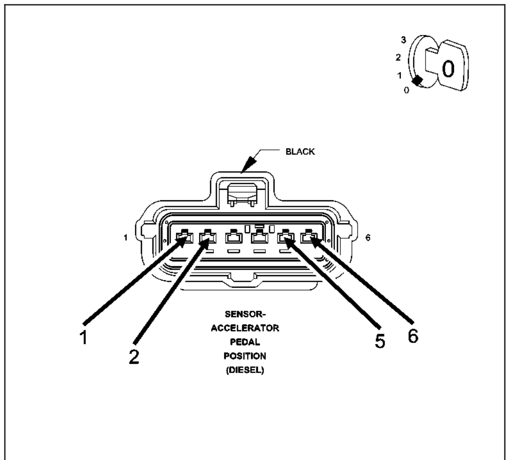
Connect a jumper wire between APP Sensor Signal circuit and the 5-volt supply circuit at the APP Sensor harness connector.

With the DRB, read the PEDAL OUTPUT VOLTS.

**Does the DRB display between 4.0 and 5.5 volts?**

**Yes** >> Go To 7

**No** >> Go To 10



816eda20

## 7. APP SENSOR GROUND CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

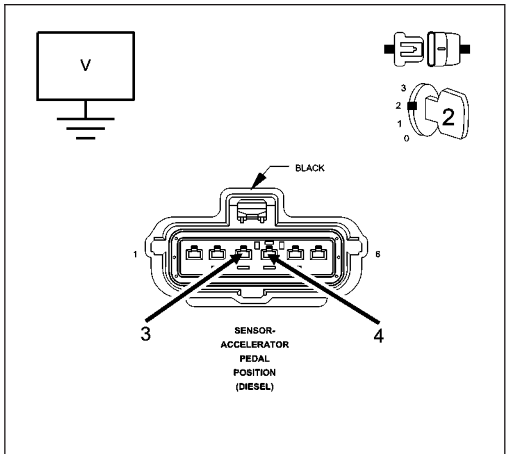
Turn the ignition on.

Measure the voltage of the APP Sensor Ground circuit.

**Is the voltage above 1.0 volt?**

**Yes** >> Repair the App Sensor Ground circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 8



816eda5b

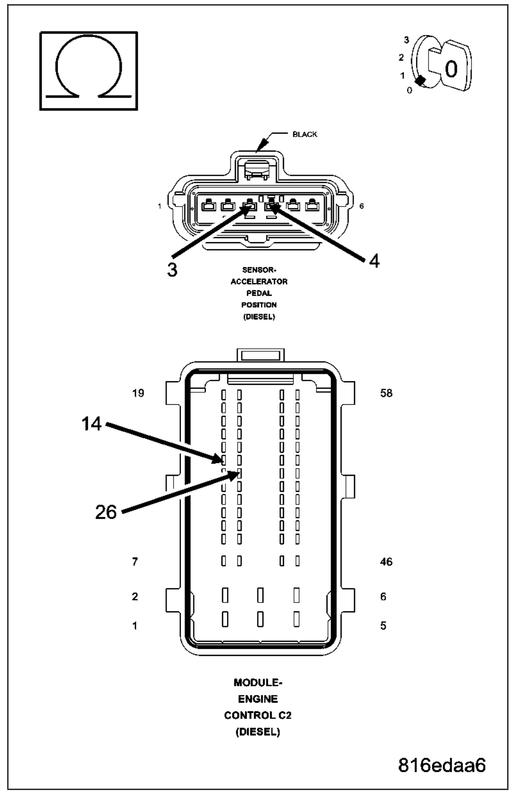
## 8. SENSOR GROUND OPEN

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Sensor Ground circuit between the APP Sensor and the ECM.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 9

**No** >> Repair the APP Sensor Ground circuit for an open.

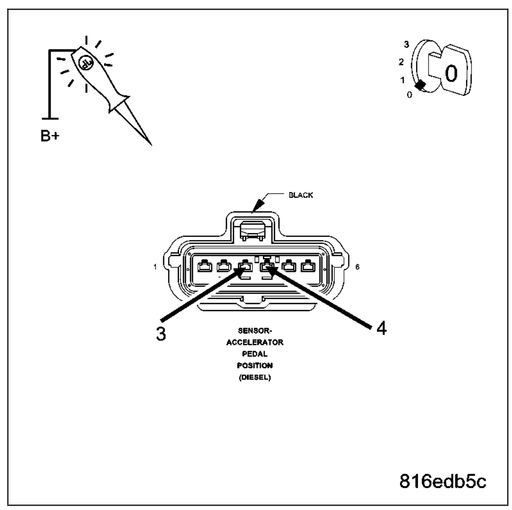
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 9. ECM - SENSOR GROUND OPEN

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Using a 12-volt test light connected to 12-volts, check the Sensor Ground circuit of the appropriate potentiometer.



**Does the test light illuminate brightly?**

**Yes** >> Replace the Accelerator Pedal Position Sensor.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

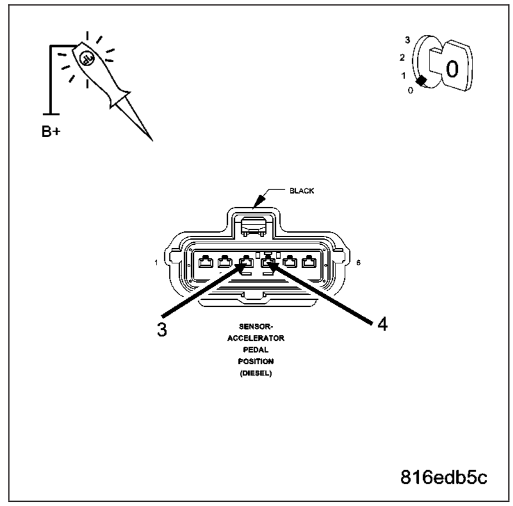
## 10. APP SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the APP Sensor Signal circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 11

**No** >> Repair the APP Sensor Signal circuit for an open
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

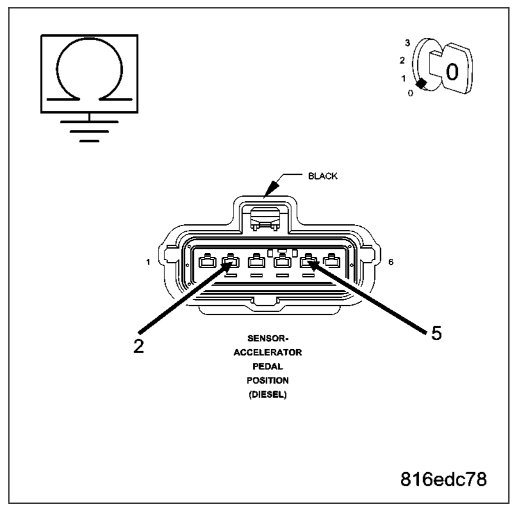
## 11. APP SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the APP Sensor Signal circuit.



**Is the resistance below 1000 ohms?**

**Yes** >> Repair the APP Sensor Signal circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 12

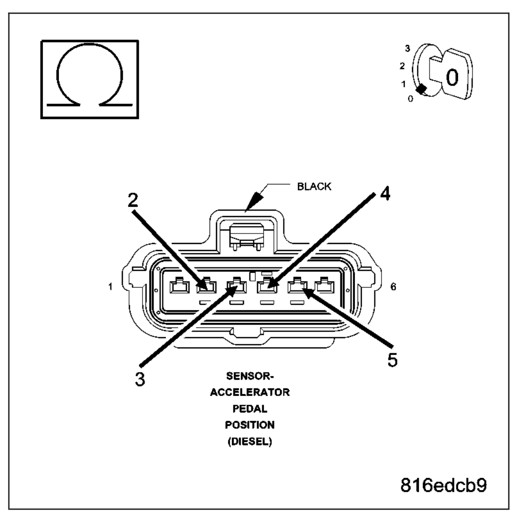
## 12. APP SENSOR SIGNAL CIRCUIT SHORTED TO THE SENSOR GROUND CIRCUIT

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between the APP Sensor Signal circuit and the Sensor Ground circuit at the APP Sensor harness connector.



**Is the resistance below 1000 ohms?**

**Yes** >> Repair the APP Sensor Signal and Sensor Ground circuits for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 13

## 13. APP SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the APP Sensor harness connector.

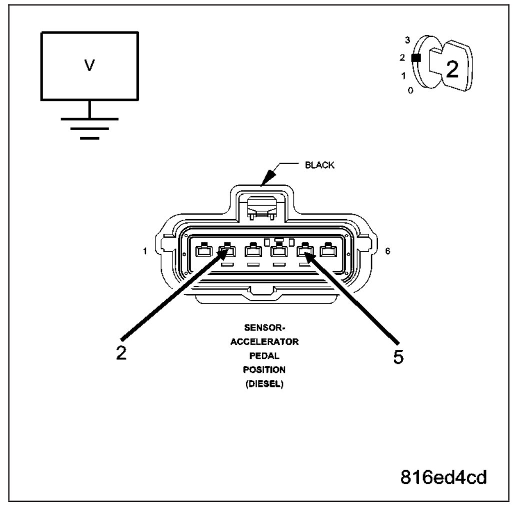
Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the APP Sensor Signal circuit.



**Is the voltage above 1.0 volt?**

**Yes** >> Repair the APP Sensor Signal circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

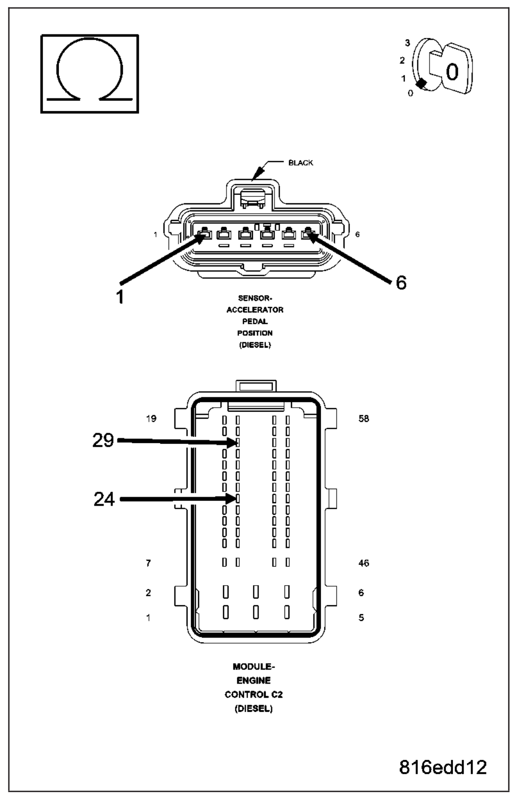
## 14. APP SENSOR 5-VOLT SUPPLY CIRCUITS OPEN

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Accelerator Pedal Position Sensor 5-volt Supply circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 15

**No** >> Repair the Accelerator Pedal Position Sensor 5-Volt Supply circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

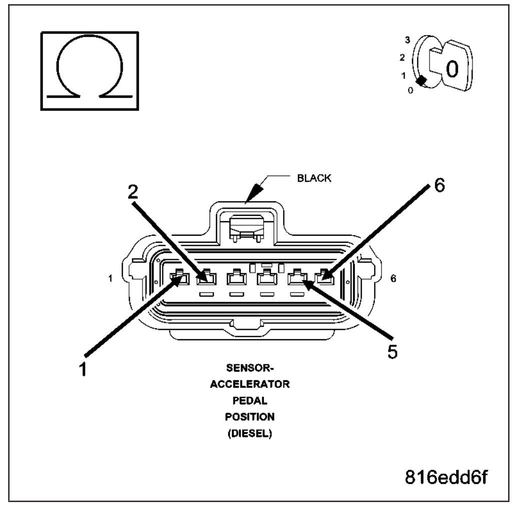
## 15. APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO SENSOR GROUND

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between the Accelerator Pedal Position Sensor 5-Volt Supply circuit and both Sensor Ground circuits in the APP Sensor harness connector.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 16

**No** >> Repair the 5-Volt Supply circuit for a short to the Sensor Ground circuit.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

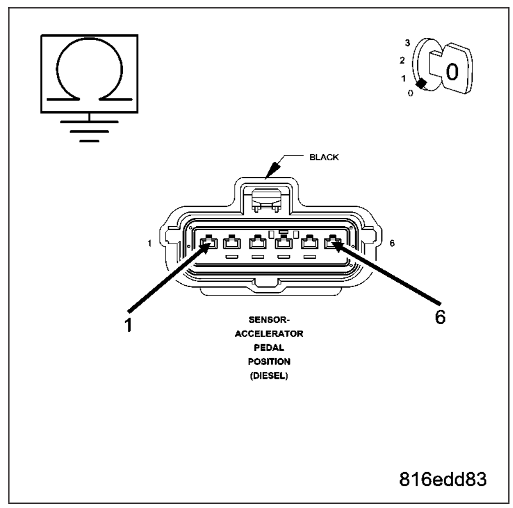
## 16. APP SENSOR 5-VOLT SUPPLY CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the APP Sensor harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Accelerator Pedal Position Sensor 5-volt Supply circuit.



**Is the resistance below 1000 ohms?**

**Yes** >> Repair the Accelerator Pedal Position Sensor 5-Volt Supply circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 17

## 17. APP SENSOR 5-VOLT SUPPLY SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the APP Sensor harness connector.

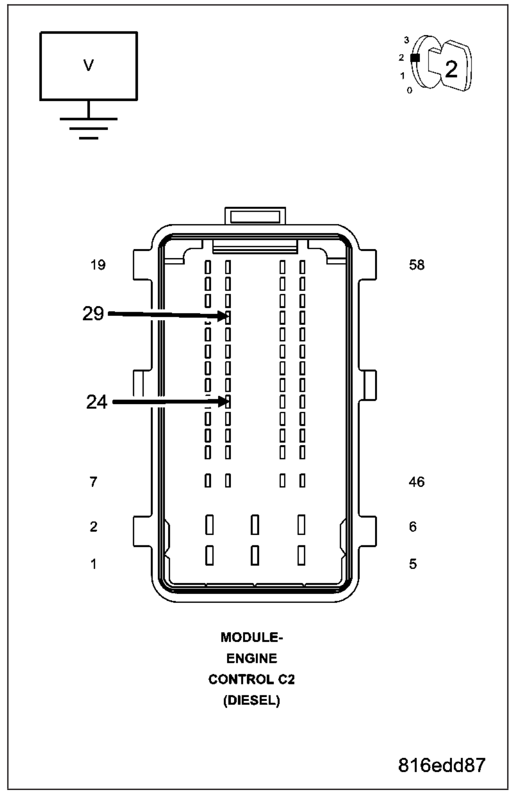
Disconnect the ECM harness connectors.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the Accelerator Pedal Position Sensor 5-Volt Supply circuit in the ECM harness connector.



**Is the voltage above 1.0 volt?**

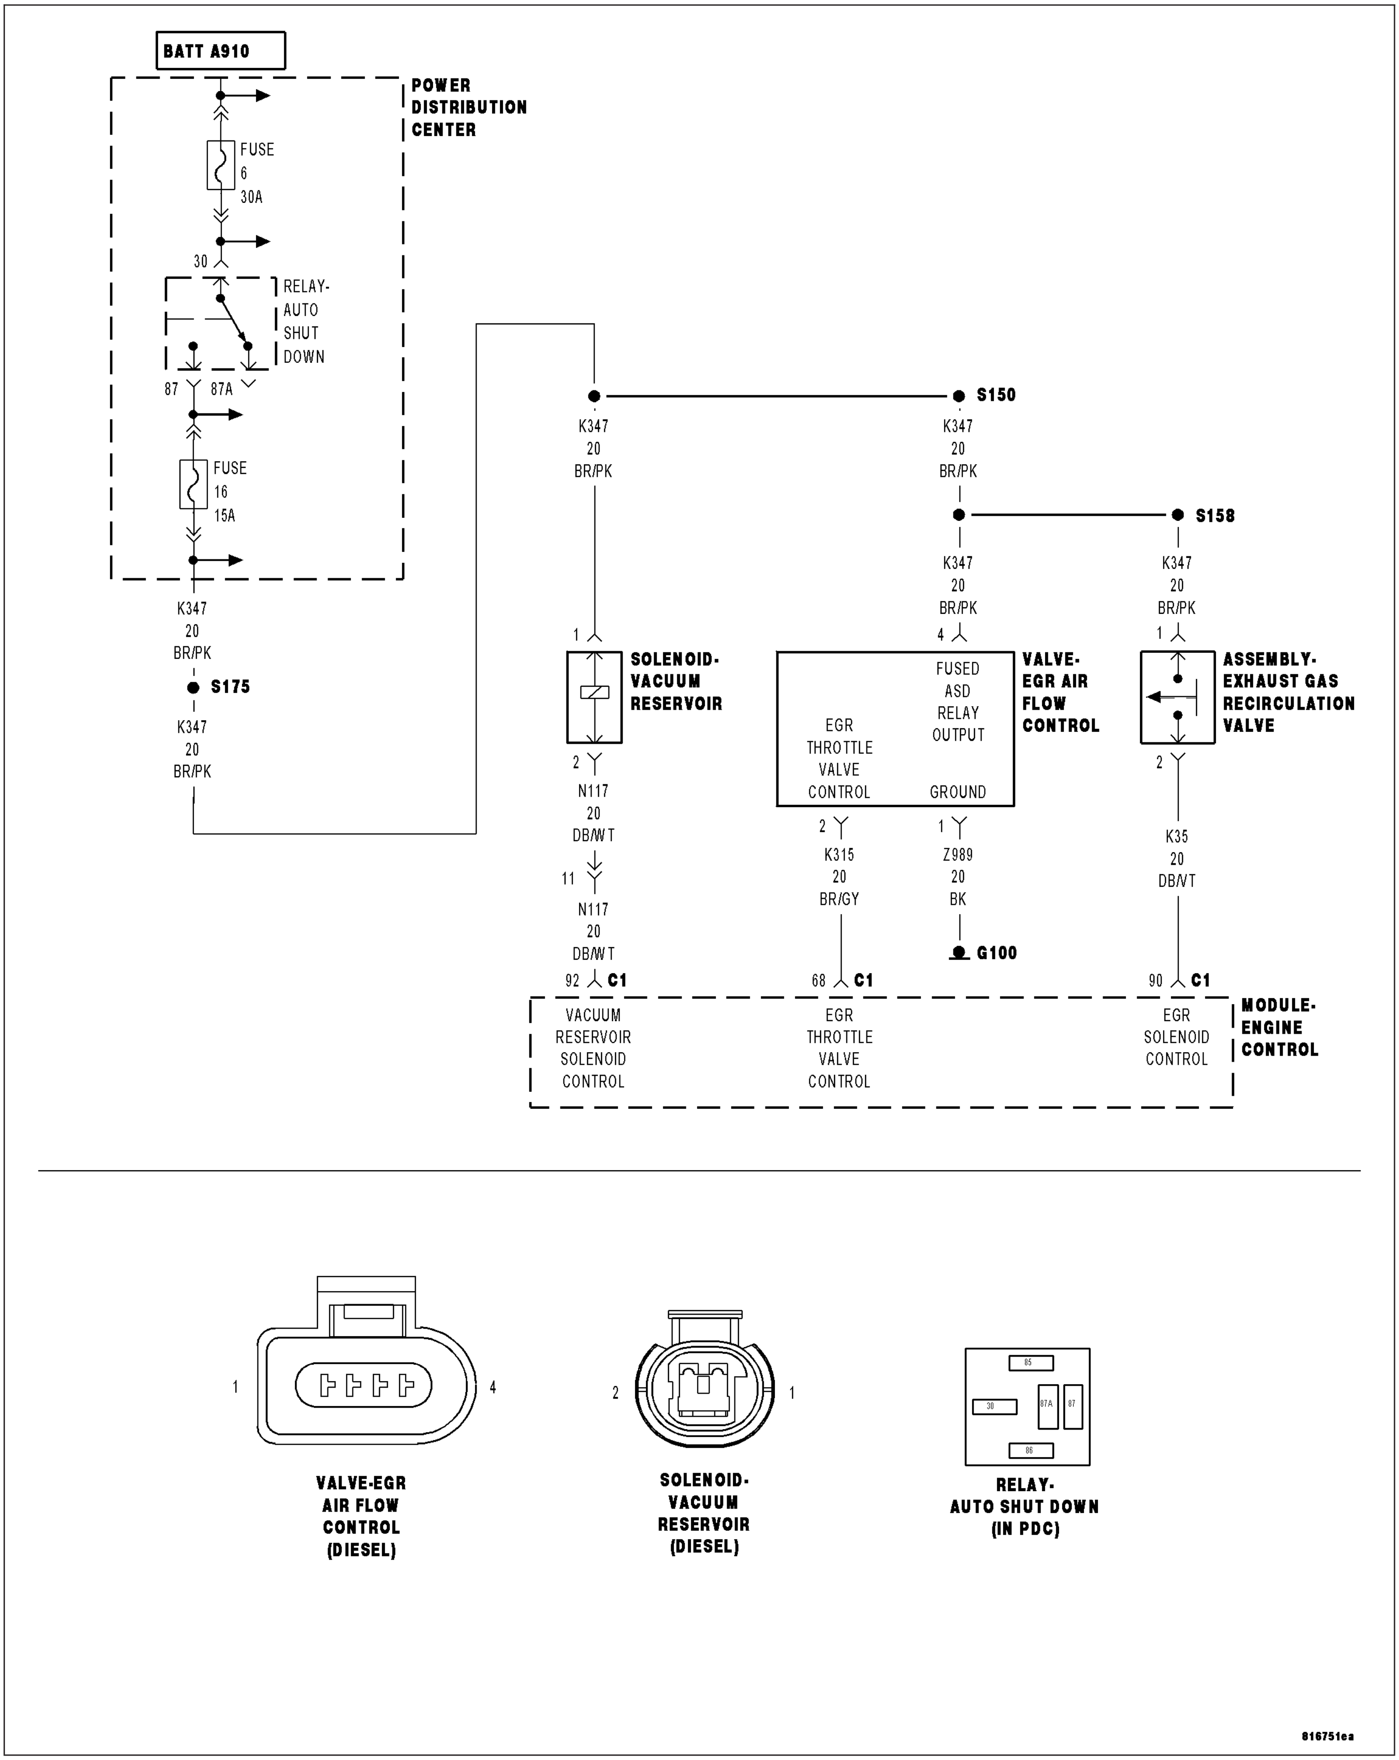
**Yes** >> Repair the Accelerator Pedal Position Sensor 5-Volt Supply circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P2141-EGR AIR FLOW CONTROL VALVE SHORT TO GROUND



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM EGR Air Flow Control Valve command off.
- **Set Condition:**
  The ECM detect a short to ground on the EGR Air Flow Control Valve Control circuit for 0.5 second.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| EGR AIR FLOW CONTROL VALVE CIRCUIT SHORTED TO GROUND |
| EGR AIR FLOW CONTROL VALVE CIRCUIT OPEN |
| EGR AIR FLOW CONTROL VALVE |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the DRB at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the DRB, erase ECM DTCs.

Test drive the vehicle.

Monitor the DRB for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

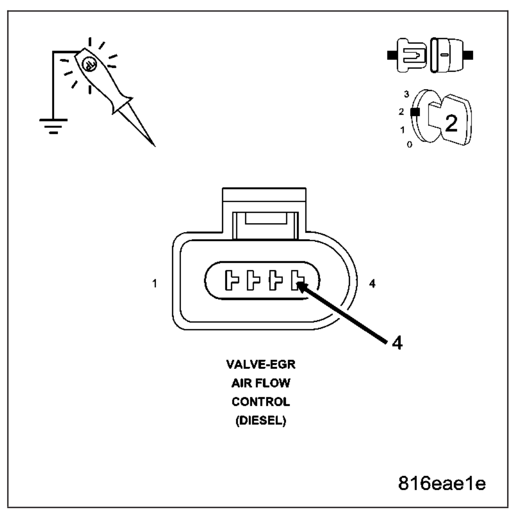
### 2. ASD OUTPUT CKT OPEN

Turn the ignition off.

Disconnect the EGR Air Flow Control Valve harness connector.

Turn the ignition on.

Using a 12-volt test light connected to ground, check the ASD Relay Output circuit.



**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the ASD Relay Output circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

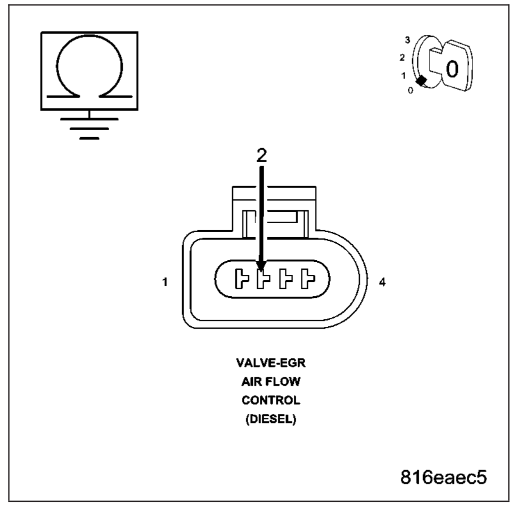
## 3. EGR AIR FLOW CONTROL VALVE SHORTED TO GROUND

Turn the ignition off.

Disconnect the EGR Air Flow Control Valve harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the EGR Air Flow Control Valve Control circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 4

**No** >> Repair the EGR Air Flow Control Valve circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

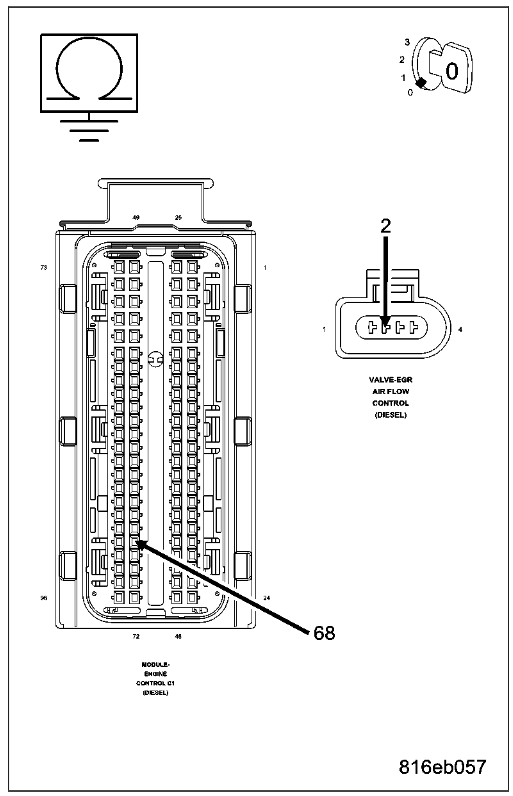
## 4. EGR AIR FLOW CONTROL VALVE CIRCUIT OPEN

Turn the ignition off.

Disconnect the EGR Air Flow Control Valve harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the EGR Air Flow Control Valve Control circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the EGR Air Flow Control Valve Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. EGR AIR FLOW CONTROL VALVE

Turn the ignition off.

Install a substitute EGR Air Flow Control Valve in place of the vehicle's EGR Air Flow Control Valve.

**NOTE: Ensure the ECM and EGR Air Flow Control Valve harness connectors are connected.**

Turn the ignition on.

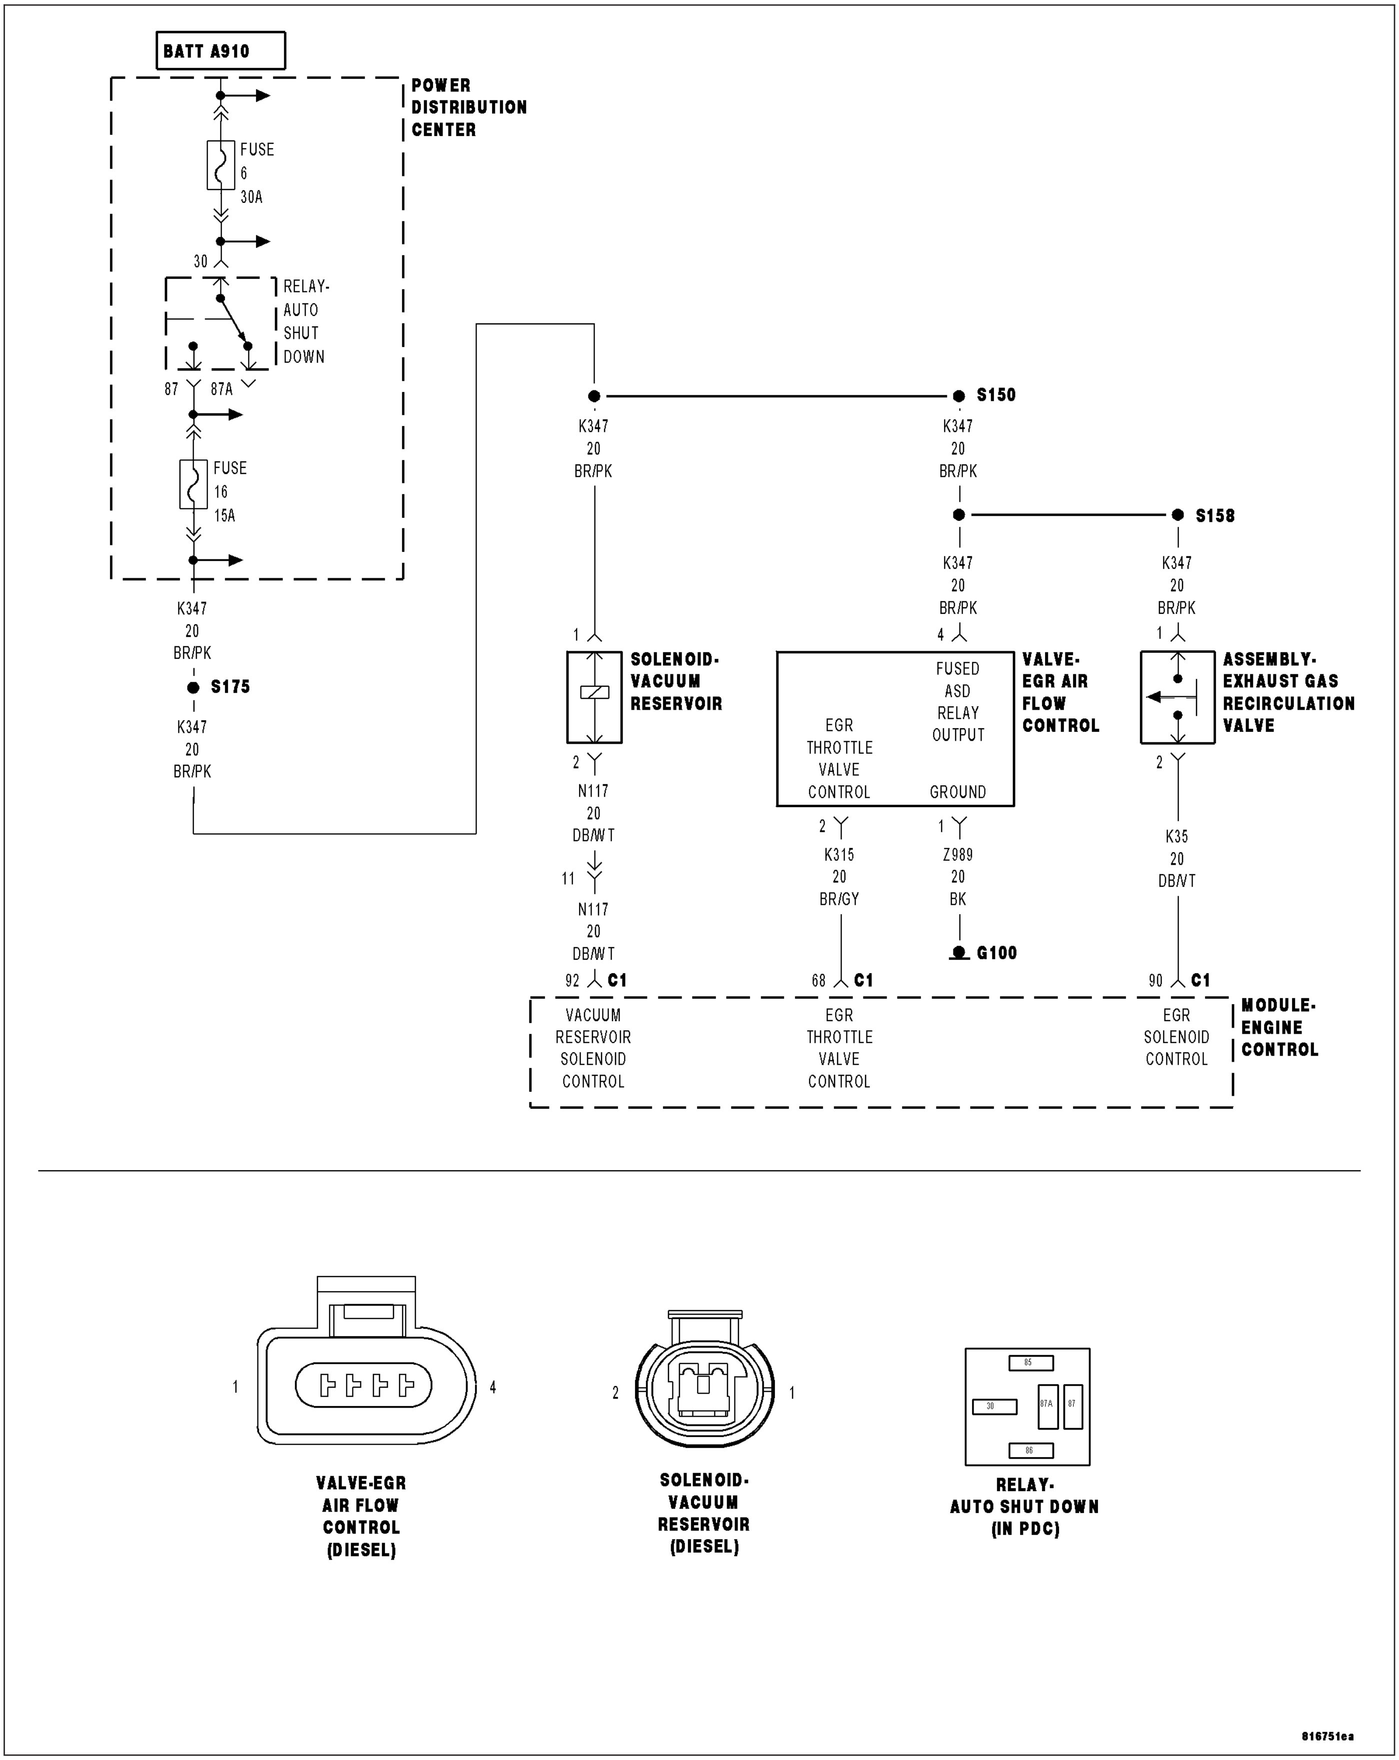
With the DRB, check for this DTC to set again.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the EGR Air Flow Control Valve.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P2142-EGR AIR FLOW CONTROL VALVE SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM EGR Air Flow Control Valve command on.
- **Set Condition:**
  The ECM detects excessive current on the EGR Air Flow Control Valve Control circuit for 0.5 second.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| EGR AIR FLOW CONTROL VALVE |
| EGR AIR FLOW CONTROL VALVE CONTROL SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE - INTERNAL SHORT TO VOLTAGE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Test drive the vehicle and monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. EGR AIR FLOW CONTROL VALVE

Turn the ignition off.

Disconnect the EGR Air Flow Control Valve harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

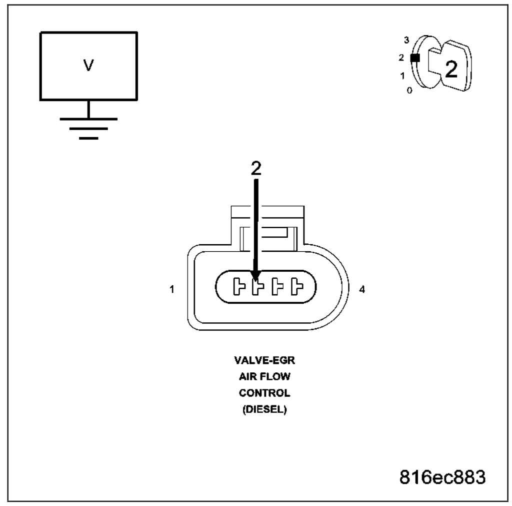
Monitor the scan tool for ECM DTCs.

**Does the scan tool display P1140 EGR AIR FLOW CONTROL VALVE OPEN CIRCUIT?**

**Yes** >> Replace the EGR Air Flow Control Valve.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

## 3. EGR AIR FLOW CONTROL VALVE SHORTED TO VOLTAGE



Turn the ignition off.

Disconnect the EGR Air Flow Control Valve harness connector.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the EGR Air Flow Control Valve Control circuit.

**Is the voltage below 1.0 volt?**

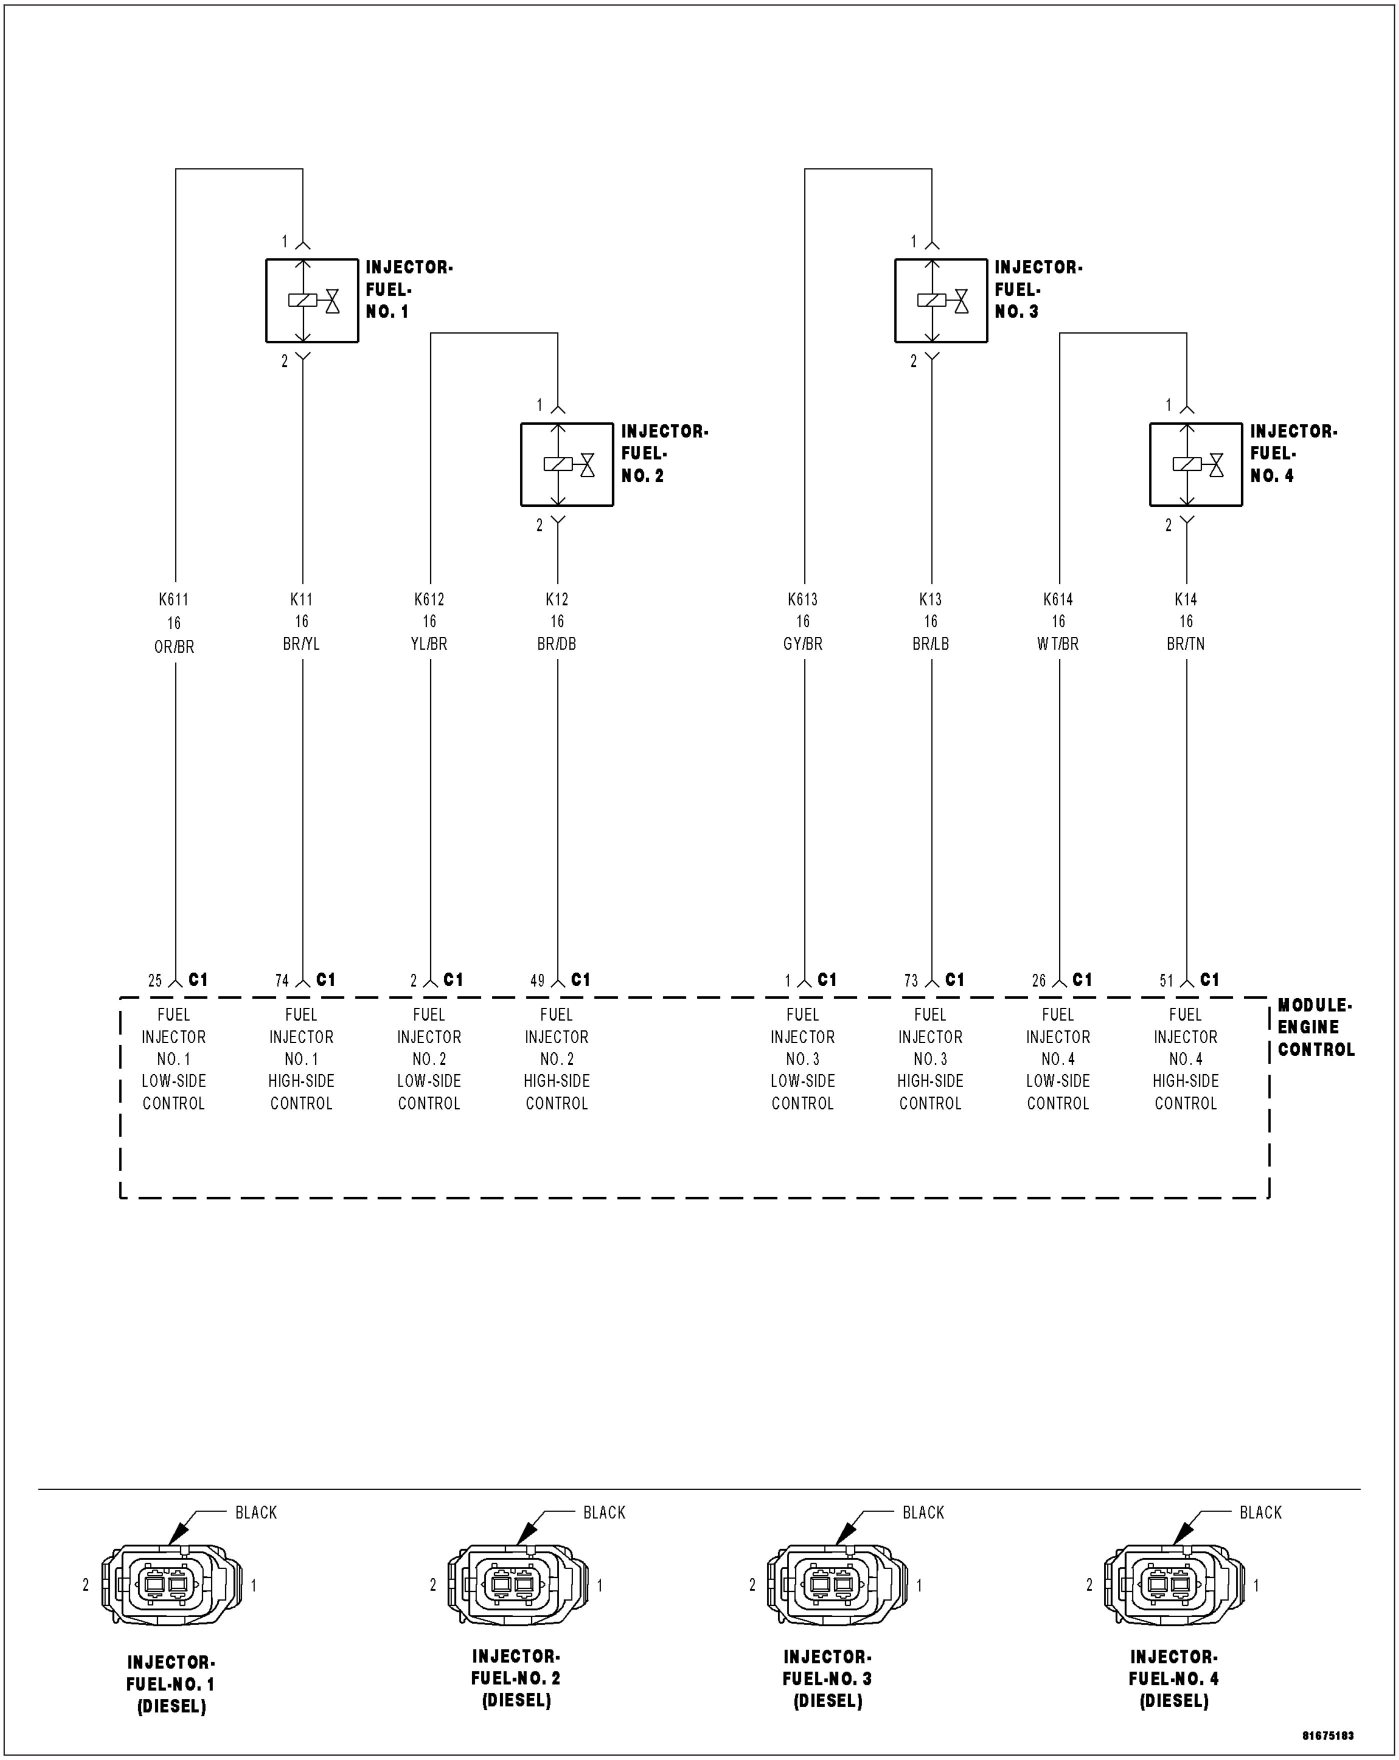
**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the EGR Air Flow Control Valve Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P2147 INJECTOR BANK 1 OPEN CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of each Fuel Injector High-Side Control circuit.

Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Fuel Injector harness connectors.

Measure the resistance between ground and each Fuel Injector High-Side Control circuits.

Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

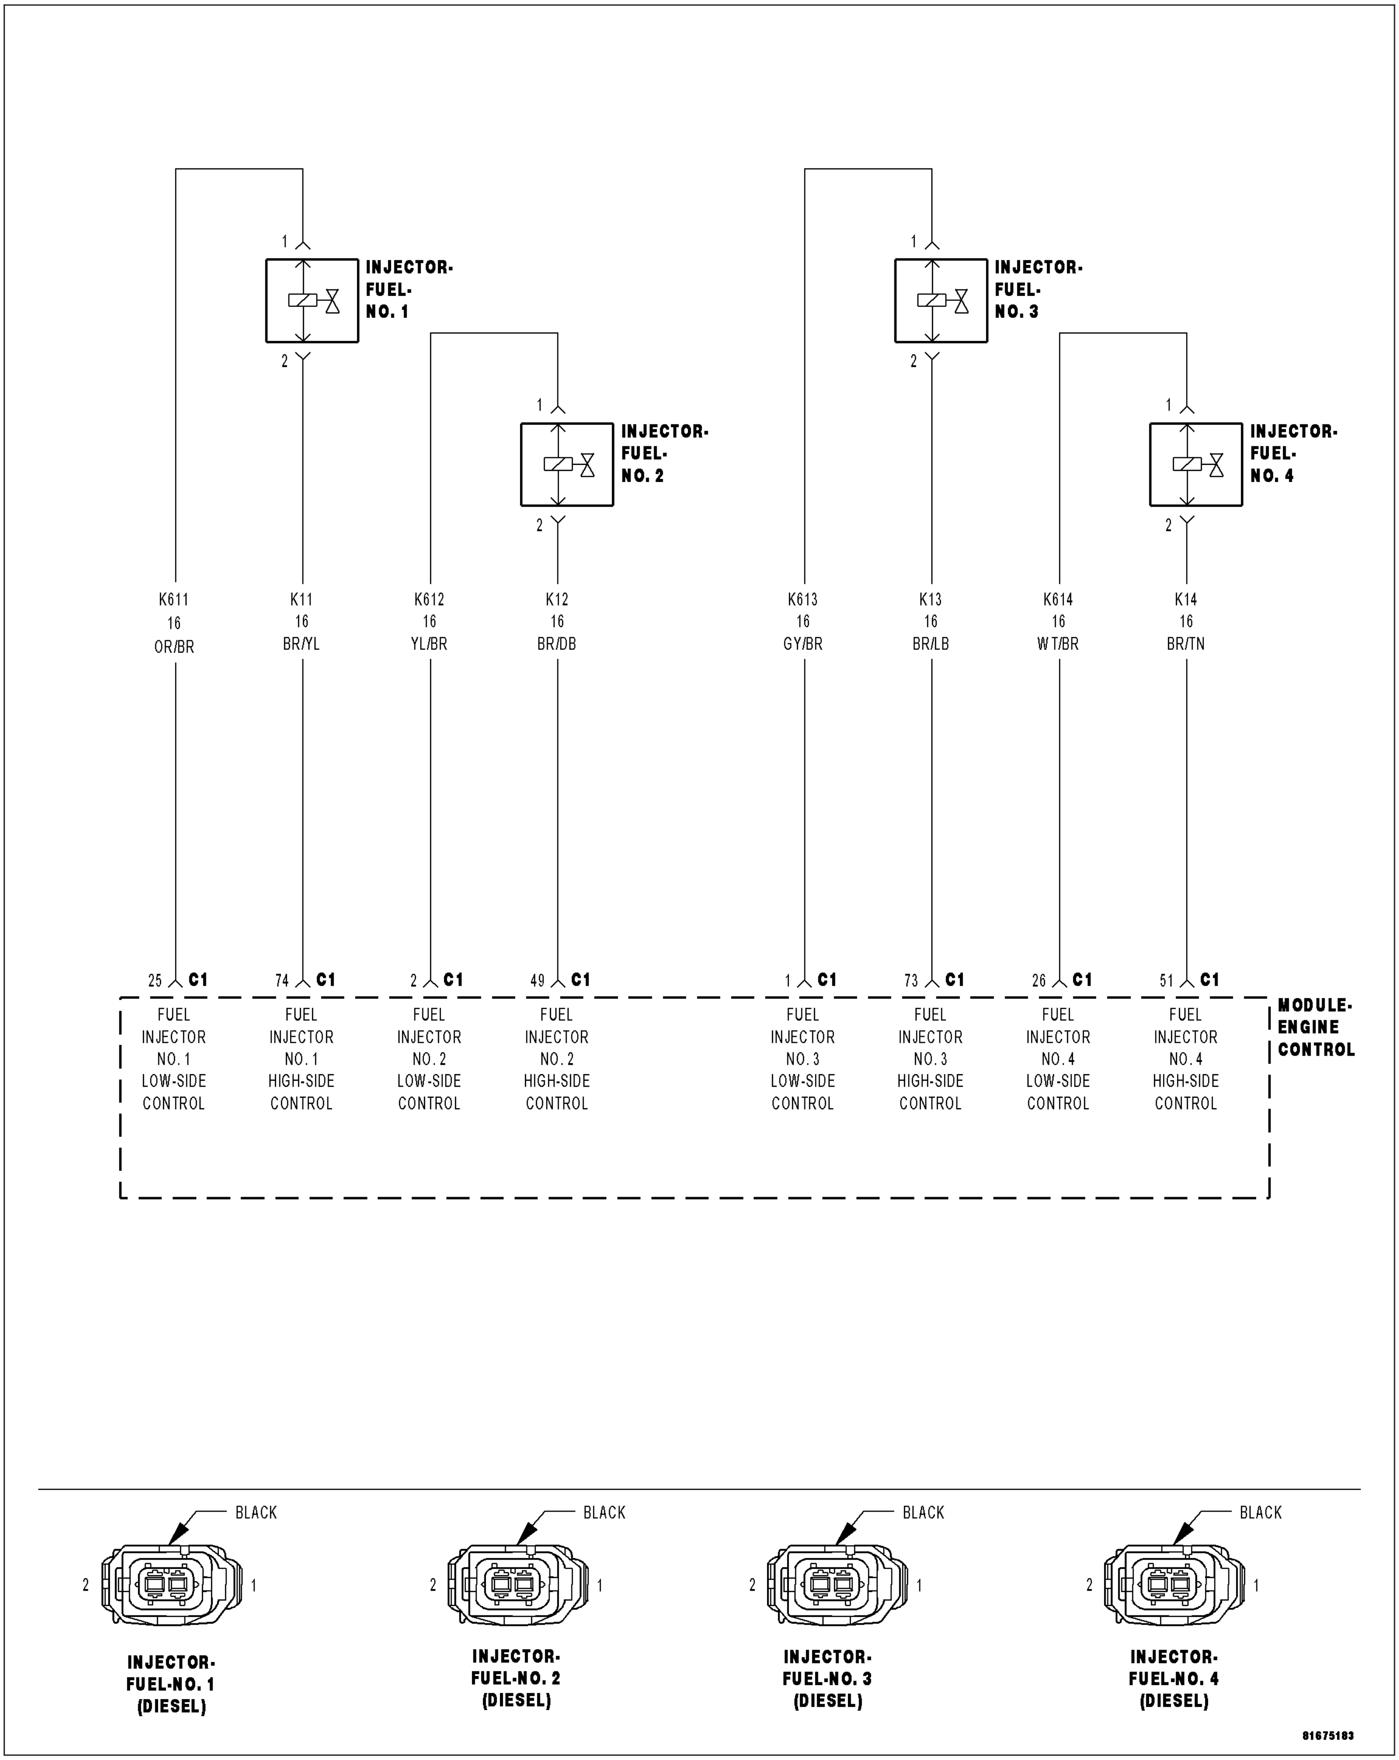
With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P2148-BANK 1-INJECTOR SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of each Fuel Injector High-Side Control circuit.

Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Fuel Injector harness connectors.

Measure the resistance between ground and each Fuel Injector High-Side Control circuits.

Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

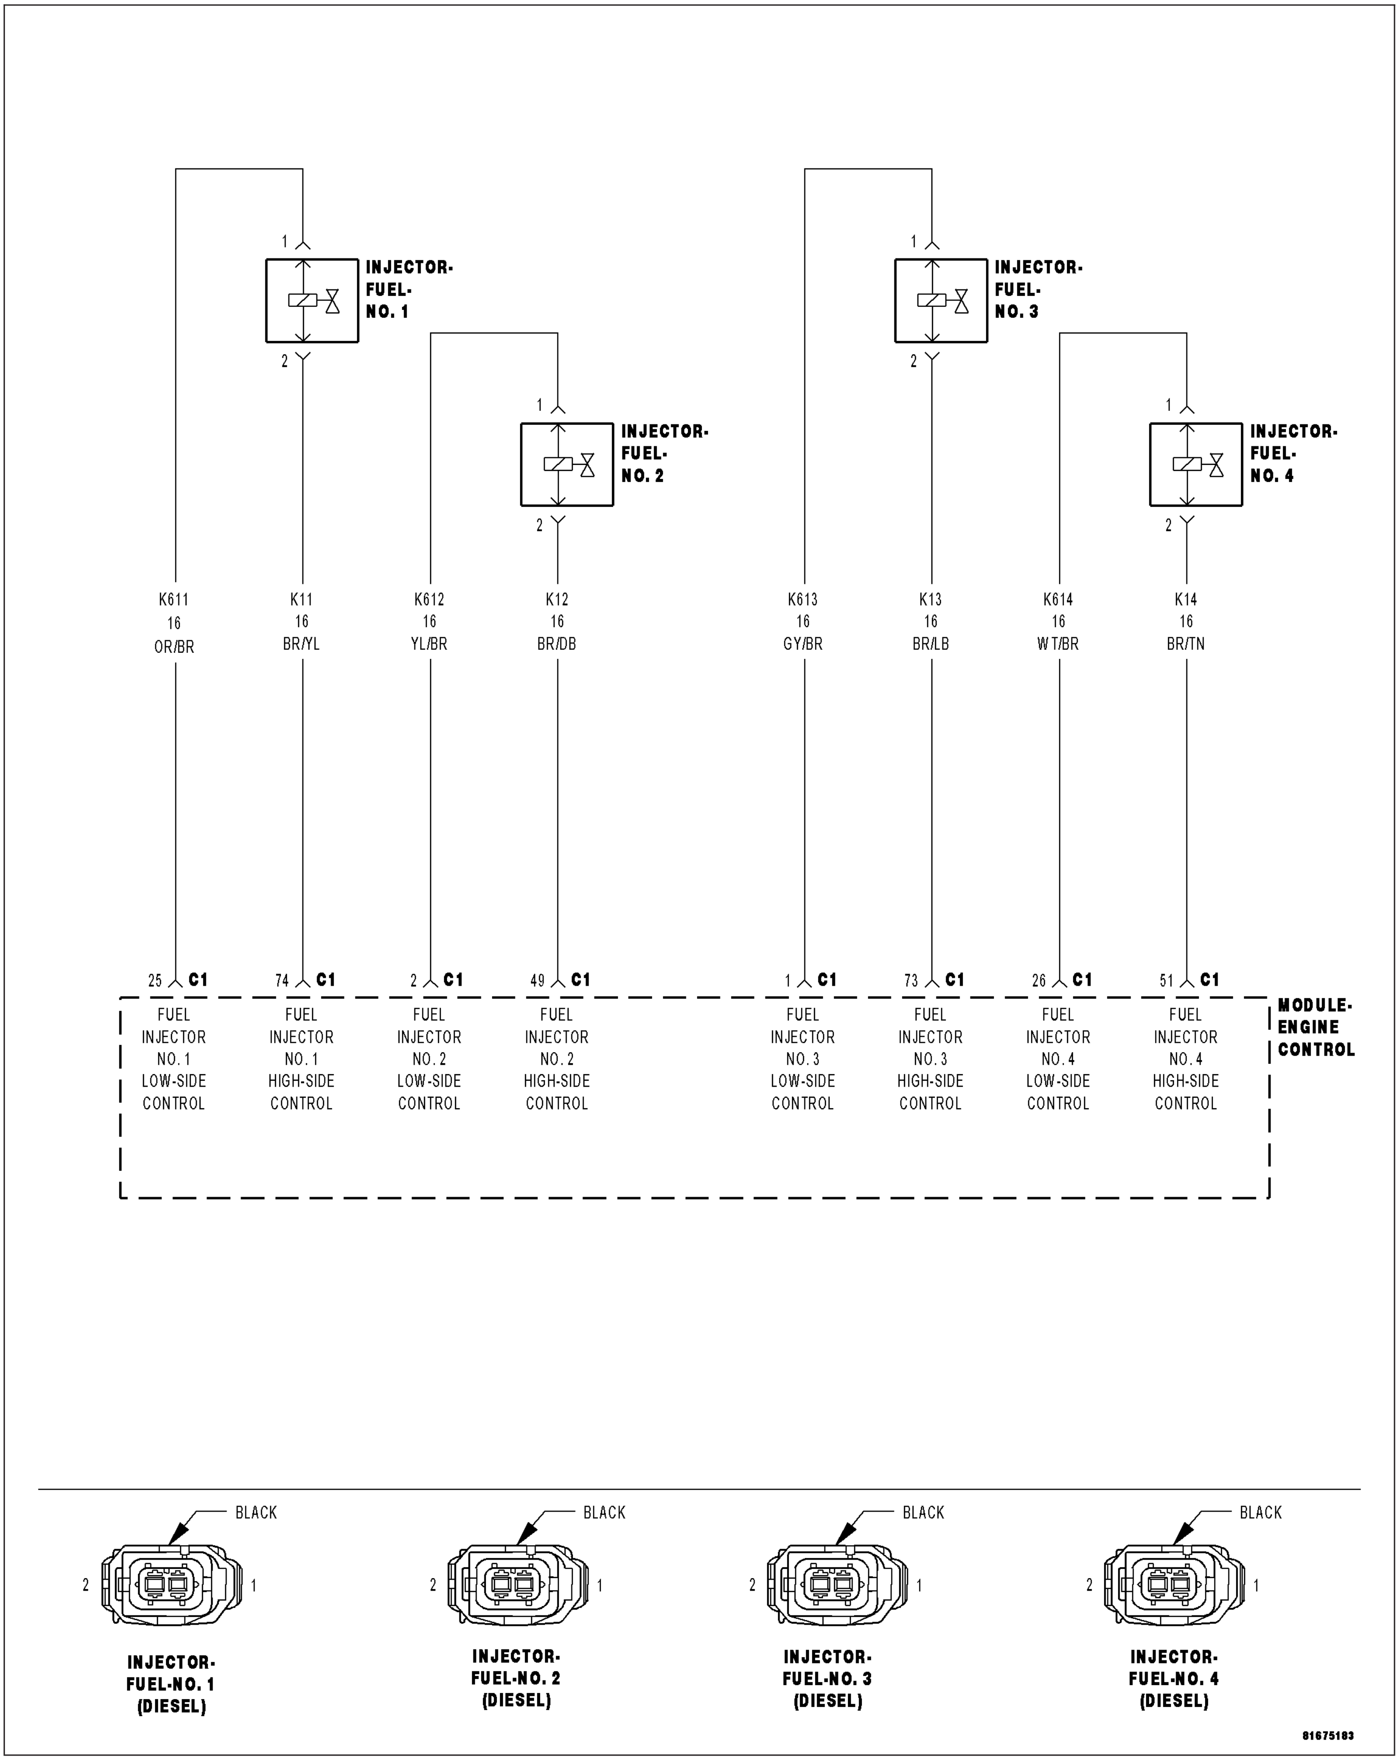
With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P2151-BANK 2- OPEN CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
| --- |
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of each Fuel Injector High-Side Control circuit.

Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Fuel Injector harness connectors.

Measure the resistance between ground and each Fuel Injector High-Side Control circuits.

Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

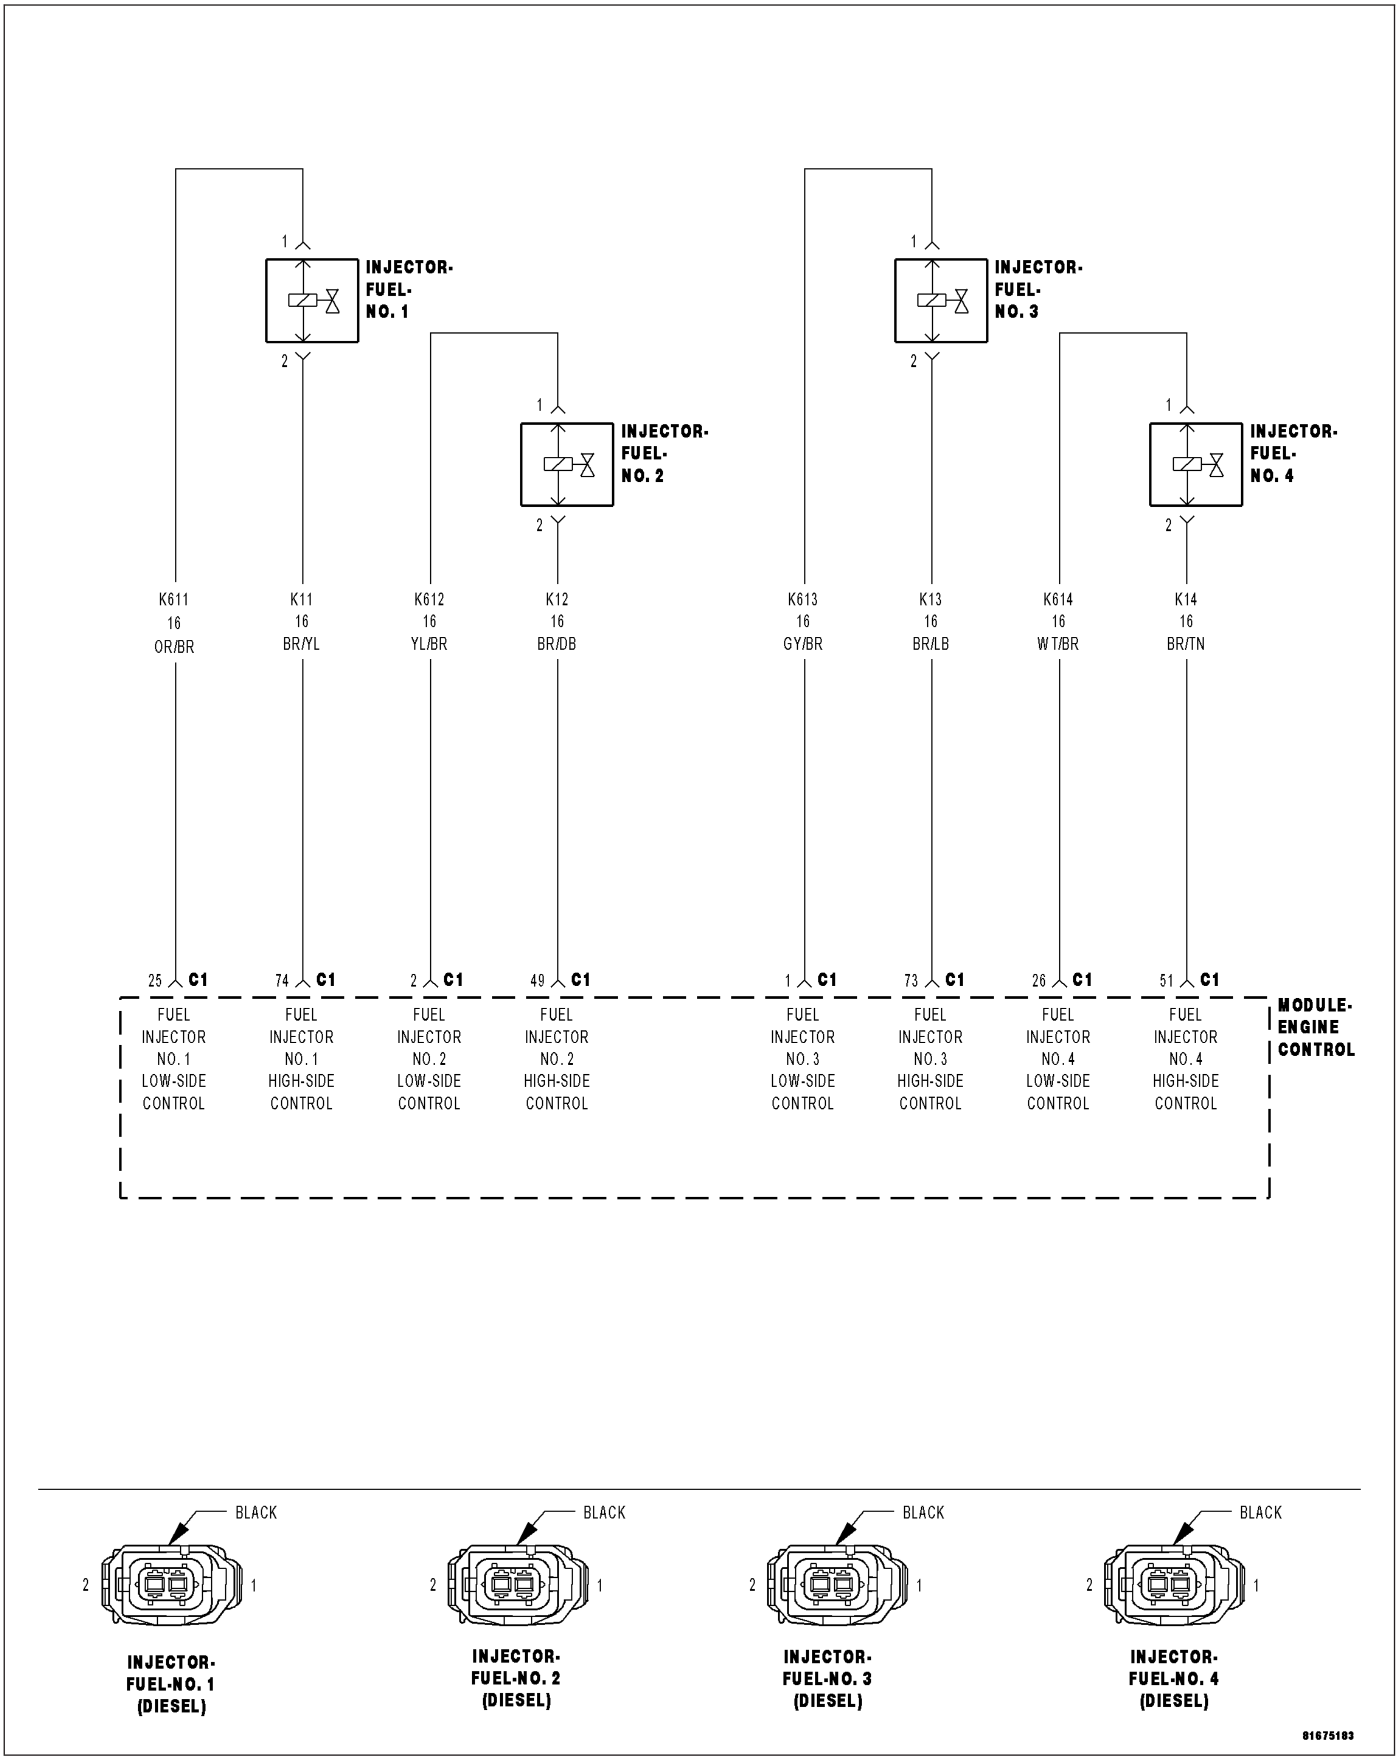
With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P2151-BANK 2 SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

| Possible Causes |
| --- |
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE |
| FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND |
| FUEL INJECTOR CIRCUITS SHORTED TOGETHER |
| FUEL INJECTOR CONTROL CIRCUIT OPEN |
| FUEL INJECTOR |

## Diagnostic Test

### 1. VERIFY ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase the ECM DTCs.

Attempt to start the engine and test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**If the ECM power and ground circuits are functioning properly continue with this test.**

**Yes** >> Go To 3

### 3. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of each Fuel Injector High-Side Control circuit.

Measure the voltage of each Fuel Injector Low-Side Control circuit.

**Is the voltage above 1.0 volt for any of the measurements?**

**Yes** >> Repair the appropriate Fuel Injector Control circuit for a short to voltage.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 4

## 4. FUEL INJECTOR CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Fuel Injector harness connectors.

Measure the resistance between ground and each Fuel Injector High-Side Control circuits.

Measure the resistance between ground and each Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector Control circuit for a short to ground.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 5

## 5. FUEL INJECTOR CIRCUITS SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance between each of the Fuel Injector High-Side Control circuits and the Fuel Injector Low-Side Control circuits.

**Is the resistance below 1000 ohms for any of the measurements?**

**Yes** >> Repair the Fuel Injector circuits that measured below 1000 ohms for a short together.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 6

## 6. FUEL INJECTOR CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect all of the Cylinder Fuel Injector harness connectors.

Measure the resistance of each Fuel Injector High-Side and Low-Side Control circuits between its respective injector harness connector and the ECM harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the appropriate Fuel Injector Control circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. CYLINDER FUEL INJECTOR

Turn the ignition off.

Replace the appropriate Cylinder Fuel Injector (as indicated by the DTC) in accordance with the Service Information.

With the scan tool, erase the ECM DTCs.

Test drive the vehicle.

With the scan tool, read the ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> The repair is complete.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P2226 BAROMETRIC PRESSURE CIRCUIT SIGNAL VOLTAGE TOO HIGH

For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The ECM detects an internal failure.

| Possible Causes |
|---|
| ENGINE CONTROL MODULE |
| INTERMITTENT CONDITION |

## Diagnostic Test

### 1. ENGINE CONTROL MODULE

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**NOTE: If there are other DTC's set with this DTC repair other DTC's before continuing with this diagnostic procedure.**

**NOTE: This code can be caused by an intermittent problem in the wiring and connectors to the Engine Control Module. Inspect the Engine Control Module harness connector and associated wiring for signs of poor terminal contact.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Perform several engine run cycles, turning the ignition off for at least 20 seconds between each engine run cycle.

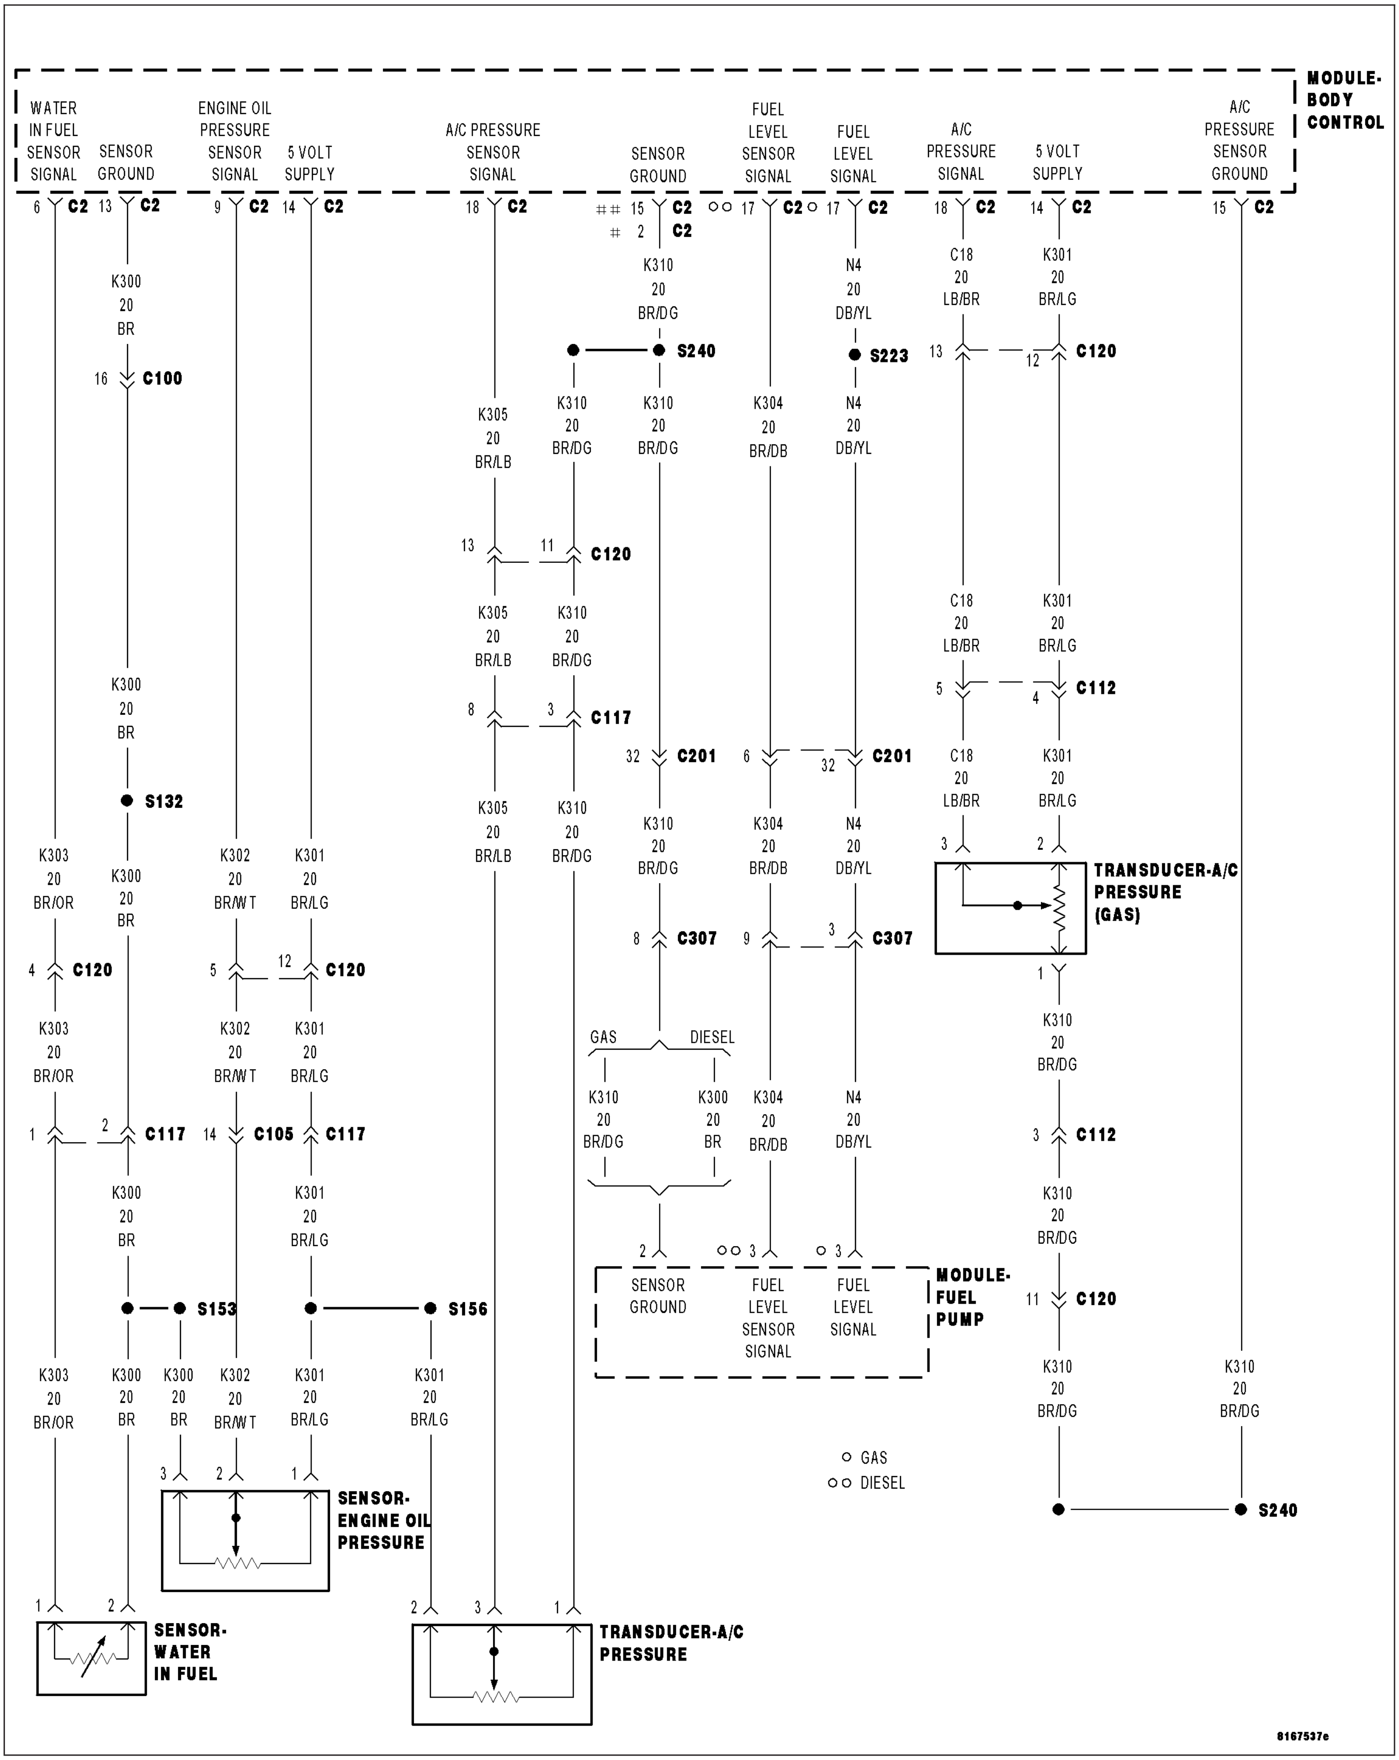
With the scan tool, read the ECM DTCs.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## P2264-WATER IN FUEL VOLTAGE ABOVE UPPER LIMIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The Water In Fuel Sensor signal is above 4.99 volts for 0.2 second.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| WATER IN FUEL SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE |
| WATER IN FUEL SENSOR SIGNAL CIRCUIT OPEN |
| WATER IN FUEL SENSOR GROUND CIRCUIT OPEN |
| WATER IN FUEL SENSOR |
| FRONT CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Turn the ignition off, wait 10 seconds, then turn the ignition on.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. WATER IN FUEL SENSOR SIGNAL CIRCUIT SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the BCM C2 harness connector.

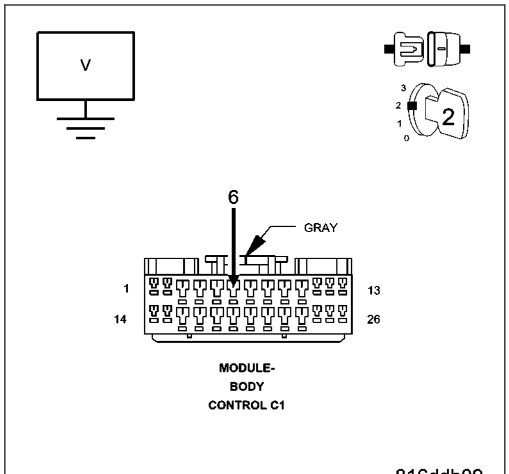
Disconnect the Water In Fuel Sensor harness connector.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage between ground and the Water In Fuel Sensor Signal circuit.



816ddb09

**Is the voltage below 0.5 volt?**

**Yes** >> Go To 3

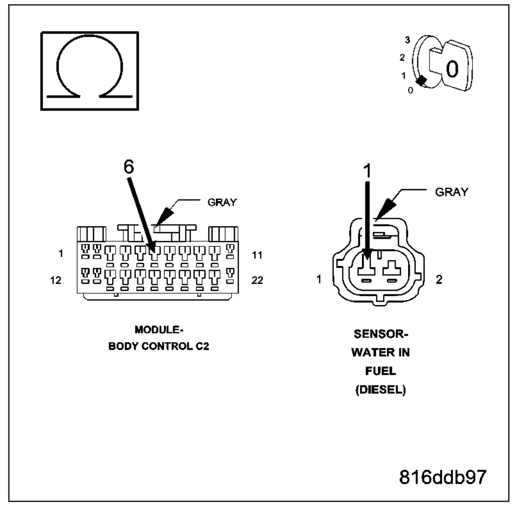
**No** >> Repair the Water In Fuel Sensor Signal circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. WATER IN FUEL SENSOR SIGNAL CIRCUIT OPEN

Turn the ignition off.

Measure the resistance of the Water In Fuel Sensor Signal circuit between the Water In Fuel sensor harness connecto and the BCM C2 harness connector.



**Is the resistance below 10.0 ohms?**

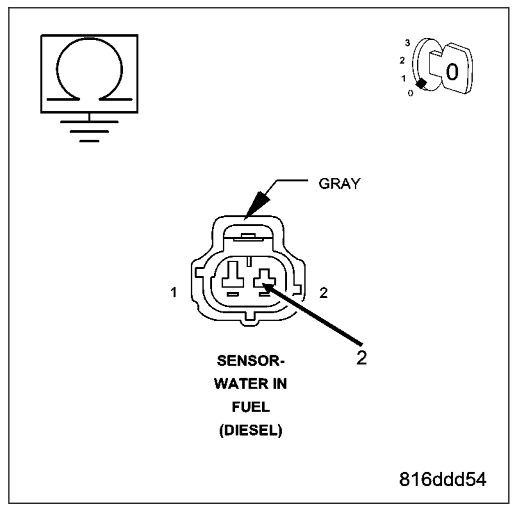
**Yes** >> Go To 4

**No** >> Repair the Water In Fuel Sensor Signal circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. WATER IN FUEL SENSOR GROUND CIRCUIT OPEN

Turn the ignition off.

Measure the resistance between ground and the Water In Fuel Sensor Ground circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the Water In Fuel Sensor Ground circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. WATER IN FUEL SENSOR

Turn the ignition off.

Disconnect the Water In Fuel Sensor harness connector.

Turn the ignition on.

With the scan tool, read and record the Water In Fuel Sensor voltage.

**NOTE: The Water In Fuel Sensor voltage should be 5.0 ± 0.3 volts with the sensor harness connector disconnected.**

Connect a jumper wire across the Water In Fuel Sensor harness connector.

With the scan tool, read the Water In Fuel Sensor voltage.

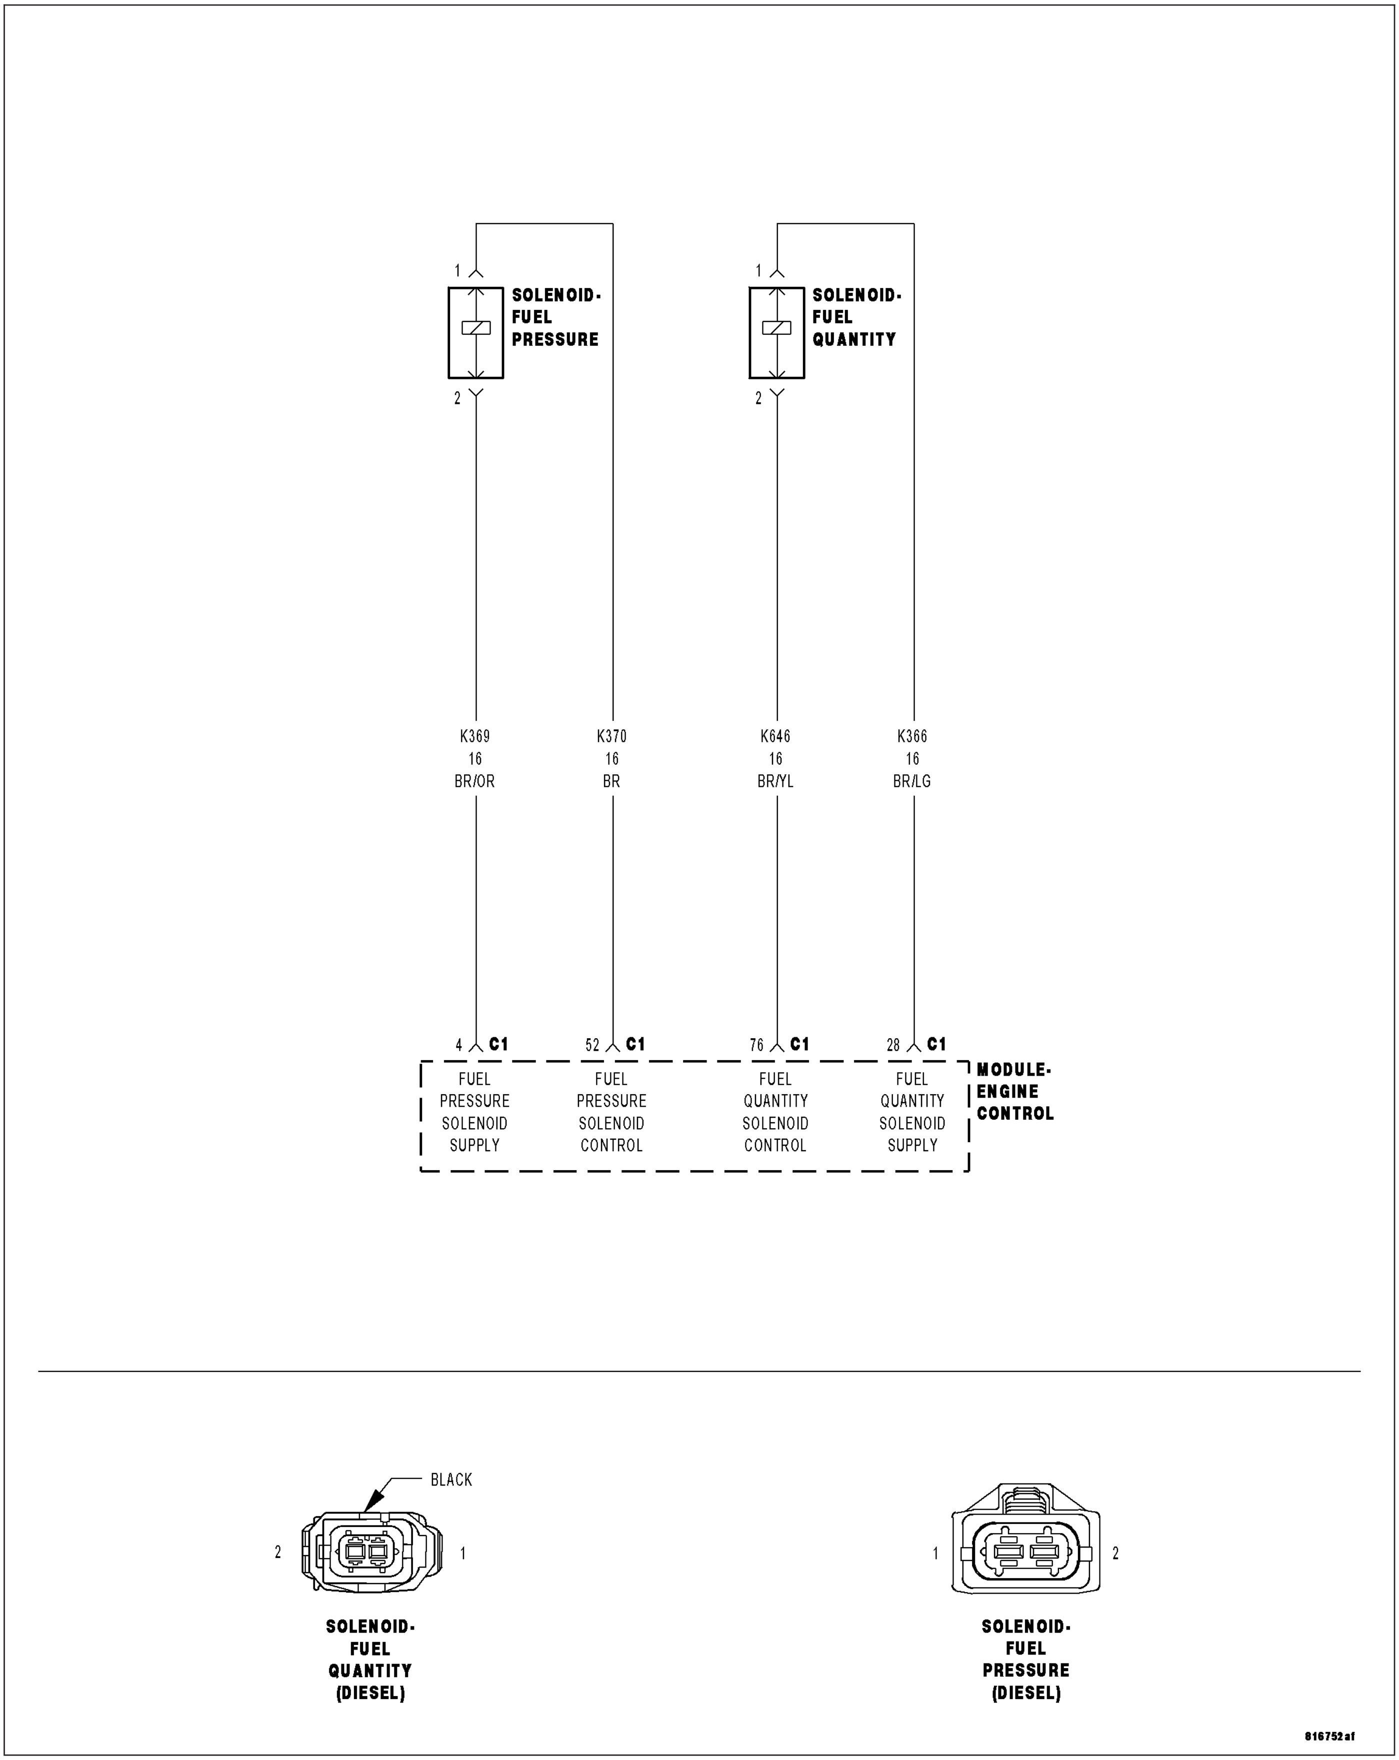
**NOTE: The Water In Fuel Sensor voltage should be less then 0.5 volt with the jumper wire connected.**

**Is the Water In Fuel voltage less than 0.5 volt?**

**Yes** >> Replace the Water In Fuel Sensor in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Front Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P2294-FUEL PRESSURE SOLENOID OPEN CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Fuel Pressure Solenoid command off.
- **Set Condition:**
  The ECM does not detect voltage on the Fuel Pressure Solenoid Control circuit for 0.28 second.

| Possible Causes |
|---|
| FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO GROUND |
| FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE |
| FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TOGETHER |
| FUEL PRESSURE SOLENOID OPEN CIRCUIT(S) |
| INTERMITTENT CONDITION |
| FUEL PRESSURE SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Start the engine several times, turning the ignition off for at least 30 seconds between each run cycle.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**Are the ECM power and ground circuits functioning properly?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING THE ECM POWER AND GROUND CIRCUITS Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

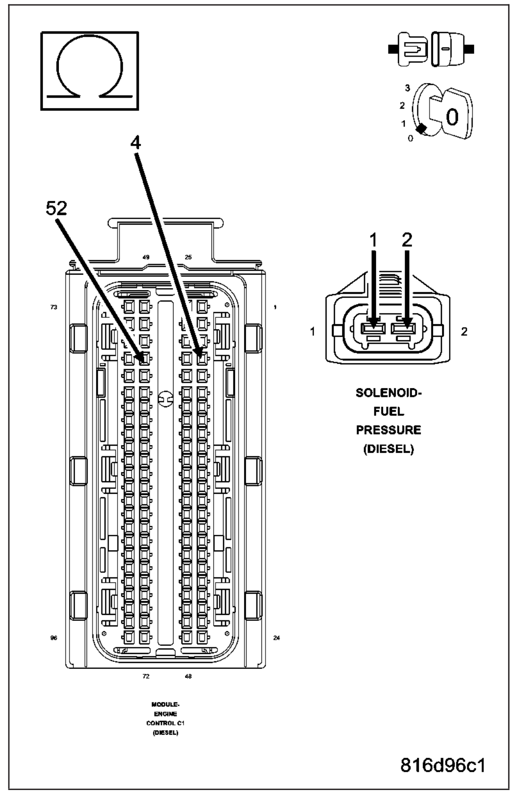
## 3. FUEL PRESSURE SOLENOID CIRCUIT(S) OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Pressure Solenoid harness connector.

Measure the resistance of each of the Fuel Pressure Solenoid circuits between the ECM harness connector and the Fuel Pressure Solenoid harness connector.



**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 4

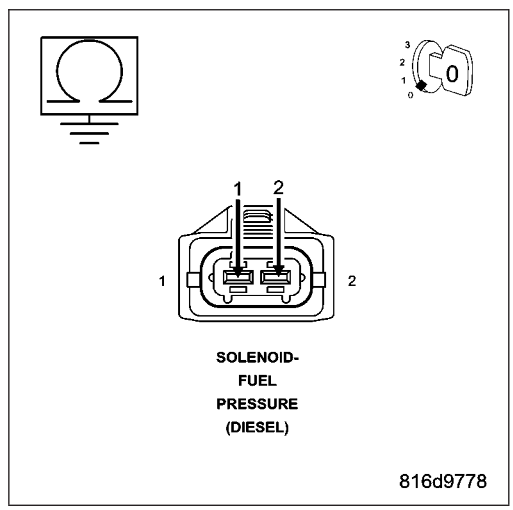
**No** >> Repair the circuit(s) that measured above 10.0 ohms for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO GROUND

Turn the ignition off.

Measure the resistance between ground and each of the Fuel Pressure Solenoid circuits.



**Is the resistance above 1000 ohms for each measurement?**

**Yes** >> Go To 5

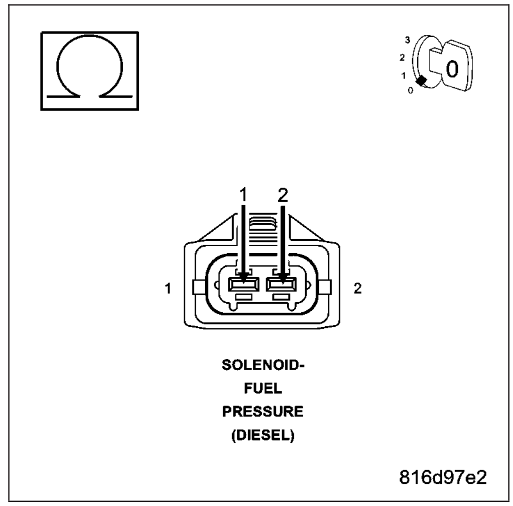
**No** >> Repair the circuit(s) that measured below 1000 ohms for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TOGETHER

Turn the ignition off.

Measure the resistance between the Fuel Pressure Solenoid circuits.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Fuel Pressure Solenoid circuits for a short together.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE

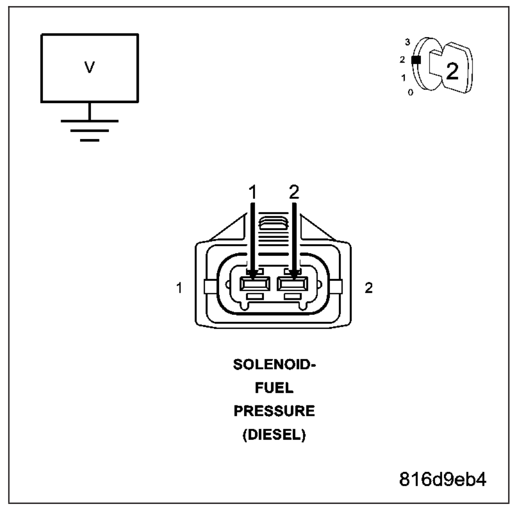
Turn the ignition off.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage each of the Fuel Pressure Solenoid circuits.



**Is the voltage below 1.0 volt for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the circuit(s) that measured above 1.0 volts for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. FUEL PRESSURE SOLENOID

Turn the ignition off.

Remove the jumper wire from the ASD relay connector.

Reinstall the ASD relay.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P2294-FUEL PRESSURE SOLENOID OPEN CIRCUIT.**

Turn the ignition off.

Connect a jumper wire between cavity 1 and cavity 2 of the Fuel Pressure Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

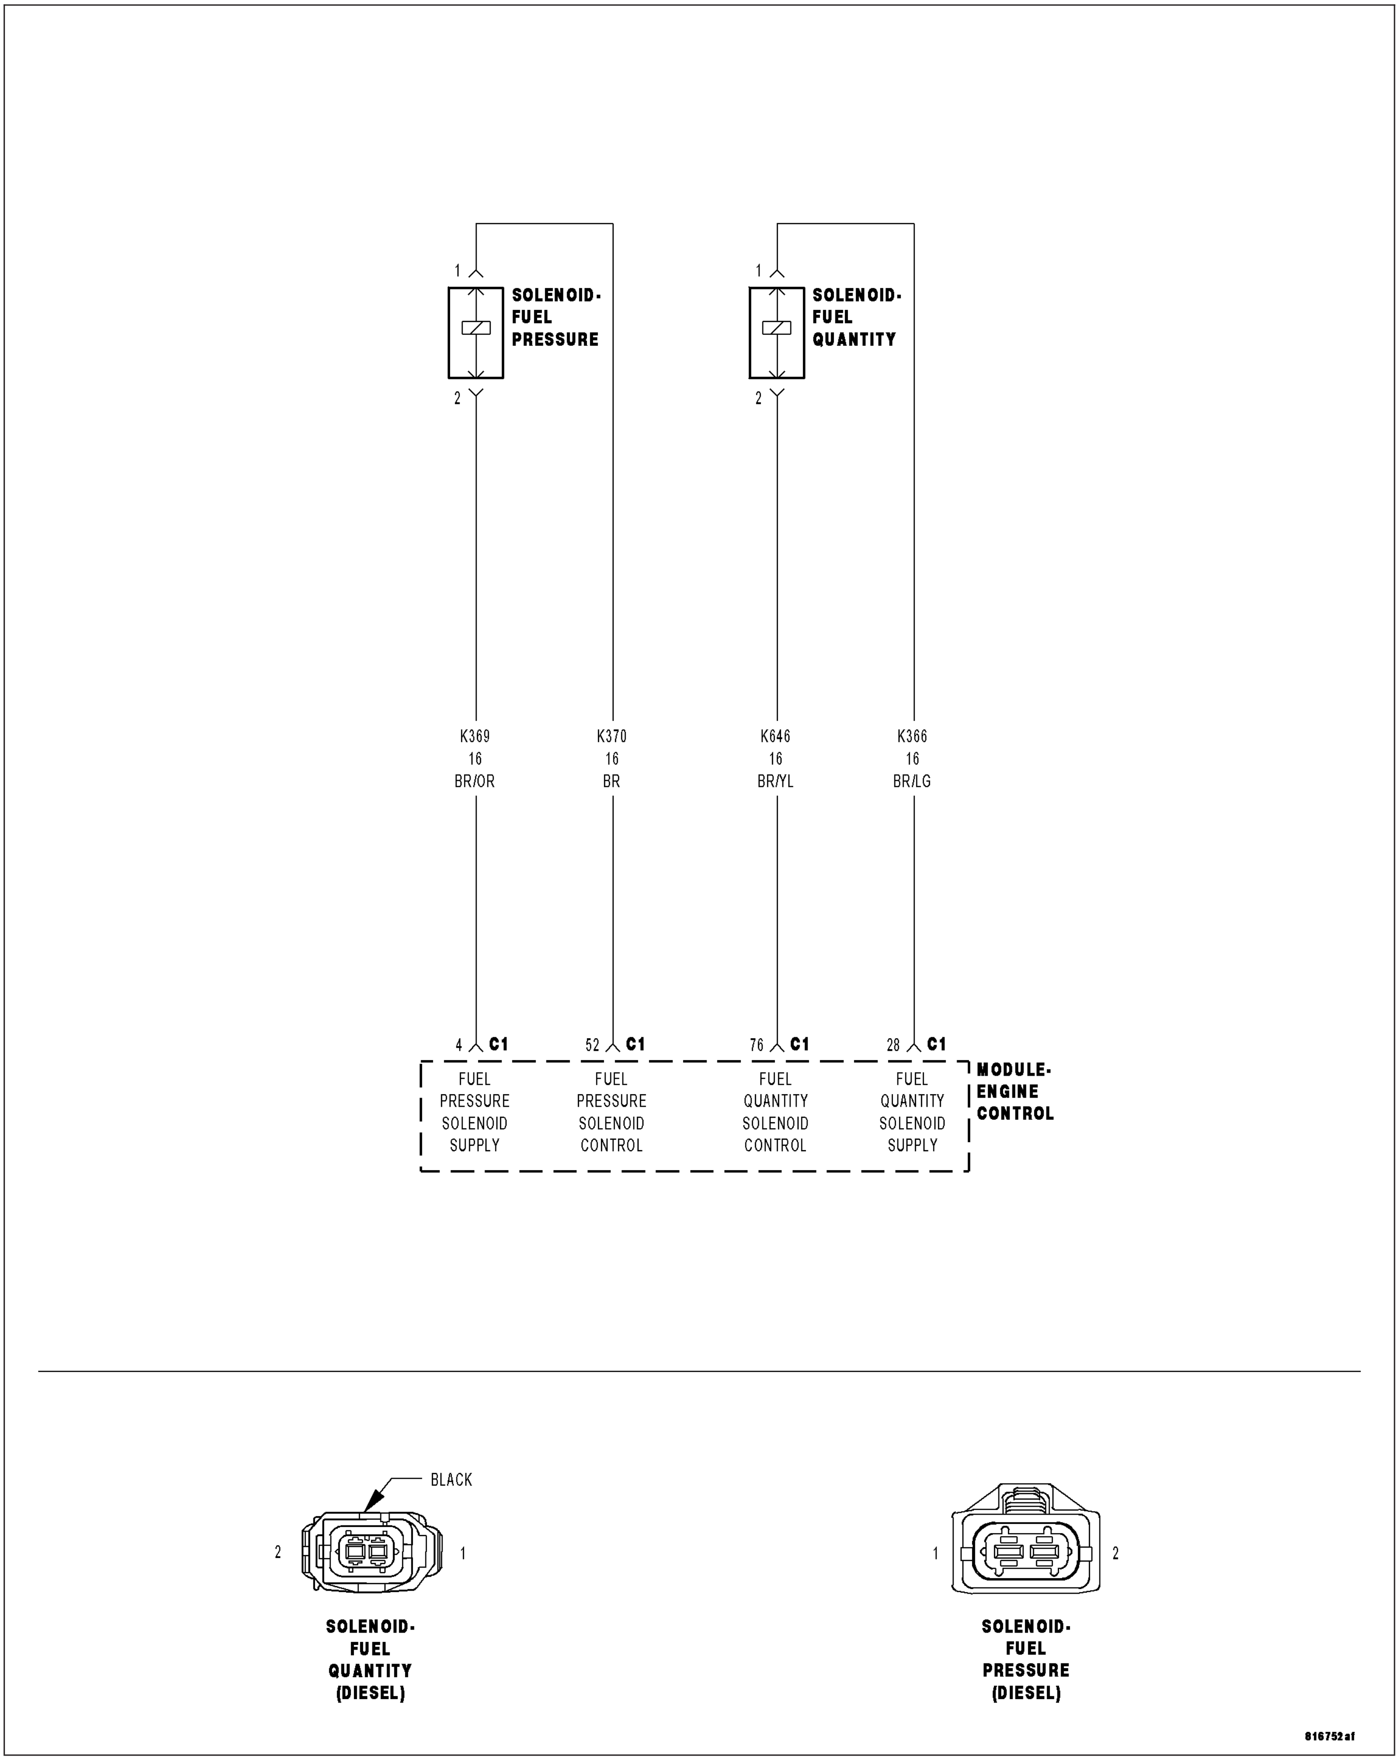
**NOTE: The scan tool should display P2296-FUEL PRESSURE SOLENOID SHORT CIRCUIT.**

**Does the scan tool display the appropriate DTC for each condition?**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P2295-FUEL PRESSURE SOLENOID SHORT TO GROUND



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Fuel Pressure Solenoid command off.
- **Set Condition:**
  The ECM detects a short to ground on the Fuel Pressure Solenoid Control circuit for 0.22 second.

| Possible Causes |
|---|
| FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO GROUND |
| FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE |
| FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TOGETHER |
| FUEL PRESSURE SOLENOID OPEN CIRCUIT(S) |
| INTERMITTENT CONDITION |
| FUEL PRESSURE SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Start the engine several times, turning the ignition off for at least 30 seconds between each run cycle.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**Are the ECM power and ground circuits functioning properly?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING THE ECM POWER AND GROUND CIRCUITS Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

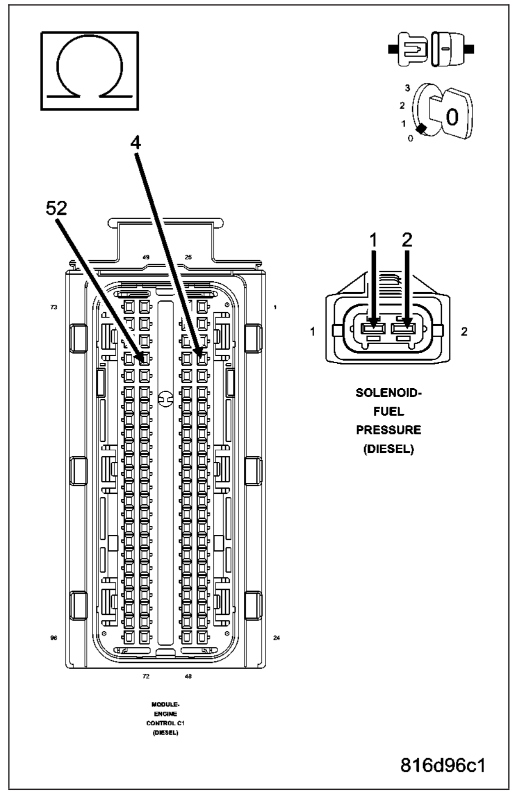
## 3. FUEL PRESSURE SOLENOID CIRCUIT(S) OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Pressure Solenoid harness connector.

Measure the resistance of each of the Fuel Pressure Solenoid circuits between the ECM harness connector and the Fuel Pressure Solenoid harness connector.



**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 4

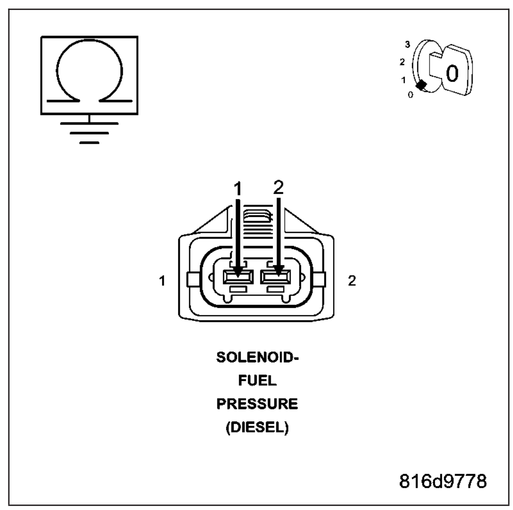
**No** >> Repair the circuit(s) that measured above 10.0 ohms for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO GROUND

Turn the ignition off.

Measure the resistance between ground and each of the Fuel Pressure Solenoid circuits.



**Is the resistance above 1000 ohms for each measurement?**

**Yes** >> Go To 5

**No** >> Repair the circuit(s) that measured below 1000 ohms for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TOGETHER

Turn the ignition off.

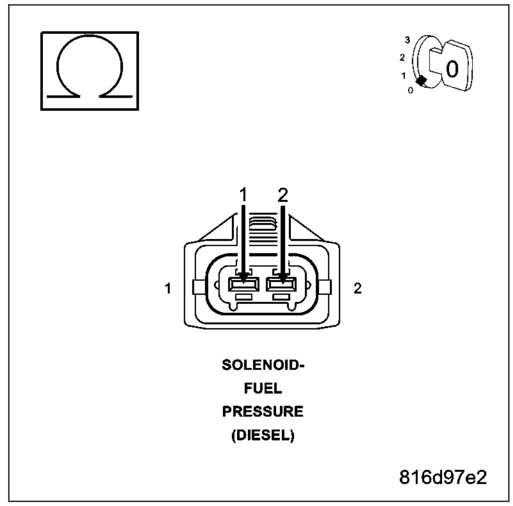
Measure the resistance between the Fuel Pressure Solenoid circuits.

**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Fuel Pressure Solenoid circuits for a short together.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 6. FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE

Turn the ignition off.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

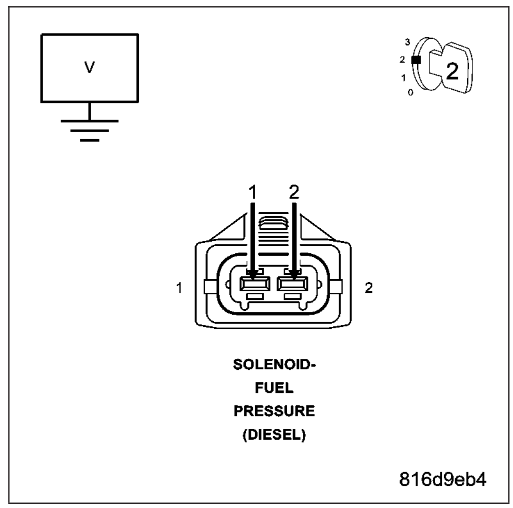
Measure the voltage each of the Fuel Pressure Solenoid circuits.

**Is the voltage below 1.0 volt for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the circuit(s) that measured above 1.0 volts for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 7. FUEL PRESSURE SOLENOID

Turn the ignition off.

Remove the jumper wire from the ASD relay connector.

Reinstall the ASD relay.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P2294-FUEL PRESSURE SOLENOID OPEN CIRCUIT.**

Turn the ignition off.

Connect a jumper wire between cavity 1 and cavity 2 of the Fuel Pressure Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

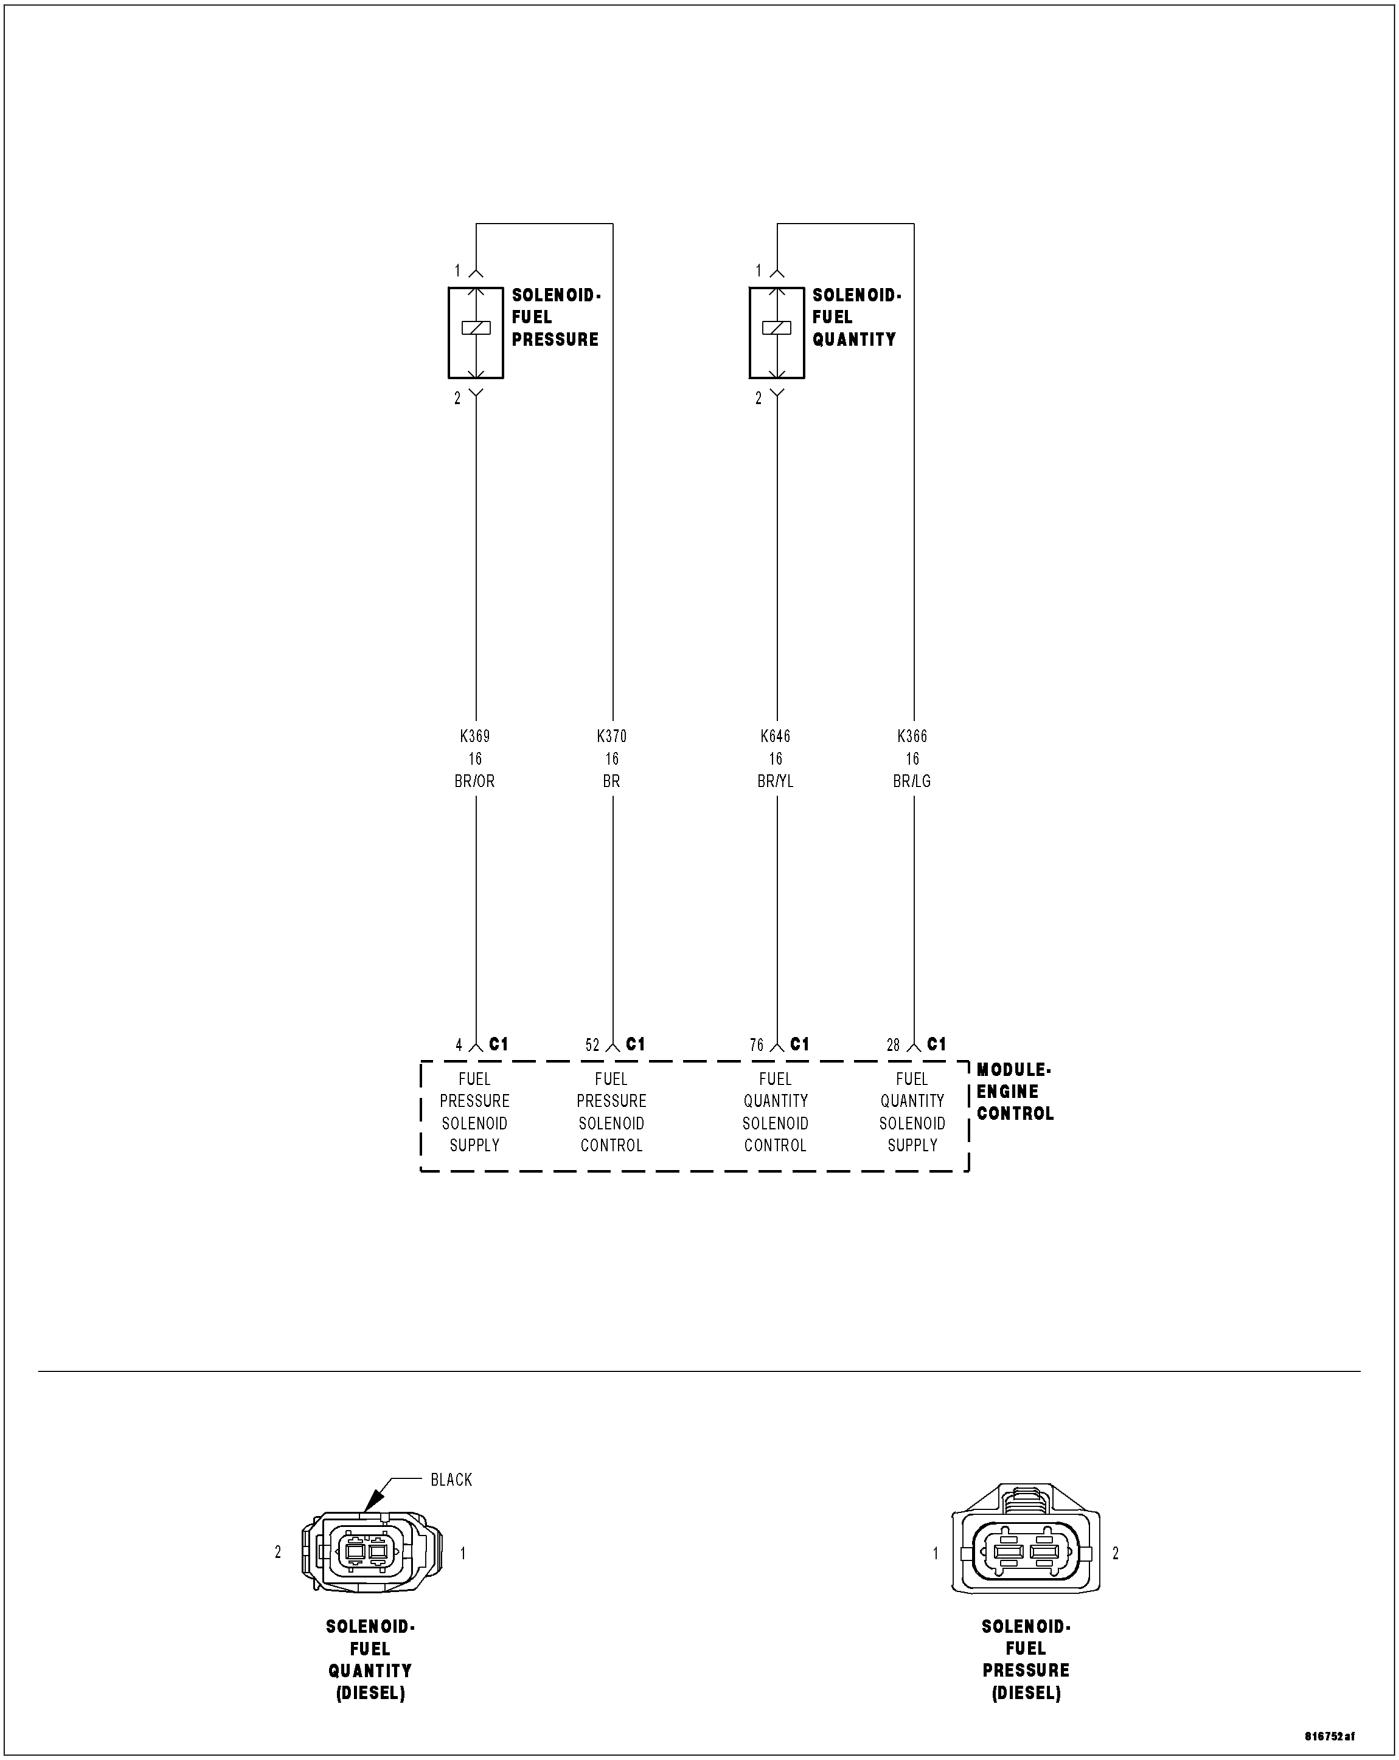
**NOTE: The scan tool should display P2296-FUEL PRESSURE SOLENOID SHORT CIRCUIT.**

**Does the scan tool display the appropriate DTC for each condition?**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P2296-FUEL PRESSURE SOLENOID SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Fuel Pressure Solenoid command on.
- **Set Condition:**
  The ECM detects excessive current on the Fuel Pressure Solenoid Control circuit for 0.28 second.

| Possible Causes |
| --- |
| FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO GROUND |
| FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE |
| FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TOGETHER |
| FUEL PRESSURE SOLENOID OPEN CIRCUIT(S) |
| INTERMITTENT CONDITION |
| FUEL PRESSURE SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

**WARNING: HIGH-PRESSURE FUEL LINES DELIVER DIESEL FUEL UNDER EXTREME PRESSURE FROM THE INJECTION PUMP TO THE FUEL INJECTORS. THIS MAY BE AS HIGH AS 23,200 PSI (1600 BAR). USE EXTREME CAUTION WHEN INSPECTING FOR HIGH-PRESSURE FUEL LEAKS.**

**WARNING: FUEL UNDER THIS AMOUNT OF PRESSURE CAN PENETRATE SKIN CAUSING PERSONAL INJURY OR DEATH. INSPECT FOR HIGH-PRESSURE FUEL LEAKS WITH A SHEET OF CARDBOARD. WEAR SAFETY GOGGLES AND ADEQUATE PROTECTIVE CLOTHING WHEN SERVICING FUEL SYSTEM.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Start the engine several times, turning the ignition off for at least 30 seconds between each run cycle.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECKING FOR OTHER DTCS

**NOTE: An open ASD power supply to the ECM will cause multiple DTC's including this DTC to set.**

**NOTE: Check the ECM for other DTC's. If other DTC's are set with this DTC refer to the symptom list and perform the CHECKING THE ECM POWER AND GROUND CIRCUITS test before continuing.**

**Are the ECM power and ground circuits functioning properly?**

**Yes** >> Go To 3

**No** >> Refer to the *CHECKING THE ECM POWER AND GROUND CIRCUITS Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. FUEL PRESSURE SOLENOID CIRCUIT(S) OPEN

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Pressure Solenoid harness connector.

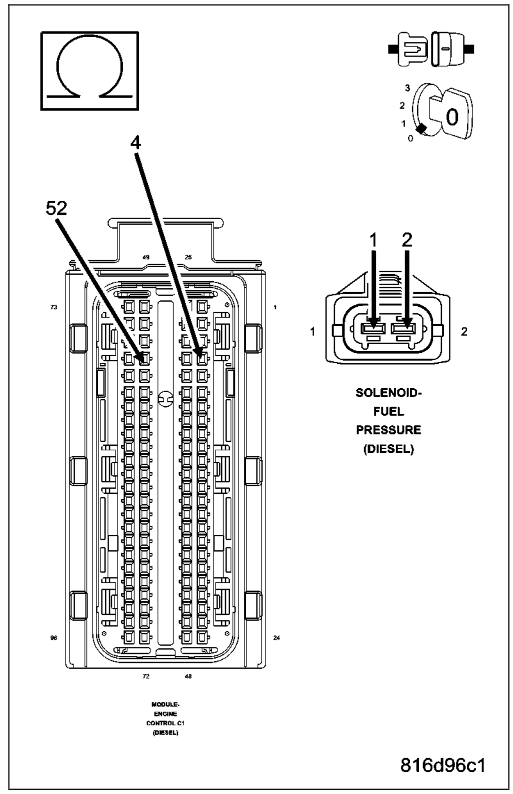
Measure the resistance of each of the Fuel Pressure Solenoid circuits between the ECM harness connector and the Fuel Pressure Solenoid harness connector.

**Is the resistance below 10.0 ohms for each measurement?**

**Yes** >> Go To 4

**No** >> Repair the circuit(s) that measured above 10.0 ohms for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



## 4. FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Pressure Solenoid harness connector.

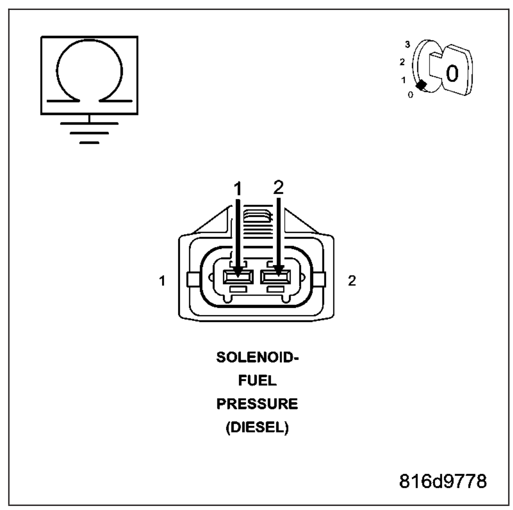
Measure the resistance between ground and each of the Fuel Pressure Solenoid circuits.

**Is the resistance above 1000 ohms for each measurement?**

**Yes** >> Go To 5

**No** >> Repair the circuit(s) that measured below 1000 ohms for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).



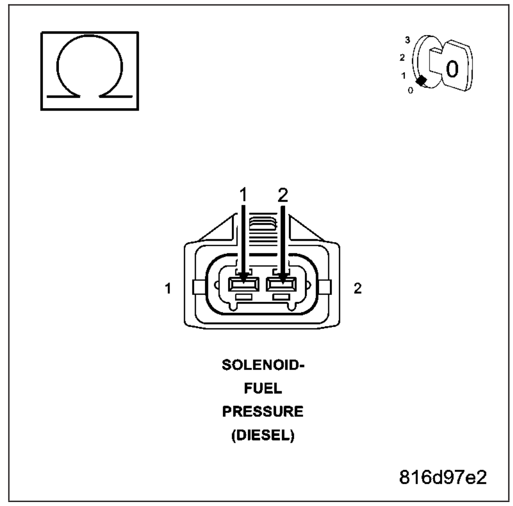
## 5. FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TOGETHER

Turn the ignition off.

Disconnect the ECM harness connectors.

Disconnect the Fuel Pressure Solenoid harness connector.

Measure the resistance between the Fuel Pressure Solenoid circuits.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 6

**No** >> Repair the Fuel Pressure Solenoid circuits for a short together.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 6. FUEL PRESSURE SOLENOID CIRCUIT(S) SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the ECM harness connectors.

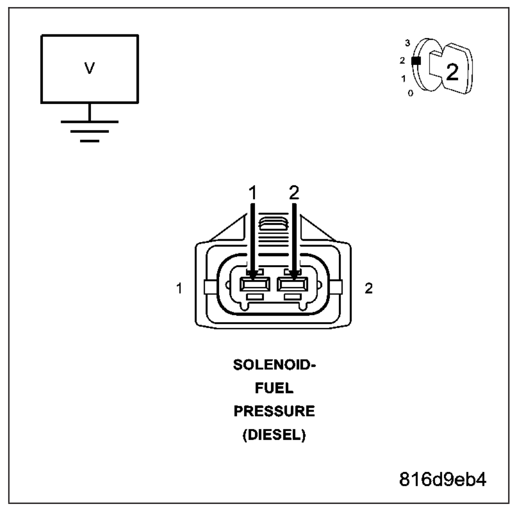
Disconnect the Fuel Pressure Solenoid harness connector.

Remove the ASD Relay.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage each of the Fuel Pressure Solenoid circuits.



**Is the voltage below 1.0 volt for each measurement?**

**Yes** >> Go To 7

**No** >> Repair the circuit(s) that measured above 1.0 volts for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 7. FUEL PRESSURE SOLENOID

Turn the ignition off.

Remove the jumper wire from the ASD relay connector.

Reinstall the ASD relay.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

**NOTE: The scan tool should display P2294-FUEL PRESSURE SOLENOID OPEN CIRCUIT.**

Turn the ignition off.

Connect a jumper wire between cavity 1 and cavity 2 of the Fuel Pressure Solenoid harness connector.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Monitor the scan tool for ECM DTCs.

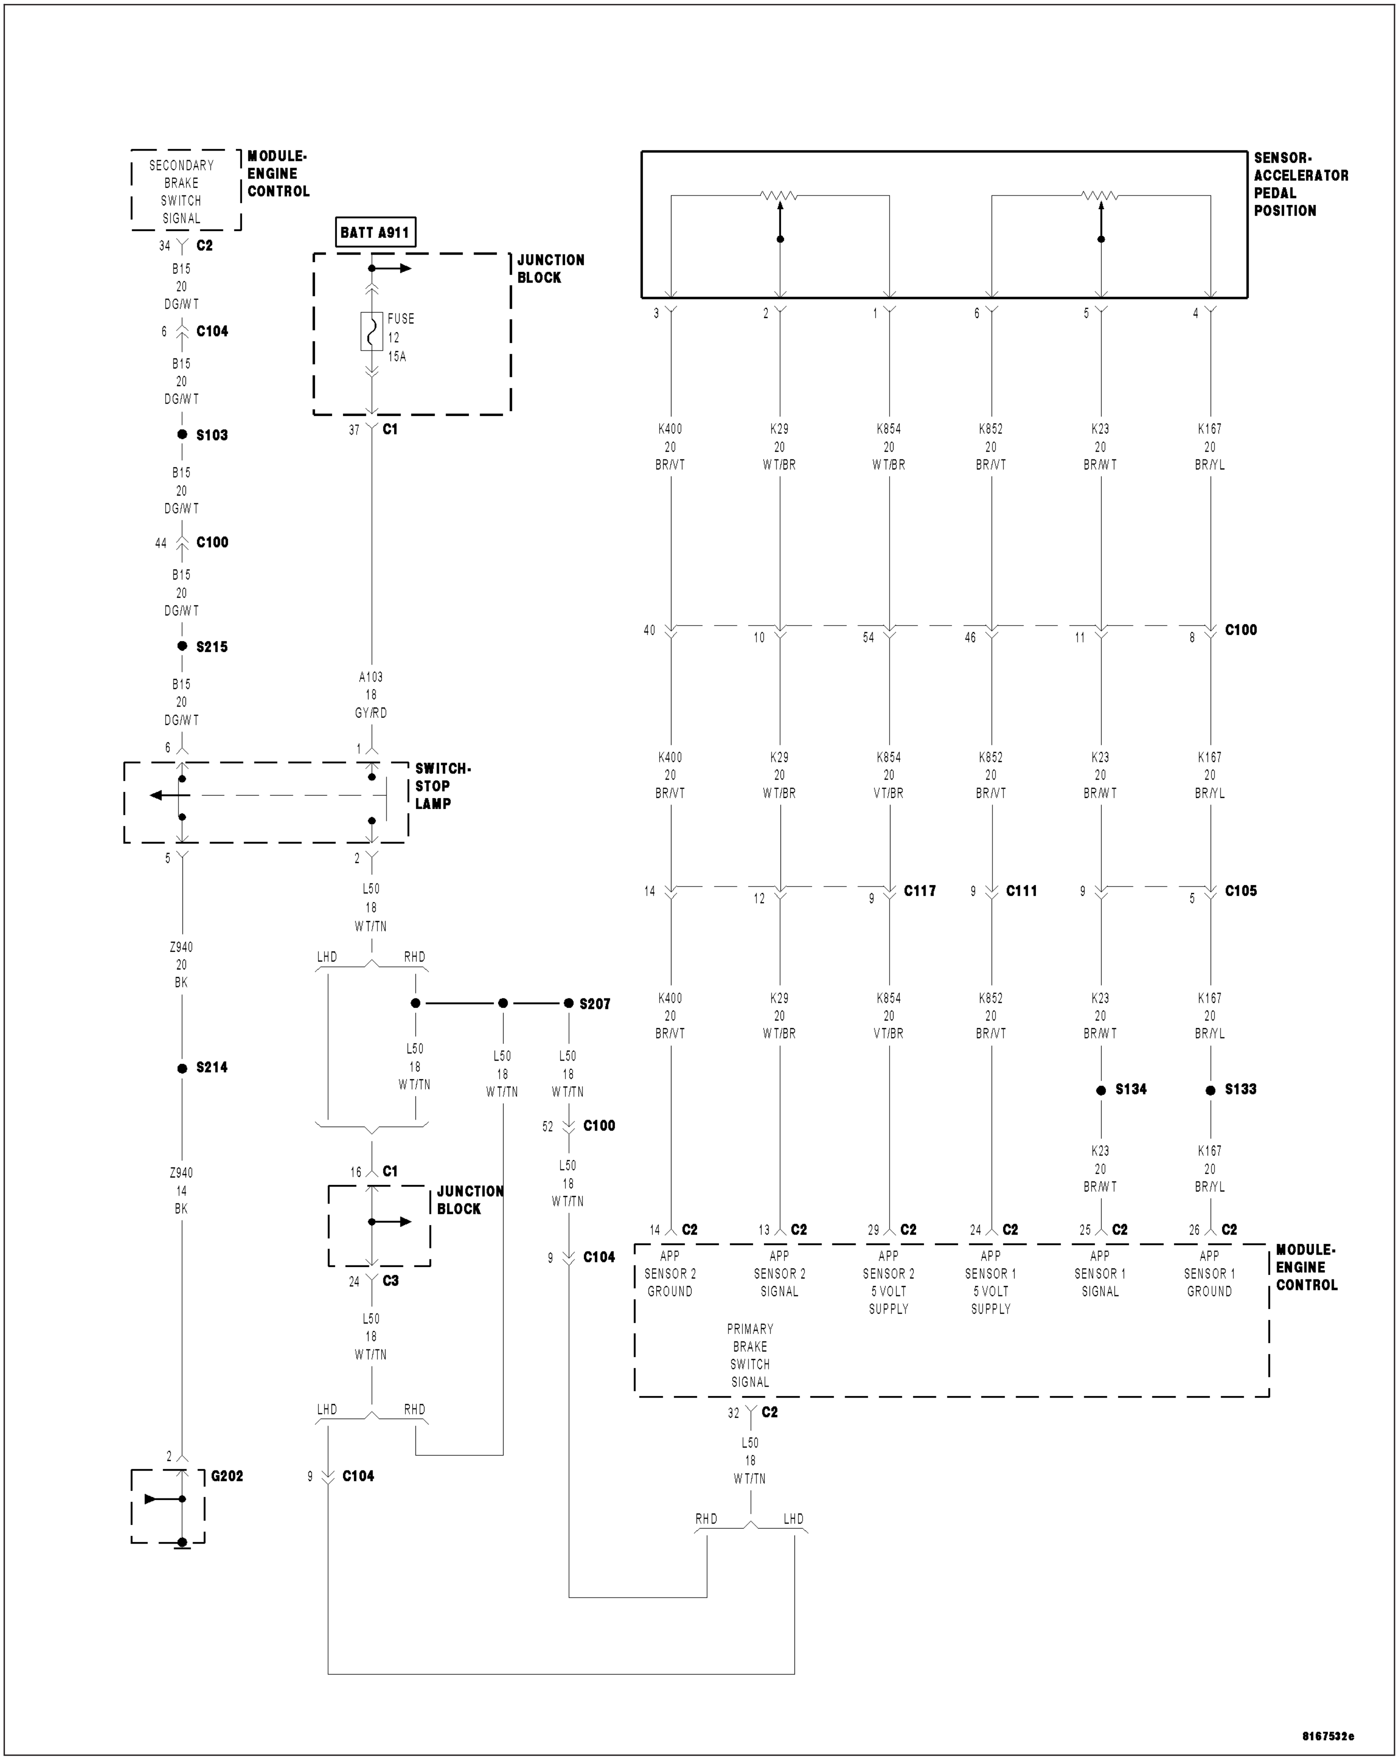
**NOTE: The scan tool should display P2296-FUEL PRESSURE SOLENOID SHORT CIRCUIT.**

**Does the scan tool display the appropriate DTC for each condition?**

**Yes** >> Replace the Fuel Pressure Solenoid in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

# P2299- BRAKE PEDAL POSITION/ACCELERATOR PEDAL POSITION INCOMPATIBLE



For a complete wiring diagram **Refer to Section 8W**.

- **When Monitored:**
  With the engine running (engine speed above 570 rpm). No other APP or Brake Signal DTC's. Vehicle speed above 3 km/h.
- **Set Condition:**
  The ECM detects a brake signal input (brakes applied) and Accelerator Pedal Position above 3% at the same time for 15.0 seconds.

| Possible Causes |
|---|
| ACCELERATOR PEDAL POSITION SENSOR |
| ACCELERATOR PEDAL OBSTRUCTION |
| BRAKE SWITCH ADJUSTMENT |
| BRAKE SWITCH |
| INTERMITTENT WIRING/CONNECTOR PROBLEM |

**Always perform the Pre-Diagnostic Troubleshooting procedure before proceeding. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)**

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: This DTC may be set if the vehicle operator is "riding" the brake pedal (driving with both feet).**

With the scan tool, clear all ECM DTCs.

Test drive the vehicle performing several stop-and-go operations.

With the scan tool, view active ECM DTCs.

**Does the scan tool display this DTC?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. CHECK BRAKE SWITCH OPERATION

**NOTE: This DTC may be set if the Brake Switch is not properly adjusted. Check Brake Switch adjustment before continuing.**

Turn the ignition on.

With the scan tool, read the Primary and Secondary Brake Switch Input.

**Are the Primary and Secondary Brake Switch inputs operating properly?**

**Yes** >> Go To 3

**No** >> Refer to the Service Information Wiring to diagnose Brake Switch and/or Brake Switch wiring problem. Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 3. CHECK ACCELERATOR PEDAL MOVEMENT

Turn the ignition off.

Check the Accelerator Pedal for obstructions or other problem that could restrict pedal travel, cause binding or prohibit the pedal from traveling to the complete rest position.

**Were any of these problems found?**

**Yes** >> Repair or replace as necessary.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

**No** >> Go To 4

## 4. CHECK ACCELERATOR PEDAL POSITION SENSOR INPUT

Turn the ignition on.

**NOTE: The Accelerator Pedal must be at the complete rest position for this test. Ensure the pedal is at rest and free from any obstruction.**

With the scan tool, read the APP #1 and APP #2 percentages.

**Does the scan tool display below 2% for APP #1 and APP #2 percentages?**

**Yes** >> Go To 5

**No** >> Replace the Accelerator Pedal Position Sensor.
Perform the ECM Verification Test Ver. 1. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

## 5. INTERMITTENT APP SENSOR/BRAKE SWITCH

Turn the ignition on.

With the scan tool, read the APP #1 and APP #2 percentages

Fully depress and release the Accelerator Pedal several times.

With the scan tool, read the Primary and Secondary Brake Switch inputs.

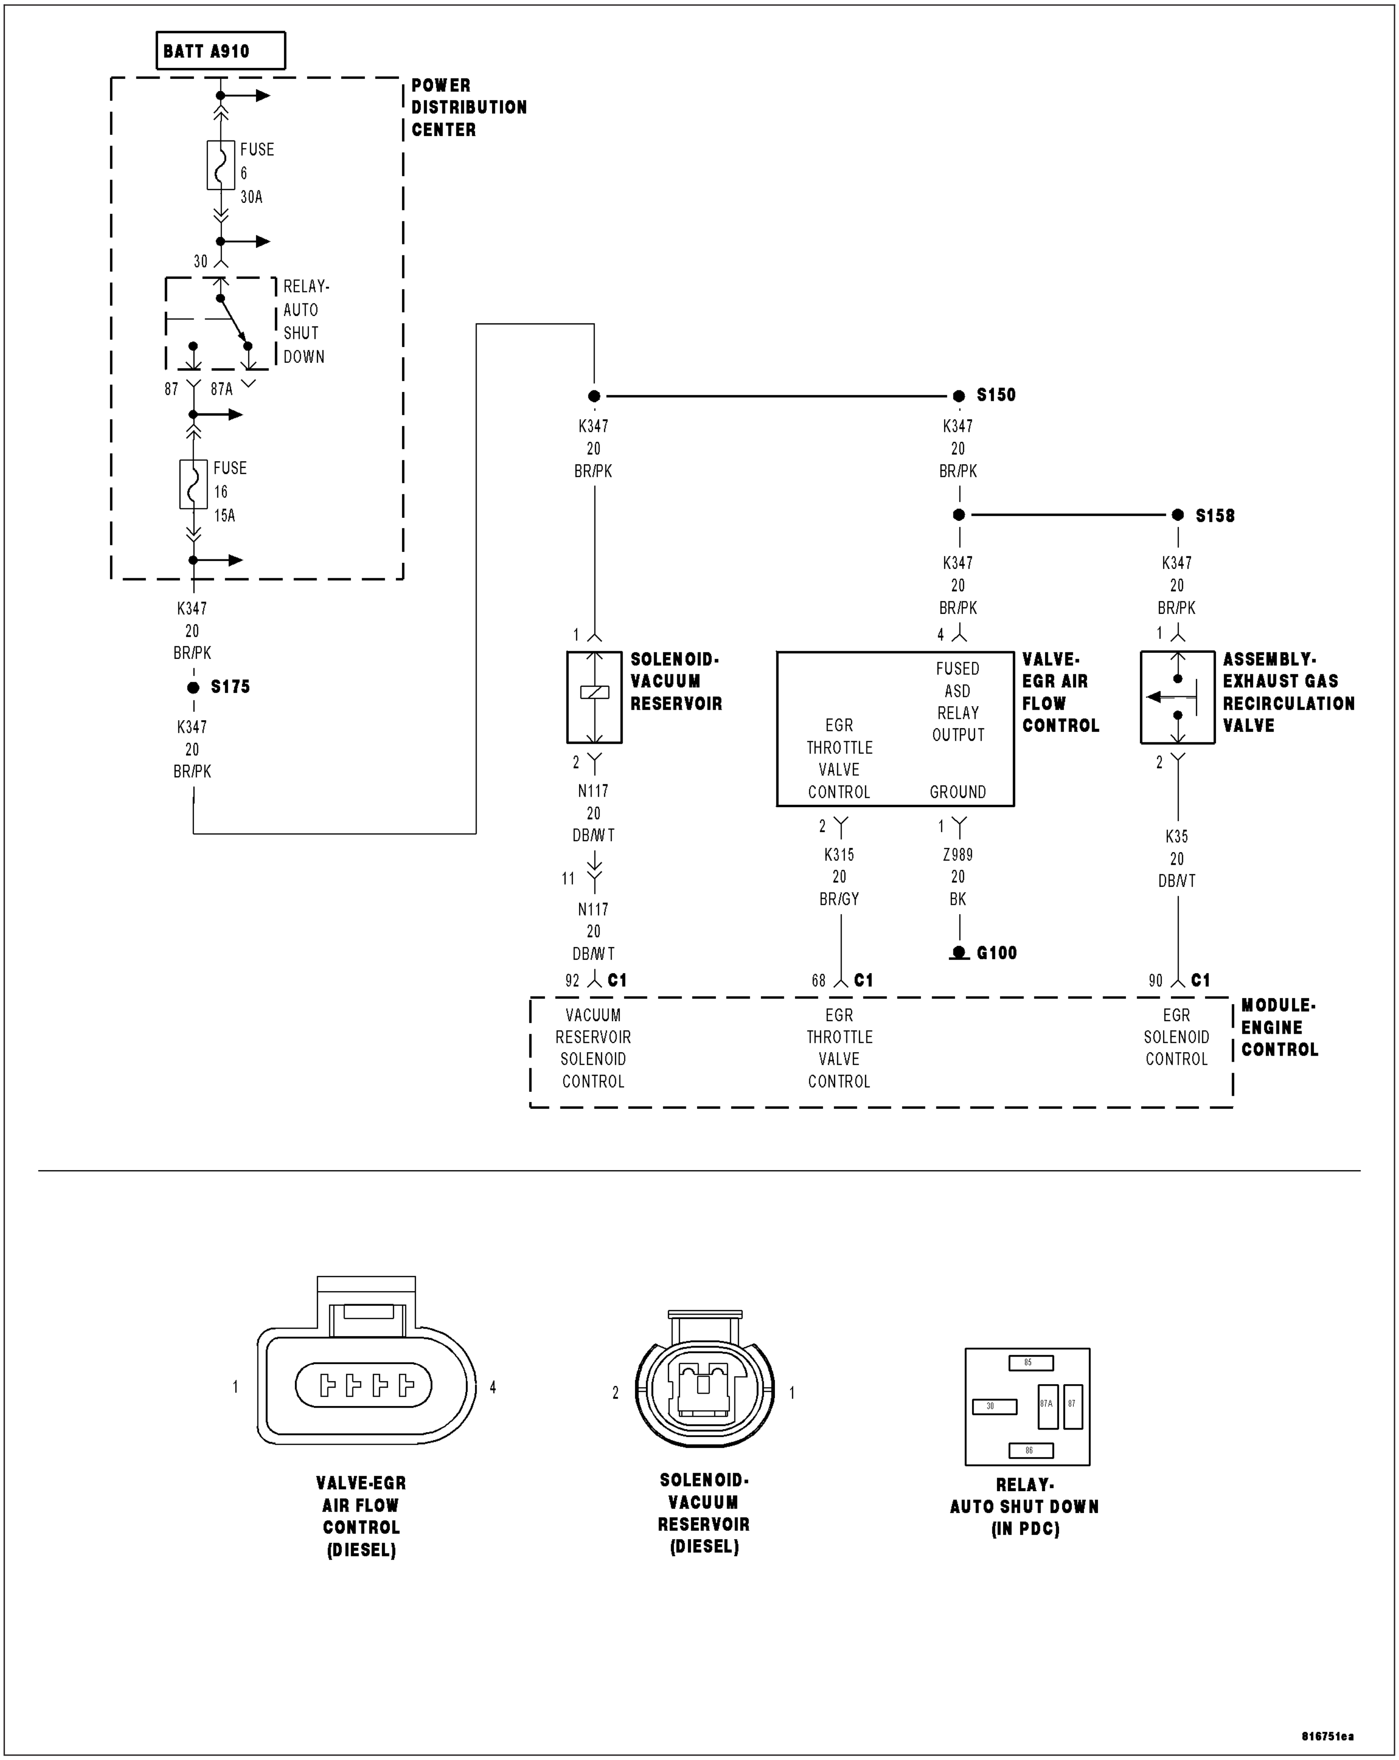
Fully depress and release the Brake Pedal several times.

**Were any problems found with the inputs during pedal actuation for the Brakes or Accelerator?**

**Yes** >> Repair or replace as necessary.

**No** >> Using the wiring diagrams check the connectors and wiring associated with the Accelerator Pedal Sensor and Brake Switch for damage, corrosion or other problems that could cause an intermittent DTC.

## P2525-VACUUM RESERVOIR SOLENOID OPEN CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Vacuum Reservoir Solenoid command off.
- **Set Condition:**
  The ECM does not detect voltage on the Vacuum Reservoir Solenoid Control circuit.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| VR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND |
| VR SOLENOID CONTROL CIRCUIT OPEN |
| VACUUM RESERVOIR SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Start the engine several times, turning the ignition off for at least 10 seconds between engine run cycles.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

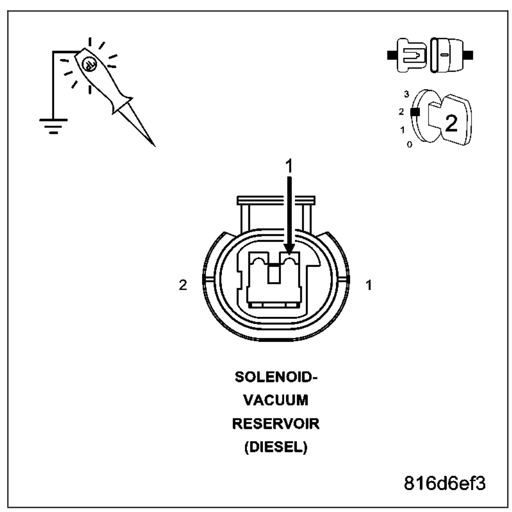
### 2. ASD OUTPUT CKT OPEN

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Turn the ignition on.

Using a 12-volt test light connected to ground, check the ASD Relay Output circuit at the Vacuum Reservoir Solenoid harness connector.



**Does the test light illuminate brightly?**

**Yes** >> Go To 3

**No** >> Repair the ASD Relay Output circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

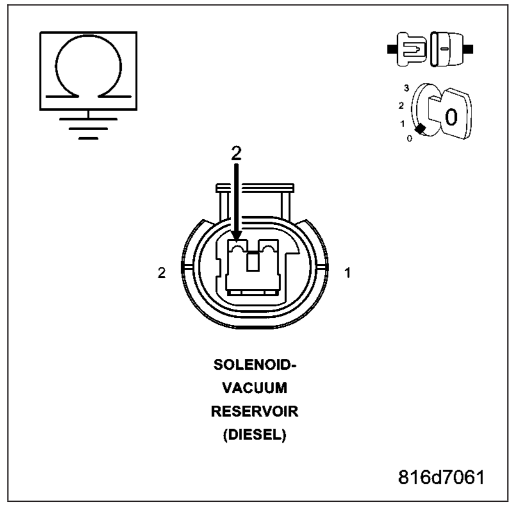
## 3. VACUUM RESERVOIR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Vacuum Reservoir Solenoid Control circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Vacuum Reservoir Solenoid Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

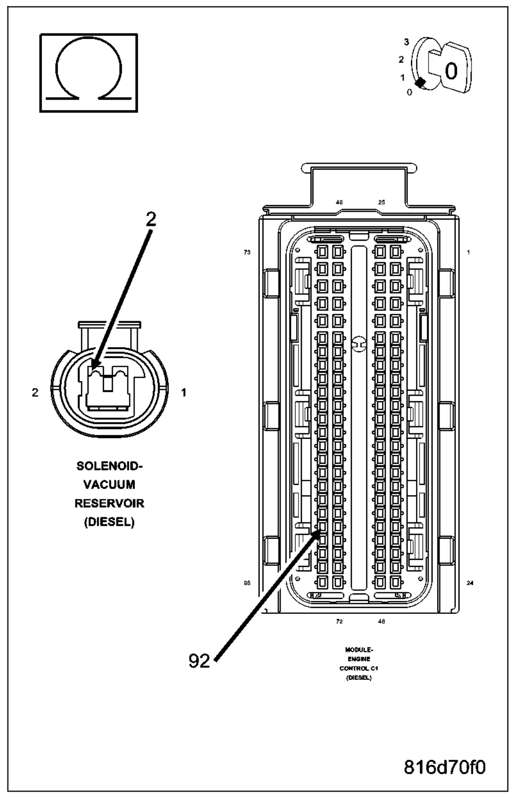
## 4. VACUUM RESERVOIR SOLENOID CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Vacuum Reservoir Solenoid Control circuit.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the Vacuum reservoir Solenoid Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. VACUUM RESERVOIR SOLENOID

Turn the ignition off.

Install a substitute Vacuum Reservoir Solenoid in place of the vehicle's Vacuum Reservoir Solenoid.

**NOTE: Ensure the ECM and Vacuum Reservoir Solenoid harness connectors are connected.**

Turn the ignition on.

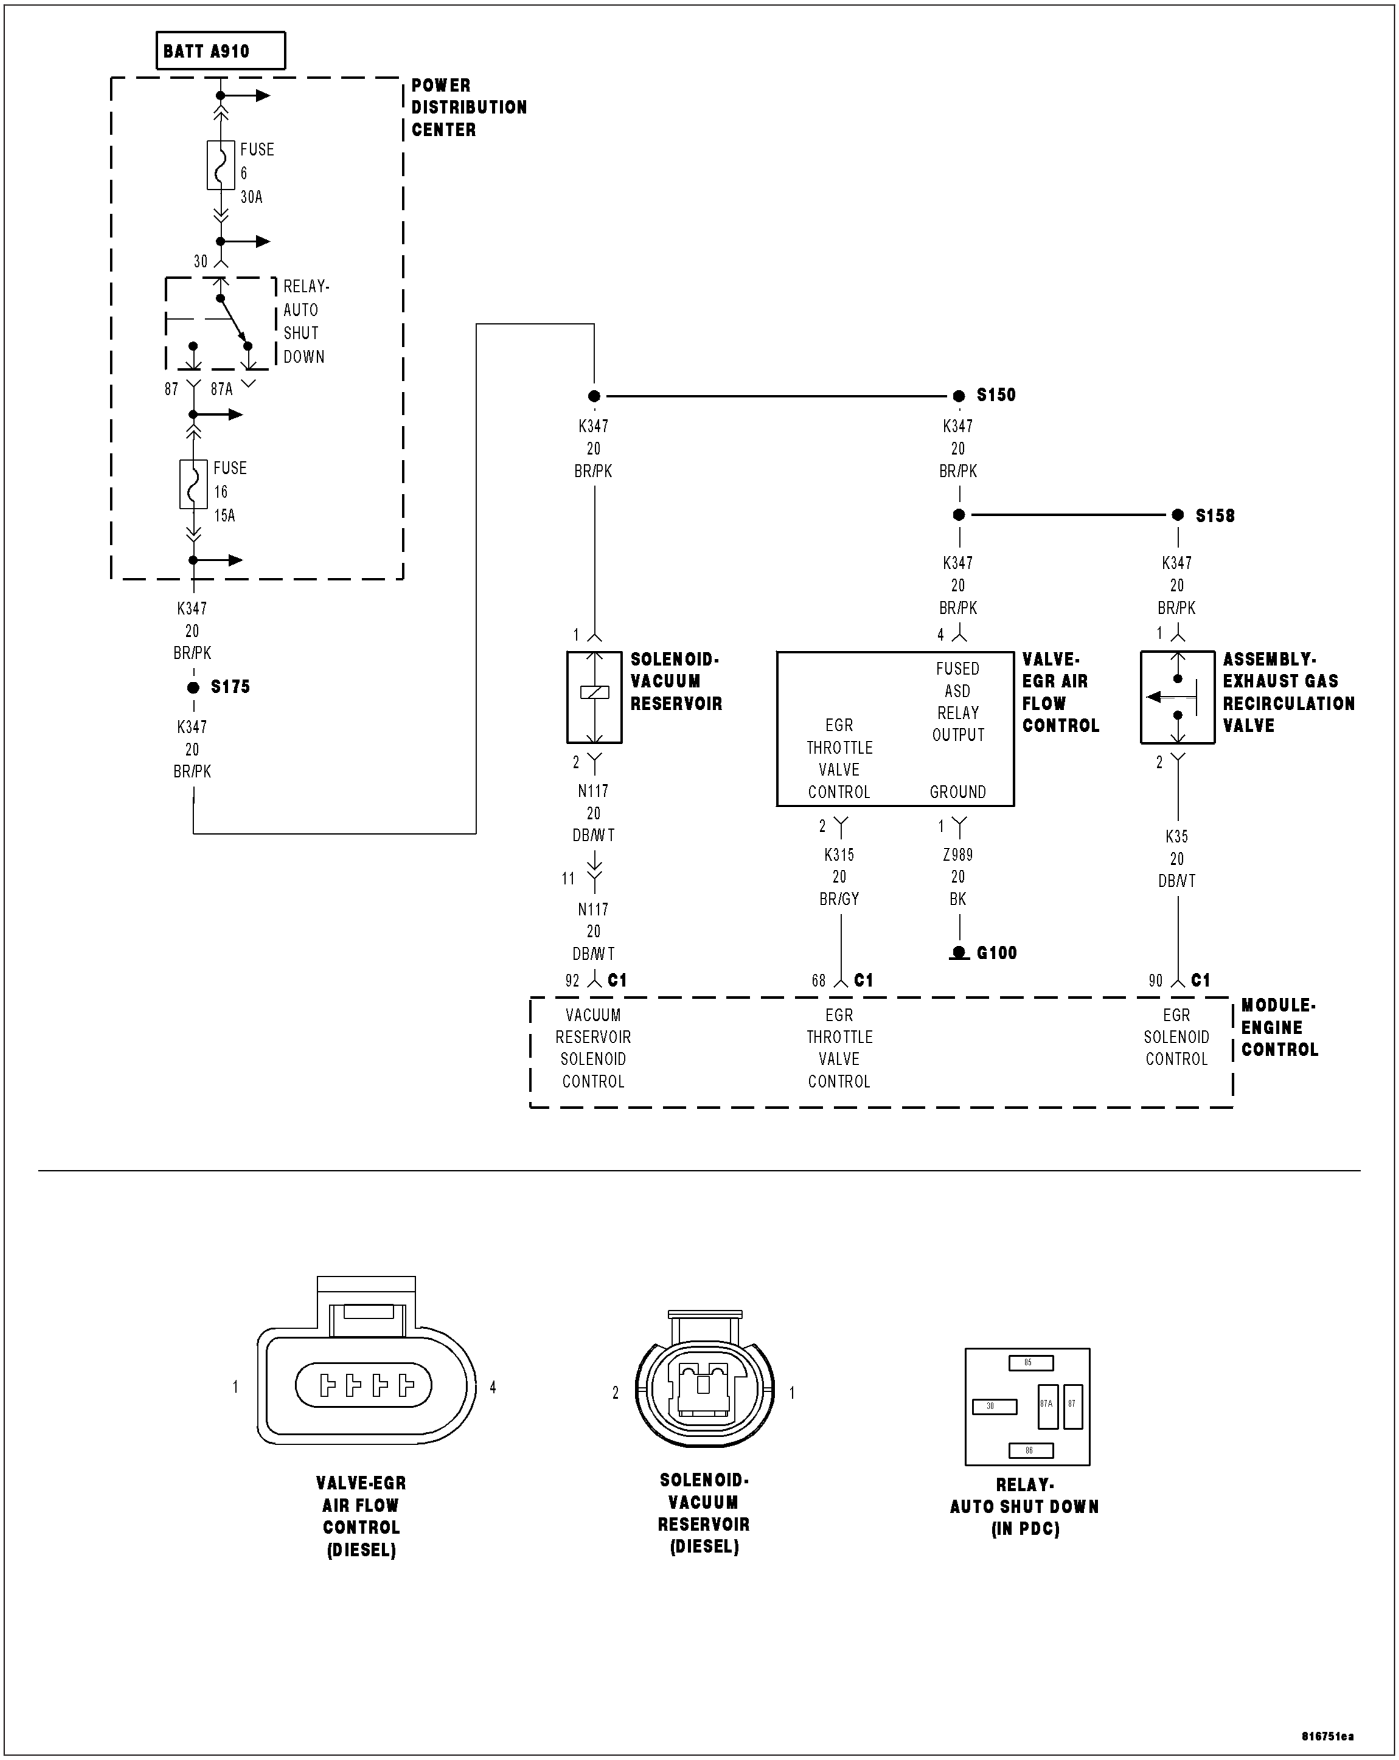
With the scan tool, check for this DTC to set again.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Vacuum Reservoir Solenoid.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P2527-VACUUM RESERVOIR SOLENOID SHORT TO GROUND



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Vacuum Reservoir Solenoid command off.
- **Set Condition:**
  The ECM detects a short to ground on the Vacuum Reservoir Solenoid Control circuit.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| ASD RELAY OUTPUT CIRCUIT OPEN |
| VR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND |
| VR SOLENOID CONTROL CIRCUIT OPEN |
| VACUUM RESERVOIR SOLENOID |
| ENGINE CONTROL MODULE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Start the engine several times, turning the ignition off for at least 10 seconds between engine run cycles.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

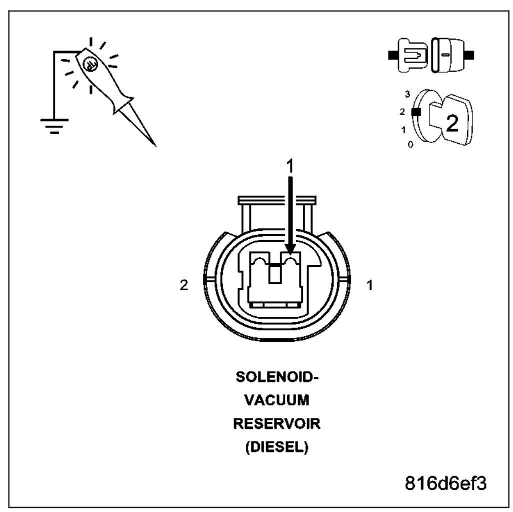
### 2. ASD OUTPUT CKT OPEN

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Turn the ignition on.

Using a 12-volt test light connected to ground, check the ASD Relay Output circuit at the Vacuum Reservoir Solenoid harness connector.



**Does the test light illuminate brightly?**

**Yes** >> Go To 3

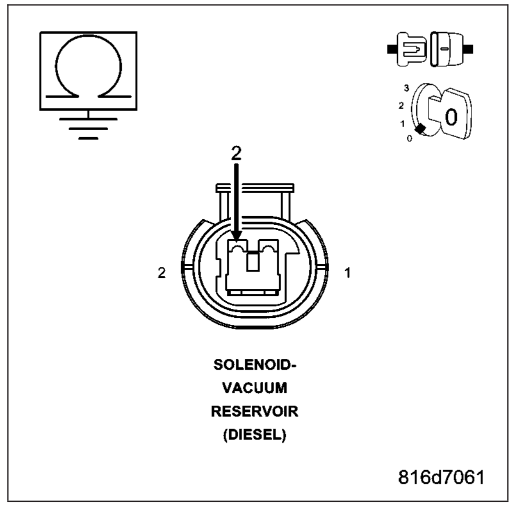
**No** >> Repair the ASD Relay Output circuit for an open.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. VACUUM RESERVOIR SOLENOID CONTROL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the ECM harness connectors.

Measure the resistance between ground and the Vacuum Reservoir Solenoid Control circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Go To 4

**No** >> Repair the Vacuum Reservoir Solenoid Control circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

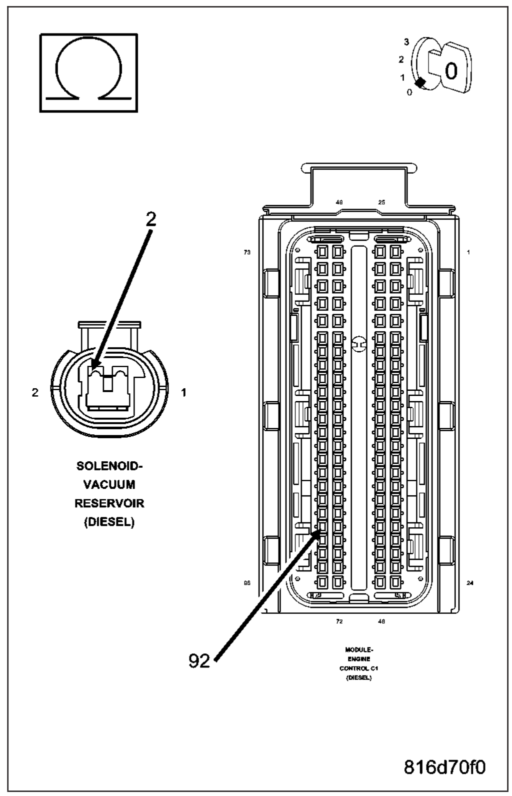
## 4. VACUUM RESERVOIR SOLENOID CONTROL CIRCUIT OPEN

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

Disconnect the ECM harness connectors.

Measure the resistance of the Vacuum Reservoir Solenoid Control circuit between the Vacuum Reservoir Solenoid connector and the ECM harness connector.



**Is the resistance below 10.0 ohms?**

**Yes** >> Go To 5

**No** >> Repair the Vacuum reservoir Solenoid Control circuit for an open.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 5. VACUUM RESERVOIR SOLENOID

Turn the ignition off.

Install a substitute Vacuum Reservoir Solenoid in place of the vehicle's Vacuum Reservoir Solenoid.

**NOTE: Ensure the ECM and Vacuum Reservoir Solenoid harness connectors are connected.**

Turn the ignition on.

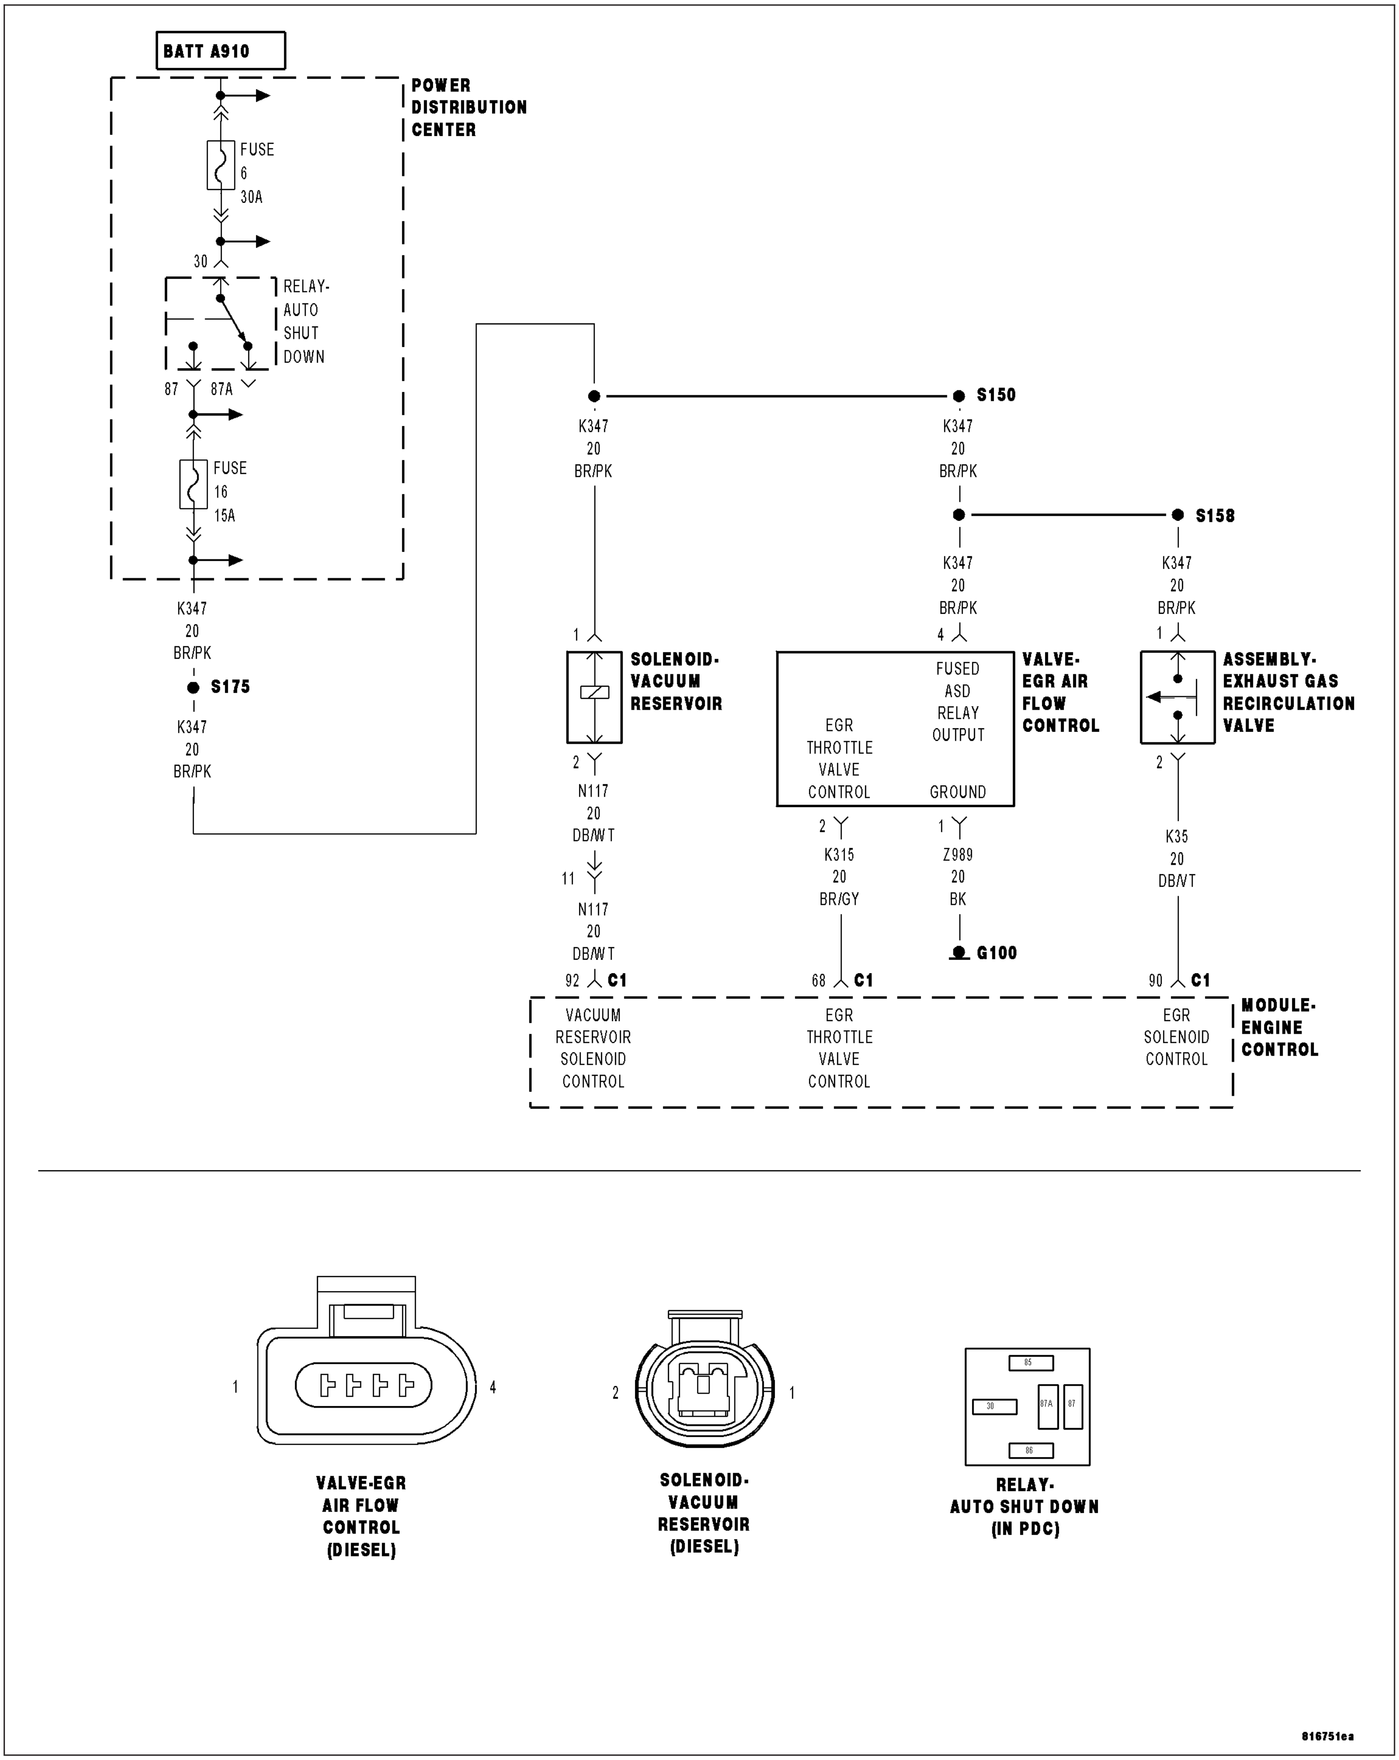
With the scan tool, check for this DTC to set again.

**Did this DTC set again?**

**Yes** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace the Vacuum Reservoir Solenoid.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P2528-VACUUM RESERVOIR SOLENOID SHORT CIRCUIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on and the ECM Vacuum Reservoir Solenoid command on.
- **Set Condition:**
  The ECM detects excessive current on the Vacuum Reservoir Solenoid Control circuit.

| Possible Causes |
|---|
| INTERMITTENT CONDITION |
| VACUUM RESERVOIR SOLENOID |
| VR SOLENOID CONTROL SHORTED TO VOLTAGE |
| ENGINE CONTROL MODULE - INTERNAL SHORT TO VOLTAGE |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Start the engine several times, turning the ignition off for at least 10 seconds between engine run cycles.

Monitor the scan tool for ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. VR SOLENOID CONTROL SHORTED TO VOLTAGE

Turn the ignition off.

Disconnect the Vacuum Reservoir Solenoid harness connector.

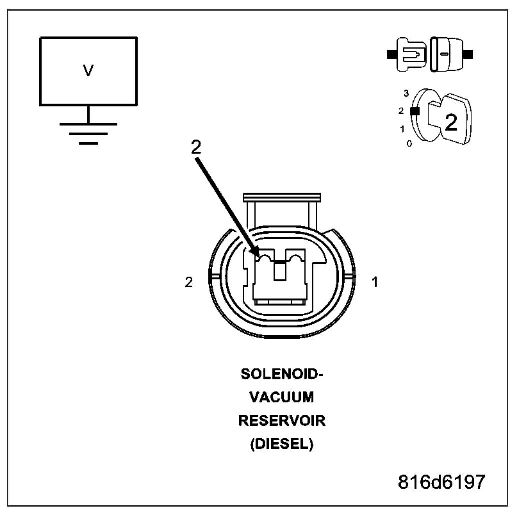
Disconnect the ECM harness connectors.

Remove the ASD Relay from the PDC.

Connect a jumper wire between cavity 30 and cavity 87 of the ASD Relay connector.

Turn the ignition on.

Measure the voltage of the Vacuum Reservoir Solenoid Control circuit.



**Is the voltage below 1.0 volt?**

**Yes** >> Go To 3

**No** >> Repair the Vacuum Reservoir Solenoid Control circuit for a short to voltage.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 3. VR SOLENOID

Turn the ignition off.

Turn the ignition on.

With the scan tool, erase ECM DTCs.

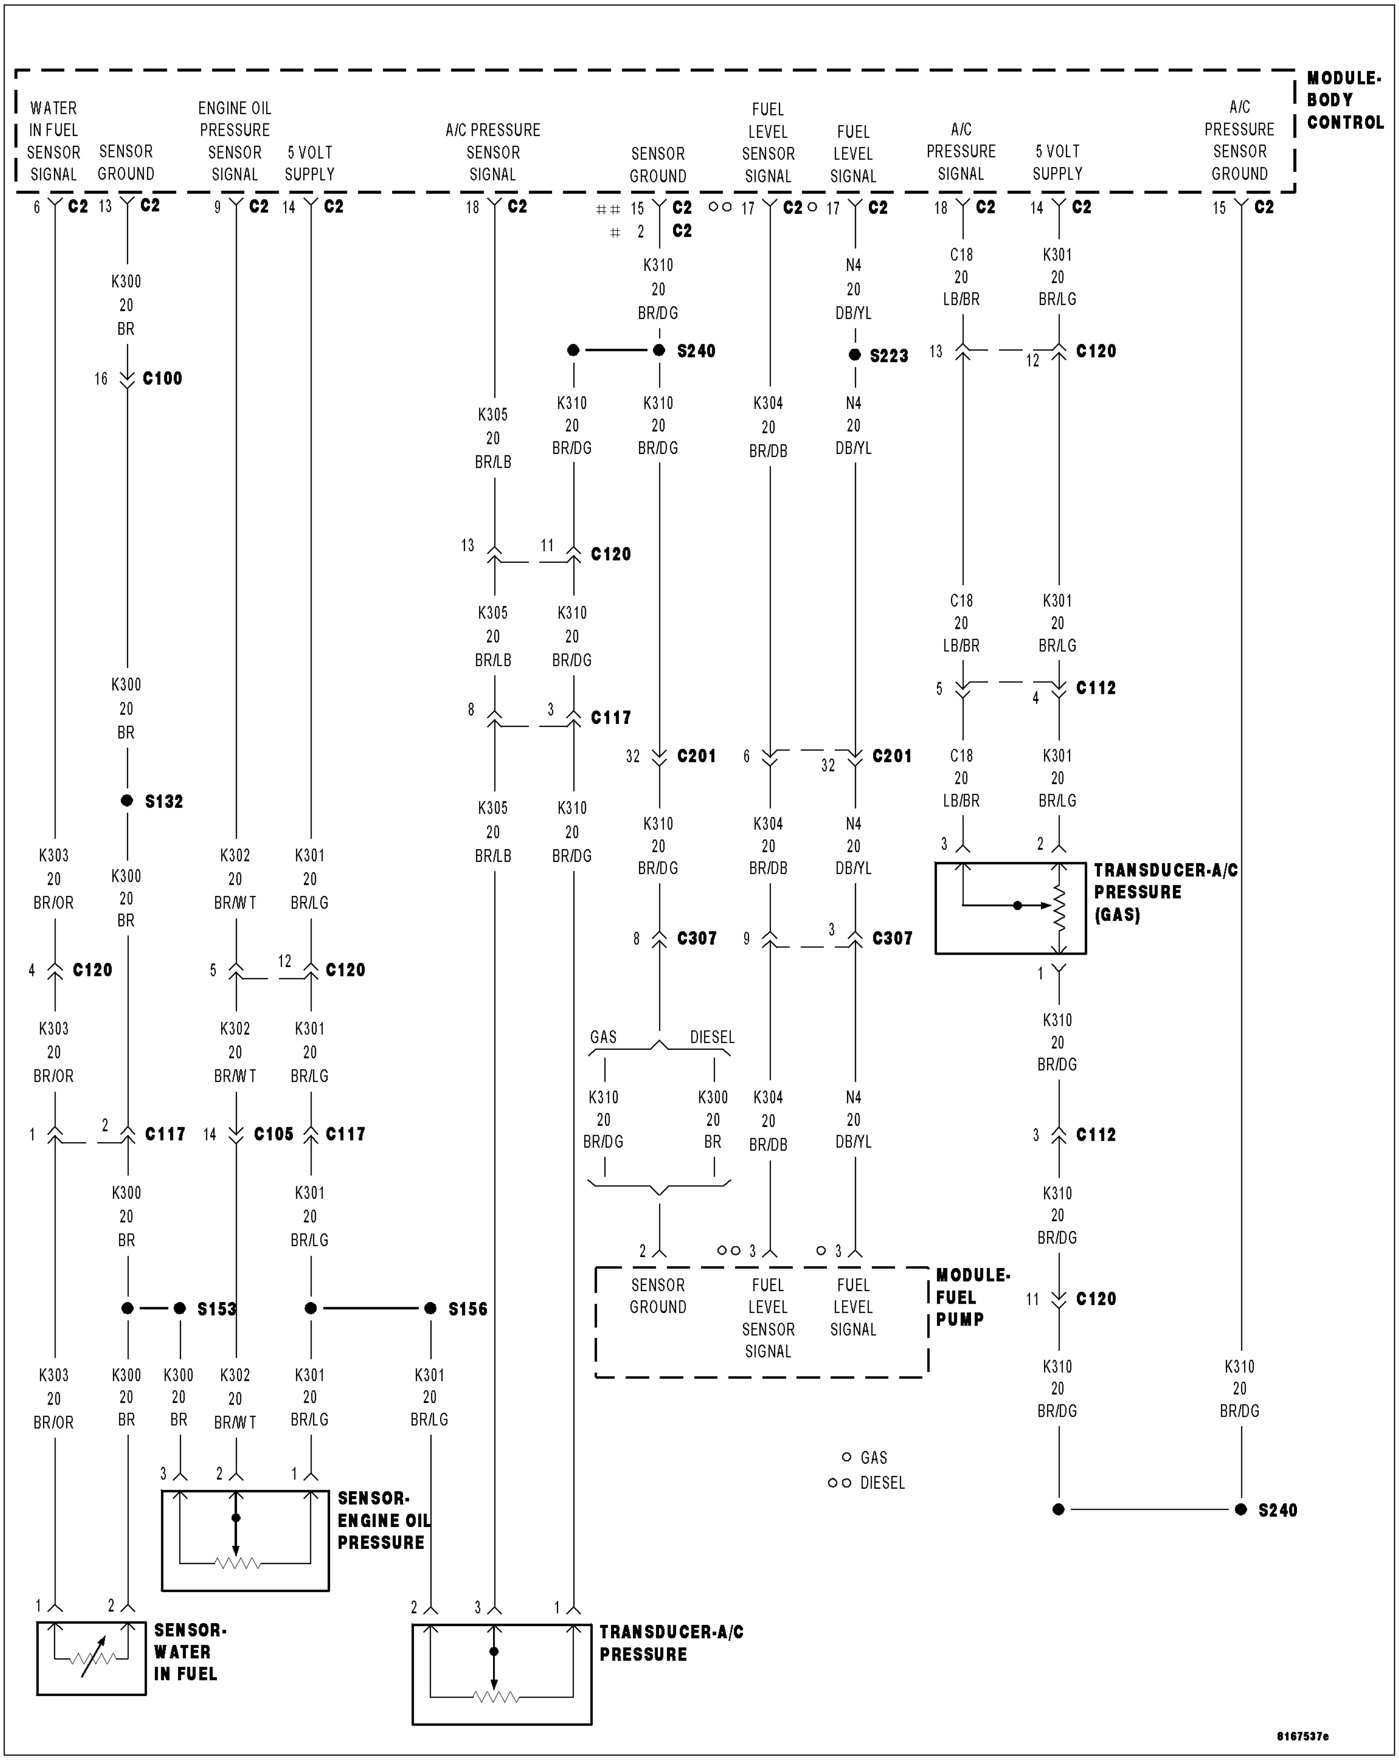
Monitor the scan tool for ECM DTCs.

**Does the scan tool display P1250 VACUUM RESERVOIR SOLENOID OPEN CIRCUIT?**

**Yes** >> Replace the Vacuum Reservoir Solenoid.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Replace and program the Engine Control Module in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## P2264-WATER IN FUEL VOLTAGE BELOW LOWER LIMIT



For a complete wiring diagram **Refer to Section 8W**

- **When Monitored:**
  With the ignition on.
- **Set Condition:**
  The Water In Fuel Sensor signal is below 0.51 volts for 0.2 second.

| Possible Causes |
|---|
| WATER IN FUEL SENSOR |
| WATER IN FUEL SENSOR SIGNAL CIRCUIT SHORTED TO CHASSIS GROUND |
| WATER IN FUEL SENSOR SIGNAL CIRCUIT SHORTED TO WATER IN FUEL SENSOR GROUND |

## Diagnostic Test

### 1. CHECK FOR ACTIVE DTC

**NOTE: If the ECM detects and stores a DTC, the ECM also stores the engine/vehicle operating conditions under which the DTC was set. Some of these conditions are displayed on the scan tool at the same time the DTC is displayed.**

**NOTE: Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.**

Turn the ignition on.

With the scan tool, erase ECM DTCs.

Turn the ignition off, wait 10 seconds, then turn the ignition on.

With the scan tool, read ECM DTCs.

**Did this DTC set again?**

**Yes** >> Go To 2

**No** >> Refer to the *CHECKING FOR AN INTERMITTENT DTC Diagnostic Procedure. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)

### 2. WATER IN FUEL SENSOR

Turn the ignition off.

Disconnect the Water In Fuel Sensor harness connector.

Turn the ignition on.

With the scan tool, read the Water In Fuel Sensor voltage.

**Is the voltage above 4.8 volts?**

**Yes** >> Replace the Water In Fuel Sensor in accordance with the Service Information.
Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Go To 3

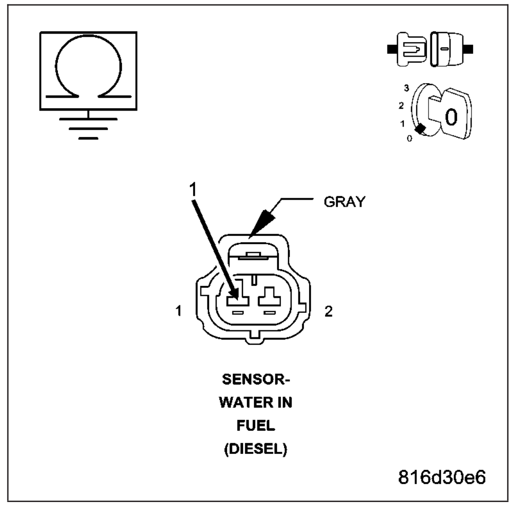
## 3. WATER IN FUEL SENSOR SIGNAL CIRCUIT SHORTED TO GROUND

Turn the ignition off.

Disconnect the BCM harness connectors.

Disconnect the Water In Fuel Sensor harness connector.

Measure the resistance between ground and the Water In Fuel Sensor Signal circuit.



**Is the resistance above 1000 ohms?**

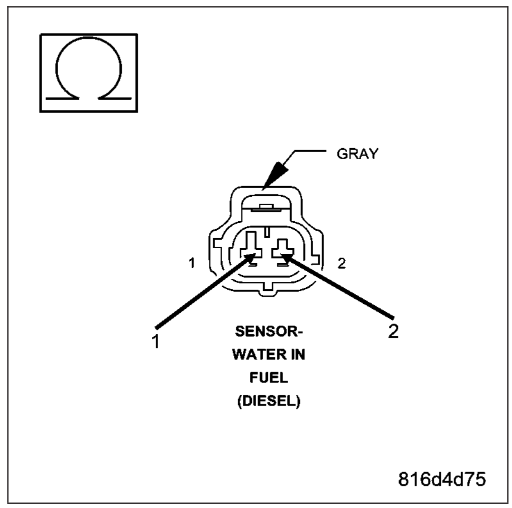
**Yes** >> Go To 4

**No** >> Repair the Water In Fuel Sensor Signal circuit for a short to ground.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## 4. WATER IN FUEL SENSOR SIGNAL AND GROUND CIRCUITS SHORTED TOGETHER

Measure the resistance between the Water In Fuel Sensor Signal circuit and Sensor Ground circuit.



**Is the resistance above 1000 ohms?**

**Yes** >> Replace and program the Front Control Module in accordance with the Service Information.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

**No** >> Repair the Water In Fuel Sensor Signal and Ground circuits for a short together.

Perform the ECM Verification Test Ver. 1 (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).

## *INTERMITTENT DTC

For a complete wiring diagram **Refer to Section 8W**

## Diagnostic Test

### 1. INTERMITTENT DTC

**WARNING: When the engine is operating, do not stand in direct line with the fan. Do not put your hands near the pulleys, belts, or fan. Do not wear loose clothing. Failure to follow these instructions can result in personal injury or death.**

The conditions necessary to set this DTC are not present at this time.

Review the scan tool environmental data. If possible, try to duplicate the conditions under which the DTC set.

If applicable, actuate the component with the scan tool.

Monitor the scan tool data relative to this circuit and wiggle test the wiring and connectors.

Look for the data to change, the actuation to be interrupted, or for the DTC to reset during the wiggle test.

Refer to any Technical Service Bulletins (TSBs) that may apply.

Turn the ignition off.

Visually inspect the related wire harness. Disconnect all the related harness connectors. Look for any chafed, pierced, pinched, partially broken wires and broken, bent, pushed out, or corroded terminals.

Perform a voltage drop test on the related circuits between the suspected component and the ECM.

Inspect and clean all ECM, engine, and chassis grounds that are related to the most current DTC.

If numerous trouble codes were set, use a schematic and inspect any common ground or supply circuits.

For intermittent Misfire DTCs check for restrictions in the Intake and Exhaust system, proper installation of Sensors, vacuum leaks, and binding components that are run by the accessory drive belt.

Use the scan tool to perform a System Test if one applies to the component.

A co-pilot, data recorder, and/or lab scope should be used to help diagnose intermittent conditions.

**Were any problems found during the above inspections?**

**Yes** >> Perform the necessary repairs.
Perform the ECM Verification Test Ver. 1.

**No** >> Test Complete.

# PRE-DIAGNOSTIC TROUBLESHOOTING PROCEDURE

For a complete wiring diagram **Refer to Section 8W**.

## Diagnostic Test

### 1. NO RESPONSE

**NOTE: For vehicle communication problems, use the scan tool to refer to the Network Review Screen. The screen depicts a high level view of the vehicle network. Fault and problem areas appear in red.**

**Does the scan tool display a Vehicle Network problem or NO RESPONSE condition?**

**Yes** >> Refer to the appropriate BUS Communication test in Section 8 ELECTRONIC CONTROL MODULES - ELECTRICAL DIAGNOSTICS.

**No** >> Go To 2

### 2. NO START

**Does the vehicle have a NO START condition?**

**Yes** >> Check the vehicle for any DTC(s), including Vehicle Theft Security related DTC(s), that may cause a no-start condition.

If no DTC(s) are present that relate to a no-start condition, refer to the Non DTC Diagnostic Procedures that relate to Fuel and Starting.

**No** >> Go To 3

### 3. VEHICLE REPAIR HISTORY AND TSB(s)

Check the vehicle repair history for repairs that may relate to the current condition.

Inspect the vehicle for aftermarket accessories that may have been installed incorrectly.

Check for any TSB(s) related to the condition or DTC(s).

If a TSB applies, follow the procedure outlined in the TSB.

**Select the appropriate response for the condition that applies:**

**Performing a TSB procedure repaired the condition.**
Test Complete.

Perform the ECM Verification Test Ver. 1.

**A DTC is present, no TSB applies, or the TSB didn’t repair the condition.**
Go To 4

**No DTC(s) or conditions are present.**
Refer to the INTERMITTENT CONDITION Diagnostic Procedure.

### 4. VEHICLE INSPECTION

**WARNING: WHEN THE ENGINE IS OPERATING, DO NOT STAND IN A DIRECT LINE WITH THE FAN. DO NOT PUT YOUR HANDS NEAR THE PULLEYS, BELTS OR FAN. DO NOT WEAR LOOSE CLOTHING.**

Based on the diagnostic condition that applies, review the following list and perform any tests that relate to the condition:

If multiple DTCs are set in the ECM, review the wiring schematics for problems in any shared supply or ground circuits. Refer to the diagnostic procedure for Checking the ECM Power and Ground Circuits.

Inspect the air intake system and turbocharger related tubes for damage, restriction, or poor connection.

Inspect the exhaust system and related tubes for damage, restriction, or poor connection.

Remove and inspect the Air Filter for soiling or excessive dirt and debris which may cause an air flow restriction.

If the ECM detects and stores a DTC, the ECM also stores the environmental conditions under which the DTC was set.

Before erasing stored DTCs, record these conditions. Attempting to duplicate these conditions may assist when checking for an active DTC.

With the scan tool, Clear the stored DTC(s).

Attempt to duplicate the environmental conditions under which the DTC was set.

Review the DTC When Monitored and Set Conditions. If possible, try to duplicate the vehicle conditions under which the DTC conditions will be monitored. Operate the vehicle under those conditions.

Using the wiring diagram/schematic as a guide, inspect the wiring and connectors between the component and the module.

If the DTC(s) are fuel or air related, check the fuel level and quality.

**Were any repairs made that corrected the DTC or condition?**

**Yes** >> Test complete.
Perform the ECM Verification Test Ver. 1.

**No** >> Refer to the diagnostic test procedure related to the DTC.

## STANDARD PROCEDURE

# ECM VERIFICATION TEST

For a complete wiring diagram **Refer to Section 8W**.

## Diagnostic Test

### 1. SELECT THE PROPER VERIFICATION TEST

**Select the verification test for the repair that has been completed:**

**Speed Control repair**
Go To 2

**Charging System repair**
Go To 3

**No Start repair**
Go To 4

**DTC and all other repairs**
Go To 5

### 2. SPEED CONTROL VERIFICATION TEST

1. Inspect the vehicle to ensure that all engine components are properly installed and connected. Reassemble and reconnect components as necessary.

2. With the scan tool, erase all diagnostic trouble codes (DTCs).

3. Road test the vehicle at a speed above 60 km/h (35 MPH).

4. Turn the speed control ON/OFF switch on.

5. Depress and release the SET switch. If the speed control does not engage, the repair is not complete, continue with step 12.

6. Quickly depress and release the RESUME/ACCEL switch. If the vehicle speed does not increase by 3 km/h (2 MPH), the repair is not complete, continue with step 12.

7. Using caution, depress and release the brake pedal. If the speed control does not disengage, the repair is not complete, continue with step 12.

8. With the vehicle speed at least 60 km/h (35 MPH), depress the RESUME/ACCEL switch. If the speed control does not resume at the previously set speed, the repair is not complete, continue with step 12.

9. Hold down the COAST switch. If the vehicle does not decelerate, the repair is not complete, continue with step 12.

10. While still holding down the COAST switch, ensure the vehicle speed is at least 60 km/h (35 MPH) and release the COAST switch. If the vehicle does not adjust and set a new vehicle speed, the repair is not complete, continue with step 12.

11. With the speed control engaged, depress the ON/OFF switch. If the speed control does not disengage, the repair is not complete, continue with step 12.

12. If the vehicle did not successfully perform all of the previous steps, check for Technical Service Bulletins (TSBs) that pertain to this speed control problem and then, if necessary, return to the Symptom List.

13. If the vehicle successfully performed all of the previous steps, the speed control system is now functioning as designed. The repair is now complete.

**Are any DTCs or symptoms remaining?**

**Yes** >> Repair is not complete, refer to the appropriate diagnostic procedure.

**No** >> Repair is complete.

## 3. CHARGING SYSTEM VERIFICATION TEST

1. Inspect the vehicle to ensure that all engine components are properly installed and connected. Reassemble and reconnect components as necessary.
2. With the scan tool, erase all diagnostic trouble codes (DTCs).
3. Start the engine.
4. Raise the engine speed to 2000 RPM for at least 30 seconds.
5. Allow the engine to idle.
6. Turn the ignition off for 20 seconds.
7. Turn the ignition on.
8. With the scan tool, read ECM DTCs.
9. If this DTC has set again, or another DTC has set, look for any Technical Service Bulletins (TSBs) that may relate to this condition. Return to the Symptom List if necessary.
10. If the charging system is functioning correctly and there are no DTCs, the repair is now complete.

**Are any DTCs or symptoms remaining?**

**Yes** >> Repair is not complete, refer to the appropriate diagnostic procedure.

**No** >> Repair is complete.

## 4. NO START VERIFICATION TEST

**NOTE: IMPORTANT! If the Engine Control Module or Sentry Key Immobilizer Module has been replaced, ensure the programming procedure for the module has been performed in accordance with the Service Information.**

2. Inspect the vehicle to ensure that all engine components are properly installed and connected. Reassemble and reconnect components as necessary.
3. Inspect the engine oil for contamination. If it is contaminated, change the oil and filter.
4. With the scan tool, erase all diagnostic trouble codes (DTCs).
5. Turn the ignition off for at least 10 seconds.
6. Attempt to start the engine.
7. If the engine is unable to start, look for any Technical Service Bulletins (TSBs) that may relate to this condition. Return to the Symptom List if necessary.
8. If the engine starts and continues to run, the repair is now complete.

**Are any DTCs or symptoms remaining?**

**Yes** >> Repair is not complete, refer to the appropriate diagnostic procedure.

**No** >> Repair is complete.

## 5. ROAD TEST VERIFICATION TEST

1. Inspect the vehicle to ensure that all engine components are properly installed and connected. Reassemble and reconnect components as necessary.
2. If this verification procedure is being performed after a non-DTC test, perform steps 3 and 4. If not, proceed to step 5.
3. Check to see if the initial symptom still exists. If there are no trouble codes and the symptom no longer exists, the repair was successful and testing is now complete.
4. If the initial or another symptom exists, the repair is not complete. Check all pertinent Technical Service Bulletins (TSBs) and return to the Symptom List if necessary.
5. For previously read DTCs that have not been dealt with, return to the Symptom List and follow the diagnostic path for that DTC; otherwise, continue.
6. If the Engine Control Module (ECM) has been replaced, continue with step 9.
7. With the scan tool, erase all diagnostic trouble codes (DTCs), then disconnect the scan tool.
8. Turn the ignition off for at least 10 seconds.
9. If equipped with a Transfer Case Position Switch, perform step 10, otherwise, continue with step 11.
10. With the ignition switch on, place the Transfer Case Shift Lever in each gear position, stopping for 15 seconds in each position.
11. Road test the vehicle. For some of the road test, go at least 64 km/h (40 MPH). If this test is for an A/C Relay Control Circuit, drive the vehicle for at least 5 minutes with the A/C on.
12. At some point, stop the vehicle and turn the engine off for at least 10 seconds, then restart the engine and continue.
13. Upon completion of the road test, turn the engine off and check for DTCs with the scan tool.
14. If the repaired DTC has set again, the repair is not complete. Check for any pertinent Technical Service Bulletins (TSBs) and return to the Symptom List. If there are no DTCs, the repair was successful and is now complete.

**Are any DTCs or symptoms remaining?**

**Yes** >> Repair is not complete, refer to the appropriate diagnostic procedure.

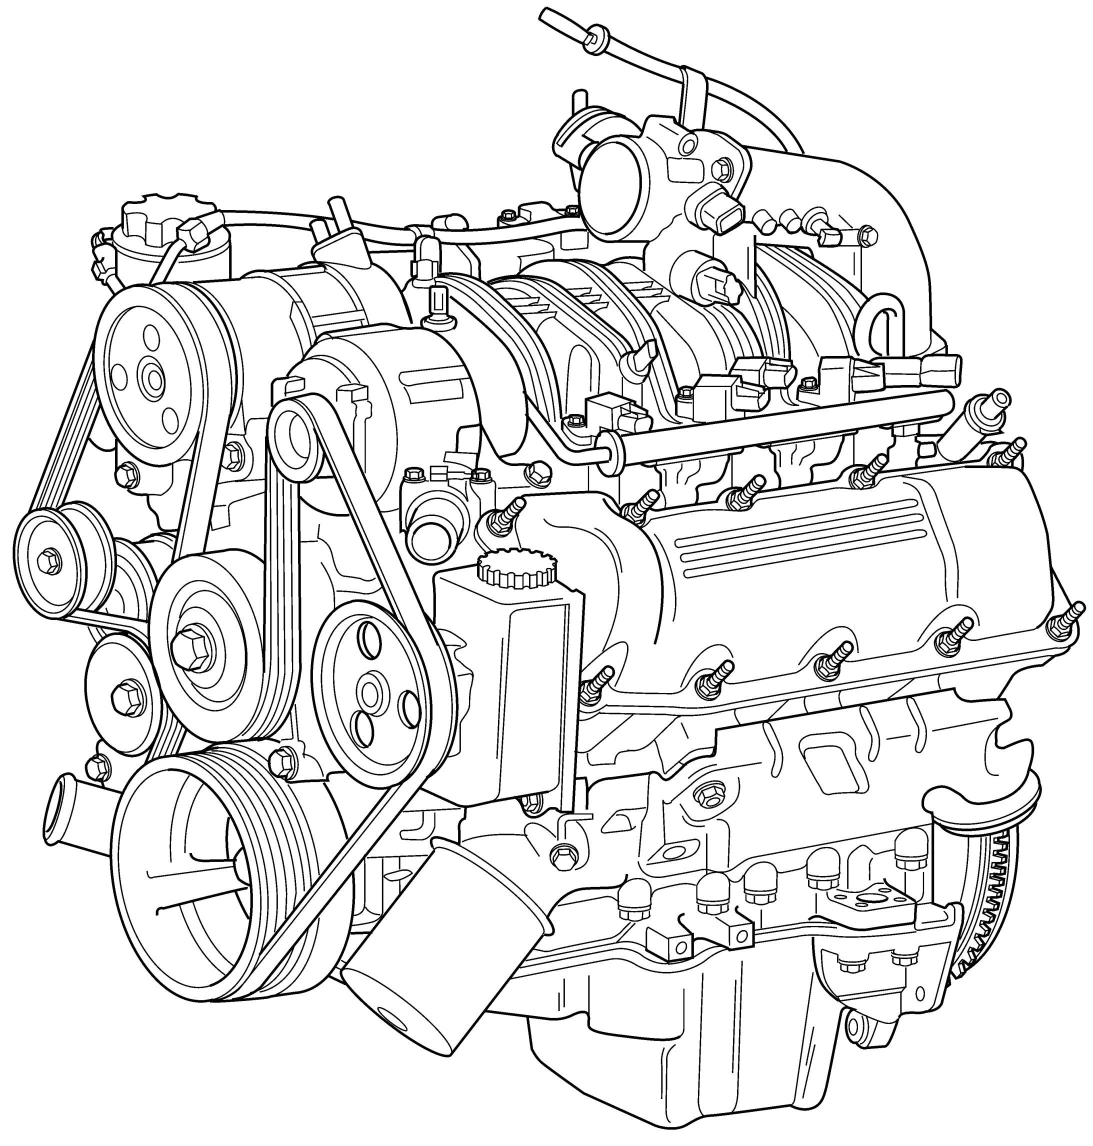
**No** >> Repair is complete.

# ENGINE - 3.7L

## TABLE OF CONTENTS

# ENGINE - 3.7L

## DESCRIPTION



80ccc15e

The 3.7 liter (226 CID) six-cylinder engine is an 90° single overhead camshaft engine. The cast iron cylinder block is made up of two different components; the first component is the cylinder bore and upper block, the second component is the bedplate that comprises the lower portion of the cylinder block and houses the lower half of the crankshaft main bearings. The cylinders are numbered from front to rear with the left bank being numbered 1,3, and 5 and the right bank being numbered 2,4, and 6. The firing order is 1–6–5–4–3–2. The engine serial number is located at the right front side of the engine block.

## DIAGNOSIS AND TESTING

## DIAGNOSIS AND TESTING - ENGINE DIAGNOSIS - INTRODUCTION

Engine diagnosis is helpful in determining the causes of malfunctions not detected and remedied by routine maintenance.

These malfunctions may be classified as either performance (e.g., engine idles rough and stalls) or mechanical (e.g., a strange noise).

(Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)—PERFORMANCE and (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING)—MECHANICAL for possible causes and corrections of malfunctions. (Refer to 14 - FUEL SYSTEM/FUEL DELIVERY - DIAGNOSIS AND TESTING) and (Refer to 14 - FUEL SYSTEM/FUEL INJECTION - DIAGNOSIS AND TESTING) for the fuel system diagnosis.

Additional tests and diagnostic procedures may be necessary for specific engine malfunctions that can not be isolated with the Service Diagnosis charts. Information concerning additional tests and diagnosis is provided within the following diagnosis:

- Cylinder Compression Pressure Test (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).
- Cylinder Combustion Pressure Leakage Test (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING).
- Engine Cylinder Head Gasket Failure Diagnosis (Refer to 9 - ENGINE/CYLINDER HEAD - DIAGNOSIS AND TESTING).
- Intake Manifold Leakage Diagnosis (Refer to 9 - ENGINE/MANIFOLDS/INTAKE MANIFOLD - DIAGNOSIS AND TESTING).

## DIAGNOSIS AND TESTING - ENGINE DIAGNOSIS - PERFORMANCE

| CONDITION | POSSIBLE CAUSE | CORRECTION |
|---|---|---|
| ENGINE WILL NOT START | 1. Weak battery | 1. Charge or replace as necessary. |
| | 2. Corroded or loose battery connections. | 2. Clean and tighten battery connections. Apply a coat of light mineral grease to the terminals. |
| | 3. Faulty starter. | 3. (Refer to 8 - ELECTRICAL/STARTING - DIAGNOSIS AND TESTING). |
| | 4. Faulty coil or control unit. | 4. (Refer to 8 - ELECTRICAL/IGNITION CONTROL/IGNITION COIL - REMOVAL). |
| | 5. Incorrect spark plug gap. | 5. (Refer to 8 - ELECTRICAL/IGNITION CONTROL/SPARK PLUG - CLEANING). |
| | 6. Incorrect right bank cam timing. | 6. Refer to engine timing in this section. |
| | 7. Dirt or water in fuel system. | 7. Clean system and replace fuel filter. |
| | 8. Faulty fuel pump, relay or wiring. | 8. Repair or replace as necessary. |
| | 9. Faulty cam or crank sensor | 9. Refer to Ignition system. |
| ENGINE STALLS OR ROUGH IDLE | 1. Vacuum leak. | 1. Inspect intake manifold and vacuum hoses, repair or replace as necessary. |
| | 2. Faulty crank position sensor | 2. Replace crank position sensor. |
| 3. Faulty coil. | 3. (Refer to 8 - ELECTRICAL/IGNITION CONTROL/IGNITION COIL - REMOVAL). | |
| 4. Incorrect cam timing. | 4. (Refer to 9 - ENGINE/VALVE TIMING - STANDARD PROCEDURE). | |

| CONDITION | POSSIBLE CAUSE | CORRECTION |
|---|---|---|
| ENGINE LOSS OF POWER | 1. Dirty or incorrectly gapped spark plugs. | 1. (Refer to 8 - ELECTRICAL/ IGNITION CONTROL/SPARK PLUG - CLEANING). |
| | 2. Dirt or water in fuel system. | 2. Clean system and replace fuel filter. |
| | 3. Faulty fuel pump. | 3. (Refer to 14 - FUEL SYSTEM/ FUEL DELIVERY/FUEL PUMP - DIAGNOSIS AND TESTING). |
| | 4. Blown cylinder head gasket. | 4. Replace cylinder head gasket. |
| | 5. Low compression. | 5. (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING), repair as necessary. |
| | 6. Burned, warped or pitted valves. | 6. Replace as necessary. |
| | 7. Plugged or restricted exhaust system. | 7. Inspect and replace as necessary. |
| | 8. Faulty coil. | 8. (Refer to 8 - ELECTRICAL/ IGNITION CONTROL/IGNITION COIL - REMOVAL). |
| | 9. Incorrect cam timing. | 9. Refer to Engine Timing in this section. |
| ENGINE MISSES ON ACCELERATION | 1. Spark plugs dirty or incorrectly gapped. | 1. (Refer to 8 - ELECTRICAL/ IGNITION CONTROL/SPARK PLUG - CLEANING). |
| | 2. Dirt in fuel system. | 2. Clean fuel system. |
| | 3. Burned, warped or pitted valves. | 3. Replace as necessary. |
| | 4. Faulty coil. | 4. (Refer to 8 - ELECTRICAL/ IGNITION CONTROL/IGNITION COIL - REMOVAL). |
| ENGINE MISSES AT HIGH SPEED | 1. Spark plugs dirty or incorrectly gapped. | 1. (Refer to 8 - ELECTRICAL/ IGNITION CONTROL/SPARK PLUG - CLEANING). |
| | 2. Faulty coil. | 2. (Refer to 8 - ELECTRICAL/ IGNITION CONTROL/IGNITION COIL - REMOVAL). |
| | 3. Dirt or water in fuel system. | 3. Clean system and replace fuel filter. |

## DIAGNOSIS AND TESTING - ENGINE DIAGNOSIS - MECHANICAL

| CONDITION | POSSIBLE CAUSES | CORRECTIONS |
|---|---|---|
| NOISY VALVES | 1. High or low oil level in crankcase. | 1. (Refer to LUBRICATION & MAINTENANCE/FLUID TYPES - SPECIFICATIONS). |
| | 2. Thin or diluted oil. | 2. Change oil and filter. |
| | 3. Low oil pressure. | 3. Check oil pump, if Ok, check rod and main bearings for excessive wear. |
| | 4. Dirt in lash adjusters. | 4. Clean or replace as necessary. |
| | 5. Worn rocker arms. | 5. Replace as necessary. |
| | 6. Worn valve guides. | 6. (Refer to 9 - ENGINE/CYLINDER HEAD/INTAKE/EXHAUST VALVES & SEATS - STANDARD PROCEDURE). |
| | 7. Excessive runout of valve seats. | 7. Service valves and valve seats (Refer to 9 - ENGINE/CYLINDER HEAD/INTAKE/EXHAUST VALVES & SEATS - STANDARD PROCEDURE) |
| ENGINE VIBRATION | 1. Counter Balance Shaft not timed properly | 1. Refer to Engine Timing in this section |
| CONNECTING ROD NOISE | 1. Insufficient oil supply. | 1. (Refer to LUBRICATION & MAINTENANCE/FLUID TYPES - SPECIFICATIONS). |
| | 2. Low oil pressure. | 2. Check oil pump, if Ok, check rod and main bearings for excessive wear. |
| | 3. Thin or diluted oil. | 3. Change oil and filter. |
| | 4. Excessive bearing clearance. | 4. Replace as necessary. |
| | 5. Connecting rod journal out-of-round. | 5. Service or replace crankshaft. |
| | 6. Misaligned connecting rods. | 6. Replace bent connecting rods. |
| MAIN BEARING NOISE | 1. Insufficient oil supply. | 1. (Refer to LUBRICATION & MAINTENANCE/FLUID TYPES - SPECIFICATIONS). |
| | 2. Low oil pressure. | 2. Check oil pump, if Ok, check rod and main bearings for excessive wear. |
| | 3. Thin or diluted oil. | 3. Change oil and filter. |
| | 4. Excessive bearing clearance. | 4. Replace as necessary. |
| | 5. Excessive end play. | 5. Check thrust washers for wear. |
| | 6. Crankshaft journal out-of round. | 6. Service or replace crankshaft. |
| | 7. Loose flywheel or torque converter. | 7. Tighten to correct torque |

## DIAGNOSIS AND TESTING - ENGINE DIAGNOSIS - LUBRICATION

| CONDITION | POSSIBLE CAUSES | CORRECTION |
|---|---|---|
| OIL LEAKS | 1. Gaskets and O-Rings. | |
| | (a) Misaligned or damaged. | (a) Replace as necessary. |
| | (b) Loose fasteners, broken or porous metal parts. | (b) Tighten fasteners, Repair or replace metal parts. |
| | 2. Crankshaft rear seal | 2. Replace as necessary (Refer to 9 - ENGINE/ENGINE BLOCK/ CRANKSHAFT OIL SEAL - REAR - REMOVAL). |
| | 3. Crankshaft seal flange. Scratched, nicked or grooved. | 3. Polish or replace crankshaft. |
| | 4. Oil pan flange cracked. | 4. Replace oil pan (Refer to 9 - ENGINE/LUBRICATION/OIL PAN - REMOVAL). |
| | 5. Timing chain cover seal damaged. | 5. Re-seal timing cover. |
| | 6. Scratched or damaged vibration damper hub. | 6. Polish or replace damper. |
| OIL PRESSURE DROP | 1. Low oil level. | 1. Check and correct oil level. |
| | 2. Faulty oil pressure sending unit. | 2. Replace sending unit (Refer to 9 - ENGINE/LUBRICATION/OIL PRESSURE SENSOR/SWITCH - REMOVAL). |
| | 3. Low oil pressure. | 3. Check oil pump and bearing clearance. |
| | 4. Clogged oil filter. | 4. Replace oil filter (Refer to 9 - ENGINE/LUBRICATION/OIL FILTER - REMOVAL). |
| | 5. Worn oil pump. | 5. Replace oil pump (Refer to 9 - ENGINE/LUBRICATION/OIL PUMP - REMOVAL). |
| | 6. Thin or diluted oil. | 6. Change oil and filter. |
| | 7. Excessive bearing clearance. | 7. Replace as necessary. |
| | 8. Oil pump relief valve stuck. | 8. Replace oil pump (Refer to 9 - ENGINE/LUBRICATION/OIL PUMP - REMOVAL). |
| | 9. Oil pick up tube loose, damaged or clogged. | 9. Replace as necessary. |

| CONDITION | POSSIBLE CAUSES | CORRECTION |
|---|---|---|
| OIL PUMPING AT RINGS; SPARK PLUGS FOULING | 1. Worn or damaged rings. | 1. Hone cylinder bores and replace rings. |
| | 2. Carbon in oil ring slots. | 2. Replace rings (Refer to 9 - ENGINE/ENGINE BLOCK/PISTON RINGS - STANDARD PROCEDURE). |
| | 3. Incorrect ring size installed. | 3. Replace rings (Refer to 9 - ENGINE/ENGINE BLOCK/PISTON RINGS - STANDARD PROCEDURE). |
| | 4. Worn valve guides. | 4. Ream guides and replace valves (Refer to 9 - ENGINE/CYLINDER HEAD/INTAKE/EXHAUST VALVES & SEATS - STANDARD PROCEDURE). |
| | 5. Leaking valve guide seals. | 5. Replace valve guide seals. |

## DIAGNOSIS AND TESTING - CYLINDER COMPRESSION PRESSURE

The results of a cylinder compression pressure test can be utilized to diagnose several engine malfunctions.

Ensure the battery is completely charged and the engine starter motor is in good operating condition. Otherwise the indicated compression pressures may not be valid for diagnosis purposes.

1. Clean the spark plug recesses with compressed air.
2. Remove the spark plugs.
3. Secure the throttle in the wide-open position.
4. Disable the fuel system (Refer to 14 - FUEL SYSTEM/FUEL DELIVERY - DESCRIPTION).
5. Remove the ASD relay (Refer to 8 - ELECTRICAL/IGNITION CONTROL/AUTO SHUT DOWN RELAY - REMOVAL).
6. Insert a compression pressure gauge and rotate the engine with the engine starter motor for three revolutions.
7. Record the compression pressure on the 3rd revolution. Continue the test for the remaining cylinders.
8. (Refer to 9 - ENGINE - SPECIFICATIONS) for the correct engine compression pressures.

## DIAGNOSIS AND TESTING - CYLINDER COMBUSTION PRESSURE LEAKAGE

The combustion pressure leakage test provides an accurate means for determining engine condition.

Combustion pressure leakage testing will detect:

- Exhaust and intake valve leaks (improper seating).
- Leaks between adjacent cylinders or into water jacket.
- Any causes for combustion/compression pressure loss.

1. Check the coolant level and fill as required. DO NOT install the radiator cap.
2. Start and operate the engine until it attains normal operating temperature, then turn the engine OFF.
3. Remove the spark plugs.
4. Remove the oil filler cap.
5. Remove the air cleaner.
6. Calibrate the tester according to the manufacturer’s instructions. The shop air source for testing should maintain 483 kPa (70 psi) minimum, 1,379 kPa (200 psi) maximum and 552 kPa (80 psi) recommended.
7. Perform the test procedures on each cylinder according to the tester manufacturer’s instructions. Set piston of cylinder to be tested at TDC compression,While testing, listen for pressurized air escaping through the throttle body, tailpipe and oil filler cap opening. Check for bubbles in the radiator coolant.

All gauge pressure indications should be equal, with no more than 25% leakage.

**FOR EXAMPLE:** At 552 kPa (80 psi) input pressure, a minimum of 414 kPa (60 psi) should be maintained in the cylinder.

Refer to CYLINDER COMBUSTION PRESSURE LEAKAGE DIAGNOSIS CHART .

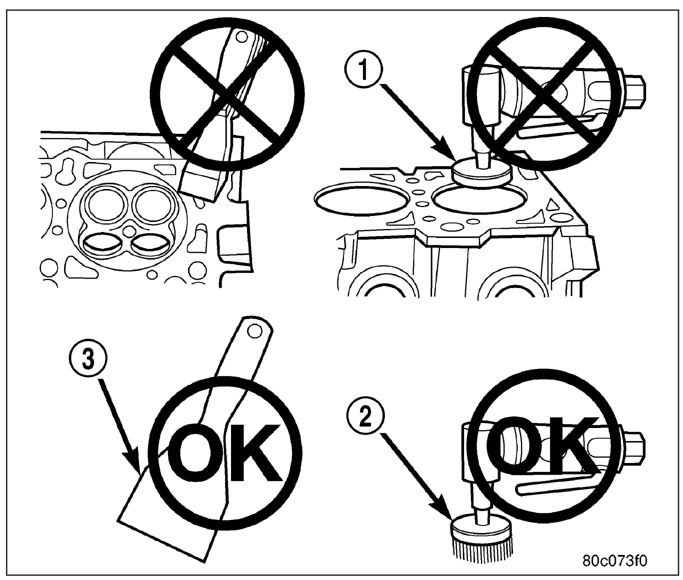
**CYLINDER COMBUSTION PRESSURE LEAKAGE DIAGNOSIS CHART**

| CONDITION | POSSIBLE CAUSE | CORRECTION |
|---|---|---|
| AIR ESCAPES THROUGH THROTTLE BODY | Intake valve bent, burnt, or not seated properly | Inspect valve and valve seat. Reface or replace, as necessary. Inspect valve springs. Replace as necessary. |
| AIR ESCAPES THROUGH TAILPIPE | Exhaust valve bent, burnt, or not seated properly | Inspect valve and valve seat. Reface or replace, as necessary. Inspect valve springs. Replace as necessary. |
| AIR ESCAPES THROUGH RADIATOR | Head gasket leaking or cracked cylinder head or block | Remove cylinder head and inspect. Replace defective part |
| MORE THAN 50% LEAKAGE FROM ADJACENT CYLINDERS | Head gasket leaking or crack in cylinder head or block between adjacent cylinders | Remove cylinder head and inspect. Replace gasket, head, or block as necessary |
| MORE THAN 25% LEAKAGE AND AIR ESCAPES THROUGH OIL FILLER CAP OPENING ONLY | Stuck or broken piston rings; cracked piston; worn rings and/or cylinder wall | Inspect for broken rings or piston. Measure ring gap and cylinder diameter, taper and out-of-round. Replace defective part as necessary |

## STANDARD PROCEDURE

## ENGINE GASKET SURFACE PREPARATION

To ensure engine gasket sealing, proper surface preparation must be performed, especially with the use of aluminum engine components and multi-layer steel cylinder head gaskets.



**Never** use the following to clean gasket surfaces:

- Metal scraper (3).
- Abrasive pad (1) or paper to clean cylinder block and head.
- High speed power tool (1) with an abrasive pad or a wire brush.

**NOTE: Multi-Layer Steel (MLS) head gaskets require a scratch free sealing surface.**

Only use the following for cleaning gasket surfaces:

- Solvent or a commercially available gasket remover
- Plastic or wood scraper.
- Drill motor with 3M Roloc™ Bristle Disc (white or yellow).

**CAUTION: Excessive pressure or high RPM (beyond the recommended speed), can damage the sealing surfaces. The mild (white, 120 grit) bristle disc is recommended. If necessary, the medium (yellow, 80 grit) bristle disc may be used on cast iron surfaces with care.**

## STANDARD PROCEDURE - REPAIR DAMAGED OR WORN THREADS

**CAUTION: Be sure that the tapped holes maintain the original center line.**

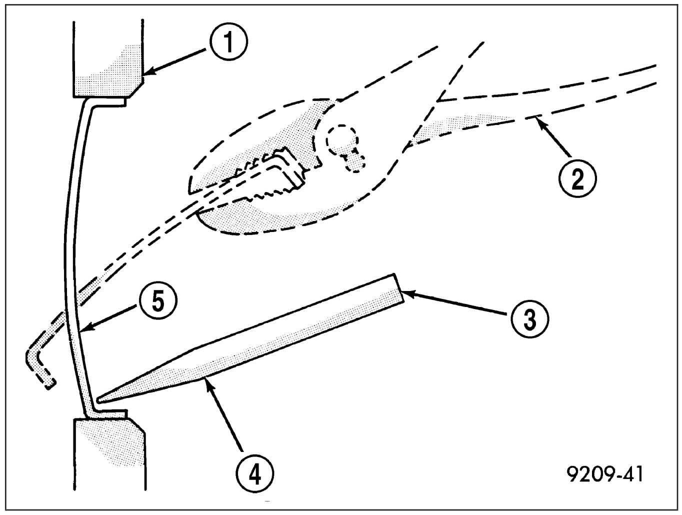
Damaged or worn threads can be repaired. Essentially, this repair consists of:

- Drilling out worn or damaged threads.
- Tapping the hole with a special Heli-Coil Tap, or equivalent.
- Installing an insert into the tapped hole to bring the hole back to its original thread size.

## ENGINE CORE AND OIL GALLERY PLUGS

Using a blunt tool such as a drift and a hammer, strike the bottom edge of the cup plug (5). With the cup plug rotated, grasp firmly with pliers or other suitable tool and remove plug.

**CAUTION: Do not drive cup plug into the casting as restricted cooling can result and cause serious engine problems.**



Thoroughly clean inside of cup plug hole in cylinder block or head. Be sure to remove old sealer. Lightly coat inside of cup plug hole with Mopar® Stud and Bearing Mount. Make certain the new plug is cleaned of all oil or grease. Using proper drive plug, drive plug into hole so that the sharp edge of the plug is at least 0.5 mm (0.020 in.) inside the lead-in chamfer.

It is not necessary to wait for curing of the sealant. The cooling system can be refilled and the vehicle placed in service immediately.

## REMOVAL

1. Disconnect the battery negative cable.
2. Remove hood. Mark hood hinge location for reinstallation.
3. Remove air cleaner assembly.
4. Remove radiator core support bracket.
5. Remove fan shroud with electric fan assembly.
6. Remove mechanical cooling fan.
7. Remove drive belt.

**NOTE: It is NOT necessary to discharge the A/C system to remove the engine.**

8. Remove A/C compressor and secure away from engine with lines attached.
9. Remove generator and secure away from engine.

**NOTE: Do NOT remove the phenolic pulley from the P/S pump. It is not required for P/S pump removal.**

10. Remove power steering pump with lines attached and secure away from engine.
11. Drain cooling system.
12. Remove coolant bottle.
13. Disconnect the heater hoses from the engine.
14. Disconnect heater hoses from heater core and remove hose assembly.
15. Disconnect throttle and speed control cables.
16. Remove upper radiator hose from engine.
17. Remove lower radiator hose from engine.
18. Disconnect the engine to body ground straps at the left side of cowl.
19. Disconnect the engine wiring harness at the following points:
    - Intake air temperature (IAT) sensor
    - Fuel Injectors

- Throttle Position (TPS) Switch
- Idle Air Control (IAC) Motor
- Engine Oil Pressure Switch
- Engine Coolant Temperature (ECT) Sensor
- Manifold Absolute Pressure MAP) Sensor
- Camshaft Position (CMP) Sensor
- Coil Over Plugs
- Crankshaft Position Sensor

20. Remove coil over plugs.
21. Release fuel rail pressure.
22. Remove fuel rail and secure away from engine.

**NOTE: It is not necessary to release the quick connect fitting from the fuel supply line for engine removal.**

23. Remove the PCV hose.
24. Remove the breather hoses.
25. Remove the vacuum hose for the power brake booster.
26. Disconnect knock sensors.
27. Remove engine oil dipstick tube.
28. Remove intake manifold.
29. Install engine lift plate.

**NOTE: Recheck bolt torque for engine lift plate before removing engine.**

30. Secure the left and right engine wiring harnesses away from engine.
31. Raise vehicle.
32. Disconnect oxygen sensor wiring.
33. Disconnect crankshaft postion sensor.
34. Disconnect the engine block heater power cable, if equipped.
35. Disconnect the front propshaft at the front differential and secure out of way.

**NOTE: It is necessary to disconnect the front propshaft for access to the starter and left side exhaust flange.**

36. Remove the starter.
37. Remove the ground straps from the left and right side of the block.
38. Disconnect the right and left exhaust pipes at the manifolds and from the crossover, and remove from the vehicle.

**NOTE: The exhaust clamps at the manifolds cannot be reused. New clamps must be used or leaks may occur.**

**NOTE: For manual transmission vehicles, the transmission must be removed from the vehicle, before the engine can be removed. The manual transmission will contact the floorpan before the engine clears the motor mounts, so it must be removed.**

39. Remove the structural cover.
40. Remove torque convertor bolts, and mark location for reassembly.
41. Remove transmission bellhousing to engine bolts.
42. Loosen left and right engine mount thru bolts.

**NOTE: It is not necessary to completely remove engine mount thru bolts, for engine removal.**

43. Lower the vehicle.

44. Support the transmission with a suitable jack.
45. Connect a suitable engine hoist to the engine lift plate.
46. Remove engine from vehicle.

## INSTALLATION

1. Position the engine in the vehicle.
2. Install both left and right side engine mounts onto engine.
3. Raise the vehicle.
4. Install the transmission bellhousing to engine mounting bolts. Tighten the bolts to 41 N·m (30ft. lbs.).
5. Tighten the engine mount thru bolts.
6. Install the torque convertor bolts.
7. Connect the ground straps on the left and right side of the engine.
8. Install the starter.
9. Connect the crankshaft position sensor.
10. Install the engine block heater power cable, if equipped.

**CAUTION: The structural cover requires a specific torque sequence. Failure to follow this sequence may cause severe damage to the cover.**

11. Install the structural cover.

**NOTE: New clamps must be used on exhaust manifold flanges. Failure to use new clamps may result in exhaust leaks.**

12. Install the left and right exhaust pipes.
13. Connect the left and right oxygen sensors.
14. Lower vehicle.
15. Remove the engine lift plate.
16. Connect the knock sensors.
17. Connect the engine to body ground straps at the left side of the cowl.
18. Install the intake manifold.
19. Install the engine oil dipstick tube.
20. Install the power brake booster vacuum hose.
21. Install the breather hoses.
22. Install the PCV hose.
23. Install the fuel rail.
24. Install the coil over plugs.
25. Connect the engine wiring harness at the following points:
    - Intake air temperature (IAT) sensor
    - Fuel Injectors
    - Throttle Position (TPS) Switch
    - Idle Air Control (IAC) Motor
    - Engine Oil Pressure Switch
    - Engine Coolant Temperature (ECT) Sensor
    - Manifold Absolute Pressure MAP) Sensor
    - Camshaft Position (CMP) Sensor
    - Coil Over Plugs
    - Crankshaft Position Sensor
26. Connect lower radiator hose.
27. Connect upper radiator hose.
28. Connect throttle and speed control cables.

29. Install the heater hose assembly.
30. Install coolant recovery bottle.
31. Install the power steering pump.
32. Install the generator.
33. Install the A/C compressor.
34. Install the drive belt.
35. Install the mechanical cooling fan.
36. Install the fan shroud with the electric fan assembly.
37. Install the radiator core support bracket.
38. Install the air cleaner assembly.
39. Refill the engine cooling system.
40. Install the hood.
41. Check and fill engine oil.
42. Connect the battery negative cable.
43. Start the engine and check for leaks.

## SPECIFICATIONS

## TORQUE

| DESCRIPTION | N·m | Ft. Lbs. | In. Lbs. |

## SPECIFICATIONS - 3.7L ENGINE

### GENERAL SPECIFICATIONS

| DESCRIPTION | SPECIFICATION | |
|---|---|---|
| Type | 90° SOHC V6 12 Valve | |
| Number of Cylinders | 6 | |
| Firing Order | 1-6-5-4-3-2 | |
| Lead Cylinder | No. 1 Left Bank | |
| Compression Ratio | 9.6:1 | |
| Max. Variation Between Cylinders | 25% | |
| | **Metric** | **Standard** |
| Displacement | 3.7 Liters | 226 Cubic Inches |
| Bore | 93.0 mm | 3.66 in. |
| Stroke | 90.8 mm | 3.40 in. |
| Horsepower | 211 @ 5200 RPM | |
| Torque | 236ft. lbs.@4000 PRM | |
| Compression Pressure | 1172-1551 kPa | 170-225 psi |

### CYLINDER BLOCK

| DESCRIPTION | SPECIFICATION | |
|---|---|---|
| | **Metric** | **Standard** |
| Bore Diameter | 93.013 ± .0075 mm | 3.6619 ± 0.0003 in. |
| Out of Round (MAX) | 0.076 mm | 0.003 in. |
| Taper (MAX) | 0.051 mm | 0.002 in. |

### PISTONS

| DESCRIPTION | SPECIFICATION | |
|---|---|---|
| | Metric | Standard |
| Diameter | 92.975 mm | 3.6605 in. |
| Weight | 365.0 grams | 12.87 oz |
| **Ring Groove Diameter** | | |
| No. 1 | 85.37 - 83.13 mm | 3.282 - 3.273 in |
| No. 2 | 82.833 - 83.033 mm | 3.261 - 3.310 in. |
| No. 3 | 83.88 - 84.08 mm | 3.302 - 3.310 in. |

### PISTON PINS

| DESCRIPTION | SPECIFICATION | |
|---|---|---|
| | Metric | Standard |
| Clearance In Piston | 0.006 - 0.015 mm | 0.0002 - 0.0005 in. |
| Diameter | 24.017 - 24.020 mm | 0.9455 - 0.9456 in. |

### PISTON RINGS

| DESCRIPTION | SPECIFICATION | |
|---|---|---|
| | Metric | Standard |
| **Ring Gap** | | |
| Top Compression Ring | 0.20 - 0.36 mm | 0.0079 - 0.0142 in. |
| Second Compression Ring | 0.37 - 0.63 mm | 0.0146 - 0.0249 in. |
| Oil Control (Steel Rails) | 0.25 - 0.76 mm | 0.0099 - 0.30 in. |
| **Side Clearance** | | |
| Top Compression Ring | .051 - .094 mm | 0.0020 - 0.0037 in. |
| Second Compression Ring | 0.040 - 0.080 mm | 0.0016 - 0.0031 in. |
| Oil Ring (Steel Ring) | .019 - .229 mm | .0007 - .0091 in. |
| **Ring Width** | | |
| Top Compression Ring | 1.472 - 1.490 mm | 0.057 - 0.058 in. |
| Second Compression Ring | 1.472 - 1.490 mm | 0.057 - 0.058 in. |
| Oil Ring (Steel Rails) | 0.445 - 0.470 mm | 0.017 - 0.018 in. |

### CONNECTING RODS

| DESCRIPTION | SPECIFICATION | |
|---|---|---|
| | Metric | Standard |
| Bearing Clearance | 0.006 - 0.044 mm | 0.0002 - 0.0017 in. |
| Side Clearance | 0.10 - 0.35 mm | 0.004 - 0.0138 in. |
| Piston Pin Clearance | .015 - .028 mm | 0.0006 - 0.0011 in. |
| Bearing Bore Out of Round (MAX) | 0.004 mm | 0.0002 in. |
| Total Weight (Less Bearing) | 612 grams | 21.588 ounces |

#### CRANKSHAFT

| DESCRIPTION | SPECIFICATION | |
|---|---|---|
| | Metric | Standard |
| Main Bearing Journal Diameter | 63.488 - 63.512 mm | 2.4996 - 2.5005 in. |
| Bearing Clearance | 0.002 - 0.046 mm | 0.00008 - 0.0018 in. |
| Out of Round (MAX) | 0.005 mm | 0.0002 in. |
| Taper (MAX) | 0.006 mm | 0.0004 in. |
| End Play | 0.052 - 0.282 mm | 0.0021 - 0.0112 in. |
| End Play (MAX) | 0.282 mm | 0.0112 in. |
| Connecting Rod Journal Diameter | 57.908 - 57.892 mm | 2.2798 - 2.2792 in. |
| Bearing Clearance | 0.006 - 0.044 | 0.0002 - 0.0011 in. |
| Out of Round (MAX) | 0.005 mm | 0.0002 in. |
| Taper (MAX) | 0.006 mm | 0.0002 in. |

#### CAMSHAFT

| DESCRIPTION | SPECIFICATION | |
|---|---|---|
| | Metric | Standard |
| Bore Diameter | 26.02 - 26.04 mm | 1.0245 - 1.0252 in. |
| Bearing Journal Diameter | 25.975 - 25.995 mm | 1.0227 - 1.0235 in. |
| Bearing Clearance | 0.025 - 0.065 mm | 0.001 - 0.0026 in. |
| Bearing Clearance (MAX) | 0.065 mm | 0.0026 in. |
| End Play | .075 - .200 mm | 0.003 - 0.0079 in. |
| End Play (MAX) | .200 mm | 0.0079 in. |

#### VALVE TIMING

| DESCRIPTION | SPECIFICATION |
|---|---|
| **Intake** | |
| Opens (BTDC) | 5.6° |
| Closes (ATDC) | 240.1° |
| Duration | 245.7° |
| **Exhaust** | |
| Opens (BTDC) | 241.5° |
| Closes (ATDC) | 20.1° |
| Duration | 261.6° |
| Valve Overlap | 25.7° |

#### VALVES

| DESCRIPTION | SPECIFICATION | |
|---|---|---|
| | Metric | Standard |
| Face Angle | 45° - 45.5° | |
| Head Diameter | | |
| Intake | 48.52 - 48.78 mm | 1.9103 - 1.9205 in. |
| Exhaust | 36.87 - 37.13 mm | 1.4516 - 1.4618 in. |
| Length (Overall) | | |
| Intake | 113.45 - 114.21 mm | 4.4666 - 4.4965 in. |
| Exhaust | 114.92 - 115.68 mm | 4.5244 - 4.5543 in. |
| Stem Diameter | | |
| Intake | 6.931 - 6.957 mm | 0.2729 - 0.2739 in. |
| Exhaust | 6.902 - 6.928 mm | 0.2717 - 0.2728 in. |
| Stem-to-Guide Clearance | | |
| Intake | 0.018 - 0.069 mm | 0.0008 - 0.0028 in. |
| Exhaust | 0.047 - 0.098 mm | 0.0019 - 0.0039 in. |
| Max. Allowable Stem-to-Guide Clearance (Rocking Method) | | |
| Intake | 0.069 mm | 0.0028 in. |
| Exhaust | 0.098 mm | 0.0039 in. |
| Valve Lift (Zero Lash) | | |
| Intake | 12.00 mm | 0.472 in. |
| Exhaust | 12.00 mm | 0.472 in. |

**VALVE SPRING**

| DESCRIPTION | SPECIFICATION | |
|---|---|---|
| | Metric | Standard |
| Free Length (Approx) | | |
| Intake | 48.18 mm | 1.896 in. |
| Exhaust - w/damper | 48.2 mm | 1.897 in. |
| Spring Force (Valve Closed) | | |
| Intake | 332.0 - 368.0 N @ 40.12 mm | 74.63 - 82.72 lbs. @ 1.5795 in. |
| Exhaust - (without damper) | 356 - 394 N @ 39.12 mm | 80.031 - 88.57 lbs. @ 1.54 in. |
| Spring Force (Valve Open) | | |
| Intake | 948.0 - 1038.0 N @ 28.12 mm | 213.2 - 233.8 lbs. @ 1.107 in. |
| Exhaust - without damper | 974 - 956 N @ 27.12 mm | 218.8 - 215.1 lbs. @ 1.067 in. |
| Number of Coils | | |
| Intake | 7.30 | |
| Exhaust | 7.15 | |
| Wire Diameter | | |
| Intake | 4.77 × 3.80mm | 0.1878 × 0.1496 in. |

| | | |
|---|---|---|
| Exhaust | 4.66 × 3.72mm | 0.1843 × .1464 in. |
| Installed Height (Spring Seat to Bottom of Retainer) | | |
| Nominal | | |
| Intake | 40.12 mm | 1.579 in. |
| Exhaust - w/damper | 40.12 mm | 1.579 in. |

**CYLINDER HEAD**

| DESCRIPTION | SPECIFICATION | |
|---|---|---|
| | **Metric** | **Standard** |
| Gasket Thickness (Compressed) | 0.7 mm | (0.0276 in.) |
| Valve Seat Angle | 44.5° - 45.0° | |
| Valve Seat Runout (MAX) | 0.051 mm | 0.002 in. |
| Valve Seat Width | | |
| Intake | 1.75 - 2.36 mm | 0.0698 - 0.0928 in. |
| Exhaust | 1.71 - 2.32 mm | 0.0673 - 0.0911 in. |
| Guide Bore Diameter (Std.) | 6.975 - 7.00 mm | 0.2747 - 0.2756 in. |
| Cylinder Head Warpage (Flatness) | 0.0508 mm | 0.002 in. |

**OIL PUMP**

| DESCRIPTION | SPECIFICATION | |
|---|---|---|
| | **Metric** | **Standard** |
| Clearance Over Rotors/End Face (MAX) | 0.095 mm | 0.0038 in. |
| Cover Out - of -Flat (MAX) | 0.025 mm | 0.001 in. |
| Inner and Outer Rotor Thickness | 12.02 mm | 0.4731 in. |
| Outer Rotor to pocket (Diametral) clearance (MAX) | .235 mm | .0093 in. |
| Outer Rotor Diameter (MIN) | 85.925 mm | 0.400 in. |
| Tip Clearance Between Rotors (MAX) | 0.150 mm | 0.006 in. |

**OIL PRESSURE**

| SPECIFICATION | SPECIFICATION | |
|---|---|---|
| | **Metric** | **Standard** |
| At Curb Idle Speed (MIN)* | 25 kPa | 4 psi |
| @ 3000 rpm | 170 - 758 kPa | 25 - 110 psi |
| *** CAUTION: If pressure is zero at curb idle, DO NOT run engine at 3000 rpm.** | | |

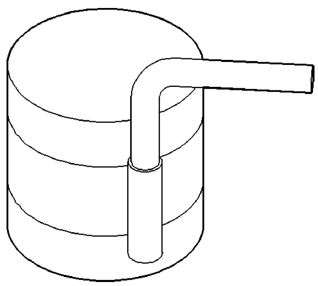
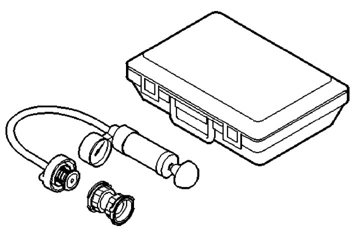
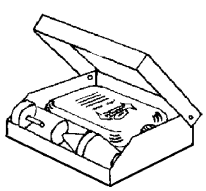
GAUGE OIL PRESSURE - C-3292



Piston Ring Compressor C-385



Pressure Tester Kit 7700



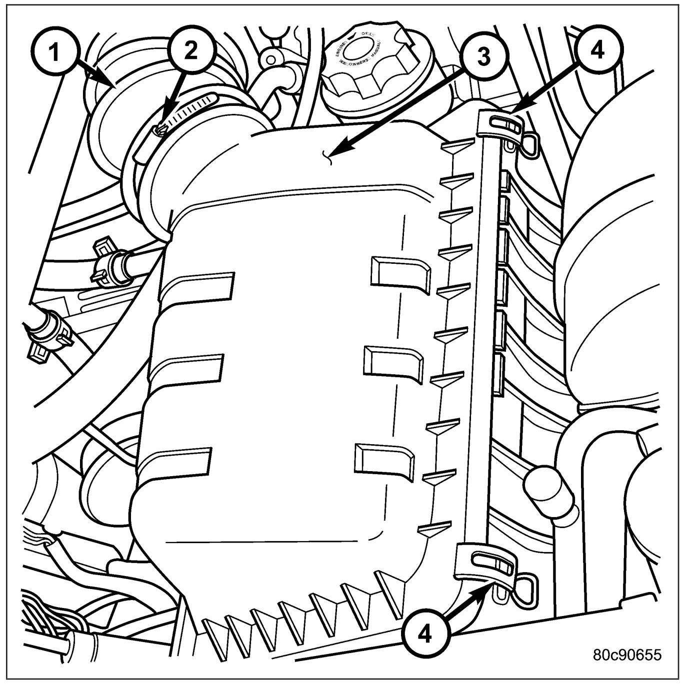
Bloc–Chek–Kit C-3685–A

# ELEMENT - AIR CLEANER

## REMOVAL - 3.7L

Housing removal is not necessary for element (filter) replacement.

1. Pry up spring clips (4) from front of housing cover (spring clips retain cover to housing).
2. Release housing cover from 4 locating tabs located on rear of housing, and remove cover.
3. Remove air cleaner element (filter) from housing.
4. Clean inside of housing before replacing element.



## INSTALLATION - 3.7L

1. Install element into housing.
2. Position housing cover into housing locating tabs.
3. Pry up spring clips and lock cover to housing.

If any air filter, air resonator, air intake tubes or air filter housing clamps had been loosened or removed, tighten them to 5 N·m (40 in. lbs.) torque.

# HEAD-CYLINDER-LEFT

## DESCRIPTION - VALVE GUIDES

The valve guides are made of powered metal and are pressed into the cylinder head. The guides are not replaceable or serviceable, and valve guide reaming is not recommended. If the guides are worn beyond acceptable limits, replace the cylinder heads.

## DIAGNOSIS AND TESTING

## DIAGNOSIS AND TESTING - HYDRAULIC LASH ADJUSTER

A tappet-like noise may be produced from several items. Check the following items.

1. Engine oil level too high or too low. This may cause aerated oil to enter the adjusters and cause them to be spongy.
2. Insufficient running time after rebuilding cylinder head. Low speed running up to 1 hour may be required.
3. Turn engine off and let set for a few minutes before restarting. Repeat this several times after engine has reached normal operating temperature.
4. Low oil pressure.
5. The oil restrictor in cylinder head gasket or the oil passage to the cylinder head is plugged with debris.
6. Air ingested into oil due to broken or cracked oil pump pick up.
7. Worn valve guides.
8. Rocker arm ears contacting valve spring retainer.
9. Rocker arm loose, adjuster stuck or at maximum extension and still leaves lash in the system.
10. Oil leak or excessive cam bore wear in cylinder head.
11. Faulty lash adjuster.
    a. Check lash adjusters for sponginess while installed in cylinder head and cam on camshaft at base circle. Depress part of rocker arm over adjuster. Normal adjusters should feel firm when pressed quickly. When pressed very slowly, lash adjusters should collapse.
    b. Remove suspected lash adjusters, and replace.
    c. Before installation, make sure adjusters are full of oil. This can be verified by little plunger travel when lash adjuster is depressed quickly.

## CYLINDER HEAD GASKET

A cylinder head gasket leak can be located between adjacent cylinders or between a cylinder and the adjacent water jacket.

Possible indications of the cylinder head gasket leaking between adjacent cylinders are:

- Loss of engine power
- Engine misfiring
- Poor fuel economy

Possible indications of the cylinder head gasket leaking between a cylinder and an adjacent water jacket are:

- Engine overheating
- Loss of coolant
- Excessive steam (white smoke) emitting from exhaust
- Coolant foaming

### CYLINDER-TO-CYLINDER LEAKAGE TEST

To determine if an engine cylinder head gasket is leaking between adjacent cylinders, follow the procedures in Cylinder Compression Pressure Test (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING). An engine cylinder head gasket leaking between adjacent cylinders will result in approximately a 50 - 70% reduction in compression pressure.

## CYLINDER-TO-WATER JACKET LEAKAGE TEST

**WARNING: USE EXTREME CAUTION WHEN THE ENGINE IS OPERATING WITH COOLANT PRESSURE CAP REMOVED.**

### VISUAL TEST METHOD

With the engine cool, remove the coolant pressure cap. Start the engine and allow it to warm up until thermostat opens.

If a large combustion/compression pressure leak exists, bubbles will be visible in the coolant.

### COOLING SYSTEM TESTER METHOD

**WARNING: WITH COOLING SYSTEM TESTER IN PLACE, PRESSURE WILL BUILD UP FAST. EXCESSIVE PRESSURE BUILT UP, BY CONTINUOUS ENGINE OPERATION, MUST BE RELEASED TO A SAFE PRESSURE POINT. NEVER PERMIT PRESSURE TO EXCEED 138 kPa (20 psi).**

Install Cooling System Tester 7700 or equivalent to pressure cap neck. Start the engine and observe the tester's pressure gauge. If gauge pulsates with every power stroke of a cylinder a combustion pressure leak is evident.

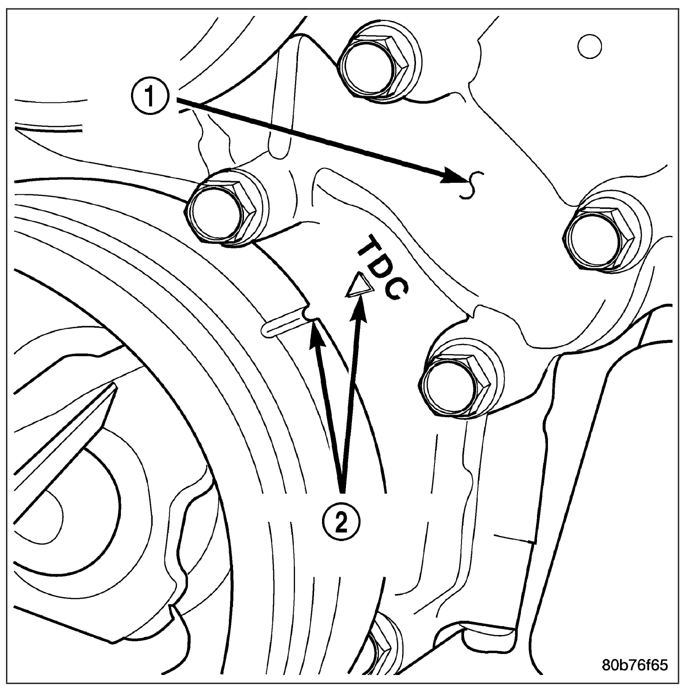
### CHEMICAL TEST METHOD

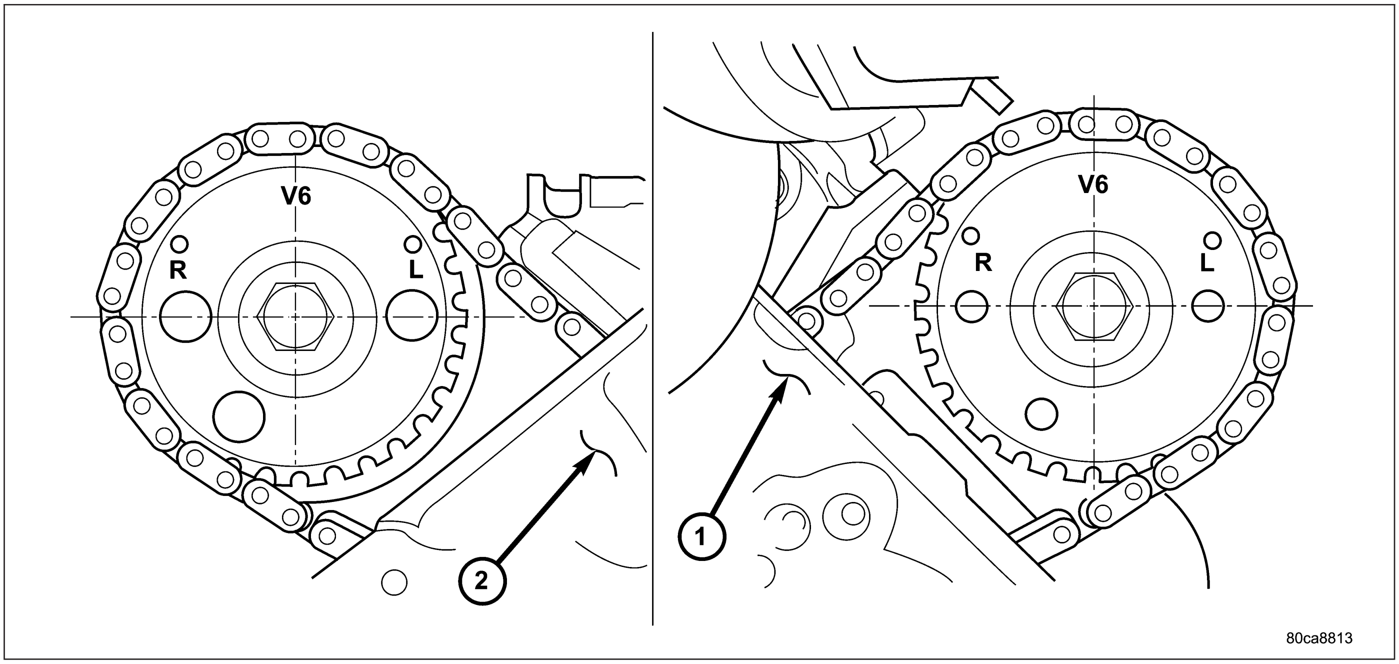
Combustion leaks into the cooling system can also be checked by using Bloc-Chek Kit C-3685-A or equivalent. Perform test following the procedures supplied with the tool kit.

## REMOVAL

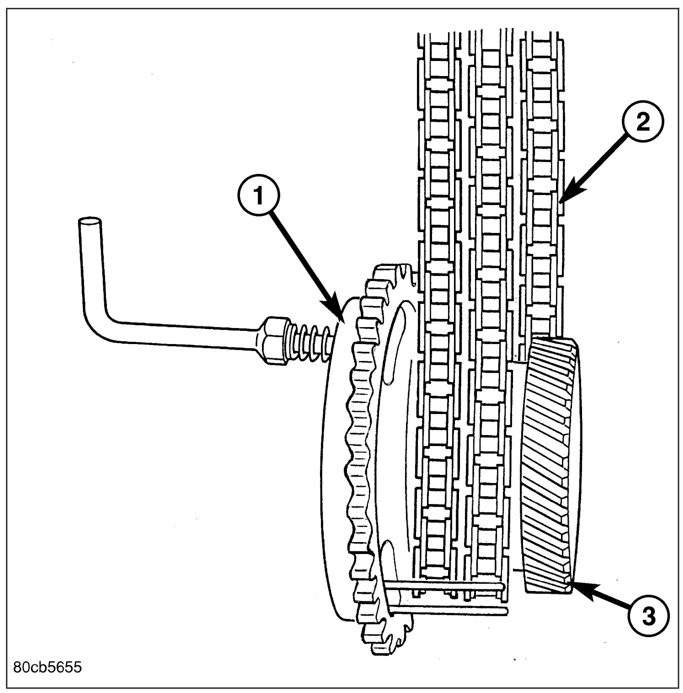
## REMOVAL LEFT CYLINDER HEAD

1. Disconnect the negative cable from the battery.
2. Raise the vehicle on a hoist.
3. Disconnect the exhaust pipe at the left side exhaust manifold.
4. Drain the engine coolant. Refer to COOLING SYSTEM.
5. Lower the vehicle.
6. Remove the intake manifold. Refer to procedure in this section.
7. Remove the cylinder head cover. Refer to procedure in this section.
8. Remove the fan shroud and fan blade assembly. Refer to COOLING SYSTEM.
9. Remove accessory drive belt. Refer to COOLING SYSTEM.
10. Remove the power steering pump and set aside.
11. Rotate the crankshaft until the damper timing mark is aligned with TDC indicator mark (2).





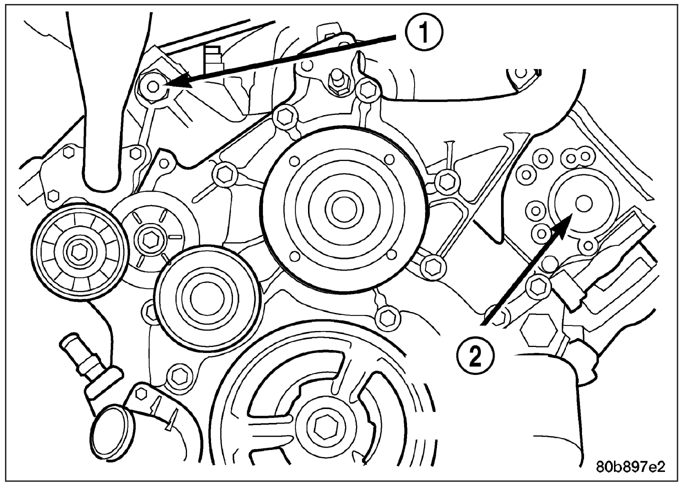
12. Verify the V6 mark on the camshaft sprocket is at the 12 o'clock position. Rotate the crankshaft one turn if necessary.
13. Remove the crankshaft damper. (Refer to 9 - ENGINE/ENGINE BLOCK/VIBRATION DAMPER - REMOVAL)
14. Remove the timing chain cover. (Refer to 9 - ENGINE/VALVE TIMING/TIMING BELT / CHAIN COVER(S) - REMOVAL)
15. Lock the secondary timing chains to the idler sprocket using Special Tool 8429 Timing Chain Holding Fixture (1).



**NOTE: Mark the secondary timing chain prior to removal to aid in installation.**

16. Mark the secondary timing chain, one link on each side of the V6 mark on the camshaft drive gear.
17. Remove the left side secondary chain tensioner.

18. Remove the cylinder head access plug (1) (2).
19. Remove the left side secondary chain guide.
20. Remove the retaining bolt and the camshaft drive gear.



80b897e2

**CAUTION: Do not allow the engine to rotate. Severe damage to the valve train can occur.**

**CAUTION: Do not overlook the four smaller bolts at the front of the cylinder head. Do not attempt to remove the cylinder head without removing these four bolts.**

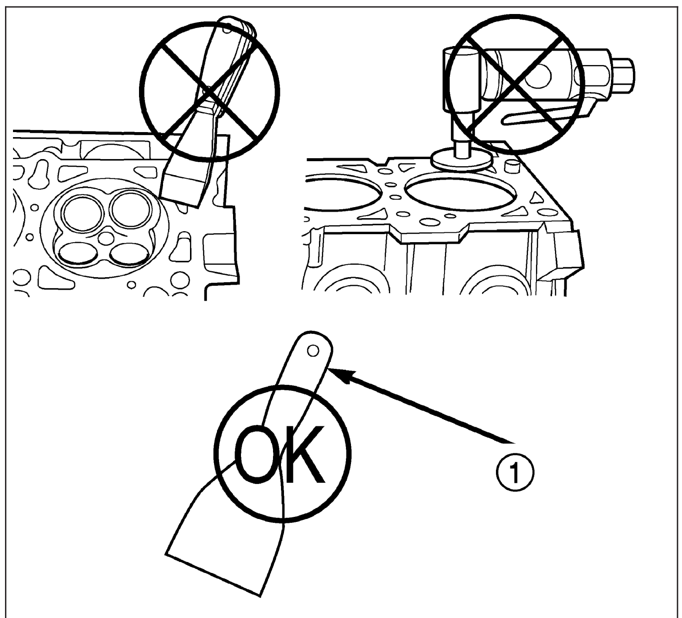
**NOTE: The cylinder head is attached to the cylinder block with twelve bolts.**

21. Remove the cylinder head retaining bolts.
22. Remove the cylinder head and gasket. Discard the gasket.

**CAUTION: Do not lay the cylinder head on its gasket sealing surface, due to the design of the cylinder head gasket any distortion to the cylinder head sealing surface may prevent the gasket from properly sealing resulting in leaks.**

## CLEANING

To ensure engine gasket sealing, proper surface preparation must be performed, especially with the use of aluminum engine components. (Refer to 9 - ENGINE - STANDARD PROCEDURE).



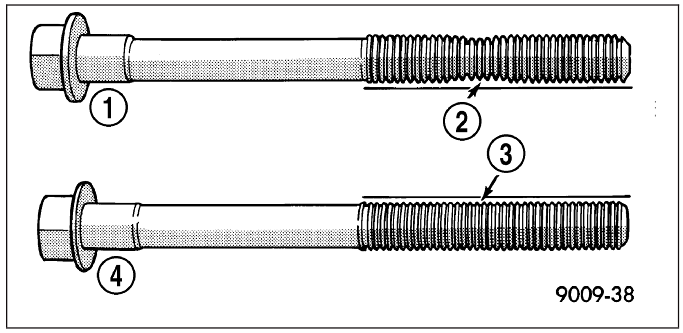
80b76eba

## INSTALLATION

## INSTALLATION LEFT CYLINDER HEAD

**NOTE: The cylinder head bolts are tightened using a torque plus angle procedure. The bolts must be examined BEFORE reuse. If the threads are necked down the bolts should be replaced.**

Necking can be checked by holding a straight edge against the threads. If all the threads do not contact the scale (1), the bolt should be replaced.

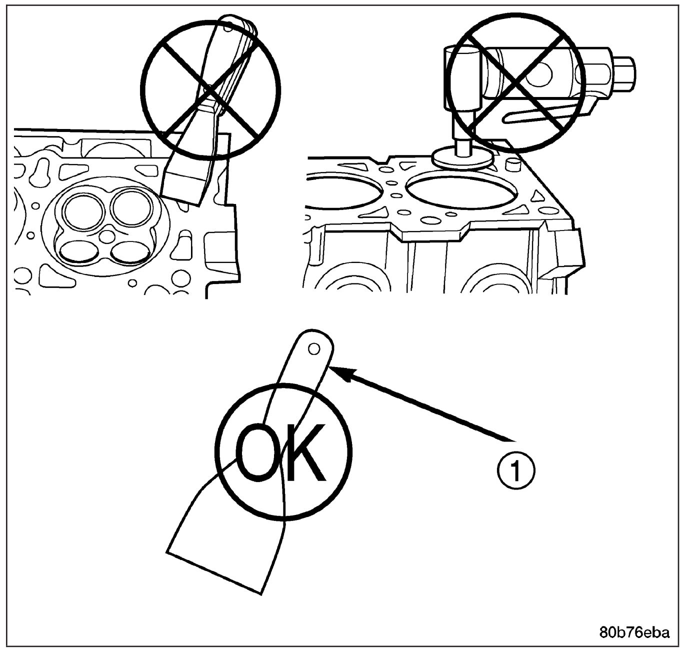


**CAUTION: When cleaning cylinder head and cylinder block surfaces, DO NOT use a metal scraper because the surfaces could be cut or ground. Use only a wooden or plastic scraper.**

1. Clean the cylinder head and cylinder block mating surfaces.
2. Position the new cylinder head gasket on the locating dowels.

**CAUTION: When installing cylinder head, use care not damage the tensioner arm or the guide arm.**

3. Position the cylinder head onto the cylinder block. Make sure the cylinder head seats fully over the locating dowels.

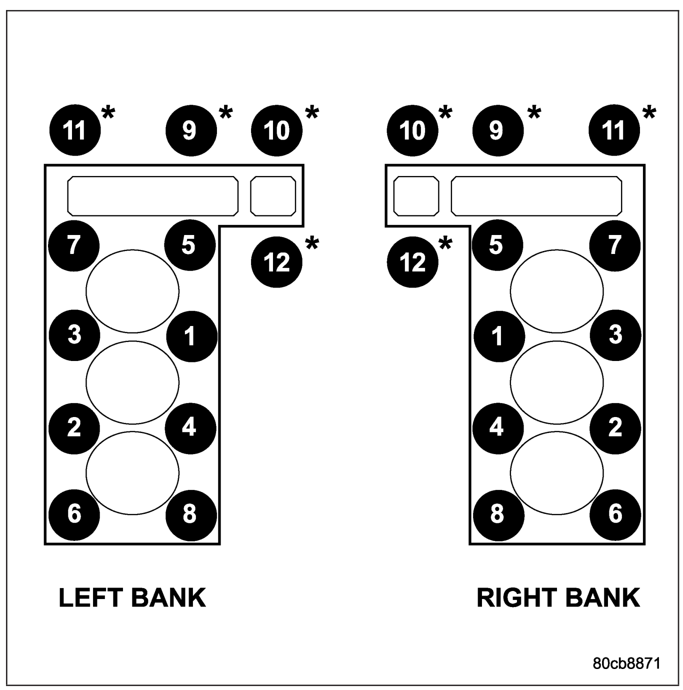


**NOTE: The four smaller cylinder head mounting bolts require sealant to be added to them before installing. Failure to do so may cause leaks.**

4. Lubricate the cylinder head bolt threads with clean engine oil and install the eight M11 bolts.
5. Coat the four M8 cylinder head bolts with **Mopar® Lock and Seal Adhesive** then install the bolts.

**NOTE: The cylinder head bolts are tightened using an angle torque procedure, however, the bolts are not a torque-to-yield design.**

6. Tighten the bolts in sequence using the following steps and torque values:
   - Step 1: Tighten bolts 1–8, 27 N·m (20 ft. lbs.).
   - Step 2: Verify that bolts 1–8, all reached 27 N·m (20 ft. lbs.), by repeating step-1 without loosening the bolts. Tighten bolts 9 thru 12 to 14 N·m (10 ft. lbs.).
   - Step 3: Tighten bolts 1–8, 90 degrees.



- Step 4: Tighten bolts 1–8, 90 degrees, again. Tighten bolts 9–12, 26 N·m (19 ft. lbs.)

7. Position the secondary chain onto the camshaft drive gear, making sure one marked chain link is on either side of the V6 mark on the gear then using Special Tool 8428 Camshaft Wrench, position the gear onto the camshaft.

**CAUTION: Remove excess oil from camshaft sprocket retaining bolt before reinstalling bolt. Failure to do so may cause over-torqueing of bolt resulting in bolt failure.**

8. Install the camshaft drive gear retaining bolt.
9. Install the left side secondary chain guide.
10. Install the cylinder head access plug.
11. Re-set and Install the left side secondary chain tensioner.
12. Remove Special Tool 8429.
13. Install the timing chain cover.
14. Install the crankshaft damper. Tighten damper bolt 175 N·m (130 Ft. Lbs.).
15. Install the power steering pump.
16. Install the fan blade assembly and fan shroud.
17. Install the cylinder head cover.
18. Install the intake manifold.
19. Refill the cooling system
20. Raise the vehicle.
21. Install the exhaust pipe onto the left exhaust manifold.
22. Lower the vehicle.
23. Connect the negative cable to the battery.
24. Start the engine and check for leaks.

# CAMSHAFT

## DESCRIPTION

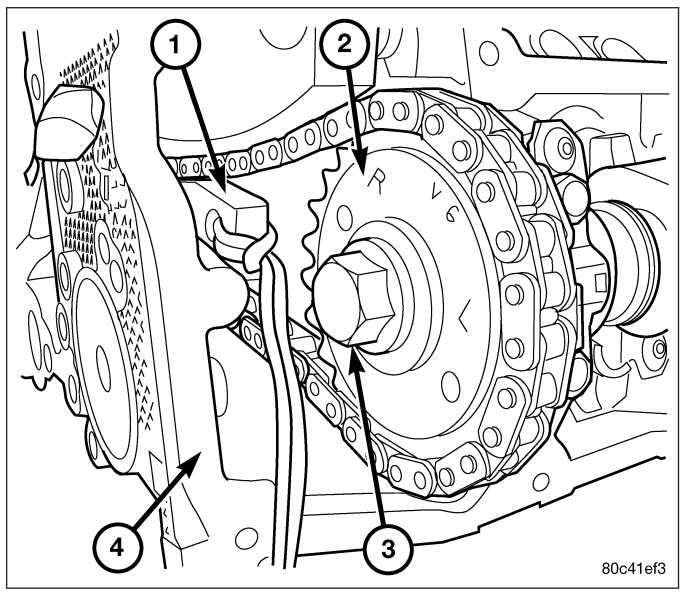
The camshafts consist of powdered metal steel lobes which are sinter-bonded to a steel tube. Four bearing journals are machined into the camshaft. Camshaft end play is controlled by two thrust walls that border the nose piece journal.

## REMOVAL

**CAUTION: When the timing chain is removed and the cylinder heads are still installed, DO NOT forcefully rotate the camshafts or crankshaft independently of each other. Severe valve and/or piston damage can occur.**

**CAUTION: When removing the cam sprocket, timing chains or camshaft, Failure to use Special Tool 8379 will result in hydraulic tensioner ratchet over extension, requiring timing chain cover removal to reset the tensioner ratchet.**

1. Remove cylinder head cover (Refer to 9 - ENGINE/CYLINDER HEAD/CYLINDER HEAD COVER(S) - REMOVAL).
2. Set engine to TDC cylinder #1, camshaft sprocket V6 marks at the 12 o'clock position.
3. Mark one link on the secondary timing chain on both sides of the V6 mark on the camshaft sprocket to aid in installation.



**CAUTION: Do not hold or pry on the camshaft target wheel (Located on the right side camshaft sprocket) for any reason, Severe damage will occur to the target wheel resulting in a vehicle no start condition.**

4. Loosen but **DO NOT** remove the camshaft sprocket retaining bolt. Leave the bolt snug against the sprocket.

**NOTE: The timing chain tensioners must be secured prior to removing the camshaft sprockets. Failure to secure tensioners will allow the tensioners to extend, requiring timing chain cover removal in order to reset tensioners.**

**CAUTION: Do not force wedge past the narrowest point between the chain strands. Damage to the tensioners may occur.**

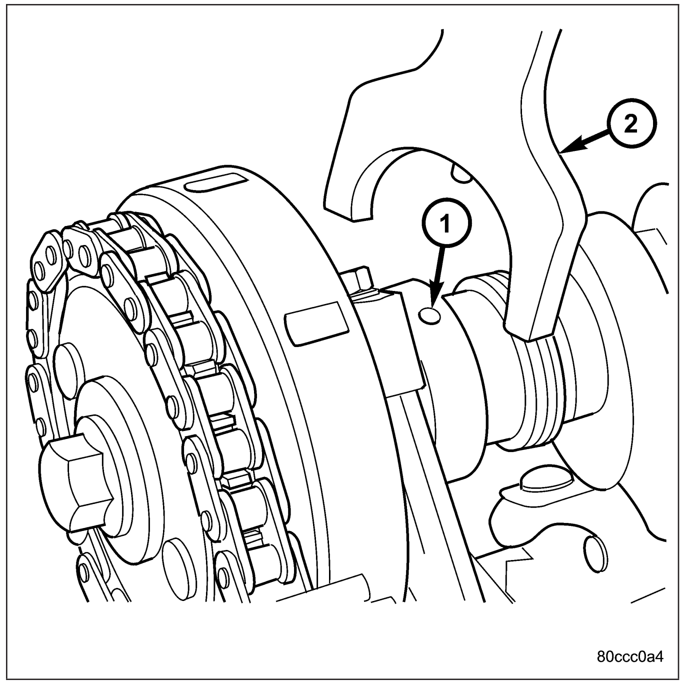
5. Position Special Tool 8379 timing chain wedge between the timing chain strands, tap the tool to securely wedge the timing chain against the tensioner arm and guide.

6. Hold the camshaft with Special Tool 8428 Camshaft Wrench , while removing the camshaft sprocket bolt and sprocket.
7. Using Special Tool 8428 Camshaft Wrench, gently allow the camshaft to rotate 5° clockwise until the camshaft is in the neutral position (no valve load).
8. Starting at the outside working inward, loosen the camshaft bearing cap retaining bolts 1/2 turn at a time. Repeat until all load is off the bearing caps.

**CAUTION: DO NOT STAMP OR STRIKE THE CAMSHAFT BEARING CAPS. SEVERE DAMAGE WILL OCCUR TO THE BEARING CAPS.**

**NOTE: When the camshaft is removed the rocker arms may slide downward, mark the rocker arms before removing camshaft.**

9. Remove the camshaft bearing caps and the camshaft.



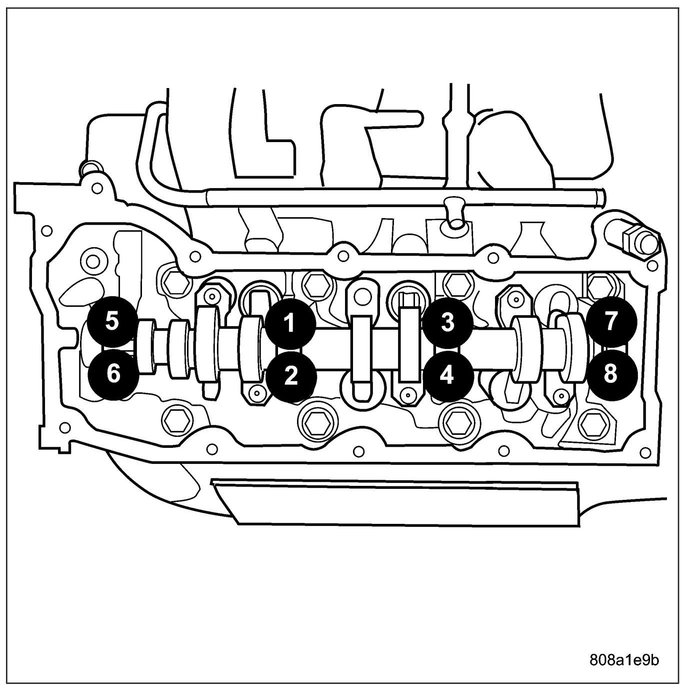
## INSTALLATION

1. Lubricate camshaft journals with clean engine oil.

**NOTE: Position the left side camshaft so that the camshaft sprocket dowel is near the 1 o'clock position, This will place the camshaft at the neutral position easing the installation of the camshaft bearing caps.**

2. Position the camshaft into the cylinder head.
3. Install the camshaft bearing caps, hand tighten the retaining bolts.

**NOTE: Caps should be installed so that the stamped numbers on the caps are in numerical order, ( 1 thru 4 ) from the front to the rear of the engine. All caps should be installed so that the stamped arrows on the caps point toward the front of the engine.**



4. Working in 1/2 turn increments, tighten the bearing cap retaining bolts starting with the middle cap working outward.
5. Torque the camshaft bearing cap retaining bolts to 11 N·m (100 in. lbs.) .
6. Position the camshaft drive gear into the timing chain aligning the V6 mark between the two marked chain links (Two links marked during removal).
7. Using Special Tool 8428 Camshaft Wrench, rotate the camshaft until the camshaft sprocket dowel is aligned with the slot in the camshaft sprocket. Install the sprocket onto the camshaft.

**CAUTION: Remove excess oil from camshaft sprocket bolt. Failure to do so can cause bolt over-torque resulting in bolt failure.**

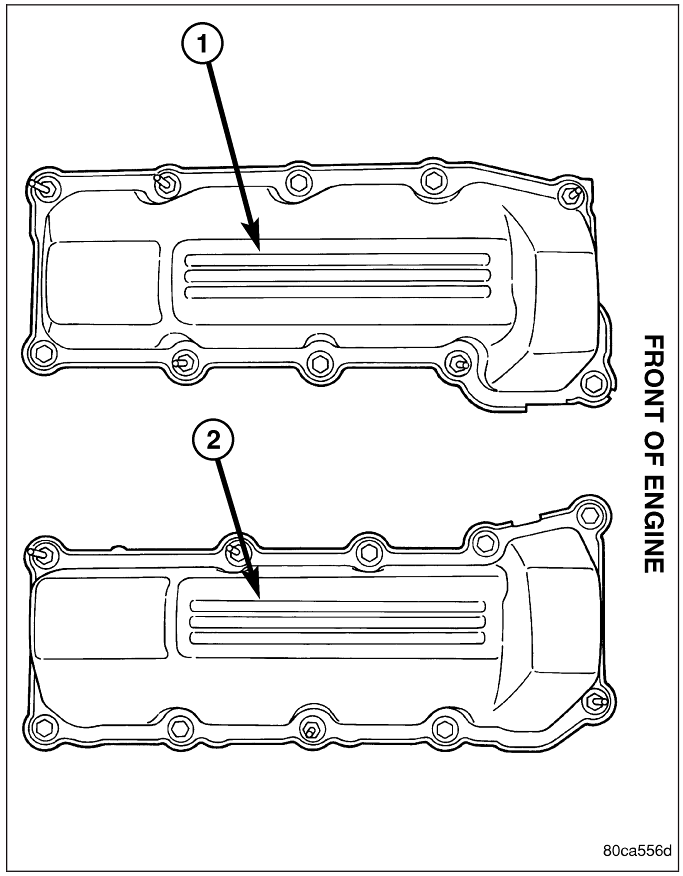
8. Remove excess oil from bolt, then install the camshaft sprocket retaining bolt and hand tighten.
9. Remove Special Tool 8379 timing chain wedge.

10. Using Special Tool 6958 spanner wrench with adapter pins 8346, torque the camshaft sprocket retaining bolt to 122 N·m (90 ft. lbs.).
11. Install the cylinder head cover (Refer to 9 - ENGINE/CYLINDER HEAD/CYLINDER HEAD COVER(S) - INSTALLATION).

# COVER-CYLINDER HEAD

## DESCRIPTION

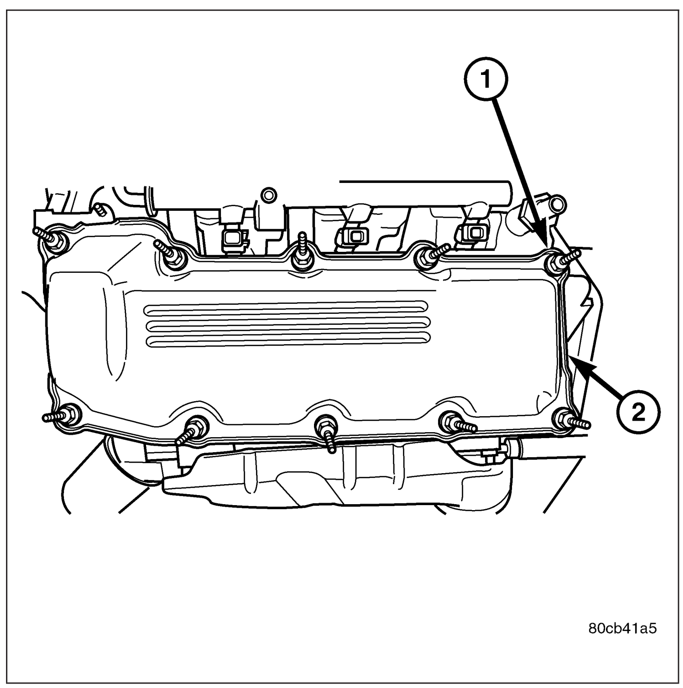
The cylinder head covers (1,2) are made of glass re-enforced thermoset plastic, and are not interchangable from side-to-side.



## REMOVAL

1. Disconnect negative cable from battery.
2. Remove the resonator assemble and air inlet hose.
3. Disconnect injector connectors and un-clip the injector harness.
4. Route injector harness in front of cylinder head cover.
5. Disconnect the left side breather tube and remove the breather tube.
6. Remove the cylinder head cover mounting bolts (1).
7. Remove cylinder head cover (1) and gasket.

**NOTE: The gasket may be used again, providing no cuts, tears, or deformation has occurred.**

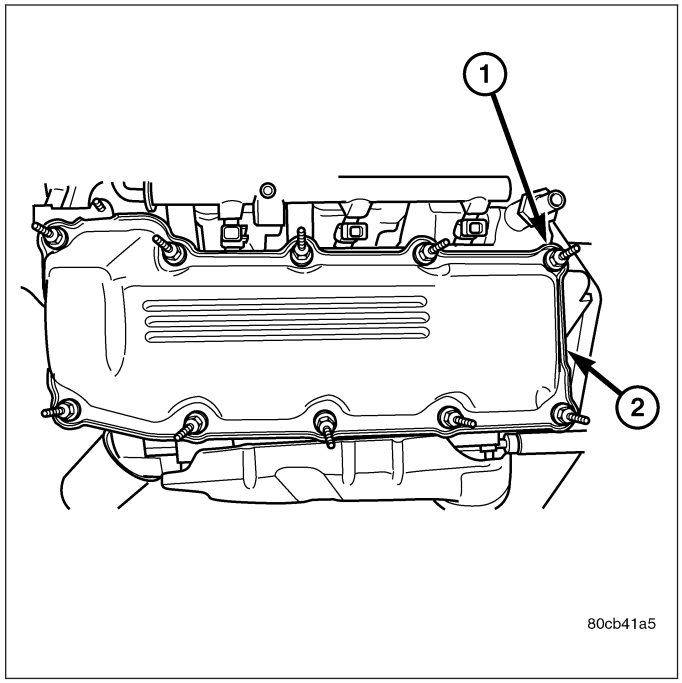


## INSTALLATION

**CAUTION: Do not use harsh cleaners to clean the cylinder head covers. Severe damage to covers may occur.**

**NOTE: The gasket may be used again, provided no cuts, tears, or deformation has occurred.**

1. Clean cylinder head cover and both sealing surfaces. Inspect and replace gasket as necessary.
2. Install cylinder head cover (2).
3. Tighten cylinder head cover bolts (1) and double ended studs to 12 N·m (105 in. lbs.).
4. Install left side breather and connect breather tube.
5. Connect injector electrical connectors and injector harness retaining clips.
6. Install the resonator and air inlet hose.
7. Connect negative cable to battery.



# VALVES & SEATS - INTAKE/EXHAUST

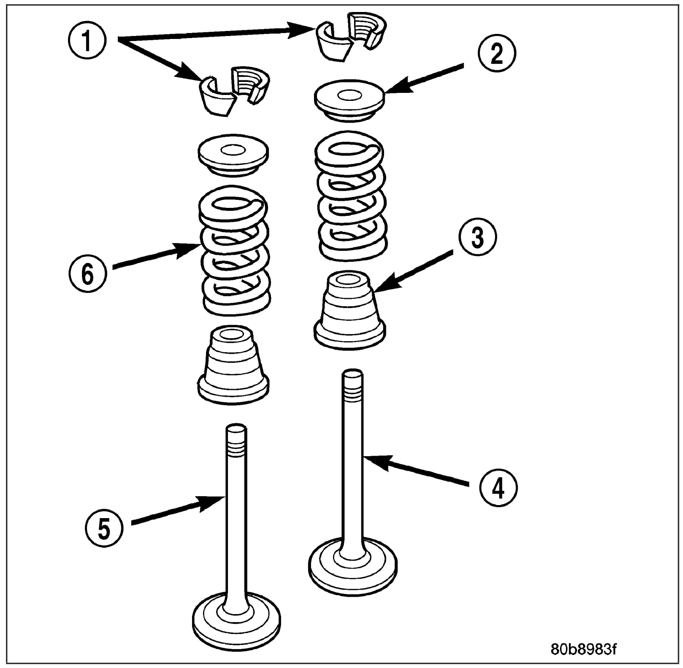
## DESCRIPTION

The valves are made of heat resistant steel and have chrome plated stems to prevent scuffing. Each valve is actuated by a roller rocker arm which pivots on a stationary lash adjuster. All valves use three bead lock keepers to retain the springs and promote valve rotation.

## STANDARD PROCEDURE - REFACING

**NOTE: Valve seats that are worn or burned can be reworked, provided that correct angle and seat width are maintained. Otherwise the cylinder head must be replaced.**

**NOTE: When refacing valves (4) and valve seats, it is important that the correct size valve guide pilot be used for reseating stones. A true and complete surface must be obtained.**



1. Using a suitable dial indicator measure the center of the valve seat. Total run out must not exceed 0.051 mm (0.002 in).
2. Apply a small amount of Prussian blue to the valve seat, insert the valve into the cylinder head, while applying light pressure on the valve rotate the valve. Remove the valve and examine the valve face. If the blue is transferred below the top edge of the valve face, lower the valve seat using a 15 degree stone. If the blue is transferred to the bottom edge of the valve face, raise the valve seat using a 65 degree stone.
3. When the seat is properly positioned the width of the intake seat must be 1.75 - 2.36 mm (0.0689 - 0.0928 in.) and the exhaust seat must be 1.71 - 2.32 mm (0.0673 - 0.0911 in.).
4. Check the valve spring (6) installed height after refacing the valve and seat. The installed height for both intake and exhaust valve springs must not exceed 40.74 mm (1.6039 in.).
5. The valve seat and valve face must maintain a face angle of 44.5 - 45 ° angle.

## REMOVAL

**NOTE: The cylinder heads must be removed in order to perform this procedure.**

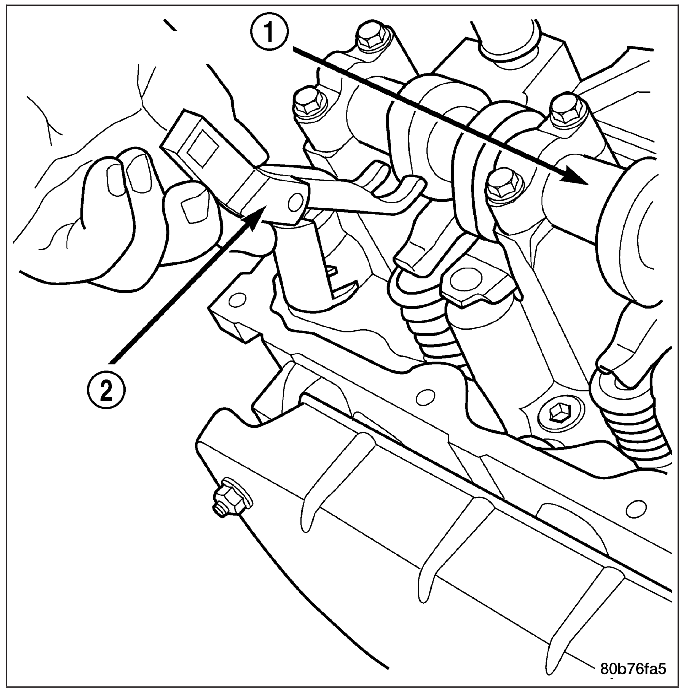
1. Remove rocker arms and lash adjusters (Refer to 9 - ENGINE/CYLINDER HEAD/ROCKER ARM / ADJUSTER ASSY - REMOVAL).
2. Remove the camshaft bearing caps and the camshaft.

**NOTE: All valve springs and valves are removed in the same manner; this procedure only covers one valve and valve spring.**

3. Using Special Tool C-3422–B or C-3422–C Valve Spring Compressor and Special tool 8519 Adapter, compress the valve spring.

**NOTE: It may be necessary to tap the top of the valve spring to loosen the spring retainers locks enough to be removed.**

4. Remove the two spring retainer lock halves.



**NOTE: the valve spring is under tension use care when releasing the valve spring compressor.**

5. Remove the valve spring compressor.
6. Remove the spring retainer, and the spring.

**NOTE: Check for sharp edges on the keeper grooves. Remove any burrs from the valve stem before removing the valve from the cylinder head.**

7. Remove the valve from the cylinder head.

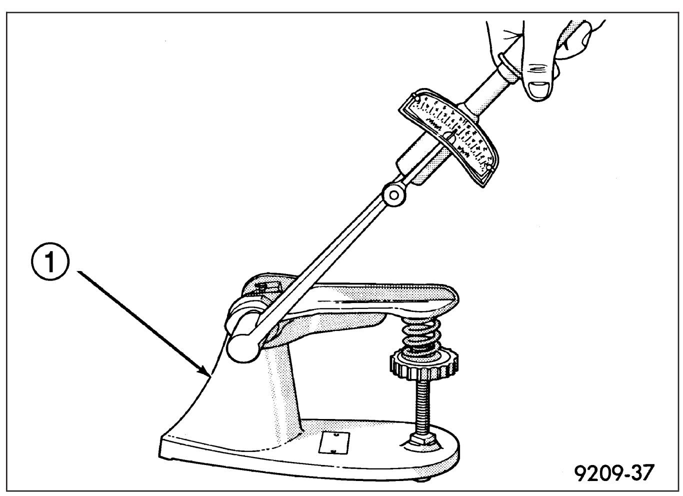
**NOTE: The valve stem seals are common between intake and exhaust.**

8. Remove the valve stem seal. Mark the valve for proper installation.

## TESTING VALVE SPRINGS

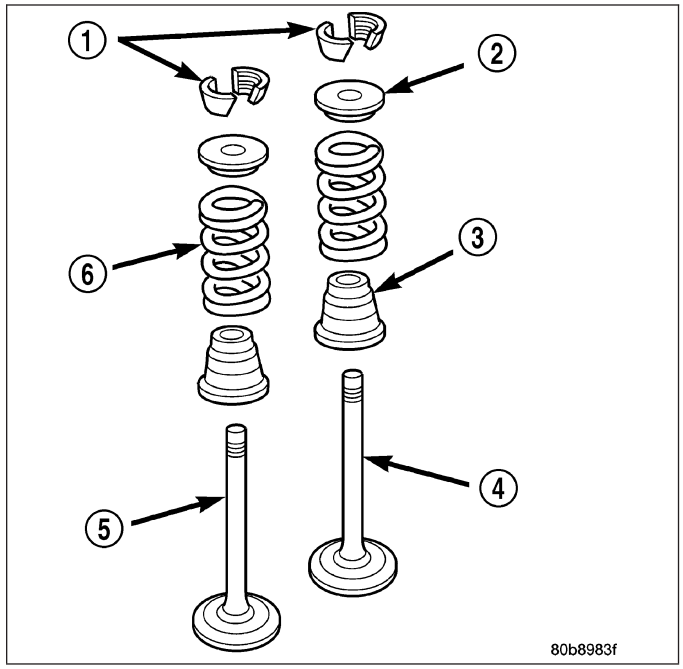
**NOTE: Whenever the valves are removed from the cylinder head it is recommended that the valve springs be inspected and tested for reuse.**

Inspect the valve springs for physical signs of wear or damage. Turn table of tool C-647 (1) until surface is in line with the 40.12 mm (1.579 in.) mark on the threaded stud and the zero mark on the front. Place spring over the stud on the table and lift compressing lever to set tone device. Pull on torque wrench until a Ping is heard. Take reading on torque wrench at this instant. Multiply this reading by two. This will give the spring load at test length. Fractional measurements are indicated on the table for finer adjustments. Refer to Specifications Section to obtain specified height and allowable tensions. Replace any springs that do not meet specifications.

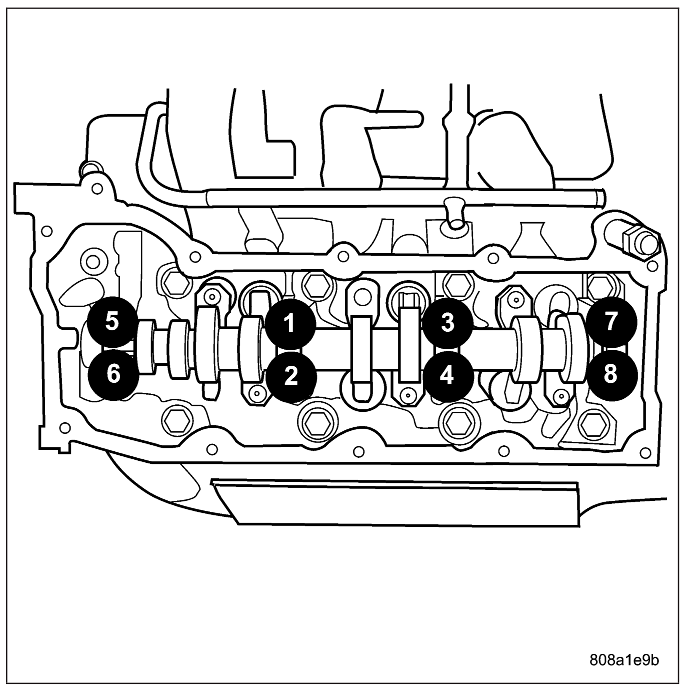


## INSTALLATION

1. coat the valve stem with clean engine oil and insert it into the cylinder head.
2. Install the valve stem seal. make sure the seal is fully seated and that the garter spring at the top of the seal is intact.
3. Install the spring and the spring retainer.
4. Using the valve spring compressor, compress the spring and install the two valve spring retainer halves.
5. Release the valve spring compressor and make sure the two spring retainer halves and the spring retainer are fully seated.



6. lubricate the camshaft journal with clean engine oil then Position the camshaft (with the sprocket dowel on the left camshaft at 11 o'clock and the right camshaft at 12 o'clock), then position the camshaft bearing caps.
7. Install the camshaft bearing cap retaining bolts. Tighten the bolts 9-13 N·m (100 in. lbs.) in 1/2 turn increments in the sequence shown .
8. Position the hydraulic lash adjusters and rocker arms (Refer to 9 - ENGINE/CYLINDER HEAD/ ROCKER ARM / ADJUSTER ASSY - INSTALLATION).



# ARM-VALVE ROCKER

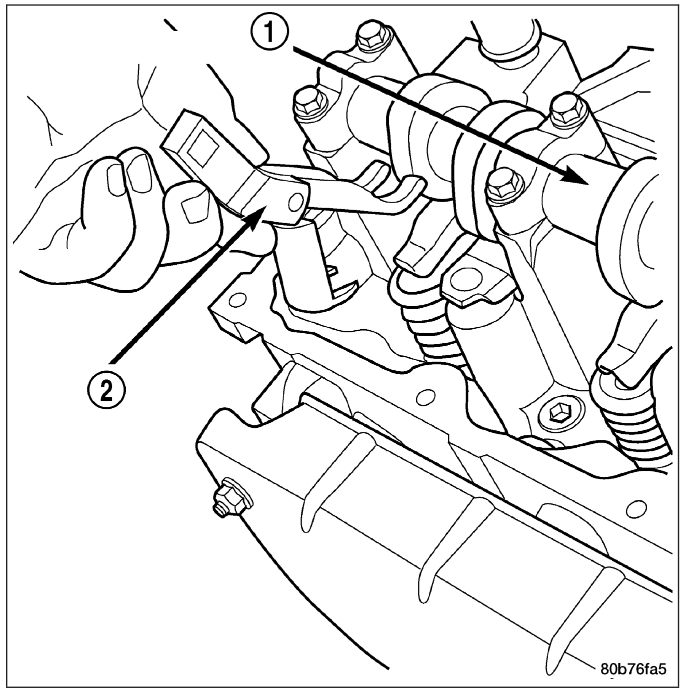
## DESCRIPTION

The rocker arms are steel stampings with an integral roller bearing. The rocker arms incorporate a 2.8 mm (0.11 inch) oil hole in the lash adjuster socket for roller and camshaft lubrication.

## REMOVAL

**NOTE: Disconnect the battery negative cable to prevent accidental starter engagement.**

1. Remove the cylinder head cover (Refer to 9 - ENGINE/CYLINDER HEAD/CYLINDER HEAD COVER(S) - REMOVAL).
2. For rocker arm removal on cylinder No. 4, Rotate the crankshaft until cylinder No. 1 is at BDC intake stroke.
3. For rocker arm removal on cylinder No. 1, Rotate the crankshaft until cylinder No. 1 is at BDC combustion stroke.
4. For rocker arm removal on cylinders No. 3 and No. 5, Rotate the crankshaft until cylinder No. 1 is at TDC exhaust stroke.
5. For rocker arm removal on cylinders No. 2 and No. 6, Rotate the crankshaft until cylinder No. 1 is at TDC ignition stroke.
6. Using special tool 8516 Rocker Arm Remover (2) , press downward on the valve spring, remove rocker arm.



# SEALS-VALVE GUIDE

## DESCRIPTION

The valve guide seals are made of rubber and incorporate an integral steel valve spring seat. The integral garter spring maintains consistent lubrication control to the valve stems.

# SPRINGS-VALVE

## DESCRIPTION

The valve springs are made from high strength chrome silicon steel. The springs are NOT common for intake and exhaust applications. The exhaust spring has an external damper. The valve spring seat is integral with the valve stem seal, which is a positive type seal to control lubrication.

## REMOVAL

1. Remove the cylinder head cover (Refer to 9 - ENGINE/CYLINDER HEAD/CYLINDER HEAD COVER(S) - REMOVAL).
2. Using Special Tool 8516 Valve Spring Compressor, remove the rocker arms and the hydraulic lash adjusters.
3. Remove the spark plug for the cylinder the valve spring and seal are to be removed from.
4. Apply shop air to the cylinder to hold the valves in place when the spring is removed.

**NOTE: All six valve springs and seals are removed in the same manner; this procedure only covers one valve seal and valve spring.**

5. Using Special Tool 8387 Valve Spring Compressor, compress the valve spring.

**NOTE: It may be necessary to tap the top of the valve spring to loosen the spring retainers locks enough to be removed.**

6. Remove the two spring retainer lock halves.

**NOTE: the valve spring is under tension use care when releasing the valve spring compressor.**

7. Remove the valve spring compressor.

**NOTE: The valve springs are NOT common between intake and exhaust.**

8. Remove the spring retainer, and the spring.
9. Remove the valve stem seal.

**NOTE: The valve stem seals are common between intake and exhaust.**

## INSTALLATION

**NOTE: All six valve springs and seals are removed in the same manner; this procedure only covers one valve seal and valve spring.**

1. Apply shop air to the cylinder to hold the valves in place while the spring is installed.

**NOTE: The valve stem seals are common between intake and exhaust.**

2. Install the valve stem seal.

**NOTE: The valve springs are NOT common between intake and exhaust.**

3. Install the spring retainer, and the spring.
4. Using Special Tool 8387 Valve Spring Compressor, compress the valve spring.
5. Install the two spring retainer lock halves.

**NOTE: the valve spring is under tension use care when releasing the valve spring compressor.**

6. Remove the valve spring compressor.
7. Disconnect the shop air to the cylinder.
8. Install the spark plug for the cylinder the valve spring and seal was installed on.

9. Using Special Tool 8516 Valve Spring Compressor, install the rocker arms and the hydraulic lash adjusters.
10. Install the cylinder head cover (Refer to 9 - ENGINE/CYLINDER HEAD/CYLINDER HEAD COVER(S) - INSTALLATION).

# HEAD-CYLINDER-RIGHT

## DESCRIPTION

## DESCRIPTION - CYLINDER HEAD

The cylinder heads are made of an aluminum alloy. The cylinder head features two valves per cylinder with pressed in powdered metal valve guides. The cylinder heads also provide enclosures for the timing chain drain, necessitating unique left and right cylinder heads.

## DESCRIPTION - VALVE GUIDES

The valve guides are made of powered metal and are pressed into the cylinder head. The guides are not replaceable or serviceable, and valve guide reaming is not recommended. If the guides are worn beyond acceptable limits, replace the cylinder heads.

## DESCRIPTION

The valves are made of heat resistant steel and have chrome plated stems to prevent scuffing. Each valve is actuated by a roller rocker arm which pivots on a stationary lash adjuster. All valves use three bead lock keepers to retain the springs and promote valve rotation.

## DIAGNOSIS AND TESTING

## DIAGNOSIS AND TESTING - HYDRAULIC LASH ADJUSTER

A tappet-like noise may be produced from several items. Check the following items.

1. Engine oil level too high or too low. This may cause aerated oil to enter the adjusters and cause them to be spongy.
2. Insufficient running time after rebuilding cylinder head. Low speed running up to 1 hour may be required.
3. Turn engine off and let set for a few minutes before restarting. Repeat this several times after engine has reached normal operating temperature.
4. Low oil pressure.
5. The oil restrictor in cylinder head gasket or the oil passage to the cylinder head is plugged with debris.
6. Air ingested into oil due to broken or cracked oil pump pick up.
7. Worn valve guides.
8. Rocker arm ears contacting valve spring retainer.
9. Rocker arm loose, adjuster stuck or at maximum extension and still leaves lash in the system.
10. Oil leak or excessive cam bore wear in cylinder head.
11. Faulty lash adjuster.
    a. Check lash adjusters for sponginess while installed in cylinder head and cam on camshaft at base circle. Depress part of rocker arm over adjuster. Normal adjusters should feel very firm. Spongy adjusters can be bottomed out easily.
    b. Remove suspected lash adjusters, and replace.
    c. Before installation, make sure adjusters are at least partially full of oil. This can be verified by little or no plunger travel when lash adjuster is depressed.

## DIAGNOSIS AND TESTING - CYLINDER HEAD GASKET

A cylinder head gasket leak can be located between adjacent cylinders or between a cylinder and the adjacent water jacket.

Possible indications of the cylinder head gasket leaking between adjacent cylinders are:

- Loss of engine power
- Engine misfiring
- Poor fuel economy

Possible indications of the cylinder head gasket leaking between a cylinder and an adjacent water jacket are:

- Engine overheating
- Loss of coolant
- Excessive steam (white smoke) emitting from exhaust
- Coolant foaming

## CYLINDER-TO-CYLINDER LEAKAGE TEST

To determine if an engine cylinder head gasket is leaking between adjacent cylinders, follow the procedures in Cylinder Compression Pressure Test (Refer to 9 - ENGINE - DIAGNOSIS AND TESTING). An engine cylinder head gasket leaking between adjacent cylinders will result in approximately a 50–70% reduction in compression pressure.

## CYLINDER-TO-WATER JACKET LEAKAGE TEST

**WARNING: USE EXTREME CAUTION WHEN THE ENGINE IS OPERATING WITH COOLANT PRESSURE CAP REMOVED.**

### VISUAL TEST METHOD

With the engine cool, remove the coolant pressure cap. Start the engine and allow it to warm up until thermostat opens.

If a large combustion/compression pressure leak exists, bubbles will be visible in the coolant.

### COOLING SYSTEM TESTER METHOD

**WARNING: WITH COOLING SYSTEM TESTER IN PLACE, PRESSURE WILL BUILD UP FAST. EXCESSIVE PRESSURE BUILT UP, BY CONTINUOUS ENGINE OPERATION, MUST BE RELEASED TO A SAFE PRESSURE POINT. NEVER PERMIT PRESSURE TO EXCEED 138 kPa (20 psi).**

Install Cooling System Tester 7700 or equivalent to pressure cap neck. Start the engine and observe the tester's pressure gauge. If gauge pulsates with every power stroke of a cylinder a combustion pressure leak is evident.

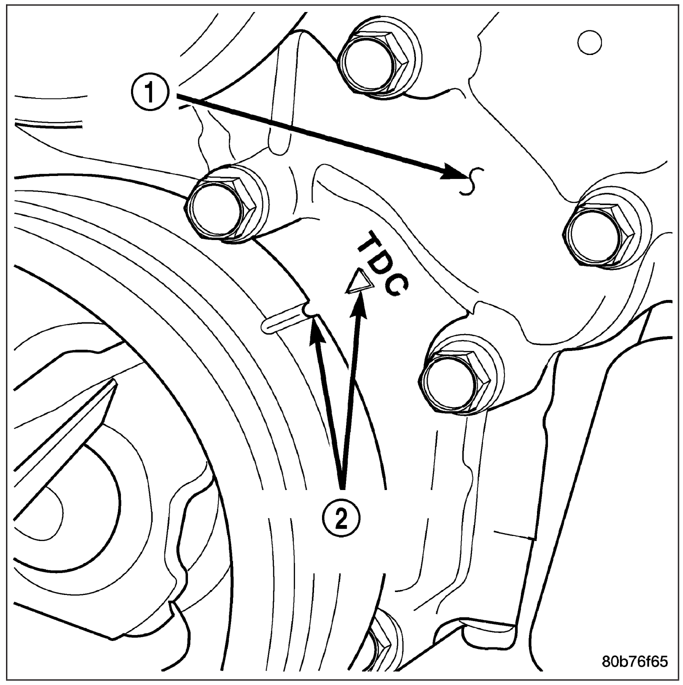
### CHEMICAL TEST METHOD

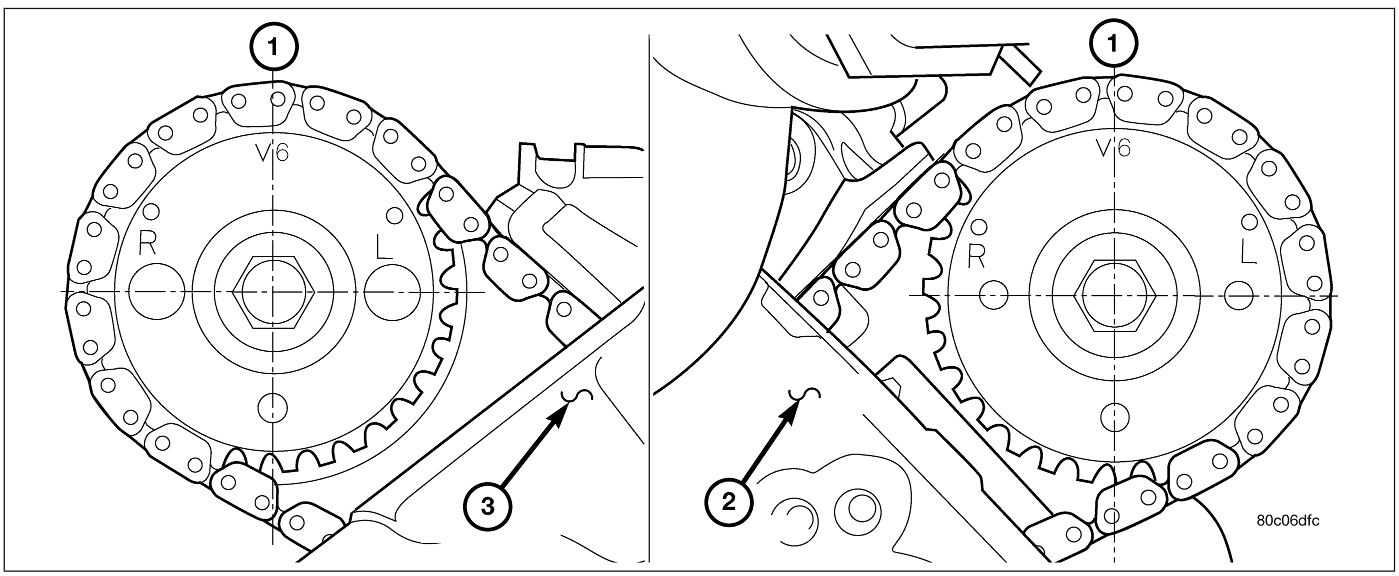
Combustion leaks into the cooling system can also be checked by using Bloc-Chek Kit C-3685-A or equivalent. Perform test following the procedures supplied with the tool kit.

## REMOVAL

## REMOVAL RIGHT CYLINDER HEAD

1. Disconnect battery negative cable.
2. Raise the vehicle on a hoist.
3. Disconnect the exhaust pipe at the right side exhaust manifold.
4. Drain the engine coolant (Refer to 7 - COOLING - STANDARD PROCEDURE).
5. Lower the vehicle.
6. Remove the intake manifold (Refer to 9 - ENGINE/MANIFOLDS/INTAKE MANIFOLD - REMOVAL).
7. Remove the cylinder head cover (Refer to 9 - ENGINE/CYLINDER HEAD - REMOVAL).
8. Remove the fan shroud (Refer to 7 - COOLING/ENGINE/RADIATOR FAN - REMOVAL).
9. Remove oil fill housing from cylinder head.
10. Remove accessory drive belt (Refer to 7 - COOLING/ACCESSORY DRIVE/DRIVE BELTS - REMOVAL).
11. Rotate the crankshaft until the damper timing mark is aligned with TDC indicator mark (2).



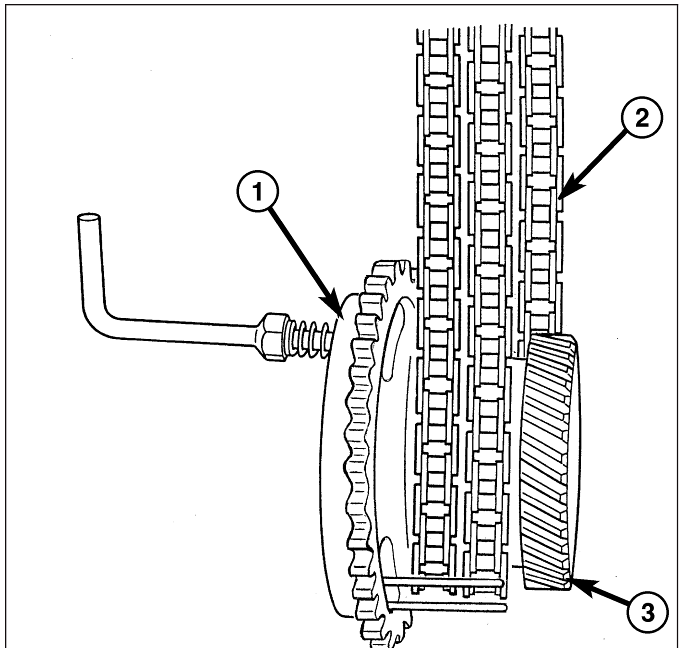


12. Verify the V6 mark on the camshaft sprocket is at the 12 o'clock position. Rotate the crankshaft one turn if necessary.
13. Remove the crankshaft damper (Refer to 9 - ENGINE/ENGINE BLOCK/VIBRATION DAMPER - REMOVAL).
14. Remove the timing chain cover (Refer to 9 - ENGINE/VALVE TIMING/TIMING BELT / CHAIN COVER(S) - REMOVAL).

15. Lock the secondary timing chains to the idler sprocket using Special Tool 8429 Timing Chain Holding Fixture (1).

**NOTE: Mark the secondary timing chain prior to removal to aid in installation.**

16. Mark the secondary timing chain, one link on each side of the V6 mark on the camshaft drive gear.
17. Remove the right side secondary chain tensioner (Refer to 9 - ENGINE/VALVE TIMING/TIMING BELT/CHAIN AND SPROCKETS - REMOVAL).



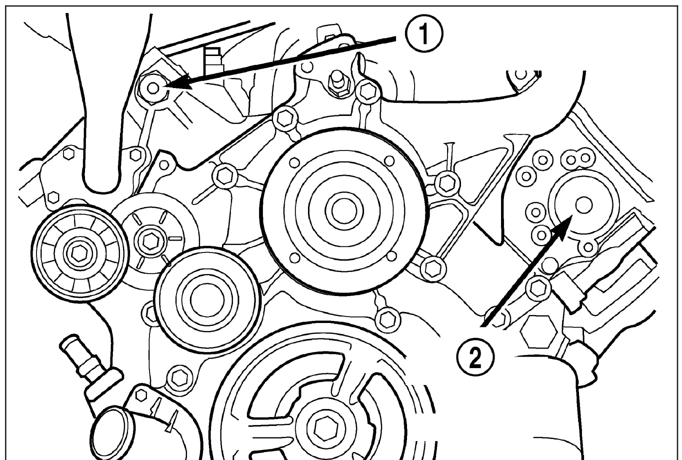
80cb5655

18. Remove the cylinder head access plug (1,2).
19. Remove the right side secondary chain guide (Refer to 9 - ENGINE/VALVE TIMING/TIMING BELT/CHAIN AND SPROCKETS - REMOVAL).

**CAUTION: The nut on the right side camshaft sprocket should not be removed for any reason, as the sprocket and camshaft sensor target wheel is serviced as an assembly. If the nut was removed, torque nut to 5 N·m (44 in. lbs.).**

20. Remove the retaining bolt and the camshaft drive gear.

**CAUTION: Do not allow the engine to rotate. severe damage to the valve train can occur.**



80b897e2

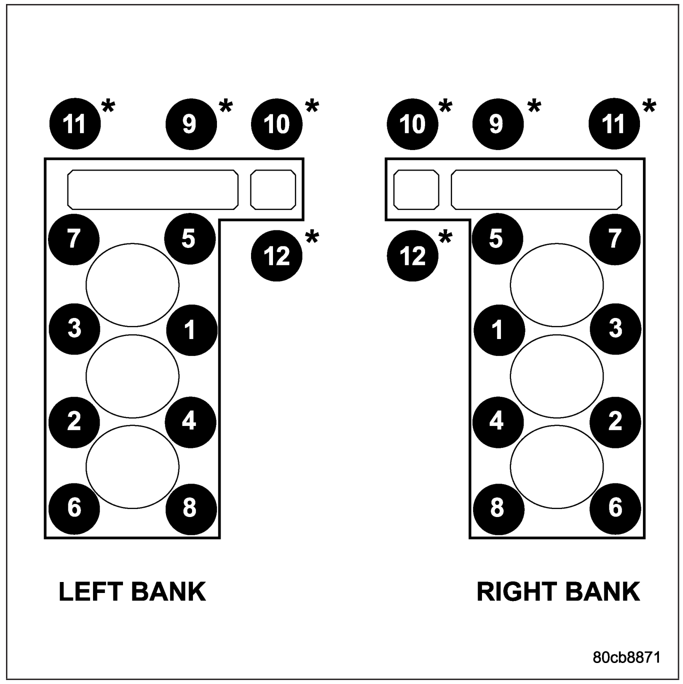
**CAUTION: Do not overlook the four smaller bolts at the front of the cylinder head. Do not attempt to remove the cylinder head without removing these four bolts.**

**CAUTION: Do not hold or pry on the camshaft target wheel for any reason. A damaged target wheel can result in a vehicle no start condition.**

**NOTE: The cylinder head is attached to the cylinder block with twelve bolts.**

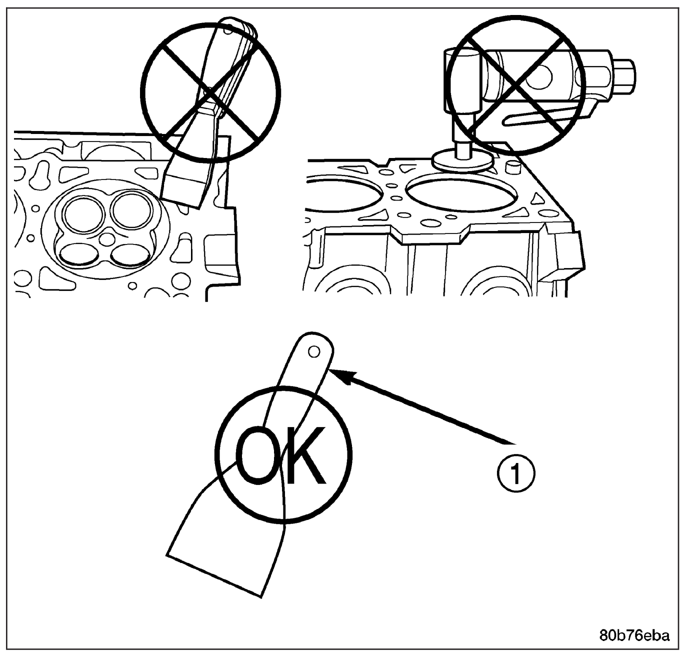
21. Remove the cylinder head retaining bolts.
22. Remove the cylinder head and gasket. Discard the gasket.

**CAUTION: Do not lay the cylinder head on its gasket sealing surface, do to the design of the cylinder head gasket any distortion to the cylinder head sealing surface may prevent the gasket from properly sealing resulting in leaks.**



## CLEANING

To ensure engine gasket sealing, proper surface preparation must be performed, especially with the use of aluminum engine components. (Refer to 9 - ENGINE - STANDARD PROCEDURE).



## INSPECTION

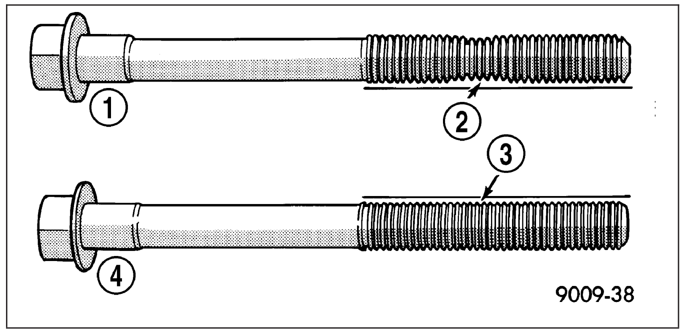
1. Inspect the cylinder head for out-of-flatness, using a straightedge and a feeler gauge. If measurements exceed 0.0508 mm (0.002 in.) replace the cylinder head.
2. Inspect the valve seats for damage. Service the valve seats as necessary.
3. Inspect the valve guides for wear, cracks or looseness. If either condition exist, replace the cylinder head.

# INSTALLATION

## INSTALLATION RIGHT CYLINDER HEAD

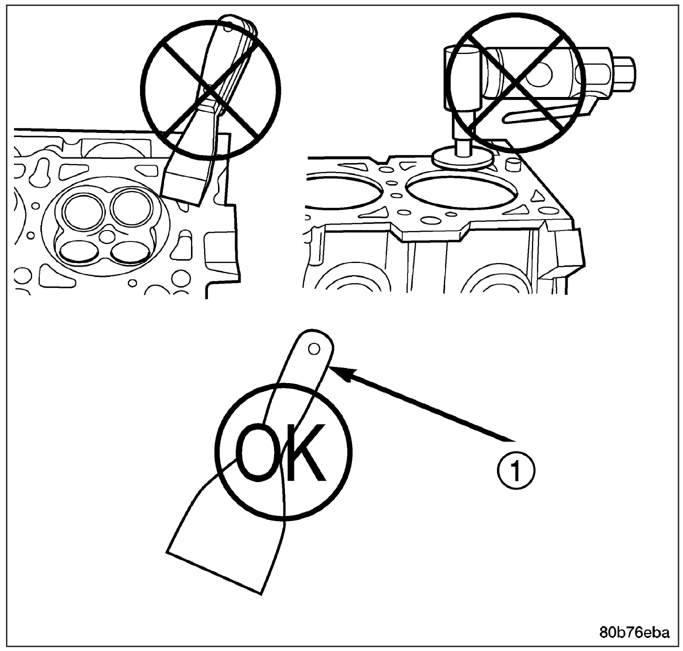
**NOTE: The cylinder head bolts are tightened using a torque plus angle procedure. The bolts must be examined BEFORE reuse. If the threads are necked down (2) the bolts should be replaced.**

Necking can be checked by holding a straight edge against the threads. If all the threads do not contact the scale, the bolt should be replaced.



**CAUTION: When cleaning cylinder head and cylinder block surfaces, DO NOT use a metal scraper because the surfaces could be cut or ground. Use only a wooden or plastic scraper (1).**

1. Clean the cylinder head and cylinder block mating surfaces.



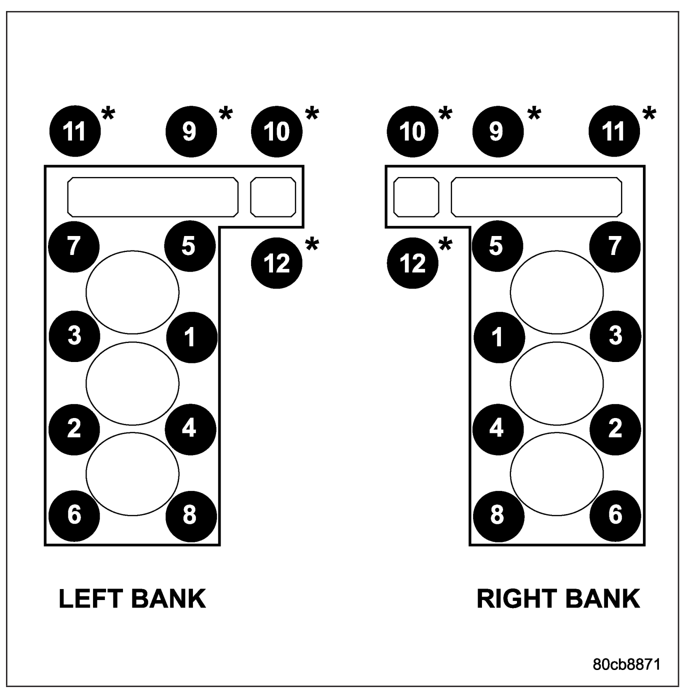
2. Position the new cylinder head gasket on the locating dowels.

**CAUTION: When installing cylinder head, use care not damage the tensioner arm or the guide arm.**

3. Position the cylinder head onto the cylinder block. Make sure the cylinder head seats fully over the locating dowels.

**NOTE: The four M8 cylinder head mounting bolts (1) require sealant to be added to them before installing. Failure to do so may cause leaks.**

4. Lubricate the cylinder head bolt threads with clean engine oil and install the eight M10 bolts.
5. Coat the four M8 cylinder head bolts with **Mopar Lock and Seal Adhesive** then install the bolts.



**NOTE: The cylinder head bolts are tightened using an angle torque procedure, however, the bolts are not a torque-to-yield design.**

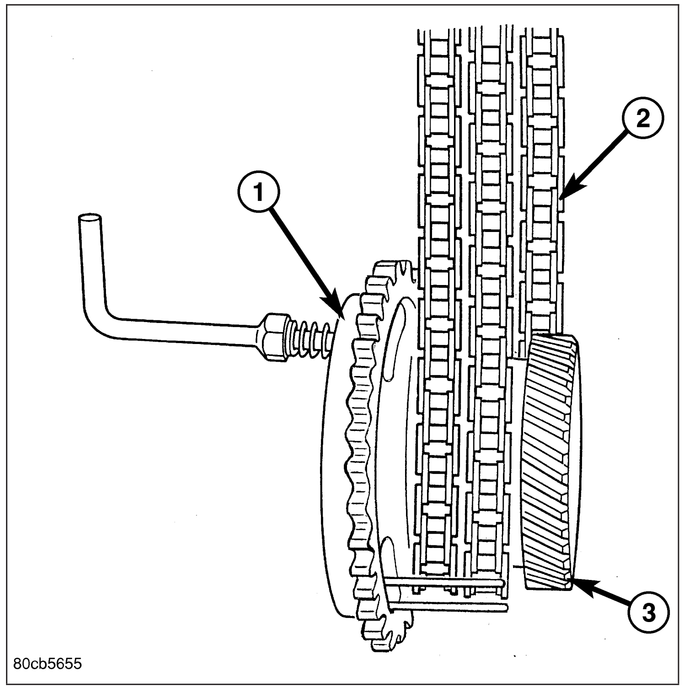
6. Tighten the bolts in sequence using the following steps and torque values :
   - Step 1: Tighten bolts 1-8, 27 N·m (20 ft. lbs.).
   - Step 2: Verify that bolts 1-8, all reached 27 N·m (20 ft. lbs.), by repeating step 1 without loosening the bolts. Tighten bolts 9 thru 12 to 14 N·m (10 ft. lbs.).
   - Step 3: Tighten bolts 1-8, 90 °.
   - Step 4: Tighten bolts 1-8, 90 °, again. Tighten bolts 9-12, 26 N·m (19 ft. lbs.)

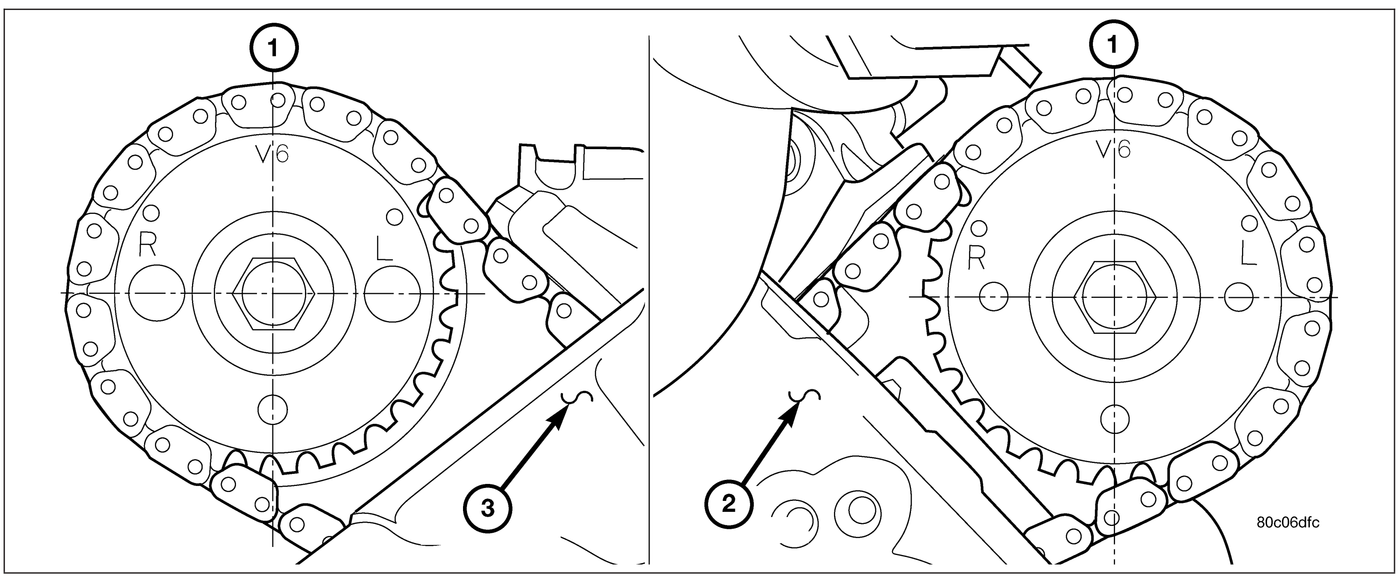
**CAUTION: The nut on the right side camshaft sprocket should not be removed for any reason, as the sprocket and camshaft sensor target wheel is serviced as an assembly. If the nut was removed, torque nut to 5 NM ( 60 in. lbs.).**

7. Position the secondary chain (2) onto the camshaft drive gear, making sure one marked chain link is on either side of the V6 mark (1) on the gear then using Special Tool 8428 Camshaft Wrench, position the gear onto the camshaft.

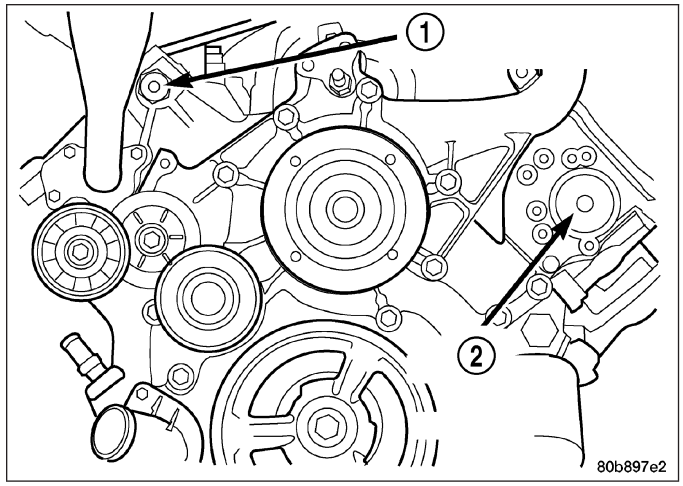
**CAUTION: Remove excess oil from camshaft sprocket retaining bolt before reinstalling bolt. Failure to do so may cause over-torquing of bolt resulting in bolt failure.**

8. Install the camshaft drive gear retaining bolt.
9. Install the right side secondary chain guide (Refer to 9 - ENGINE/VALVE TIMING/TIMING BELT/ CHAIN AND SPROCKETS - INSTALLATION).

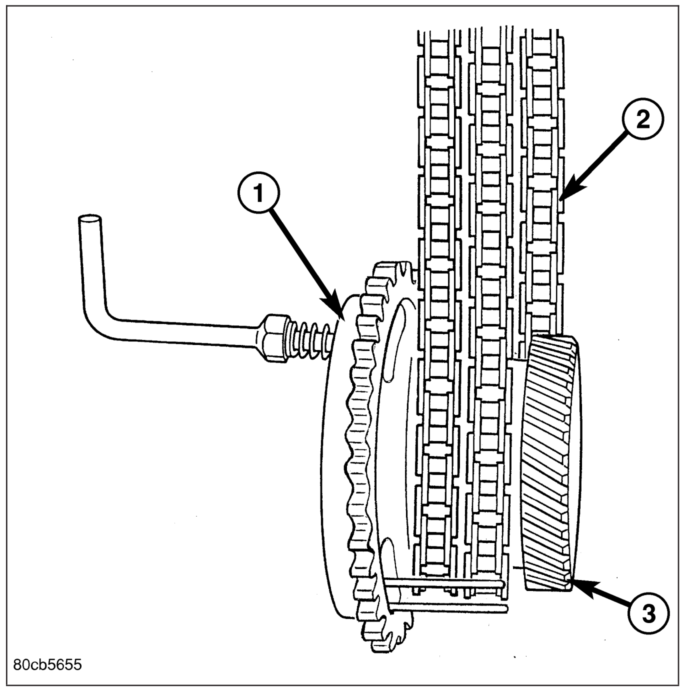




10. Install the cylinder head access plug (1,2).
11. Re-set and install the right side secondary chain tensioner (Refer to 9 - ENGINE/VALVE TIMING/ TIMING BELT/CHAIN AND SPROCKETS - INSTALLATION).



12. Remove Special Tool 8429 (1).
13. Install the timing chain cover (Refer to 9 - ENGINE/VALVE TIMING/TIMING BELT / CHAIN COVER(S) - REMOVAL).
14. Install the crankshaft damper (Refer to 9 - ENGINE/ENGINE BLOCK/VIBRATION DAMPER - INSTALLATION). Tighten damper bolt 175 N·m (130 Ft. Lbs.).
15. Install accessory drive belt (Refer to 7 - COOLING/ACCESSORY DRIVE/DRIVE BELTS - INSTALLATION).
16. Install the fan shroud (Refer to 7 - COOLING/ENGINE/RADIATOR FAN - INSTALLATION).
17. Install the cylinder head cover (Refer to 9 - ENGINE/CYLINDER HEAD/CYLINDER HEAD COVER(S) - INSTALLATION).
18. Install the intake manifold (Refer to 9 - ENGINE/MANIFOLDS/INTAKE MANIFOLD - INSTALLATION).
19. Install oil fill housing onto cylinder head.
20. Refill the cooling system (Refer to 7 - COOLING - STANDARD PROCEDURE).
21. Raise the vehicle.
22. Install the exhaust pipe onto the right exhaust manifold.
23. Lower the vehicle.
24. Reconnect battery negative cable.
25. Start the engine and check for leaks.

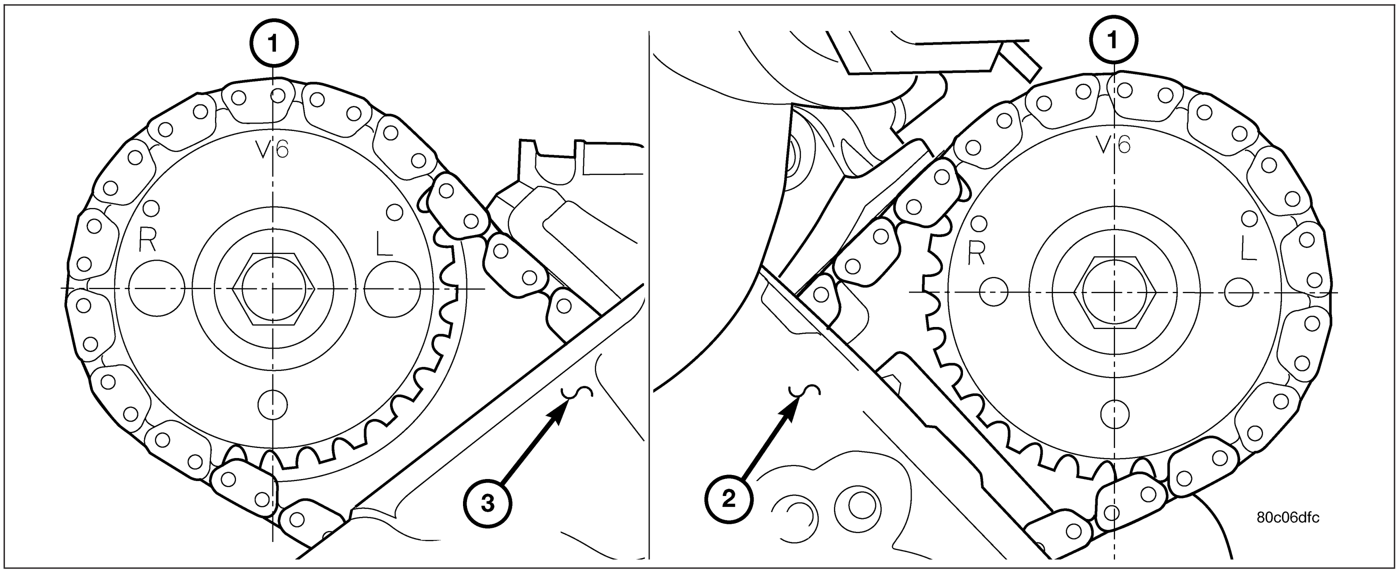


# CAMSHAFT

## DESCRIPTION

The camshafts consist of powdered metal steel lobes which are sinter-bonded to a steel tube. Four bearing journals are machined into the camshaft. Camshaft end play is controlled by two thrust walls that border the nose piece journal.

## REMOVAL



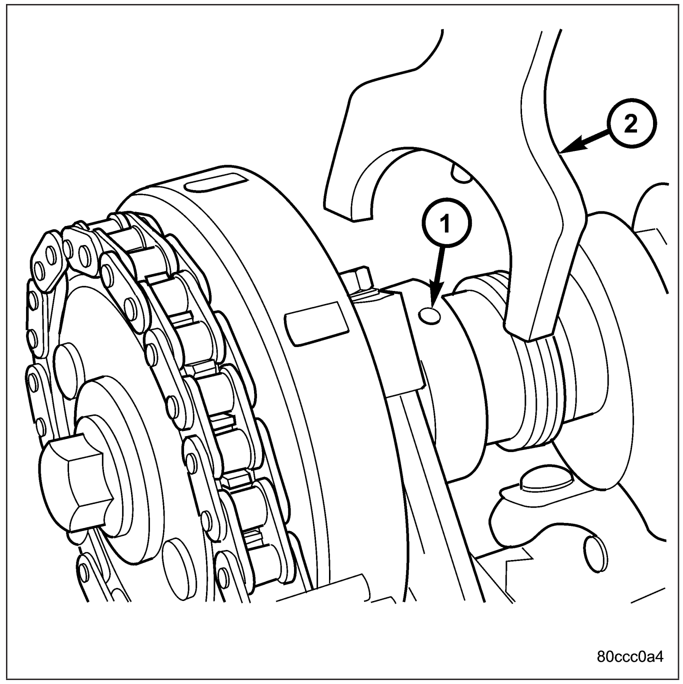
**CAUTION: When the timing chain is removed and the cylinder heads are still installed, DO NOT forcefully rotate the camshafts or crankshaft independently of each other. Severe valve and/or piston damage can occur.**

**CAUTION: When removing the cam sprocket, timing chains or camshaft, Failure to use special tool 8379 will result in hydraulic tensioner ratchet over extension, Requiring timing chain cover removal to re-set the tensioner ratchet.**

1. Remove the cylinder head cover (Refer to 9 - ENGINE/CYLINDER HEAD/CYLINDER HEAD COVER(S) - REMOVAL).
2. Set engine to TDC cylinder No. 1, camshaft sprocket V6 marks at the 12 o'clock position (1).
3. Mark one link on the secondary timing chain on both sides of the V6 mark on the camshaft sprocket to aid in installation.

**CAUTION: Do not hold or pry on the camshaft target wheel for any reason, Severe damage will occur to the target wheel. A damaged target wheel could cause a vehicle no start condition.**

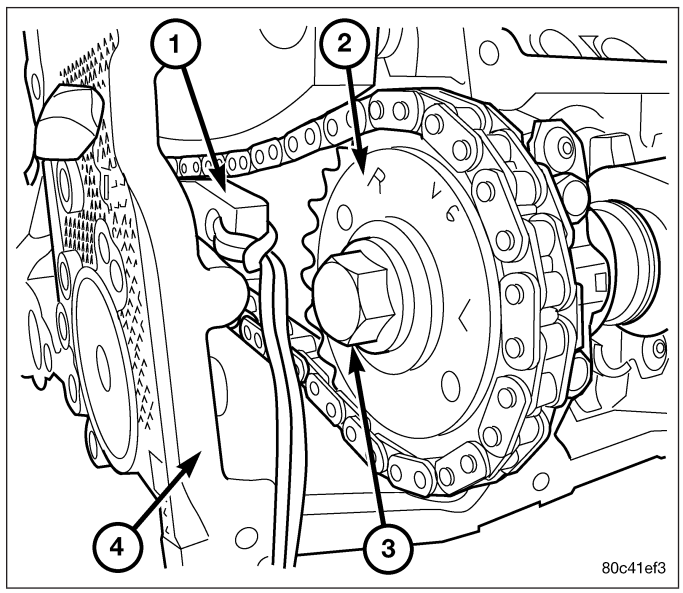
4. Loosen but **DO NOT** remove the camshaft sprocket retaining bolt. Leave bolt snug against sprocket.



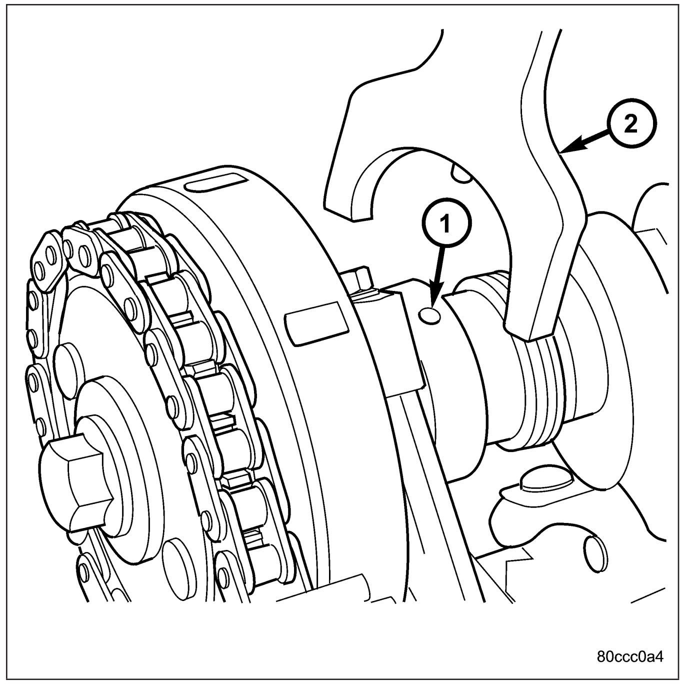
**NOTE: The timing chain tensioners must be secured prior to removing the camshaft sprockets. Failure to secure tensioners will allow the tensioners to extend, requiring timing chain cover removal in order to reset tensioners.**

**CAUTION: Do not force wedge past the narrowest point between the chain strands. Damage to the tensioners may occur.**

5. Position Special Tool 8379 timing chain wedge (1) between the timing chain strands. Tap the tool to securely wedge the timing chain against the tensioner arm and guide.



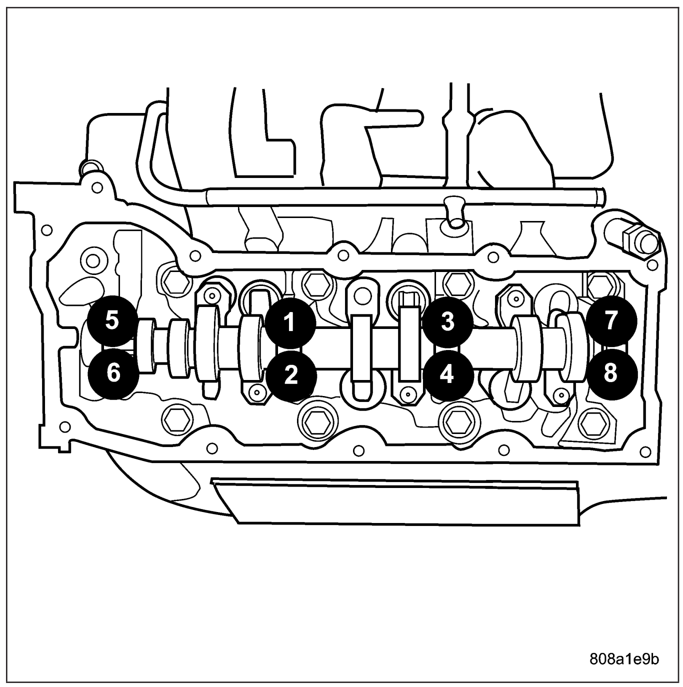
6. Remove the camshaft position sensor.
7. Hold the camshaft with Special Tool 8428 Camshaft Wrench (2), while removing the camshaft sprocket bolt and sprocket.



8. Starting at the outside working inward, loosen the camshaft bearing cap retaining bolts 1/2 turn at a time. Repeat until all load is off the bearing caps.

**CAUTION: DO NOT STAMP OR STRIKE THE CAMSHAFT BEARING CAPS. SEVERE DAMAGE WILL OCCUR TO THE BEARING CAPS.**

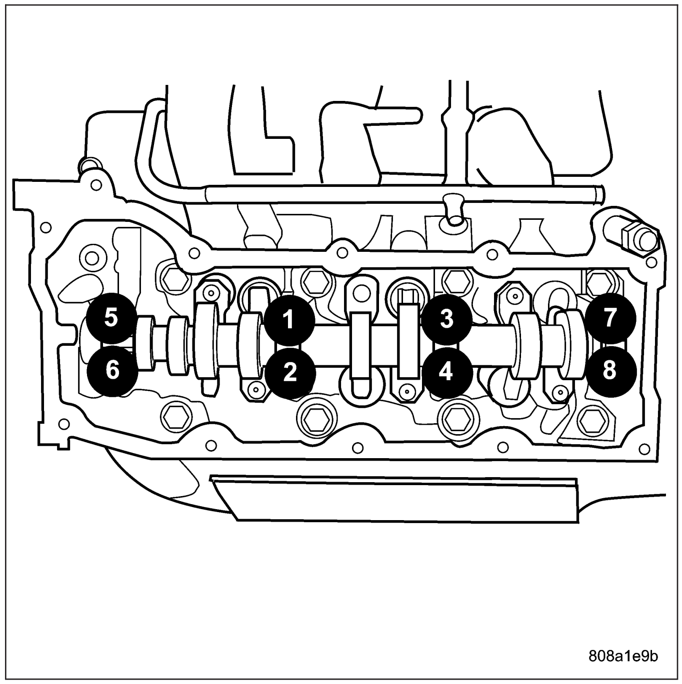
**NOTE: When the camshaft is removed the rocker arms may slide downward, mark the rocker arms before removing camshaft.**



9. Remove the camshaft bearing caps and the camshaft.

## INSTALLATION

1. Lubricate camshaft journals with clean engine oil.

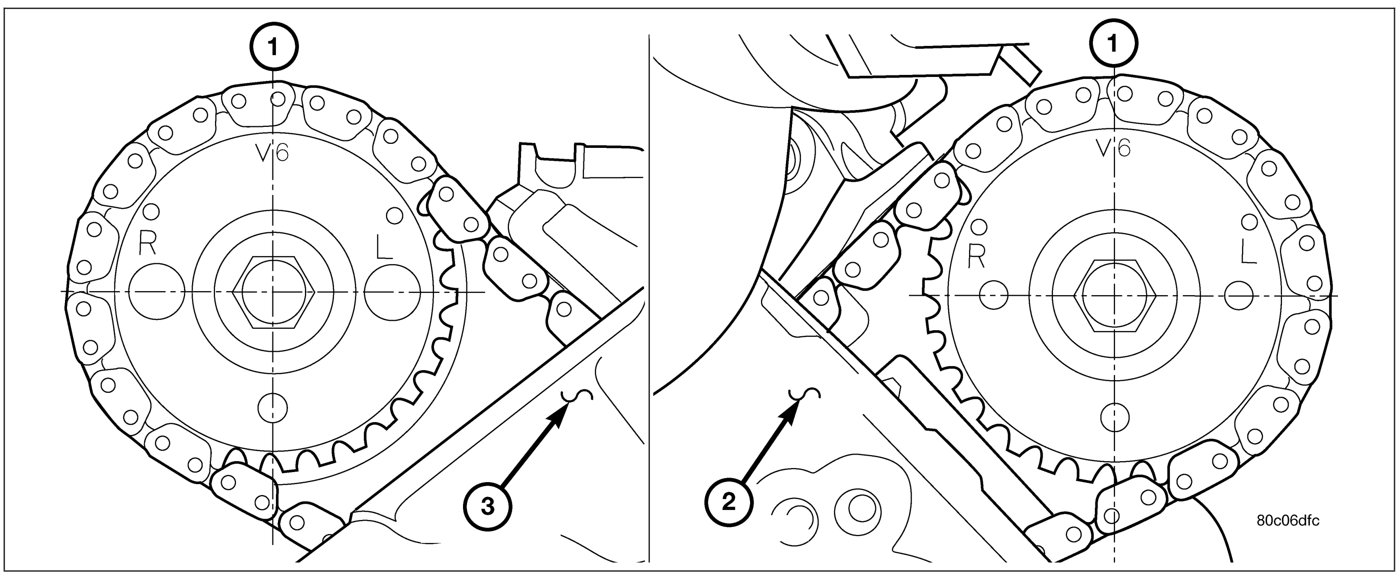


**NOTE: Position the right side camshaft so that the camshaft sprocket dowel is near the 10 o'clock position, This will place the camshaft at the neutral position easing the installation of the camshaft bearing caps.**

2. Position the camshaft into the cylinder head.
3. Install the camshaft bearing caps, hand tighten the retaining bolts.

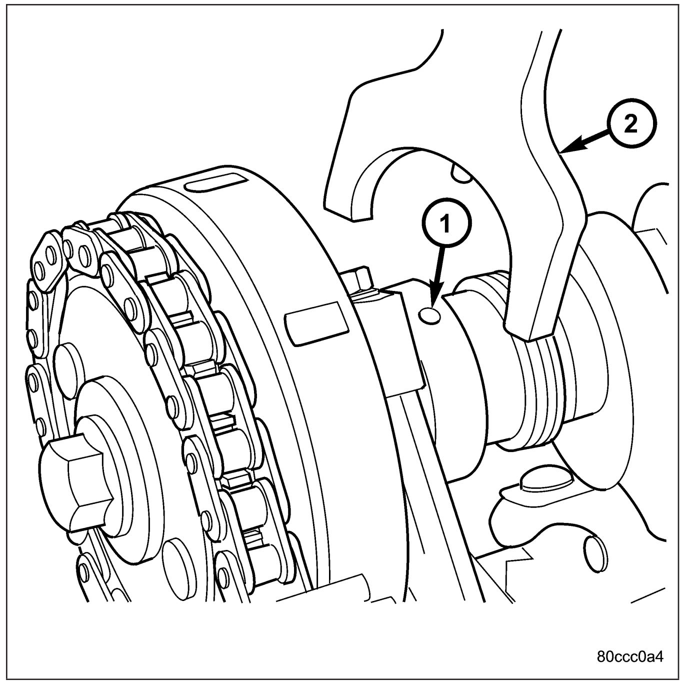
**NOTE: Caps should be installed so that the stamped numbers on the caps are in numerical order, ( 1 thru 4 ) from the front to the rear of the engine. All caps should be installed so that the stamped arrows on the caps point toward the front of the engine.**

4. Working in 1/2 turn increments, tighten the bearing cap retaining bolts starting with the middle cap working outward.
5. Torque the camshaft bearing cap retaining bolts to 11 N·m (100 in. lbs.).



6. Position the camshaft drive gear into the timing chain aligning the V6 mark between the two marked chain links (Two links marked during removal) .

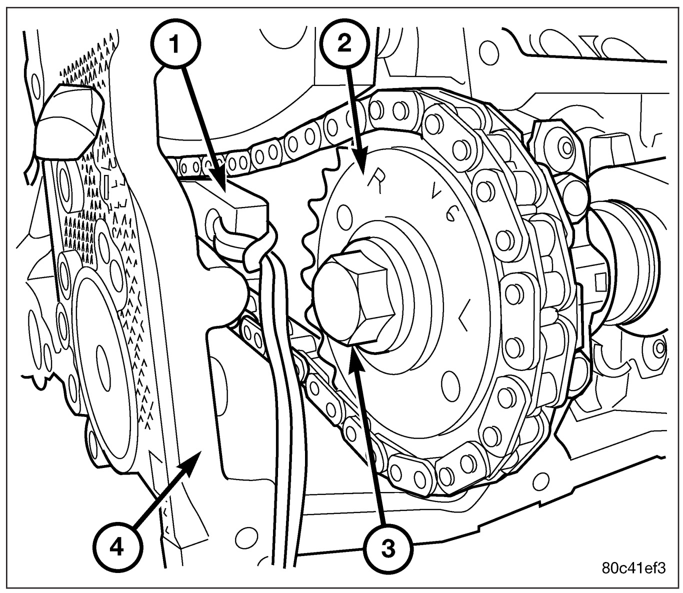
7. Using Special Tool 8428 Camshaft Wrench (2), rotate the camshaft until the camshaft sprocket dowel is aligned with the slot in the camshaft sprocket. Install the sprocket onto the camshaft.



**CAUTION: Remove excess oil from camshaft sprocket bolt. Failure to do so can cause bolt over-torque resulting in bolt failure.**

8. Remove excess oil from camshaft sprocket bolt, then install the camshaft sprocket retaining bolt and hand tighten.

9. Remove timing chain wedge special tool 8379 (1).
10. Using Special Tool 6958 spanner wrench with adapter pins 8346, torque the camshaft sprocket retaining bolt to 122 N·m (90 ft. lbs.).
11. Install the camshaft position sensor.
12. Install the cylinder head cover (Refer to 9 - ENGINE/CYLINDER HEAD/CYLINDER HEAD COVER(S) - INSTALLATION).



# COVER - CYLINDER HEAD

## REMOVAL

1. Disconnect battery negative cable.
2. Remove air cleaner assembly, resonator assembly and air inlet hose.
3. Drain cooling system, below the level of the heater hoses (Refer to 7 - COOLING - STANDARD PROCEDURE).
4. Remove accessory drive belt (Refer to 7 - COOLING/ACCESSORY DRIVE/DRIVE BELTS - REMOVAL).
5. Remove air conditioning compressor retaining bolts and move compressor to the left.
6. Remove heater hoses.
7. Disconnect injector and ignition coil connectors.
8. Disconnect and remove positive crankcase ventilation (PCV) hose.
9. Remove oil fill tube.
10. Un-clip injector and ignition coil harness and move away from cylinder head cover.
11. Remove right rear breather tube and filter assembly.
12. Remove cylinder head cover retaining bolts.
13. Remove cylinder head cover.

## INSTALLATION

**CAUTION: Do not use harsh cleaners to clean the cylinder head covers. Severe damage to covers may occur.**

**NOTE: The gasket may be used again, provided no cuts, tears, or deformation has occurred.**

1. Clean cylinder head cover and both sealing surfaces. Inspect and replace gasket as necessary.
2. Tighten cylinder head cover bolts and double ended studs to 12 N·m (105 in. lbs).
3. Install right rear breather tube and filter assembly.
4. Connect injector, ignition coil electrical connectors and harness retaining clips.
5. Install the oil fill tube.
6. Install PCV hose.
7. Install heater hoses.
8. Install air conditioning compressor retaining bolts.
9. Install accessory drive belt (Refer to 7 - COOLING/ACCESSORY DRIVE/DRIVE BELTS - INSTALLATION).
10. Fill Cooling system (Refer to 7 - COOLING - STANDARD PROCEDURE).
11. Install air cleaner assembly, resonator assembly and air inlet hose.
12. Connect battery negative cable.

# VALVES & SEATS - INTAKE/EXHAUST

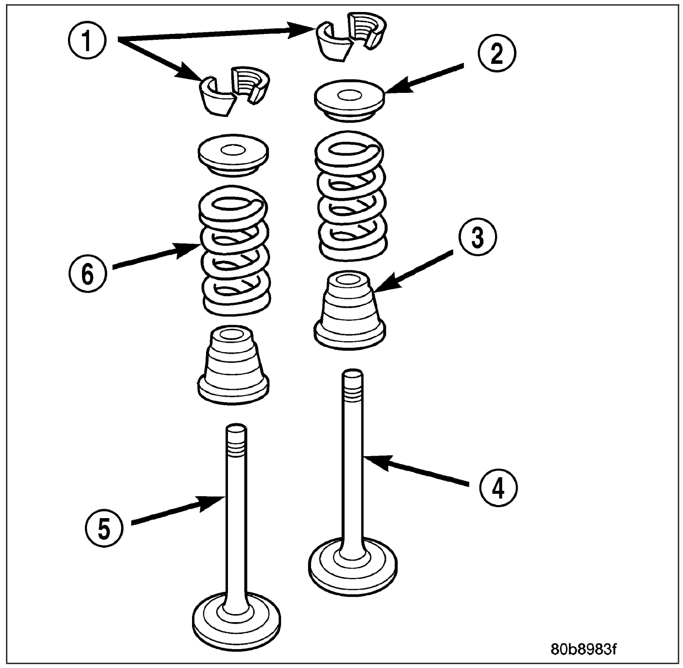
## DESCRIPTION

The valves are made of heat resistant steel and have chrome plated stems to prevent scuffing. Each valve is actuated by a roller rocker arm which pivots on a stationary lash adjuster. All valves use three bead lock keepers to retain the springs and promote valve rotation.

## STANDARD PROCEDURE - REFACING

**NOTE: Valve seats that are worn or burned can be reworked, provided that correct angle and seat width are maintained. Otherwise the cylinder head must be replaced.**

**NOTE: When refacing valves (4) and valve seats, it is important that the correct size valve guide pilot be used for reseating stones. A true and complete surface must be obtained.**



1. Using a suitable dial indicator measure the center of the valve seat. Total run out must not exceed 0.051 mm (0.002 in).
